If damage, bend, or corrosion is excessive, replace the rear differential member.

2) Check the bushings of rear differential member for cracking, hardening, or damage.

If cracking, hardening, or damage is excessive, replace the rear differential member.

# General Diagnostic Table

DIFFERENTIALS

## 8. General Diagnostic Table

### A: INSPECTION

| Symptom or trouble  | Possible cause  | Remedy  |
|---|---|---|
| <b>1. Oil leakage</b>   | (1) Worn, scratched, or incorrectly seated front or side oil seal. Scored, battered, or excessively worn sliding surface of companion flange. | Repair or replace.  |
|   | (2) Clogged or damaged air breather cap.  | Clean, repair or replace.   |
|   | (3) Loose bolts on differential spindle or side bearing retainer, or incorrectly fitted O-ring.   | Tighten the bolts to specified torque.<br>Replace the O-ring.                         |
|   | (4) Loose rear cover attaching bolts or damaged gasket.   | Tighten the bolts to specified torque.<br>Replace the gasket and apply liquid gasket. |
|   | (5) Loose oil filler or drain plug.   | Retighten and apply liquid gasket.  |
|   | (6) Wear, damage or incorrectly fitting for spindle, side bearing retainer and oil seal.  | Repair or replace.  |
| <b>2. Seizure</b><br>NOTE:<br>Seized or damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.                  | (1) Insufficient backlash for hypoid gear.  | Readjust or replace.  |
|   | (2) Excessive preload for side, rear, or front bearing.   | Readjust or replace.  |
|   | (3) Insufficient or improper oil used.  | Replace the seized part and fill with specified oil to specified level.               |
| <b>3. Damage</b><br>NOTE:<br>Damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.                             | (1) Improper backlash for hypoid gear.  | Replace.  |
|   | (2) Insufficient or excessive preload for side, rear, or front bearing.   | Readjust or replace.  |
|   | (3) Excessive backlash for differential gear.   | Replace the gear or thrust washer.  |
|   | (4) Loose bolts and nuts such as hypoid driven gear bolt.   | Retighten.  |
|   | (5) Damage due to overloading.  | Replace.  |
| <b>4. Noises when starting or shifting gears</b><br>NOTE:<br>Noises may be caused by differential assembly, universal joint, wheel bearing, etc. Find out what is actually making noise before disassembly. | (1) Excessive backlash for hypoid gear.   | Readjust.   |
|   | (2) Excessive backlash for differential gear.   | Replace the gear or thrust washer.  |
|   | (3) Insufficient preload for front or rear bearing.   | Readjust.   |
|   | (4) Loose drive pinion nut.   | Tighten to specified torque.  |
|   | (5) Loose bolts and nuts such as side bearing retainer attaching bolt.  | Tighten to specified torque.  |
| <b>5. Noises when cornering</b>   | (1) Damaged differential gear.  | Replace.  |
|   | (2) Excessive wear or damage of thrust washer.  | Replace.  |
|   | (3) Broken pinion mate shaft.   | Replace.  |
|   | (4) Seized or damaged side bearing.   | Replace.  |

# General Diagnostic Table

DIFFERENTIALS

| Symptom or trouble  | Possible cause  | Remedy                                   |
|---|---|--|
| <b>6. Gear noises</b><br>NOTE:<br>Since noises from engine, muffler, transmission, propeller shaft, wheel bearings, tires, and body are sometimes mistaken for noises from differential assembly, be careful in checking them. Inspection methods to locate noises include coasting, accelerating, cruising, and lifting-up all four wheels. Perform these inspections according to condition of trouble. When listening to noises, shift gears into four wheel drive and fourth speed position, trying to pick up only differential noise. | (1) Improper tooth contact of hypoid gear.            | Readjust or replace the hypoid gear set. |
|   | (2) Improper backlash for hypoid gear.                | Readjust.                                |
|   | (3) Scored or chipped teeth of hypoid gear.           | Replace the hypoid gear set.             |
|   | (4) Seized hypoid gear.                               | Replace the hypoid gear set.             |
|   | (5) Improper preload for front or rear bearings.      | Readjust.                                |
|   | (6) Seized, scored, or chipped front or rear bearing. | Replace.                                 |
|   | (7) Seized, scored, or chipped side bearing.          | Replace.                                 |
|   | (8) Vibrating differential carrier.                   | Replace.                                 |

## C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.

- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply grease onto sliding or revolution surfaces before installation.
- Before installing snap rings, apply sufficient amount of grease to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.

| TOOL NAME        | REMARKS  |
|------------------|--|
| Puller           | Used for removing ball joint from knuckle arm. |
| Dial gauge       | Used for inspecting propeller shaft run-out.   |
| Snap ring pliers | Used for installing and removing snap ring.    |
| Bar              | Used for extracting drive shaft.               |

# Propeller Shaft

## DRIVE SHAFT SYSTEM

### 2. Propeller Shaft

#### A: REMOVAL

##### NOTE:

- Before removing the propeller shaft, wrap the metal parts with a cloth or rubber material.
- In case of EDJ type, before removing the propeller shaft, wrap the metal parts (installed at the rubber boot of center EDJ) with a cloth or rubber material, as shown in the figure. Rubber boot may be damaged due to interference with adjacent metal parts while bending the EDJ during removal.
- Except STI model

- STI model

- 1) Disconnect the ground cable from battery.
- 2) Move the select lever or gear shift lever to "N".
- 3) Release the parking brake.
- 4) Jack-up the vehicle and support it with sturdy racks.
- 5) Remove the center exhaust pipes.
- 6) Remove the rear exhaust pipe and muffler.
- 7) Remove the differential mount front cover.

- 8) Make matching marks on affected parts before removal.

(A) Matching mark

- 9) Remove the three bolts which hold the propeller shaft to rear differential.
- 10) Remove the remaining bolt.
- 11) Remove the two bolts which hold the center bearing to vehicle body.

- 12) Remove the propeller shaft from transmission.

##### CAUTION:

- Be careful not to damage the oil seals and frictional surface of sleeve yoke.
- Cover the center exhaust pipe with a cloth to keep off any ATF or oil spilled from transmission when removing the propeller shaft.

13) Install the extension cap to transmission.

**NOTE:**

If the extension cap is not available, place a vinyl bag over opening and fasten it with string to prevent gear oil or ATF from leaking.

(A) Extension cap

**B: INSTALLATION**

1) Insert the sleeve yoke into transmission, and then attach the center bearing to body.

**Tightening torque:**

**52 N·m (5.3 kgf-m, 38.3 ft-lb)**

2) Align the matching marks, and then connect the flange yoke and rear differential.

**Tightening torque:**

**31 N·m (3.2 kgf-m, 22.9 ft-lb)**

(A) Matching mark

3) Using new bolts, install the differential mount front cover.

- (1) Temporarily tighten the bolt (A) while pushing cover forward.
- (2) Tighten the bolt (B) to specified torque.
- (3) Tighten the bolt (A) to specified torque.
- (4) Tighten the remaining bolts to specified torque.

**Tightening torque:**

**90 N·m (9.2 kgf-m, 66 ft-lb)**

- 4) Install the center exhaust pipes.
- 5) Install the rear exhaust pipe and muffler.

**C: INSPECTION**

**NOTE:**

Do not disassemble the propeller shaft. Check the following and replace if necessary.

- 1) Tube surfaces for dents or cracks
- 2) Splines for deformation or abnormal wear
- 3) Joints for non-smooth operation or abnormal noise
- 4) Center bearing for free play, noise or non-smooth operation
- 5) Oil seals for abnormal wear or damage
- 6) Center bearing for breakage

Check the following points with propeller shaft installed in vehicle.

**1. JOINTS AND CONNECTIONS**

- 1) Remove the center exhaust pipes.
- 2) Check for any looseness of the yoke flange mounting bolts which connect to rear differential and center bearing bracket mounting bolts.

# Propeller Shaft

## DRIVE SHAFT SYSTEM

### 2. SPLINES AND BEARING LOCATIONS

- 1) Remove the center exhaust pipes.
- 2) Remove the rear exhaust pipe and muffler.
- 3) Turn the propeller shaft by hand to see if abnormal free play exists at splines. Also move the yokes to see if abnormal free play exists at spiders and bearings.

### 4. CENTER BEARING FREE PLAY

- 1) Remove the front and center exhaust pipes.
- 2) Remove the rear exhaust pipe and muffler.
- 3) Move the propeller shaft near center bearing up and down, and left and right with your hand to check for any abnormal bearing free play.

### 3. RUNOUT OF PROPELLER SHAFT

- 1) Remove the center exhaust pipes.
- 2) Remove the rear exhaust pipe and muffler.
- 3) Set the dial gauge with its indicator stem at center of propeller shaft tube.
- 4) Turn the propeller shaft slowly by hands to check for “runout” of propeller shaft.

#### **Runout:**

**Limit 0.6 mm (0.024 in)**

- (A) Propeller shaft
- (B) Dial gauge

## 3. Front Axle

### A: REMOVAL

- 1) Lift-up the vehicle and remove the front wheels.
- 2) Unlock the axle nut.

- 3) Remove the axle nut using a socket wrench while depressing the brake pedal.

#### CAUTION:

**Remove the axle nut with vehicle weight not applied on axle. Failure to follow this rule may damage the wheel bearings.**

- 4) Remove the stabilizer link.

- Sedan model

- Wagon model

- 5) Remove the disc brake caliper from housing, and suspend it from strut using a wire.

- 6) Remove the disc rotor from hub.

#### NOTE:

If the disc rotor seizes up within hub, drive disc rotor out by installing an 8-mm bolt in screw hole on rotor.

- 7) Remove the cotter pin and castle nut which secure tie-rod end to housing knuckle arm.

- (A) Cotter pin
- (B) Castle nut
- (C) Tie-rod

- 8) Using a puller, remove the tie-rod ball joint from knuckle arm.

## Front Axle

### DRIVE SHAFT SYSTEM

9) Remove the ABS wheel speed sensor assembly and harness.

10) Remove the transverse link ball joint from housing.

11) Remove the front drive shaft assembly from hub. If it is hard to remove, use the STs.

ST1 926470000 AXLE SHAFT PULLER  
ST2 28099PA110 AXLE SHAFT PULLER  
PLATE

#### CAUTION:

- Be sure to replace the differential side retainer oil seal at transmission side with a new one when removing the front drive shaft.
- Suspend the front drive shaft to vehicle body using a wire.

12) After scribing an alignment mark on the camber adjusting bolt head, remove the bolts which connect the housing and strut, and disconnect the housing from strut.

### B: INSTALLATION

- 1) Temporarily tighten the front axle to front strut.
- 2) Insert the front drive shaft into front axle.
- 3) Temporarily tighten the axle nut.
- 4) Install the transverse link ball joint to housing.

#### Tightening torque:

**50 N·m (5.1 kgf-m, 37 ft-lb)**

- 5) While aligning the alignment mark on the camber adjusting bolt head, tighten the housing and strut using a new self-locking nut.

#### Tightening torque:

**175 N·m (17.8 kgf-m, 129 ft-lb)**

- 6) Connect the tie-rod end ball joint to the knuckle arm with a castle nut.

#### Tightening torque:

**27.0 N·m (2.75 kgf-m, 19.9 ft-lb)**

#### CAUTION:

When connecting, do not hit the cap at bottom of tie-rod with hammer.

- 7) Tighten the castle nut to specified torque and tighten further within 60° until the pin hole is aligned with the slot in nut. Bend the cotter pin to lock.

- (A) Cotter pin  
(B) Castle nut  
(C) Tie-rod

- 8) Install the disc rotor on hub.

9) Install the disc brake caliper on housing.

**Tightening torque:**

**Except STI model**

**80 N·m (8.2 kgf·m, 59 ft·lb)**

**STI model**

**155 N·m (15.8 kgf·m, 114.3 ft·lb)**

10) Connect the stabilizer link.

**Tightening torque:**

**Except STI model**

**30 N·m (3.1 kgf·m, 22 ft·lb)**

**STI model**

**45 N·m (4.6 kgf·m, 33 ft·lb)**

**CAUTION:**

**Use a new self-locking nut.**

11) Using the ST1 and ST2, pull the front drive shaft into place.

ST1 922431000 AXLE SHAFT INSTALLER

ST2 927390000 ADAPTER

12) While depressing the brake pedal, tighten a new axle nut to specified torque and lock it securely.

**Tightening torque:**

**220 N·m (22.4 kgf·m, 162 ft·lb)**

**CAUTION:**

**Do not overtighten it as this may damage the wheel bearing.**

13) After tightening the axle nut, lock it securely.

14) Install the ABS wheel speed sensor on housing.

**Tightening torque:**

**33 N·m (3.4 kgf·m, 24 ft·lb)**

15) Install the wheel and tighten the wheel nuts to specified torque.

**Tightening torque:**

**90 N·m (9.1 kgf·m, 65.7 ft·lb)**

### C: DISASSEMBLY

#### 1. EXCEPT STI MODEL

1) Using the ST1, support the housing and hub securely.

2) Attach the ST2 to housing and drive the hub out.

ST1 927060000 HUB REMOVER

ST2 927080000 HUB STAND

If the inner bearing race remains in hub, remove it with a suitable tool (commercially available).

**NOTE:**

Be careful not to scratch the polished area of hub.

**CAUTION:**

**Do not reuse the bearing if the hub was removed.**

# Front Axle

## DRIVE SHAFT SYSTEM

3) Remove the disc cover from housing.

4) Using a standard screwdriver, remove the outer and inner oil seals.

5) Using a flat tip screwdriver, remove the snap ring.

**NOTE:**

Be careful not to damage the housing at removal.

6) Using the ST1, support the housing securely.

7) Using the ST2, hold the inner race to drive out the outer race of bearing.

ST1 927400000 HOUSING STAND

ST2 927100000 BEARING PULLER

8) Using the ST and a hydraulic press, drive the hub bolts out.

ST 927080000 HUB STAND

## 2. STI MODEL

1) Remove the four bolts from housing, and remove the front hub unit bearing.

(A) Housing

2) Disassemble the front hub unit bearing. <Ref. to DS-21, DISASSEMBLY, Front Axle.>

## D: ASSEMBLY

### 1. EXCEPT STI MODEL

**NOTE:**

When the hub is to be removed from housing, replace the bearing set and oil seal with new ones.

1) Attach the hub to ST securely.

ST 927080000 HUB STAND

2) Using a hydraulic press, press new hub bolts until their seating surfaces contact the hub.

**NOTE:**

Use 12 mm (0.47 in) dia. holes in HUB STAND to prevent bolts from tilting.

3) Clean dust or foreign particles from inside of housing.

4) Using the ST1 and ST2, press a new bearing into place.

ST1 927400000 HOUSING STAND  
ST2 927100000 BEARING PULLER

**NOTE:**

Be careful not to remove the plastic lock from inner race when installing the bearing.

5) Using pliers, install the snap ring firmly.

6) Using the ST1 and ST2, press the outer oil seal until it contacts the bottom of housing.

ST1 927410000 OIL SEAL INSTALLER  
ST2 927400000 HOUSING STAND

7) Using the ST1 and ST2, press the inner oil seal until it contacts the circlip.

ST1 927410000 OIL SEAL INSTALLER

ST2 927400000 HOUSING STAND

8) Invert the ST and housing.

ST 927400000 HOUSING STAND

9) Apply sufficient grease to the oil seal lip.

**Specified grease:**  
**SHELL 6459N**

**NOTE:**

- If specified grease is not available, remove the bearing grease and apply Auto Rex A instead.
- Do not mix different types of grease.

10) Install the disc cover to housing with three bolts.

**Tightening torque:**

**18 N·m (1.8 kgf·m, 13.0 ft·lb)**

11) Attach the hub to ST1 securely.

12) Clean dust or foreign particles from the polished surface of hub.

13) Using the ST2, press the bearing into hub by driving the inner race.

ST1 927080000 HUB STAND

ST2 927120000 HUB INSTALLER

### 2. STI MODEL

- 1) Assemble the front hub unit bearing. <Ref. to DS-26, ASSEMBLY, Front Hub Unit Bearing.>
- 2) Tighten the front hub unit bearing to the housing with four bolts.

**Tightening torque:**

**65 N·m (6.6 kgf·m, 47.9 ft·lb)**

(A) Housing

### E: INSPECTION

- 1) Moving the front tire up and down by hand, check there is no play in bearing, and check the wheel rotates smoothly.

- 2) Inspect the lean of axis direction using a dial gauge. Replace the hub bearing if the load range exceeds the limitation.

**Limit:**

**Maximum: 0.05 mm (0.0020 in)**

## 4. Front Hub Unit Bearing

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle and remove the front wheels.
- 3) Unlock the axle nut.

- 4) Remove the axle nut using a socket wrench while depressing the brake pedal.

#### CAUTION:

**Remove the wheel before loosening the axle nut. Failure to follow this rule may damage the wheel bearings.**

- 5) Remove the disc brake caliper from housing, and suspend it from strut using a wire.
- 6) Remove the disc rotor from hub.

#### NOTE:

If the disc rotor seizes up within hub, drive disc rotor out by installing an 8-mm bolt in screw hole on rotor.

- 7) Remove the ABS wheel speed sensor assembly and harness.

- 8) Remove four bolts from housing.

(A) Housing

- 9) Remove the front hub unit bearing. If it is hard to remove, use STs.

ST1 926470000 AXLE SHAFT PULLER  
ST2 28099PA110 AXLE SHAFT PULLER PLATE

### B: INSTALLATION

- 1) Tighten the front hub unit bearing to the housing with four bolts.

#### Tightening torque:

**65 N·m (6.6 kgf-m, 47.9 ft-lb)**

(A) Housing

- 2) Install the front drive shaft. <Ref. to DS-33, INSTALLATION, Front Drive Shaft.>
- 3) Tighten the axle nut temporarily.
- 4) Install the disc rotor on hub.
- 5) Install the disc brake caliper on the housing.

# Front Hub Unit Bearing

## DRIVE SHAFT SYSTEM

### Tightening torque:

**78 N·m (8.0 kgf·m, 57.9 ft·lb)**

6) While depressing the brake pedal, tighten a new axle nut (olive color) to specified torque and lock it securely.

### Tightening torque:

**220 N·m (22.4 kgf·m, 162 ft·lb)**

### CAUTION:

- Install the wheel after installation of the axle nut. Failure to follow this rule may damage the wheel bearing.
- Do not overtighten it as this may damage wheel bearing.

7) After tightening the axle nut, lock it securely.

8) Install the ABS wheel speed sensor on housing.

### Tightening torque:

**33 N·m (3.4 kgf·m, 24 ft·lb)**

9) Install the wheel and tighten the wheel nuts to specified torque.

### Tightening torque:

**90 N·m (9.1 kgf·m, 65.7 ft·lb)**

## C: DISASSEMBLY

Using the ST and a hydraulic press, drive hub bolts out.

ST 28399AG000 HUB STAND

### CAUTION:

- Be careful not to hammer the hub bolts. This may deform the hub.
- Do not reuse the hub bolt.

### NOTE:

Since the hub unit bearing can not be disassembled, only hub bolts can be removed.

(1) Front hub unit bearing

## D: ASSEMBLY

1) Attach the hub to ST securely.

ST 28099PA080 HUB STAND

(1) Front hub unit bearing

2) Using a press, press new hub bolts until their seating surfaces contact the hub.

### NOTE:

Use 12 mm (0.47 in) dia. holes in HUB STAND to prevent bolts from tilting.

## E: INSPECTION

Refer to "FRONT AXLE" for inspection procedures. <Ref. to DS-24, INSPECTION, Front Axle.>

### CAUTION:

If there is any fault in the bearing, replace hub unit bearing.

## 5. Rear Axle

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle, and remove the rear wheel.
- 3) Unlock the axle nut.
- 4) Remove the axle nut using a socket wrench with parking brake applied.

#### CAUTION:

**Remove the axle nut with vehicle weight not applied on axle. Failure to follow this rule may damage the wheel bearings.**

- 5) Return the parking brake lever and loosen the adjusting nut.

- (1) Parking brake lever
- (2) Lock nut
- (3) Adjusting nut

- 6) Remove the disc brake caliper from back plate, and suspend it from strut using a piece of wire.

- 7) Remove the disc rotor from hub.

#### NOTE:

If the disc rotor seizes up within hub, drive it out by installing an 8-mm bolt into bolt hole in disc rotor.

- 8) Disconnect the parking brake cable end.

- (1) Cable end

- 9) Disconnect the rear stabilizer from rear lateral link.

- 10) Remove the bolts which secure the trailing link assembly to rear housing.

- 11) Remove the bolts which secure the lateral assembly to rear housing.

# Rear Axle

## DRIVE SHAFT SYSTEM

12) Remove the rear ABS wheel speed sensor from back plate.

(1) ABS wheel speed sensor

13) Disengage the BJ from housing splines, and then remove the rear drive shaft assembly. If it is hard to remove, use the STs.

ST1 926470000 AXLE SHAFT PULLER  
ST2 28099PA110 AXLE SHAFT PULLER PLATE

### NOTE:

- Be careful not to damage the oil seal lip when removing the rear drive shaft.
- When the rear drive shaft is to be replaced, also replace the inner oil seal with a new one.

14) Remove the bolts which secure the rear housing to strut, and separate the two.

## B: INSTALLATION

- 1) Temporarily tighten the rear axle to strut.
- 2) Insert the rear drive shaft into rear axle.

### NOTE:

Be careful not to damage the inner oil seal lip.

- 3) Temporarily tighten the axle nut.
- 4) Using a new self-locking nut, temporarily tighten the rear housing assembly and lateral link assembly.

- 5) Using a new self-locking nut, temporarily tighten the rear housing assembly and trailing link assembly.

- 6) Tighten the rear housing assembly and strut assembly using a new self-locking nut.

### Tightening torque:

**200 N·m (20.0 kgf-m, 145 ft-lb)**

- 7) Using a new self-locking nut, install the rear stabilizer and rear lateral link.

### Tightening torque:

**45 N·m (4.5 kgf-m, 33.2 ft-lb)**

- 8) Connect the parking brake cable to parking brake.
- 9) Install the disc rotor on rear housing assembly.
- 10) Install the disc brake caliper on back plate.

**Tightening torque:**

**Except STI model**

**53 N·m (5.4 kgf·m, 39.1 ft·lb)**

**STI model**

**65 N·m (6.6 kgf·m, 47.9 ft·lb)**

11) Adjust the parking brake lever stroke by turning the adjuster.

12) While applying the parking brake, tighten a new axle nut using a socket wrench. Lock the axle nut after tightening.

**Tightening torque:**

**190 N·m (19.4 kgf·m, 140 ft·lb)**

**CAUTION:**

**Do not overtighten it as this may damage the wheel bearing.**

13) Install rear ABS wheel speed sensor.

(1) ABS wheel speed sensor

14) Install the wheel and tighten the wheel nuts to specified torque.

**Tightening torque:**

**90 N·m (9.1 kgf·m, 65.7 ft·lb)**

15) Make the tires contact the ground fully.

**CAUTION:**

**Make the tires contact the ground fully and the vehicle be in curb weight whenever carrying out the tightening of bushing portions.**

16) Tighten the installation bolt of rear housing assembly and lateral link assembly.

**Tightening torque:**

**140 N·m (14.3 kgf·m, 103 ft·lb)**

17) Tighten the installation bolt of rear housing assembly and trailing link assembly.

**Tightening torque:**

**90 N·m (9.2 kgf·m, 66 ft·lb)**

**C: DISASSEMBLY**

1) Using the ST1 and ST2, remove the hub from rear housing.

ST1 927080000 HUB STAND (Except STI model)

ST1 28099PA080 HUB STAND (STI model)

ST2 927420000 HUB REMOVER

2) Remove the back plate from rear housing.

3) Using a standard screwdriver, remove the outer and inner oil seals.

4) Using a flat tip screwdriver, remove the snap ring.

**NOTE:**

Be careful not to damage the housing at removal.

## Rear Axle

### DRIVE SHAFT SYSTEM

5) Using the ST1 and ST2, remove the bearing by pressing the inner race.

ST1 927430000 HOUSING STAND (Except STI model)

ST1 28099PA060 HOUSING STAND (STI model)

ST2 927440000 BEARING PULLER (Except STI model)

ST2 927100000 BEARING PULLER (STI model)

6) Remove the tone wheel bolts, and then remove the tone wheel from hub.

7) Using the ST, press the hub bolt out.

ST 927080000 HUB STAND (Except STI model)

ST 28099PA080 HUB STAND (STI model)

#### CAUTION:

**Be careful not to hammer the hub bolts. This may deform the hub.**

## D: ASSEMBLY

#### NOTE:

When the hub is to be removed from housing, replace the bearing set and oil seal with new ones.

1) Using the ST, press the new hub bolt into place.

#### NOTE:

- Ensure the hub bolt closely contacts the hub.
- Use a 12 mm (0.47 in) hole in the ST to prevent the hub bolt from tilting during installation.

ST 927080000 HUB STAND (Except STI model)

ST 28099PA080 HUB STAND (STI model)

2) Remove foreign particles (dust, rust, etc.) from mating surfaces of the hub tone wheel, and then install the tone wheel to hub.

#### NOTE:

- Ensure the tone wheel closely contacts the hub.
- Be careful not to damage the tone wheel teeth.

(1) Tone wheel

3) Clean the housing interior completely. Using the ST1 and ST2, press the bearing into housing.

ST1 927430000 HOUSING STAND (Except STI model)

ST1 28099PA060 HOUSING STAND (STI model)

ST2 927440000 BEARING PULLER (Except STI model)

ST2 927100000 BEARING PULLER (STI model)

**NOTE:**

Be careful not to remove the plastic lock from inner race when installing the bearing.

4) Using pliers, install the snap ring firmly.

(1) Pliers

5) Using the ST1 and ST2, press the outer oil seal until it comes in contact with snap ring.

- ST1 927430000 HOUSING STAND (Except STI model)
- ST1 28099PA060 HOUSING STAND (STI model)
- ST2 927460000 OIL SEAL INSTALLER (Except STI model)
- ST2 28099PA070 OIL SEAL INSTALLER (STI model)

(1) Snap ring

6) Invert both ST1 and housing.

7) Using the ST2, press the inner oil seal into housing until it touches the bottom.

- ST1 927430000 HOUSING STAND (Except STI model)
- ST1 28099PA060 HOUSING STAND (STI model)
- ST2 927460000 OIL SEAL INSTALLER (Except STI model)
- ST2 28099PA070 OIL SEAL INSTALLER (STI model)

8) Using the ST1 and ST2, press the sub seal into place.

- ST1 927430000 HOUSING STAND (Except STI model)
- ST1 28099PA060 HOUSING STAND (STI model)
- ST2 927460000 OIL SEAL INSTALLER (Except STI model)
- ST2 28099PA070 OIL SEAL INSTALLER (STI model)

9) Apply sufficient grease to oil seal lip.

**Specified grease:**  
**SHELL 6459N**

**NOTE:**

- If specified grease is not available, remove the bearing grease and apply Auto Rex A instead.
- Do not mix different types of grease.

10) Install the back plate to rear housing.

**Tightening torque:**  
**52 N·m (5.3 kgf·m, 38.3 ft·lb)**

# Rear Axle

## DRIVE SHAFT SYSTEM

11) Using the ST1 and ST2, press the bearing into hub.

ST1 927080000 HUB STAND (Except STI model)

ST1 28099PA080 HUB STAND (STI model)

ST2 927450000 HUB INSTALLER (Except STI model)

ST2 927120000 HUB INSTALLER (STI model)

(1) Back plate

## E: INSPECTION

1) Moving the rear tire up and down by hand, check there is no play in bearing, and check the wheel rotates smoothly.

2) Inspect the lean of axis direction using a dial gauge. Replace the hub bearing if the load range exceeds the limitation.

**Limit:**

**Maximum: 0.05 mm (0.0020 in)**

## 6. Front Drive Shaft

### A: REMOVAL

- 1) Jack-up the vehicle, support it with rigid racks, and then remove the front wheel cap and wheels.
- 2) Raise the caulking portion of axle nut.
- 3) Depress the brake pedal and remove the axle nut using a socket wrench.

**CAUTION:**

**Be sure to loosen the axle nut after removing the wheel from vehicle. Failure to follow this rule may damage the wheel bearings.**

- 4) Remove the stabilizer link from transverse link.
- 5) Disconnect the transverse link from housing.
- 6) Remove the front drive shaft assembly. If it is hard to remove, use the ST1 and ST2.

ST1 926470000 AXLE SHAFT PULLER  
 ST2 28099PA110 AXLE SHAFT PULLER PLATE

**CAUTION:**

- Be careful not to damage the oil seal lip and tone wheel when removing the front drive shaft.
- When the front drive shaft is to be replaced, also replace the inner oil seal.

- 7) Remove the front drive shaft from transmission using bar.

**CAUTION:**

**Be careful not to damage the holder portion.**

### B: INSTALLATION

- 1) Using the ST, replace the differential side retainer oil seal with a new one.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

**NOTE:**

After pulling out the drive shaft, be sure to replace with a new oil seal.

- 2) Insert the EBJ into hub splines.

**CAUTION:**

**Be careful not to damage the inner oil seal lip and tone wheel.**

- 3) Using the ST1 and ST2, pull the drive shaft into place.

ST1 922431000 AXLE SHAFT INSTALLER  
 ST2 927390000 ADAPTER

- 4) Tighten the axle nut temporarily.
- 5) Using the ST, install the front drive shaft to transmission.

ST 28399SA010 OIL SEAL PROTECTOR

# Front Drive Shaft

## DRIVE SHAFT SYSTEM

6) Connect the transverse link to housing.

**Tightening torque:**

**50 N·m (5.1 kgf·m, 37 ft·lb)**

7) Install the stabilizer bracket.

8) While depressing the brake pedal, tighten the axle nut to specified torque.

**Tightening torque:**

**220 N·m (22.4 kgf·m, 162 ft·lb)**

**CAUTION:**

- Always tighten the axle nut before installing wheel on vehicle. If the tire is installed and comes in contact with ground when axle nut is loose, wheel bearings may be damaged.
- Do not overtighten it as this may damage the wheel bearing.

9) After tightening the axle nut, caulk and lock it.

## C: DISASSEMBLY

### 1. EBJ+PTJ TYPE

1) Place alignment marks on shaft and outer race.

2) Remove the PTJ boot band and boot.

**CAUTION:**

**Be careful not to damage the boot.**

3) Remove the circlip from PTJ outer race using a screwdriver.

4) Remove the PTJ outer race from shaft assembly.

5) Wipe off the grease.

**CAUTION:**

**The grease is a special grease. Do not confuse with other greases.**

6) Place alignment marks on roller kit and trunnion.

7) Remove the roller kit from trunnion.

**CAUTION:**

**Be careful with the roller kit position.**

8) Place an alignment mark on trunnion and shaft.

9) Remove the snap ring and trunnion.

**CAUTION:**

**Be sure to wrap the shaft splines with vinyl tape to prevent the boot from scratches.**

10) Remove the PTJ boot.

11) Place the drive shaft in a vise between wooden blocks.

**CAUTION:**

**Do not place the drive shaft directly in a vise; use wooden block.**

12) Raise the boot band claws by means of screwdriver and hammer.

(A) Boot band claws

13) Cut and remove the boot.

**CAUTION:**

**The boot must be replaced with a new one whenever it is removed.**

**NOTE:**

Further disassembly of axle is impossible because the EBJ cannot be disassembled.

# Front Drive Shaft

## DRIVE SHAFT SYSTEM

### 2. BJ+DOJ TYPE

- 1) Straighten the bent claw of larger end of DOJ boot.
- 2) Loosen the band by means of screwdriver or pliers with care of not damaging boot.

- 3) Remove the boot band on the small end of DOJ boot in the same manner.
- 4) Remove the larger end of DOJ boot from DOJ outer race.
- 5) Pry and remove the round circlip located at neck of DOJ outer race with a screwdriver.

- 6) Take out the DOJ outer race from shaft assembly.
- 7) Wipe off the grease, and then take out the balls.

#### NOTE:

- The grease is a special grease (grease for constant velocity joint). Do not confuse with other greases.

- Disassemble with exercising care not to lose balls (6 pcs).

- (A) Outer race  
(B) Grease

- 8) To remove the cage from inner race, turn the cage by a half pitch to the track groove of inner race, and shift the cage.
- 9) Remove the snap ring, which fixes the inner race to shaft, by using pliers.
- 10) Take out the DOJ inner race.
- 11) Take off the DOJ cage from shaft and remove the DOJ boot.
- 12) Wrap the shaft splines with vinyl tape.
- 13) Remove the BJ boot in the same procedure as DOJ boot.

#### NOTE:

Further disassembly of axle is impossible because the BJ cannot be disassembled.

### D: ASSEMBLY

#### 1. EBJ+PTJ TYPE

#### NOTE:

Use specified grease.

#### EBJ side:

**NTG2218-M (Part No. 28395AG010)**

#### PTJ side:

**NKG302 (Part No. 28495AE010)**

- 1) Place the EBJ boot and small boot band on EBJ side of shaft.

#### CAUTION:

**Be sure to wrap the shaft splines with vinyl tape to prevent the boot from scratches.**

- 2) Place the drive shaft in a vise.

#### CAUTION:

**Do not place the drive shaft directly in a vise; use wooden blocks.**

- 3) Apply a coat of specified grease [60 to 70 g (2.12 to 2.47 oz)] to EBJ.

4) Apply an even coat of specified grease [20 to 30 g (0.71 to 1.06 oz)] to entire inner surface of boot. Also apply grease to shaft.

**NOTE:**

EBJ installation surface of EBJ boot shall be cleaned so as to be free from grease and other substances.

5) Install the boot projecting portion to EBJ groove.

- (A) EBJ
- (B) Large boot band
- (C) Boot

6) Set the large boot band in place.

7) Install the boot projecting portion to shaft groove.

- (A) Boot
- (B) Small boot band
- (C) Shaft

8) Tighten the boot bands using the ST, torque wrench and socket flex handle.

ST 28099AC000 BOOT BAND PLIER

- (A) Large boot band
- (B) Boot
- (C) Torque wrench
- (D) Socket flex handle
- (E) EBJ

**Tightening torque:**

**Large boot band**

**157 N·m (16.0 kgf-m, 116 ft-lb) or more**

**Small boot band**

**133 N·m (13.6 kgf-m, 98 ft-lb) or more**

9) Place the PTJ boot at the center of shaft.

10) Align the alignment marks, and then install the trunnion on shaft.

11) Install the snap ring to shaft.

**CAUTION:**

**Confirm that the snap ring is completely fitted in shaft groove.**

12) Fill 100 to 110 g (3.53 to 3.88 oz) of specified grease into the interior of PTJ outer race.

13) Apply a coat of specified grease to roller kit and trunnion.

14) Align the alignment marks on roller kit and trunnion, and then install the free ring.

# Front Drive Shaft

## DRIVE SHAFT SYSTEM

**CAUTION:**  
Be careful with the roller kit position.

15) Align the alignment marks on shaft and outer race, and then install the outer race.

16) Install the circlip in the groove on PTJ outer race.

**CAUTION:**  
Pull the shaft lightly and assure the circlip is completely fitted in groove.

17) Apply an even coat of the specified grease 30 to 40 g (1.06 to 1.41 oz) to the entire inner surface of boot.

18) Install the PTJ boot taking care not to twist it.

**CAUTION:**

- PTJ installation surface of PTJ boot shall be cleaned so as to be free from grease and other substances.

- When installing the PTJ boot, position the outer race of PTJ at center of its travel.

19) Put a new band through the clip and wind twice in alignment with band groove of boot.

20) Tighten the band by using the ST.  
ST 925091000 BAND TIGHTENING TOOL

**NOTE:**

Tighten the band until it cannot be moved by hand.

21) Tap on the clip with punch provided at the end of ST.

ST 925091000 BAND TIGHTENING TOOL

**CAUTION:**

Tap to an extent that the boot underneath is not damaged.

22) Cut off the band with an allowance of about 10 mm (0.39 in) left from clip, and bend this allowance over clip.

**CAUTION:**

Be careful so that the end of band is in close contact with clip.

23) Extend and retract the PTJ to provide equal grease coating.

## 2. BJ+DOJ TYPE

**NOTE:**

Use specified grease.

**BJ side:**

*NTG2218-M (Part No. 28395AG030)*

**DOJ side:**

*NKG205 (Part No. 28495AG010)*

1) Install the BJ boot in specified position, and fill it with 60 to 70 g (2.12 to 2.47 oz) of specified grease.

2) Place the DOJ boot at the center of shaft.

3) Wrap the shaft splines with vinyl tape.

4) Insert the DOJ cage onto shaft.

**NOTE:**

Insert the cage with cut-out portion facing the shaft end, since the cage has an orientation.

(A) Cage  
(B) Cut-out portion

5) Install the DOJ inner race on shaft, and fit the snap ring with pliers.

**NOTE:**

Confirm the snap ring is completely fitted in shaft groove.

DS-00128

6) Install the cage, which was previously fitted, to inner race fixed upon shaft.

**NOTE:**

Fit the cage with protruded part aligned with the track on inner race, and then turn by a half pitch.

(A) Inner race  
(B) Cage

7) Fill 80 to 90 g (2.82 to 3.17 oz) of specified grease into the interior of DOJ outer race.

8) Apply a coat of specified grease to cage pocket and six balls.

9) Insert six balls into cage pocket.

10) Align the outer race track and ball positions and place in the part where shaft, inner race, cage and balls are previously installed, and then fit the outer race.

(A) Outer race  
(B) Grease

11) Install the circlip in the groove on DOJ outer race.

**NOTE:**

- Assure the balls, cage and inner race are completely fitted in the outer race of DOJ.
- Exercise care not to place the matched position of circlip in ball groove of outer race.
- Pull the shaft lightly and assure that the circlip is completely fitted in groove.

DS-00125

12) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz)] to the entire inner surface of boot. Also apply grease to shaft.

13) Install the DOJ boot taking care not to twist it.

**NOTE:**

- Inside of the larger end of DOJ boot and boot groove shall be cleaned so as to be free from grease and other substances.
- When installing the DOJ boot, position the outer race of DOJ at center of its travel.

# Front Drive Shaft

## DRIVE SHAFT SYSTEM

14) Put a new band through the clip and wind twice in alignment with band groove of boot.

**NOTE:**

When tightening the boot, exercise care so that air within boot is appropriate.

15) Tighten the band using the ST.

ST 925091000 BAND TIGHTENING TOOL

**NOTE:**

Tighten the band until it cannot be moved by hand.

16) Tap on the clip with the punch provided at the end of ST.

ST 925091000 BAND TIGHTENING TOOL

**NOTE:**

Tap to an extent that the boot underneath is not damaged.

17) Cut off the band with an allowance of about 10 mm (0.39 in) left from clip, and bend this allowance over the clip.

**NOTE:**

Be careful so that the end of band is in close contact with clip.

18) Fix up the boot on BJ in the same manner.

19) Extend and retract the DOJ to provide equal grease coating.

## E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. If faulty, repair or replace.

1) DOJ (Double Offset Joint)

Check seizure, corrosion, damage, wear and excessive play.

2) PTJ (Pillow tripod Joint)

Check seizure, corrosion, damage and excessive play.

3) Shaft

Check excessive bending, twisting, damage and wear.

4) EBJ (High-efficiency compact ball fixed joint)

Check seizure, corrosion, damage and excessive play.

5) Boot

Check for wear, warping, breakage or scratches.

6) Grease

Check for discoloration or fluidity.

## 7. Rear Drive Shaft

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle, and remove the rear wheel.
- 3) Unlock the axle nut.

- 4) Remove the axle nut using a socket wrench with parking brake applied.

**CAUTION:**

Remove the axle nut with vehicle weight not applied on axle.

- 5) Disconnect the stabilizer link.
  - Except STI model

- STI model

- 6) Remove the bolt which secures the trailing link to housing.

- 7) Remove the bolts which secure the front lateral link and rear lateral link to housing.

- 8) Remove the rear ABS wheel speed sensor from back plate.

(1) ABS wheel speed sensor

- 9) Remove the rear drive shaft from rear axle. If it is hard to remove, remove the brake disk rotor using the ST1 and ST2.

- |     |            |                         |
|-----|------------|-------------------------|
| ST1 | 926470000  | AXLE SHAFT PULLER       |
| ST2 | 28099PA110 | AXLE SHAFT PULLER PLATE |

**CAUTION:**

- Do not hammer the drive shaft when removing.

# Rear Drive Shaft

## DRIVE SHAFT SYSTEM

- Do not damage the oil seal and tone wheel.

10) Remove the rear drive shaft from rear differential using the ST.

ST 28099PA100 DRIVE SHAFT REMOVER

### NOTE:

Fit the ST to the bolt (A) as shown in the figure to avoid damage on the side bearing retainer.

(A) Bolt

## B: INSTALLATION

- 1) Insert the rear drive shaft into rear axle.
- 2) Temporarily tighten the axle nut.
- 3) Install the rear drive shaft to rear differential using the ST.

ST 28099PA090 OIL SEAL PROTECTOR

4) Temporarily tighten the front lateral link and rear lateral link to housing using a new self-locking nuts.

5) Temporarily tighten the trailing link to housing using a new self-locking nut.

6) Install the stabilizer link.

### Tightening torque:

**45 N·m (4.5 kgf·m, 33.2 ft·lb)**

- Except STI model

- ST1 model

7) Install the ABS wheel speed sensor.

**Tightening torque:**

**32 N·m (3.3 kgf·m, 24 ft·lb)**

(1) ABS wheel speed sensor

8) Using the ST1 and ST2, pull the rear drive shaft into place.

- ST1 922431000 AXLE SHAFT INSTALLER
- ST2 927390000 ADAPTER

9) Tighten a new axle nut to the specified torque with parking brake applied.

**Tightening torque:**

**190 N·m (19.4 kgf·m, 140 ft·lb)**

10) Lock the axle nut.

11) Install the wheel.

**Tightening torque:**

**90 N·m (9.1 kgf·m, 65.7 ft·lb)**

12) Make the tires contact the ground fully.

**CAUTION:**

**Make the tires contact the ground fully and the vehicle be in curb weight whenever carrying out the tightening of bushing portions.**

13) Tighten the installation bolt of rear housing assembly and lateral link assembly.

**Tightening torque:**

**140 N·m (14.3 kgf·m, 103 ft·lb)**

14) Tighten the installation bolt of rear housing assembly and trailing link assembly.

**Tightening torque:**

**90 N·m (9.2 kgf·m, 66 ft·lb)**

**C: DISASSEMBLY**

- 1) Straighten the bent claw of larger end of DOJ boot.
- 2) Loosen the band by means of screwdriver or pliers with care of not damaging boot.

3) Remove the boot band on the small end of DOJ boot in the same manner.

4) Remove the larger end of DOJ boot from DOJ outer race.

# Rear Drive Shaft

## DRIVE SHAFT SYSTEM

5) Pry and remove the round circlip located at neck of DOJ outer race with a screwdriver.

6) Take out the DOJ outer race from shaft assembly.

7) Wipe off the grease, and then take out the balls.

**NOTE:**

- The grease is a special grease (grease for constant velocity joint). Do not confuse with other greases.
- Disassemble with exercising care not to lose balls (6 pcs).

- (A) Outer race  
(B) Grease

8) To remove the cage from inner race, turn the cage by a half pitch to the track groove of inner race, and shift the cage.

9) Remove the snap ring, which fixes the inner race to shaft, by using pliers.

10) Take out the DOJ inner race.

11) Take off the DOJ cage from shaft and remove the DOJ boot.

12) Wrap the shaft splines with vinyl tape.

13) Remove the EBJ boot in the same procedure as DOJ boot.

**NOTE:**

Further disassembly of axle is impossible because the EBJ cannot be disassembled.

## D: ASSEMBLY

**NOTE:**

Use specified grease.

**EBJ side:**

**NTG2218-M (Part No. 28395AG010)**

**DOJ side:**

**Except STI model**

**NKG205 (Part No. 28495AG000)**

**EDJ side:**

**STI model**

**NKG205 (Part No. 28495AG010)**

1) Install the EBJ boot in specified position, and fill it with 60 to 70 g (2.12 to 2.47 oz) of specified grease.

2) Place the DOJ boot at the center of shaft.

3) Wrap the shaft splines with vinyl tape.

4) Insert the DOJ cage onto shaft.

**NOTE:**

Insert the cage with cut-out portion facing the shaft end, since the cage has an orientation.

- (A) Cage  
(B) Cut-out portion

5) Install the DOJ inner race on shaft, and fit the snap ring with pliers.

**NOTE:**

Confirm the snap ring is completely fitted in shaft groove.

6) Install the cage, which was previously fitted, to inner race fixed upon shaft.

**NOTE:**

Fit the cage with protruded part aligned with the track on inner race, and then turn by a half pitch.

(A) Inner race  
(B) Cage

- 7) Fill 80 to 90 g (2.82 to 3.17 oz) of specified grease into the interior of DOJ outer race.
- 8) Apply a coat of specified grease to cage pocket and six balls.
- 9) Insert six balls into cage pocket.
- 10) Align the outer race track and ball positions and place in the part where shaft, inner race, cage and balls are previously installed, and then fit the outer race.

(A) Outer race  
(B) Grease

- 11) Install the circlip in the groove on DOJ outer race.

**NOTE:**

- Assure the balls, cage and inner race are completely fitted in the outer race of DOJ.
- Exercise care not to place the matched position of circlip in ball groove of outer race.

- Pull the shaft lightly and assure that the circlip is completely fitted in groove.

- 12) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz)] to the entire inner surface of boot. Also apply grease to shaft.
- 13) Install the DOJ boot taking care not to twist it.

**NOTE:**

- Inside of the larger end of DOJ boot and boot groove shall be cleaned so as to be free from grease and other substances.
- When installing the DOJ boot, position the outer race of DOJ at center of its travel.

- 14) Put a new band through the clip and wind twice in alignment with band groove of boot.

**NOTE:**

When tightening the boot, exercise care so that air within boot is appropriate.

- 15) Tighten the band using the ST.  
ST 925091000 BAND TIGHTENING TOOL

**NOTE:**

Tighten the band until it cannot be moved by hand.

- 16) Tap on the clip with the punch provided at the end of ST.  
ST 925091000 BAND TIGHTENING TOOL

# Rear Drive Shaft

## DRIVE SHAFT SYSTEM

---

### NOTE:

Tap to an extent that the boot underneath is not damaged.

17) Cut off the band with an allowance of about 10 mm (0.39 in) left from clip, and bend this allowance over the clip.

### NOTE:

Be careful so that the end of band is in close contact with clip.

18) Fix up the boot on EBJ in the same manner.

19) Extend and retract the DOJ to provide equal grease coating.

## E: INSPECTION

Check the removed parts for damage, wear, corrosion, etc. If faulty, repair or replace.

1) DOJ (Double Offset Joint)

Check seizure, corrosion, damage, wear and excessive play.

2) EDJ (High-efficiency compact double offset joint)

Check for seizure, corrosion, damage, wear or excessive play.

3) Shaft

Check excessive bending, twisting, damage and wear.

4) EBJ (High-efficiency compact ball fixed Joint)

Check seizure, corrosion, damage and excessive play.

5) Boot

Check for wear, warping, breakage or scratches.

6) Grease

Check for discoloration or fluidity.

## 8. General Diagnostic Table

### A: INSPECTION

**NOTE:**

Vibration while cruising may be caused by an unbalanced tire, improper tire inflation pressure, improper wheel alignment, etc.

| Symptom  | Possible cause                   | Corrective action   |
|--|----------------------------------|---|

**T2: 33 (3.3, 24)**

**T3: 38 (3.8, 27.5)**

### C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.

**D: PREPARATION TOOL**

**2. GENERAL TOOL**

| TOOL NAME      | REMARKS  |
|----------------|--|
| Circuit tester | Used for measuring resistance, voltage and ampere. |
| Pressure gauge | Used for measuring oil pressure.                   |
| Oscilloscope   | Used for measuring sensor.                         |
| TORX® BIT E5   | Used for removing ABSCM.                           |

# ABS Control Module and Hydraulic Control Unit (ABSCM&H/U)

ABS

## 2. ABS Control Module and Hydraulic Control Unit (ABSCM&H/U)

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake duct and air cleaner case from the engine compartment to facilitate removal of ABSCM&H/U. <Ref. to IN(H4SO)-5, REMOVAL, Air Cleaner Case.> <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.> <Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.> <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>
- 3) Use compressed air to get rid of water around the ABSCM&H/U.

#### NOTE:

Contact will be insufficient if the terminal gets wet.

- 4) Disconnect the ABSCM&H/U connector pulling up the lock lever.

#### CAUTION:

**Do not pull the harness when disconnecting connector.**

- 5) Remove the harness clip.
- 6) Disconnect the brake pipes from ABSCM&H/U.
- 7) Wrap the brake pipe using a vinyl bag not to spill the brake fluid on the vehicle body.

#### CAUTION:

**When brake fluid is attached to the vehicle body, wash it off with water and wipe the water.**

- 8) Remove the nuts and remove the ABSCM&H/U.

#### CAUTION:

- Do not drop or bump the ABSCM&H/U.
- Do not turn ABSCM&H/U upside down or place it sideways for storage.
- Be careful that no foreign objects are mixed in ABSCM&H/U.

- Be careful that no water enters inside the connectors.

- 9) Remove the ABSCM&H/U bracket.

### B: INSTALLATION

- 1) Install the ABSCM&H/U bracket.

#### Tightening torque:

**33 N·m (3.3 kgf-m, 24 ft-lb)**

- 2) Install the ABSCM&H/U aligning the groove of damper on ABSCM&H/U side with the pawl of bracket.

#### NOTE:

Check the identification mark of ABSCM&H/U.

#### Tightening torque:

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

- 3) Connect the brake pipes to their correct ABSCM&H/U connections.

#### Tightening torque:

**15 N·m (1.5 kgf-m, 10.8 ft-lb)**

- 4) Using the cable clip, secure the ABSCM&H/U harness to bracket.
- 5) Connect the connector to ABSCM&H/U.

#### NOTE:

- Be sure to remove all foreign matter from inside of the connector before connecting.
- Ensure that the ABSCM&H/U connector is securely locked.

- 6) Connect the ground cable to ABSCM&H/U, and then apply anti-corrosive wax.

- 7) Install the air cleaner case and air intake duct. <Ref. to IN(H4SO)-5, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.> <Ref. to IN(H4DOTC)-8, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4DOTC)-9, INSTALLATION, Air Intake Duct.>
- 8) Bleed air from the brake system.

## C: REPLACEMENT

### CAUTION:

- Because the seal of ABSCM cannot be replaced, do not pull or peel it with lifting up.
- Because the screw part of H/U deteriorates in every replacement procedure, do not perform the replacement more than five times on it. When the malfunction is found though the replacement that performed is less than five times, replace the H/U body.
- Use new screws for installation of ABSCM.
- When the sealing surface of ABSCM or H/U is dirty or damaged and it cannot be removed or repaired, replace it with new one.

- 1) Remove the ABSCM&H/U. <Ref. to ABS-6, REMOVAL, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
- 2) To prevent entering foreign matter and brake fluid leakage, plug the oil pressure port of ABSCM&H/U using screw plug and etc.
- 3) Set the pump motor part of removed ABSCM&H/U faces down in the vise.

### NOTE:

Before securing a part on a vice, place cushioning material such as wood blocks, aluminum plate or cloth between the part and vice.

- (1) Aluminum plate or etc.
- (2) Vise

- 4) Using TORX® BIT E5, remove the four screws of ABSCM.

### NOTE:

Always use new screws.

- 5) Slowly remove the ABSCM upward from H/U.

### NOTE:

To prevent damaging of coil part, remove the ABSCM straightly from H/U.

- 6) Ensure there are no dirt or damage on sealing surface of H/U.

### CAUTION:

- Do not clean the ABSCM & H/U with applying compressed air.
- Do not repair the damages of H/U sealing surface using file or metal scraper. To remove the sealing, use resin scraper. Do not use the chemical materials (thinner and etc.).

- 7) Position the coil of new ABSCM to align H/U valve.

- 8) To prevent deforming of ABSCM housing cover, hold the corner of ABSCM and install it to the H/U without tilting.

- 9) Using TORX® BIT E5, tighten the screws stepwise in the order of (1) through (4).

### CAUTION:

Always use new screws.

### Tightening torque:

**1.5 N·m (0.15 kgf·m, 1.1 ft·lb)**

- 10) Check that there is no foreign matter in aligning part between ABSCM and H/U.

# ABS Control Module and Hydraulic Control Unit (ABSCM&H/U)

ABS

11) Using TORX® BIT E5, tighten the screws stepwise in the order of (1) through (4) again.

### Tightening torque:

**3 N·m (0.3 kgf·m, 2.2 ft·lb)**

12) Check that there is no clearance in aligning part between ABSCM and H/U.

13) Install the ABSCM&H/U to vehicle. <Ref. to ABS-6, INSTALLATION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

## D: INSPECTION

1) Check the connected and fixed condition of connector.

2) Check specifications of the mark with ABSCM&H/U.

| Mark | Model               |
|------|---------------------|
| PK   | AT                  |
| PL   | MT (Except for STI) |
| MJ   | STI                 |

(1) Mark

## 1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

1) Lift-up the vehicle and remove the wheels.

2) Disconnect the air bleeder screws from the FL and FR caliper bodies.

3) Connect two pressure gauges to the FL and FR caliper bodies.

### CAUTION:

- Pressure gauges used exclusively for brake fluid must be used.
- Do not employ pressure gauge previously used for transmission oil pressure since the piston seal is expanded which may lead to malfunction of the brake.

### NOTE:

Wrap sealing tape around the pressure gauge.

ABS00134

4) Bleed air from the pressure gauges.

5) Perform the ABS sequence control.

<Ref. to ABS-10, ABS Sequence Control.>

6) When the hydraulic unit begins to work and first the FL side performs decompression, holding and compression, and then the FR side performs decompression, holding and compression.

7) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Also check if any irregular brake pedal tightness is felt.

|               | Front wheel  | Rear wheel   |
|---------------|--|--|
| Initial value | 3,500 kPa<br>(35 kgf/cm <sup>2</sup> , 498 psi)            | 3,500 kPa<br>(35 kgf/cm <sup>2</sup> , 498 psi)            |
| Decompressed  | 500 kPa<br>(5 kgf/cm <sup>2</sup> , 71 psi)<br>or less     | 500 kPa<br>(5 kgf/cm <sup>2</sup> , 71 psi)<br>or less     |
| Compressed    | 3,500 kPa<br>(35 kgf/cm <sup>2</sup> , 498 psi)<br>or more | 3,500 kPa<br>(35 kgf/cm <sup>2</sup> , 498 psi)<br>or more |

8) Remove the pressure gauges from FL and FR caliper bodies.

9) Remove the air bleeder screws from the RL and RR caliper bodies.

10) Connect the air bleeder screws to the FL and FR caliper bodies.

11) Connect two pressure gauges to the RL and RR caliper bodies.

12) Bleed air from the FL and FR caliper bodies.

13) Perform the ABS sequence control.

<Ref. to ABS-10, ABS Sequence Control.>

14) When the hydraulic unit begins to work, at first the RR side performs decompression, holding and compression, and then the RL side performs decompression, holding and compression.

15) Read values indicated on the pressure gauges and check if they meet the standard value.

- 16) After checking, remove the pressure gauges from caliper bodies.
- 17) Connect the air bleeder screws to RL and RR caliper bodies.
- 18) Bleed air from the brake system.

## 2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER

1) In the case of non-turbo AT model, install a spare fuse with the FWD connector in the main fuse box to simulate FWD model.

- (1) Main fuse box
- (2) FWD connector

**NOTE:**

The AWD circuit of MT and turbo AT model can not be disabled.

2) Prepare for operating the ABS sequence control.  
<Ref. to ABS-10, ABS Sequence Control.>

3) Set the front wheels or rear wheels on the brake tester and set the select lever's position at "N" range.

(1) Brake tester

- 4) Operate the brake tester.
- 5) Perform the ABS sequence control.  
<Ref. to ABS-10, ABS Sequence Control.>
- 6) Hydraulic unit begins to work; and check the following working sequence.

- (1) The FL side performs decompression, holding and compression in sequence, and subsequently the FR side repeats the cycle.
- (2) The RR side performs decompression, holding and compression in sequence, and subsequently the RL side repeats the cycle.

7) Read values indicated on the brake tester and check if the fluctuation of values, while decompressed and compressed, meet the standard values.

|               | Front wheel                              | Rear wheel                               |
|---------------|--|--|
| Initial value | 1,000 N<br>(100 kgf, 221 lbf)            | 1,000 N<br>(100 kgf, 221 lbf)            |
| Decompressed  | 500 N<br>(50 kgf, 110 lbf)<br>or less    | 500 N<br>(50 kgf, 110 lbf)<br>or less    |
| Compressed    | 1,000 N<br>(100 kgf, 221 lbf)<br>or more | 1,000 N<br>(100 kgf, 221 lbf)<br>or more |

8) After checking, also check if any irregular brake pedal tightness is felt.

## 3. ABS Sequence Control

### A: OPERATION

- 1) Under the ABS sequence control, after the hydraulic unit solenoid valve is driven, the operation of the hydraulic unit can be checked by means of the brake tester or pressure gauge.
- 2) ABS sequence control can be started by Subaru Select Monitor.

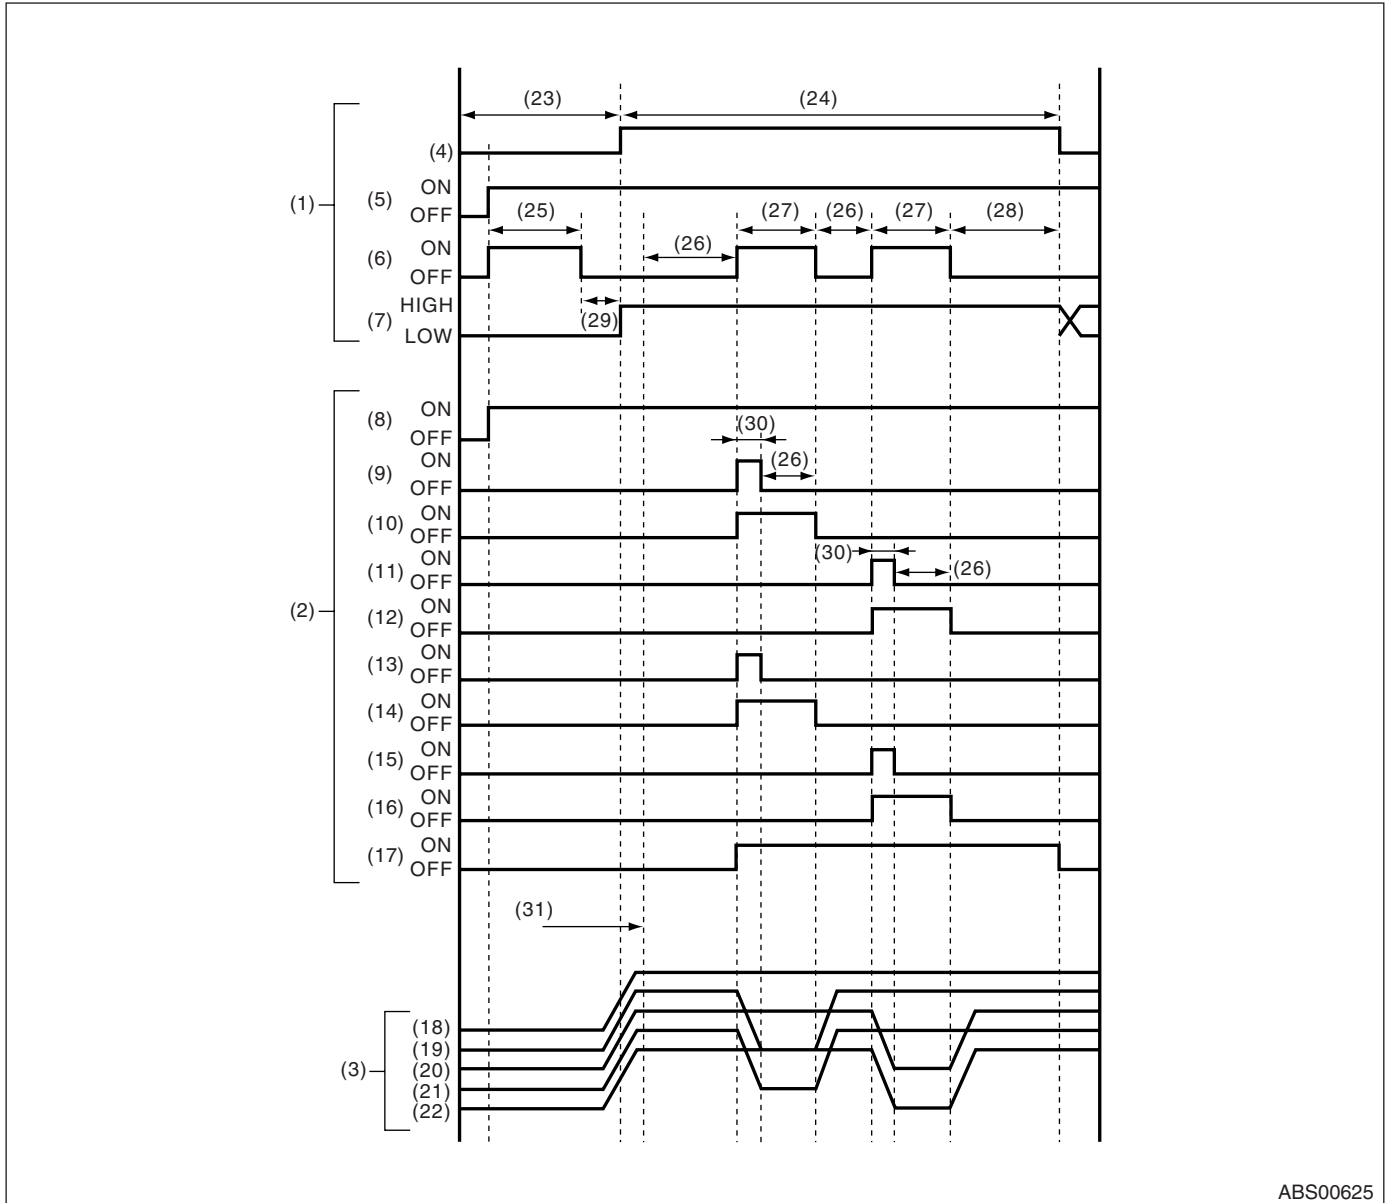

#### 1. ABS SEQUENCE CONTROL WITH SUBARU SELECT MONITOR

**NOTE:**

In the event of any trouble, the sequence control may not be operative. In such a case, perform the diagnosis. <Ref. to ABS(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

- 1) Connect the Subaru Select Monitor to data link connector under driver's seat instrument panel lower cover.
- 2) Turn the ignition switch to ON.
- 3) Turn the Subaru Select Monitor switch to ON.
- 4) Put the Subaru Select Monitor to {BRAKE CONTROL} mode.
- 5) When {Function check sequence} is selected, ABS sequence control will start.
- 6) When the message {Press Brake Pedal with braking force of 100 to 150 kgf} is displayed, perform the followings.
  - (1) When using the brake tester, depress the brake pedal with braking force of 981 N (100 kgf, 221 lbf).
  - (2) When using the pressure gauge, depress the brake pedal so as to make the pressure gauge indicate 3,432 kPa (35 kgf/cm<sup>2</sup>, 498 psi).
- 7) When the message {Press YES} is displayed, press the [YES] key.
- 8) The braking system in operation is displayed on Subaru Select Monitor.

## 2. CONDITIONS FOR ABS SEQUENCE CONTROL

- |  |  |  |
|--|--|--|
| <p>(1) Operational guide line of sequence control</p> <p>(2) Operational pattern of sequence control</p> <p>(3) Operational pressure of sequence control</p> | <p>(10) FL inlet valve</p> <p>(11) FR outlet valve</p> <p>(12) FR inlet valve</p> <p>(13) RR outlet valve</p> <p>(14) RR inlet valve</p> <p>(15) RL outlet valve</p> <p>(16) RL inlet valve</p> <p>(17) Pump motor</p> <p>(18) Pressure of master cylinder</p> <p>(19) Pressure of FL wheel cylinder</p> <p>(20) Pressure of FR wheel cylinder</p> <p>(21) Pressure of RR wheel cylinder</p> | <p>(22) Pressure of RL wheel cylinder</p> <p>(23) 4 km/h (2 MPH) or less</p> <p>(24) 10 km/h (6 MPH) or less</p> <p>(25) Approx. 2.0 seconds</p> <p>(26) 1.0 second</p> <p>(27) 1.4 seconds</p> <p>(28) 0.6 seconds</p> <p>(29) Within 0.5 seconds</p> <p>(30) 0.4 seconds</p> <p>(31) Point A</p> |
|--|--|--|

**NOTE:**

- When the Subaru Select Monitor is used, control operation starts at point A. (However, the stop light switch must be ON before point A.)
- HIGH means high voltage.
- LOW means low voltage.

## **B: SPECIFICATION**

### **1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL**

When the following conditions develop, the ABS sequence control stops and ABS operation is returned to the normal control mode.

- 1) When the speed of at least one wheel reaches 10 km/h (6 MPH).
- 2) When the brake pedal is released during sequence control and the stop light switch is set to off.
- 3) After completion of the sequence control.
- 4) When malfunction is detected.

## 4. Front ABS Wheel Speed Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the front ABS wheel speed sensor connector located next to the front strut mounting house in engine compartment. Pull the connector out from grommet hole to tire side.
- 3) Remove the bolts which secure the sensor harness to strut.

- 4) Remove the bolts which secure the sensor harness to body.

- (1) To front ABS wheel speed sensor connector
- (2) Bracket

- 5) Remove the bolts which secure the front ABS wheel speed sensor to housing, and remove the front ABS wheel speed sensor.

### CAUTION:

- Be careful not to damage the pole piece located at tip of the sensor and teeth faces during removal.

- Do not pull the sensor harness during removal.

### B: INSTALLATION

- 1) Temporarily install the front ABS wheel speed sensor on housing.

### CAUTION:

- Be careful not to strike the ABS wheel speed sensor's pole piece against tone wheel and adjacent metal parts during installation.

- 2) Install the front ABS wheel speed sensor on strut and wheel apron.

### Tightening torque:

**33 N·m (3.3 kgf-m, 24 ft-lb)**

- (1) To front ABS wheel speed sensor connector
- (2) Bracket

- 3) Check the ABS wheel speed sensor gap. <Ref. to ABS-14, SENSOR GAP, INSPECTION, Front ABS Wheel Speed Sensor.> After standard clearance is obtained, tighten the ABS wheel speed sensor on housing to specified torque.

# Front ABS Wheel Speed Sensor

ABS

If the clearance is outside specification, readjust using spacer (Part No. 26755AA000).

**ABS wheel speed sensor standard clearance:**  
**0.3 — 0.8 mm (0.012 — 0.031 in)**

**Tightening torque:**  
**33 N·m (3.3 kgf·m, 24 ft·lb)**

**NOTE:**

- Check the marks on the harness and make sure that no kink exists. (RH: White, LH: Yellow)
- Make sure the harness is not pulled and does not contact to suspension or body when steering wheel is turned.

4) After confirmation of the ABS wheel speed sensor clearance, connect the connector to ABS wheel speed sensor.

5) Connect the battery ground cable to battery.

## C: INSPECTION

### 1. ABS WHEEL SPEED SENSOR

1) Check the pole piece of ABS wheel speed sensor for foreign particles or damage. If necessary, clean the pole piece or replace ABS wheel speed sensor.

2) Measure the ABS wheel speed sensor resistance.

If the resistance is outside standard value, replace the ABS wheel speed sensor with a new one.

| Terminal No. | Standard     |
|--------------|--------------|
| 1 and 2      | 1.25±0.25 kΩ |

**NOTE:**

Check the ABS wheel speed sensor cable for discontinuity. If necessary, replace with a new one.

### 2. SENSOR GAP

1) Measure the distance “A” between ABS wheel speed sensor surface and sensor pole face.

2) Measure the distance “B” between surface where the front axle housing meets the ABS wheel speed sensor, and the tone wheel.

**NOTE:**

Measure so that the gauge touches the tone wheel teeth top.

- (1) Axle housing  
 (2) Tone wheel

3) Find the gap between the ABS wheel speed sensor pole face and the surface of the tone wheel teeth by putting the measured values in the formula below and calculating.

**ABS wheel speed sensor clearance = B – A**

**ABS wheel speed sensor standard clearance:**  
**0.3 — 0.8 mm (0.012 — 0.031 in)**

**NOTE:**

If the clearance is out of specification, readjust using spacer (Part No. 26755AA000).

## 3. OUTPUT VOLTAGE

Output voltage can be checked by the following method. Install the resistor and condenser, then rotate the wheel about 2.75 km/h (2 MPH) or equivalent.

**Output voltage specification:**  
**0.12 to 1 V (at 20 Hz)**

**NOTE:**

Regarding terminal No., please refer to item 1. ABS WHEEL SPEED SENSOR. <Ref. to ABS-14, ABS WHEEL SPEED SENSOR, INSPECTION, Front ABS Wheel Speed Sensor.>

- (1) Oscilloscope
- (2) Terminal

## D: ADJUSTMENT

Adjust the gap using spacer (Part No. 26755A000).

## 5. Rear ABS Wheel Speed Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Remove the rear seat and disconnect the rear ABS wheel speed sensor connector. Pull the connector out from grommet hole to under floor.
- 4) Remove the rear sensor harness bracket from the rear trailing link and bracket.
- 5) Remove the rear ABS wheel speed sensor from back plate.

#### CAUTION:

- Be careful not to damage the pole piece located at tip of the sensor and teeth faces during removal.
- Do not pull the sensor harness during removal.

(1) Rear ABS wheel speed sensor

- 6) Remove the rear tone wheel while removing the hub from housing and hub assembly. <Ref. to DS-27, REMOVAL, Rear Axle.>

### B: INSTALLATION

- 1) Install the rear tone wheel on hub, then rear housing on hub. <Ref. to DS-30, ASSEMBLY, Rear Axle.>
- 2) Temporarily install the rear ABS wheel speed sensor on back plate.

#### CAUTION:

Be careful not to strike the ABS wheel speed sensor's pole piece against tone wheel and adjacent metal parts during installation.

(1) Rear ABS wheel speed sensor

- 3) Install the rear drive shaft to rear housing and rear differential spindle. <Ref. to DS-28, INSTALLATION, Rear Axle.>
- 4) Install the rear sensor harness on rear trailing link.

#### Tightening torque:

**33 N·m (3.3 kgf-m, 24 ft-lb)**

(1) Rear sensor harness

(2) Trailing link

- 5) Check the ABS wheel speed sensor gap. <Ref. to ABS-17, SENSOR GAP, INSPECTION, Rear ABS Wheel Speed Sensor.> After standard clearance is obtained, tighten the ABS wheel speed sensor on back plate to specified torque. If the clearance is outside specification, readjust using spacer (Part No. 26755AA000).

#### ABS wheel speed sensor standard clearance:

**0.7 — 1.2 mm (0.028 — 0.047 in)**

#### Tightening torque:

**33 N·m (3.3 kgf-m, 24 ft-lb)**

#### NOTE:

Check the marks on the harness and make sure no kink exists. (RH: Light blue, LH: Brown)

- 6) After confirmation of the ABS wheel speed sensor clearance, connect the connector to ABS wheel speed sensor.
- 7) Connect the battery ground cable to battery.

## C: INSPECTION

### 1. ABS WHEEL SPEED SENSOR

- 1) Check the pole piece of ABS wheel speed sensor for foreign particles or damage. If necessary, clean the pole piece or replace ABS wheel speed sensor.
  - 2) Measure the ABS wheel speed sensor resistance.
- If resistance is out of standard value, replace the ABS wheel speed sensor with a new one.

| Terminal No. | Standard      |
|--------------|---------------|
| 1 and 2      | 1.15±0.115 kΩ |

**NOTE:**  
Check the ABS wheel speed sensor cable for discontinuity. If necessary, replace with a new one.

### 2. SENSOR GAP

- 1) Measure the clearance between tone wheel and ABS wheel speed sensor at whole periphery.

**NOTE:**  
If clearance is narrow, adjust by using spacer (Part No. 26755AA000).  
If clearance is wide, check the outputted voltage then replace the ABS wheel speed sensor or tone wheel if the outputted voltage is outside specification.

**ABS wheel speed sensor clearance:**  
**0.7 — 1.2 mm (0.028 — 0.047 in)**

- (1) Tone wheel
- (2) ABS wheel speed sensor
- (3) Sensor gap

### 3. OUTPUT VOLTAGE

Output voltage can be checked by the following method. Install the resistor and condenser, then rotate the wheel about 2.75 km/h (2 MPH) or equivalent.

**Output voltage specification:**  
**0.12 — 1 V (at 20 Hz)**

**NOTE:**  
Regarding terminal No., please refer to item 1. ABS WHEEL SPEED SENSOR. <Ref. to ABS-17, ABS WHEEL SPEED SENSOR, INSPECTION, Rear ABS Wheel Speed Sensor.>

- (1) Oscilloscope
- (2) Terminal

## Rear ABS Wheel Speed Sensor

ABS

---

### **D: ADJUSTMENT**

Adjust the gap using spacer (Part No. 26755AA000).

## 6. Front Tone Wheel

### A: REMOVAL

Refer to Front Drive Shaft, because front tone wheel is integrated with front drive shaft.

<Ref. to DS-33, REMOVAL, Front Drive Shaft.>

### B: INSTALLATION

Refer to Front Drive Shaft, because front tone wheel is integrated with front drive shaft.

<Ref. to DS-33, INSTALLATION, Front Drive Shaft.>

### C: INSPECTION

Visually check the tone wheel's teeth (44 pieces) for cracks or dents. If necessary, replace the tone wheel with a new one.

#### NOTE:

Tone wheel forms a unit with BJ assembly of drive shaft. Replace the BJ assembly when the tone wheel is damaged.

### 7. Rear Tone Wheel

#### **A: REMOVAL**

Refer to Rear Axle, because the rear tone wheel is installed to rear hub.

<Ref. to DS-27, REMOVAL, Rear Axle.>

#### **B: INSTALLATION**

Refer to Rear Axle, because the rear tone wheel is installed to rear hub.

<Ref. to DS-28, INSTALLATION, Rear Axle.>

#### **C: INSPECTION**

Visually check the tone wheel's teeth (44 pieces) for cracks or dents. If necessary, replace the tone wheel with a new one.

## 8. G Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console cover. <Ref. to EI-46, REMOVAL, Console Box.>
- 3) Disconnect the connector from G sensor.
- 4) Remove the G sensor from body.

#### CAUTION:

- Do not drop or bump the G sensor.
- G sensor and the bracket are integrated into one unit. Therefore, do not disassemble it.
  - Except for STI model

- STI model

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

Do not drop or bump the G sensor.

*Tightening torque:*

*18 N·m (1.8 kgf·m, 13.0 ft·lb)*

| <b>3</b> | <b>CHECK G SENSOR.</b><br>Measure the voltage between G sensor connector terminals.<br><b>Connector &amp; terminal</b><br><b>(B292) No. 2 (+) — No. 3 (-):</b>  | Go to step 4.       | Replace the G sensor. |
| <b>4</b> | <b>CHECK G SENSOR.</b><br>Measure the voltage between G sensor connector terminals.<br><b>Connector &amp; terminal</b><br><b>(B292) No. 2 (+) — No. 3 (-):</b>  | G sensor is normal. | Replace the G sensor. |
| <b>5</b> | <b>CHECK G SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the Subaru Select Monitor to data link connector.<br>3) Turn the Subaru Select Monitor into {BRAKE CONTROL} mode.<br>4) Set the display in the {Current Data Display & Save} mode.<br>5) Read the G sensor output value.                            | Go to step 6.       | Replace the G sensor. |
| <b>6</b> | <b>CHECK G SENSOR.</b><br>1) Remove the console box.<br>2) Remove the G sensor from vehicle. (Do not disconnect the connector.)<br>3) Read the Subaru Select Monitor display.   | Go to step 7.       | Replace the G sensor. |
| <b>7</b> | <b>CHECK G SENSOR.</b><br>Read the Subaru Select Monitor display.   | G sensor is normal. | Replace the G sensor. |

## 9. Yaw Rate and Lateral G Sensor

### A: REMOVAL

For removal procedure of the yaw rate & lateral G sensor, refer to "6MT" section. <Ref. to 6MT-128, REMOVAL, Yaw Rate and Lateral G Sensor.>

### B: INSTALLATION

For installation procedure of the yaw rate & lateral G sensor, refer to "6MT" section. <Ref. to 6MT-128, INSTALLATION, Yaw Rate and Lateral G Sensor.>

# Basic Diagnostic Procedure

ABS (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

**CAUTION:**

Remove foreign matters (dust, water, oil, etc.) from the ABSCM&H/U connector during removal and installation.

**NOTE:**

- To check harness for broken wires or short circuits, shake trouble spot or connector.
- Refer to “Check List for Interview”. <Ref. to ABS(diag)-4, Check List for Interview.>

| Step  | Check  | Yes                   | No   |
|---|--|-----------------------|--|
| <b>1 CHECK PRE-INSPECTION.</b><br>1) Ask the customer when and how the trouble occurred using interview checklist. <Ref. to ABS(diag)-4, Check List for Interview.><br>2) Before performing diagnostics, check the component which might affect ABS problems. <Ref. to ABS(diag)-8, INSPECTION, General Description.>   | Is the component that might influence the ABS problem normal?              | Go to step 2.         | Repair or replace each unit.   |
| <b>2 CHECK INDICATION OF DTC ON SCREEN.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the Subaru Select Monitor to data link connector.<br>3) Turn the ignition switch to ON and Subaru Select Monitor power switch to ON.<br><b>NOTE:</b><br>If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to ABS(diag)-19, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.><br>4) Read the DTC. <Ref. to ABS(diag)-24, OPERATION, Read Diagnostic Trouble Code (DTC).><br>5) Record all DTCs and Freeze Frame Data. | Is DTC displayed?  | Go to step 4.         | Go to step 3.  |
| <b>3 PERFORM THE GENERAL DIAGNOSTICS.</b><br>1) Inspect using “General Diagnostic Table”. <Ref. to ABS(diag)-77, General Diagnostic Table.><br>2) Perform clear memory mode. <Ref. to ABS(diag)-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.><br>3) Perform the inspection mode. <Ref. to ABS(diag)-25, Inspection Mode.><br>4) Read the DTC. <Ref. to ABS(diag)-16, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.><br>Check the DTC does not displayed.  | Does the ABS warning light go off after turning the ignition switch to ON? | Finish the diagnosis. | Check in accordance with “Diagnostic Procedure for ABS”. <Ref. to ABS(diag)-21, NO TROUBLE CODE, INSPECTION, Subaru Select Monitor.> |

# Basic Diagnostic Procedure

ABS (DIAGNOSTICS)

| Step   | Check             | Yes  | No                    |
|--|-------------------|--|-----------------------|
| <b>4</b><br><b>PERFORM THE DIAGNOSIS.</b><br>1) Refer to the "List of Diagnostic Trouble Code (DTC)". <Ref. to ABS(diag)-34, LIST, List of Diagnostic Trouble Code (DTC).><br>2) Fix the wrong part.<br>3) Perform clear memory mode. <Ref. to ABS(diag)-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.><br>4) Perform the inspection mode. <Ref. to ABS(diag)-25, Inspection Mode.><br>5) Read the DTC. <Ref. to ABS(diag)-16, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> | Is DTC displayed? | Repeat step 1 to 4 until DTC is not shown. | Finish the diagnosis. |

# Check List for Interview

ABS (DIAGNOSTICS)

## 2. Check List for Interview

### A: CHECK

Check the following items about the vehicle's state.

#### 1. STATE OF ABS WARNING LIGHT

|  |   |                 |      |
|--|---|-----------------|------|

| • Contents:                           |  |  |     |
| l) Others:                            |  |  |     |

## 3. General Description

### A: CAUTION

#### 1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the ABS wheel speed sensor and ABSCM&H/U.

#### CAUTION:

- Airbag system connectors are colored yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the ABS wheel speed sensor and ABSCM&H/U.

### B: INSPECTION

Before performing diagnosis, check the following items which might affect ABS problems.

#### 1. BATTERY

Measure battery voltage and check electrolyte.

**Standard voltage: 12 V or more**

**Specific gravity: More than 1.260**

#### 2. GROUND

Check the ABS ground (B302) bolt, tightening torque.

**Tightening torque:**

**13 N·m (1.3 kgf·m, 9.4 ft-lb)**

#### 3. BRAKE FLUID

- 1) Check the brake fluid level.
- 2) Check the brake fluid for leaks.

#### 4. HYDRAULIC UNIT

Check the hydraulic unit.

- With brake tester <Ref. to ABS-9, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
- Without brake tester <Ref. to ABS-8, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

#### 5. BRAKE DRAG

Check for brake drag.

#### 6. BRAKE PAD AND ROTOR

Check the brake pad and rotor.

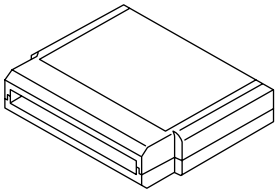

- FRONT <Ref. to BR-19, INSPECTION, Front Brake Pad.> <Ref. to BR-21, INSPECTION, Front Disc Rotor.>
- REAR <Ref. to BR-30, INSPECTION, Rear Brake Pad.> <Ref. to BR-32, INSPECTION, Rear Disc Rotor.>

#### 7. TIRE

Check the tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATION, General Description.>

**C: PREPARATION TOOL**

| (10) Front inlet solenoid valve RH                            | (21) G sensor                        |  |
| (11) Front outlet solenoid valve RH                           | (22) Front ABS wheel speed sensor LH |  |

## C: WAVEFORM

- (1) ABS wheel speed sensor
- (2) Terminal No.
- (3) Standard output voltage

## 6. Subaru Select Monitor

### A: OPERATION

#### 1. READ DIAGNOSTIC TROUBLE CODE (DTC)

1) Prepare the Subaru Select Monitor kit.

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor. <Ref. to ABS(diag)-9, SPECIAL TOOL, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector located in the lower portion of instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

#### CAUTION:

Do not connect the scan tools except for Subaru Select Monitor and general scan tool.

5) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor power switch to ON.

(1) Power switch

6) On the «Main Menu» display screen, select the {Each System Check} and press [YES] key.

7) On the «System Selection Menu» display screen, select the {Brake Control System} and press [YES] key.

8) Press the [YES] key after the information of engine type is displayed.

9) On the «ABS Diagnosis» display screen, select the {DTC Display} and press [YES] key.

10) On the «DTC Display» display screen, select the {Current DTC} or {History DTC} and press [YES] key.

#### NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

- For detailed concerning the DTC, refer to the LIST OF DTC. <Ref. to ABS(diag)-34, List of Diagnostic Trouble Code (DTC).>

- A maximum of 3 DTCs are displayed in order of occurrence.

- If a particular DTC is not properly stored in memory (due to a drop in ABSCM&H/U power supply, etc.) when a problem occurs, the DTC, followed by a question mark "?", appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.

| Display screen | Contents to be monitored   |
|----------------|--|
| Latest         | The most recent DTC appears on Subaru Select Monitor display.        |
| Old            | The second most recent DTC appears on Subaru Select Monitor display. |
| Older          | The third most recent DTC appears on Subaru Select Monitor display.  |
| Reference      | DTC issued after elapse of a specified period of time.               |

## 2. READ CURRENT DATA

- 1) On the «Main Menu» display screen, select the {Each System Check} and press «YES» key.
- 2) On the «System Selection Menu» display screen, select the {Brake Control System} and press «YES» key.
- 3) Press the «YES» key after the information of ABS type is displayed.
- 4) On the «Brake Control Diagnosis» display screen, select the {Current Data Display & Save} and press «YES» key.
- 5) On the «Data Display Menu» display screen, select the {Data Display} and press «YES» key.
- 6) Using the scroll key, move the display screen up or down until desired data is shown.
  - A list of the support data is shown in the following table.

| Display screen                 | Contents to be monitored  | Unit of measure         |
|--------------------------------|---|-------------------------|
| FR Wheel Speed                 | Wheel speed detected by Front ABS wheel speed sensor RH is displayed        | km/h or MPH             |
| FL Wheel Speed                 | Wheel speed detected by Front ABS wheel speed sensor LH is displayed        | km/h or MPH             |
| RR Wheel Speed                 | Wheel speed detected by Rear ABS wheel speed sensor RH is displayed         | km/h or MPH             |
| RL Wheel Speed                 | Wheel speed detected by Rear ABS wheel speed sensor LH is displayed         | km/h or MPH             |
| Stop Light Switch              | Stop light switch signal  | ON or OFF               |
| G Sensor Output Signal         | Vehicle acceleration detected by analog G sensor is displayed.              | m/s (m/s <sup>2</sup> ) |
| Lateral G Sensor Output Signal | Lateral G detected by Lateral G sensor is displayed in voltage. (STI model) | m/s (m/s <sup>2</sup> ) |
| Valve Relay Signal             | Valve Relay Signal  | ON or OFF               |
| ABS Warning Lamp               | ON operation of ABS warning light is displayed.                             | ON or OFF               |
| EBD Warning Light              | ON operation of EBD warning light is displayed.                             | ON or OFF               |
| Motor Relay Monitor            | Monitor voltage of motor relay is displayed.                                | V                       |
| IG power supply voltage        | Voltage supplied to ABSCM&H/U is displayed.                                 | V                       |
| ABS Control Flag               | ABS control condition is displayed.   | ON or OFF               |
| ABS OK B Signal                | ABS system normal/abnormal is displayed.                                    | ON or OFF               |

**NOTE:**

For detailed operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

## 3. CLEAR MEMORY MODE

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press «YES» key.
- 2) On the «System Select Menu» display screen, select the {Brake System} and press «YES» key.
- 3) Press the «YES» key after the information of engine type is displayed.
- 4) On the «Brake Control Diagnosis» display screen, select the {Clear Memory} and press «YES» key.

**NOTE:**

For detailed operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

| Display screen | Contents to be monitored  |
|----------------|---------------------------|
| Clear memory?  | Function of clearing DTC. |

- 5) When the “Done” and “turn ignition switch to OFF” are shown on display screen, turn the Subaru Select Monitor power switch and ignition switch to OFF.

## 4. ABS SEQUENCE CONTROL

| Display screen       | Contents to be monitored   | Index No.                               |
|----------------------|--|---|
| ABS sequence control | Perform ABS sequence control by operating valve and pump motor sequentially. | <Ref. to ABS-10, ABS Sequence Control.> |

## 5. FREEZE FRAME DATA

**NOTE:**

- Data stored at the time of trouble occurrence is shown on display.
- Each time trouble occurs, the latest information is stored in the freeze frame data in memory.
- Freeze frame data will be memorized maximum to three.
- If freeze frame data is not properly stored in memory (due to a drop in ABSCM power supply, etc.), a DTC, preceded by a question mark “?”, appears on the Subaru Select Monitor display. This shows it may be an unreliable reading.

| Display screen                  | Contents to be monitored  |
|---------------------------------|---|
| FR wheel speed                  | Wheel speed detected by Front ABS wheel speed sensor RH is displayed in km/h or mile/h. |
| FL wheel speed                  | Wheel speed detected by Front ABS wheel speed sensor LH is displayed in km/h or mile/h. |
| RR wheel speed                  | Wheel speed detected by Rear ABS wheel speed sensor RH is displayed in km/h or mile/h.  |
| RL wheel speed                  | Wheel speed detected by Rear ABS wheel speed sensor LH is displayed in km/h or mile/h.  |
| IG power voltage                | Power (in volts) supplied to ABSCM & H/U appears on the Subaru Select Monitor display.  |
| G sensor output voltage         | Voltage equivalent to vehicle acceleration detected by analog G sensor is displayed.    |
| Lateral G sensor output voltage | Voltage equivalent to Lateral G detected by analog Lateral G sensor is displayed.       |
| Motor relay monitor             | Motor relay operation monitor signal  |
| Stop light switch               | Stop light switch signal  |
| ABS operation signal            | ABS operation signal  |
| Power Supply Failure            | Occurrence of abnormal voltage during malfunction is displayed.                         |
| Vehicle speed                   | Vehicle speed is displayed.   |

## B: INSPECTION

### 1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

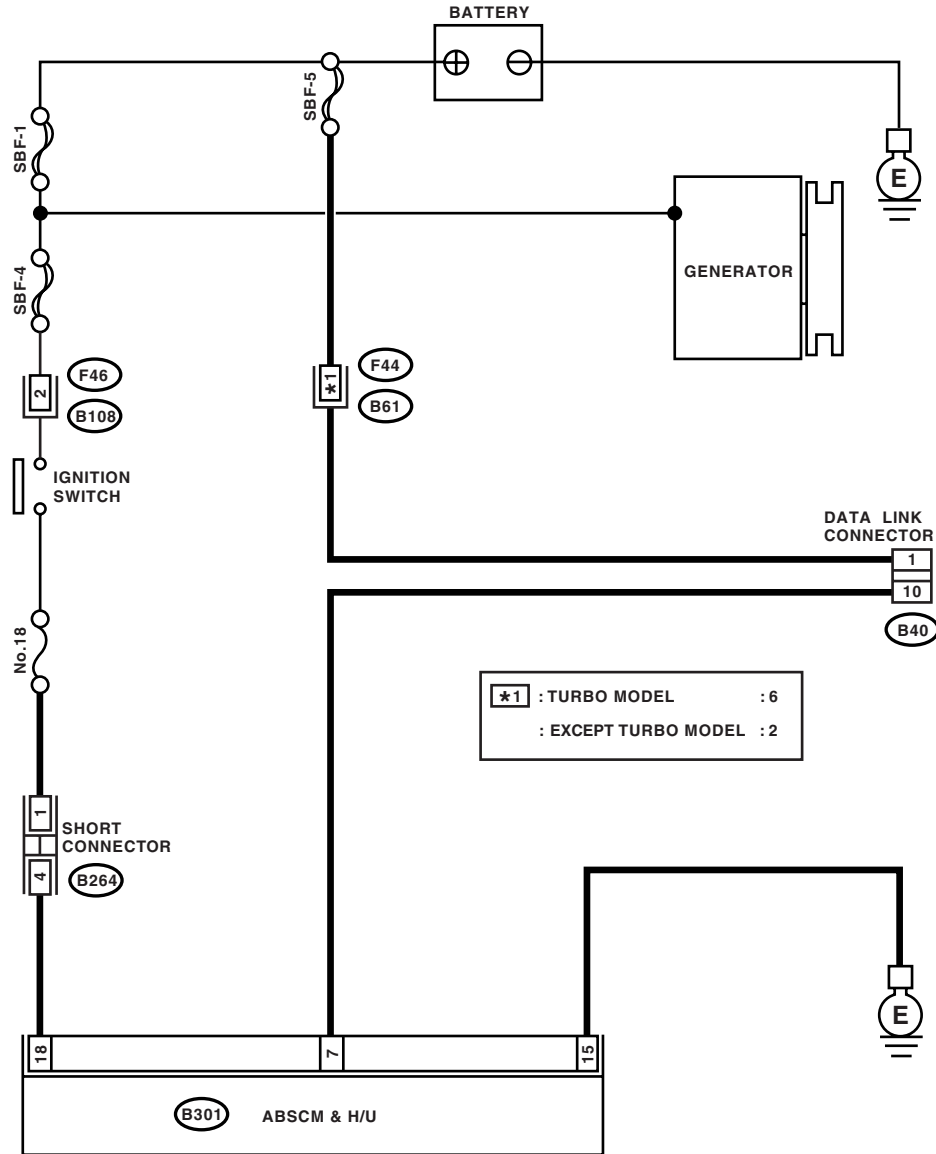

**DETECTING CONDITION:**

Faulty harness connector

**TROUBLE SYMPTOM:**

Communication cannot be executed between ABS and Subaru select monitor.

**WIRING DIAGRAM:**

# Subaru Select Monitor

## ABS (DIAGNOSTICS)

| Step     | Check   | Yes   | No  |   |
|----------|---|---|---|---|
| <b>1</b> | <b>CHECK IGNITION SWITCH.</b>   | Is the ignition switch turned to ON?  | Go to step <b>2</b> .   | Turn the ignition switch to ON, and select ABS mode using Subaru Select Monitor.      |
| <b>2</b> | <b>CHECK BATTERY.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the battery voltage.   | Is the voltage more than 11 V?  | Go to step <b>3</b> .   | Charge or replace the battery.  |
| <b>3</b> | <b>CHECK BATTERY TERMINAL.</b>  | Is there poor contact at battery terminal?  | Repair or tighten the battery terminal.   | Go to step <b>4</b> .   |
| <b>4</b> | <b>CHECK COMMUNICATION OF SUBARU SELECT MONITOR.</b><br>1) Turn the ignition switch to ON.<br>2) Using the Subaru Select Monitor, check whether communication to other system can be executed normally.   | Are the name and year of system displayed on Subaru Select Monitor?               | Go to step <b>8</b> .   | Go to step <b>5</b> .   |
| <b>5</b> | <b>CHECK COMMUNICATION OF SUBARU SELECT MONITOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the ABSCM&H/U connector.<br>3) Turn the ignition switch to ON.<br>4) Check whether communication to other systems can be executed normally.  | Are the name and year of system displayed on Subaru Select Monitor?               | Replace the ABSCM&H/U.<br><Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step <b>6</b> .   |
| <b>6</b> | <b>CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the ABSCM&H/U, ECM and TCM connectors.<br>3) Measure the resistance between data link connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B40) No. 10 — Chassis ground:</b> | Is the resistance more than 1 M $\Omega$ ?  | Go to step <b>7</b> .   | Repair the harness and connector between each control module and data link connector. |
| <b>7</b> | <b>CHECK OUTPUT SIGNAL FOR ABSCM&amp;H/U.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between ABSCM&H/U and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B40) No. 10 (+) — Chassis ground (-):</b>   | Is the voltage less than 1 V?   | Go to step <b>8</b> .   | Repair the harness and connector between each control module and data link connector. |
| <b>8</b> | <b>CHECK HARNESS/CONNECTOR BETWEEN ABSCM&amp;H/U AND DATA LINK CONNECTOR.</b><br>Measure the resistance between ABSCM&H/U connector and data link connector.<br><b>Connector &amp; terminal</b><br><b>(B301) No. 7 — (B40) No. 10:</b>  | Is the resistance less than 0.5 $\Omega$ ?  | Go to step <b>9</b> .   | Repair the harness and connector between ABSCM&H/U and data link connector.           |
| <b>9</b> | <b>CHECK INSTALLATION OF ABSCM&amp;H/U CONNECTOR.</b><br>Turn the ignition switch to OFF.   | Is the ABSCM&H/U connector inserted into ABSCM&H/U until the clamp locks onto it? | Go to step <b>10</b> .  | Insert the ABSCM&H/U connector into ABSCM&H/U.  |

| Step  | Check  | Yes                   | No   |
|---|--|-----------------------|--|
| <b>10 CHECK POWER SUPPLY CIRCUIT.</b><br>1) Turn the ignition switch to ON (engine OFF).<br>2) Measure the ignition power supply voltage between ABSCM&H/U connector and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B301) No. 18 (+) — Chassis ground (-):</i>   | Is the voltage 10 — 15 V?  | Go to step 11.        | Repair the open circuit in harness between ABSCM&H/U and battery.  |
| <b>11 CHECK HARNESS CONNECTOR BETWEEN ABSCM&amp;H/U AND CHASSIS GROUND.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ABSCM&H/U and transmission.<br>3) Measure the resistance of harness between ABSCM&H/U and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B301) No. 15 — Chassis ground:</i> | Is the resistance less than 0.5 $\Omega$ ?   | Go to step 12.        | Repair the open circuit in harness between ABSCM&H/U and inhibitor side connector, and poor contact in coupling connector. |
| <b>12 CHECK POOR CONTACT IN CONNECTORS.</b>   | Is there poor contact in control module power supply, ground line and data link connector? | Repair the connector. | Replace the ABSCM&H/U.<br><Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>                      |

## 2. NO TROUBLE CODE

### DETECTING CONDITION:

ABS warning light circuit is shorted.

### TROUBLE SYMPTOM:

- ABS warning light remains on.
- “NO TROUBLE CODE” displayed on the Subaru Select Monitor.

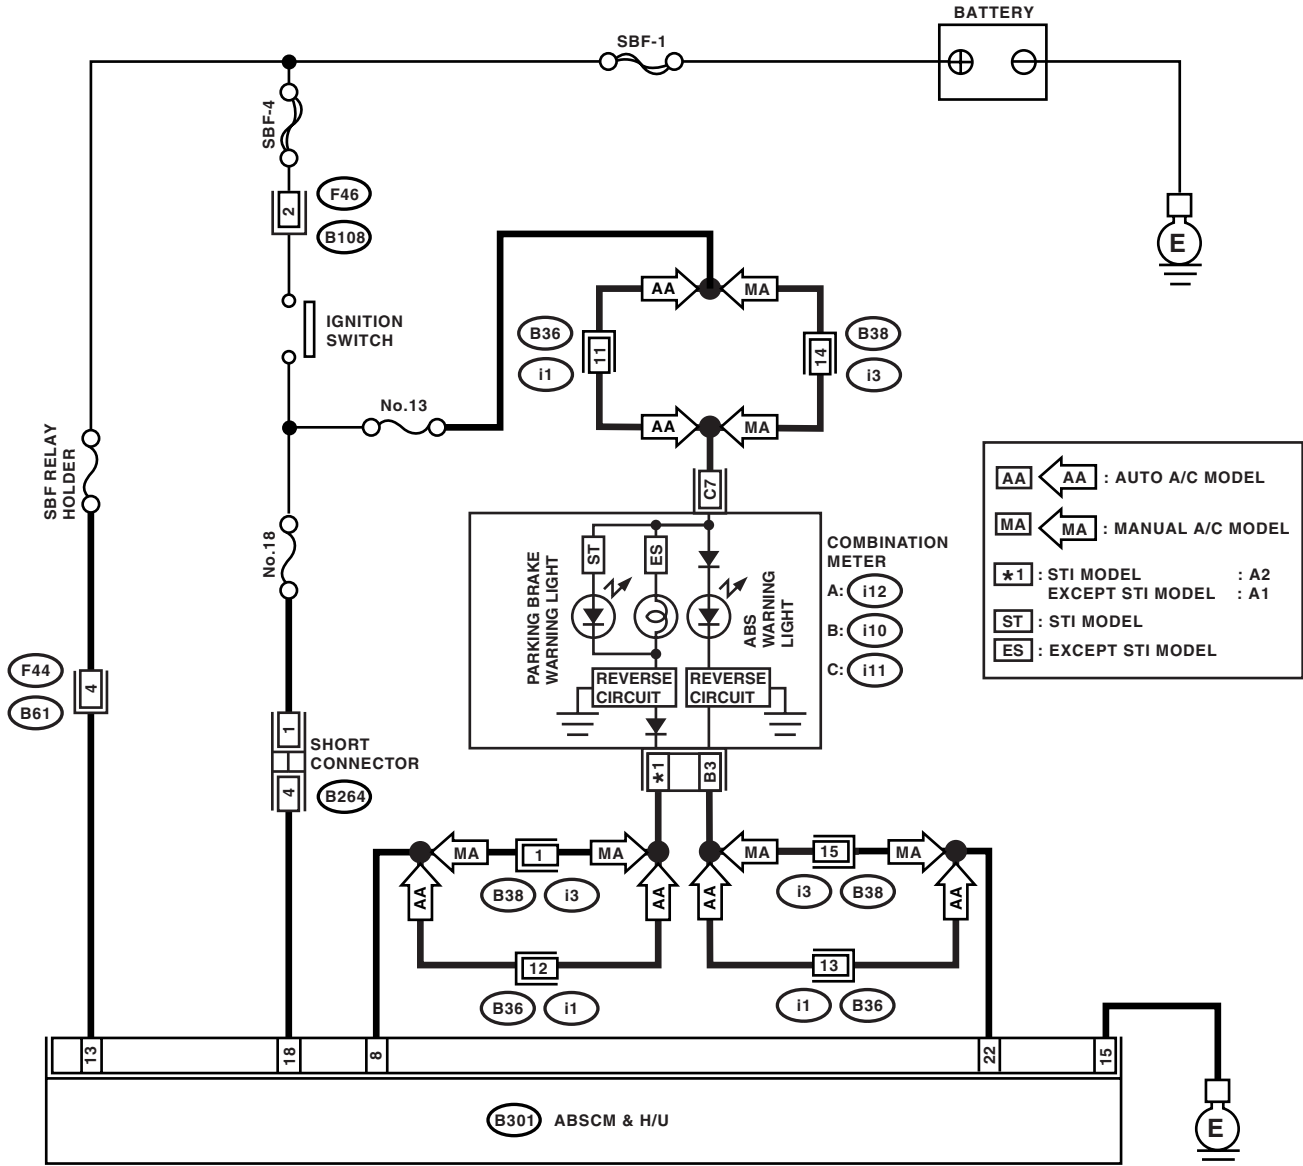

### NOTE:

When the ABS warning light is OFF and “NO TROUBLE CODE” is displayed on Subaru Select Monitor, the system is in normal condition.

|---|---|---|---|
| <b>1 DATA CHECK SUBARU SELECT MONITOR.</b><br>1) Select {Current Data Display & Save} in Subaru Select Monitor.<br>2) Read the condition of "ABS warning light".  | Is "ON" indicated?  | Replace the ABSCM only.<br><Ref. to ABS-7, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step 2.   |
| <b>2 CHECK WIRING HARNESS.</b><br>Measure the resistance between ABSCM connector and combination meter connector.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(i10) No. 3 — (B301) No. 22:</b></i> | Is the resistance less than 0.5 Ω?  | Go to step 3.   | Repair harness and connector between ABSCM&H/U and combination meter connector. |
| <b>3 CHECK POOR CONTACT IN CONNECTOR.</b>   | Is there poor contact in ABSCM connector and combination meter connector? | Repair the connector.   | Check the combination meter.  |

## Read Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

---

### 7. Read Diagnostic Trouble Code (DTC)

#### A: OPERATION

Refer to SUBARU SELECT MONITOR for details about reading of DTCs. <Ref. to ABS(diag)-16, Subaru Select Monitor.>

## 8. Inspection Mode

### A: PROCEDURE

Reproduce the condition under which the problem has occurred as much as possible.

Drive the vehicle at a speed more than 40 km/h (25 MPH) for at least 1 minute.

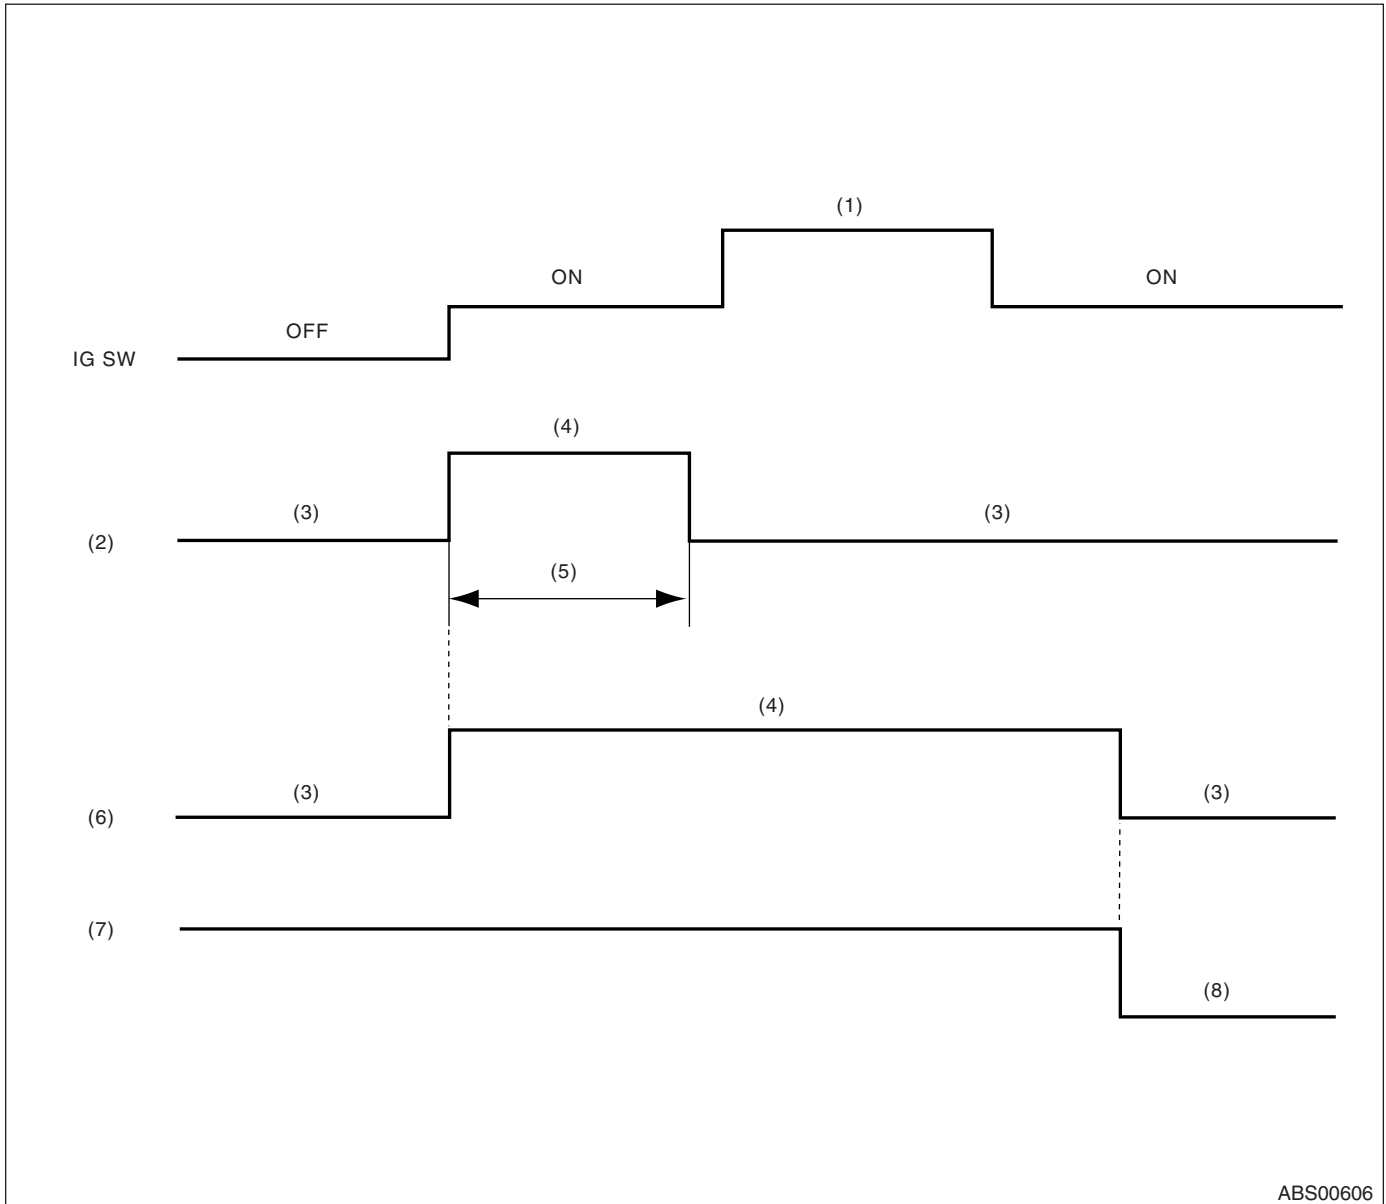

### **9. Clear Memory Mode**

#### **A: OPERATION**

Refer to SUBARU SELECT MONITOR for details about how to clear DTC. <Ref. to ABS(diag)-16, Subaru Select Monitor.>

## 10.ABS Warning Light/Brake Warning Light Illumination Pattern

### A: INSPECTION

ABS00606

- |                       |   |                   |
|-----------------------|---|-------------------|
| (1) Start             | (4) Illuminates                             | (7) Parking brake |
| (2) ABS warning light | (5) About 2 sec.                            | (8) Release       |
| (3) Goes out          | (6) Brake warning light (EBD warning light) |                   |

1) When the ABS warning light does not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.

2) When the ABS warning light remains constantly OFF, repair the ABS warning light circuit or diagnosis circuit.

**NOTE:**

Even though the ABS warning light does not go out about 2 seconds after it illuminates, the ABS system operates normally when the warning light goes out while driving at approx. 12 km/h (7 MPH). However, the Anti-lock brakes do not work while ABS warning light is illuminated.

# ABS Warning Light/Brake Warning Light Illumination Pattern

ABS (DIAGNOSTICS)

## B: ABS WARNING LIGHT DOES NOT COME ON

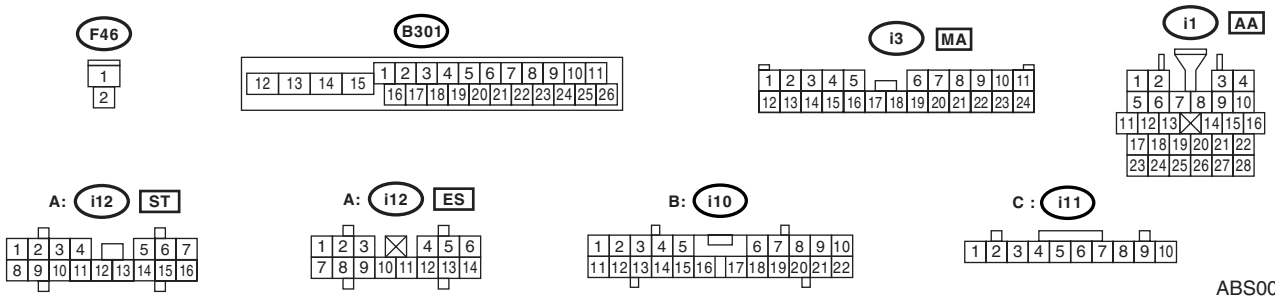

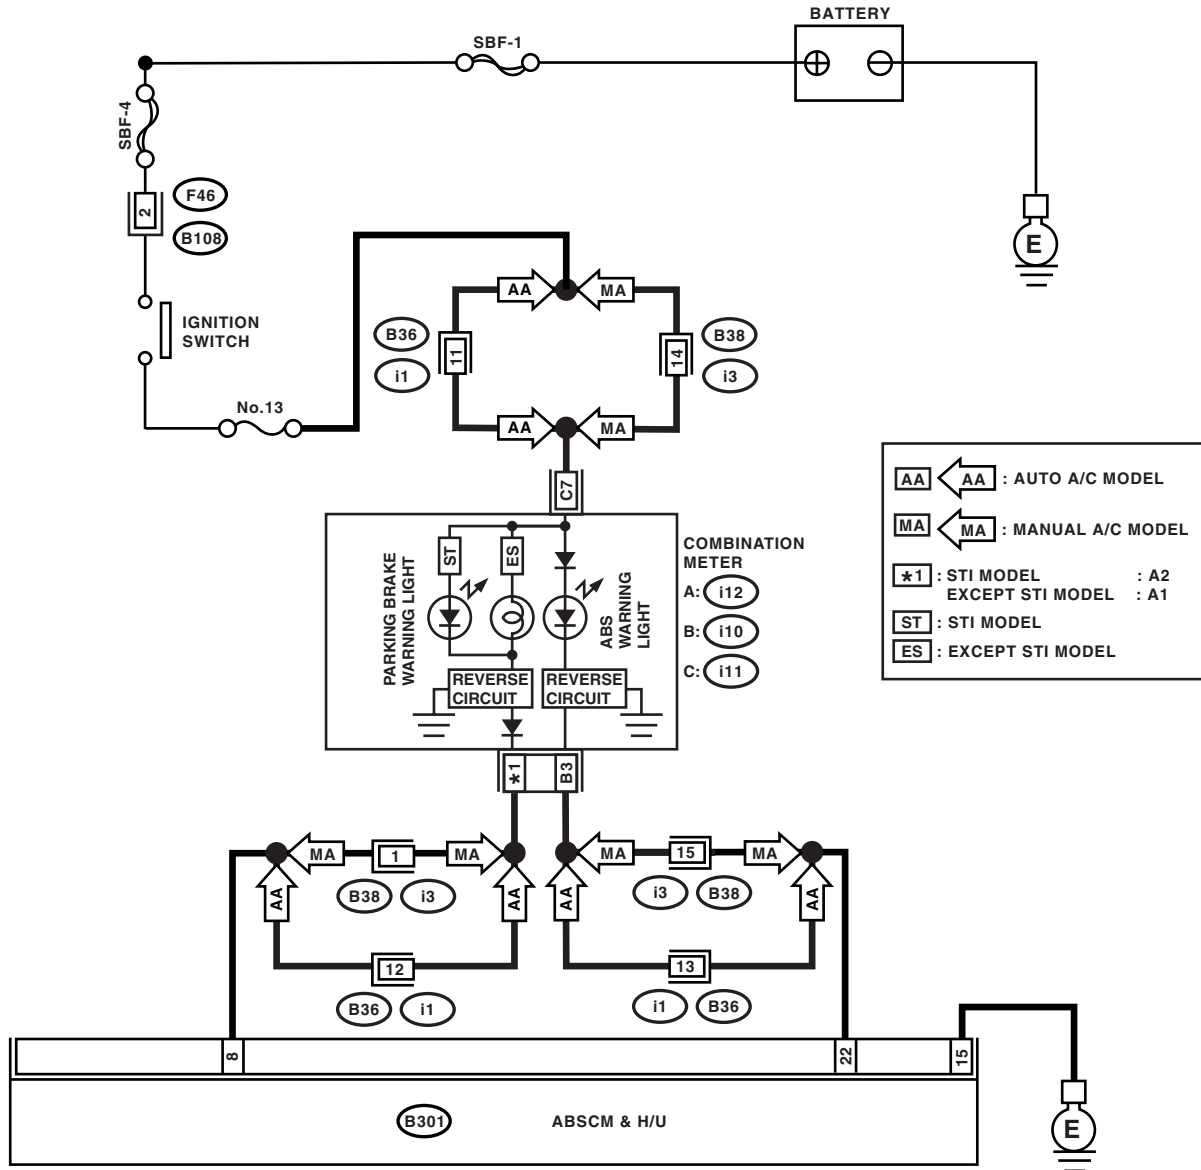

### DETECTING CONDITION:

- Defective combination meter
- Defective harness

### TROUBLE SYMPTOM:

When the ignition switch is turned to ON (engine OFF), ABS warning light does not come on.

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

---

### 12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### **A: DTC 21 OPEN OR SHORT CIRCUIT IN FRONT RIGHT ABS WHEEL SPEED SENSOR CIRCUIT**

NOTE:

For the diagnostic procedure, refer to DTC 27. <Ref. to ABS(diag)-37, DTC 27 OPEN OR SHORT CIRCUIT IN REAR LEFT ABS WHEEL SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

#### **B: DTC 23 OPEN OR SHORT CIRCUIT IN FRONT LEFT ABS WHEEL SPEED SENSOR CIRCUIT**

NOTE:

For the diagnostic procedure, refer to DTC 27. <Ref. to ABS(diag)-37, DTC 27 OPEN OR SHORT CIRCUIT IN REAR LEFT ABS WHEEL SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

#### **C: DTC 25 OPEN OR SHORT CIRCUIT IN REAR RIGHT ABS WHEEL SPEED SENSOR CIRCUIT**

NOTE:

For the diagnostic procedure, refer to DTC 27. <Ref. to ABS(diag)-37, DTC 27 OPEN OR SHORT CIRCUIT IN REAR LEFT ABS WHEEL SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

## D: DTC 27 OPEN OR SHORT CIRCUIT IN REAR LEFT ABS WHEEL SPEED SENSOR CIRCUIT

### DIAGNOSIS:

- Faulty ABS wheel speed sensor (Broken wire, input voltage too high)
- Faulty harness connector

### TROUBLE SYMPTOM:

ABS does not operate.

### WIRING DIAGRAM:

ABS00607

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ABS (DIAGNOSTICS)

| Step | Check   | Yes   | No  |  |
|------|---|---|---|--|
| 1    | <b>CHECK OUTPUT OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.</b><br>1) Select "Current data display & Save" on the Subaru Select Monitor.<br>2) Read the ABS wheel speed sensor output corresponding to faulty system in the Subaru Select Monitor data display mode. | Does the speed indicated on display change in response to speedometer reading during acceleration/deceleration when the steering wheel is in straight-ahead position? | Go to step 2.   | Go to step 8.  |
| 2    | <b>CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.</b>  | Are the ABS wheel speed sensor installation bolts tightened 33 N·m (3.3 kgf-m, 24 ft-lb)?   | Go to step 3.   | Tighten the ABS wheel speed sensor installation bolts securely.  |
| 3    | <b>CHECK ABS WHEEL SPEED SENSOR GAP.</b><br>Measure the tone wheel to ABS wheel speed sensor piece gap over entire perimeter of the wheel.  | Is the gap as following value?<br>Front wheel: 0.3 — 0.8 mm (0.012 — 0.031 in)<br>Rear wheel: 0.7 — 1.2 mm (0.028 — 0.047 in)   | Go to step 4.   | Adjust the gap.<br>NOTE:<br>Adjust the gap using spacers (Part No. 26755AA000). If the spacers cannot correct gap, replace worn sensor or worn tone wheel. |
| 4    | <b>CHECK TONE WHEEL RUNOUT.</b><br>Measure the tone wheel runout.   | Is the runout less than 0.05 mm (0.0020 in)?  | Go to step 5.   | Replace the tone wheel. Front: <Ref. to ABS-19, Front Tone Wheel.><br>Rear: <Ref. to ABS-20, Rear Tone Wheel.>   |
| 5    | <b>CHECK POOR CONTACT IN CONNECTORS.</b><br>Turn the ignition switch to OFF.  | Is there poor contact in connectors between ABSCM&H/U and ABS wheel speed sensor?   | Repair the connector.   | Go to step 6.  |
| 6    | <b>CHECK ABSCM&amp;H/U.</b><br>1) Connect all connectors.<br>2) Erase the memory.<br>3) Perform the inspection mode.<br>4) Read out the DTC.  | Is the same DTC as in the current diagnosis still being output?   | Replace the ABSCM&H/U.<br><Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step 7.  |
| 7    | <b>CHECK ANY OTHER DTC APPEARANCE.</b>  | Are other DTCs being output?  | Proceed with the diagnosis corresponding to DTC.  | A temporary poor contact.<br>NOTE:<br>Check the harness and connectors between ABSCM&H/U and ABS wheel speed sensor.                                       |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ABS (DIAGNOSTICS)

| Step     | Check   | Yes   | No  |  |
|----------|---|---|---|--|
| <b>1</b> | <b>CHECK OUTPUT OF ABS WHEEL SPEED SENSOR USING SUBARU SELECT MONITOR.</b><br>1) Select "Current data display & Save" on the Subaru Select Monitor.<br>2) Read the ABS wheel speed sensor output corresponding to faulty system in the Subaru Select Monitor data display mode. | Does the speed indicated on display change in response to speedometer reading during acceleration/deceleration when the steering wheel is in straight-ahead position? | Go to step 2.   | Go to step 7.  |
| <b>2</b> | <b>CHECK POOR CONTACT IN CONNECTORS.</b><br>Turn the ignition switch to OFF.  | Is there poor contact in connectors between ABSCM&H/U and ABS wheel speed sensor?   | Repair the connector.   | Go to step 3.  |
| <b>3</b> | <b>CHECK SOURCES OF SIGNAL NOISE.</b>   | Is the car telephone or wireless transmitter properly installed?  | Go to step 4.   | Properly install the car telephone or wireless transmitter.  |
| <b>4</b> | <b>CHECK SOURCES OF SIGNAL NOISE.</b>   | Are noise sources (such as an antenna) installed near the sensor harness?   | Install the noise sources apart from sensor harness.  | Go to step 5.  |
| <b>5</b> | <b>CHECK ABSCM&amp;H/U.</b><br>1) Connect all connectors.<br>2) Erase the memory.<br>3) Perform the inspection mode.<br>4) Read out the DTC.  | Is the same DTC as in the current diagnosis still being output?   | Replace the ABSCM&H/U.<br><Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step 6.  |
| <b>6</b> | <b>CHECK ANY OTHER DTC APPEARANCE.</b>  | Are other DTCs being output?  | Proceed with the diagnosis corresponding to DTC.  | A temporary noise interference.  |
| <b>7</b> | <b>CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.</b>  | Are the ABS wheel speed sensor installation bolts tightened 33 N·m (3.3 kgf-m, 24 ft-lb)?   | Go to step 8.   | Tighten the ABS wheel speed sensor installation bolts securely.  |
| <b>8</b> | <b>CHECK ABS WHEEL SPEED SENSOR GAP.</b><br>Measure the tone wheel to ABS wheel speed sensor piece gap over entire perimeter of wheel.  | Is the gap as following value?<br>Front wheel: 0.3 — 0.8 mm (0.012 — 0.031 in) Rear wheel: 0.7 — 1.2 mm (0.028 — 0.047 in)  | Go to step 9.   | Adjust the gap.<br>NOTE:<br>Adjust the gap using spacer (Part No. 26755AA000).<br>If the spacers cannot correct gap, replace worn sensor or worn tone wheel. |
| <b>9</b> | <b>PREPARE OSCILLOSCOPE.</b>  | Is an oscilloscope available?   | Go to step 10.  | Go to step 11.   |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

| Step   | Check   | Yes   | No   |
|--|---|---|--|
| <b>10 CHECK ABS WHEEL SPEED SENSOR SIGNAL.</b><br>1) Raise all four wheels off ground.<br>2) Turn the ignition switch to OFF.<br>3) Connect the oscilloscope to the connector.<br>4) Turn the ignition switch to ON.<br>5) Rotate the wheels and measure voltage at specified frequency. <Ref. to ABS(diag)-15, WAVEFORM, Control Module I/O Signal.><br><br><b>NOTE:</b><br>When this inspection is completed, the ABS&H/U sometimes stores DTC 29 or DTC 56.<br><br><i>Connector &amp; terminal</i><br><b>DTC 22</b><br>(B15) No. 1 (+) — No. 2 (-):<br><b>DTC 24</b><br>(B62) No. 20 (+) — No. 24 (-):<br><b>DTC 26</b><br>(B99) No. 10 (+) — No. 9 (-):<br><b>DTC 28</b><br>(B99) No. 5 (+) — No. 4 (-): | Is the waveform pattern on oscilloscope as shown in the figure?                                 | Go to step 14.                                  | Go to step 11.   |
| <b>11 CHECK CONTAMINATION OF ABS WHEEL SPEED SENSOR OR TONE WHEEL.</b><br>Remove the disc rotor or drum from hub in accordance with DTC.   | Is the ABS wheel speed sensor piece or tone wheel contaminated by dirt or other foreign matter? | Thoroughly remove dirt or other foreign matter. | Go to step 12.   |
| <b>12 CHECK DAMAGE OF ABS WHEEL SPEED SENSOR OR TONE WHEEL.</b>  | Are there broken or damaged in the ABS wheel speed sensor piece or tone wheel?                  | Go to step 13.                                  | Replace the ABS wheel speed sensor or tone wheel.<br>Front: <Ref. to ABS-13, Front ABS Wheel Speed Sensor.> Rear: <Ref. to ABS-16, Rear ABS Wheel Speed Sensor.> and Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.> |
| <b>13 CHECK TONE WHEEL RUNOUT.</b><br>Measure the tone wheel runout.   | Is the runout less than 0.05 mm (0.0020 in)?  | Go to step 14.                                  | Replace the tone wheel. Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>  |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ABS (DIAGNOSTICS)

| Step  | Check  | Yes                   | No  |
|---|--|-----------------------|---|
| <b>14 CHECK RESISTANCE OF ABS WHEEL SPEED SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ABS wheel speed sensor.<br>3) Measure the resistance between ABS wheel speed sensor connector terminals while shaking the harness lightly.<br><b>Terminals</b><br><i>Front RH No. 1 — No. 2:</i><br><i>Front LH No. 1 — No. 2:</i><br><i>Rear RH No. 1 — No. 2:</i><br><i>Rear LH No. 1 — No. 2:</i>   | Is the resistance as following value? Front: 1 — 1.5 k $\Omega$ Rear: 1.025 — 1.265 k $\Omega$ | Go to step 15.        | Replace the ABS wheel speed sensor. Front: <Ref. to ABS-13, Front ABS Wheel Speed Sensor.> Rear: <Ref. to ABS-16, Rear ABS Wheel Speed Sensor.> |
| <b>15 CHECK GROUND SHORT OF ABS WHEEL SPEED SENSOR.</b><br>Measure the resistance between ABS wheel speed sensor and chassis ground.<br><b>Terminals</b><br><i>Front RH No. 1 — Chassis ground:</i><br><i>Front LH No. 1 — Chassis ground:</i><br><i>Rear RH No. 1 — Chassis ground:</i><br><i>Rear LH No. 1 — Chassis ground:</i>  | Is the resistance more than 1 M $\Omega$ ?   | Go to step 16.        | Replace the ABS wheel speed sensor. Front: <Ref. to ABS-13, Front ABS Wheel Speed Sensor.> Rear: <Ref. to ABS-16, Rear ABS Wheel Speed Sensor.> |
| <b>16 CHECK HARNESS/CONNECTOR BETWEEN ABSCM&amp;H/U AND ABS WHEEL SPEED SENSOR.</b><br>1) Connect the connector to ABS wheel speed sensor.<br>2) Disconnect the connector from ABSCM&H/U.<br>3) Measure the resistance at ABSCM&H/U connector terminals.<br><b>Connector &amp; terminal</b><br><b>DTC 22</b><br><i>(B301) No. 6 — No. 5:</i><br><b>DTC 24</b><br><i>(B301) No. 1 — No. 16:</i><br><b>DTC 26</b><br><i>(B301) No. 19 — No. 4:</i><br><b>DTC 28</b><br><i>(B301) No. 3 — No. 2:</i> | Is the resistance as following value? Front: 1 — 1.5 k $\Omega$ Rear: 1.025 — 1.265 k $\Omega$ | Go to step 17.        | Repair the harness/connector between ABSCM&H/U and ABS wheel speed sensor.  |
| <b>17 CHECK GROUND SHORT OF HARNESS.</b><br>Measure the resistance between ABSCM&H/U connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>DTC 22</b><br><i>(B301) No. 6 — Chassis ground:</i><br><b>DTC 24</b><br><i>(B301) No. 1 — Chassis ground:</i><br><b>DTC 26</b><br><i>(B301) No. 19 — Chassis ground:</i><br><b>DTC 28</b><br><i>(B301) No. 3 — Chassis ground:</i>  | Is the resistance more than 1 M $\Omega$ ?   | Go to step 18.        | Repair the harness/connector between ABSCM&H/U and ABS wheel speed sensor.  |
| <b>18 CHECK GROUND CIRCUIT OF ABSCM&amp;H/U.</b><br>Measure the resistance between ABSCM&H/U and chassis ground.<br><b>Connector &amp; terminal</b><br><i>(B301) No. 15 — Chassis ground:</i>   | Is the resistance less than 0.5 $\Omega$ ?   | Go to step 19.        | Repair the ABSCM&H/U ground harness.  |
| <b>19 CHECK POOR CONTACT IN CONNECTORS.</b>   | Is there poor contact in connectors between ABSCM&H/U and ABS wheel speed sensor?              | Repair the connector. | Go to step 20.  |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

| Step      | Check  | Yes   | No  |   |
|-----------|--|---|---|---|
| <b>20</b> | <b>CHECK SOURCES OF SIGNAL NOISE.</b>  | Is the car telephone or the wireless transmitter properly installed?      | Go to step <b>21</b> .  | Properly install the car telephone or wireless transmitter.   |
| <b>21</b> | <b>CHECK SOURCES OF SIGNAL NOISE.</b>  | Are noise sources (such as an antenna) installed near the sensor harness? | Install the noise sources apart from sensor harness.  | Go to step <b>22</b> .  |
| <b>22</b> | <b>CHECK ABSCM&amp;H/U.</b><br>1) Connect all connectors.<br>2) Erase the memory.<br>3) Perform the inspection mode.<br>4) Read out the DTC. | Is the same DTC as in the current diagnosis still being output?           | Replace the ABSCM&H/U.<br><Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step <b>23</b> .  |
| <b>23</b> | <b>CHECK ANY OTHER DTC APPEARANCE.</b>   | Are other DTCs being output?  | Proceed with the diagnosis corresponding to DTC.  | A temporary noise interference.<br><br>NOTE:<br>Although the ABS warning light remains illuminating at this point, this is a normal condition. Vehicle must be driven at approx. 12 km/h (7.46 MPH) or faster to turn off ABS warning light. Make sure that the ABS warning light goes off after driving vehicle. |

## I: DTC 29 ABNORMAL ABS WHEEL SPEED SENSOR SIGNAL ON ANY ONE OF FOUR SENSOR

### DIAGNOSIS:

- Faulty ABS wheel speed sensor signal (noise, irregular signal, etc.)
- Faulty tone wheel
- Wheels turning freely for a long time

### TROUBLE SYMPTOM:

- ABS does not operate.
- EBD does not operate.

### NOTE:

In addition to the ABS warning light, brake warning light illuminates.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

## WIRING DIAGRAM:

ABS00607

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

| Step     | Check   | Yes   | No   |  |
|----------|---|---|--|--|
| <b>1</b> | <b>CHECK IF THE WHEELS HAVE TURNED FREELY FOR A LONG TIME.</b>  | Is the wheels have been turned freely for more than one minute, such as when vehicle is jacked-up, under full-lock cornering or the tires not in contact with road surface? | The ABS is normal. Erase the DTC.<br><b>NOTE:</b><br>When the wheels turn freely for a long time, such as when vehicle is towed or jacked-up, or when steering wheel is continuously turned all way, this DTC may sometimes occur. | Go to step 2.  |
| <b>2</b> | <b>CHECK TIRE SPECIFICATIONS.</b><br>Turn the ignition switch to OFF.   | Are the tire specifications correct?  | Go to step 3.  | Replace the tire.  |
| <b>3</b> | <b>CHECK WEAR OF TIRE.</b>  | Is the tire worn excessively?   | Replace the tire.  | Go to step 4.  |
| <b>4</b> | <b>CHECK TIRE PRESSURE.</b>   | Is the tire pressure correct?   | Go to step 5.  | Adjust the tire pressure.  |
| <b>5</b> | <b>CHECK INSTALLATION OF ABS WHEEL SPEED SENSOR.</b>  | Are the ABS wheel speed sensor installation bolts tightened 33 N·m (3.3 kgf·m, 24 ft·lb)?   | Go to step 6.  | Tighten the ABS wheel speed sensor installation bolts securely.  |
| <b>6</b> | <b>CHECK ABS WHEEL SPEED SENSOR GAP.</b><br>Measure the tone wheel to ABS wheel speed sensor piece gap over entire perimeter of the wheel.  | Is the gap as following value?<br>Front wheel: 0.3 — 0.8 mm (0.012 — 0.031 in) Rear wheel: 0.7 — 1.2 mm (0.028 — 0.047 in)  | Go to step 7.  | Adjust the gap.<br><b>NOTE:</b><br>Adjust the gap using spacer (Part No. 26755AA000). If the spacers cannot correct gap, replace worn sensor or worn tone wheel. |
| <b>7</b> | <b>PREPARE OSCILLOSCOPE.</b>  | Is an oscilloscope available?   | Go to step 8.  | Go to step 9.  |
| <b>8</b> | <b>CHECK ABS WHEEL SPEED SENSOR SIGNAL.</b><br>1) Raise all four wheels off ground.<br>2) Turn the ignition switch to OFF.<br>3) Connect the oscilloscope to the connector.<br>4) Turn the ignition switch to ON.<br>5) Rotate the wheels and measure voltage at specified frequency. <Ref. to ABS(diag)-15, WAVEFORM, Control Module I/O Signal.><br><b>NOTE:</b><br>When this inspection is completed, ABSCM&H/U sometimes stores the DTC 29.<br><br><b>Connector &amp; terminal</b><br><b>Front RH</b><br>(B15) No. 1 (+) — No. 2 (-):<br><b>Front LH</b><br>(B62) No. 20 (+) — No. 24 (-):<br><b>Rear RH</b><br>(B99) No. 10 (+) — No. 9 (-):<br><b>Rear LH</b><br>(B99) No. 5 (+) — No. 4 (-): | Is the waveform pattern on oscilloscope as shown in the figure?   | Go to step 12.   | Go to step 9.  |
| <b>9</b> | <b>CHECK CONTAMINATION OF ABS WHEEL SPEED SENSOR OR TONE WHEEL.</b><br>Remove the disc rotor or drum from hub.  | Is the ABS wheel speed sensor piece or tone wheel contaminated by dirt or other foreign matter?   | Thoroughly remove dirt or other foreign matter.  | Go to step 10.   |

| Step      | Check   | Yes  | No   |   |
|-----------|---|--|--|---|
| <b>10</b> | <b>CHECK DAMAGE OF ABS WHEEL SPEED SENSOR OR TONE WHEEL.</b>  | Are there broken or damaged teeth in the ABS wheel speed sensor piece or tone wheel? | Replace the ABS wheel speed sensor or tone wheel.<br>Front: <Ref. to ABS-13, Front ABS Wheel Speed Sensor.> Rear: <Ref. to ABS-16, Rear ABS Wheel Speed Sensor.> and Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.> | Go to step <b>11</b> .  |
| <b>11</b> | <b>CHECK TONE WHEEL RUNOUT.</b><br>Measure the tone wheel runout.   | Is the runout less than 0.05 mm (0.0020 in)?   | Go to step <b>12</b> .   | Replace the tone wheel. Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.> |
| <b>12</b> | <b>CHECK ABSCM&amp;H/U.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect all connectors.<br>3) Erase the memory.<br>4) Perform the inspection mode.<br>5) Read out the DTC. | Is the same DTC as in the current diagnosis still being output?                      | Replace the ABSCM&H/U.<br><Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>  | Go to step <b>13</b> .  |
| <b>13</b> | <b>CHECK ANY OTHER DTC APPEARANCE.</b>  | Are other DTCs being output?   | Proceed with the diagnosis corresponding to DTC.   | A temporary poor contact.   |

## **J: DTC 31 FRONT RIGHT INLET VALVE MALFUNCTION**

**NOTE:**

For the diagnostic procedure, refer to DTC 37. <Ref. to ABS(diag)-51, DTC 37 REAR LEFT INLET VALVE MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

## **K: DTC 33 FRONT LEFT INLET VALVE MALFUNCTION**

**NOTE:**

For the diagnostic procedure, refer to DTC 37. <Ref. to ABS(diag)-51, DTC 37 REAR LEFT INLET VALVE MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

## **L: DTC 35 REAR RIGHT INLET VALVE MALFUNCTION**

**NOTE:**

For the diagnostic procedure, refer to DTC 37. <Ref. to ABS(diag)-51, DTC 37 REAR LEFT INLET VALVE MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

## **M: DTC 37 REAR LEFT INLET VALVE MALFUNCTION**

**DIAGNOSIS:**

- Faulty harness/connector
- Faulty inlet solenoid valve

**TROUBLE SYMPTOM:**

- ABS does not operate.
- EBD does not operate.

**NOTE:**

In addition to the ABS warning light, brake warning light illuminates.

| <b>1 CHECK GROUND CIRCUIT OF ABSCM&amp;H/U.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ABSCM&H/U.<br>3) Measure the resistance between ABSCM&H/U and chassis ground.<br><i>Connector &amp; terminal<br/>(B301) No. 15 — Chassis ground:</i> | Is the resistance less than 0.5 Ω?  | Go to step 2.   | Repair the ABSCM&H/U ground harness.                        |
| <b>2 CHECK POOR CONTACT IN CONNECTORS.</b>  | Is there poor contact in connectors between battery, ignition switch and ABSCM&H/U? | Repair the connector.   | Go to step 3.   |
| <b>3 CHECK SOURCES OF SIGNAL NOISE.</b>   | Is the car telephone or wireless transmitter properly installed?                    | Go to step 4.   | Properly install the car telephone or wireless transmitter. |
| <b>4 CHECK SOURCES OF SIGNAL NOISE.</b>   | Are noise sources (such as an antenna) installed near the sensor harness?           | Install the noise sources apart from sensor harness.  | Go to step 5.   |
| <b>5 CHECK ABSCM&amp;H/U.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect all connectors.<br>3) Erase the memory.<br>4) Perform the inspection mode.<br>5) Read out the DTC.   | Is the same DTC as in current diagnosis still being output?                         | Replace the ABSCM&H/U.<br><Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step 6.   |
| <b>6 CHECK ANY OTHER DTC APPEARANCE.</b>  | Are other DTCs being output?  | Proceed with the diagnosis corresponding to DTC.  | A temporary poor contact.                                   |

## S: DTC 42 POWER VOLTAGE MALFUNCTION

### DIAGNOSIS:

Power voltage of the ABSCM&H/U is too low or too high.

### TROUBLE SYMPTOM:

- ABS does not operate.
- EBD may not operate.

### NOTE:

If EBD does not operate, brake warning light comes on as well as ABS warning light. Both warning lights go off if voltage returns.

| <b>1 CHECK INPUT VOLTAGE OF ABSCM&amp;H/U.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ABSCM&H/U.<br>3) Turn the ignition switch to ON.<br>4) Measure the voltage between ABSCM&H/U connector and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B301) No. 13 (+) — Chassis ground (-):</b></i> | Is the voltage 10 — 15 V?  | Go to step 2.  | Repair the harness/connector between battery and ABSCM&H/U and check fuse SBF8.                    |
| <b>2 CHECK GROUND CIRCUIT OF MOTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between ABSCM&H/U connector and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B301) No. 12 — Chassis ground:</b></i>  | Is the resistance less than 0.5 $\Omega$ ?   | Go to step 3.  | Repair the ABSCM&H/U ground harness.   |
| <b>3 CHECK INPUT VOLTAGE OF ABSCM&amp;H/U.</b><br>1) Run the engine at idle.<br>2) Measure the voltage between ABSCM&H/U connector and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B301) No. 18 (+) — Chassis ground (-):</b></i>   | Is the voltage 10 — 15 V?  | Go to step 4.  | Repair the harness connector between battery, ignition switch and ABSCM&H/U.                       |
| <b>4 CHECK GROUND CIRCUIT OF ABSCM&amp;H/U.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between ABSCM&H/U connector and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B301) No. 15 — Chassis ground:</b></i>  | Is the resistance less than 0.5 $\Omega$ ?   | Go to step 5.  | Repair the ABSCM&H/U ground harness.   |
| <b>5 CHECK MOTOR OPERATION.</b><br>Operate the sequence control. <Ref. to ABS-10, ABS Sequence Control.><br><br>NOTE:<br>Use the diagnosis connector to operate sequence control.   | Can motor revolution noise (buzz) be heard when carrying out the sequence control? | Go to step 6.  | Replace the ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> |
| <b>6 CHECK POOR CONTACT IN CONNECTORS.</b><br>Turn the ignition switch to OFF.  | Is there poor contact in connector between generator, battery and ABSCM&H/U?       | Repair the connector.  | Go to step 7.  |
| <b>7 CHECK ABSCM&amp;H/U.</b><br>1) Connect all connectors.<br>2) Erase the memory.<br>3) Perform the inspection mode.<br>4) Read out the DTC.  | Is the same DTC as in current diagnosis still being output?                        | Replace the ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step 8.  |
| <b>8 CHECK ANY OTHER DTC APPEARANCE.</b>  | Are other DTCs being output?   | Proceed with the diagnosis corresponding to DTC.   | A temporary poor contact.  |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

## W: DTC 54 STOP LIGHT SWITCH SIGNAL CIRCUIT MALFUNCTION

### DIAGNOSIS:

Faulty stop light switch

### WIRING DIAGRAM:

ABS00573

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ABS (DIAGNOSTICS)

| Step  | Check   | Yes   | No  |
|---|---|---|---|
| <b>1 CHECK OUTPUT OF STOP LIGHT SWITCH USING SUBARU SELECT MONITOR.</b><br>1) Select "Current data display & Save" on the Subaru Select Monitor.<br>2) Release the brake pedal.<br>3) Read the stop light switch signal in Subaru Select Monitor data display.  | Is "OFF" indicated?   | Go to step 2.   | Go to step 3.   |
| <b>2 CHECK OUTPUT OF STOP LIGHT SWITCH USING SUBARU SELECT MONITOR.</b><br>1) Depress the brake pedal.<br>2) Read the stop light switch signal in Subaru Select Monitor data display.   | Is "ON" indicated?  | Go to step 5.   | Go to step 3.   |
| <b>3 CHECK IF STOP LIGHTS COME ON.</b><br>Depress the brake pedal.  | Do the stop lights turn on?   | Go to step 4.   | Repair the stop lights circuit.                                       |
| <b>4 CHECK OPEN CIRCUIT IN HARNESS.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ABSCM&H/U.<br>3) Depress the brake pedal.<br>4) Measure the voltage between ABSCM&H/U connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B301) No. 20 (+) — Chassis ground (-):</b> | Is the voltage 10 — 15 V?   | Go to step 5.   | Repair the harness between stop light switch and ABSCM&H/U connector. |
| <b>5 CHECK POOR CONTACT IN CONNECTORS.</b>  | Is there poor contact in connector between stop light switch and ABSCM&H/U? | Go to step 6.   | Repair the connector.   |
| <b>6 CHECK ABSCM&amp;H/U.</b><br>1) Connect all connectors.<br>2) Erase the memory.<br>3) Perform the inspection mode.<br>4) Read out the DTC.  | Is the same DTC as in current diagnosis still being output?                 | Replace the ABSCM&H/U.<br><Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step 7.   |
| <b>7 CHECK ANY OTHER DTC APPEARANCE.</b>  | Are other DTCs being output?  | Proceed with the diagnosis corresponding to DTC.  | A temporary poor contact.   |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

## X: DTC 56 FAULTY G SENSOR OUTPUT VOLTAGE OR OUTPUT SIGNAL

### DIAGNOSIS:

Faulty G sensor

### TROUBLE SYMPTOM:

ABS does not operate.

### WIRING DIAGRAM:

ABS00574

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

| Step     | Check  | Yes   | No   |
|----------|--|---|--|
| <b>1</b> | <b>WHETHER A WHEEL TURNED FREELY OR NOT.</b>   | ABS is normal.<br>Erase the memory.   | Go to step 2.  |
| <b>2</b> | <b>CHECK OUTPUT OF G SENSOR USING SUBARU SELECT MONITOR.</b><br>1) Select {Current Data Display & Save} in Subaru Select Monitor.<br>2) Read the G sensor output on Subaru Select Monitor.   | Is the reading indicated on display -1.2 — 1.2 m/s when G sensor is horizontal? | Go to step 3.  |
| <b>3</b> | <b>CHECK POOR CONTACT IN CONNECTORS.</b>   | Is there poor contact in connector between ABSCM&H/U and G sensor?              | Repair the connector.<br>Go to step 4.   |
| <b>4</b> | <b>CHECK ABSCM&amp;H/U.</b><br>1) Connect all connectors.<br>2) Erase the memory.<br>3) Perform the inspection mode.<br>4) Read out the DTC.   | Is the same DTC still displayed?  | Replace the ABSCM only.<br><Ref. to ABS-7, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).><br>Go to step 5.                               |
| <b>5</b> | <b>CHECK ANY OTHER DTC ON DISPLAY.</b>   | Is any other DTC displayed?   | Inspect the DTC using "List of Diagnostic Trouble Code (DTC)".<br><Ref. to ABS(diag)-34, List of Diagnostic Trouble Code (DTC).><br>Temporary poor contact occurs. |
| <b>6</b> | <b>CHECK INPUT VOLTAGE OF G SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the console box.<br>3) Remove the G sensor from vehicle. (Do not disconnect connector.)<br>4) Turn the ignition switch to ON.<br>5) Measure the voltage between G sensor connector terminals.<br><b>Connector &amp; terminal</b><br><b>(B292) No. 1 (+) — No. 3 (-):</b> | Is the voltage 4.75 — 5.25 V?   | Go to step 7.<br>Repair the harness connector between G sensor and ABSCM&H/U.  |
| <b>7</b> | <b>CHECK OPEN CIRCUIT IN G SENSOR OUTPUT HARNESS AND GROUND HARNESS.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ABSCM&H/U.<br>3) Measure the resistance between ABSCM&H/U connector terminals.<br><b>Connector &amp; terminal</b><br><b>(B301) No. 21 — No. 10:</b>  | Is the resistance 3.6 — 3.8 kΩ?   | Go to step 8.<br>Repair the harness connector between G sensor and ABSCM&H/U.  |
| <b>8</b> | <b>CHECK GROUND SHORT IN G SENSOR OUTPUT HARNESS.</b><br>1) Disconnect the connector from G sensor.<br>2) Measure the resistance between ABSCM&H/U connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B301) No. 21 — Chassis ground:</b>  | Is the resistance more than 1 MΩ?   | Go to step 9.<br>Repair the harness/connector between G sensor and ABSCM&H/U.  |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

| Step   | Check   | Yes   | No  |
|--|---|---|---|
| <b>9 CHECK G SENSOR.</b><br>1) Connect the connector to G sensor.<br>2) Connect the connector to ABSCM&H/U.<br>3) Turn the ignition switch to ON.<br>4) Measure the voltage between G sensor connector terminals.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B292) No. 2 (+) — No. 3 (-):</b></i> | Is the voltage 2.1 — 2.5 V when G sensor is on a level?               | Go to step 10.  | Replace the G sensor. <Ref. to ABS-21, G Sensor.> |
| <b>10 CHECK G SENSOR.</b><br>Measure the voltage between G sensor connector terminals.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B292) No. 2 (+) — No. 3 (-):</b></i>  | Is the voltage 3.6 — 4.1 V when G sensor is inclined forwards to 90°? | Go to step 11.  | Replace the G sensor. <Ref. to ABS-21, G Sensor.> |
| <b>11 CHECK G SENSOR.</b><br>Measure the voltage between G sensor connector terminals.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B292) No. 2 (+) — No. 3 (-):</b></i>  | Is the voltage 0.5 — 1.0 V when G sensor is inclined backward to 90°? | Go to step 12.  | Replace the G sensor. <Ref. to ABS-21, G Sensor.> |
| <b>12 CHECK POOR CONTACT IN CONNECTOR.</b><br>Turn the ignition switch to OFF.   | Is there poor contact in connector between ABSCM&H/U and G sensor?    | Repair the connector.   | Go to step 13.                                    |
| <b>13 CHECK ABSCM&amp;H/U.</b><br>1) Connect all the connectors.<br>2) Erase the memory.<br>3) Perform the inspection mode.<br>4) Read the DTC.  | Is the same DTC still displayed?                                      | Replace the ABSCM only. <Ref. to ABS-7, REPLACEMENT, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>              | Go to step 14.                                    |
| <b>14 CHECK ANY OTHER DTC.</b>   | Is any other DTC displayed?   | Inspect the DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to ABS(diag)-34, List of Diagnostic Trouble Code (DTC).> | Temporary poor contact.                           |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

## Y: DTC 73 LATERAL G SENSOR OUTPUT VOLTAGE OR OUTPUT SIGNAL MALFUNCTION

### DIAGNOSIS:

Faulty Lateral G sensor

### TROUBLE SYMPTOM:

ABS does not operate.

### WIRING DIAGRAM:

ABS01124

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

| Step     | Check   | Yes  | No   |
|----------|---|--|--|
| <b>1</b> | <b>CHECK ALL FOUR WHEELS FOR FREE TURNING.</b>  | The ABS is normal. Erase the DTC.  | Go to step 2.  |
| <b>2</b> | <b>CHECK OUTPUT OF YAW RATE &amp; LATERAL G SENSOR USING SUBARU SELECT MONITOR.</b><br>1) Select "Current data display & Save" on the Subaru Select Monitor.<br>2) Read the Subaru Select Monitor display.  | Go to step 3.  | Go to step 8.  |
| <b>3</b> | <b>CHECK OUTPUT OF YAW RATE &amp; LATERAL G SENSOR USING SUBARU SELECT MONITOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the console box.<br>3) Remove the yaw rate & lateral G sensor from vehicle. (Do not disconnect the connector.)<br>4) Turn the ignition switch to ON.<br>5) Select "Current data display & Save" on the Subaru Select Monitor.<br>6) Read the Subaru Select Monitor display. | Go to step 4.  | Replace the yaw rate & lateral G sensor. <Ref. to 6MT-128, Yaw Rate and Lateral G Sensor.> |
| <b>4</b> | <b>CHECK OUTPUT OF YAW RATE &amp; LATERAL G SENSOR USING SUBARU SELECT MONITOR.</b><br>Read the Subaru Select Monitor display.  | Go to step 5.  | Replace the yaw rate & lateral G sensor. <Ref. to 6MT-128, Yaw Rate and Lateral G Sensor.> |
| <b>5</b> | <b>CHECK POOR CONTACT IN CONNECTORS.</b><br>Turn the ignition switch to OFF.  | Repair the connector.  | Go to step 6.  |
| <b>6</b> | <b>CHECK ABSCM&amp;H/U.</b><br>1) Connect all connectors.<br>2) Erase the memory.<br>3) Perform the inspection mode.<br>4) Read out the DTC.  | Replace the ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step 7.  |
| <b>7</b> | <b>CHECK ANY OTHER DTC APPEARANCE.</b>  | Proceed with the diagnosis corresponding to DTC.   | A temporary poor contact.  |
| <b>8</b> | <b>CHECK OPEN CIRCUIT IN YAW RATE &amp; LATERAL G SENSOR OUTPUT HARNESS AND GROUND HARNESS.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from driver's control center differential control module.<br>3) Measure the resistance between driver's control center differential control module connector terminals.<br><b>Connector &amp; terminal</b><br><b>(B380) No. 1 — No. 11:</b>   | Go to step 9.  | Repair the harness/connector between yaw rate & lateral G sensor and ABSCM&H/U.            |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ABS (DIAGNOSTICS)

| Step   | Check  | Yes  | No  |
|--|--|--|---|
| <b>9 CHECK GROUND SHORT OF HARNESS.</b><br>Measure the resistance between ABSCM&H/U connector and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B380) No. 11 — Chassis ground:</b></i>   | Is the resistance more than 1 MΩ?  | Go to step 10.   | Repair the harness between yaw rate & lateral G sensor and driver's control center differential control module. Replace the driver's control center differential control module.<br><Ref. to 6MT-129, Driver's Control Center Differential Control Module.> |
| <b>10 CHECK YAW RATE &amp; LATERAL G SENSOR.</b><br>1) Remove the console box.<br>2) Remove the yaw rate & lateral G sensor from vehicle.<br>3) Connect the connector to yaw rate & lateral G sensor.<br>4) Connect the connector to ABSCM&H/U.<br>5) Turn the ignition switch to ON.<br>6) Measure the voltage between yaw rate & lateral G sensor connector terminals.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B230) No. 5 (+) — (B230) No. 6 (-):</b></i> | Is the voltage 2.1 — 2.5 V when yaw rate & lateral G sensor is in horizontal position? | Go to step 11.   | Replace the yaw rate & lateral G sensor. <Ref. to 6MT-128, Yaw Rate and Lateral G Sensor.>  |
| <b>11 CHECK YAW RATE &amp; LATERAL G SENSOR.</b><br>Measure the voltage between yaw rate & lateral G sensor connector terminals.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B230) No. 5 (+) — (B230) No. 6 (-):</b></i>   | Is the voltage 3.3 — 3.7 V when yaw rate & lateral G sensor is inclined right to 90°?  | Go to step 12.   | Replace the lateral G sensor. <Ref. to 6MT-128, Yaw Rate and Lateral G Sensor.>   |
| <b>12 CHECK YAW RATE &amp; LATERAL G SENSOR.</b><br>Measure the voltage between yaw rate & lateral G sensor connector terminals.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B230) No. 5 (+) — (B230) No. 6 (-):</b></i>   | Is the voltage 0.5 — 0.9 V when yaw rate & lateral G sensor is inclined left to 90°?   | Go to step 13.   | Replace the lateral G sensor. <Ref. to 6MT-128, Yaw Rate and Lateral G Sensor.>   |
| <b>13 CHECK ABSCM&amp;H/U.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect all connectors.<br>3) Erase the memory.<br>4) Perform the inspection mode.<br>5) Read out the DTC.   | Is the same DTC as in current diagnosis still being output?                            | Replace the ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> | Go to step 14.  |
| <b>14 CHECK ANY OTHER DTC APPEARANCE.</b>  | Are other DTCs being output?   | Proceed with the diagnosis corresponding to DTC.   | A temporary poor contact.   |

## 13. General Diagnostic Table

### A: INSPECTION

| Symptom   |                                | Probable faulty units/parts  |
|---|--------------------------------|--|
| Vehicle instability during braking                          | Vehicle pulls to either side.  | <ul style="list-style-type: none"> <li>• ABSCM&amp;H/U (solenoid valve)</li> <li>• ABS wheel speed sensor</li> <li>• Brake (caliper &amp; piston, pads)</li> <li>• Wheel alignment</li> <li>• Tire specifications, tire wear and air pressures</li> <li>• Incorrect wiring or piping connections</li> <li>• Road surface (uneven, camber)</li> </ul> |
|   | Vehicle spins.                 | <ul style="list-style-type: none"> <li>• ABSCM&amp;H/U (solenoid valve)</li> <li>• ABS wheel speed sensor</li> <li>• Brake (pads)</li> <li>• Tire specifications, tire wear and air pressures</li> <li>• Incorrect wiring or piping connections</li> </ul>   |
| Poor braking  | Long braking/stopping distance | <ul style="list-style-type: none"> <li>• ABSCM&amp;H/U (solenoid valve)</li> <li>• Brake (pads)</li> <li>• Air in brake line</li> <li>• Tire specifications, tire wear and air pressures</li> <li>• Incorrect wiring or piping connections</li> </ul>  |
|   | Wheel locks.                   | <ul style="list-style-type: none"> <li>• ABSCM&amp;H/U (solenoid valve, motor)</li> <li>• ABS wheel speed sensor</li> <li>• Incorrect wiring or piping connections</li> </ul>  |
|   | Brake dragging                 | <ul style="list-style-type: none"> <li>• ABSCM&amp;H/U (solenoid valve)</li> <li>• ABS wheel speed sensor</li> <li>• Master cylinder</li> <li>• Brake (caliper &amp; piston)</li> <li>• Parking brake</li> <li>• Axle &amp; wheels</li> <li>• Brake pedal play</li> </ul>  |
|   | Long brake pedal stroke        | <ul style="list-style-type: none"> <li>• Air in brake line</li> <li>• Brake pedal play</li> </ul>  |
|   | Vehicle pitching               | <ul style="list-style-type: none"> <li>• Suspension play or fatigue (reduced damping)</li> <li>• Incorrect wiring or piping connections</li> <li>• Road surface (uneven)</li> </ul>  |
|   | Unstable or uneven braking     | <ul style="list-style-type: none"> <li>• ABSCM&amp;H/U (solenoid valve)</li> <li>• ABS wheel speed sensor</li> <li>• Brake (caliper &amp; piston, pads)</li> <li>• Tire specifications, tire wear and air pressures</li> <li>• Incorrect wiring or piping connections</li> <li>• Road surface (uneven)</li> </ul>                                    |
|   | Excessive pedal vibration      | <ul style="list-style-type: none"> <li>• Incorrect wiring or piping connections</li> <li>• Road surface (uneven)</li> </ul>  |
| Vibration and/or noise<br>(while driving on slippery roads) | Noise from ABSCM&H/U           | <ul style="list-style-type: none"> <li>• ABSCM&amp;H/U (mount bushing)</li> <li>• ABS wheel speed sensor</li> <li>• Brake piping</li> </ul>  |
|   | Noise from front of vehicle    | <ul style="list-style-type: none"> <li>• ABSCM&amp;H/U (mount bushing)</li> <li>• ABS wheel speed sensor</li> <li>• Master cylinder</li> <li>• Brake (caliper &amp; piston, pads, rotor)</li> <li>• Brake piping</li> <li>• Brake booster &amp; check valve</li> <li>• Suspension play or fatigue</li> </ul>   |

# General Description

BRAKE

---

## C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.

## D: PREPARATION TOOL

### 1. GENERAL TOOL

| TOOL NAME        | REMARKS                                     |
|------------------|---|
| Snap ring pliers | Used for removing and installing snap ring. |

## 2. Front Brake Pad

### A: REMOVAL

#### 1. 15 INCH TYPE

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the front wheel.
- 4) Remove the lower caliper bolt.
- 5) Raise the caliper body upward and support it.

**NOTE:**

Do not disconnect the brake hose from caliper body.

- 6) Remove the pad.

**NOTE:**

If the brake pad is difficult to remove, proceed as follows:

- (1) Remove the caliper body from support.
- (2) Remove the support.
- (3) Place a support in a vise between wooden blocks.

- (1) Support
- (2) Wooden blocks

- (4) Attach a rod of less than 12 mm (0.47 in) dia. to the shaded area of brake pad, and strike the rod with a hammer to drive brake pad out of place.

#### 2. 16 INCH TYPE

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the front wheel.
- 4) Remove the M clip.

- (1) M clip

- 5) Remove the pad pins, then remove the cross spring.

- (1) Pad pin
- (2) Cross spring

# Front Brake Pad

## BRAKE

6) Use a wrench to expand the pads, and then push the piston back.

7) Remove the pad.

5) Remove the pad pins and cross spring.

- (1) Pad pin
- (2) Cross spring

6) Use a wrench to expand the pads, and then push the piston back.

7) Remove the pad.

### 3. 17 INCH TYPE

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the front wheel.
- 4) Remove the clip.

- (1) Clip

## B: INSTALLATION

### 1. 15 INCH TYPE

1) Apply thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and pad clip.

2) Apply thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and pad inner shim.

- 3) Install the pads on support.
- 4) Install the caliper body on support.

#### **Tightening torque:**

**26.5 N·m (2.7 kgf-m, 19.5 ft-lb)**

#### **NOTE:**

If it is difficult to push the piston during pad replacement, loosen the air bleeder screw to facilitate work.

### 2. 16 INCH TYPE

1) Apply thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and pad inner shim.

- 2) Install the pads on caliper body.
- 3) Install the pad pin on caliper body.
- 4) Install the M clip.
- 5) Install the cross spring.

### 3. 17 INCH TYPE

1) Apply thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and pad shim.

- 2) Install the pads on caliper body.
- 3) Install the cross spring.
- 4) Install the pad pins.
- 5) Install the clip.

## C: INSPECTION

### 1. 15 INCH TYPE

Check the pad thickness A.

|               |                |                   |
|---------------|----------------|-------------------|
| Pad thickness | Standard value | 11 mm (0.43 in)   |
|               | Wear limit     | 1.5 mm (0.059 in) |

#### **NOTE:**

- Always replace the pads for both right and left wheels at the same time.
- Also replace the pad clips if they are twisted or worn.
- A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of wear indicator contacts disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.
- Replace the pad if there is oil or grease on it.

# Front Brake Pad

## BRAKE

### 2. 16 INCH TYPE

Check the pad thickness A.

|               |                |                   |
|---------------|----------------|-------------------|
| Pad thickness | Standard value | 10 mm (0.393 in)  |
|               | Wear limit     | 1.5 mm (0.059 in) |

#### NOTE:

- Always replace the pads for both right and left wheels at the same time.
- Also replace the pad clips if they are twisted or worn.
- A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of wear indicator contacts disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.
- Replace the pad if there is oil or grease on it.

### 3. 17 INCH TYPE

Check the pad thickness A.

|               |                |                   |
|---------------|----------------|-------------------|
| Pad thickness | Standard value | 9.2 mm (0.362 in) |
|               | Wear limit     | 1.2 mm (0.047 in) |

#### NOTE:

- Always replace the pads for both right and left wheels at the same time.
- Also replace the pad clips if they are twisted or worn.

- A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of wear indicator contacts disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.
- Replace the pad if there is oil or grease on it.

## 3. Front Disc Rotor

### A: REMOVAL

#### 1. 15 INCH TYPE

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the front wheel.
- 4) Remove the caliper body and support from housing, and suspend it from strut using a wire.

- 5) Remove the disc rotor.

**NOTE:**

If the disc rotor seizes up within the hub, drive the disc rotor out by installing an 8-mm bolt in holes (B) on disc rotor.

- 6) Clean mud and foreign particles from the caliper body assembly and support.

#### 2. 16 INCH TYPE & 17 INCH TYPE

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nut.
- 3) Lift-up the vehicle, and then remove the front wheel.

- 4) Remove the caliper body from housing, and suspend it from strut using a wire.

- 5) Remove the disc rotor from hub.

**NOTE:**

If the disc rotor seizes up within the hub, drive the disc rotor out by installing an 8-mm bolt in holes B on disc rotor.

- 6) Clean mud and foreign particles from the caliper body assembly.

### B: INSTALLATION

- 1) Install the disc rotor.
- 2) Install the caliper body and support to housing.

**Tightening torque:**

*Except 17 inch type:*

**80 N·m (8.2 kgf-m, 59 ft-lb)**

*17 inch type:*

**155 N·m (15.8 kgf-m, 114.3 ft-lb)**

- 3) Install the wheel.

### C: INSPECTION

- 1) Check front wheel bearing play and axle hub play before disc rotor runout limit inspection. <Ref. to DS-24, INSPECTION, Front Axle.>
- 2) Secure the disc rotor by tightening five wheel nuts.

# Front Disc Rotor

## BRAKE

3) Set a dial gauge 10 mm (0.39 in) inward of rotor outer perimeter. Turn the disc rotor to check runout. If the disc rotor runout exceeds the service limit, resurface the disc rotor. After resurfacing, check disc rotor thickness as in step 4.

BR-00019

**Disc rotor runout limit:  
0.075 mm (0.0030 in)**

4) Set a micrometer 10 mm (0.39 in) inward of the rotor outer perimeter, and then measure the disc rotor thickness. If the thickness of disc rotor exceeds the service limit, replace with a new disc rotor.

BR-00018

|                        |     | Standard value     | Service limit      | Disc outer dia.      |
|------------------------|-----|--------------------|--------------------|----------------------|
| Disc rotor thickness A | 15" | 24 mm<br>(0.94 in) | 22 mm<br>(0.87 in) | 277 mm<br>(10.91 in) |
|                        | 16" | 24 mm<br>(0.94 in) | 22 mm<br>(0.87 in) | 294 mm<br>(11.57 in) |
|                        | 17" | 30 mm<br>(1.18 in) | 28 mm<br>(1.10 in) | 326 mm<br>(12.83 in) |

## 4. Front Disc Brake Assembly

### A: REMOVAL

#### 1. 15 INCH TYPE

**CAUTION:**

Do not allow brake fluid to come in contact with vehicle body; wash away immediately with water and wipe off completely if spilled.

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the front wheel.
- 4) Remove the union bolt, and then disconnect the brake hose from caliper body assembly.

- 5) Remove the bolt securing lock pin to caliper body.

- 6) Raise the caliper body, and then move it toward vehicle center to separate it from support.
- 7) Remove the support from housing.

**NOTE:**

Remove the support only when replacing it or the disc rotor. It need not be removed when servicing the caliper body assembly.

- 8) Clean mud and foreign particles from the caliper body assembly and support.

#### 2. 16 INCH TYPE

**CAUTION:**

Do not allow brake fluid to come in contact with vehicle body; wash away at once with water and wipe off completely if spilled.

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the front wheel.
- 4) Remove the union bolt, and then disconnect the brake hose from caliper body assembly.
- 5) Remove the caliper body from housing.

- 6) Clean mud and foreign particles from the caliper body assembly and support.

#### 3. 17 INCH TYPE

**CAUTION:**

Do not allow brake fluid to come in contact with vehicle body; wash away immediately with water and wipe off completely if spilled.

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the front wheel.

# Front Disc Brake Assembly

## BRAKE

- 4) Remove the brake pads from caliper body. <Ref. to BR-18, 17 INCH TYPE, REMOVAL, Front Brake Pad.>
- 5) Remove the union bolt (1) and brake hose from caliper body assembly.
- 6) Remove installation bolts (2) from housing.

- (1) Union bolt
- (2) Installation bolt

- 7) Clean mud and foreign particles from the caliper body assembly.

## B: INSTALLATION

### 1. 15 INCH TYPE

- 1) Install the support on housing.

#### **Tightening torque:**

**80 N·m (8.2 kgf·m, 59 ft·lb)**

- 2) Apply thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and pad clip.
- 3) Apply thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and inner shim.

- 4) Install the pads on support.
- 5) Install the caliper body on support.

#### **Tightening torque:**

**26.5 N·m (2.7 kgf·m, 19.5 ft·lb)**

- 6) Replace the brake hose gaskets with new ones, and then connect the brake hose.

#### **Tightening torque:**

**18 N·m (1.8 kgf·m, 13.0 ft·lb)**

- 7) Bleed air from the brake system.

### 2. 16 INCH TYPE

- 1) Install the caliper body on housing.

#### **Tightening torque:**

**80 N·m (8.2 kgf·m, 59 ft·lb)**

- 2) Apply thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and pad inner shim.

- 3) Install the pads on caliper body.
- 4) Install the pad pin and cross spring on caliper body.
- 5) Install the M clip.
- 6) Replace the brake hose gaskets with new ones, and then connect the brake hose.

#### **Tightening torque:**

**18 N·m (1.8 kgf·m, 13.0 ft·lb)**

- 7) Bleed air from the brake system.

### 3. 17 INCH TYPE

- 1) Install the caliper body assembly on housing.

#### **Tightening torque:**

**155 N·m (15.8 kgf·m, 114.3 ft·lb)**

- 2) Apply thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and pad shim.

- 3) Install the pads on caliper body.
- 4) Install the cross spring.
- 5) Install the pad pins.
- 6) Install the clip.
- 7) Replace the brake hose gaskets with new ones, and then connect the brake hose.

**Tightening torque:**

**18 N·m (1.8 kgf·m, 13.0 ft·lb)**

8) Bleed air from the brake system.

**C: DISASSEMBLY**

**1. 15 INCH TYPE**

1) Clean mud and foreign particles from the caliper body assembly and support.

**CAUTION:**

**Be careful not to allow foreign particles to enter the brake hose connector.**

2) Place a wooden block in caliper body as shown in the figure to prevent the piston from jumping out and avoid being damaged.

3) Gradually supply compressed air via the installation hole of brake hose to force the piston out.

(1) Place a 30 mm (1.18 in) wide wooden block here.

4) Remove the piston boot.

5) Remove the piston seal from caliper body cylinder.

**CAUTION:**

**Do not damage the cylinder and piston seal groove.**

(1) Piston seal

6) Remove the guide pin and boot from caliper body.

**2. 16 INCH TYPE**

1) Clean mud and foreign particles from the caliper body assembly.

**CAUTION:**

**Be careful not to allow foreign particles to enter the brake hose connector.**

2) Using a standard screwdriver, remove the boot ring from piston.

(1) Boot ring

3) Remove the boot from piston end.

4) Place a wooden block in caliper body as shown in the figure to prevent the piston from jumping out and avoid being damaged.

# Front Disc Brake Assembly

## BRAKE

5) Gradually supply compressed air via the installation hole of brake hose to force the piston out.

(1) Place a 30 mm (1.18 in) wide wooden block here.

6) Remove the piston seal from caliper body cylinder.

**CAUTION:**  
Do not damage the cylinder and piston seal groove.

(1) Piston seal

### 3. 17 INCH TYPE

1) Clean mud and foreign particles from the caliper body assembly.

**CAUTION:**  
Be careful not to allow foreign particles to enter the brake hose connector.

2) Remove the piston boots from each piston end.

3) Place a wooden block in caliper body as shown in the figure to prevent the piston from jumping out and avoid being damaged.

4) Gradually supply compressed air via the installation hole of brake hose to force the piston out.

(1) Place a 30 mm (1.18 in) wide wooden block here.

5) Remove the piston seal from caliper body cylinder.

**CAUTION:**  
Do not damage the cylinder and piston seal groove.

(1) Piston seal

## D: ASSEMBLY

### 1. 15 INCH TYPE

- 1) Clean the caliper body interior using brake fluid.
- 2) Apply a coat of brake fluid to the piston seal and fit piston seal in groove on caliper body.
- 3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.
- 4) Apply a coat of specified grease to the boot and install the piston boot to the groove on ends of cylinder.

**Grease:**

**NIGLUBE RX-2 (Part No. K0779GA102)**

- 5) Insert the piston into cylinder.

**CAUTION:**

**Do not force the piston into cylinder.**

- (1) Piston
- (2) Piston boot

6) Position the boot in grooves on cylinder and piston.

- (1) Piston
- (2) Piston boot
- (3) Caliper body
- (4) Piston seal

7) Apply a coat of specified grease to the lock pin and guide pin outer surface, cylinder inner surface, and boot grooves.

**Grease:**

***NIGLUBE RX-2 (Part No. K0779GA102)***

8) Install the lock and guide pin boot on support.

- (1) Pin boot
- (2) Lock pin or guide pin
- (3) Apply grease.

## 2. 16 INCH TYPE

- 1) Clean the caliper body interior using brake fluid.
- 2) Apply a coat of brake fluid to the piston seal and fit piston seal in groove on caliper body.
- 3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.
- 4) Apply a coat of specified grease to the boot and fit in groove on ends of cylinder and piston.

**Grease:**

***NIGLUBE RX-2 (Part No. K0779GA102)***

5) Insert the piston into cylinder.

**CAUTION:**

**Do not force the piston into cylinder.**

6) Position the boot in grooves on cylinder and piston.

- (1) Piston
- (2) Piston boot
- (3) Piston seal
- (4) Boot ring

7) Install the boot ring. Be careful not to scratch the boot.

## 3. 17 INCH TYPE

- 1) Clean the caliper body interior using brake fluid.
- 2) Apply a coat of brake fluid to the piston seal, and then install the piston seal in groove on caliper body.
- 3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.
- 4) Apply a coat of specified grease to the boot and install it in the groove on piston.

# Front Disc Brake Assembly

## BRAKE

### Grease:

**NIGLUBE RX-2 (Part No. K0779GA102)**

5) Insert the piston into cylinder.

### CAUTION:

**Do not force the piston into cylinder.**

6) Position the boot in grooves on cylinder and piston.

- (1) Piston seal
- (2) Piston boot
- (3) Piston

## E: INSPECTION

- 1) Repair or replace the faulty parts.
- 2) Check the caliper body and piston for uneven wear, damage or rust.
- 3) Check the rubber parts for damage or deterioration.

## 5. Rear Brake Pad

### A: REMOVAL

#### 1. 14 INCH TYPE

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the rear wheel.
- 4) Remove the lower caliper bolt.

- 5) Raise the caliper body upward and support it.

**NOTE:**

Do not disconnect the brake hose from caliper body.

- 6) Remove the pad.

**NOTE:**

If the brake pad is difficult to remove, use the same procedure as for front disc brake pad.

<Ref. to BR-17, REMOVAL, Front Brake Pad.>

#### 2. 15 INCH TYPE

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the rear wheel.

- 4) Remove the M clip.

- (1) M clip
- (2) Caliper body

- 5) Remove the two pad pins.
- 6) Remove the cross spring.

- (1) Cross spring
- (2) Pad pin

- 7) Expand the pads and push piston back.
- 8) Remove the pad and shim.

- (1) Brake pad

#### 3. 17 INCH TYPE

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the rear wheel.

# Rear Brake Pad

## BRAKE

4) Remove the clip.

(1) Clip

5) Remove the pad pins and cross spring.

(1) Cross spring  
(2) Pad pin

6) Expand the pads and push piston back.

7) Remove the pad.

(1) Rear brake pad

## B: INSTALLATION

### 1. 14 INCH TYPE

1) Apply a thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and pad clip.

2) Install the pads on support.

3) Install the caliper body on support.

#### Tightening torque:

**37 N·m (3.8 kgf·m, 27.5 ft·lb)**

#### NOTE:

If it is difficult to push the piston during pad replacement, loosen the air bleeder screw to facilitate work.

### 2. 15 INCH TYPE

1) Apply a thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and pad inner shim.

2) Install the pads on caliper body.

3) Install the cross spring.

4) Install the pad pin on caliper body.

5) Install the M clip.

### 3. 17 INCH TYPE

1) Apply a thin coat of Molykote AS-880N (Part No. K0777YA010) to frictional portion between pad and pad inner shim.

2) Install the pads on caliper body.

3) Install the cross spring and pad pins.

4) Install the clip.

## C: INSPECTION

### 1. 14 INCH TYPE

Check pad thickness A.

|               |                |                   |
|---------------|----------------|-------------------|
| Pad thickness | Standard value | 9.0 mm (0.354 in) |
|               | Wear limit     | 1.5 mm (0.059 in) |

#### NOTE:

- Always replace the pads for both right and left wheels at the same time.

- Also replace the pad clips if they are twisted or worn.

- A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of wear indicator contacts disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.

- Replace the pad if there is oil or grease on it.

## 2. 15 INCH TYPE

Check the pad thickness A.

- A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of wear indicator contacts disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.
- Replace the pad if there is oil or grease on it.

|               |                |                    |
|---------------|----------------|--------------------|
| Pad thickness | Standard value | 11.5 mm (0.452 in) |
|               | Wear limit     | 1.5 mm (0.059 in)  |

**NOTE:**

- Always replace the pads for both right and left wheels at the same time.
- Also replace the pad clips if they are twisted or worn.
- A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of wear indicator contacts disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.
- Replace the pad if there is oil or grease on it.

## 3. 17 INCH TYPE

Check the pad thickness A.

|               |                |                   |
|---------------|----------------|-------------------|
| Pad thickness | Standard value | 9.0 mm (0.354 in) |
|               | Wear limit     | 1.2 mm (0.047 in) |

**NOTE:**

- Always replace the pads for both right and left wheels at the same time.
- Also replace the pad clips if they are twisted or worn.

## 6. Rear Disc Rotor

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the wheels.
- 4) Release the parking brake.
- 5) Remove the two mounting bolts, and then remove the disc brake assembly.

- 6) Suspend the disc brake assembly so that hose is not stretched.
- 7) Remove the disc rotor.

### NOTE:

If the disc rotor is difficult to remove try following two methods in order.

- (1) Turn the adjusting screw using a flat tip screwdriver until brake shoe gets away enough from the disc rotor.

- (1) Adjusting screw
- (2) Cover
- (3) Flat tip screwdriver
- (4) Back plate

- (2) If the disc rotor seizes up within hub, drive the disc rotor out by installing an 8-mm bolt in holes B on disc rotor.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the parking brake. <Ref. to PB-8, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

### C: INSPECTION

- 1) Check bearing axial end play and hub runout before disc rotor runout limit inspection. <Ref. to DS-32, INSPECTION, Rear Axle.>
- 2) Secure the disc rotor by tightening five wheel nuts.
- 3) Set a dial gauge 10 mm (0.39 in) inward of rotor outer perimeter. Turn the disc rotor to check runout. If the disc rotor runout exceeds the service limit, resurface the disc rotor. After resurfacing, check disc rotor thickness as in step 4.

**Disc rotor runout limit:**  
**0.070 mm (0.0028 in)**

4) Set a micrometer 10 mm (0.39 in) inward of the rotor outer perimeter, and then measure the disc rotor thickness. If the thickness of disc rotor exceeds the service limit, replace with a new disc rotor.

BR-00036

|                        |     | Standard           | Limit                | Disc outer dia.      |
|------------------------|-----|--------------------|----------------------|----------------------|
| Disc rotor thickness A | 14" | 10 mm<br>(0.39 in) | 8.5 mm<br>(0.335 in) | 266 mm<br>(10.47 in) |
|                        | 15" | 18 mm<br>(0.71 in) | 16 mm<br>(0.63 in)   | 290 mm<br>(11.42 in) |
|                        | 17" | 20 mm<br>(0.79 in) | 18 mm<br>(0.71 in)   | 316 mm<br>(12.44 in) |

## 7. Rear Disc Brake Assembly

### A: REMOVAL

#### 1. 14 INCH TYPE

**CAUTION:**

**Do not allow brake fluid to come in contact with vehicle body; wash away immediately with water and wipe off completely if spilled.**

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the wheels.
- 4) Disconnect the brake hose from caliper body assembly.
- 5) Remove the bolt securing lock pin to caliper body.

- 6) Raise the caliper body and move it toward vehicle center to separate it from support.
- 7) Remove the support from housing.

**NOTE:**

Remove the support only when replacing it or the disc rotor. It need not be removed when servicing the caliper body assembly.

- 8) Clean mud and foreign particles from the caliper body assembly and support.

**CAUTION:**

**Be careful not to allow foreign particles to enter brake hose connector.**

#### 2. 15 INCH TYPE

**CAUTION:**

**Do not allow brake fluid to come in contact with vehicle body; wash away at once with water and wipe off completely if spilled.**

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the wheels.
- 4) Remove the pads from caliper body. <Ref. to BR-29, REMOVAL, Rear Brake Pad.>
- 5) Disconnect the brake hose from caliper body assembly.

- 6) Remove the caliper body from housing.

- 7) Clean mud and foreign particles from the caliper body assembly.

**CAUTION:**

**Be careful not to allow foreign particles to enter brake hose connector.**

#### 3. 17 INCH TYPE

**CAUTION:**

**Do not allow brake fluid to come in contact with vehicle body; wash away immediately with water and wipe off completely if spilled.**

- 1) Set the vehicle on a lift.
- 2) Loosen the wheel nuts.
- 3) Lift-up the vehicle, and then remove the wheels.
- 4) Remove the brake pads from caliper body. <Ref. to BR-29, 17 INCH TYPE, REMOVAL, Rear Brake Pad.>
- 5) Disconnect the brake hose from caliper body.
- 6) Remove the caliper body from housing.

- 7) Clean mud and foreign particles from the caliper body.

**CAUTION:**

**Be careful not to allow foreign particles to enter brake hose connector.**

## B: INSTALLATION

### 1. 14 INCH TYPE

- 1) Install the support on housing.

**Tightening torque:**

**53 N·m (5.4 kgf-m, 39.1 ft-lb)**

- 2) Apply thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and pad clip.
- 3) Install the pads on support.
- 4) Install the caliper body on support.

**Tightening torque:**

**37 N·m (3.8 kgf-m, 27.5 ft-lb)**

- 5) Replace the brake hose gaskets with new ones, and then connect the brake hose.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- 6) Bleed air from the brake system.

### 2. 15 INCH TYPE

- 1) Install the caliper body on housing.

**Tightening torque:**

**53 N·m (5.4 kgf-m, 39.1 ft-lb)**

- 2) Apply a thin coat of Molykote AS-880N (Part No. K0777YA010) to the frictional portion between pad and pad clip.
- 3) Install the pads on caliper body.
- 4) Replace the brake hose gaskets with new ones, and then connect the brake hose.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- 5) Bleed air from the brake system.

### 3. 17 INCH TYPE

- 1) Install the caliper body on housing.

**Tightening torque:**

**65 N·m (6.6 kgf-m, 47.9 ft-lb)**

- 2) Install the pads on caliper body.
- 3) Replace the brake hose gaskets with new ones, and then connect the brake hose.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- 4) Bleed air from the brake system.

## C: DISASSEMBLY

### 1. 14 INCH TYPE

- 1) Remove the boot ring.

(1) Boot ring

- 2) Remove the piston boot.

- 3) Place a wooden block in caliper body as shown in the figure to prevent the piston from jumping out and avoid being damaged.

- 4) Gradually supply compressed air via the installation hole of brake hose to force the piston out.

(1) Place a 30 mm (1.18 in) wide wooden block here.

- 5) Remove the piston seal from caliper body cylinder.

# Rear Disc Brake Assembly

## BRAKE

**CAUTION:**  
Do not damage the cylinder and piston seal groove.

- 6) Remove the lock pin sleeve and boot from caliper body.
- 7) Remove the guide pin boot.

### 2. 15 INCH TYPE

- 1) Remove the boot ring.

- (1) Boot ring

- 2) Remove the piston boot.

- 3) Place a wooden block in caliper body as shown in the figure to prevent the piston from jumping out and avoid being damaged.

- 4) Gradually supply compressed air via the installation hole of brake hose to force the piston out.

- (1) Place a 30 mm (1.18 in) wide wooden block here.

- 5) Remove the piston seal from caliper body cylinder.

**CAUTION:**  
Do not damage the cylinder and piston seal groove.

### 3. 17 INCH TYPE

- 1) Remove the piston boots from each piston end.

- 2) Place a wooden block in caliper body as shown in the figure to prevent the piston from jumping out and avoid being damaged.

3) Gradually supply compressed air via the installation hole of brake hose to force the piston out.

(1) Place a 20 mm (0.79 in) wide wooden block here.

4) Remove the piston seal from caliper body cylinder.

**CAUTION:**  
Do not damage the cylinder and piston seal groove.

## D: ASSEMBLY

### 1. 14 INCH TYPE

- 1) Clean the caliper body interior using brake fluid.
- 2) Apply a coat of brake fluid to the piston seal and fit piston seal in groove on caliper body.
- 3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.
- 4) Insert the piston into cylinder.

**CAUTION:**  
Do not force piston into cylinder.

- 5) Apply a coat of specified grease to the boot and fit in groove on ends of cylinder and piston.

**Grease:**  
**NIGLUBE RX-2 (Part No. K0779GA102)**

6) Install the piston boot to caliper body, and then attach boot ring.

- (1) Piston boot
- (2) Boot ring
- (3) Piston seal
- (4) Caliper body

7) Apply a coat of specified grease to the guide pin, outer surface, sleeve outer surface, cylinder inner surface, and boot grooves.

**Grease:**  
**NIGLUBE RX-2 (Part No. K0779GA102)**

- (1) Pin boot
- (2) Lock pin or guide pin
- (3) Apply grease.

- 8) Install the guide pin boot on support.
- 9) Install the lock pin boot on support, and then insert the lock pin sleeve into place.

### 2. 15 INCH TYPE

- 1) Clean the caliper body interior using brake fluid.
- 2) Apply a coat of brake fluid to the piston seal and fit piston seal in groove on caliper body.
- 3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.
- 4) Apply a coat of specified grease to the boot and install it in the groove on piston.

**Grease:**  
**NIGLUBE RX-2 (Part No. K0779GA102)**

- 5) Insert the piston into cylinder.

# Rear Disc Brake Assembly

## BRAKE

### CAUTION:

**Do not force the piston into cylinder.**

6) Install the piston boot to caliper body, and then attach boot ring.

- (1) Piston
- (2) Piston boot
- (3) Piston seal
- (4) Boot ring

### 3. 17 INCH TYPE

- 1) Clean the caliper body interior using brake fluid.
- 2) Apply a coat of brake fluid to the piston seal and install the piston seal in groove on caliper body.
- 3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.
- 4) Apply a coat of specified grease to the boot and install it in the groove on piston.

### Grease:

***NIGLUBE RX-2 (Part No. K0779GA102)***

5) Insert the piston into cylinder.

### CAUTION:

**Do not force the piston into cylinder.**

6) Position the boot in grooves on cylinder and piston.

- (1) Piston seal
- (2) Piston boot
- (3) Piston

### E: INSPECTION

- 1) Repair or replace the faulty parts.
- 2) Check the caliper body and piston for uneven wear, damage or rust.
- 3) Check the rubber parts for damage or deterioration.

## 8. Master Cylinder

### A: REMOVAL

**CAUTION:**

Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.

- 1) Thoroughly drain brake fluid from reservoir tank.
- 2) Disconnect the fluid level indicator harness connector.
- 3) Remove the brake pipes from master cylinder.
- 4) Remove the master cylinder mounting nuts, and take out master cylinder from brake booster.

### B: INSTALLATION

- 1) To install the master cylinder to body, reverse the sequence of removal procedure.

**Tightening torque:**

**Master cylinder mounting nut**

15 N·m (1.5 kgf-m, 10.8 ft-lb)

**Piping flare nut**

15 N·m (1.5 kgf-m, 10.8 ft-lb)

**CAUTION:**

Be sure to use recommended brake fluid.

- 2) Bleed air from the brake system. <Ref. to BR-47, PROCEDURE, Air Bleeding.>

### C: DISASSEMBLY

- 1) Remove mud and dirt from the surface of brake master cylinder.
- 2) Secure the master cylinder on a vise.
- 3) Remove the pin which secures reservoir tank to master cylinder, and then remove the reservoir tank and grommet.
- 4) Remove the cylinder pin with magnetic pick-up tool while pushing in primary piston by screwdriver which wrapped with tape.

(1) Cylinder pin (straight pin)

- 5) Pry up the pawl, and then remove the piston retainer. Hold piston retainer tight, because the piston may jump out from master cylinder.

- 6) Extract the primary piston assembly and secondary piston assembly straight out, while taking care not to scratch the inner surface of cylinder.
- 7) Use brake fluid to wash the inside wall of cylinder, and piston assembly. If any damage, deformation, wear, rust, and other faults are found, replace the faulty part.

### D: ASSEMBLY

- 1) Apply recommended brake fluid to the inside wall of cylinder, and to outer surface of the piston assembly.
- 2) Ensure that the inside wall of cylinder, and piston assembly are free from dirt when assembling. Install the primary piston assembly and secondary piston assembly, while taking care not to damage, scratch, or dent the cylinder inside wall, and piston assembly.
- 3) Install the cylinder pin while pushing in primary piston by screwdriver which wrapped with tape.
- 4) Install the piston retainer, and then secure it by pressing the pawl.

# Master Cylinder

## BRAKE

---

5) Install the seal to reservoir tank.

(1) Seal

6) Install the reservoir tank to master cylinder and secure with pin.

### **E: INSPECTION**

If any damage, deformation, wear, swelling, rust, and other faults are found on the primary piston assembly or secondary piston assembly, replace the faulty part.

#### **NOTE:**

- The primary and secondary pistons must be replaced as complete assemblies.
- The service limit of clearance between each piston and the master cylinder inner dia. is 0.11 mm (0.0043 in).

## 9. Brake Booster

### A: REMOVAL

1) Remove or disconnect the following parts at engine compartment.

- (1) Disconnect the connector for brake fluid level indicator.
- (2) Remove the brake pipes from master cylinder.
- (3) Remove the master cylinder installing nuts.
- (4) Disconnect the vacuum hose from brake booster.

2) Remove the following parts from pedal bracket.

- (1) Snap pin and clevis pin
- (2) Four brake booster installing nuts

- (1) Nuts
- (2) Clevis pin
- (3) Snap pin
- (4) Operating rod

3) Remove the brake booster while shunning brake pipes.

#### NOTE:

- Be careful not to drop the brake booster. The brake booster should be discarded if it has been dropped.
- Use special care when handling the operating rod. If excessive force is applied to the operating rod, sufficient to cause a change in the angle in excess of  $\pm 3^\circ$ , it may result in damage to the power piston cylinder.
- Use care when placing the brake booster on floor.

- Do not change the push rod length. If it has been changed, reset the projected length "L" to standard length.

#### Standard L:

**10.05 mm (0.40 in)**

#### CAUTION:

If external force is applied from above when the brake booster is placed in this position, the resin portion as indicated by "P", may be damaged.

(1) Force

### B: INSTALLATION

1) Adjust the operating rod of brake booster.

#### Standard L:

**144.6 mm (5.69 in)**

If it is not within specified value, adjust it by adjusting the brake booster operating rod.

2) Mount the brake booster in position.

# Brake Booster

## BRAKE

3) Connect the operating rod to brake pedal with clevis pin and snap pin.

- (1) Nuts
- (2) Clevis pin
- (3) Snap pin
- (4) Operating rod

4) Connect the vacuum hose to brake booster.

- 5) Mount the master cylinder onto brake booster.
- 6) Connect the brake pipes to master cylinder.
- 7) Connect the electric connector for brake fluid level indicator.
- 8) Measure the clearance between threaded end of stop light switch and stopper.  
If it is not within specified value, adjust it by adjusting the position of stop light switch. <Ref. to BR-56, ADJUSTMENT, Stop Light Switch.>

### CAUTION:

Be careful not to rotate the stop light switch.

**Stop light switch clearance A:**  
**0.3 mm (0.012 in)**

- 9) Apply grease to operating rod connecting pin to prevent it from wearing.
- 10) Bleed air from the brake system.

**Tightening torque (Air bleeder screw):**

**Except 17 inch type:**

**8 N·m (0.8 kgf-m, 5.8 ft-lb)**

**17 inch type:**

**20 N·m (2.0 kgf-m, 14.5 ft-lb)**

- 11) Conduct road tests to ensure brakes do not drag.

## C: INSPECTION

### 1. OPERATION CHECK (WITHOUT GAUGES)

#### CAUTION:

When checking operation, be sure to securely apply the parking brake.

#### • Checking without gauges

This method cannot determine the exact portion which has failed, but it can provide a rough understanding of the nature of failure if checking is conducted in accordance with the following procedures.

#### • Air tightness check

Start the engine, and run it for 1 to 2 minutes, then turn it off. Depress the brake pedal several times applying same pedal force as that used in ordinary braking operations. The pedal stroke should be greatest on 1st depression, and it should become smaller with each successive depression. If no

change occurs in the pedal height while in a depressed state, the brake booster is faulty.

- (1) OK
- (2) NG
- (3) 1st
- (4) 2nd
- (5) 3rd

**NOTE:**

- In the event of defective operation, inspect the condition of check valve and vacuum hose.
- Replace them if faulty and conduct the test again.
- If no improvement is observed, check precisely with gauges.

**• Operation check**

1) With the engine off, depress the brake pedal several times applying same pedal force and make sure that pedal height does not vary with each depression of pedal.

- (1) When engine is stopped
- (2) When engine is started

2) With the brake pedal depressed, start the engine.

3) As the engine starts, the brake pedal should move slightly toward the floor. If no change occurs in the pedal height, the brake booster is faulty.

**NOTE:**

If faulty, check precisely with gauges.

**• Loaded air tightness check**

Depress the brake pedal while engine is running, and turn off the engine while pedal is still depressed. Keep the pedal depressed for 30 seconds; if no change occurs in the pedal height, the brake booster is functioning normally; if the pedal height increases, it is faulty.

**NOTE:**

If faulty, check precisely with gauges.

**2. OPERATION CHECK (WITH GAUGES)**

**CAUTION:**

**When checking operation, be sure to securely apply the parking brake.**

**• Checking with gauges**

Connect gauges as shown in the figure. After bleeding air from pressure gauges, proceed to each check.

- (1) Pressure gauge
- (2) Vacuum gauge
- (3) Adapter hose
- (4) Vacuum hose
- (5) Pedal force gauge

**• Air tightness check**

1) Start the engine and keep it running until a vacuum of 66.7 kPa (500 mmHg, 19.69 inHg) = point A is indicated on vacuum gauge. Do not depress the brake pedal.

- (1) Pressure gauge
- (2) Vacuum gauge

# Brake Booster

## BRAKE

2) Stop the engine and watch the gauge. If the vacuum drop range is less than 3.3 kPa (25 mmHg, 0.98 inHg) within 15 seconds after stopping engine, the brake booster is functioning properly. If defective, the cause may be one of those listed below.

- Check valve malfunction
- Leak from vacuum hose
- Leak from the shell jointed portion or stud bolt welded portion
- Damaged diaphragm
- Leak from valve body seal and bearing portion
- Leak from plate and seal assembly portion
- Leak from poppet valve assembly portion

### • Loaded air tightness check

1) Start the engine and depress brake pedal with pedal force of 196 N (20 kgf, 44 lbf). Keep the engine running until a vacuum of 66.7 kPa (500 mmHg, 19.69 inHg) = point B is indicated on vacuum gauge while the pedal is still depressed.

- (1) Pressure gauge
- (2) Vacuum gauge
- (3) Pedal force gauge
- (4) Depress.

2) Stop the engine and watch vacuum gauge. If the vacuum drop range is less than 3.3 kPa (25 mmHg, 0.98 inHg) within 15 seconds after stopping engine, the brake booster is functioning properly. If defective, refer to "AIR TIGHTNESS CHECK". <Ref. to BR-42, INSPECTION, Brake Booster.>  
3) If any fault is found on brake booster, replace the brake booster with a new one.

### • Lack of boosting action check

Turn off the engine, and set the vacuum gauge reading at "0". Then, check the fluid pressure when brake pedal is depressed. The pressure must be greater than the standard value listed.

| Brake pedal force |     | 147 N<br>(15 kgf, 33 lbf)                   | 294 N<br>(30 kgf, 66 lbf)                       |
|-------------------|-----|---|---|
| Fluid pressure    | 15" | 588 kPa<br>(6 kgf/cm <sup>2</sup> , 85 psi) | 1,471 kPa<br>(15 kgf/cm <sup>2</sup> , 213 psi) |
|                   | 16" |   | 1,667 kPa<br>(17 kgf/cm <sup>2</sup> , 242 psi) |
|                   | 17" |   | 1,471 kPa<br>(15 kgf/cm <sup>2</sup> , 213 psi) |

### • Boosting action check

Set the vacuum gauge reading at 66.7 kPa (500 mmHg, 19.69 inHg) by running engine. Then, check the fluid pressure when brake pedal is depressed. The pressure must be greater than the standard value listed.

| Brake pedal force |     | 147 N<br>(15 kgf, 33 lbf)                       | 294 N<br>(30 kgf, 66 lbf)                           |
|-------------------|-----|---|---|
| Fluid pressure    | 15" | 5,296 kPa<br>(54 kgf/cm <sup>2</sup> , 768 psi) | 9,120 kPa<br>(93 kgf/cm <sup>2</sup> , 1,323 psi)   |
|                   | 16" | 6,276 kPa<br>(64 kgf/cm <sup>2</sup> , 910 psi) | 10,000 kPa<br>(102 kgf/cm <sup>2</sup> , 1,450 psi) |
|                   | 17" | 4,021 kPa<br>(41 kgf/cm <sup>2</sup> , 583 psi) | 8,336 kPa<br>(85 kgf/cm <sup>2</sup> , 1,209 psi)   |

## 10.Brake Fluid

### A: INSPECTION

- 1) Check that the brake fluid level remains between "MIN" and "MAX". If out of the specified range, refill or drain fluid. If the fluid level becomes close to "MIN", refill the fluid.
- 2) Check the fluid for discoloration. If the fluid color has excessively changed, drain the fluid and refill with new fluid.

### B: REPLACEMENT

#### CAUTION:

- To always maintain the brake fluid characteristics, replace the brake fluid according to maintenance schedule or earlier than that when used in severe condition.
- The FMVSS No. 116, fresh DOT3 or DOT4 brake fluid must be used.
- Cover the air bleeder screw with waste cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.
- Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.
- Avoid mixing different brands of brake fluid to prevent degrading the quality of fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.

#### NOTE:

- During replacement, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
  - The brake pedal operating must be very slow.
  - For convenience and safety, two people should do the work.
  - The amount of brake fluid required is approx. 500 ml (16.9 US fl oz, 17.6 Imp fl oz) for total brake system.
- 1) Either lift-up the vehicle and place a rigid racks under it, or lift-up vehicle.
  - 2) Remove both front and rear wheels.
  - 3) Draw out the brake fluid from master cylinder with syringe.
  - 4) Refill the reservoir tank with recommended brake fluid.

#### **Recommended brake fluid:**

**FMVSS No. 116, fresh DOT3 or DOT4 brake fluid**

- 5) Install one end of a vinyl tube onto the air bleeder screw and insert the other end of the tube into a container to collect the brake fluid.

#### CAUTION:

**Brake fluid replacement sequence; (A) Front right → (B) Rear left → (C) Front left → (D) Rear right**

- (1) Master cylinder
- (2) Hydraulic unit
- (3) Two-way connector

- 6) Instruct your co-worker to depress the brake pedal slowly two or three times and then hold it depressed.
- 7) Loosen the air bleeder screw approx. 1/4 turn until a small amount of brake fluid drains into container, and then quickly tighten the screw.
- 8) Release the brake pedal slowly. Repeat steps 6) through 8) until new fluid flows through vinyl tube.

#### NOTE:

Add brake fluid as necessary during replacement, in order to prevent the tank from running short of brake fluid.

- 9) After completing the replacement, hold brake pedal depressed and tighten screw and install air bleeder screw cap.

#### **Tightening torque (Air bleeder screw):**

**Except 17 inch type:**

**8 N·m (0.8 kgf·m, 5.8 ft·lb)**

**17 inch type:**

**20 N·m (2.0 kgf·m, 14.5 ft·lb)**

## Brake Fluid

### BRAKE

---

10) Replace brake fluid of each wheel cylinder using the same procedures as described in steps 6) through 8) above.

11) Depress the brake pedal with a force of approx. 294 N (30 kg, 66 lbf) and hold it there for approx. 20 seconds. At this time check for mix in air and pedal height change.

Visually inspect the air bleeder screws and brake pipe joints to make sure that there is no fluid leakage.

12) Install the wheels, and drive the vehicle for a short distance between 2 to 3 km (1 to 2 miles) to make sure that brakes are operating properly.

## 11. Air Bleeding

### A: PROCEDURE

#### CAUTION:

- The FMVSS No. 116, fresh DOT3 or DOT4 brake fluid must be used.
- Cover the air bleeder screw with waste cloth when loosening it to prevent brake fluid from being splashed over surrounding parts.
- Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.
- Avoid mixing different brands of brake fluid to prevent degrading the quality of the fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.

### 1. MASTER CYLINDER

#### NOTE:

- If the master cylinder is disassembled or reservoir tank is empty, bleed the master cylinder.
  - During the bleeding operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
  - The brake pedal operating must be very slow.
  - For convenience and safety, two people should do the work.
- 1) Loosen the wheel nuts, jack-up the vehicle, support it with rigid racks, and remove the wheel.
  - 2) Disconnect the brake line at primary and secondary sides.
  - 3) Put a plastic bag cover on master cylinder.
  - 4) Carefully depress and hold the brake pedal.

- 5) Close the outlet plug with your finger, and then release the brake pedal.

- 6) Repeat step 4) and 5) until the brake fluid is completely bled from outlet plug.
- 7) Remove the plastic bag.
- 8) Install the brake pipes to master cylinder.

#### Tightening torque:

**15 N·m (1.5 kgf-m, 10.8 ft-lb)**

- 9) Bleed air from the brake line. <Ref. to BR-47, BRAKE LINE, PROCEDURE, Air Bleeding.>

### 2. BRAKE LINE

#### NOTE:

- During the bleeding operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
  - The brake pedal operating must be very slow.
  - For convenience and safety, two people should do the work.
- 1) Make sure that there is no leak from the joints and connections of brake system.
  - 2) Fit one end of vinyl tube into the air bleeder screw and put the other end into a brake fluid container.

# Air Bleeding

## BRAKE

### CAUTION:

**Brake fluid replacement sequence; (A) Front right → (B) Rear left → (C) Front left → (D) Rear right**

- (1) Master cylinder
- (2) Hydraulic unit
- (3) Proportioning valve

3) Slowly depress the brake pedal and keep it depressed. Then, open the air bleeder screw to discharge air together with the fluid.

Release the air bleeder screw for 1 to 2 seconds.

Next, with the air bleeder screw closed, slowly release the brake pedal.

Repeat these steps until there are no more air bubbles in the vinyl tube.

Allow 3 to 4 seconds between two brake pedal operations.

### CAUTION:

**Cover the air bleeder screw with waste cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.**

### NOTE:

The brake pedal operating must be very slow.

4) Tighten the air bleeder screw securely when no air bubbles are visible.

### Tightening torque:

#### Except 17 inch type:

**8 N·m (0.8 kgf-m, 5.8 ft-lb)**

#### 17 inch type:

**20 N·m (2.0 kgf-m, 14.5 ft-lb)**

### NOTE:

For 17 inch type, do not allow brake fluid come in contact with caliper body; wash away with water. (Especially for air bleeder screw.)

5) Perform these steps for the brakes connecting to secondary chamber of master cylinder, first, and then for the ones connecting to primary chamber. With all procedures completed, fully depress the brake pedal and keep it in that position for approx. 20 seconds to make sure that there is no leak evident in the entire system.

6) Check the pedal stroke.

While the engine is idling, depress the brake pedal with a 490 N (50 kgf, 110 lbf) load and measure the distance between brake pedal and steering wheel. With the brake pedal released, measure the distance between pedal and steering wheel again. The difference between the two measurements must not be more than specified.

- (1) Steering wheel
- (2) Toe board

### Specified pedal stroke

#### WRX model

**105 mm (4.13 in)**

#### Except WRX model

**90 mm (3.54 in)**

**When depressing brake pedal with a 490 N (50 kgf, 110 lbf) load.**

7) If the distance is more than the specifications, there is a possibility that air is in the brake line. Bleed the brake line until pedal stroke meets the specification.

8) Operate the hydraulic control unit in the sequence control mode. <Ref. to ABS-10, ABS Sequence Control.>

9) Recheck the pedal stroke.

10) If the distance is more than specifications, there is a possibility air is in the inside of hydraulic unit. Repeat above steps 2) to 9) above until pedal stroke meets the specification.

11) Add brake fluid to the required level (MAX. level) of reservoir tank.

12) As a final step, test run the vehicle at low speed and apply brakes to ensure that brakes provide normal braking action.

## 12.Brake Hose

### A: REMOVAL

#### 1. FRONT BRAKE HOSE

- 1) Separate the brake pipe from brake hose.  
(Always use the flare nut wrench and be careful not to deform the flare nut.)
- 2) Pull out the clamp to remove brake hose.
- 3) Remove the bolt at strut and union bolt.

- (1) Brake hose
- (2) Brake pipe

#### 2. REAR BRAKE HOSE

- 1) Separate the brake pipe from brake hose.

**NOTE:**

Always use the flare nut wrench and be careful not to deform the flare nut.

- 2) Remove the clamp and union bolt.

- (1) Brake pipe
- (2) Brake hose
- (3) Brake hose clamp

### B: INSTALLATION

#### 1. FRONT BRAKE HOSE

- 1) Secure the brake hose to strut mount.

**Tightening torque:**

**33 N·m (3.4 kgf-m, 25 ft-lb)**

- 2) Install the brake hose to caliper body using a new gasket.

**Tightening torque (Union bolt):**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- 3) Position the disc in straight-forward direction and route brake hose through hole in bracket on wheel apron side.

**CAUTION:**

**Be sure brake hose is not twisted.**

- 4) Temporarily tighten the flare nut to connect brake pipe and hose.
- 5) Fix the brake hose with clamp at wheel apron bracket.
- 6) While holding the hexagonal part of brake hose fitting with a wrench, tighten the flare nut to the specified torque.

**Tightening torque (Brake pipe flare nut):**

**15 N·m (1.5 kgf-m, 10.8 ft-lb)**

- 7) Bleed air from the brake system.

#### 2. REAR BRAKE HOSE

- 1) Pass the brake hose through hole of bracket, and then lightly tighten the flare nut to connect brake pipe.
- 2) Insert the clamp upward to fix brake hose.
- 3) Install the brake hose to caliper body using a new gasket.

**Tightening torque (Union bolt):**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- 4) While holding the hexagonal part of brake hose fitting with a wrench, tighten the flare nut to the specified torque.

# Brake Hose

## BRAKE

---

**Tightening torque (Brake pipe flare nut):**  
**15 N·m (1.5 kgf-m, 10.8 ft-lb)**

- (1) Brake pipe
- (2) Brake hose
- (3) Brake hose clamp

5) Bleed air from the brake system.

### **C: INSPECTION**

Ensure there are no cracks, breakage, or damage on the hoses. Check the joints for fluid leakage. If any cracks, breakage, damage or leakage is found, repair or replace the hose.

## 13.Brake Pipe

### A: REMOVAL

**NOTE:**

Airbag system wiring harness is routed near the center brake pipe.

**CAUTION:**

- Airbag system connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When removing the brake pipe, use flare nut wrench.
- When removing the brake pipe, make sure that it is not bent.

### B: INSTALLATION

**NOTE:**

Airbag system wiring harness is routed near the center brake pipe.

**CAUTION:**

- Airbag system connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When installing the brake pipe, use flare nut wrench.
- When installing the brake pipe, make sure that it is not bent.
- After installing the brake pipe and hose, bleed the air.
- After installing the brake hose, make sure that it does not touch the tire or suspension assembly, etc.

***Tightening torque (Brake pipe):***

***15 N·m (1.5 kgf·m, 10.8 ft·lb)***

### C: INSPECTION

Ensure there are no cracks, breakage, or damage on pipes. Check the joints for fluid leakage. If any cracks, breakage, damage or leakage is found, repair or replace the pipe.

**NOTE:**

Use a mirror when inspecting low-visible part or back side.

## 14. Brake Pedal

### A: REMOVAL

#### 1. MT MODEL

- 1) Remove the steering shaft.
- 2) Disconnect the connectors (for stop light switch, etc.) from pedal bracket.
- 3) Remove the clevis pin which secures the lever to push rod.
- 4) Remove the nut which secures the clutch master cylinder.
- 5) Remove the accelerator pedal.
- 6) Remove the bolts and nuts which the secure pedal bracket.

#### 2. AT MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover from instrument panel.
- 3) Remove the clevis pin which secures the brake pedal to brake booster operating rod. Also disconnect the stop light switch connector.

- 4) Remove the four bolts and four nuts which secure the brake pedal to pedal.

- (1) Clevis pin
- (2) Snap pin
- (3) Operating rod

### B: INSTALLATION

- 1) Install in the reverse order of removal.

#### CAUTION:

- If the cable clamp is damaged, replace it with a new one.
- Never fail to cover the outer cable end with boot.
- Always use new clevis pins.

- 2) Adjust the clutch pedal <Ref. to CL-33, ADJUSTMENT, Clutch Pedal.>
- 3) Inspect the brake pedal after installation <Ref. to BR-53, INSPECTION, Brake Pedal.>

### C: DISASSEMBLY

#### 1. MT MODEL

- 1) Remove the brake switch. <Ref. to BR-55, REMOVAL, Stop Light Switch.>
- 2) Remove the clutch pedal. <Ref. to CL-32, DISASSEMBLY, Clutch Pedal.>

3) Remove the clutch master cylinder bracket.

4) Remove the bushing, spring and stopper.

- (1) Stopper
- (2) Bushing
- (3) Brake pedal
- (4) Brake pedal spring

5) Remove the brake pedal pad.

## 2. AT MODEL

- 1) Remove the brake switch.
- 2) Unbolt, and then remove the brake pedal.

3) Remove the bushing, spacer and spring.

- (1) Plug
- (2) Stopper
- (3) Brake pedal
- (4) Brake pedal spring

4) Remove the brake pedal pad.

## D: ASSEMBLY

- 1) Attach the stop light switch, etc. to pedal bracket temporarily.
- 2) Clean the inside of bores of clutch pedal and brake pedal, apply grease, and set the bushings into bores.
- 3) Align bores of the pedal bracket, clutch pedal and brake pedal, attach the brake pedal return spring, and then install the pedal bolt.

### NOTE:

Clean up the inside of bushings and apply grease before installing spacer.

### Tightening torque:

**T: 30 N·m (3.1 kgf-m, 22.1 ft-lb)**

4) Adjust the stop light switch position after installing the brake pedal to vehicle.

## E: INSPECTION

- 1) Move the brake and clutch pedal pads in the lateral direction with a force of approx. 10 N (1 kgf, 2 lbf) to ensure pedal deflection is in specified range.

### CAUTION:

**If excessive deflection is noted, replace the bushings with new ones.**

# Brake Pedal

## BRAKE

**Deflection of brake and clutch pedal:**  
**Service limit**  
**5.0 mm (0.197 in) or less**

3) If it is not within specified value, adjust it by adjusting the brake booster operating rod length.

- (1) Clutch pedal
- (2) Brake pedal

- (1) Brake pedal

2) Check the position of pedal pad.

**Pedal height L:**  
**148 mm (5.83 in)**

**Brake pedal free play A:**  
**0.5 — 2.0 mm (0.02 — 0.08 in) [Depress brake pedal pad with a force of less than 10 N (1 kgf, 2 lbf).]**

- (1) Stop light switch
- (2) Mat
- (3) Toe board
- (4) Brake booster operating rod

## 15. Stop Light Switch

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the stop light switch connector.
- 3) Loosen nuts, and unscrew stop light switch to remove.

(1) Stop light switch

### B: INSTALLATION

- 1) Screw the stop light switch onto a bracket and secure it temporarily with a nut.
  - 2) Adjust the stop light switch position, and then tighten the nut.
- <Ref. to BR-56, ADJUSTMENT, Stop Light Switch.>

#### Tightening torque:

**8 N·m (0.8 kgf·m, 5.8 ft·lb)**

### C: INSPECTION

- 1) If the stop light switch does not operate properly (or if it does not stop at the specified position), replace with a new one.

**Specified position L:**  
**2 mm (0.079 in)**

- 2) Measure the clearance between threaded end of stop light switch and stopper.

#### CAUTION:

**Be careful not to rotate stop light switch.**

**Stop light switch clearance A:**  
**0.3 mm (0.012 in)**

- (1) Stop light switch
- (2) Stopper
- (3) Brake pedal

- 3) If it is not within specified value, adjust it by adjusting position of stop light switch.

#### CAUTION:

**Be careful not to rotate the stop light switch.**

# Stop Light Switch

BRAKE

## D: ADJUSTMENT

Loosen the lock nut, and adjust the stop light switch position until the clearance between threaded end of stop light switch and stopper (A) becomes 0.3 mm (0.012 in). Then, tighten the lock nut.

### ***Tightening torque:***

***8 N·m (0.8 kgf-m, 5.8 ft-lb)***

- (1) Stop light switch
- (2) Lock nut A
- (3) Lock nut B
- (4) Stopper
- (5) Brake pedal

### **NOTE:**

Tighten the lock nut B until the clearance between threaded end of stop light switch and stopper becomes 0 mm (0 in). Hold the stop light switch to prevent turning, and then loosen the lock nut B approx. 60°. The clearance (A) will become 0.3 mm (0.012 in).

## 16. General Diagnostic Table

### A: INSPECTION

|   | Trouble and possible cause  | Corrective action  |
|---|---|--|
| <b>1. Insufficient braking</b>                    | (1) Fluid leakage from the hydraulic mechanism  | Repair or replace (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose). |
|   | (2) Entry of air into the hydraulic mechanism   | Bleed the air.   |
|   | (3) Excessively wide shoe clearance   | Adjust the clearance.  |
|   | (4) Wear, deteriorated surface material, adhering water or fluid on the lining                  | Replace, grind or clean.   |
|   | (5) Improper operation of master cylinder, disc caliper, brake booster or check valve           | Correct or replace.  |
| <b>2. Unstable or uneven braking</b>              | (1) Fluid on the lining, drum or disc rotor   | Eliminate cause of fluid leakage, clean, or replace.   |
|   | (2) Drum or disc rotor eccentricity   | Correct or replace the drum or disc rotor.   |
|   | (3) Worn brake drum, or damage to the drum caused by sand                                       | Correct by grinding, or replace.   |
|   | (4) Improper lining contact, deteriorated surface material, improper inferior material, or wear | Correct by grinding, or replace.   |
|   | (5) Deformed back plate   | Correct or replace.  |
|   | (6) Improper tire inflation   | Inflate to correct pressure.   |
|   | (7) Disordered wheel alignment  | Adjust alignment.  |
|   | (8) Loosened back plate or the support installing bolts   | Retighten.   |
|   | (9) Loosened wheel bearing  | Retighten to normal tightening torque or replace.  |
|   | (10) Trouble in the hydraulic system  | Replace the cylinder, brake pipe or hose.  |
|   | (11) Uneven effect of the parking brake   | Check, adjust, or replace the rear brake and cable system.                                   |
| <b>3. Excessive pedal stroke</b>                  | (1) Entry of air into the hydraulic mechanism   | Bleed the air.   |
|   | (2) Excessive play in the master cylinder push rod  | Adjust.  |
|   | (3) Fluid leakage from the hydraulic mechanism  | Repair or replace (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose). |
|   | (4) Improperly adjusted shoe clearance  | Adjust.  |
|   | (5) Improper lining contact or worn lining  | Correct or replace.  |
| <b>4. Brake dragging or improper brake return</b> | (1) Insufficient pedal play   | Adjust play.   |
|   | (2) Improper master cylinder return   | Clean or replace the cylinder.   |
|   | (3) Clogged hydraulic system  | Replace.   |
|   | (4) Improper return or adjustment of parking brake  | Correct or adjust.   |
|   | (5) Weakened spring tension or breakage of shoe return spring                                   | Replace the spring.  |
|   | (6) Excessively narrow shoe clearance   | Adjust the clearance.  |
|   | (7) Improper disc caliper operation   | Correct or replace.  |
|   | (8) Wheel bearing faulty  | Replace the wheel bearing.   |
| <b>5. Brake noise (1) (creak sound)</b>           | (1) Hardened or deteriorated lining   | Replace the shoe assembly or pad.  |
|   | (2) Worn lining   | Replace the shoe assembly or pad.  |
|   | (3) Loosened back plate or the support installing bolts   | Retighten.   |
|   | (4) Loose wheel bearing   | Retighten to normal tightening torque.   |
|   | (5) Dirty drum or disc rotor  | Clean the drum or disc rotor, or clean and replace the brake assembly.                       |
| <b>6. Brake noise (2) (hissing sound)</b>         | (1) Worn lining   | Replace the shoe assembly or pad.  |
|   | (2) Improper installed shoe or pad  | Correct or replace the shoe assembly or pad.   |
|   | (3) Loose or bent drum or disc rotor  | Retighten or replace.  |

# General Diagnostic Table

## BRAKE

|   | Trouble and possible cause                           | Corrective action               |
|---|--|---------------------------------|
| <b>7. Brake noise (3)<br/>(click sound)</b> | In the case of the disc brake:                       |                                 |
|   | (1) Excessively worn pad or the support              | Replace the pad or the support. |
|   | In the case of the drum brake:                       |                                 |
|   | (1) Excessively worn shoe ridge                      | Replace the back plate.         |
|   | (2) Lack of oil on the shoe ridge surface and anchor | Add more grease.                |

| (2) Parking brake switch | (8) Parking brake cable RH         |
| (3) Lock nut             | (9) Cable guide                    |
| (4) Adjusting nut        | (10) Clamp (Rear disc brake model) |
| (5) Equalizer            | (11) Parking brake cable LH        |
| (6) Bracket              |                                    |

**Tightening torque: N·m (kgf·m, ft·lb)**

- |                           |
|---------------------------|
| <b>T1: 6 (0.6, 4.4)</b>   |
| <b>T2: 18 (1.8, 13.0)</b> |
| <b>T3: 32 (3.3, 23.6)</b> |

### C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Keep grease etc. away from parking brake shoes.

# Parking Brake Lever

## PARKING BRAKE

### 2. Parking Brake Lever

#### A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the rear wheel.
- 3) Remove the rear seat cushion.
- 4) Remove the console box.
- 5) Loosen the parking cable adjusting nut and console bracket.
- 6) Disconnect the connector of parking brake switch.
- 7) Remove the parking brake lever.

- 8) Unbend the parking brake lever pawls and remove cable.

- (1) Parking brake lever
- (2) Cable

#### B: INSTALLATION

- 1) Install in the reverse order of removal.

##### Tightening torque:

##### **Parking brake lever;**

**18 N·m (1.8 kgf·m, 13.0 ft·lb)**

##### **Lock nut;**

**6 N·m (0.6 kgf·m, 4.4 ft·lb)**

- 2) Be sure to adjust the lever stroke. <Ref. to PB-4, ADJUSTMENT, Parking Brake Lever.>

#### C: INSPECTION

While pulling the parking brake lever upward, count the notches.

##### **Lever stroke:**

**7 to 8 notches when pulled with a force of 196 N (20 kgf, 44 lbf)**

If not as specified, adjust the parking brake. <Ref. to PB-8, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

#### D: ADJUSTMENT

- 1) Remove the console cover.
- 2) Forcibly pull the parking brake lever 3 to 5 times.
- 3) Adjust the parking brake lever by turning adjuster until parking brake lever stroke is set at 7 to 8 notches with operating force of 196 N (20 kgf, 44 lbf).
- 4) Tighten the lock nut.

##### **Lever stroke:**

**7 to 8 notches when pulled with a force of 196 N (20 kgf, 44 lbf)**

##### **Tightening torque (Lock nut):**

**6 N·m (0.6 kgf·m, 4.4 ft·lb)**

- (1) Parking brake lever
- (2) Lock nut
- (3) Adjusting nut

- 5) Install the console cover.

## 3. Parking Brake Cable

### A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the rear wheels.
- 3) Remove the rear seat cushion.
- 4) Remove the console box.
- 5) Loosen the parking cable adjusting nut and console bracket.
- 6) Remove the parking brake lever.

- 7) Roll up the floor mat and remove clamps.

- 8) Remove the equalizer cover.
- 9) Remove the inner cable end from equalizer.

- (1) Equalizer
- (2) Inner cable end

- 10) Remove the parking brake cable from rear brake. <Ref. to PB-6, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>
- 11) Remove the clamp from rear brake.
- 12) Remove the bolt and bracket from trailing link bracket.

- 13) Remove the bolt and clamp from rear floor.

- 14) Detach the grommet from rear floor.
- 15) Remove the cable assembly from cabin by forcibly pulling it backward.
- 16) Detach the parking brake cable from cable guide at rear trailing link.

### B: INSTALLATION

- 1) Install in the reverse order of removal.

#### NOTE:

Be sure to pass the cable through cable guide inside the tunnel.

2) Be sure to adjust the lever stroke. <Ref. to PB-4, ADJUSTMENT, Parking Brake Lever.>

### C: INSPECTION

Check the removed cable and replace it if damaged, rusty or malfunctioning.

- 1) Check for smooth operation of the cable.
- 2) Check the inner cable for damage and rust.
- 3) Check the outer cable for damage, bends and cracks.
- 4) Check the boot for damage, cracks and deterioration.

# Parking Brake Assembly (Rear Disc Brake)

## PARKING BRAKE

### 4. Parking Brake Assembly (Rear Disc Brake)

#### A: REMOVAL

- 1) Pull down and release the parking brake.
- 2) Remove the two mounting bolts and remove the brake caliper assembly.

(1) Brake caliper ASSY

- 3) Suspend the brake caliper assembly so that the hose is not stretched.
- 4) Remove the disc rotor.

#### NOTE:

If the disc rotor is difficult to remove, try the two following methods in order.

- (1) Turn the adjusting screw using a flat tip screwdriver until brake shoe gets away enough from the disc rotor.

- (1) Adjusting screw
- (2) Adjusting hole cover (rubber)
- (3) Flat tip screwdriver
- (4) Back plate

- (2) If the disc rotor seizes up within hub, drive the disc rotor out by installing two 8-mm bolts in holes B on rotor.

- 5) Remove the shoe return spring from parking brake assembly.
- 6) Remove the front shoe hold-down spring and pin with pliers.

- 7) Remove the strut and strut spring.
- 8) Remove the adjuster assembly from parking brake assembly.
- 9) Remove the brake shoe.
- 10) Remove the rear shoe hold-down spring and pin with pliers.
- 11) Remove the parking brake cable from lever.

- (1) Parking brake cable
- (2) Lever

- 12) Using a standard screwdriver, raise the retain-er. Remove the lever and washer from brake shoe.

## B: INSTALLATION

### CAUTION:

Be sure the lining surface is free from oil and grease contamination.

1) Apply brake grease to the following places.

#### Brake grease:

##### Brake Grease (Part No. 003602002)

- Six contact surfaces of shoe rim and back plate packing
- Contact surface of shoe wave and anchor pin
- Contact surface of lever and strut
- Contact surface of shoe wave and adjuster assembly
- Contact surface of shoe wave and strut
- Contact surface of lever and shoe wave

2) Insert the primary side brake shoe into anchor pin groove.

3) Secure the brake shoe with shoe hold-down pin and cup.

4) Install the plate to anchor pin, and then assemble the primary return spring to anchor pin.

- (1) Primary return spring
- (2) Anchor pin
- (3) Shoe guide plate
- (4) Primary shoe
- (5) Shoe hold-down pin & cup

5) Install the parking brake cable to lever.

6) Assemble the strut and adjuster, and then secure the secondary side brake shoe with shoe hold-down pin & cup.

### NOTE:

- Install the strut spring of both right and left wheels facing vehicle front.

- Install the adjuster assembly with screw on left side.

- (1) Left

7) Install the secondary return spring and adjusting spring.

- (1) Lever
- (2) Secondary brake shoe
- (3) Strut spring
- (4) Strut
- (5) Return spring
- (6) Adjuster
- (7) Shoe hold-down cup
- (8) Adjusting spring

8) Adjust the parking brakes. <Ref. to PB-8, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

9) Drive the vehicle for parking brake lining "break-in".

- (1) Drive the vehicle at about 35 km/h (22 MPH).
- (2) With the parking brake release button pushed in, pull the parking brake lever gently.
- (3) Drive the vehicle for about 200 meter (0.12 mile) in this condition.
- (4) Wait 5 to 10 minutes for the parking brake to cool down. Repeat this procedure once more.
- (5) After breaking-in, re-adjust the parking brakes.

# Parking Brake Assembly (Rear Disc Brake)

## PARKING BRAKE

### C: INSPECTION

1) Measure the brake disc rotor inside diameter. If the disc is scored or worn, replace the brake disc rotor.

#### **Disc rotor inside diameter:**

##### **Standard**

**Except STI model 170 mm (6.69 in)**

**STI model 190 mm (7.48 in)**

##### **Service limit**

**Except STI model 171 mm (6.73 in)**

**STI model 191 mm (7.52 in)**

2) Measure the lining thickness. If it exceeds the limit, replace the shoe assembly.

#### **Lining thickness:**

##### **Standard**

**3.2 mm (0.126 in)**

##### **Service limit**

**1.5 mm (0.059 in)**

#### **NOTE:**

Replace the right and left brake shoes at the same time.

### D: ADJUSTMENT

#### 1. SHOE CLEARANCE

- 1) Return the parking brake completely.
- 2) Remove the adjusting hole cover from back plate.
- 3) Turn the adjusting screw using a flat tip screwdriver until brake shoe is in close contact with disc rotor.

- (1) Adjusting screw
- (2) Adjusting hole cover (rubber)
- (3) Flat tip screwdriver
- (4) Back plate

4) Turn back (downward) the adjusting screw 3 or 4 notches.

#### **CAUTION:**

**Be sure that the brake is not dragging.**

5) Install the adjusting hole cover to back plate.

6) Adjust the parking brake lever stroke. <Ref. to PB-8, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

#### 2. LEVER STROKE

1) Before adjusting the lever stroke, adjust the shoe clearance. <Ref. to PB-8, SHOE CLEARANCE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

2) Remove the console box lid.

3) Forcibly pull the parking brake lever 3 to 5 times.

4) Adjust the parking brake lever by turning adjuster until parking brake lever stroke is set at 7 to 8 notches with operating force of 196 N (20 kgf, 44 lbf).

- (1) Parking brake lever
- (2) Lock nut
- (3) Adjusting nut

#### **Lever stroke:**

**7 to 8 notches when pulled with a force of 196 N (20 kgf, 44 lbf)**

5) Tighten the lock nut.

#### **Tightening torque (Lock nut):**

**6 N·m (0.6 kgf-m, 4.4 ft-lb)**

6) Install the console box lid.

## 5. General Diagnostic Table

### A: INSPECTION

| Symptom          | Possible cause                               | Remedy             |
|------------------|--|--------------------|
| Brake drag       | Parking brake lever is maladjusted.          | Adjustment.        |
|                  | Parking brake cable does not move.           | Repair or replace. |
|                  | Parking brake shoe clearance is maladjusted. | Adjustment.        |
|                  | Return spring is faulty.                     | Replace.           |
| Noise from brake | Return spring is faulty.                     | Replace.           |
|                  | Shoe hold-down spring is faulty.             | Replace.           |

(1) Power steering oil pump ASSY

#### **C: CAUTION**

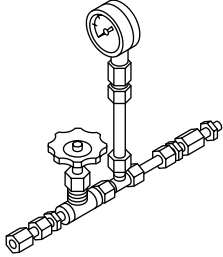

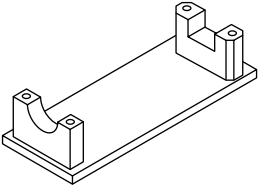

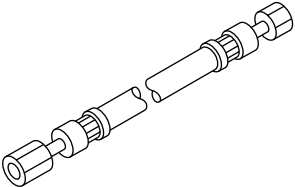

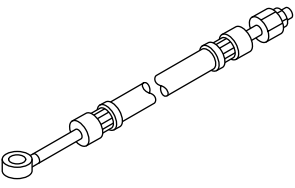

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Use genuine power steering fluid, grease etc. or the equivalent. Do not mix steering fluid, grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.

# General Description

POWER ASSISTED SYSTEM (POWER STEERING)

| ILLUSTRATION  | TOOL NUMBER | DESCRIPTION | REMARKS  |
|---|-------------|-------------|--|
| <br>ST34199FE020 | 34199FE020  | BASE        | <ul style="list-style-type: none"><li>• Used for supporting housing assembly.</li><li>• For Turbo model and STI model.</li></ul> |

## 2. GENERAL TOOL

| TOOL NAME        | REMARKS  |
|------------------|--|
| Spring scale     | Used for measuring tightening torque.  |
| Snap ring pliers | Used for removing and installing snap ring.  |
| Dial gauge       | Used for measuring steering gearbox.   |
| C-clamp          | Used for disassembling and assembling steering gearbox of Turbo model and STI model. |

# Steering Wheel

## POWER ASSISTED SYSTEM (POWER STEERING)

### 2. Steering Wheel

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Set the tires to straight-ahead position.
- 3) Remove the airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>

#### WARNING:

Always refer to "Airbag System" before performing airbag module service. <Ref. to AB-3, CAUTION, General Description.>

- 4) Make matching marks on the steering wheel and steering shaft.

(1) Matching mark

- 5) Remove the steering wheel nut, and then draw out the steering wheel from shaft using steering puller.

#### B: INSTALLATION

#### WARNING:

Always refer to "Airbag System" before performing airbag module service. <Ref. to AB-3, CAUTION, General Description.>

- 1) Align the center of roll connector. <Ref. to AB-20, ADJUSTMENT, Roll Connector.>
- 2) Install in the reverse order of removal.

#### NOTE:

Align matching marks on the steering wheel and steering shaft.

#### Tightening torque:

**45 N·m (4.6 kgf·m, 33.2 ft·lb)**

#### Column cover-to-steering wheel clearance:

**2 — 4 mm (0.08 — 0.16 in)**

#### CAUTION:

Insert the roll connector guide pin into guide hole on lower end of surface of steering wheel to prevent damage.

#### C: INSPECTION

- 1) Check the steering wheel for deformation. If the deformation is excessive, replace steering wheel.
- 2) Check the splines on steering wheel for damage. If the damage is excessive, replace steering wheel.

# Universal Joint

POWER ASSISTED SYSTEM (POWER STEERING)

## 3. Universal Joint

### A: REMOVAL

- 1) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
- 2) Make matching mark on the universal joint.
- 3) Remove the universal joint bolts, and then remove the universal joint.

### B: INSTALLATION

- 1) Align the cutout at serrated section of the column shaft and yoke, and then insert the universal joint into column shaft.

- (1) Cutout
- (2) Yoke
- (3) Column shaft
- (4) Column shaft side
- (5) Gearbox side

- 2) Align the matching marks, and then insert the universal joint to serrated section of gear box assembly.
- 3) Tighten the bolt.

### Tightening torque:

**24 N·m (2.4 kgf-m, 17.4 ft-lb)**

### CAUTION:

Excessively large tightening torque of the universal joint bolts may lead to heavy steering wheel operation.

### Standard clearance between gearbox to DOJ:

**Over 14 mm (0.55 in)**

- 4) Align the center of roll connector. <Ref. to AB-20, ADJUSTMENT, Roll Connector.>

- 5) Install the steering wheel and airbag module. <Ref. to PS-20, INSTALLATION, Steering Wheel.>

### WARNING:

Always refer to "Airbag System" before performing airbag module service. <Ref. to AB-3, CAUTION, General Description.>

### C: INSPECTION

Check for wear, damage, or any other faults. If necessary, replace.

### Service limit:

**Universal joint play:**

**0 mm (0 in)**

**Maximum swing torque:**

**0.3 N (0.03 kgf, 0.07 lbf)**

- (1) Swing torque
- (2) Play

Measurement of swing torque of universal joint is as shown in the figures.

# Universal Joint

## POWER ASSISTED SYSTEM (POWER STEERING)

### Service limit:

**Maximum load: 3.8 N (0.39 kgf, 0.86 lbf) or less**

(1) Yoke (gearbox side)

### Service limit:

**Maximum load: 7.3 N (0.74 kgf, 1.64 lbf) or less**

(1) Yoke (Steering column side)

### Service limit:

**Maximum load: 3.8 N (0.39 kgf, 0.86 lbf) or less**

(1) Yoke (gearbox side)

### Service limit:

**Maximum load: 7.3 N (0.74 kgf, 1.64 lbf) or less**

(1) Yoke (Steering column side)

# Tilt Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

## 4. Tilt Steering Column

### A: REMOVAL

PS-00038

(1) Tilt steering column

(2) Universal joint

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 24 (2.4, 17.4)**

**T2: 25 (2.5, 18.1)**

# Tilt Steering Column

## POWER ASSISTED SYSTEM (POWER STEERING)

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Remove the airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>

### WARNING:

**Always refer to "Airbag System" before performing airbag module service. <Ref. to AB-3, CAUTION, General Description.>**

- 4) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
- 5) Remove the universal joint. <Ref. to PS-21, REMOVAL, Universal Joint.>
- 6) Remove the trim panel under instrument panel.
- 7) Remove the steering column lower cover.
- 8) Remove all connectors from steering column.
- 9) Remove the two bolts under instrument panel securing steering column.

- 10) Pull out the steering shaft assembly from hole on toe board.

### CAUTION:

- Be sure to remove the universal joint before removing the steering shaft assembly installing bolts when removing the steering shaft assembly or when lowering it for servicing of other parts.
- Do not loosen the tilt lever when the steering column is not secured to the vehicle.

## B: INSTALLATION

- 1) Set the grommet to toe board.

- 2) Insert the end of steering shaft into toe board grommet.

- 3) With the tilt lever secured, tighten the steering shaft mounting bolts under instrument panel.

### Tightening torque:

**25 N·m (2.5 kgf-m, 18.1 ft-lb)**

- 4) Connect all connectors under instrument panel.
- 5) Connect the airbag system connector at harness spool.

### NOTE:

Make sure to apply double lock.

- 6) Install the lower column cover with tilt lever held in the lowered position.
- 7) Install the universal joint. <Ref. to PS-21, INSTALLATION, Universal Joint.>
- 8) Align center of roll connector. <Ref. to AB-20, ADJUSTMENT, Roll Connector.>
- 9) Install the steering wheel. <Ref. to PS-20, INSTALLATION, Steering Wheel.>

### CAUTION:

**Insert the roll connector guide pin into guide hole on lower end of surface of steering wheel to prevent damage.**

- 10) Install the airbag module to steering wheel.

### WARNING:

**Always refer to "Airbag System" before performing the service operation. <Ref. to AB-3, CAUTION, General Description.>**

## C: DISASSEMBLY

Remove the two screws securing upper steering column covers, and two screws securing combination switch, and then remove the related parts.

## D: ASSEMBLY

- 1) Insert the combination switch to upper column shaft, and then install the upper column cover. Then route the ignition key harness and combination switch harness between column cover mounting bosses.

### Tightening torque:

**1.2 N·m (0.12 kgf-m, 0.9 ft-lb)**

### CAUTION:

**Do not overtighten the screw.**

# Tilt Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

## E: INSPECTION

### 1. BASIC INSPECTION

Measure overall length of the steering column. If not as specified, replace.

**Standard value:**

**Overall length L**

**$818.7 \pm 1.5 \text{ mm}$  ( $32.23 \pm 0.059 \text{ in}$ )**

PS-00042

### 2. AIRBAG MODEL INSPECTION

**WARNING:**

For airbag inspection procedures, refer to “Airbag System”. <Ref. to AB-3, CAUTION, General Description.>

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

### 5. Steering Gearbox

#### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Loosen the front wheel nut.
- 4) Lift-up the vehicle, and then remove the front wheels.
- 5) Remove the under cover. <Ref. to EI-23, REMOVAL, Front Under Cover.>
- 6) Remove the sub frame. <Ref. to FS-24, REMOVAL, Sub Frame.>
- 7) Remove the front exhaust pipe assembly. (Non-turbo model)  
<Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.>

#### WARNING:

**Be careful, the exhaust pipe is hot.**

- 8) Using a puller, remove the tie-rod end from knuckle arm after pulling off cotter pin and removing castle nut.

- (1) Castle nut
- (2) Tie-rod end
- (3) Knuckle arm

- 9) Remove the jack-up plate and front stabilizer.

- (1) Jack-up plate

- 10) Remove the one pipe joint at center of gearbox, and connect vinyl hose to pipe and joint. Discharge fluid by turning the steering wheel fully clockwise and counterclockwise. Discharge fluid similarly from the other pipe.

- Non-turbo model

- (1) Pipe A
- (2) Pipe B

- Turbo model

- (1) Pipe A
- (2) Pipe B

- 11) Remove the universal joint. <Ref. to PS-21, REMOVAL, Universal Joint.>

- 12) Disconnect the lower pipe C from gear box first, and upper pipe D second.

- (1) Pipe C
- (2) Pipe D

- 13) Remove the clamp bolts securing the gearbox to crossmember, and then remove the gearbox.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

- Non-turbo model

(1) Clamp

- Turbo model

(1) Clamp

## B: INSTALLATION

- 1) Insert the gearbox into crossmember, being careful not to damage the gearbox boot.
- 2) Tighten the gearbox to crossmember bracket via clamp with bolts to specified torque.

**Tightening torque:**

**60 N-m (6.1 kgf-m, 44.3 ft-lb)**

- Non-turbo model

(1) Clamp

- Turbo model

(1) Clamp

- 3) Connect the pipe D first to gear box, and pipe C second.

**Tightening torque:**

**15 N-m (1.5 kgf-m, 10.8 ft-lb)**

(1) Pipe C

(2) Pipe D

- 4) Install the universal joint. <Ref. to PS-21, INSTALLATION, Universal Joint.>
- 5) Connect the tie-rod end and knuckle arm, and tighten with castle nut.

**Tightening torque (Castle nut):**

**27 N-m (2.75 kgf-m, 19.9 ft-lb)**

**CAUTION:**

When connecting, do not hit the cap at bottom of tie-rod end with hammer.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

6) After tightening the castle nut to specified torque, tighten it further within 60° until cotter pin hole is aligned with the slot in nut, and then bend the cotter pin to lock.

- (A) Cotter pin
- (B) Castle nut
- (C) Tie-rod end

7) Install the front stabilizer to vehicle. <Ref. to FS-22, INSTALLATION, Front Stabilizer.>

8) Install the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.>

9) Install the sub frame. <Ref. to FS-24, INSTALLATION, Sub Frame.>

10) Install the under cover. <Ref. to EI-23, INSTALLATION, Front Under Cover.>

11) Align the center of roll connector. <Ref. to AB-20, ADJUSTMENT, Roll Connector.>

12) Install the steering wheel. <Ref. to PS-20, INSTALLATION, Steering Wheel.>

13) Install the front wheels.

14) Tighten the wheel nuts to specified torque.

### **Tightening torque:**

**90 N·m (9.0 kgf·m, 65.1 ft·lb)**

15) Connect the battery ground cable to battery.

16) Pour fluid into the oil tank, and bleed air.

<Ref. to PS-68, Power Steering Fluid.>

17) Check for fluid leaks.

18) Install the jack-up plate.

19) Lower the vehicle.

20) Check the fluid level in oil tank.

21) After adjusting the toe-in and steering angle, tighten the lock nut on tie-rod end.

### **Tightening torque:**

**83 N·m (8.5 kgf·m, 61.5 ft·lb)**

### **NOTE:**

When adjusting the toe-in, hold boot as shown to prevent it from being rotated or twisted. If twisted, straighten it.

## **C: DISASSEMBLY**

### **1. NON-TURBO MODEL**

#### **• RACK HOUSING ASSEMBLY**

1) Disconnect the four pipes from gearbox.

### **NOTE:**

Remove the pipes E and F as a single unit being fixed at clamp plate.

2) Secure the gearbox removed from vehicle in vice using ST.

ST 926200000 STAND

### **CAUTION:**

**Secure the gearbox in a vise using ST as shown. Do not attempt to secure it without this ST.**

3) Remove the tie-rod end and lock nut from gearbox.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

4) Remove the small clip from boot using pliers, and then move the boot to tie-rod end side.

(1) Clip

5) Using a flat tip screwdriver, remove the band from boot.

(1) Band

6) Extend the rack approx. 40 mm (1.57 in) out. Unlock the lock washer on both side of tie-rod end using a flat tip screwdriver.

**CAUTION:**  
Be careful not to scratch the rack surface as oil leaks may result.

(1) Lock washer

(2) Approx. 40 mm (1.57 in)

7) Using the ST, loosen the lock nut.

ST 926230000 SPANNER

8) Tighten the adjusting screw until it no longer tightens.

9) Using a wrench [32 mm width across flats] or adjustable wrench, remove the tie-rod.

10) Loosen the adjusting screw, and then remove the spring and sleeve.

11) Remove the two bolts securing valve assembly.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

12) Carefully draw out the input shaft, and then remove the valve assembly.

13) Using a sharp pointed pliers, rotate the rack stopper in direction of the arrow until end of the circlip comes out of stopper. Rotate the circlip in opposite direction and pull it out.

(1) Rack stopper

14) Pull the rack assembly from cylinder side, and draw out the rack bushing and rack stopper together with the rack assembly.

**CAUTION:**

**Be careful not to contact the rack to inner wall of cylinder when drawing out. Any scratch on the cylinder inner wall will cause oil leakage.**

(1) Rack bushing  
(2) Rack ASSY  
(3) Rack stopper

15) Remove the rack bushing and rack stopper from rack assembly.

16) Remove the oil seal from rack.

17) Insert the ST from pinion housing side, and then remove the oil seal using a press.

ST 34199AE050 OIL SEAL REMOVER

(1) Press  
(2) Oil seal

**• CONTROL VALVE ASSEMBLY**

1) Disconnect the four pipes from gearbox.

**NOTE:**

Remove the pipes E and F as a single unit being fixed at clamp plate.

2) Secure the gearbox removed from the vehicle in vise using ST.

ST 926200000 STAND

**CAUTION:**

**Secure the gearbox in a vise using ST as shown. Do not attempt to secure it without this ST.**

3) Using the ST, loosen the lock nut.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

ST 926230000 SPANNER

4) Tighten the adjusting screw until it no longer tightens.

5) Loosen the adjusting screw, and then remove the spring and sleeve.

6) Remove the two bolts securing valve assembly.

7) Carefully draw out the input shaft, and then remove the valve assembly.

8) Slide the dust cover out.

(1) Dust cover

9) Using a press remove the pinion and valve assembly from valve housing.

(1) Valve ASSY  
(2) Valve housing  
(3) Cloth

10) Using the ST and press, remove the dust seal, oil seal and special bearing from valve housing.  
ST 34099FA120 INSTALLER & REMOVER SEAL

### CAUTION:

- Do not apply force to the end surface of valve housing.
- Do not reuse the oil seal after removal.

(1) Oil seal  
(2) Special bearing

11) Remove the snap ring using snap ring pliers.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

**CAUTION:**  
Be careful not to scratch the pinion and valve assembly.

12) Press out the bearing together with the back up washer using pipe of I.D. 38.5 to 39.5 mm (1.516 to 1.555 in) and press.

- (1) Bearing
- (2) Backing washer
- (3) Oil seal
- (4) Pipe

13) Remove the oil seal.

## 2. TURBO MODEL

1) Disconnect the pipes A and B from steering body and control valve housing.

2) Secure the gearbox removed from vehicle using a C-clamp.

- (1) C-clamp

3) Remove the tie-rod end and lock nut from gearbox.

4) Remove the clip on outside of boot using pliers, and then slide the boot to tie-rod end side.

- (1) Clip

5) Using flat tip screwdriver, remove the band from boot.

### NOTE:

Check the boot for crack, damage or deterioration. Replace the boot with a new one if necessary.

- (1) Band

6) Using the ST, loosen lock nut.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

ST 926230000 SPANNER

(1) Lock nut

7) Tighten the adjusting screw until it no longer tightens.

8) Using a wrench (32 mm width across flats) or adjustable wrench with cinching boot, remove the tie-rod.

(1) Tie-rod

9) Loosen the adjusting screw, and then remove the spring and sleeve.

10) Clean the dirt of input shaft. Remove the dust cover taking care not to scratch the housing or input shaft and allow foreign matter to enter gear box interior.

(1) Dust cover

11) Align the ST pin to plug hole to install. Rotate the ST counterclockwise to remove plug.  
ST 34199AE090 PLUG WRENCH

(1) Plug

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

12) Remove the valve assembly taking care not to scratch seal ring and valve housing inner surface.

- (1) Valve ASSY
- (2) Seal ring

13) Remove the holder using a wrench (36 mm width across flats) or adjustable wrench.

14) Install the ST on valve side of rack and press outer side oil seal out taking care not to contact rack with steering body inner surface.  
ST 34199FE000 INSTALLER & REMOVER

### NOTE:

Block the pipe connection of steering body to prevent fluid from flowing out.

- (1) Rack piston
- (2) Outer side oil seal

15) Insert the ST from valve side and press back-up ring and oil seal out.  
ST 34199FE010 REMOVER

16) Using the ST1 and ST2, repair the cylinder's clinched sections.

# Steering Gearbox

ST2 34199FE020 BASE

NOTE:  
Do not apply force on the plug edge surface.

(1) Cylinder

17) If the cylinder edge is deformed in a convex shape, repair using an oil stone.

18) Remove the oil seal using ST and press from plug.

ST 34199AE100 PLUG OIL SEAL REMOVER

(1) Oil seal  
(2) O-ring

19) Set the ST on drawing dimension.  
ST 34199AE120 GEARBOX OIL SEAL RE-  
MOVER

(1) 70 mm (2.76 in)

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

20) Set the stopper to gear box, and then insert the tip of ST to gear box.

- (1) Stopper
- (2) Oil seal

21) By fixing the 2-surface width, press in by rotating the rod and attach to oil seal.

- (1) Rod
- (2) 2-surface width

22) While fixing the 2-surface width, pull out the oil seal by rotating nut.

### CAUTION:

Take care not to scratch the gear box inner surface.

- (1) 2-surface width
- (2) Nut

23) Using a press, remove the bushing of gear box installation portion.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

## D: ASSEMBLY

### 1. NON-TURBO MODEL

#### • RACK HOUSING ASSEMBLY

#### CAUTION:

Use only genuine grease for the gearbox.

#### Specified grease for gearbox:

**VALIANT GREASE M-2 (Part No. 003608001)**

- 1) Apply power steering fluid to a new oil seal.
  - 2) Install the oil seal in correct position as shown in the figure. Push the oil seal using a press until portion A of ST contacts face of B.
- ST 34099FA110 INSTALLER

#### CAUTION:

Be careful not to damage or scratch the cylinder inner wall.

- (1) Press  
(2) Oil seal

- 3) Fix the rack housing in vise using ST.  
ST 926200000 STAND

#### NOTE:

- When fixing the rack housing in vise, be sure to use this special tool. Do not fix rack housing in vise using pad such as aluminum plates, etc.
- When using the old rack housing, be sure to clean and remove rust before assembling. Check pinion housing bushing carefully.

- 4) Fit the ST over toothed portion of rack assembly, and check for binding or irregular insertion. If any deformation is noted on flats at the end of rack, shape by using file, and wash with cleaning fluid.  
ST 926390001 COVER & REMOVER ASSY

- (1) Rack ASSY

- 5) Apply genuine grease to the teeth of thoroughly washed rack assembly, and then fit the ST over the toothed portion.

#### CAUTION:

- Be careful not to block the air passage with grease. Remove excessive grease.
- After fitting cover, check the air passage hole for clogging. If clogged, open by removing grease from the hole.

- 6) Before inserting the rack assembly, apply a coat of specified power steering fluid to the surfaces of ST and rack piston.

- 7) Insert the rack assembly into rack housing from cylinder side, and then remove the ST after it has passed completely through oil seal.

- 8) Fit the ST1 and ST2 over the end of rack, and then install a new rack bushing.

ST1 926400000 GUIDE  
ST2 927660000 GUIDE

#### CAUTION:

- If burrs or nicks are found on this guide and rack shaft portion, remove by filing.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

- Dip the rack bushing in specified power steering fluid before installing, and pay attention not to damage O-ring and oil seal.

(1) Rack bushing ASSY

9) Insert the rack stopper into the cylinder tube until internal groove (on cylinder side) is aligned with external groove (on rack stopper). Turn the rack stopper with ST so that the rack stopper hole is seen through cylinder slits.

10) Insert the rack stopper into the rack housing, and then wrap a new circlip using a sharp pointed pliers to secure the rack stopper in position.

### CAUTION:

Be careful not to scratch the rack while winding circlip.

### NOTE:

Rotate the wrench another 90 to 180° after end of circlip has been wrapped in.

- 11) Apply genuine grease to dust cover, and then install the dust cover to valve assembly.

(1) Dust cover

- 12) Apply genuine grease to the pinion gear and bearing of valve assembly.

- 13) Install a new gasket on valve assembly. Insert the valve assembly into place while facing rack teeth toward pinion.

- 14) Tighten the bolts alternately to secure valve assembly.

### Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

### CAUTION:

Be sure to alternately tighten the bolts.

- 15) Temporarily install the rack, and then operate it from lock to lock two or three times to make it fit in. Remove the grease blocking air vent hole.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

## CAUTION:

If operating the rack from lock to lock without installing tie-rod, it may damage the oil seal. Always install the tie-rods LH and RH.

16) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert sleeve into steering body.

Charge the adjusting screw with grease, and then insert the spring into adjusting screw and install on steering body.

- (1) Sleeve
- (2) Spring
- (3) Adjusting screw

17) Tighten the adjusting screw to specified torque.

## Tightening torque:

**7.4 N·m (0.75 kgf-m, 5.4 ft-lb)**

18) After tightening to the specified tightening torque, loosen it by 25°.

19) Remove the tie-rod.

20) Verify that play is within specified value. <Ref. to PS-51, SERVICE LIMIT, INSPECTION, Steering Gearbox.>

21) Loosen the adjusting screw, and then apply liquid gasket to at least 1/3 of the entire perimeter of adjusting screw thread.

## Liquid gasket:

**THREE BOND 1141 (Part No. 004403006)**

- (1) Apply liquid gasket to at least 1/3 of entire perimeter.

22) Tighten the adjusting screw to specified torque.

## Tightening torque:

**7.4 N·m (0.75 kgf-m, 5.4 ft-lb)**

23) After tightening to the specified tightening torque, loosen it by 25°.

24) Install the lock nut. While holding the adjusting screw with a wrench, tighten lock nut using ST.

ST 926230000 SPANNER

## Tightening torque (Lock nut):

**40 N·m (4.1 kgf-m, 29.5 ft-lb)**

## NOTE:

Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

25) Extend the rack approx. 40 mm (1.57 in) beyond side of steering body.

26) Install the tie-rod and a new lock washer into rack.

## Tightening torque:

**78 N·m (8.0 kgf-m, 57.9 ft-lb)**

- (1) Lock washer
- (2) Approx. 40 mm (1.57 in)

27) Bend the lock washer.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

**CAUTION:**  
Be careful not to scratch the rack when bending lock washer.

(1) Lock washer

28) Apply a coat of grease to the tie-rod groove, and then install the boot to housing.

**NOTE:**  
Make sure that the boot is installed without unusual inflation or deflation.

29) Install a new boot band. Using band clamp pliers, caulk the boot band until caulking part clearance is 2 mm (0.079 in) or less.

(1) Boot band  
(2) 2 mm (0.079 in) or less

30) Fix the boot end with clip (small).

(1) Clip

31) After installing, check the boot end is positioned into groove on tie-rod.

32) If the tie-rod end was removed, screw in the lock nut and tie-rod end to screwed portion of tie-rod, and then tighten the lock nut temporarily in a position as shown in the figure.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

**Installed tie-rod length L:**  
**15 mm (0.59 in)**

- 33) Inspect the gearbox as follows:  
"A" Holding the tie-rod end, repeat lock to lock two or three times as quickly as possible.  
"B" Holding the tie-rod end, turn it slowly at a radius one or two times as large as possible.  
After all, make sure that the boot is installed in specified position without deflation.

- 34) Remove the gearbox from ST.  
ST 926200000 STAND  
35) Install the four pipes on gearbox.  
(1) Connect the pipe A and B to four pipe joints of gearbox.

**Tightening torque:**

**13 N·m (1.3 kgf·m, 9.4 ft·lb)**

- (2) Connect the pipe E and F to gearbox.

**Tightening torque:**

**Pipe E: 15 N·m (1.5 kgf·m, 10.8 ft·lb)**

**Pipe F: 25 N·m (2.5 kgf·m, 18.1 ft·lb)**

## • CONTROL VALVE ASSEMBLY

**Specified steering grease:**

**VALIANT GREASE M-2 (Part No. 003608001)**

- 1) Clean all parts and tools before reassembling.

- 2) Apply a coat of specified power steering fluid to the inner wall of valve housing.

- (1) Apply fluid.

- 3) Attach the ST2 to ST1.

ST1 34099FA120 INSTALLER & REMOVER SEAL

ST2 34099FA130 INSTALLER SEAL

- 4) To avoid scratching the oil seal, apply a coat of grease to the contact surface of installer and oil seal.

- 5) Verify the oil seal direction.

Attach the oil seal to installer and position in valve housing before pressing into place.

- 6) Press the oil seal into place using a press.

- 7) Attach the bearing to ST, and then position in value housing. Using the ST and press, install the special bearing in valve housing.

# Steering Gearbox

#### NOTE:

Be careful not to tilt the ball bearing during installation.

15) Install the snap ring using snap ring pliers.

#### NOTE:

Rotate the snap ring to check for proper installation.

16) Apply the specified grease to dust cover.

17) Install the dust cover on valve assembly.

- (1) Dust cover

18) Apply genuine grease to the pinion gear and bearing of valve assembly.

PS-00165

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

19) Install a new gasket on valve assembly. Insert the valve assembly into place while facing rack teeth toward pinion.

20) Tighten the bolts alternately to secure valve assembly.

### Tightening torque:

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

### CAUTION:

**Be sure to alternately tighten the bolts.**

21) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert sleeve into steering body.

Charge the adjusting screw with grease, and then insert the spring into adjusting screw and install on steering body.

- (1) Sleeve
- (2) Spring
- (3) Adjusting screw

22) Tighten the adjusting screw to specified torque.

### Tightening torque:

**7.4 N·m (0.75 kgf·m, 5.4 ft·lb)**

23) After tightening to the specified tightening torque, loosen it by 25°.

24) Verify that play is within specified value. <Ref. to PS-51, SERVICE LIMIT, INSPECTION, Steering Gearbox.>

25) Loosen the adjusting screw, and then apply liquid gasket to at least 1/3 of the entire perimeter of adjusting screw thread.

### Liquid gasket:

**THREE BOND 1141 (Part No. 004403006)**

- (1) Apply liquid gasket to at least 1/3 of entire perimeter.

26) Tighten the adjusting screw to specified torque.

### Tightening torque:

**7.4 N·m (0.75 kgf·m, 5.4 ft·lb)**

27) After tightening to the specified tightening torque, loosen it by 25°.

28) Install the lock nut. While holding the adjusting screw with a wrench, tighten lock nut using ST. ST 926230000 SPANNER

### Tightening torque (Lock nut):

**40 N·m (4.1 kgf·m, 29.5 ft·lb)**

### NOTE:

Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

29) Remove the gearbox from ST.

30) Install the four pipes on gearbox.

- (1) Connect the pipe A and B to the gearbox.

### Tightening torque:

**13 N·m (1.3 kgf·m, 9.4 ft·lb)**

- (2) Connect the pipe E and F to gearbox.

### Tightening torque:

**Pipe E: 15 N·m (1.5 kgf·m, 10.8 ft·lb)**

**Pipe F: 25 N·m (2.5 kgf·m, 18.1 ft·lb)**

## 2. TURBO MODEL AND STI MODEL

1) Using a press, install the bushing to gearbox installation portion.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

2) Apply a coat of grease to inside and outside of new oil seal.

### Specified steering grease:

**VALIANT GREASE M-2 (Part No. 003608001)**

3) Verify the oil seal direction and installation position. Using the ST and press, press fit the oil seal to gear box.

ST 34199AE130 GEARBOX OIL SEAL INSTALLER

(1) Oil seal

4) Using a C-clamp, attach the steering body as shown in the figure. Apply a coat of grease to needle bearing.

### CAUTION:

**Ensure the needle bearing is free from defects. If it is faulty, replace the steering body with a new one.**

(1) C-clamp

5) Using the ST-B and ST-C, attach the oil seal to ST-A.

ST 34199FE040 INSTALLER A, B, C

### NOTE:

Face the oil seal in direction shown in the figure.

(A) Oil seal

6) Insert the ST-A with oil seal assembled, through gear side of rack. Remove the oil seal from ST-A near piston, and then remove the ST-A from rack.

(A) Oil seal  
(B) Rack  
(C) Piston

7) Install the back-up washer from gear side of rack.

(1) Oil seal  
(2) Back-up washer  
(3) Rack

8) Equally apply a thin coat of grease to the rack, then install the oil seal.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

**CAUTION:**

Be careful not to scratch the oil seal lips with piston's inner ring section.

- (1) Rack piston inner ring
- (2) Outer side oil seal
- (3) Rack

9) Apply a coat of grease to the grooves in rack, sliding surface of sleeve and sealing surface of piston. Install the ST on end of steering body cylinder. Then insert the rack into steering body from cylinder side.

- (1) Vinyl tape

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

16) Apply a coat of grease on the gear teeth of valve assembly, and then attach the valve assembly taking care not to scratch oil seal and seal ring.

- (1) Seal ring
- (2) Oil seal

17) Apply grease on the oil seal circumference, and then press into the plug using ST and a press. Replace the plug circumference O-rings with new ones.

ST 34199AE110 PLUG OIL SEAL INSTALLER

**CAUTION:**  
Pay attention to the oil seal direction, and attaching position.

- (1) Plug
- (2) O-ring
- (3) Oil seal

18) Using the ST, install the plug.  
ST 34199AE090 PLUG WRENCH

**Tightening torque:**  
**64 N·m (6.5 kgf-m, 47.0 ft-lb)**

- (1) Plug

19) Install the dust cover. Remove the vinyl tape.

- (1) Dust cover

20) Temporarily install the rack, and then operate it from lock to lock two or three times to make it fit in. Remove the grease blocking air vent hole.

**CAUTION:**  
If operating the rack from lock to lock without installing tie-rod, it may damage the oil seal. Always install the tie-rods LH and RH.

21) Apply a coat of grease to the sliding surface of seat pad, sleeve and seating surface of spring, and then insert sleeve into steering body.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

Charge the adjusting screw with grease, and then insert the spring into adjusting screw and install on steering body.

- (1) Seat pad
- (2) Sleeve
- (3) Spring
- (4) Adjusting screw
- (5) Lock nut

22) Tighten the adjusting screw to specified torque.

### **Tightening torque:**

**7.4 N·m (0.75 kgf-m, 5.4 ft-lb)**

23) After tightening to the specified tightening torque, loosen it by 37°.

24) Remove the tie-rod.

25) Verify that play is within specified value. <Ref. to PS-51, SERVICE LIMIT, INSPECTION, Steering Gearbox.>

26) Loosen the adjusting screw, and then apply liquid gasket to at least 1/3 of the entire perimeter of adjusting screw thread.

### **Liquid gasket:**

**THREE BOND 1141 (Part No. 004403006)**

- (1) Apply liquid gasket to at least 1/3 of entire perimeter.

27) Tighten the adjusting screw.

### **Tightening torque:**

**9.8 N·m (1.0 kgf-m, 7.2 ft-lb)**

28) After tightening to the specified tightening torque, loosen it.

29) Tighten the adjusting screw.

### **Tightening torque:**

**4.8 N·m (0.49 kgf-m, 3.5 ft-lb)**

30) After tightening to the specified tightening torque, loosen it.

31) Tighten the adjusting screw.

### **Tightening torque:**

**4.8 N·m (0.49 kgf-m, 3.5 ft-lb)**

32) After tightening to the specified tightening torque, loosen it by 37°.

33) Install the lock nut. While holding the adjusting screw with a wrench, tighten lock nut using ST.

ST 926230000 SPANNER

### **Tightening torque (Lock nut):**

**40 N·m (4.1 kgf-m, 29.5 ft-lb)**

### **NOTE:**

Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

34) Install the tie-rod into rack.

### **Tightening torque:**

**90 N·m (9.0 kgf-m, 65.1 ft-lb)**

### **NOTE:**

Check the mating face of rack and tie-rod for foreign material, dirt, dust and etc.

If required, clean the mating face.

35) Apply a coat of grease to the tie-rod groove, and then install the boot to housing.

### **NOTE:**

Make sure that the boot is installed without unusual inflation or deflation.

36) Caulk the boot so the space inside boot band caulking portion becomes 2 mm (0.08 in) or less.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

NOTE:  
Use a new boot band.

- (A) Boot band
- (B) Less than 2 mm (0.08 in)

37) Fix the boot end with clip (small).

- (1) Clip

38) After installing, check the boot end is positioned into groove on tie-rod.

39) If the tie-rod end was removed, screw in the lock nut and tie-rod end to screwed portion of tie-rod, and then tighten the lock nut temporarily in a position as shown in the figure.

**Installed tie-rod length L:**

- Sedan:**  
**25 mm (0.98 in)**
- Wagon:**  
**15 mm (0.59 in)**

PS-00097

40) Inspect the gearbox as follows:  
“A” Holding the tie-rod end, repeat lock to lock two or three times as quickly as possible.  
“B” Holding the tie-rod end, turn it slowly at a radius one or two times as large as possible.  
After all, make sure that the boot is installed in specified position without deflation.

- 41) Remove the gearbox from ST.  
ST 926200000 STAND
- 42) Install the four pipes on gearbox.
  - (1) Connect the pipe A and B to gearbox.

**Tightening torque:**

**Housing side**

**20 N·m (2.0 kgf-m, 14.5 ft-lb)**

**Cylinder side**

**24 N·m (2.4 kgf-m, 17.4 ft-lb)**

- (2) Connect the pipe G and H to gearbox.

**Tightening torque:**

**15 N·m (1.5 kgf-m, 10.8 ft-lb)**

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

### E: INSPECTION

#### 1. BASIC INSPECTION

1) Clean all disassembled parts, and check for wear, damage, or any other faults, then repair or replace as necessary.

2) When disassembling, check the inside of gearbox for water. If any water is found, carefully check the boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

| No. | Parts                  | Inspection   | Corrective action  |
|-----|------------------------|--|--|
| 1   | Input shaft            | (1) Bend of input shaft<br>(2) Damage on serration   | If the bend or damage is excessive, replace the entire gearbox.  |
| 2   | Dust seal              | (1) Crack or damage<br>(2) Wear  | If the outer wall slips, the lip is worn out or damage is found, replace it with a new one.  |
| 3   | Rack and pinion        | Poor mating of rack with pinion  | (1) Adjust the backlash properly.<br>By measuring the turning torque of gearbox and sliding resistance of rack, check if rack and pinion engage uniformly and smoothly with each other. (Refer to "Service limit".)<br>(2) Keeping the rack pulled out all the way so that all teeth emerge, check teeth for damage.<br>Even if abnormality is found in either (1) or (2), replace the entire gearbox. |
| 4   | Gearbox unit           | (1) Bend of rack shaft<br>(2) Bend of cylinder portion<br>(3) Crack or damage on cast iron portion | Replace the gearbox with a new one.  |
|     |                        | (4) Wear or damage on rack bushing   | If the free play of rack shaft in radial direction is out of the specified range, replace the gearbox with a new one. (Refer to "Service limit".)  |
|     |                        | (5) Wear on input shaft bearing  | If the free plays of input shaft in radial and axial directions are out of the specified ranges, replace the gearbox with a new one. (Refer to "Service limit".)   |
| 5   | Boot                   | Crack, damage or deterioration   | Replace.   |
| 6   | Tie-rod                | (1) Looseness of ball joint<br>(2) Bend of tie-rod   | Replace.   |
| 7   | Tie-rod end            | Damage or deterioration on dust seal   | Replace.   |
| 8   | Adjusting screw spring | Deterioration  | Replace.   |
| 9   | Boot clip              | Deterioration  | Replace.   |
| 10  | Sleeve                 | Damage   | Replace.   |
| 11  | Pipes                  | (1) Damage to flared surface<br>(2) Damage to flare nut<br>(3) Damage to pipe                      | Replace.   |

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

## 2. SERVICE LIMIT

Make a measurement as follows. If it exceeds the specified service limit, adjust or replace.

### NOTE:

When making a measurement, vise the gearbox by using ST. Never vise the gearbox by inserting aluminum plates, etc. between vise and gearbox.

ST 926200000 STAND

### Sliding resistance of rack shaft:

#### Service limit

400 N (41 kgf, 90 lbf) or less

## 3. RACK SHAFT PLAY IN RADIAL DIRECTION

### Right-turn steering:

#### Service limit

0.19 mm (0.0075 in) or less

#### On condition

L: 5 mm (0.20 in)

P: 122.6 N (12.5 kgf, 27.6 lbf)

### Left-turn steering:

#### Service limit

Direction ⇄

0.3 mm (0.012 in) or less

Direction ⇄

0.15 mm (0.0059 in) or less

L: 5 mm (0.20 in)

P: 98 N (10 kgf, 22 lbf)

## 4. INPUT SHAFT PLAY

### In radial direction:

#### Service limit

0.18 mm (0.0071 in) or less

#### On condition

P: 98 N (10 kgf, 22 lbf)

### In axial direction:

#### Service limit

0.5 mm (0.020 in) or less

#### On condition

P: 20 — 49 N (2 — 5 kgf, 4 — 11 lbf)

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

## 5. TURNING RESISTANCE OF GEARBOX

Using the ST, measure the gearbox turning resistance.

ST 34099PA100 SPANNER

### Service limit

**Maximum allowable resistance**

**10.5 N (1.1 kgf, 2.4 lbf) or less**

**Difference between right and left turning resistance: Less than 20%**

## 6. OIL LEAKING

(1) Power cylinder

(3) Rack piston

(5) Input shaft

(2) Cylinder

(4) Rack axle

(6) Valve housing

1) Lift up the vehicle.

2) Even if the location of the leak can be easily found by observing the leaking condition, it is necessary to thoroughly remove the fluid from the suspected portion and turn the steering wheel from lock to lock about thirty to forty times with engine running, then make comparison of the suspected portion between immediately after and several hours after this operation.

3) Inspect leakage from "a".

The oil seal is damaged. Replace the valve assembly with a new one.

4) Inspect leakage from "b".

The torsion bar O-ring is damaged. Replace the valve assembly with a new one.

5) Inspect leakage from "c".

The oil seal is damaged. Replace the valve assembly or oil seal with a new one.

6) Inspect leakage from "d".

The pipe is damaged. Replace the faulty pipe or O-ring.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

7) Inspect leakage from “g”.

The hose is damaged. Replace the hose with a new one.

8) If leak is other than a, b, c, d, or g, and if oil is leaking from the gearbox, move the right and left boots toward tie-rod end side, respectively, with the gearbox mounted to the vehicle, and remove fluid from the surrounding portions. Then, turn the steering wheel from lock to lock thirty to forty times with the engine running, then make comparison of the leaked portion immediately after and several hours after this operation.

(1) Leakage from “e”

The cylinder seal is damaged. Replace the rack bushing with a new one.

(2) Leakage from “f”

There are two possible causes. Take the following step first. Remove the pipe assembly B from the valve housing, and close the circuit with ST.

ST 926420000 PLUG

Turn the steering wheel from lock to lock thirty to forty times with the engine running, then make comparison of the leaked portion between immediately after and several hours after this operation.

- If leakage from “f” is noted again:

The oil seal of pinion and valve assembly is damaged. Replace the pinion and valve assembly with a new one. Or replace the oil seal and parts that are damaged during disassembly with new ones.

- If oil stops leaking from “f”:

The oil seal of rack housing is damaged. Replace the oil seal and the parts that are damaged during disassembly with new ones.

## F: ADJUSTMENT

1) Adjust the front toe. <Ref. to FS-10, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

**Standard of front toe:**

**IN 3 — OUT 3 mm (IN 0.12 — OUT 0.12 in)**

(1) Lock nut

2) Adjust the steering angle of wheels.

**Standard of steering angle:**

| Model       | 2.5i, OUTBACK, WRX | STI        |
|-------------|--------------------|------------|
| Inner wheel | 34.5°±1.5°         | 32.9°±1.5° |
| Outer wheel | 30.3°±1.5°         | 28.5°±1.5° |

3) If the steering wheel spokes are not horizontal when wheels are set in the straight ahead position, and error is more than 5° on the periphery of steering wheel, correctly re-install the steering wheel.

(1) Within 5°

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in opposite direction by same angle.

# Pipe Assembly

## POWER ASSISTED SYSTEM (POWER STEERING)

### 6. Pipe Assembly

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle, and then remove the jack-up plate.

(1) Jack-up plate

- 3) Remove the one pipe joint at the center of gear-box, and then connect the vinyl hose to pipe and joint. Discharge fluid by turning steering wheel fully clockwise and counterclockwise. Discharge fluid similarly from the other pipe.

- Non-turbo model

(1) Pipe A  
(2) Pipe B

(2) Pipe B

- Turbo model

(1) Pipe A

(2) Pipe B

8) Install the jack-up plate.

9) Install the air intake duct. <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.>

10) Install the air intake duct, air cleaner upper cover and air intake boot.

<Ref. to IN(H4DOTC)-8, INSTALLATION, Air Cleaner Case.> and <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.>

11) Connect the battery ground cable to battery.

12) Feed the specified fluid.

**CAUTION:**

**Never start the engine before feeding the fluid; otherwise vane pump might be seized up.**

## Pipe Assembly

### POWER ASSISTED SYSTEM (POWER STEERING)

13) Finally check clearance between pipes and/or hoses, as shown above.

If cruise control actuator-to-power steering hose clearance is less than 10 mm (0.39 in), move the portion (A) secured by clamp to other portion, or bend portion (B) to adjust.

PS-00179

(1) High pressure hose

(2) No interference is allowed between hoses.

(3) Clearance between crossmember and pipe: 3 — 8 mm (0.12 — 0.31 in)

# Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

## C: INSPECTION

Check all disassembled parts for wear, damage or other abnormalities. Repair or replace faulty parts as required.

| Part name | Inspection  | Remedy                  |
|-----------|---|-------------------------|
| Pipe      | <ul style="list-style-type: none"> <li>• O-ring fitting surface for damage</li> <li>• Nut for damage</li> <li>• Pipe for damage</li> </ul>  | Replace with a new one. |
| Clamp     | <ul style="list-style-type: none"> <li>• Clamps for weak clamping force</li> </ul>  | Replace with a new one. |
| Hose      | <ul style="list-style-type: none"> <li>• Flared surface for damage</li> <li>• Flare nut for damage</li> <li>• Outer surface for cracks</li> <li>• Outer surface for wear</li> <li>• Clip for damage</li> <li>• End coupling or adapter for degradation</li> </ul> | Replace with a new one. |

### CAUTION:

Although the surface layer materials of rubber hoses have excellent weathering resistance, heat resistance and resistance for low temperature brittleness, they are likely to be damaged chemically by brake fluid, battery electrolyte, engine oil and automatic transmission fluid and their service lives are to be very shortened. It is very important to keep the hoses free from before mentioned fluids and to wipe out immediately when the hoses are adhered with the fluids.

Since the resistances for heat or low temperature brittleness are gradually declining according to time accumulation of hot or cold conditions for the hoses and their service lives are shortening accordingly, it is necessary to perform the careful inspection frequently when the vehicle is used in hot weather areas, cold weather area and a driving condition in which many steering operations are required in short time.

Particularly, continuous work of relief valve over 5 seconds causes to reduce service lives of the hoses, the oil pump, the fluid, etc. due to over heat.

| Trouble                             | Possible cause  | Corrective action                          |
|-------------------------------------|---|--|
| Pressure hose burst                 | Excessive holding time of relief status   | Instruct the customers.                    |
|                                     | Malfunction of relief valve   | Replace the oil pump.                      |
|                                     | Poor cold characteristic of fluid   | Replace the fluid.                         |
| Forced out return hose              | Poor connection   | Correct.                                   |
|                                     | Poor holding of clip  | Retighten.                                 |
|                                     | Poor cold characteristic of fluid   | Replace the fluid.                         |
| Fluid bleeding out of hose slightly | Wrong layout, tensioned   | Replace the hose.                          |
|                                     | Excessive play of engine due to deterioration of engine mounting rubber               | Replace the defective parts.               |
|                                     | Improper stop position of pitching stopper  | Replace the defective parts.               |

|                                     | Too many times use in extremely cold weather  | Replace.<br>Instruct the customers.        |

# Pipe Assembly

## POWER ASSISTED SYSTEM (POWER STEERING)

### NOTE:

It is likely that although one judges fluid leakage, there is actually no leakage. This is because the fluid spilt during the last maintenance was not completely wiped off. Be sure to wipe off spilt fluid thoroughly after maintenance.

PS-00022

# Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

| Fluid leaking area  | Possible cause  | Corrective action   |
|---|---|---|
| Leakage from connecting portions of pipes and hoses, numbered with (1) through (10) in figure | Insufficient tightening of flare nut, catching dirt or the like, damage to flare or flare nut or eye bolt | Loosen and retighten, if ineffective, replace.  |
|   | Poor insertion of hose, poor clamping   | Retighten or replace the clamp.   |
|   | Damaged O-ring or gasket  | Replace the O-ring or gasket pipe or hose with new one, if ineffective, replace gearbox also. |
| Leakage from hose (11), (12) and (13) in figure   | Crack or damage in hose   | Replace with a new one.   |
|   | Crack or damage in hose hardware  | Replace with a new one.   |
| Leakage from surrounding of cast iron portion of oil pump (14) and (15) in figure             | Damaged O-ring  | Replace the oil pump.   |
|   | Damaged gasket  | Replace the oil pump.   |
| Leakage from oil tank (16) and (17) in figure   | Crack in oil tank   | Replace the oil tank.   |
| Leakage from filler neck (18)   | Damaged cap packing   | Replace the cap.  |
|   | Crack in root of filler neck  | Replace the oil tank.   |
|   | High fluid level  | Adjust the fluid level.   |
| Leakage from surrounding of power cylinder of gearbox (19) in figure                          | Damaged oil seal  | Replace the oil seal.   |
| Leakage from control valve of gearbox (20) and (21) in figure                                 | Damaged packing or oil seal   | Replace the problem parts.  |
|   | Damage in control valve   | Replace the control valve.  |

# Oil Pump

## POWER ASSISTED SYSTEM (POWER STEERING)

### 7. Oil Pump

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the pulley belt cover.
- 3) Loosen the belt tension adjusting bolt and generator securing bolt, and then remove the power steering pump V-belt.

- 4) Disconnect the connector from power steering pump switch.
- 5) Disconnect the pipe C and suction hose from oil pump.

#### CAUTION:

- Do not allow fluid from the hose end to come into contact with pulley belt.
- To prevent foreign matter from entering the hose, cover the open ends of them with a clean cloth.

- (1) Suction hose
- (2) Pipe C

- 6) Remove the bolts which install the power steering pump bracket.

- 7) Place the oil pump bracket in a vise, remove the two bolts from front side of oil pump.

#### CAUTION:

**Do not place the oil pump bracket directly in the vise; use soft pads and hold oil pump lightly to protect the pump.**

- 8) Remove the bolt from the rear side of oil pump.
- 9) Disassemble the oil pump and bracket by inserting a flat tip screwdriver as shown in the figure.

#### B: INSTALLATION

- 1) Install the oil pump to bracket.
  - (1) Place the oil pump bracket in a vise. Tighten the bushing using a 12.7 mm (1/2") type 14 mm and 21 mm box wrench until it is in contact with the oil pump mounting surface.

# Oil Pump

POWER ASSISTED SYSTEM (POWER STEERING)

## CAUTION:

Do not place the oil pump bracket directly in the vise; use soft pads and hold oil pump lightly to protect the pump.

- (1) Bushing
- (2) Nut
- (3) 21 mm
- (4) 14 mm
- (5) Bolt

(2) Tighten the bolts which install the oil pump to bracket.

### Tightening torque:

**15.7 N·m (1.6 kgf-m, 11.6 ft-lb)**

### Tightening torque:

**37.3 N·m (3.8 kgf-m, 27.5 ft-lb)**

2) Tighten the bolts which install the power steering pump bracket.

3) Interconnect the pipe C and suction hose.

### Tightening torque:

#### Eye bolt

**40 N·m (4.1 kgf-m, 29.5 ft-lb)**

## CAUTION:

If a hose is twisted at this step, the hose may come into contact with some other parts.

- (1) Suction hose
- (2) Pipe C

4) Connect the connector to power steering pump switch.

5) Install the pulley belt to oil pump.

6) Check the pulley belt tension.

<Ref. to ME(H4SO)-41, INSPECTION, V-belt.>

7) Tighten the bolt of belt tension.

### Tightening torque:

**25 N·m (2.5 kgf-m, 18.1 ft-lb)**

8) Install the pulley belt cover.

9) Connect the battery ground cable to battery.

10) Feed the specified power steering fluid. <Ref. to PS-68, Power Steering Fluid.>

## CAUTION:

Never start the engine before feeding the fluid; otherwise vane pump might be seized up.

# Oil Pump

POWER ASSISTED SYSTEM (POWER STEERING)

## C: INSPECTION

### 1. BASIC INSPECTION

Perform the following inspection procedures and repair or replace defective parts.

| No. | Parts               | Inspection                                 | Corrective action  |
|-----|---------------------|--|--|
| 1   | Oil pump (Exterior) | (1) Crack, damage or oil leakage           | Replace the oil pump with a new one.   |
|     |                     | (2) Play of pulley shaft                   | Measure the radial play and axial play. If any of these exceeds the service limit, replace the oil pump with a new one.  |
| 2   | Pulley              | (1) Damage                                 | Replace it with a new one.   |
|     |                     | (2) Bend                                   | Measure the V ditch deflection. If it exceeds the service limit, replace the pulley with a new one.  |
| 3   | Oil pump (Interior) | (1) Defect or burning of vane pump         | Check the resistance to rotation of pulley. If it is past the service limit, replace the oil pump with a new one.  |
|     |                     | (2) Bend in the shaft or damage to bearing | Oil pump emits a noise that is markedly different in tone and loudness from a sound of a new oil pump when turning with a string put around its pulley, replace the oil pump with a new one. |
| 4   | O-ring              | Crack or deterioration                     | Replace it with a new one.   |
| 5   | Bracket             | Crack                                      | Replace it with a new one.   |

### 2. SERVICE LIMIT

Make a measurement as follows. If it exceeds the specified service limit, replace the parts with new ones.

#### CAUTION:

- Fix the oil pump on a vise to make a measurement. At this time, hold the oil pump with least possible force between two wood pieces.
- Do not set outside of flow control valve or pulley on a vise; otherwise outside or pulley might be deformed. Select properly sized wood pieces.

1) Play of the pulley shaft

#### Condition:

**P:** When applying the force of 9.8 N (1.0 kgf, 2.2 lbf)

#### Service limit:

**Radial play (Direction ← →)**  
0.4 mm (0.016 in) or less

(1) Dial gauge

**Axial play (Direction ⇄)**  
0.9 mm (0.035 in) or less

(1) Dial gauge

2) Ditch deflection of pulley

# Oil Pump

POWER ASSISTED SYSTEM (POWER STEERING)

## Service limit:

**1.0 mm (0.039 in) or less**

### NOTE:

Read the value for one surface of V ditch, and then the value for another off the dial.

(1) Dial gauge

### 3) Resistance to rotation of pulley

## Service limit:

**Maximum load: 9.22 N (0.94 kgf, 2.07 lbf) or less**

### NOTE:

- A rather higher value may be indicated when pulley starts turning.
- Measure the load during rotation and make a judgment.

(1) Spring balance

## 3. HYDRAULIC PRESSURE

### NOTE:

- Be sure to complete all items aforementioned in "INSPECTION", prior to measuring hydraulic pressure. Otherwise, pressure can not be measured correctly. <Ref. to PS-69, INSPECTION, General Diagnostic Table.>
- Do not leave the valve of pressure gauge closed or hold the steering wheel at stop end for 5 seconds or more in any case, as the oil pump may be damaged due to long keep of these conditions.
- Put a cotton cloth waste at a place where fluid drops before the pressure gauge is installed. Wipe off split fluid thoroughly after the measurement.

### 1) REGULAR PRESSURE MEASUREMENT

- (1) Connect the ST1, ST2 and ST3.

ST1 925711000 PRESSURE GAUGE

ST2 34099AC020 ADAPTER HOSE B

ST3 34099AC010 ADAPTER HOSE A

- (2) Remove the air intake duct.
- (3) Disconnect the pipe C from the pump.
- (4) Using the gasket (Part No. 34621AC022) and bolt (Part No. 34620AC010), install the ST2 to the pump instead of pipe C.

- (1) Bolt A
- (2) Pipe C
- (3) Pipe D

- (5) Install the ST3 to end of pipe C removed from pump.
- (6) Replenish power steering fluid up to the specified level.
- (7) Open the valve, and start the engine.
- (8) Measure the regular pressure.

ST1 925711000 PRESSURE GAUGE

ST2 34099AC020 ADAPTER HOSE B

ST3 34099AC010 ADAPTER HOSE A

(1) Valve

## Service limit:

**981 kPa (10 kgf/cm<sup>2</sup>, 142 psi) or less**

- (9) If it is not within the specified value, replace the troubled part caused by the following symptoms; pipe or hose clogged, leaks from fluid line, and mix of foreign objects in fluid line.

### 2) Measure the relief pressure.

- (1) Using the STs, measure the relief pressure.

# Oil Pump

## POWER ASSISTED SYSTEM (POWER STEERING)

- (2) Close the valve.
  - (3) Measure the relief pressure.
- ST1 925711000 PRESSURE GAUGE  
ST2 34099AC020 ADAPTER HOSE B  
ST3 34099AC010 ADAPTER HOSE A

(1) Valve

### Service limit:

#### Non-turbo model:

6,700 — 7,400 kPa (68 — 75 kgf/cm<sup>2</sup>, 972 — 1,073 psi)

#### Turbo model and STI model:

7,350 — 8,036 kPa (75 — 82 kgf/cm<sup>2</sup>, 1,067 — 1,165 psi)

- (4) If it is within the specified value, measure the steering effort. <Ref. to PS-72, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.> If it is not within specified value, replace the control valve itself or control valve and pinion as a single unit with new ones.
- 3) Measure the working pressure.
- (1) Using the STs, measure the working pressure.
  - (2) Open the valve.
  - (3) Measure the working pressure of control valve by turning wheel from stop to stop.

- ST1 925711000 PRESSURE GAUGE  
ST2 34099AC020 ADAPTER HOSE B  
ST3 34099AC010 ADAPTER HOSE A

(1) Valve

### Service limit:

#### Non-turbo model:

6,700 — 7,400 kPa (68 — 75 kgf/cm<sup>2</sup>, 972 — 1,073 psi)

#### Turbo model and STI model:

7,350 — 8,036 kPa (75 — 82 kgf/cm<sup>2</sup>, 1,067 — 1,165 psi)

- (4) If it is within the specified value, measure the steering effort. <Ref. to PS-72, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.> If it is not within specified value, replace the control valve itself or control valve and pinion as a single unit with new ones.

# Reservoir Tank

POWER ASSISTED SYSTEM (POWER STEERING)

## 8. Reservoir Tank

### A: REMOVAL

- 1) Remove the air intake duct. <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>
- 2) Drain fluid from the reservoir tank.
- 3) Disconnect the pipe D from return hose and suction hose from oil pump.

#### CAUTION:

- Do not allow fluid from the hose end to come into contact with pulley belt.
- To prevent foreign matter from entering the hose and pipe, cover the open ends of them with a clean cloth.

- (1) Suction hose
- (2) Pipe D
- (3) Return hose

- 4) Remove the reservoir tank from bracket by pulling it upwards.

### B: INSTALLATION

- 1) Install the reservoir tank to bracket.
- 2) Connect the pipes D to return hose and suction hose to oil pump.

- (1) Suction hose
- (2) Pipe D
- (3) Return hose

- 3) Feed the power steering fluid to the specified level. <Ref. to PS-68, Power Steering Fluid.>

# Power Steering Fluid

POWER ASSISTED SYSTEM (POWER STEERING)

## 9. Power Steering Fluid

### A: SPECIFICATION

| Recommended power steering fluid | Manufacturer |
|----------------------------------|--------------|
| ATF DEXRON III or equivalent     | B.P.         |
|                                  | CALTEX       |
|                                  | CASTROL      |
|                                  | MOBIL        |
|                                  | SHELL        |
|                                  | TEXACO       |

### B: INSPECTION

1) Check the power steering fluid for deterioration or contamination. If the fluid is highly deteriorated or contaminated, drain it and refill with new fluid.

2) Check the joints and units for oil leakage. If any oil leaks are found, repair or replace the applicable part.

3) Inspect the fluid level on flat and level surface with engine "OFF" by indicator of reservoir tank.

If the level is at MIN. point or below, add fluid to keep the level in the specified range of the indicator. If at MAX. point or above, drain fluid by using a syringe or the like.

(1) Check at power steering fluid temperature 20°C (68°F); read the fluid level on the "COLD" side.

(2) Check at power steering fluid temperature 80°C (176°F); read the fluid level on the "HOT" side.

### C: REPLACEMENT

1) Lift up the vehicle.

2) Remove the jack up plate.

3) Remove the pipe joint in center of gear box, and then install the vinyl hose to pipe and joint. Drain the fluid while turning steering wheel.

4) Set the ST on top of reservoir tank and fill it about half way with the specified fluid.

ST 34199AE040 OIL CHARGE GUIDE

5) Continue to turn the steering wheel slowly from lock to lock until bubbles stop appearing on oil surface while keeping the fluid at that level.

6) If turning the steering wheel in low fluid level condition, air will be sucked in pipe. In this case, leave it about half an hour and then do the step 5) again.

7) Lift up the vehicle, start the engine and let it idle.

8) Continue to turn the steering wheel slowly from lock to lock again until bubbles stop appearing on oil surface while keeping the fluid at that level.

It is normal that bubbles stop appearing after three times turning of steering wheel from lock to lock.

9) In case the bubbles do not stop appearing in the tank, leave it about half an hour and then do the step 4) all over again.

10) Lower the vehicle, and then idle the engine.

11) Continue to turn the steering wheel from lock to lock until bubbles stop appearing and change of the fluid level is within 3 mm (0.12 in).

12) In case the following happens, leave it about half an hour and then do step 8) to 11) again.

(1) The fluid level changes over 3 mm (0.12 in).

(2) Bubbles remain on the upper surface of the fluid.

(3) Grinding noise is generated from oil pump.

13) Check the fluid leakage after turning steering wheel from lock to lock with engine running.

# General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

## 10. General Diagnostic Table

### A: INSPECTION

| Trouble   | Possible cause   | Corrective action                                    |
|---|--|--|
| <ul style="list-style-type: none"> <li>• Heavy steering effort in all ranges</li> <li>• Heavy steering effort at stand still</li> <li>• Steering wheel surges when turning.</li> </ul>        | 1. |   | 5. Measure hydraulic pressure. <Ref. to PS-64, INSPECTION, Oil Pump.>  | Replace the problem parts.                           |
|   | 6. Measure steering effort. <Ref. to PS-69, INSPECTION, General Diagnostic Table.>   | Adjust or replace.                                   |
| <ul style="list-style-type: none"> <li>• Vehicle leads to one side or the other.</li> <li>• Poor return of steering wheel to center</li> <li>• Steering wheel surges when turning.</li> </ul> | 1. Fluid line <ul style="list-style-type: none"> <li>• Folded hose</li> <li>• Flattened pipe</li> </ul>  | Reform or replace.                                   |
|   | 2. Tire and wheel <ul style="list-style-type: none"> <li>• Flat tire</li> <li>• Mix use of different tires</li> <li>• Mix use of different wheels</li> <li>• Abnormal wear of tire</li> <li>• Unbalance of remained grooves</li> <li>• Unbalance of tire pressure</li> </ul>   | Adjust, fix or replace.                              |
|   | 3. Front alignment <ul style="list-style-type: none"> <li>• Improper or unbalance caster</li> <li>• Improper or unbalance toe-in</li> <li>• Loose connection of suspension</li> </ul>  | Adjust or retighten.                                 |
|   | 4. Others <ul style="list-style-type: none"> <li>• Damaged joint assembly</li> <li>• Unbalanced height</li> <li>• One-sided weight</li> </ul>  | Replace, adjust or instruct the customer.            |
|   | 5. Measure steering effort. <Ref. to PS-69, INSPECTION, General Diagnostic Table.>   | Adjust or replace.                                   |

\*1 If tires and/or wheels are wider, the load to power steering system is the more. Accordingly, in a condition, for example before fluid warms-up, relief valve may work before maximum turning angle. In this case, steering effort may be heavy. When measured hydraulic pressure is normal, there is no abnormal thing.

\*2 In cold weather, steering effort may be heavy due to increased flow resistance of cold fluid. After warming-up engine, turn steering wheel from stop to stop several times to warm-up fluid. Then if steering effort reduces normally, there is no abnormal thing.

\*3 In cold weather or with insufficient warm-up of engine, steering effort may be heavy due to excessive drop of idling when turning steering wheel. In this case, it is recommended to start the vehicle with increasing engine speed than usual. Then if steering effort reduces normally, there is no abnormal thing.

# General Diagnostic Table

## POWER ASSISTED SYSTEM (POWER STEERING)

### 1. NOISE AND VIBRATION

**CAUTION:**

**Don't keep the relief valve operated over 5 seconds at any time or inner parts of the oil pump may be damaged due to rapid increase of fluid temperature.**

**NOTE:**

- Grinding noise may be heard immediately after the engine start in extremely cold condition. In this case, if the noise goes off during warm-up there is no abnormal function in the system. This is due to the fluid characteristic in extremely cold condition.
- Oil pump makes whine or growl noise slightly due to its mechanism. Even if the noise can be heard when steering wheel is turned at stand still there is no abnormal function in the system provided that the noise eliminates when the vehicle is running.
- When turning the steering wheel with service brake and/or parking brake applied, the noise is generated by creaking between disk and pads. However this does not indicate abnormal function in system.
- There may be a little vibration around the steering devices when turning steering wheel at standstill, even though the component parts have no defects.

Hydraulic systems are likely to generate this kind of vibration as well as working noise and fluid noise because of combined conditions, i.e., road surface and tire surface, engine speed and turning speed of steering wheel, fluid temperature and braking condition.

This phenomena does not indicate there is some abnormal function in the system.

The vibration can be known when steering wheel is turned repeatedly at various speeds from slow to rapid step by step with parking brake applied on concrete road and in "D" range for AT model.

| Trouble  | Possible cause   | Corrective action   |
|--|--|---|
| Hiss noise (continuous)<br>While engine is running.  | Relief valve emits operating sound when steering wheel is completely turned in either direction. (Don't keep this condition over 5 seconds.) | Normal  |
|  | Relief valve emits operating sound when steering wheel is not turned. This means that the relief valve is faulty.                            | Replace the oil pump.   |
| Rattling noise (intermittent)<br>While engine is running.  | Interference with adjacent parts   | Check the clearance.<br>Correct if necessary.<br><Ref. to PS-59, INSPECTION,<br>Pipe Assembly.> |
|  | Loosened installation of oil pump, oil tank, pump bracket, gearbox or crossmember  | Retighten.  |
|  | Loosened installation of oil pump pulley or other pulley(s)  | Retighten.  |
|  | Loosened linkage or play of steering or suspension Loosened tightening of joint or steering column   | Retighten or replace.   |
|  | Sound generates from the inside of gearbox or oil pump.  | Replace the faulty parts of gearbox or oil pump.  |
| Knocking<br>When turning steering wheel in both direction with small angle repeatedly at engine ON or OFF. | Excessive backlash<br>Loosened lock nut for adjusting backlash   | Adjust and retighten.   |
|  | Loosened tightening or play of tie-rod, or tie-rod end   | Retighten or replace.   |
| Grinding noise (continuous)<br>While engine is running.  | Vane pump aeration   | Inspect and retighten the fluid line connection.<br>Refill fluid and vent air.                  |
|  | Vane pump seizing  | Replace the oil pump.   |
|  | Pulley bearing seizing of oil pump   | Replace the oil pump.   |
|  | Folded hose, flat pipe   | Replace.  |
| Squeal, squeak (intermittent or continuous)<br>While engine is running.                                    | Maladjustment of pulley belt<br>Damaged or charged pulley belt<br>Unequal length of pulley belts   | Adjust or replace.<br>(Replace two belts as a set.)   |
|  | Run out or soilage of V-groove surface of oil pump pulley  | Clean or replace.   |

## General Diagnostic Table

### POWER ASSISTED SYSTEM (POWER STEERING)

| Trouble  | Possible cause   | Corrective action  |
|--|--|--|
| Sizzling noise (continuous)<br>While engine is running.  | Fluid aeration   | Fix the wrong part causing aeration.<br>Replace the fluid and vent air.                    |
|  | Damaged pipe of gearbox  | Replace the pipe.  |
|  | Abnormal inside of hose or pipe<br>Flat hose or pipe                           | Rectify or replace.  |
|  | Abnormal inside of oil tank  | Replace.   |
|  | Removed oil tank cap   | Install the cap.   |
| Whistle (continuous)<br>While engine is running.   | Abnormal pipe of gearbox or abnormal inside of hose                            | Replace the faulty parts of gearbox or hose.   |
| Whine or growl (continuous or intermittent)<br>While engine is running with/<br>without steering turned. | Loosened installation of oil pump, oil pump bracket                            | Retighten.   |
|  | Abnormal inside of oil pump, hose  | Replace the oil pump, hose, if the noise can be heard when running as well as stand still. |
|  | Torque converter growl, air conditioner compression growl                      | Remove the power steering pulley belt and confirm.   |
| Creaking noise (intermittent)<br>While engine is running with<br>steering turned.                        | Abnormal inside of gearbox   | Replace the faulty parts of gearbox.   |
|  | Abnormal bearing for steering shaft  | Apply grease or replace.   |
|  | Generates when turning steering wheel with brake (service or parking) applied. | If the noise goes off when brake is released, it is normal.                                |
| Vibration<br>While engine is running with/<br>without steering turned.                                   | Too low engine speed   | Adjust and instruct customers.   |
|  | Vane pump aeration   | Fix the wrong part.<br>Vent air.   |
|  | Damaged valve in oil pump, gearbox   | Replace the oil pump, faulty parts of gearbox.   |
|  | Looseness of play of steering, suspension parts                                | Retighten.   |

## General Diagnostic Table

### POWER ASSISTED SYSTEM (POWER STEERING)

#### 2. MEASUREMENT OF STEERING EFFORT

| Step   | Check   | Yes   | No   |
|--|---|---|--|
| <b>1 CHECK STEERING EFFORT.</b><br>1) Stop the vehicle on a concrete road.<br>2) Start the engine.<br>3) Idle the engine.<br>4) Install the spring scale on the steering wheel.<br>5) Pull the spring scale at an right angle to steering wheel, and measure both right and left steering wheel effort.<br>NOTE:<br>When turning the steering more quickly than necessary from a direction to the other direction at an engine speed over 2,000 rpm, steering effort may be heavy. This is caused by flow characteristic of oil pump and is not a problem. | Is the steering effort less than 31.4 N (3.2 kgf, 7.1 lbf)?   | Go to step 2.                               | Adjust the backlash.   |
| <b>2 CHECK STEERING EFFORT.</b><br>1) Stop the engine.<br>2) Pull the spring scale at an right angle to the steering wheel, and measure both right and left steering wheel effort.   | Is the steering effort less than 294.2 N (30 kgf, 66.2 lbf)?  | Go to step 3.                               | Perform adjustment.  |
| <b>3 CHECK STEERING WHEEL EFFORT.</b><br>1) Remove the universal joint.<br>2) Measure the steering wheel effort.   | Is the maximum steering effort less than 2.26 N (0.23 kgf, 0.51 lbf)?   | Go to step 4.                               | Check, adjust and replace if necessary.                              |
| <b>4 CHECK STEERING WHEEL EFFORT.</b><br>Measure the steering wheel effort.  | Is the difference of steering effort between clockwise and counterclockwise less than 20%?  | Go to step 5.                               | Check, adjust and replace if necessary.                              |
| <b>5 CHECK UNIVERSAL JOINT.</b><br>Measure the swing torque of the joint (yoke of steering column side). <Ref. to PS-21, INSPECTION, Universal Joint.>   | Is the swing torque less than 7.3 N (0.74 kgf, 1.64 lbf)?   | Go to step 6.                               | Replace with new one.  |
| <b>6 CHECK UNIVERSAL JOINT.</b><br>Measure the swing torque of the joint (yoke of gearbox side). <Ref. to PS-21, INSPECTION, Universal Joint.>   | Is the swing torque less than 3.8 N (0.39 kgf, 0.86 lbf)?   | Go to step 7.                               | Replace with new one.  |
| <b>7 CHECK FRONT WHEEL.</b><br>Check the front wheel.  | Are the front wheels for unsteady revolution or rattling and brake for dragging?  | Inspect, readjust and replace if necessary. | Go to step 8.  |
| <b>8 CHECK TIE-ROD ENDS.</b><br>Remove the tie-rod ends.   | Are the tie-rod ends of suspension for unsteady revolution or rattling?   | Inspect and replace if necessary.           | Go to step 9.  |
| <b>9 CHECK BALL JOINT.</b><br>Remove the ball joint.   | Are the ball joints of suspension for unsteady revolution or rattling?  | Inspect and replace if necessary.           | Go to step 10.   |
| <b>10 CHECK GEARBOX.</b><br>Measure the rotating of gearbox.<br><Ref. to PS-52, TURNING RESISTANCE OF GEARBOX, INSPECTION, Steering Gearbox.>  | Is the rotating resistance of gear box less than 10.5 N (1.1 kgf, 2.4 lbf)? Is the difference between clockwise and counterclockwise 20%? | Go to step 11.                              | Readjust the backlash, and if ineffective, replace the faulty parts. |
| <b>11 CHECK GEARBOX.</b><br>Measure the sliding of gearbox.<br><Ref. to PS-51, SERVICE LIMIT, INSPECTION, Steering Gearbox.>   | Is the sliding resistance of gear box less than 400 N (41 kgf, 90 lbf)? Is the difference between right and left 20%?                     | Steering effort is normal.                  | Readjust the backlash, and if ineffective, replace the faulty parts. |

# General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

## 3. CLEARANCE CHECK

This table lists various clearances that must be correctly adjusted to ensure the normal vehicle driving without interfering noise, or any other faults.

| Location   | Minimum allowance |
|--|-------------------|
| (1) Crossmember — Pipe                               | 5 mm (0.20 in)    |
| (2) DOJ — Shaft or joint                             | 14 mm (0.55 in)   |
| (3) DOJ — Valve housing                              | 11 mm (0.43 in)   |
| (4) Pipe — Pipe                                      | 2 mm (0.08 in)    |
| (5) Stabilizer — Pipe                                | 5 mm (0.20 in)    |
| (6) Exhaust pipe — Pipe                              | 11 mm (0.43 in)   |
| (7) Exhaust pipe — Gearbox bolt                      | 15 mm (0.59 in)   |
| (8) Side frame — Hose A and B                        | 10 mm (0.39 in)   |
| (9) Cruise control pump — Hose A and B               | 15 mm (0.59 in)   |
| (10) Pipe portion of hose A — Pipe portion of hose B | 1.5 mm (0.059 in) |
| (11) AT cooling hose — Joint                         | 20 mm (0.79 in)   |

**BODY SECTION**

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

(9) Rear heater duct cover (RH)

# General Description

## HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### C: CAUTION

#### 1. HFC-134a A/C SYSTEM

- Unlike the old conventional CFC-12 system components, the cooling system components for the HFC-134a system such as the refrigerant and compressor oil are incompatible.
- Vehicles with the HFC-134a system can be identified by the label (A) attached to the vehicle. Before maintenance, check which A/C system is installed in the vehicle.

#### 2. COMPRESSOR OIL

- HFC-134a compressor oil has no compatibility with that for CFC-12 system.
  - Use only the manufacturer-authorized compressor oil for the HFC-134a system; only use DH-PR.
  - Do not mix multiple compressor oils.
- If CFC-12 compressor oil is used in a HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.
- On the other hand, if HFC-134a compressor oil is used in a CFC-12 A/C system, the durability of the A/C system will be lowered.
- HFC-134a compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from the atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

#### 3. REFRIGERANT

- The CFC-12 refrigerant cannot be used in the HFC-134a A/C system. The HFC-134a refrigerant, also, cannot be used in the CFC-12 A/C system.
- If an incorrect or no refrigerant is used, poor lubrication will result and the compressor itself may be damaged.

#### 4. HANDLING OF REFRIGERANT

- The refrigerant boils at approx.  $-30^{\circ}\text{C}$  ( $-22^{\circ}\text{F}$ ). When handling it, be sure to wear safety goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite. If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eye with plenty of water, and receive medical treatment from an eye doctor.
- Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use hot water in  $40^{\circ}\text{C}$  ( $104^{\circ}\text{F}$ ) max.
- Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant can.)
- When the engine is running, do not open the high-pressure valve of the manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.
- Provide good ventilation and do not work in a closed area.
- In order to prevent global warming, avoid releasing HFC-134a into the atmosphere. Using a refrigerant recovery system, discharge and reuse it.

- (A) Safety goggles
- (B) Protective gloves
- (C) Avoid open flame
- (D) No direct heat on container
- (E) Do not discharge
- (F) Loosen

# General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 5. O-RING CONNECTIONS

- Use new O-rings.
- In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform operations without gloves and shop cloths.
- Apply the compressor oil to the O-rings to avoid sticking, then install them.
- Use a torque wrench to tighten the O-ring fittings: Over-tightening will damage the O-ring and tube end distortion.
- If the operation is interrupted before completing a pipe connection, recap the tubes, components, and fittings with a plug or tape to prevent contamination from entering.

(A) Seal

- Visually check the surfaces and mating surfaces of O-rings, threads, and connecting points. If a failure is found, replace the applicable parts.
- Install the O-rings at right angle to the tube beads.

- (A) O-ring
- (B) OK
- (C) NG
- (D) Bead

- Use the oil specified in the service manual to lubricate the O-rings.
- Apply the oil to the top and sides of the O-rings before installation.

Apply the oil to the area including the O-rings and tube beads.

- After tightening, use a clean shop cloth to remove excess oil from the connections and any oil which may have run on the vehicle body or other parts.
- If any leakage is suspected after tightening, do not retighten the connections, Disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

## D: PREPARATION TOOL

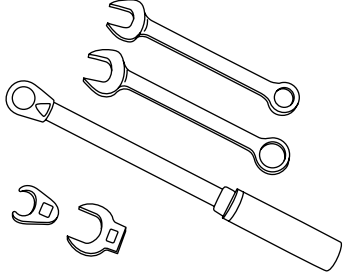

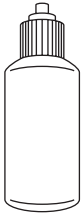

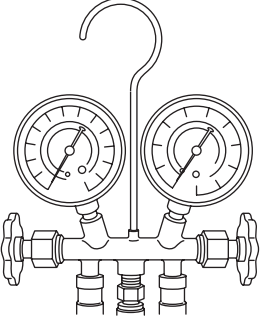

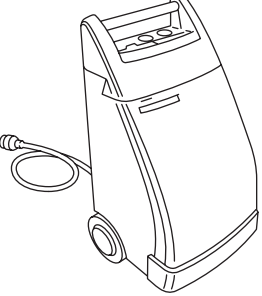

### CAUTION:

- When working on vehicles with the HFC-134a system, only use HFC-134a specified tools and parts.
- Do not mix with CFC-12 tools and parts. If HFC-134a and CFC-12 refrigerant or compressor oil is mixed, poor lubrication will result and the compressor itself may be destroyed.
- In order to help prevent mixing HFC-134a and CFC-12 parts and liquid, the tool and screw type and the type of service valves used are different. The gas leak detectors for the HFC-134a and CFC-12 systems must also not be interchanged.

|                   | HFC-134a         | CFC-12        |
|-------------------|------------------|---------------|
| Tool & screw type | Millimeter size  | Inch size     |
| Valve type        | Quick joint type | Screw-in type |

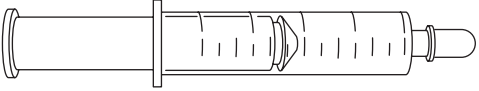

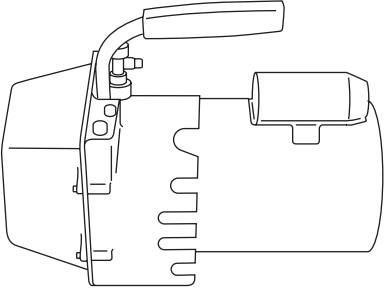

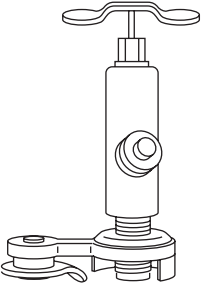

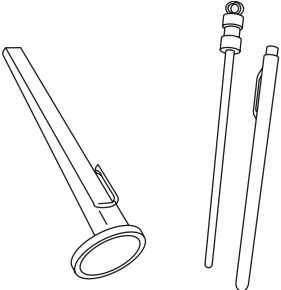

## General Description

### HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

| Description  | Tools and Equipment  |
|--|--|
|  <p style="text-align: right;">AC-00213</p>   | <p><b>Wrench</b></p> <p>Various <b>WRENCHES</b> will be required to service any A/C system. A 7 to 40 N-m (0.7 to 4.1 kgf-m, 5 to 30 ft-lb) torque wrench with various crow-foot wrenches will be needed. Open end or flare nut wrenches will be needed for back-up on the tube and hose fittings.</p> |
|  <p style="text-align: right;">AC-00012</p>   | <p><b>Applicator bottle</b></p> <p>A small <b>APPLICATOR BOTTLE</b> is recommended to apply refrigerant oil to the various parts. They can be obtained at a hardware or drug store.</p>  |

# Refrigerant Pressure with Manifold Gauge Set

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 2. Refrigerant Pressure with Manifold Gauge Set

### A: PROCEDURE

- 1) Place the vehicle in the shade and windless condition.
- 2) Connect the manifold gauge set.
- 3) Open the front windows and close all doors.
- 4) Open the front hood.
- 5) Increase the engine to 1,500 rpm.
- 6) Turn ON the A/C switch.
- 7) Turn the temperature control switch to MAX COOL.
- 8) Put in RECIRC position.
- 9) Turn the blower control switch to HI.
- 10) Read the gauge.

#### Standard:

**Low pressure: 127 — 196 kPa (1.3 — 2.0 kgf/cm<sup>2</sup>, 18 — 28 psi)**

**High pressure: 1,471 — 1,667 kPa (15 — 17 kgf/cm<sup>2</sup>, 213 — 242 psi)**

**Ambient temperature: 30 — 35°C (86 — 95°F)**

### B: INSPECTION

| Symptom                               | Probable cause  | Repair order  |
|---------------------------------------|---|---|
| High-pressure side is unusually high. | <ul style="list-style-type: none"><li>• Defective condenser fan motor</li><li>• Clogged condenser fin</li><li>• Too much refrigerant</li><li>• Air inside the system</li><li>• Defective receiver dryer</li></ul> | <ul style="list-style-type: none"><li>• Replace the fan motor.</li><li>• Clean the condenser fin.</li><li>• Discharge refrigerant.</li><li>• Replace the receiver dryer.</li><li>• After vacuuming, charge appropriate amount of refrigerant.</li></ul> |
| High-pressure side is unusually low.  | <ul style="list-style-type: none"><li>• Defective compressor</li><li>• Not enough refrigerant</li><li>• Clogged expansion valve</li><li>• Expansion valve frozen temporarily by moisture</li></ul>                | <ul style="list-style-type: none"><li>• Replace the compressor.</li><li>• Check for leaks.</li><li>• Replace the expansion valve.</li><li>• Fully vacuuming.</li></ul>  |
| Low-pressure side is unusually high.  | <ul style="list-style-type: none"><li>• Defective compressor</li><li>• Defective expansion valve</li><li>• Too much refrigerant</li></ul>   | <ul style="list-style-type: none"><li>• Replace the compressor.</li><li>• Replace the expansion valve.</li><li>• Discharge refrigerant.</li></ul>   |
| Low-pressure side is unusually low.   | <ul style="list-style-type: none"><li>• Not enough refrigerant</li><li>• Clogged expansion valve</li><li>• Expansion valve frozen temporarily by moisture</li><li>• Saturated receiver dryer</li></ul>            | <ul style="list-style-type: none"><li>• Check for leaks.</li><li>• Replace the expansion valve.</li><li>• Replace the receiver dryer.</li></ul>   |

# Refrigerant Recovery Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 3. Refrigerant Recovery Procedure

### A: PROCEDURE

#### CAUTION:

- During operation, be sure to wear safety goggles and protective gloves.
- Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and reuse it.
- When reusing the discharged refrigerant, keep service cans on hand. Because the discharge rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.
- Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.

- 1) Perform the compressor oil return operation. <Ref. to AC-25, PROCEDURE, Compressor Oil.>
- 2) Stop the engine.
- 3) Make sure the valves on low-/high-pressure sides of manifold gauge set are fully closed.

- (A) Low-pressure gauge (Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close

- 4) Install the low-/high-pressure hoses to the service ports on the low-/high-pressure sides of the vehicle respectively.

- (A) Low-pressure gauge (Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close
- (D) Low-pressure side service port
- (E) High-pressure side service port

- 5) Connect the center hose to the refrigerant recovery system.
- 6) Follow the operation manual to activate the refrigerant recovery system.

# Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 4. Refrigerant Charging Procedure

### A: PROCEDURE

#### CAUTION:

- During operation, be sure to wear safety goggles and protective gloves.
- Before charging the refrigerant, evacuate the system to remove small amounts of moisture remaining in the system.
- The moisture in the system can be completely evacuated only under the minimum vacuum level. The minimum vacuum level affects the temperature in the system.
- The list below shows the vacuum values necessary to boil water in various temperature. In addition, the vacuum levels indicated on the gauge are approx. 3.3 kPa (25 mmHg, 0.98 inHg) lower than those measured at 304.8 m (1,000 ft) above sea level.

| Vacuum level required to boil water (at sea level) |                                 |
|--|---------------------------------|
| Temperature  | Vacuum                          |
| 1.7°C (35°F)                                       | 100.9 kPa (757 mmHg, 29.8 inHg) |
| 7.2°C (45°F)                                       | 100.5 kPa (754 mmHg, 29.7 inHg) |
| 12.8°C (55°F)                                      | 99.8 kPa (749 mmHg, 29.5 inHg)  |
| 18.3°C (65°F)                                      | 99.2 kPa (744 mmHg, 29.3 inHg)  |
| 23.9°C (75°F)                                      | 98.5 kPa (739 mmHg, 29.1 inHg)  |
| 29.4°C (85°F)                                      | 97.2 kPa (729 mmHg, 28.7 inHg)  |
| 35°C (95°F)  | 95.8 kPa (719 mmHg, 28.3 inHg)  |

1) Close the valves on low-/high-pressure sides of the manifold gauge.

- (A) Low-pressure gauge (Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close

2) Install the low-/high-pressure hoses to the corresponding service ports on the vehicle respectively.  
3) Connect the center hose of the manifold gauge set with the vacuum pump.

4) Carefully open the valves on the low-/high-pressure sides to activate the vacuum pump.

- (A) Low-pressure gauge (Compound pressure gauge)
- (B) High-pressure gauge
- (C) Slowly open
- (D) Vacuum pump turn on

5) After the low-pressure gauge reaches 100.0 kPa (750 mmHg, 29.5 inHg) or higher, evacuate the system for approx. 15 minutes (Continue evacuation).

6) After 15 minutes of evacuation, if the reading shows 100.0 kPa (750 mmHg, 29.5 inHg) or higher, close the valves on the both sides to stop the vacuum pump.

- (A) Low-pressure gauge (Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close
- (D) Vacuum pump turn off

# Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

7) Note the low-pressure gauge needle.

AC-00027

8) Leave it at least 5 minutes, and then check the low-pressure gauge needle for any changes.

When a gauge indicator shows near to zero point, this is a sign of leakage. Check pipe connector points, repair them, make sure there is no leakage by air bleeding.

9) Following the can tap operation manual instructions, install it to the refrigerant can.

AC-00028

- (A) Tap valve
- (B) Center manifold hose

10) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.

11) When a 13.6 kg (30 lb) refrigerant container is used, measure the refrigerant amount in use using a weighting scale.

AC-00029

- (A) Refrigerant container (HFC-134a)
- (B) Weight scale

12) Confirm that all the 3 hoses are tightly connected to the manifold gauge set.

AC-00030

- (A) Low-pressure gauge (Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close

13) Open the valve on the HFC-134a source.

14) Loosen the center hose connection on the manifold gauge set (if applicable, press a purge valve on the manifold gauge set) only for a couple of seconds to allow the air in the center hose to escape by the refrigerant.

15) Carefully open the high-pressure valve with the engine stopping.

**CAUTION:**

**Do not open the low-pressure valve.**

AC-00031

- (A) Low-pressure gauge (Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close
- (D) Ignition switch OFF
- (E) Slowly open

**CAUTION:**

**Never run the engine during charging from the high-pressure side.**

16) Close the high-pressure valve when the low-pressure gauge reaches 98 kPa (1 kgf/cm<sup>2</sup>, 14 psi). Using a leak tester, check the system for leaks. If any leakage is found after the refrigerant recovery is completed, repair the applicable area.

# Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

17) After confirming that there are no leaks with the leak test, charge the required amount of refrigerant.

**CAUTION:**

**Never run the engine during charging from the high-pressure side.**

- 18) Close the high-pressure valve when;
- the readings of low-/high-pressure gauges become almost equal, after the charging speed is reduced,
  - the HFC-134a source becomes empty, or the system is filled with the gas.

19) If the HFC-134a source is empty, close the high-pressure valve, close the valve on the can tap, and replace the HFC-134a source with a new one to restart the operation.

- (A) Low-pressure gauge (Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close

20) Confirm that both the low-/high-pressure valves can be closed. Start the engine with the A/C switch OFF.

21) Quickly repeat ON-OFF cycles a few times to prevent initial compressor damage.

22) Set up the vehicle to the following status:

- A/C switch ON
- Engine running at 1,500 rpm
- Blower speed setting to “HI”
- Temperature setting to “MAX COOL”
- Air inlet setting to “RECIRC”
- Windows open

23) While reading the low-pressure gauge, carefully open the low-pressure valve with the refrigerant source connected and the service hose purged.

**CAUTION:**

**Never open the high-pressure valve with the engine running. Doing so may result in a reflow of high-pressure gas and refrigerant can’s explosion.**

24) Adjust the refrigerant flow to maintain the pressure on the low-pressure side at 276 kPa (2.81 kgf/cm<sup>2</sup>, 40 psi) max.

25) After the system is fully charged, close the low-pressure valve.

26) Close the valve on the refrigerant source.

| Refrigerant amount |                 |                 |
|--------------------|-----------------|-----------------|
| Refrigerant        | Minimum         | Maximum         |
| HFC-134a           | 450 g (0.99 lb) | 550 g (1.21 lb) |

27) Disconnect the hose from the service port, and install the service port cap.

# Refrigerant Leak Check

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 5. Refrigerant Leak Check

### A: INSPECTION

1) Operate the A/C system for approx. 10 minutes, and confirm that the high-pressure side shows at least 690 kPa (7.03 kgf/cm<sup>2</sup>, 100 psi). Then stop the engine to start the leak test.

2) Starting from the connection between the high-pressure pipe and evaporator, check the system for leaks along the high-pressure side through the compressor. The following items must be checked thoroughly.

3) Check the joint and seam between the pressure switch (dual pressure switch) and high-pressure pipe.

4) Check the connections between the condenser and pipes, and welded joints on the condenser.

The leak tester may detect the oil on the condenser fins as a leak.

5) Check the joint between the compressor and hoses.

6) Check the machined area of compressor and other joints on the compressor.

7) Check the compressor shaft seal at the area near the center of compressor clutch pulley.

Some shaft seals show a slight amount of leakage about 3 g (0.1 oz) per year. This is not a problem.

8) Starting from the connection between the low-pressure pipe and evaporator, check the system for leakage along the low-pressure side through the compressor. The following items must be checked thoroughly.

- Connection between two parts
- Connection between the pipe and plate

9) Visually check the rubber area of the flexible hose for cracks.

Check the entire length of the flexible hose, especially the connection with the metal hose end.

### CAUTION:

Carefully check the external surface of hoses and tubes at approx. 25 mm (0.98 in) per second.

(A) Flexible hose

10) Disconnect the drain hose from the heater case, and check the hose end for at least 10 seconds.

After the test is finished, reconnect the drain hose.

11) Turn the ignition key to ON position, and run the blower at high speed for 1 minute. Stop the blower to check the ventilation grille on the instrument panel. While moving the tester closer to the grille, run the blower for 1 or 2 seconds, then stop it. Check the grille at that point for at least 10 seconds.

12) Check the valve in the service port.

13) Visually check the rubber seal in service port cap.

## 6. Compressor Oil

### A: PROCEDURE

**NOTE:**

Before making repairs, conduct the oil return operation to return the compressor oil in circulation with the refrigerant to compressor.

- 1) Increase engine to 1,500 rpm.
- 2) Turn the A/C switch to ON.
- 3) Turn the temperature control switch to MAX COOL.
- 4) Put in RECIRC position.
- 5) Turn the blower control switch to HI.
- 6) Leave in this condition for 10 minutes.

### B: REPLACEMENT

**NOTE:**

- If a component is replaced, add an appropriate amount of compressor oil.
- When replacing the compressor, the new compressor will already have the specified amount of oil in it. Install the new compressor after removing the same amount of oil that is remaining in the compressor removed.

| Replacement parts | Amount of oil replenishment           |
|-------------------|---------------------------------------|
| Evaporator        | 114 m ℓ (3.9 US fl oz, 4.0 Imp fl oz) |
| Condenser         | 7 m ℓ (0.24 US fl oz, 0.25 Imp fl oz) |
| Hose              | 1 m ℓ (0.03 US fl oz, 0.04 Imp fl oz) |

# Blower Motor Unit Assembly

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 7. Blower Motor Unit Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the glove box. <Ref. to EI-43, REMOVAL, Glove Box.>
- 3) Loosen the nut to remove the support beam stay.

- 4) Disconnect the blower motor connector.

- 5) Disconnect the power transistor or blower resistor connector.

- 6) Loosen the bolt and nut to remove the blower motor unit assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

Refer to **COMPONENT** in *General Description*. <Ref. to AC-5, HEATER COOLING UNIT, **COMPONENT**, *General Description*.> and <Ref. to AC-7, BLOWER MOTOR UNIT, **COMPONENT**, *General Description*.>

### C: INSPECTION

Connect the positive (+) lead from the battery to the motor connector terminal 1 and negative (-) lead to the terminal 2. Make sure the motor runs smoothly.

## Power Transistor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 8. Power Transistor (Auto A/C Model)

#### A: REMOVAL

- 1) Remove the glove box. <Ref. to EI-43, REMOVAL, Glove Box.>
- 2) Disconnect the power transistor connector.
- 3) Loosen the two screws to remove the power transistor.

#### B: INSTALLATION

Install in the reverse order of removal.

## Blower Resistor (Manual A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 9. Blower Resistor (Manual A/C Model)

#### A: REMOVAL

- 1) Remove the glove box. <Ref. to EI-43, REMOVAL, Glove Box.>
- 2) Disconnect the blower resistor connector.
- 3) Loosen the two screws to remove the blower resistor.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

Measure the blower resistor resistance.

| Terminal No. | Standard              |
|--------------|-----------------------|
| 3 and 1      | Approx. 0.51 $\Omega$ |
| 3 and 2      | Approx. 2.70 $\Omega$ |
| 3 and 4      | Approx. 1.43 $\Omega$ |

If NG, replace the blower resistor.

# Heater Core

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 10.Heater Core

### A: REMOVAL

- 1) Remove the heater and cooling unit. <Ref. to AC-34, REMOVAL, Heater and Cooling Unit.>
- 2) Loosen the screws to remove the heater core cover.

- 3) Remove the heater core.

### B: INSTALLATION

Install in the reverse order of removal.

## Control Unit (Manual A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 11. Control Unit (Manual A/C Model)

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the glove box. <Ref. to EI-43, REMOVAL, Glove Box.>
- 3) Remove the lower panel. <Ref. to EI-47, Instrument Panel Assembly.>
- 4) Remove the control cables.

- 5) Remove the console front panel.
- 6) Remove the center console panel.

- 7) Remove four screws.

- (A) Clip  
(B) Screw

- 8) Pull out the control unit and disconnect connectors.

#### B: INSTALLATION

Install in the reverse order of removal.

## Control Unit (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 12. Control Unit (Auto A/C Model)

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console front panel.
- 3) Remove the center console panel.
- 4) Disconnect the connector and aspirator hose (A).

#### B: INSTALLATION

Install in the reverse order of removal.

# Compressor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 13. Compressor

### A: INSPECTION

#### 1. MAGNETIC CLUTCH CLEARANCE

1) Check the clearance of the entire circumference around the drive plate and pulley.

**Standard:**

$0.45 \pm 0.15 \text{ mm}$  ( $0.0177 \pm 0.0059 \text{ in}$ )

#### 2. MAGNETIC CLUTCH OPERATION

- 1) Disconnect the compressor connector.
- 2) Connect the positive (+) lead from battery to the terminal of compressor connector.

3) Make sure the magnet clutch engages.  
If NG, replace the compressor.

### B: REMOVAL

- 1) Perform the compressor oil return operation. <Ref. to AC-25, PROCEDURE, Compressor Oil.>
- 2) Turn the A/C switch OFF and stop the engine.
- 3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
- 4) Disconnect the ground cable from battery.
- 5) Remove the V-belt. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.> or <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>
- 6) Remove the generator. <Ref. to SC(H4SO)-14, REMOVAL, Generator.>
- 7) Remove the low-pressure hose and high-pressure hose.

8) Disconnect the compressor harness from body harness.

9) Loosen the bolts to remove the compressor bracket.

10) Loosen the bolts to remove the bracket from compressor.

### C: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Replace the O-rings on low-/high-pressure hoses with new ones, then apply compressor oil.
- 3) When replacing compressor, adjust amount of compressor oil. <Ref. to AC-25, PROCEDURE, Compressor Oil.>
- 4) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

#### **Tightening torque:**

**Refer to COMPONENT in General Description. <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.> and <Ref. to AC-12, COMPRESSOR, COMPONENT, General Description.>**

# Condenser

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 14. Condenser

### A: REMOVAL

- 1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
- 2) Disconnect the ground cable from battery.
- 3) Remove the front bumper. <Ref. to EI-24, REMOVAL, Front Bumper.>
- 4) Disconnect the pressure hose and pipe from condenser.

- 5) Remove the radiator bracket (A).

- 6) Remove the two bolts. While lifting the condenser, pull it out through the space between radiator and radiator panel.

### CAUTION:

- Be careful not to damage the condenser fins. If a damaged fin is found, repair it using a thin screwdriver.
- If the condenser is replaced, add appropriate amount of compressor oil to the compressor. <Ref. to AC-25, REPLACEMENT, Compressor Oil.>

### B: INSTALLATION

- 1) Install in the reverse order of removal.

### CAUTION:

Replace the O-rings on hoses or pipes with new ones, and then apply compressor oil. Confirm that lower guide of condenser (A) has been fitted into holes on radiator panel.

- 2) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

### Tightening torque:

Refer to **COMPONENT** in **General Description**. <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.> and <Ref. to CO(H4SO)-4, RADIATOR AND RADIATOR FAN, COMPONENT, General Description.>

### C: INSPECTION

- 1) Confirm that no dust or insects are found on the condenser fins. Air-blow or flush fins with water as needed.
- 2) Confirm that no oil leaks from condenser. If a failure is found, replace the condenser with a new one.

# Heater and Cooling Unit

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 15. Heater and Cooling Unit

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
- 3) Drain engine coolant from the radiator.
- 4) Remove the bolt securing expansion valve and pipe in engine compartment. Release the heater hose clamps in engine compartment to remove the hoses.

- 5) Remove the instrument panel. <Ref. to EI-47, REMOVAL, Instrument Panel Assembly.>
- 6) Remove the support beam.
- 7) Remove the blower motor unit assembly. <Ref. to AC-26, REMOVAL, Blower Motor Unit Assembly.>
- 8) Disconnect the servo motor connectors.
- 9) Loosen the bolt and nuts to remove the heater and cooling unit.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

#### Tightening torque:

*Refer to COMPONENT in General Description. <Ref. to AC-5, HEATER COOLING UNIT, COMPONENT, General Description.>*

## 16. Evaporator

### A: REMOVAL

- 1) Remove the heater and cooling unit. <Ref. to AC-34, REMOVAL, Heater and Cooling Unit.>
- 2) Loosen the screws and clip to remove the evaporator cover.

- 3) Remove the evaporator.

- 4) Loosen the two bolts to remove the expansion valve.

### CAUTION:

If the evaporator is replaced, add appropriate amount of compressor oil to evaporator. <Ref. to AC-25, REPLACEMENT, Compressor Oil.>

### B: INSTALLATION

Install in the reverse order of removal.

### 17.Hose and Tube

#### A: REMOVAL

##### CAUTION:

- When disconnecting/connecting hoses, do not apply excessive force to them. Confirm that no torsion and excessive tension exists after installing.
  - Seal the disconnected hose with a plug or vinyl tape to prevent contamination from entering.
- 1) Disconnect the ground cable from battery.
  - 2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
  - 3) Remove the evaporator unit mounting bolt (A).
  - 4) Remove the low-pressure hose attaching bolts (B).
  - 5) Disconnect the low-pressure hose from evaporator unit.
  - 6) Disconnect the low-pressure hose from compressor.
  - 7) Remove the low-pressure hose from vehicle.
  - 8) Remove the high-pressure hose attaching bolts (C).
  - 9) Disconnect the high-pressure hose from compressor.
  - 10) Disconnect the high-pressure hose from condenser.
  - 11) Remove the high-pressure hose from vehicle.
  - 12) Remove the high-pressure tube attaching bolt (D).
  - 13) Remove the high-pressure tube from vehicle.

#### B: INSTALLATION

##### CAUTION:

- When disconnecting/connecting hoses, do not apply an excessive force to them. Confirm that no torsion and excessive tension exists after installing.
  - Seal the disconnected hose with a plug or vinyl tape to prevent contamination from entering.
- 1) Install in the reverse order of removal.
  - 2) Charge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

##### Tightening torque:

*Refer to COMPONENT in General Description. <Ref. to AC-11, AIR CONDITIONING UNIT, COMPONENT, General Description.>*

#### C: INSPECTION

##### NOTE:

If cracking, damage, or swelling is found on a hose, replace it with a new one.

# Relay and Fuse

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 18. Relay and Fuse

### A: LOCATION

- (1) Joint box
- (2) Main fuse box

|                  |   |
|------------------|---|
| Main Fan Relay 1 | A |
| Main Fan Relay 2 | B |
| Sub Fan Relay 1  | C |
| Sub Fan Relay 2  | E |
| A/C Relay        | D |
| Main Fan Fuse    | F |
| Sub Fan Fuse     | G |
| A/C Fuse         | H |

### B: INSPECTION

- (3) — (4): Continuity exists.
- (1) — (2): No continuity

While applying battery voltage to the terminal between (3) and (4), check continuity between (1) and (2).  
If no continuity exists, replace the relay with a new one.

## Pressure Switch (Dual Switch)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 19. Pressure Switch (Dual Switch)

#### A: INSPECTION

- 1) Connect the manifold gauge to the service valve on high-pressure side.
- 2) Start the air conditioner, and check the operating pressure of switch by turning the compressor (magnet clutch) to ON/OFF.

**NOTE:**

- When the refrigerant pressure becomes excessively high, the high pressure switch turns off the compressor (magnet clutch) to prevent breakage or freeze of evaporator, air conditioner pipe and expansion valve.
- When the refrigerant pressure becomes excessively low, the low pressure switch judges that filling amount is insufficient and turns off the compressor (magnet clutch) to prevent seizure due to compressor rotating.

|                              | Operation  | Standard<br>kPa (kgf/cm <sup>2</sup> , psi)   |
|------------------------------|------------|---|
| High and low pressure switch | Turns OFF. | Increasing to<br>2,800±100 (29±1, 406±15)   |
|                              |            | Decreasing to<br>278±29 (2.83±0.3, 40.3±4.2)  |
|                              | Turns ON.  | Increasing to<br>287 <sup>+39</sup> <sub>-25</sub> (2.9 <sup>+0.4</sup> <sub>-0.25</sub> 42 <sup>+5.7</sup> <sub>-3.6</sub> ) |
|                              |            | Decreasing to<br>2,200±200 (22.4±2, 319±29)   |

## 20. Ambient Sensor

### A: REMOVAL

- 1) Open the front hood.
- 2) Disconnect the ground cable from battery.
- 3) Disconnect the ambient sensor connector.
- 4) Remove the ambient sensor from radiator lower panel.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

<Ref. to AC(diag)-24, AMBIENT SENSOR, Diagnostic Procedure for Sensors.>

## Sunload Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

### 21. Sunload Sensor (Auto A/C Model)

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front defroster grille.
- 3) Disconnect the sunload sensor connector (A).

#### CAUTION:

**Do not damage the sensors and interior trims when removing them.**

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

<Ref. to AC(diag)-28, SUNLOAD SENSOR, Diagnostic Procedure for Sensors.>

## 22. Air Vent Grille

### A: REMOVAL

#### 1. CENTER GRILLE

- 1) Disconnect the ground cable from battery.
- 2) Remove the console front panel.
- 3) Remove the center console panel.
- 4) Loosen the three screws to remove the center air vent grille (A).

#### 2. SIDE GRILLE

- 1) Disconnect the ground cable from battery.
- 2) Remove the heater vent duct. <Ref. to AC-43, REMOVAL, Heater Vent Duct.>
- 3) Loosen the screws to remove the side air vent grille.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

The direction and amount of air should be adjusted smoothly.

The adjustment should be kept in each position.

## Heater Duct

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

### 23.Heater Duct

#### A: REMOVAL

- 1) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
- 2) Remove the console box. <Ref. to EI-46, Console Box.>
- 3) Remove the side sill front cover, side sill rear cover and center pillar lower trim. <Ref. to EI-51, REMOVAL, Lower Inner Trim.>
- 4) Remove the foot rest.
- 5) Remove the clips from floor mat.
- 6) Remove the mat hook.
- 7) Remove the mat from toe board area.
- 8) Remove the rear heater duct cover (A). Draw out the rear heater duct from the unit assembly and slide it forward to remove.

#### B: INSTALLATION

Install in the reverse order of removal.

##### NOTE:

- Secure the mat firmly with hook and Velcro tape.
- Insert the mat edge firmly into the groove of side sill cover.

## Heater Vent Duct

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 24.Heater Vent Duct

#### A: REMOVAL

- 1) Remove the instrument panel. <Ref. to EI-47, REMOVAL, Instrument Panel Assembly.>
- 2) Remove the screws.
- 3) Remove the heater vent duct.

#### B: INSTALLATION

Install in the reverse order of removal.

## General Diagnostic Table

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 25. General Diagnostic Table

#### A: INSPECTION

| Symptom  |  | Repair order           |
|--|--|------------------------|
| Blower motor                                   | Doesn't move.                          | Fuse                   |
|  |  | Blower motor relay     |
|  |  | Blower motor           |
|  |  | Blower motor resistor  |
|  |  | Blower switch          |
|  |  | Wire harness           |
|  | Strange noise.                         | Blower motor           |
| Compressor                                     | Doesn't move.                          | Refrigerant            |
|  |  | Fuse                   |
|  |  | Air conditioning relay |
|  |  | Magnet clutch          |
|  |  | Compressor             |
|  |  | Pressure switch        |
|  |  | A/C switch             |
|  |  | Blower switch          |
|  | Wire harness                           |                        |
|  | Noise                                  | V-Belt                 |
|  |  | Magnet clutch          |
| Compressor                                     |  |                        |
| Cold air not emitted.                          | Refrigerant                            |                        |
|  | V-Belt                                 |                        |
|  | Magnet clutch                          |                        |
|  | Compressor                             |                        |
|  | Pressure switch                        |                        |
|  | A/C switch                             |                        |
|  | Blower switch                          |                        |
|  | Wire harness                           |                        |
|  | Heater duct                            |                        |
|  | Heater vent duct                       |                        |
| Warm air not emitted.                          | Engine coolant                         |                        |
|  | Blower switch                          |                        |
|  | Heater core                            |                        |
| Temperature of air from vents does not change. | Engine coolant                         |                        |
|  | Air mix actuator (Auto A/C)            |                        |
|  | Wire harness (Auto A/C)                |                        |
|  | Temperature control cable (Manual A/C) |                        |
| Unable to switch blow vents.                   | Mode actuator (Auto A/C)               |                        |
|  | Air flow switch (Auto A/C)             |                        |
|  | Wire harness (Auto A/C)                |                        |
|  | Mode cable (Manual A/C)                |                        |
| Unable to switch suction vents.                | Air inlet select switch (Auto A/C)     |                        |
|  | FRESH/RECIRC actuator (Auto A/C)       |                        |
|  | Wire harness (Auto A/C)                |                        |
|  | Intake cable (Manual A/C)              |                        |

# Basic Diagnostic Procedure

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

| Step   | Check                                   | Yes  | No  |
|--|---|--|---|
| <b>1</b><br><b>START INSPECTIONS.</b><br>1) Perform the pre-inspection. <Ref. to AC(diag)-3, INSPECTION, General Description.><br>2) Perform the self-diagnosis. <Ref. to AC(diag)-8, OPERATION, Diagnostic Chart for Self-Diagnosis.> | Does the self-diagnosis operate?        | Go to step 2.  | <Ref. to AC(diag)-11, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>                                      |
| <b>2</b><br><b>CONFIRM MALFUNCTION PART.</b><br>Confirm the malfunction part with self-diagnosis.  | Can the malfunction part be confirmed?  | Repair the malfunction part according to each diagnostics chart. | Go to step 3.   |
| <b>3</b><br><b>CHECK COMPARTMENT TEMPERATURE.</b><br>1) Turn the A/C switch ON.<br>2) Set the temperature control dial to maximum cold position.<br>3) Check the compartment temperature changes.                                      | Is the compartment temperature changed? | Go to step 4.  | <Ref. to AC(diag)-15, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY., Diagnostics for A/C System Malfunction.> |
| <b>4</b><br><b>CHECK A/C SYSTEM RESPONSE.</b><br>Change the temperature setting, and check the response of A/C system.   | Does the A/C system respond quickly?    | A/C system is OK.  | <Ref. to AC(diag)-15, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY., Diagnostics for A/C System Malfunction.> |

# General Description

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 2. General Description

### A: CAUTION

1) Never connect the battery in reverse polarity. The Auto A/C control module will be destroyed instantly.

2) Do not disconnect the battery cables while the engine is running.

A large counter electromotive force will be generated in the alternator, and this voltage may damage electronic parts such as auto A/C control module.

3) Before disconnecting the connectors of each sensor and the auto A/C control module, be sure to turn off the ignition switch.

The auto A/C control module may be damaged.

4) Every A/C-related part is a precision part. Do not drop them.

5) Airbag system wiring harness is routed near the A/C control panel (auto A/C control module) and junction box.

### CAUTION:

- Airbag system connectors are colored yellow. Do not use electrical test equipment on these circuits.

- Be careful not to damage the airbag system wiring harness when servicing the A/C control panel (auto A/C control module) and junction box.

### B: INSPECTION

Before performing diagnosis, check the following items which might affect A/C system problems.

#### 1. BATTERY

1) Measure the battery voltage and specific gravity of electrolyte.

**Standard voltage: 12 V**

**Specific gravity: Above 1.260**

2) Check the condition of the fuses for A/C system power supply and other fuses.

3) Check the condition of the harnesses and harness connectors connection.

#### 2. ASPIRATOR HOSE

1) Turn the ignition switch to ON and push the A/C switch.

2) Turn the temperature control dial to maximum hot position.

3) Turn the air flow control dial to "DEF" position.

4) Turn the fan speed control dial to MAX speed position.

5) Firmly hold a thin paper (b) in front of the in-vehicle sensor suction port (a) for the auto A/C control module and check that the paper moves towards the port indicating that air is being sucked into the port.

### NOTE:

Ensure the paper does not get sucked into the port.

6) If the paper does not move at all, remove the auto A/C control module <Ref. to AC-31, REMOVAL, Control Unit (Auto A/C Model).> and check for improper connection of the aspirator hose (A), auto A/C control module and heater unit, and secure as necessary.

#### 3. A/C LINE

Check the connection for A/C line (A) and lower side high-pressure pipe.

#### 4. CONTROL LINKAGE

- 1) Check the state of mode door linkage.
- 2) Check the state of air mix door linkage.
- 3) Check the state of intake door linkage.

## General Description

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

#### 5. CONTROL SWITCHES

Start and warm-up the engine completely.

##### 1) Inspection using switches

| No. | Item to be checked                      | Switch position  | Judgment standard   |
|-----|---|--|---|
| 1   | Air flow control dial                   | Turn the dial to the right.  | Outlet opening (mode) switches AUTO → VENT → BILEVEL → HEAT → DEF/HEAT → DEF each time turning the dial.  |
| 2   | Fan speed control dial                  | Turn the dial to the right   | Fan speed switches OFF → AUTO → 1st — 25th each time turning the dial.  |
| 3   | FRESH/RECIRC switch                     | Press the FRESH/RECIRC switch.   | Inlet opening switches RECIRC → FRESH each time pressing the switch.  |
|     |   | Press the FRESH/RECIRC switch longer (more than 1.0 seconds).  | LED blinks twice, and switches to AUTO.   |
| 4   | A/C switch                              | Turn the A/C switch to ON with the fan speed control dial position other than OFF.   | LED comes on, and the compressor will be operated.  |
|     |   | Press the A/C switch longer (more than 1.0 seconds).   | LED blinks twice, and switches to AUTO.   |
| 5   | Auto function Operate from 1) in order. | 1) Set the following dials and switches to AUTO.<br>• Air flow control dial<br>• Fan speed control dial<br>• FRESH/RECIRC switch<br>• A/C switch<br>2) Turn the temperature control dial to the left fully, to set to the maximum cool position. | <ul style="list-style-type: none"> <li>• Outlet air temperature: COOL</li> <li>• Fan speed: MAX</li> <li>• Outlet opening: VENT</li> <li>• Inlet opening: Internal air</li> <li>• Compressor: AUTO</li> </ul>           |
|     |   | 3) Turn the temperature control dial to the right slowly, to change the setting gradually to the maximum hot position.   | <ul style="list-style-type: none"> <li>• Outlet air temperature: COOL → HOT</li> <li>• Fan speed: AUTO</li> <li>• Outlet opening: AUTO</li> <li>• Inlet opening: AUTO</li> <li>• Compressor: AUTO</li> </ul>            |
|     |   | 4) Turn the temperature control dial to the right fully, to set to the maximum hot position.   | <ul style="list-style-type: none"> <li>• Outlet air temperature: HOT</li> <li>• Fan speed: MAX</li> <li>• Outlet opening: HEAT</li> <li>• Inlet opening: External air</li> <li>• Compressor: AUTO</li> </ul>            |
| 6   | Defroster interlock                     | Turn the air flow control dial to DEF or DEF/HEAT position.  | <ul style="list-style-type: none"> <li>• Outlet air temperature: AUTO</li> <li>• Fan speed: AUTO</li> <li>• Outlet opening: DEF or DEF/HEAT</li> <li>• Inlet opening: External air</li> <li>• Compressor: ON</li> </ul> |
| 7   | Rear window defogger switch             | Press the rear window defogger switch.   | LED comes on.   |

##### 2) Inspection of illumination control

| No. | Item to be checked | Switch operation                | Judgment standard   |
|-----|--------------------|---------------------------------|---|
| 1   | Illumination       | Turn the lighting switch to ON. | Illumination comes on. LED goes dim if it has been illuminated. |

## 6. Diagnostics for A/C System Malfunction

### A: A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE

#### TROUBLE SYMPTOM:

- Switch LEDs are faulty or switches do not operate.
- Self-diagnosis system does not operate.

#### WIRING DIAGRAM:

AC-01142

## Diagnostics for A/C System Malfunction

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

| Step   | Check                                    | Yes                   | No   |
|--|--|-----------------------|--|
| <b>1 CHECK FUSE.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the fuse No. 2 from main fuse box.<br>3) Check the condition of fuse.   | Is the fuse blown-out?                   | Replace the fuse.     | Go to step 2.  |
| <b>2 CHECK FUSE.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the fuses No. 9 and No. 17 from fuse & relay box.<br>3) Check the condition of fuse.  | Is the fuse blown-out?                   | Replace the fuse.     | Go to step 3.  |
| <b>3 CHECK AUTO A/C CONTROL MODULE POWER CIRCUIT.</b><br>1) Pull out the auto A/C control module connector.<br>2) Measure the voltage between auto A/C control module connector terminal and chassis ground when turning ignition switch to OFF.<br><i>Connector &amp; terminal</i><br><i>(B283) No. 1 (+) — Chassis ground (-):</i> | Is the voltage more than 10 V?           | Go to step 4.         | Repair the short circuit in harness for power supply line. |
| <b>4 CHECK AUTO A/C CONTROL MODULE POWER CIRCUIT.</b><br>Measure the voltage between auto A/C control module connector terminal and chassis ground when turning the ignition switch to ACC.<br><i>Connector &amp; terminal</i><br><i>(B283) No. 2 (+) — Chassis ground (-):</i>  | Is the voltage more than 10 V?           | Go to step 5.         | Repair the short circuit in harness for power supply line. |
| <b>5 CHECK AUTO A/C CONTROL MODULE POWER CIRCUIT.</b><br>Measure the voltage between auto A/C control module connector terminal and chassis ground when turning the ignition switch to ON.<br><i>Connector &amp; terminal</i><br><i>(B282) No. 8 (+) — Chassis ground (-):</i>   | Is the voltage more than 10 V?           | Go to step 6.         | Repair the short circuit in harness for power supply line. |
| <b>6 CHECK AUTO A/C CONTROL MODULE GROUND CIRCUIT.</b><br>Measure the resistance of harness between auto A/C control module and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B283) No. 12 — Chassis ground:</i>   | Is the resistance less than 5 $\Omega$ ? | Go to step 7.         | Repair the harness for ground line.                        |
| <b>7 CHECK POOR CONTACT.</b><br>Check poor contact in auto A/C control module connector.   | Is there poor contact in connector?      | Repair the connector. | Replace the auto A/C control module.                       |

# Diagnostics for A/C System Malfunction

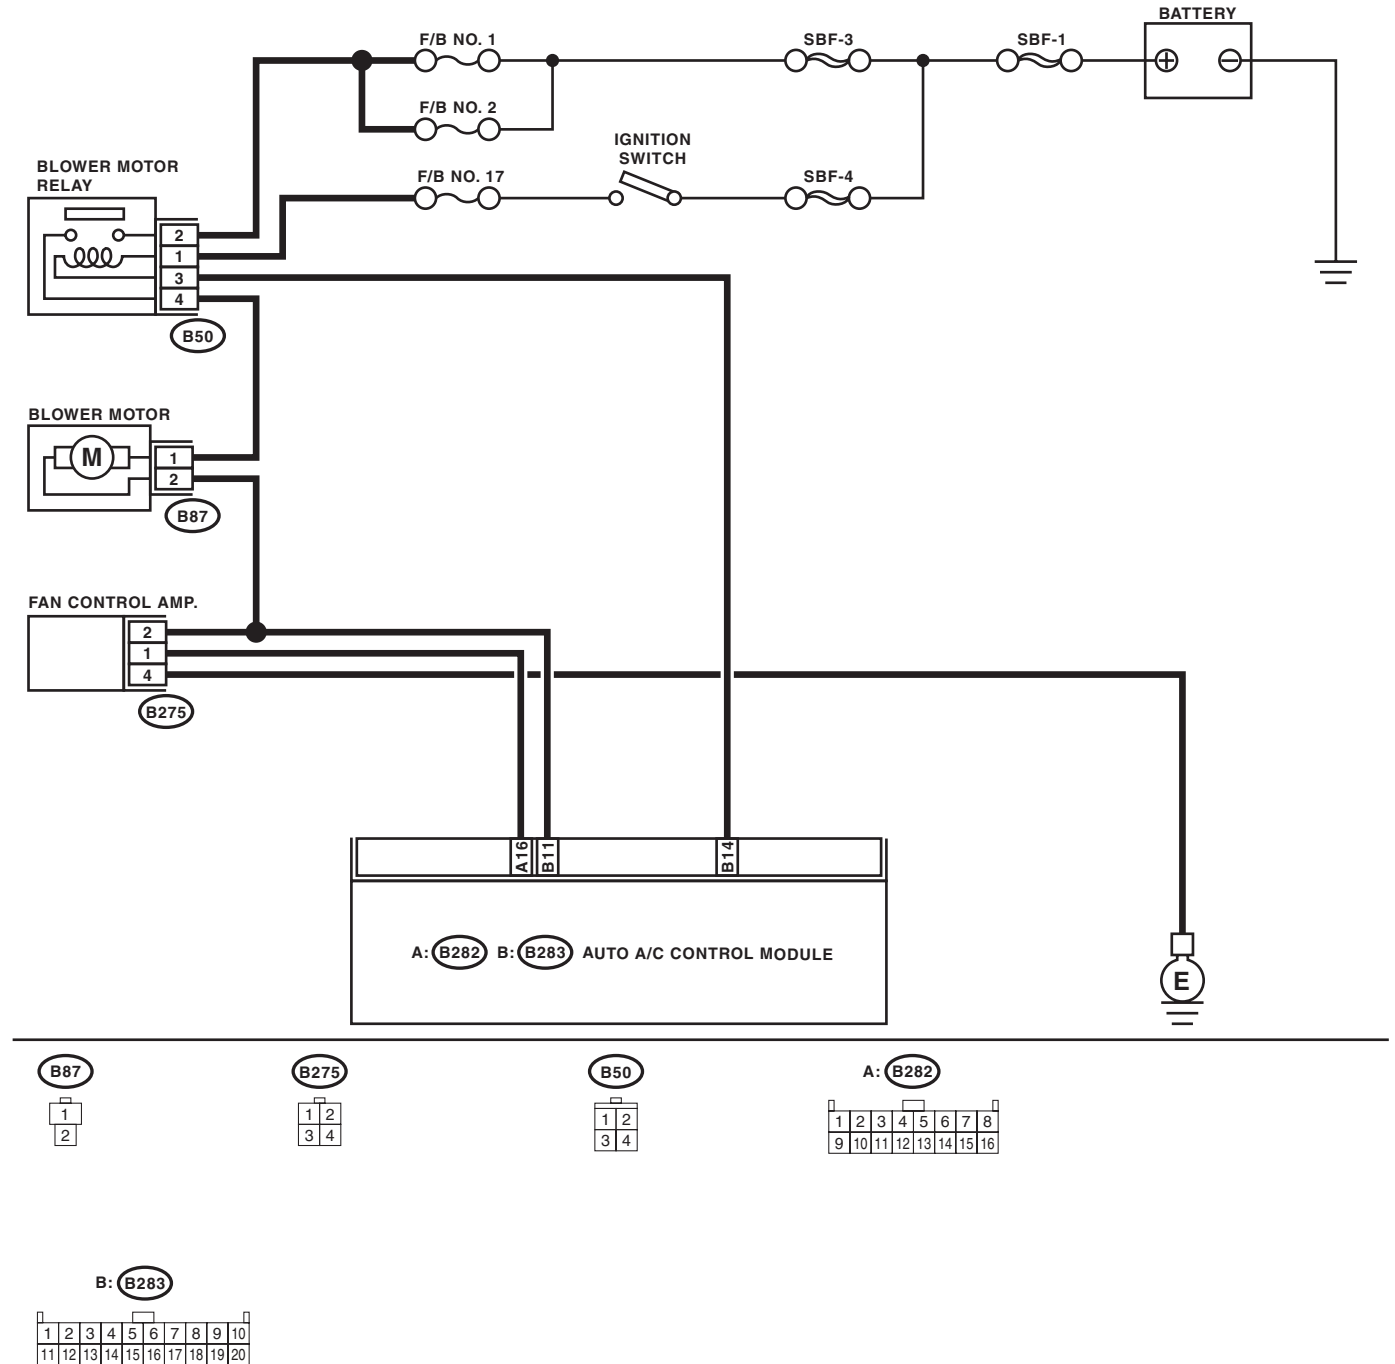

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## B: BLOWER FAN DOES NOT ROTATE.

### TROUBLE SYMPTOM:

- Blower motor is not rotated.
- Blower motor is not rotated at "HI".

### WIRING DIAGRAM:

AC-01143

## Diagnostics for A/C System Malfunction

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

| Step   | Check                                    | Yes                   | No   |
|--|--|-----------------------|--|
| <b>1</b><br><b>CHECK FUSE.</b><br>1) Remove the No. 1, No. 2 and No. 17 fuses in fuse & relay box.<br>2) Check the condition of fuses.   | Are any of the fuses blown-out?          | Replace the fuse.     | Go to step 2.  |
| <b>2</b><br><b>CHECK POWER SUPPLY TO BLOWER FAN MOTOR.</b><br>1) Turn the ignition switch to ON.<br>2) Turn the fan speed control dial to the right.<br>3) Measure the voltage between blower fan motor and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B87) No. 1 (+) — Chassis ground (-):</b>   | Is the voltage more than 10 V?           | Go to step 3.         | Repair the open circuit in harness for blower fan motor power supply line. |
| <b>3</b><br><b>CHECK BLOWER FAN MOTOR RELAY.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the blower fan motor relay.<br>3) Connect the battery positive (+) terminal to No. 1 terminal and negative (-) terminal to No. 3 terminal of blower fan motor connector.<br>4) Measure the resistance between No. 2 and No. 4 terminals.<br><b>Terminals</b><br><b>No. 2 — No. 4:</b> | Is the resistance less than 1 $\Omega$ ? | Go to step 4.         | Replace the blower fan motor relay.  |
| <b>4</b><br><b>CHECK BLOWER FAN MOTOR.</b><br>1) Disconnect the connector from blower fan motor.<br>2) Connect the battery positive (+) terminal to No. 1 terminal and negative (-) terminal to No. 2 terminal of blower fan motor connector.<br>3) Make sure that the blower fan motor is operated.   | Does the blower fan motor operate?       | Go to step 5.         | Replace the blower fan motor.  |
| <b>5</b><br><b>CHECK POOR CONTACT.</b><br>Check poor contact in auto A/C control module connector.   | Is there poor contact in connector?      | Repair the connector. | Replace the auto A/C control module.                                       |

# Diagnostics for A/C System Malfunction

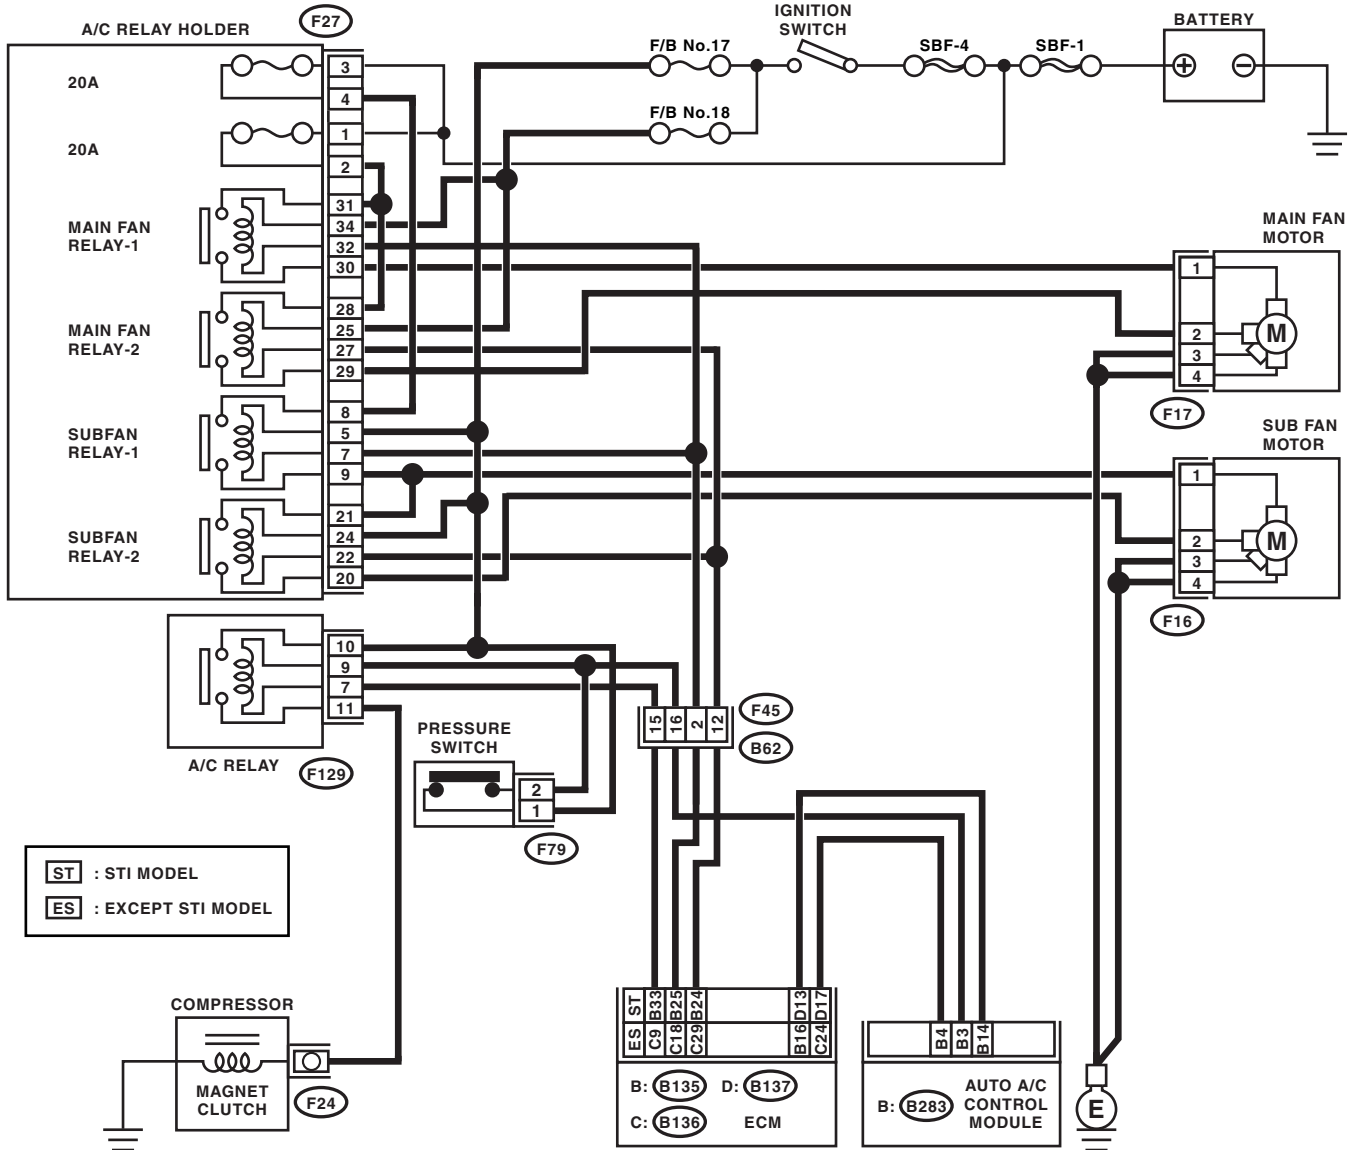

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## C: COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY.

### TROUBLE SYMPTOM:

- Compartment temperature is not changed. (No cool air is discharged.)
- A/C system does not respond quickly.

### WIRING DIAGRAM:

AC-01395

## Diagnostics for A/C System Malfunction

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

| Step  | Check  | Yes  | No  |
|---|--|--|---|
| <b>1 CHECK FUSE.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the No. 2 fuse in main fuse box.<br>3) Check the condition of fuse.  | Is the fuse blown-out?                             | Replace the fuse.                                    | Go to step 2.   |
| <b>2 CHECK POWER SUPPLY TO MAGNET CLUTCH OF A/C COMPRESSOR.</b><br>1) Start the engine, and turn A/C switch to ON.<br>2) Set the temperature control dial to maximum cold position.<br>3) Measure the voltage between magnet clutch connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(F24) No. 1 (+) — Chassis ground (-):</b>  | Is the voltage more than 10 V?                     | Go to step 3.  | Repair the open circuit in harness for power supply line of the A/C compressor.         |
| <b>3 CHECK SIGNAL VOLTAGE TO A/C RELAY.</b><br>1) Turn the ignition switch to ON.<br>2) Turn the A/C switch to ON.<br>3) Measure the signal voltage between A/C relay and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(F129) No. 7 (+) — Chassis ground (-):</b>   | Is the voltage more than 10 V?                     | Go to step 4.  | Repair the open circuit in harness for A/C relay signal circuit.                        |
| <b>4 CHECK A/C RELAY.</b><br>Check the A/C relay. <Ref. to AC-37, INSPECTION, Relay and Fuse.>  | Is the operation of the relay OK?                  | Go to step 5.  | Replace the A/C relay.  |
| <b>5 CHECK OPERATION OF MAIN FAN MOTOR.</b><br>1) Start the engine.<br>2) Turn the A/C switch to ON.<br>3) Check the operation of main fan motor.   | Does the radiator main fan operate?                | Go to step 10.                                       | Go to step 6.   |
| <b>6 CHECK POWER SUPPLY TO MAIN FAN MOTOR.</b><br><b>CAUTION:</b><br><b>Be careful not to overheat the engine during repair.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from main fan motor.<br>3) Start the engine, and warm it up until engine coolant temperature increases over 95°C (203°F).<br>4) Stop the engine and turn ignition switch to ON.<br>5) Measure the voltage between main fan motor connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(F17) No. 1, 2 (+) — Chassis ground (-):</b> | Is the voltage more than 10 V?                     | Go to step 7.  | Repair the open circuit in harness for power supply circuit.                            |
| <b>7 CHECK GROUND CIRCUIT OF MAIN FAN MOTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between main fan motor connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(F17) No. 3, 4 — Chassis ground:</b>   | Is the resistance less than 1 Ω?                   | Go to step 8.  | Repair the open circuit in harness between main fan motor connector and chassis ground. |
| <b>8 CHECK POOR CONTACT.</b><br>Check poor contact in main fan motor connector.   | Is there poor contact in main fan motor connector? | Repair the poor contact in main fan motor connector. | Go to step 9.   |
| <b>9 CHECK MAIN FAN MOTOR.</b><br>Connect the battery positive (+) terminal to terminal No. 1 and 2, and negative (-) terminal to terminal No. 3 and 4.   | Does the main fan rotate?                          | Repair the poor contact in main fan motor connector. | Replace the main fan motor with a new one.  |

# Diagnostics for A/C System Malfunction

## 8. Diagnostic Procedure for Sensors

### A: AMBIENT SENSOR

#### TROUBLE SYMPTOM:

Fan speed is not switched when the fan speed control dial is in AUTO position.

#### WIRING DIAGRAM:

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

| Step   | Check  | Yes                   | No   |
|--|--|-----------------------|--|
| <b>1 CHECK AMBIENT SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ambient sensor.<br>3) Measure the resistance between connector terminals of ambient sensor.<br><i>Terminals</i><br><i>No. 1 — No. 2:</i>   | Is the resistance approx. 2.2 k $\Omega$ at 25°C (77°F)? | Go to step 2.         | Replace the ambient sensor.  |
| <b>2 CHECK INPUT SIGNALS FOR AMBIENT SENSOR.</b><br>1) Turn the ignition ON.<br>2) Measure the voltage between (F78) connector terminals.<br><i>Connector &amp; terminal</i><br><i>(F78) No. 1 (+) — No. 2 (-):</i>  | Is the voltage approx. 5 V?                              | Go to step 6.         | Go to step 3.  |
| <b>3 CHECK OUTPUT SIGNALS FROM AUTO A/C CONTROL MODULE.</b><br>1) Turn the ignition switch to OFF.<br>2) Pull out the auto A/C control module.<br>3) Disconnect the connector from ambient sensor.<br>4) Turn the ignition switch to ON.<br>5) Measure the voltage between connector terminals of auto A/C control module.<br><i>Connector &amp; terminal</i><br><i>(B283) No. 9 (+) — No. 17 (-):</i> | Is the voltage approx. 5 V?                              | Go to step 4.         | Go to step 6.  |
| <b>4 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND AMBIENT SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from auto A/C control module.<br>3) Measure the resistance of harness between auto A/C control module and ambient sensor.<br><i>Connector &amp; terminal</i><br><i>(F78) No. 1 — (B283) No. 9:</i>   | Is the resistance less than 1 $\Omega$ ?                 | Go to step 5.         | Repair the open circuit in harness between auto A/C control module and ambient sensor. |
| <b>5 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND AMBIENT SENSOR.</b><br>Measure the resistance of harness between auto A/C control module and ambient sensor.<br><i>Connector &amp; terminal</i><br><i>(F78) No. 2 — (B283) No. 17:</i>  | Is the resistance less than 1 $\Omega$ ?                 | Go to step 6.         | Repair the open circuit in harness between auto A/C control module and ambient sensor. |
| <b>6 CHECK POOR CONTACT.</b><br>Check poor contact in auto A/C control module connector.   | Is there poor contact in connector?                      | Repair the connector. | Replace the auto A/C control module.   |

## B: IN-VEHICLE SENSOR

### TROUBLE SYMPTOM:

- When turning the AUTO switch to ON, blower fan speed, outlet port and inlet port is not changed.
- If the switch LED indicates that the sensor is malfunctioning, replace the auto A/C control module. The in-vehicle sensor is built into the auto A/C control module and cannot be replaced as a single unit.

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## D: SUNLOAD SENSOR

### TROUBLE SYMPTOM:

- Sensor identified that sunlight is at maximum. Then, A/C system is controlled to COOL side.
- Sensor identified that sunlight is at minimum. Then, A/C system is controlled to HOT side.

### NOTE:

When the sunload sensor is checked indoors or in the shade, it may be diagnosed as open circuit. Always check the sunload sensor at a place where sun shines directly on it.

### WIRING DIAGRAM:

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

| Step  | Check                                    | Yes                   | No   |
|---|--|-----------------------|--|
| <b>1 CHECK INPUT VOLTAGE TO SUNLOAD SENSOR.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the input voltage to sunload sensor.<br><i>Connector &amp; terminal</i><br><i>(i51) No. 2 (+) — Chassis ground (-):</i>   | Is the voltage approx. 5 V?              | Go to step 3.         | Go to step 2.  |
| <b>2 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from auto A/C control module.<br>3) Measure the resistance of harness between auto A/C control module and sunload sensor.<br><i>Connector &amp; terminal</i><br><i>(i51) No. 2 — (B283) No. 16:</i> | Is the resistance less than 1 $\Omega$ ? | Go to step 3.         | Repair the harness between auto A/C control module and sunload sensor. |
| <b>3 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR.</b><br>Measure the resistance of harness between auto A/C control module and sunload sensor.<br><i>Connector &amp; terminal</i><br><i>(i51) No. 1 — (B283) No. 17:</i>   | Is the resistance less than 1 $\Omega$ ? | Go to step 4.         | Repair the harness between auto A/C control module and sunload sensor. |

|   | (13) TORX® bolt T30           |

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 7.5 (0.76, 5.5)**

**T2: 10 (1.0, 7.4)**

**T3: 13 (1.3, 9.6)**

**T4: 25 (2.5, 18.4)**

### B: CAUTION

- When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for more than 20 seconds before starting work.
- The airbag system is fitted with a backup power source. If the airbag system is serviced within 20 seconds after the ground cable is disconnected, it may inflate.
- If the airbag warning light illuminates, repair the vehicle immediately. Airbag or pretensioner may inflate incorrectly, or not inflate in collision.
- If sensors, airbag module, airbag control module, pretensioner, and harness are deformed or damaged, replace them with new genuine parts.

- When checking the airbag system, be sure to use a digital circuit tester. Infinitesimal electric current in an analog circuit tester may cause the airbag to activate erroneously.

- When checking, use a test harness (1). Do not directly apply the tester probe to any connector terminal of the airbag. Damage to the connector terminal may cause the airbag to activate erroneously.

- Do not check continuity of either of the airbag modules for driver, passenger or side, or pretensioner.

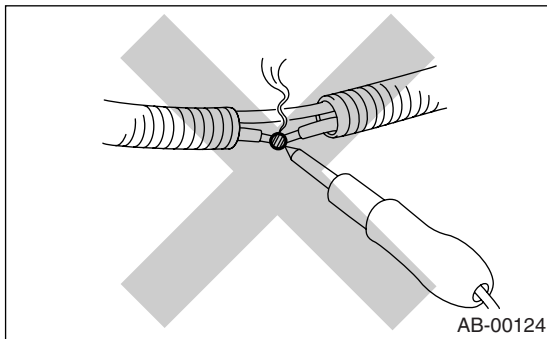

# General Description

## AIRBAG SYSTEM

- Do not drop the airbag modulator parts, subject them to high temperature over 93°C (199°F), or let water, oil, or grease get on them; otherwise, the internal parts may be damaged and reliability greatly lowered.

- If any damage, opening, or rust is found on the airbag system wire harness, do not attempt to repair using soldering equipment. Be sure to replace the faulty harness with a new genuine part.

- Install the wire harness securely with the specified clips to avoid interference or tangled up with other parts.

- Do not allow water or oil to come in contact with the connector terminals. Do not touch the connector terminals.

- Either of the airbag modules for driver, passenger or side, or pretensioner must not be disassembled.

- The removed front seat with the airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

(1) More than 200 mm (8 in)

- Do not use the airbag or pretensioner parts from other vehicles. Always replace defective parts with new parts.
- Never reuse a deployed airbag or pretensioner.
- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender, and front side frame, remove the front sub sensors and wire harness of the airbag system.

- When painting or performing sheet metal work on the side of the vehicle, including the side sill, center pillar, and front and rear doors, remove the side airbag sensors and wire harness of the airbag system.

# General Description

## AIRBAG SYSTEM

- When storing a removed airbag module, do not place any objects on it or pile airbag modules on top of each other. If the airbag inflates for some reason when it is placed with its pad side facing downward or under any object, a serious accident may result.

(1)

(2)

AB-00130

(1) Driver's airbag module

(2) Passenger's airbag module

## C: PREPARATION TOOL

### 1. GENERAL TOOL

| TOOL NAME | REMARKS  |
|-----------|--|
| TORX® T30 | Used for removal/installation of driver's airbag module. |

## 2. Airbag Connector

### A: PROCEDURE

#### 1. POWER SUPPLY, BUCKLE SWITCH

##### 1) How to disconnect

- (1) Move the slide lock (A) in the direction of the arrow.
- (2) Disconnect the connector with slide lock (A) moved.

**CAUTION:**  
When pulling the slide lock or disconnecting the connector, be sure to hold onto the connector and not the wire.

##### 2) How to connect

Holding the connector (A), and push it in carefully until a connecting sound is heard.

**CAUTION:**  
Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

#### 2. DRIVER'S AIRBAG MODULE AND PRE-TENSIONER

##### 1) How to disconnect

- (1) Using a flat tip screwdriver, pry the push lock upward to unlock.

- (2) Pull the connector to disconnect from driver's side airbag module assembly.

##### 2) How to connect

Connect the connector in reverse order of disconnecting. At this time, be sure to insert the push lock in until connecting sound is heard.

##### **CAUTION:**

- Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.
- At this time, be sure to insert the push lock in.

### 3. DRIVER'S AIRBAG (BETWEEN AIRBAG MAIN HARNESS AND ROLL CONNECTOR), PASSENGER'S AIRBAG

1) How to disconnect

- (1) Push the slide lock (A) into the direction of arrow.

- (2) With the slide lock pushed, disconnect the connector.

**CAUTION:**  
When pulling the side lock or disconnecting the connector, be sure to hold onto the connector and not the wire.

2) How to connect

Holding the connector, push it in carefully until a connecting sound is heard.

**CAUTION:**  
Be sure to insert the connector in until it is locked. Then pull on it gently to make sure that it is locked.

### 4. SIDE AIRBAG

1) How to disconnect

- (1) Push the lock arm (A).
- (2) With the lock arm (A) pushed in, move the slide lock (B) in the direction of arrow.

- (3) With the slide lock moved, release the lock arm (back to its original position), and disconnect the connector.

**CAUTION:**  
When pulling the side lock or disconnecting the connector, be sure to hold onto the connector and not the wire.

2) How to connect

Holding the connector, and push it in carefully until a connecting sound is heard.

**CAUTION:**  
Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

## 5. FRONT SUB-SENSOR AND SIDE AIR-BAG SENSOR AND SEAT POSITION SENSOR

### 1) How to disconnect

Holding outer part (A), pull it in the direction of the arrow.

#### CAUTION:

**When pulling the slide lock or disconnecting the connector, be sure to hold onto the connector and not the wire.**

### 2) How to connect

Holding the connector, and push it in carefully until a connecting sound is heard.

#### CAUTION:

- Outer (A) moves back, and so do not put your hand on the outer part.
- Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

## 3. Inspection Locations After a Collision

### A: REPLACEMENT

When airbag system is deployed, replace the following parts.

#### 1. FRONT COLLISION

- 1) Driver's airbag module
- 2) Passenger's airbag module
- 3) Driver's seat belt (pretensioner)
- 4) Passenger's seat belt (pretensioner)
- 5) Airbag control module
- 6) Front sub-sensor
- 7) Roll connector

#### 2. SIDE COLLISION

- 1) Airbag control module
- 2) Side airbag module (operating side seat backrest)
- 3) Side airbag sensor (operating side)

### 3. INSPECTION OF OTHER PARTS

Check for the following parts, replace the damaged parts with new ones.

- 1) Steering wheel and steering shaft

Check the steering wheel and steering shaft for mounting condition and deflection of axial and radial, upward and downward direction. Check the steering shaft for deflection of axial and radical direction with tilt lever released. (After a collision, absorbing part of steering shaft may inflate.)

2) Check the direct type connector of driver's airbag module, pretensioner, etc. for damage, and also check each harness for pinch and connector damage. If damage is found, replace the harness as a unit.

3) Check the seat cushion frame, backrest, seat rail and headrest for deformation, distortion, crack, installing condition and play.

4) For passenger's seat, replace the seat cushion pad frame assembly with new one if the seat cushion frame assembly is deformed or cracked.

5) If the passenger's seat cushion cover is torn or frayed, replace the seat cushion cover with a new one. Otherwise, the occupant detection system may not operate properly.

6) Be sure to perform the system calibration for occupant detection system when the passenger's seat cushion cover has been removed or replaced. Failure to do so may cause improper activation of occupant detection system. <Ref. to OD(diag)-19, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

7) Check if the driver's seat position sensor, and the driver's and passenger's seatbelt buckle switches operate normally.

### B: INSPECTION

If the vehicle is involved in a collision, even if it is a slight collision, be sure to check the following system parts.

#### 1. DRIVER'S AIRBAG MODULE

1) Check for the following, and replace damaged parts with new parts.

- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open. Lead wire is exposed.
- The module surface is fouled with grease, oil, water or cleaning solvent.

2) When installing a new driver's airbag module, check the following, and replace the damaged parts with new ones.

- The steering wheel is in the way, making it difficult to install the airbag module.
- The clearance between the driver's airbag module and steering wheel is not constant.
- The steering wheel deformation in axial and radial directions exceed limits.

#### Specifications:

##### Height deflection A

**Less than 6 mm (0.24 in)**

##### O.D. deflection L

**Less than 7 mm (0.28 in)**

#### 2. PASSENGER'S AIRBAG MODULE

Check for the following, and replace damaged parts with new parts.

- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open. Lead wire is exposed.
- Mounting bracket is cracked or deformed.

#### 3. SIDE AIRBAG MODULE

Check for the following, and replace damaged parts with new parts.

- Front seat, airbag module and mounting bracket are damaged or deformed.

# Inspection Locations After a Collision

## AIRBAG SYSTEM

- Harness and/or connector is cracked, deformed or open. Lead wire is exposed.

### 4. AIRBAG CONTROL MODULE

Check for the following, and replace damaged parts with new parts.

- Control module is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Airbag is deployed.
- Side airbag is deployed.

### 5. FRONT SUB SENSOR

If the front section of vehicle as shown in the figure is damaged, check for the following, and replace damaged parts with new parts.

- Front sub sensor is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Airbag is deployed.

### 6. SIDE AIRBAG SENSOR

If the side section of vehicle as shown in the figure is damaged, check for the following, and replace damaged parts with new parts.

- Side airbag sensor is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Side airbag is deployed. (operating side)

### 7. ROLL CONNECTOR

Check for the following, and replace damaged parts with new parts.

- Combination switch or steering roll connector is cracked or deformed.

### 8. STEERING SHAFT

Check for the following, and replace damaged parts with new parts.

- Overall length of steering column should be within specifications.

#### Specifications:

**Overall length L**

**818.7±1.5 mm (32.23±0.06 in)**

### 9. DRIVER'S SEAT

Check the following items and replace the damaged parts with new one.

- Seat belt buckle or seat position sensor body/bracket is cracked or deformed.
- Harness or connector is cracked, deformed or disconnected. Harness wire is exposed.

#### CAUTION:

**Do not remove the seat position sensor from seat rail.**

### 10. PASSENGER'S SEAT

1) Check the following items and replace the damaged parts with new one.

- Seat belt buckle body/bracket has scratch, crack or deformation.
- Backrest frame has crack or deformation.
- Headrest has deformation or play.
- If the seat cushion cover or seat back cover is torn or frayed, replace the cover with new one and perform the system calibration. <Ref. to OD(diag)-19, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

#### CAUTION:

**Check the following items, and if faulty, replace the seat cushion pad and frame as assembly. Never disassemble.**

- Seat cushion frame or seat cushion pad has crack or deformation.

- **Occupant detection system pressure sensor hose, occupant detection control module or its installing bracket has scratch, crack or deformation.**

- **Harness or connector is cracked, deformed or disconnected. Harness wire is exposed.**

2) After checking the installing condition of passenger's seat, perform the system calibration of occupant detection system. <Ref. to OD(diag)-19, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

## **11.BELT TENSION SENSOR**

Check the following items, and replace the damaged parts with new one.

- Belt tension sensor has scratch, crack or deformation.

- Harness or connector is cracked, deformed or disconnected. Harness wire is exposed.

## 4. Driver's Airbag Module

### A: REMOVAL

**CAUTION:**

Refer to "CAUTION" in General Description before handling the airbag module. <Ref. to AB-3, CAUTION, General Description.>

- 1) Position the front wheels straight ahead. (After moving the vehicle more than 5 m (16 ft) with front wheels positioned straight ahead, make sure that the vehicle moves straight ahead).
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery, and wait for at least 20 seconds before starting work.
- 4) Using the TORX® BIT T30, remove the two TORX® bolts on side of steering wheel.

(1) TORX® BIT T30

- 5) Disconnect the horn harness.
- 6) Disconnect the airbag connector on the back of airbag module, and then remove the airbag module. <Ref. to AB-8, PROCEDURE, Airbag Connector.>

- 7) Refer to "CAUTION" for handling of a removed airbag module. <Ref. to AB-3, CAUTION, General Description.>

### B: INSTALLATION

Install in the reverse order of removal.

**CAUTION:**

- Refer to "CAUTION" in General Description before handling the airbag module. <Ref. to AB-3, CAUTION, General Description.>
- Do not allow harness and connectors to interfere or get tangled up with other parts.

**Tightening torque:**

Refer to "COMPONENT" in "General Description" <Ref. to AB-2, SRS AIRBAG, COMPONENT, General Description.>

### C: INSPECTION

**CAUTION:**

Refer to "CAUTION" in General Description before handling the airbag module. <Ref. to AB-3, CAUTION, General Description.>

Check for the following, and replace damaged parts with new parts.

- Airbag module, harness, connector, and mounting bracket are damaged. <Ref. to AB-11, DRIVER'S AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

## 5. Passenger's Airbag Module

### A: REMOVAL

**CAUTION:**

Refer to "CAUTION" in General Description before handling the airbag module. <Ref. to AB-3, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery, and wait for at least 20 seconds before starting work.
- 3) Remove the glove box. <Ref. to EI-43, REMOVAL, Glove Box.>
- 4) Detach the airbag connector from support beam bracket, and then disconnect the airbag connector.

- 5) Remove the three bolts, and then carefully remove the passenger's airbag module.
- 6) Refer to "CAUTION" for handling of a removed airbag module. <Ref. to AB-3, CAUTION, General Description.>

### B: INSTALLATION

Install in the reverse order of removal.

**CAUTION:**

Do not allow harness and connectors to interfere or get tangled up with other parts.

*Tightening torque:*

Refer to "COMPONENT" in "General Description" <Ref. to AB-2, SRS AIRBAG, COMPONENT, General Description.>

### C: INSPECTION

**CAUTION:**

Refer to "CAUTION" in General Description before handling the airbag module. <Ref. to AB-3, CAUTION, General Description.>

Check for the following, and replace damaged parts with new parts.

- Airbag module, harness, connector, and mounting bracket are damaged. <Ref. to AB-11, PASSENGER'S AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

## 6. Side Airbag Module

### A: REMOVAL

**CAUTION:**

Before working on the airbag module, refer to the “CAUTION” in General Description. <Ref. to AB-3, CAUTION, General Description.>

**NOTE:**

Remove the passenger’s side by referring to driver’s side.

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery, and wait for at least 20 seconds before starting work.
- 3) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
- 4) Remove the clip, and then remove the side airbag harness from slide rail IN (A) and reverse side of seat cushion assembly.

- 5) Remove the backrest cover. <Ref. to SE-8, DISASSEMBLY, Front Seat.>

- 6) Remove the side airbag harness from backrest frame assembly.

- 7) Remove the side airbag module (A) from backrest frame assembly.

### B: INSTALLATION

**CAUTION:**

- Before working on the airbag module, refer to the “CAUTION” in General Description. <Ref. to AB-3, CAUTION, General Description.>
- Be sure to perform the system calibration for occupant detection system after passenger’s seat installation. <Ref. to OD(diag)-19, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

- 1) Ensure there are no foreign particles on side airbag module.
- 2) Install the side airbag module (A) to backrest frame assembly.

**Tightening torque:**

**5.9 N·m (0.60 kgf·m, 4.4 ft·lb)**

- 3) Install the side airbag harness to backrest frame assembly.

**NOTE:**

Secure the harness to its original position of seat.

4) Install the backrest cover. <Ref. to SE-12, ASSEMBLY, Front Seat.>

5) Install the side airbag harness to slide rail IN (A), and then secure the connector to the bracket on the back side of seat cushion assembly.

6) Recline the seat or slide it backward and forward. Check there is no contact between seat backrest assembly, cushion cover assembly and side airbag harness.

## C: INSPECTION

**CAUTION:**

**Before working on the airbag module, refer to the “CAUTION” in General Description. <Ref. to AB-3, CAUTION, General Description.>**

Perform the inspection of following items, and replace the damaged parts with new ones. <Ref. to AB-11, SIDE AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

- 1) With side clash (when side airbag is deployed)
  - Side airbag module assembly
  - Backrest pad assembly
  - Backrest frame assembly
  - Backrest cover assembly
- 2) Other replacement parts, which found to be damaged by visual check
  - Headrest assembly
  - Bushing
  - Slide rail OUT
  - Slide rail IN
  - Seat hinge cover
  - Seat lifter lever
  - Reclining lever
  - Side airbag harness and connector (body side)
- 3) Without side clash (when side airbag is not deployed)
  - Check the seat and airbag module visually, and then replace them with new ones if damaged or cracked.
  - Specially inspect the damage of airbag module body, installing bracket, harness connector.
- 4) Without side clash (dirt and damage of cover)
  - Replace the corresponding part with a new one.

## 7. Airbag Control Module

### A: REMOVAL

**CAUTION:**

- Do not disassemble the airbag control module.
- If the airbag control module is deformed or if water damage is suspected, replace the airbag control module with a new one.
- Do not drop the airbag control module.
- After removal, keep the airbag control module on a dry, clean surface away from moisture, heat, and dust.

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery, and wait for at least 20 seconds before starting work.
- 3) Remove the console cover. <Ref. to EI-46, REMOVAL, Console Box.>
- 4) Remove the center console panel. <Ref. to EI-47, REMOVAL, Instrument Panel Assembly.>
- 5) Disconnect the connector from airbag control module.
- 6) Remove the four bolts and remove airbag control module.

### B: INSTALLATION

**CAUTION:**

**Use new bolts (for airbag control module only) during installation.**

Install in the reverse order of removal.

**Tightening torque:**

*Refer to "COMPONENT" in "General Description" <Ref. to AB-2, SRS AIRBAG, COMPONENT, General Description.>*

### C: INSPECTION

Check for the following, and replace damaged parts with new parts.

- Control module, connector, and mounting bracket are damaged.
- Airbag is deployed.
- Side airbag is deployed.

## 8. Side Airbag Sensor

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery, and wait for at least 20 seconds before starting work.
- 3) Remove the outer seat belt (FRONT). <Ref. to SB-10, INNER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>
- 4) Detach the side airbag sensor, and then disconnect the airbag connector.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

*Refer to “COMPONENT” in “General Description” <Ref. to AB-2, SRS AIRBAG, COMPONENT, General Description.>*

### C: INSPECTION

Check for the following, and replace damaged parts with new parts.

- Mounting bracket of side airbag sensor or connector is damaged.
- Side airbag is deployed.

## 9. Roll Connector

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery, and wait for at least 20 seconds before starting work.
- 3) Remove the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.>
- 4) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
- 5) Remove the steering column cover.
- 6) Remove the screws, and then remove the roll connector.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Before installing the steering wheel, be sure the direction of roll connector is adjusted with steering. <Ref. to AB-20, ADJUSTMENT, Roll Connector.>

### C: INSPECTION

Check for the following, and replace damaged parts with new parts.

- Combination switch and roll connector is cracked or deformed.

### D: ADJUSTMENT

- 1) Check that the front wheels are positioned in straight ahead direction.
- 2) Turn the roll connector pin (A) clockwise until it stops.
- 3) Turn the roll connector pin (A) counterclockwise approx. 3.25 turns until “▲” marks are aligned.

## 10. Front Sub Sensor

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery, and wait for at least 20 seconds before starting work.
- 3) Remove the front bumper. <Ref. to EI-24, REMOVAL, Front Bumper.>
- 4) Remove the bolt, and then detach the front sub sensor.

- 5) Disconnect the connector from front sub sensor.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

*Refer to “COMPONENT” in “General Description” <Ref. to AB-2, SRS AIRBAG, COMPONENT, General Description.>*

### C: INSPECTION

Check for the following, and replace damaged parts with new parts.

- Front sub sensor and connector are damaged.
- Airbag is deployed.

# General Description

## AIRBAG SYSTEM (DIAGNOSTICS)

### 3. General Description

#### A: CAUTION

- When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for more than 20 seconds before starting work.
- The airbag system is fitted with a backup power source. If the airbag system is serviced within 20 seconds after the ground cable is disconnected, it may inflate.
- If sensors, airbag module, airbag control module, pretensioner, and harness are deformed or damaged, replace them with new genuine parts.

- Do not use the airbag system and pretensioners on other vehicles. When replacing parts, be sure to replace them with new parts.
- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously.

- When checking, use a test harness. Do not directly apply the tester probe to any connector terminal of the airbag.

(1) Test harness

- Do not drop the airbag modulator parts, subject them to high temperature over 93°C (199°F), or let water, oil, or grease get on them; otherwise, the internal parts may be damaged and may be reliability greatly lowered.

# General Description

## AIRBAG SYSTEM (DIAGNOSTICS)

- If any damage, opening, or rust is found on the airbag system wire harness, do not attempt to repair using soldering equipment. Be sure to replace the faulty harness with a new genuine part.

- Install the wire harness securely with the specified clips to avoid interference or tangled up with other parts.

- Do not allow water or oil to come in contact with the connector terminals. Do not touch the connector terminals.

- Either of the airbag modules for driver, passenger or side, or pretensioner must not be disassembled.

- The airbag module cannot be used again if once inflated.

- After removal, keep the airbag module with the pad facing upward on a dry, clean, and flat surface away from heat and light sources, and moisture and dust.

- Do not check continuity of either of the airbag modules for driver, passenger or side, or pretensioner.

## General Description

### AIRBAG SYSTEM (DIAGNOSTICS)

---

- The removed front seat with the airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

(1) More than 200 mm (8 in)

- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender, and front side frame, remove the front sub sensors and wire harness of the airbag system.
- When painting or performing sheet metal work on the side of the vehicle, including the side sill, center pillar, and front and rear doors, remove the side airbag sensors and wire harness of the airbag system.

- Do not discard undeployed airbag modules. They could easily cause a serious accident if accidentally deployed.

# General Description

## AIRBAG SYSTEM (DIAGNOSTICS)

- When storing a removed airbag module, do not place any objects on it or pile airbag modules on top of each other. If the airbag inflates for some reason when it is placed with its pad side facing downward or under any object, a serious accident may result.

(2)

AB-00130

(1) Driver side airbag module

(2) Passenger side airbag module

# General Description

## AIRBAG SYSTEM (DIAGNOSTICS)

### B: INSPECTION

Before diagnosing, check the following items that might be related to the engine problem:

#### 1. BATTERY

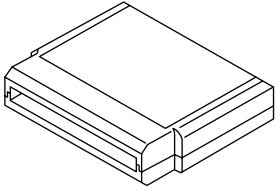

Measure the battery voltage and specific gravity of electrolyte.

**Standard voltage: 12 V**

**Specific gravity: Above 1.260**

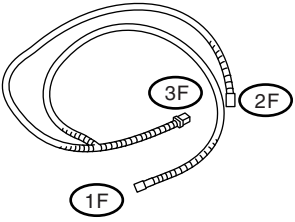

### C: PREPARATION TOOL

#### 1. SPECIAL TOOL

| ILLUSTRATION  | TOOL NUMBER                        | DESCRIPTION                  | REMARKS                                 |

### 5. Airbag Control Module I/O Signal

#### A: WIRING DIAGRAM

Refer to wiring diagrams in WI section. <Ref. to WI-96, WIRING DIAGRAM, Airbag System.>

## 6. Airbag Connector

### A: PROCEDURE

#### 1. BUCKLE SWITCH AND OCCUPANT DETECTION CONTROL MODULE

##### 1) How to disconnect

- (1) Move the slide lock (A) in the direction of the arrow.
- (2) Disconnect the connector with the slide lock (A) moved.

#### CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

##### 2) How to connect

Holding the connector (A), and push it in carefully until a connecting sound is heard.

#### CAUTION:

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

#### 2. DRIVER'S AIRBAG MODULE AND PRE-TENSIONER

##### 1) How to disconnect

- (1) Using a flat tip screwdriver, pry the push lock upward to unlock.

- (2) Pull the connector to disconnect from driver's side airbag module assembly or retractor assembly.

##### 2) How to connect

Connect the connector in reverse order of disconnecting. At this time, be sure to insert the push lock in until connecting sound is heard.

#### CAUTION:

- Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
- Be sure to push the push lock in securely.

#### NOTE:

Connector can not be connected when the push lock is in lock position. To connect the connector, set the push lock to unlock position.

# Airbag Connector

## AIRBAG SYSTEM (DIAGNOSTICS)

### 3. DRIVER'S AIRBAG (BETWEEN AIRBAG MAIN HARNESS AND ROLL CONNECTOR) AND PASSENGER'S AIRBAG

#### 1) How to disconnect

- (1) Press in the slide lock (A) in the direction of arrow.

- (2) With the slide lock (A) pressed in, disconnect the connector.

**CAUTION:**  
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

#### 2) How to connect

Holding the connector, push it in carefully until a connecting sound is heard.

**CAUTION:**  
Be sure to insert the connector in until it locks. Then pull it gently to make sure that it is locked.

### 4. SIDE AIRBAG

#### 1) How to disconnect

- (1) Push the lock arm (A).
- (2) With the lock arm (A) pushed in, move the slide lock (B) in the direction of the arrow.

- (3) With the slide lock moved, release the lock arm (back to its original position), and disconnect the connector.

**CAUTION:**  
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

#### 2) How to connect

Holding the connector, push it in carefully until a connecting sound is heard.

## 5. FRONT SUB-SENSOR, SIDE AIRBAG SENSOR, SEAT POSITION SENSOR LH

1) How to disconnect

Holding outer part (A), pull it in the direction of the arrow.

### CAUTION:

**When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.**

2) How to connect

Holding the connector, push it in carefully until a connecting sound is heard.

### CAUTION:

- Outer (A) moves back, and so do not put your hand on the outer part.
- Be sure to insert the connector in until it locks. Then pull it gently to make sure that it is locked.

# Subaru Select Monitor

## AIRBAG SYSTEM (DIAGNOSTICS)

### 7. Subaru Select Monitor

#### A: OPERATION

##### 1. READ DIAGNOSTIC TROUBLE CODE (DTC)

When malfunction of airbag system occurs, the DTC stored in airbag control module will be read out.

1) Prepare the Subaru Select Monitor kit. <Ref. to AB(diag)-8, SPECIAL TOOL, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor. <Ref. to AB(diag)-8, SPECIAL TOOL, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

#### CAUTION:

**Do not connect the scan tools except for Subaru Select Monitor.**

5) Turn the ignition switch to ON (engine OFF), and Subaru Select Monitor power switch to ON.

(1) Power switch

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

7) On the «System Selection Menu» display screen, select the {Airbag System} and press the [YES] key.

8) Press the [YES] key after the {AIRBAG SYSTEM} is displayed.

9) On the «Airbag System» display screen, select the {DTC Display} and press the [YES] key.

#### NOTE:

- For details concerning operation procedure, refer to the "SUBARU SELECT MONITOR OPERATION MANUAL".

- For details concerning DTCs, refer to the "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-43, List of Diagnostic Trouble Code (DTC).>

## 2. STATUS DATA DISPLAY

Check the operating condition of each sensor in the event of malfunction in seat belt buckle switch and seat position sensor, or when the seat belt buckle switch and seat position sensor has been replaced.

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Airbag System} and press the [YES] key.
- 3) On the «Airbag System» display screen, select the {Status Data} and press the [YES] key.

The support data is shown in the following table.

| Item                             | Display   |
|----------------------------------|---|
| Seat position sensor LH          | Front <sup>*1</sup> /Rear <sup>*2</sup> /Other <sup>*3</sup> /Unknown <sup>*3</sup> /___ <sup>*5</sup>      |
| Seat position sensor RH          | ___ <sup>*5</sup>   |
| Seat belt buckle switch LH       | Belted <sup>*6</sup> /Unbelted <sup>*7</sup> /Other <sup>*8</sup> /Unknown <sup>*4</sup> /___ <sup>*9</sup> |
| Seat belt buckle switch RH       | Belted <sup>*6</sup> /Unbelted <sup>*7</sup> /Other <sup>*8</sup> /Unknown <sup>*4</sup> /___ <sup>*9</sup> |
| Passenger's airbag firing status | ON <sup>*10</sup> /OFF <sup>*11</sup> /Unknown <sup>*4</sup>  |

- \*1: The seat position is forward.
- \*2: The seat position is rearward.
- \*3: It is displayed when data other than forward and backward positions of the seat, such as malfunction etc., is input.
- \*4: It is displayed at the initial status.
- \*5: Seat position sensor is not available.
- \*6: Seat belt is fastened.
- \*7: Seat belt is unfastened.
- \*8: It is displayed when data other than fastened or unfastened belts, such as malfunction etc., is input.
- \*9: Seat belt buckle switch is not available.
- \*10: Passenger's airbag is active.
- \*11: Passenger's airbag is not active.

**NOTE:**

For details concerning operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

## 3. CLEAR MEMORY MODE

Clear the DTC stored in the airbag control module after repairing malfunction in airbag system. If the memory is not cleared after repairing malfunction, repaired DTC will be read out again when a new malfunction occurs.)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Airbag System} and press the [YES] key.
- 3) On the «Airbag System» display screen, select the {Clear Memory} and press the [YES] key.
- 4) Press the [YES] key after the "Clear memory?" has been displayed.
- 5) When the "Done" is shown on the display screen, turn the Subaru Select Monitor switch to OFF.

**NOTE:**

For details concerning operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

# Subaru Select Monitor

AIRBAG SYSTEM (DIAGNOSTICS)

## B: INSPECTION

### 1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

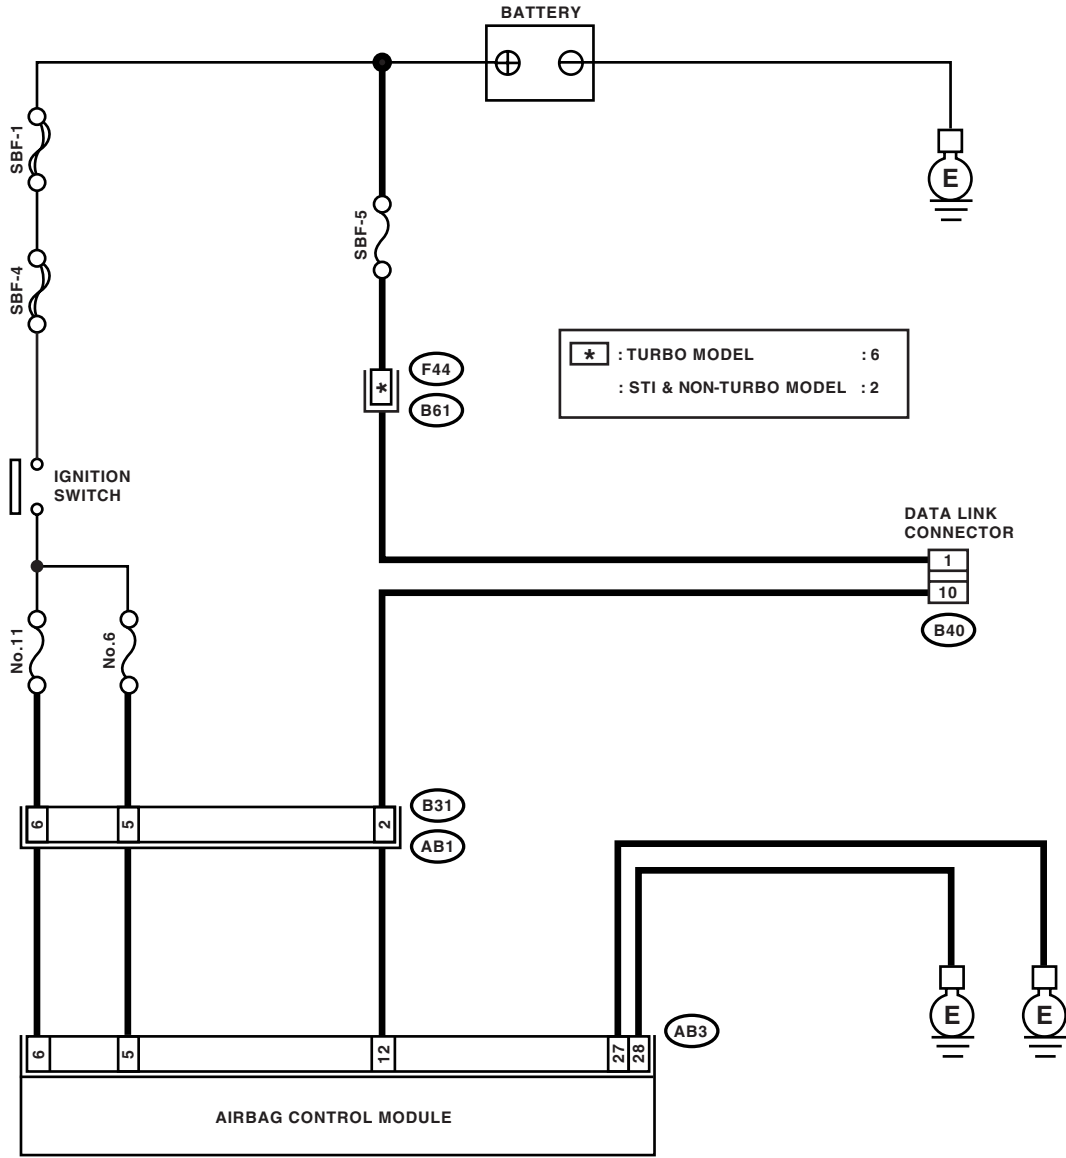

**DETECTING CONDITION:**

Defective harness connector

**TROUBLE SYMPTOM:**

Communication is impossible between airbag control module and Subaru Select Monitor.

**WIRING DIAGRAM:**

# Subaru Select Monitor

## AIRBAG SYSTEM (DIAGNOSTICS)

| Step | Check   | Yes   | No  |  |
|------|---|---|---|--|
| 1    | <b>CHECK IGNITION SWITCH.</b>   | Does the ignition switch turn to ON?                      | Go to step 2.   | Turn the ignition switch to ON, and select airbag mode using Subaru Select Monitor.  |
| 2    | <b>CHECK BATTERY.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the battery voltage.   | Is the voltage more than 11 V?                            | Go to step 3.   | Charge or replace the battery.   |
| 3    | <b>CHECK BATTERY TERMINAL.</b>  | Is there poor contact at battery terminal?                | Repair or tighten the battery terminal.                                       | Go to step 4.  |
| 4    | <b>CHECK SUBARU SELECT MONITOR COMMUNICATION.</b><br>1) Turn the ignition switch to ON.<br>2) Using Subaru Select Monitor, check whether communication to other system can be executed normally.  | Is the name of system displayed on Subaru Select Monitor? | Go to step 8.   | Go to step 5.  |
| 5    | <b>CHECK SUBARU SELECT MONITOR COMMUNICATION.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the airbag control module connector.<br>3) Turn the ignition switch to ON.<br>4) Check whether communication to other systems can be executed normally.   | Is the name of system displayed on Subaru Select Monitor? | Replace the airbag control module.<br><Ref. to AB-18, Airbag Control Module.> | Go to step 6.  |
| 6    | <b>CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the airbag control module, ABSCM&H/U, ECM and TCM.<br>3) Measure the resistance between data link connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B40) No. 10 — Chassis ground:</b> | Is the resistance more than 1 MΩ?                         | Go to step 7.   | Repair the harness and connector between each control module and data link connector. (Airbag harness must be replaced with harness. Do not attempt to repair it.) |
| 7    | <b>CHECK OUTPUT SIGNAL FOR AIRBAG CONTROL MODULE.</b><br>1) Turn the ignition switch to ON in step 7 condition.<br>2) Measure the voltage between data link connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B40) No. 10 (+) — Chassis ground (-):</b>   | Is the voltage less than 1 V?                             | Go to step 8.   | Repair the harness and connector between each control module and data link connector. (Airbag harness must be replaced with harness. Do not attempt to repair it.) |

# Subaru Select Monitor

## AIRBAG SYSTEM (DIAGNOSTICS)

| Step   | Check  | Yes   | No   |
|--|--|---|--|
| <b>8 CHECK HARNESS BETWEEN AIRBAG CONTROL MODULE AND DATA LINK CONNECTOR.</b><br>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait more than 20 seconds.<br>2) Disconnect the connector (AB3) from the airbag control module.<br>3) Connect the connector (1R) in test harness R to connector (AB3).<br>4) Measure the resistance between connector (4R) in test harness R and the data link connector.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(4R) No. 18 — (B40) No. 10:</b></i> | Is the resistance less than 10 $\Omega$ ?  | Go to step 9.   | Repair the harness between airbag control module and data link connector. Or, replace the airbag main harness with body harness. |
| <b>9 CHECK POWER SUPPLY CIRCUIT.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between connector (2R) in test harness R and the chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(2R) No. 1 (+) — Chassis ground (-):</b></i><br><i><b>(2R) No. 6 (+) — Chassis ground (-):</b></i>  | Is the voltage more than 10 V?   | Go to step 10.  | Repair the harness between airbag control module and battery. Or, replace the airbag main harness with body harness.             |
| <b>10 CHECK BETWEEN AIRBAG CONTROL MODULE AND CHASSIS GROUND.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between connector (2R) in test harness R and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(2R) No. 10 — Chassis ground:</b></i><br><i><b>(2R) No. 11 — Chassis ground:</b></i>   | Is the resistance less than 10 $\Omega$ ?  | Go to step 11.  | Repair the harness between airbag control module and chassis ground. Or, replace the airbag main harness with body harness.      |
| <b>11 CHECK POOR CONTACT IN CONNECTOR.</b>   | Is there poor contact in control module power supply, ground line and data link connector? | Repair the connector. (Airbag system connector must be replaced with harness. Do not attempt to repair it.) | Replace the airbag control module only. <Ref. to AB-18, REMOVAL, Airbag Control Module.>   |

## 2. WITHOUT DTC

### DETECTING CONDITION:

- Defective combination meter
- Open circuit of harness

### TROUBLE SYMPTOM:

- Airbag warning light does not go off.
- “NO TROUBLE CODE” displayed on the Subaru Select Monitor.

For detailed operation procedure, refer to «Airbag Warning Light Failure». <Ref. to AB(diag)-35, Airbag Warning Light Failure.>

### NOTE:

- For detailed operation procedure, refer to «Airbag Warning Light Failure». <Ref. to AB(diag)-35, Airbag Warning Light Failure.>
- When the airbag warning light is OFF and “NO TROUBLE CODE” is displayed on Subaru Select Monitor, the system is in normal condition.

## 8. Airbag Warning Light Illumination Pattern

### A: INSPECTION

Keep the ignition switch to ON, and confirm that the airbag warning light remains off after being turned on for approx. 6 seconds.

- (1) Airbag warning light
- (2) Approx. 6 seconds
- (3) Ignition switch ON

## Read Diagnostic Trouble Code (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

---

### 9. Read Diagnostic Trouble Code (DTC)

#### A: OPERATION

For details about reading of DTCs, refer to “Subaru Select Monitor”. <Ref. to AB(diag)-26, Subaru Select Monitor.>

## 10. Inspection Mode

### A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

### 11. Clear Memory Mode

#### A: OPERATION

Clear the memory in the following steps after the malfunction is repaired.

Detail procedure for clearing DTCs, refer to “Subaru Select Monitor”. <Ref. to AB(diag)-26, Subaru Select Monitor.>

## 12. Airbag Warning Light Failure

### A: AIRBAG WARNING LIGHT REMAINS ON

#### DIAGNOSIS:

- Airbag warning light unit is faulty.
- Airbag control module to airbag warning light circuit is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- (AB1) and (B31) are not connected properly.
- (AB3) is not connected properly to the airbag control module.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver and passenger seats for safety reasons.

|   | Step   | Check  | Yes  | No                       |
|---|--|--|--|--------------------------|
| 7 | <b>CHECK AIRBAG MAIN HARNESS.</b><br>Check the airbag main harness for faults. | Is there any fault in the airbag main harness? | Replace the airbag main harness with body harness. | Repair the body harness. |

# Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

## B: AIRBAG WARNING LIGHT REMAINS OFF

### DETECTING CONDITION:

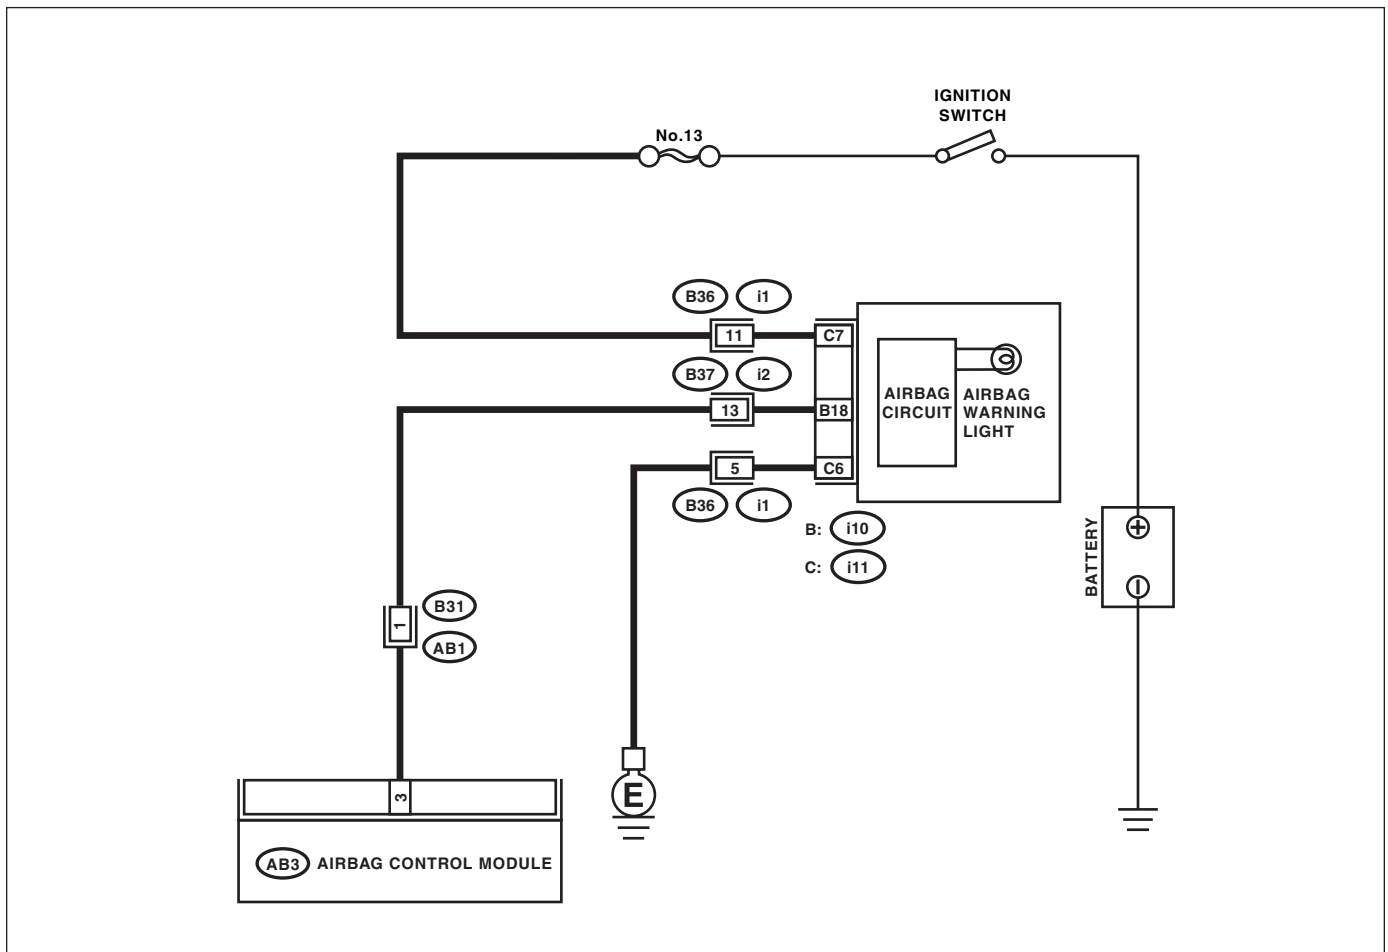

- Fuse No. 13 (in fuse box) is blown.
- Body harness circuit is open.
- Airbag warning light is faulty.
- Airbag main harness is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver and passenger seats for safety reasons.

## 14. Diagnostic Chart with Trouble Code

### A: DTC 11 DRIVER'S AIRBAG FAILURE

#### DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Driver) circuit is open, shorted or shorted to ground.
- Roll connector circuit is open, shorted or shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

#### CAUTION:

- **Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.**
- **Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.**
- **When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors for safety reasons.**

#### NOTE:

Prior to diagnosis, prepare two airbag resistors (98299PA040).

AIRBAG SYSTEM (DIAGNOSTICS)

## B: DTC 12 PASSENGER'S AIRBAG FAILURE

### DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Passenger) circuit is open, shorted or shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver and passenger seats for safety reasons.

## AIRBAG SYSTEM (DIAGNOSTICS)

### C: DTC 15 DRIVER'S AIRBAG FAILURE

#### DTC DETECTING CONDITION:

- Airbag main harness circuit (Driver) is shorted to the power supply.
- Airbag module harness (Driver) is shorted to the power supply.
- Roll connector is shorted to the power supply.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors for safety reasons.

#### NOTE:

Prior to diagnosis, prepare two airbag resistors (98299PA040).

| <b>4 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>   | Is any other DTC displayed?   | Using the List of Diagnostic Trouble Code (DTC), check the DTC.<br><Ref. to AB(diag)-43, List of Diagnostic Trouble Code (DTC).> | Finish the diagnosis.  |

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

### H: DTC 24 IG1 OPEN

#### DTC DETECTING CONDITION:

- Airbag control module is faulty.
- Airbag main harness circuit is open.
- Fuse No. 11 (in joint box) is blown.
- Body harness circuit is open.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module passenger's airbag module connectors for safety reasons.

## J: DTC 26 PASSENGER'S AIRBAG INDICATOR FAILURE

### DTC DETECTING CONDITION:

- Passenger's airbag indicator is faulty.
- Airbag control module is faulty.
- Airbag main harness circuit is open.
- Open circuit of body harness.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag harness, disconnect each airbag module connector and seat belt pretensioner for safety reasons.

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

| Step  | Check   | Yes   | No  |
|---|---|---|---|
| <b>1</b><br><b>CHECK POOR CONTACT.</b><br>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait more than 20 seconds.<br>2) Check the connector between the airbag control module and clock for firm contact.   | Is there poor contact in each connector?          | Replace the airbag harness connector.   | Go to step 2.   |
| <b>2</b><br><b>CHECK AIRBAG MAIN HARNESS.</b><br>1) Disconnect the connector (AB3) from the airbag control module.<br>2) Connect the battery ground cable, and turn the ignition switch to ON.<br>NOTE:<br>If normal, neither of ON-OFF illuminates.  | Does the passenger's airbag indicator illuminate? | Go to step 3.   | Go to step 4.   |
| <b>3</b><br><b>CHECK AIRBAG MAIN HARNESS.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the clock, and disconnect the connector (i59).<br>3) Connect the connector (1R) in test harness R to connector (AB3).<br>4) Measure the resistance between connectors (2R) and (4R) in test harness R and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(2R) No. 14 — (4R) No. 17:</b><br><b>(2R) No. 14 — Chassis ground:</b><br><b>(4R) No. 17 — Chassis ground:</b> | Is the resistance more than 1 M $\Omega$ ?        | Replace the clock.  | Repair the body harness. Or, replace the airbag main harness with body harness. |
| <b>4</b><br><b>CHECK AIRBAG HARNESS.</b><br>1) Connect the connectors (5R) and (6R) in test harness R.<br>2) Connect the battery ground cable and turn the ignition switch to ON.<br>NOTE:<br>If normal, neither of ON-OFF illuminates.   | Does the passenger's airbag indicator illuminate? | Replace the airbag control module.<br><Ref. to AB-18, Airbag Control Module.> | Go to step 5.   |
| <b>5</b><br><b>CHECK AIRBAG HARNESS.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the connector (1R) in test harness R to connector (AB3).<br>3) Measure the resistance between connectors (2R) and (4R) in test harness R and connector (i59).<br><b>Connector &amp; terminal</b><br><b>(2R) No. 14 — (i59) No. 6:</b><br><b>(4R) No. 17 — (i59) No. 4:</b>  | Is the resistance less than 10 $\Omega$ ?         | Go to step 6.   | Repair the body harness. Or, replace the airbag main harness with body harness. |
| <b>6</b><br><b>CHECK AIRBAG HARNESS.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between connector (i59) and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(i59) No. 2 — Chassis ground:</b>   | Is the voltage more than 10 V?                    | Replace the clock.  | Repair the power supply line to clock.  |

# Diagnostic Chart with Trouble Code

## K: DTC 27 ODS COMMUNICATION ERROR

### DTC DETECTING CONDITION:

- Communication error with occupant detection control module.
- Airbag rear harness circuit is open, shorted or shorted to ground and power supply.
- Occupant detection harness (seat harness) is faulty.
- Occupant detection system is faulty.
- Airbag control module is faulty.

### WIRING DIAGRAM:

AB-01376

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

| Step  | Check                                     | Yes  | No   |
|---|---|--|--|
| <b>1</b><br><b>CHECK POOR CONTACT OF CONNECTORS.</b><br>Check the connector between airbag control module and occupant detection control module for poor contact.   | Is there poor contact?                    | Reconnect the connector. If the fault is not corrected, replace the side airbag harness RH or occupant detection harness (seat harness). | Go to step 2.  |
| <b>2</b><br><b>CHECK AIRBAG HARNESS.</b><br>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait more than 20 seconds.<br>2) Disconnect the connector (AB8) from the airbag control module.<br>3) Disconnect the connector (AB 62) of underside of passenger's seat.<br>4) Connect the connector (1U) in test harness U to connector (AB8).<br>5) Connect the connector (1AB) in test harness AB to connector (AB62).<br>6) Measure the resistance between connector (3U) in test harness U and the connector (2AB) in test harness AB.<br><b>Connector &amp; terminal</b><br><b>(3U) No. 2 — (2AB) No. 1:</b><br><b>(3U) No. 4 — (2AB) No. 2:</b> | Is the resistance less than 10 $\Omega$ ? | Go to step 3.  | Replace the side airbag harness RH with body harness.  |
| <b>3</b><br><b>CHECK AIRBAG HARNESS.</b><br>Measure the resistance between connector (3U) in test harness U and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(3U) No. 2 — Chassis ground:</b><br><b>(3U) No. 2 — (3U) No. 4:</b>  | Is the resistance less than 10 $\Omega$ ? | Go to step 4.  | Replace the side airbag harness RH with body harness.  |
| <b>4</b><br><b>CHECK AIRBAG HARNESS.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between connector (2AB) in test harness AB and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(2AB) No. 3 — Chassis ground:</b>  | Is the voltage more than 9 V?             | Go to step 5.  | Check the battery voltage and fuse. Replace the side airbag harness RH with body harness if no faulty.   |
| <b>5</b><br><b>CHECK AIRBAG HARNESS.</b><br>Measure the voltage between connector (2AB) in test harness AB and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(2AB) No. 1 — Chassis ground:</b>   | Is the voltage more than 9 V?             | Replace the side airbag harness RH with body harness.  | Replace the occupant detection harness (seat harness). If the fault is not corrected, replace the occupant detection system (seat cushion and frame assembly) and airbag control module in this order. |

## AIRBAG SYSTEM (DIAGNOSTICS)

### P: DTC 31 FRONT SUB SENSOR RH FAILURE

#### DTC DETECTING CONDITION:

- Airbag main harness is open, shorted or shorted to the power supply.
- Front sub sensor (RH) is faulty.
- Airbag control module is faulty.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors for safety reasons.

## AIRBAG SYSTEM (DIAGNOSTICS)

### Q: DTC 32 FRONT SUB SENSOR LH FAILURE

#### DTC DETECTING CONDITION:

- Airbag main harness is open, shorted or shorted to the power supply.
- Front sub-sensor (LH) is faulty.
- Airbag control module is faulty.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver and passenger seats for safety reasons.

| Step   | Check   | Yes   | No   |
|--|---|---|--|
| <b>1 CHECK POOR CONTACT OF CONNECTORS.</b><br>Check the connector between airbag control module, and side airbag module LH and side airbag sensor LH for poor contact.   | Is there poor contact?  | Replace the side airbag harness with body harness.  | Go to step 2.                                      |
| <b>2 CHECK SIDE AIRBAG MODULE.</b><br>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait more than 20 seconds.<br>2) Disconnect the connector (AB9) from side airbag module (LH), and connect the connector (1F) in test harness F to connector (AB9).<br>3) Connect the airbag resistor to connector (3F) in test harness F.<br>4) Connect the battery ground cable, and turn the ignition switch to ON.   | Does the airbag warning light illuminate for 6 seconds then go off? | Replace the side airbag module (LH). <Ref. to AB-16, REMOVAL, Side Airbag Module.>  | Go to step 3.                                      |
| <b>3 CHECK SIDE AIRBAG HARNESS (LH).</b><br>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait more than 20 seconds.<br>2) Disconnect the connector (AB19) from seat belt pretensioner (LH).<br>3) Disconnect the airbag resistor from the test harness.<br>4) Disconnect the connector (AB7) from the airbag control module.<br>5) Connect the connector (1R) in test harness R to the connector (AB7).<br>6) Measure the resistance between connector (3R) in test harness R and connector (3F) in test harness F.<br><b>Connector &amp; terminal</b><br><b>(3R) No. 12 — (3F) No. 3:</b><br><b>(3R) No. 10 — (3F) No. 4:</b> | Is the resistance less than 10 Ω?                                   | Go to step 4.   | Replace the side airbag harness with body harness. |
| <b>4 CHECK SIDE AIRBAG HARNESS (LH).</b><br>Measure the resistance between the connector (3R) terminals in test harness R.<br><b>Connector &amp; terminal</b><br><b>(3R) No. 12 — (3R) No. 10:</b>   | Is the resistance more than 1 MΩ?                                   | Go to step 5.   | Replace the side airbag harness with body harness. |
| <b>5 CHECK SIDE AIRBAG HARNESS (LH).</b><br>Measure the resistance between connector (3R) in test harness R and the chassis ground.<br><b>Connector &amp; terminal</b><br><b>(3R) No. 10 — Chassis ground:</b><br><b>(3R) No. 12 — Chassis ground:</b>   | Is the resistance more than 1 MΩ?                                   | Go to step 6.   | Replace the side airbag harness with body harness. |
| <b>6 CHECK AIRBAG CONTROL MODULE.</b><br>1) Connect all connectors.<br>2) Erase the memory.<br>3) Perform the inspection mode.<br>4) Read out the DTC.   | Is the same DTC displayed?  | Replace the airbag control module. <Ref. to AB-18, Airbag Control Module.>  | Go to step 7.                                      |
| <b>7 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>   | Is any other DTC displayed?   | Using the List of Diagnostic Trouble Code (DTC), check the DTC. <Ref. to AB(diag)-43, List of Diagnostic Trouble Code (DTC).> | Finish the diagnosis.                              |

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## Y: DTC 45 SIDE AIRBAG RH FAILURE

### DTC DETECTING CONDITION:

- Side airbag harness is shorted to power supply.
- Side airbag module (RH) is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors for safety reasons.
- When inspecting the side airbag harness, disconnect the side airbag module connector and seat belt pretensioner connector for the safety reasons.

### **AC:DTC 53 SIDE AIRBAG RH FAILURE**

#### **DTC DETECTING CONDITION:**

Side airbag sensor (RH) is faulty.

When Code 53 is displayed, the circuit within the side airbag sensor (RH) is faulty. Replace the side airbag sensor (RH).

<Ref. to AB-19, Side Airbag Sensor.>

### **AD:DTC 54 SIDE AIRBAG SENSOR LH FAILURE**

#### **DTC DETECTING CONDITION:**

Side airbag sensor (LH) is faulty.

When Code 54 is displayed, the circuit within the side airbag sensor (LH) is faulty. Replace the side airbag sensor (LH).

<Ref. to AB-19, Side Airbag Sensor.>

### **AE:DTC 55 SIDE CURTAIN AIRBAG FIRING OUTPUT**

This DTC is displayed when the side airbag is deployed.

When this DTC is displayed, the memory cannot be erased. Replace the following parts.

- Airbag control module <Ref. to AB-18, Airbag Control Module.>
- Front seat with side airbag module (Operating side) <Ref. to SE-7, Front Seat.>
- Side airbag sensor (Operating side) <Ref. to AB-19, Side Airbag Sensor.>

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## AF:DTC 61 BELT PRETENSIONER RH FAILURE

### DTC DETECTING CONDITION:

- Seat belt pretensioner (RH) circuit is open, shorted or shorted to ground.
- Airbag control module is faulty.
- Pretensioner is faulty.
- Pretensioner harness is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the side airbag harness, disconnect the side airbag module connector and seat belt pretensioner connector for the safety reasons.

AIRBAG SYSTEM (DIAGNOSTICS)

## AH:DTC 65 BELT PRETENSIONER RH FAILURE

### DTC DETECTING CONDITION:

- Seat belt pretensioner (RH) circuit is shorted to the power supply.
- Pretensioner is faulty.
- Pretensioner harness is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the side airbag harness, disconnect the side airbag module connector and seat belt pretensioner connector for the safety reasons.

AIRBAG SYSTEM (DIAGNOSTICS)

## AJ:DTC 71 DRIVER'S AIRBAG FAILURE

### DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Driver) circuit is open, shorted or shorted to ground.
- Roll connector circuit is open, shorted or shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, seat belt pretensioner, roll connector, control module and the sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors, and seat belt pretensioner for safety reasons.

### NOTE:

Prior to work, prepare two airbag resistors (98299PA040).

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

### AM:DTC 76 PASSENGER'S AIRBAG FAILURE

#### DTC DETECTING CONDITION:

- Airbag main harness (Passenger) is shorted to the power supply.
- Airbag module harness (Passenger) is shorted to the power supply.
- Airbag control module is faulty.
- Passenger's airbag module is faulty.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait more than 20 seconds before starting to work.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module for safety reasons.

#### WIRING DIAGRAM:

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

| Step  | Check   | Yes   | No   |
|---|---|---|--|
| <b>1 CHECK POOR CONTACT OF CONNECTORS.</b><br>Check the connector between airbag control module and passenger's airbag module for poor contact.   | Is there poor contact?  | Replace the airbag main harness with body harness.  | Go to step 2.                                      |
| <b>2 CHECK PASSENGER'S AIRBAG MODULE.</b><br>1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for more than 20 seconds before starting work.<br>2) Remove the glove box.<br>3) Disconnect the connector (AB4) from passenger's airbag module.<br>4) Connect the connector (1P) in test harness P to connector (AB4).<br>5) Connect the two airbag resistors to connectors (2P) and (3P) in test harness P.<br>6) Connect the battery ground cable, and turn the ignition switch to ON.  | Does the airbag warning light illuminate for 6 seconds then go off? | Replace the passenger's airbag module. <Ref. to AB-15, Passenger's Airbag Module.>  | Go to step 3.                                      |
| <b>3 CHECK AIRBAG MAIN HARNESS.</b><br>1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for more than 20 seconds before starting work.<br>2) Disconnect the two airbag resistors from connectors (2P) and (3P) in test harness P.<br>3) Remove the lower cover and disconnect the connector (AB21) from (AB26).<br>4) Disconnect the connector (AB3) from the airbag control module, and connect the connector (1R) in test harness R.<br>5) Connect the battery ground cable, and turn the ignition switch to ON.<br>6) Measure the voltage between connector (2R) in test harness R and chassis ground.<br><b>Connector &amp; terminal</b><br><i>(2R) No. 9 (+) — Chassis ground (-):</i><br><i>(2R) No. 13 (+) — Chassis ground (-):</i><br><i>(2R) No. 5 (+) — Chassis ground (-):</i><br><i>(2R) No. 3 (+) — Chassis ground (-):</i> | Is the voltage less than 1 V?                                       | Go to step 4.   | Replace the airbag main harness with body harness. |
| <b>4 CHECK AIRBAG CONTROL MODULE.</b><br>1) Connect all connectors.<br>2) Erase the memory.<br>3) Perform the inspection mode.<br>4) Read out the DTC.  | Is the same DTC displayed?  | Replace the airbag control module. <Ref. to AB-18, Airbag Control Module.>  | Go to step 5.                                      |
| <b>5 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>  | Is any other DTC displayed?   | Using the List of Diagnostic Trouble Code (DTC), check the DTC. <Ref. to AB(diag)-43, List of Diagnostic Trouble Code (DTC).> | Finish the diagnosis.                              |

## General Description

### OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

### 3. General Description

#### A: CAUTION

1) If the seat cushion cover has been removed or replaced, be sure to perform the system calibration for occupant detection system after installing seat to the vehicle. <Ref. to OD(diag)-19, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

Failure to do so may cause improper operation of occupant detection system.

2) Never remove the occupant detection control module of occupant detection system (passenger's side only) or pressure sensor from seat cushion frame since the control module and occupant detection sensor are fixed to the seat cushion frame.

3) Do not replace the seat cushion pad as a single unit. Be sure to replace the seat cushion pad and frame assembly together. Since the seat cushion pad and cushion frame have been adjusted at factory, installing them together with parts for other vehicle or ones of other set may cause improper operation of occupant detection system.

4) If the seat cushion cover has been removed, be sure to replace wire on the seat cushion cover side with a new one. (Passenger's seat)

5) Never connect the battery in reverse polarity. The occupant detection system may be destroyed instantly.

6) Do not disconnect the battery terminals while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as occupant detection control module.

7) Before disconnecting the connectors of each sensor and the control module, be sure to turn off the ignition switch and wait for more than 20 seconds. The occupant detection control module may be damaged.

8) Every related part of occupant detection system is a precision part. Do not drop them.

#### CAUTION:

- **Airbag system connectors are colored yellow. Do not use the electrical test equipment on these circuits.**

- **Be careful not to damage the airbag system wiring harness when servicing the occupant detection system.**

- **Refer to the CAUTION for airbag system when repairing the occupant detection system. <Ref. to AB-3, CAUTION, General Description.>**

#### B: INSPECTION

Measure the battery voltage and specific gravity of electrolyte, and check the electrolyte amount.

**Standard voltage: 12 V or more**

**Specific gravity: 1.260 or more**

**Electrolyte: Between the upper level and lower level**

# General Description

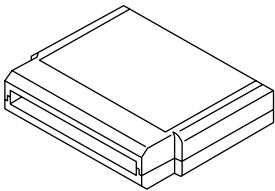

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## C: PREPARATION TOOL

### CAUTION:

To measure the voltage and resistance of airbag system and occupant detection system components, be sure to use the specified test harness.

### 5. Airbag Connector

#### A: PROCEDURE

##### BUCKLE SWITCH

###### 1) How to disconnect

- (1) Move the slide lock (A) in the direction of arrow.
- (2) With the slide lock (A) moved, disconnect the connector.

##### CAUTION:

**When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.**

###### 2) How to connect

Holding the connector (A), and push it in securely until a clicking sound is heard.

##### CAUTION:

**Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

## Control Module I/O Signal

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### 6. Control Module I/O Signal

#### A: ELECTRICAL SPECIFICATION

**CAUTION:**

- The occupant detection control module, load cell sensor and seat frame are integrated, therefore, do not remove them.
- It is prohibited to measure the occupant detection control module I/O signal. Therefore, terminal No. is not shown here.

| Terminal Name                       |        | Input/Output value      | Remarks                          |
|-------------------------------------|--------|-------------------------|----------------------------------|
| IG – Power supply                   |        | 9 — 16 V                | When ignition switch ON          |
| Airbag control module communication | (COM)  | Open collector terminal | Communication line               |
| Airbag control module communication | (GND)  | 0 V                     | Ground                           |
| Belt tension sensor                 | (Vcc)  | 0 — 5 V                 | Belt tension sensor power supply |
|                                     | (Vout) | 0.5 — 4.5 V             | Sensor output voltage            |
|                                     | (GND)  | 0 V                     | Sensor ground                    |

#### B: WIRING DIAGRAM

Refer to the electrical wiring diagram. <Ref. to WI-96, Airbag System.>

# Subaru Select Monitor

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### 7. Subaru Select Monitor

#### A: OPERATION

##### 1. READ DIAGNOSTIC TROUBLE CODE (DTC)

When malfunction of airbag system and occupant detection system occurs, the DTC stored in airbag control module will be read out.

Refer to “Read Diagnostic Trouble Code (DTC)” in AIRBAG SYSTEM (DIAGNOSTICS). <Ref. to AB(diag)-26, OPERATION, Subaru Select Monitor.>

NOTE:

- For details concerning operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For details concerning DTCs, refer to the “List of Diagnostic Trouble Code (DTC)” (Airbag system, occupant detection system). <Ref. to AB(diag)-43, List of Diagnostic Trouble Code (DTC).> <Ref. to OD(diag)-26, List of Diagnostic Trouble Code (DTC).>

##### 2. STATUS DATA DISPLAY

Check the operating condition of each sensor in the event of malfunction in seat belt buckle switch and seat position sensor, or when the seat belt buckle switch and seat position sensor has been replaced.

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Airbag System} and press the [YES] key.
- 3) On the «Airbag System» display screen, select the {Status Data} and press the [YES] key.

The support data is shown in the following table.

| Item                       | Contents of diagnosis   |
|----------------------------|---|
| Seat position sensor LH    | Front <sup>*1</sup> /Rear <sup>*2</sup> /Other <sup>*3</sup> /Unknown <sup>*3</sup> /— <sup>*5</sup>      |
| Seat position sensor RH    | — <sup>*5</sup>   |
| Seat belt buckle switch LH | Belted <sup>*6</sup> /Unbelted <sup>*7</sup> /Other <sup>*8</sup> /Unknown <sup>*4</sup> /— <sup>*9</sup> |
| Seat belt buckle switch RH | Belted <sup>*6</sup> /Unbelted <sup>*7</sup> /Other <sup>*8</sup> /Unknown <sup>*4</sup> /— <sup>*9</sup> |
| Passenger's airbag status  | ON <sup>*10</sup> /OFF <sup>*11</sup> /Unknown <sup>*4</sup>  |

\*1: The seat position is forward.

\*2: The seat position is rearward.

\*3: It is displayed when data other than forward and backward positions of the seat, such as malfunction etc., is input.

\*4: It is displayed at the initial status.

\*5: Seat position sensor is not available.

\*6: Seat belt is fastened.

\*7: Seat belt is unfastened.

\*8: It is displayed when data other than fastened or unfastened belts, such as malfunction etc., is input.

\*9: Seat belt buckle switch is not available.

\*10: Passenger's airbag is active.

\*11: Passenger's airbag is not active.

NOTE:

For details concerning operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

# Subaru Select Monitor

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### 3. CLEAR MEMORY MODE

Clear the DTC stored in the airbag control module after repairing malfunction in airbag system and occupant detection system. If the memory is not cleared after repairing malfunction, repaired DTC will be read out again when a new malfunction occurs.)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Airbag System} and press the [YES] key.
- 3) On the «Airbag System» display screen, select the {Clear Memory} and press the [YES] key.
- 4) Press the [YES] key after the “Clear memory?” has been displayed.
- 5) When the “Done” is shown on the display screen, turn the Subaru Select Monitor switch to OFF.

#### NOTE:

For details concerning operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

### 4. SYSTEM CALIBRATION (REZEROING)

#### NOTE:

If the occupant detection system has been removed or the passenger's seat cushion cover has been removed and disassembled, be sure to perform the “System Calibration (Rezeroing)” after installing the seat to the vehicle.

#### CAUTION:

**If the system malfunction occurs during the calibration, 2A “ODS Calibration Error” is detected on DTC of airbag system and the airbag warning light comes on. In this case, perform the system calibration (Rezeroing) again after turning the ignition switch to OFF once, or perform the system calibration after repairing the trouble cause.**

- 1) Set the vehicle on a level surface without any passengers.
- 2) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 3) On the «System Selection Menu» display screen, select the {Occupant Detection System} and press the [YES] key.
- 4) On the «Occupant Detection System» display screen, select the {Re-zeroing} and press the [YES] key.
- 5) «See service manual. And check vehicle condition for successfully completing the rezeroing.» will be displayed on the screen. Inspect the following items to adjust the vehicle conditions.
  - Move the seat backrest in the upright position.

- Slide to the backmost position.
  - Put nothing on the seat cushion.
  - Sit on the seat cushion and tidy the seat cloth.
  - Make sure that passenger's seat belt is not inserted into buckle, pulled or not stuck.
  - Make sure the ambient temperature is within 0 — 40°C (32 — 104°F).
- 6) «Re-zeroing Adjust the passenger seat to the condition shown in service manual.» will be displayed on the screen. Slide the passenger's seat to the backmost position, make sure that the backrest is in the upright position, and then press the [YES] key.

- 7) When the «Re-zeroing Unbuckle the Passenger seat belt. Continue: “YES”, Quit: “NO”» is displayed on the screen, make sure that passenger's seat belt is released from buckle and press the [YES] key.
- 8) When the «Re-zeroing Empty the passenger seat. Continue: “YES”, Quit: “NO”» is displayed on the screen, make sure that no one is on the passenger's seat, the airbag OFF indicator comes on and the ON indicator goes off, and then press the [YES] key.

#### NOTE:

- After pressing the [YES] key, «In process... Please wait for a while without touching vehicle.» will be displayed. Do not touch and swing the vehicle while the message is displayed.
  - When the «Zero calibration is unsuccessful. See service manual. Press “YES” to END» is displayed during the calibration, go to step 10.
- 9) If the zero calibration is successfully completed, the «Re-zeroing is successfully completed. Press “YES” to END» will be displayed. Press the [YES] key and turn the ignition switch to OFF to finish the diagnosis.

# Subaru Select Monitor

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

10) When the «Zero calibration is unsuccessful. See service manual. Press “YES” to END» is displayed during the calibration, turn the ignition switch to OFF once and turn it back to ON. Then, read the DTC of airbag system. <Ref. to AB(diag)-26, OPERATION, Subaru Select Monitor.>

If the DTC is input, perform the system calibration after repairing malfunction. If the DTC is not input, check the status of seat and vehicle and perform the system calibration again. <Ref. to OD(diag)-19, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

### NOTE:

If the zero calibration is unsuccessful, malfunction may occur in occupant detection system, or the status of seat and vehicle may not be appropriate. Also, if the airbag warning light comes on, read the DTC and perform the diagnosis referring to the “List of Diagnostic Trouble Code (DTC)” in AIRBAG SYSTEM. <Ref. to AB(diag)-26, OPERATION, Subaru Select Monitor.> <Ref. to AB(diag)-43, LIST, List of Diagnostic Trouble Code (DTC).>

## **B: INSPECTION**

### **1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE**

#### **DETECTING CONDITION:**

Defective harness connector

#### **TROUBLE SYMPTOM:**

Communication is impossible between airbag control module and Subaru Select Monitor.

Refer to “COMMUNICATION FOR INITIALIZING IMPOSSIBLE” in AIRBAG SYSTEM (DIAGNOSTICS). <Ref. to AB(diag)-28, INSPECTION, Subaru Select Monitor.>

### **2. WITHOUT DTC**

#### **DETECTING CONDITION:**

- Defective combination meter
- Open circuit of harness

#### **TROUBLE SYMPTOM:**

- Airbag warning light does not go off.
- “NO TROUBLE CODE” is displayed on Subaru Select Monitor display screen.

For detailed operation procedure, refer to “Airbag Warning Light Failure”. <Ref. to AB(diag)-35, Airbag Warning Light Failure.>

### NOTE:

When the airbag warning light is OFF and “NO TROUBLE CODE” is displayed on Subaru Select Monitor, the system is in normal condition.

## Read Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

### 8. Read Diagnostic Trouble Code (DTC)

#### A: OPERATION

For details about reading of DTCs, refer to “Subaru Select Monitor”. <Ref. to AB(diag)-26, Subaru Select Monitor.>

### **9. Inspection Mode**

#### **A: PROCEDURE**

Recreate the circumstance by referring to the conditions described in the checklist.

### 10. Clear Memory Mode

#### A: OPERATION

Clear the memory in the following steps after the malfunction is repaired.

Refer to “Subaru Select Monitor” for details concerning DTC clear operation. <Ref. to AB(diag)-26, Subaru Select Monitor.>

# Airbag Warning Light Illumination Pattern

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

## 11. Airbag Warning Light Illumination Pattern

### A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then go off afterwards.

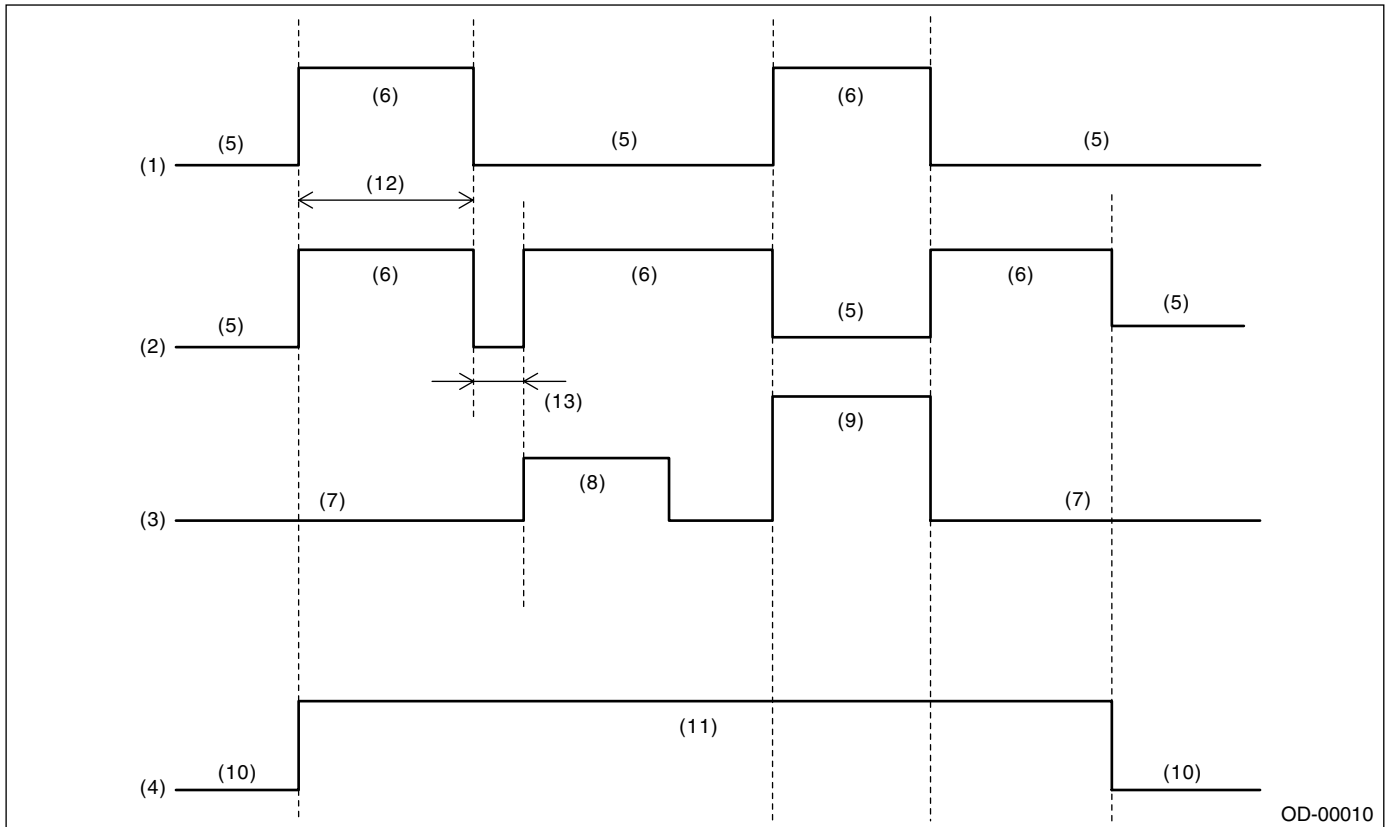

- (1) Airbag warning light
- (2) Approx. 6 sec.
- (3) Ignition switch ON

# Passenger's Airbag ON/OFF Indicator Light Illumination Pattern

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## 12. Passenger's Airbag ON/OFF Indicator Light Illumination Pattern

### A: INSPECTION

- (1) Passenger's airbag ON indicator light
- (2) Passenger's airbag OFF indicator light
- (3) Occupant seating

- (4) Ignition switch
- (5) Light OFF
- (6) Light ON
- (7) Empty
- (8) Child

- (9) Adult
- (10) OFF
- (11) ON
- (12) Approx. 6 sec.
- (13) Approx. 2 sec.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## 14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### A: DTC 2A ODS CALIBRATION ERROR

#### DTC DETECTING CONDITION:

The system calibration (Rezeroing) is not completed successfully.

| Step  | Check   | Yes                   | No  |
|---|---|-----------------------|---|
| 1<br><b>PERFORM ZERO CALIBRATION.</b><br>Perform the system calibration using the Subaru Select Monitor. <Ref. to OD(diag)-18, OPERATION, Subaru Select Monitor.> | Is the system calibration completed successfully? | Finish the diagnosis. | Perform according to system calibration procedure. <Ref. to OD(diag)-18, OPERATION, Subaru Select Monitor.> |

### B: DTC 2B ODS SYSTEM WRONG PARTS

#### DTC DETECTING CONDITION:

- Airbag control module is wrong parts.
- Occupant detection system is wrong parts.

| Step   | Check   | Yes                   | No   |
|--|---|-----------------------|--|
| 1<br><b>CHECK OCCUPANT DETECTION SYSTEM.</b><br>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait more than 20 seconds.<br>2) Replace the passenger's seat cushion pad & seat cushion frame assembly. <Ref. to SE-7, REMOVAL, Front Seat.> <Ref. to SE-8, DISASSEMBLY, Front Seat.><br>3) Connect the ground cable to battery.<br>4) Connect the Subaru Select Monitor to data link connector, and then check the system calibration. <Ref. to OD(diag)-18, OPERATION, Subaru Select Monitor.> | Is the system calibration completed successfully? | Finish the diagnosis. | Go to step 2.  |
| 2<br><b>CHECK AIRBAG CONTROL SYSTEM.</b><br>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait more than 20 seconds.<br>2) Replace the airbag control module. <Ref. to AB-16, REMOVAL, Side Airbag Module.><br>3) Connect the ground cable to battery.<br>4) Connect the Subaru Select Monitor to data link connector, and then check the system calibration. <Ref. to OD(diag)-18, OPERATION, Subaru Select Monitor.>  | Is the system calibration completed successfully? | Finish the diagnosis. | Check between occupant detection control module and airbag control module. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

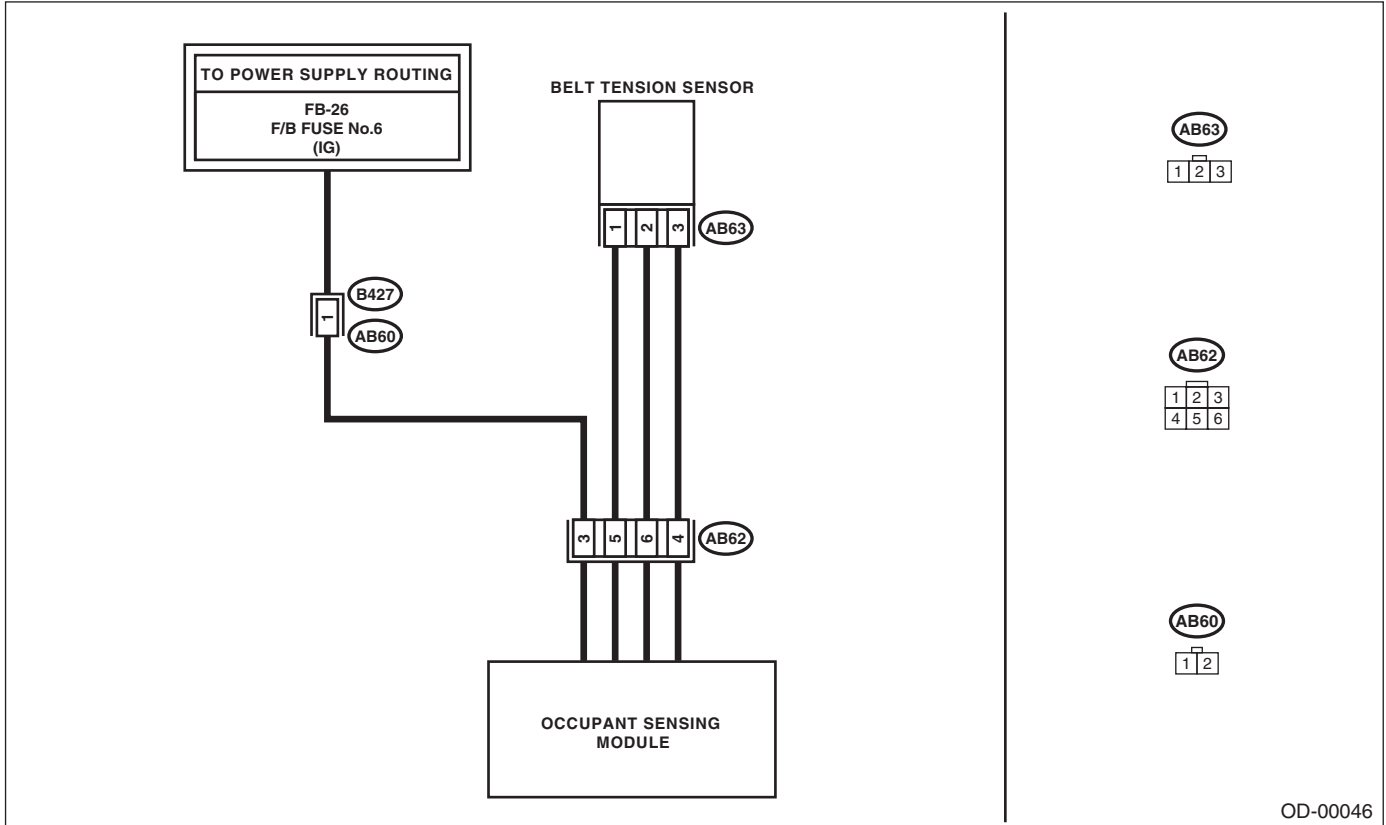

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### C: DTC 2C BELT PRETENSIONER FAILURE

#### DTC DETECTING CONDITION:

- Passenger's belt tension sensor failure
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

#### WIRING DIAGRAM:

OD-00046

| Step  | Check  | Yes   | No            |
|---|--|---|---------------|
| <b>1 CHECK POOR CONTACT OF CONNECTORS.</b><br>Check the connector between occupant detection control module and belt tension sensor for poor contact.   | Is there poor contact?   | Reconnect the connector. If the fault is not corrected, replace the airbag harness. | Go to step 2. |
| <b>2 CHECK BELT TENSION SENSOR.</b><br>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait more than 20 seconds.<br>2) Disconnect the belt tension sensor connector (AB63) from airbag harness.<br>3) Connect the test harness AC to connector (AB63).<br>4) Connect the battery ground cable and turn the ignition switch to ON. | Does the airbag warning light illuminates for 6 seconds then go off? | Replace the seat belt outer. <Ref. to SB-10, REMOVAL, Front Seat Belt.>             | Go to step 3. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

| Step  | Check                                      | Yes                         | No   |
|---|--|-----------------------------|--|
| <b>3</b><br><b>CHECK AIRBAG HARNESS.</b><br>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait more than 20 seconds.<br>2) Disconnect the test harness AC from belt tension sensor connector (AB63).<br>3) Connect the test harness AD (1AD) to connector (AB63).<br>4) Disconnect the airbag harness connector (AB62), and connect the connector (1AB) in test harness AB.<br>5) Measure the resistance between test harness terminals.<br><b>Connector &amp; terminal</b><br><b>(2AB) No. 5 — (2AD) No. 1:</b><br><b>(2AB) No. 4 — (2AD) No. 3:</b><br><b>(2AB) No. 6 — (2AD) No. 2:</b> | Is the resistance less than 10 $\Omega$ ?  | Go to step 4.               | Replace the airbag harness.  |
| <b>4</b><br><b>CHECK AIRBAG HARNESS.</b><br>Measure the resistance between test harness terminals and between test harness terminal and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(2AB) No. 4 — (2AD) No. 1:</b><br><b>(2AB) No. 4 — (2AD) No. 2:</b><br><b>(2AB) No. 4 — Chassis ground:</b><br><b>(2AB) No. 5 — (2AD) No. 2:</b><br><b>(2AB) No. 5 — Chassis ground:</b>   | Is the resistance more than 1 M $\Omega$ ? | Go to step 5.               | Replace the airbag harness.  |
| <b>5</b><br><b>CHECK AIRBAG HARNESS.</b><br>1) Connect the battery ground cable and turn the ignition switch to ON.<br>2) Measure the voltage between test harness and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(2AD) No. 1 — Chassis ground:</b><br><b>(2AD) No. 3 — Chassis ground:</b>   | Is the voltage less than 1 V?              | Replace the airbag harness. | Check the occupant detection harness and replace it if faulty. Replace the seat cushion frame assembly if the occupant detection harness is not faulty. <Ref. to SE-8, DISASSEMBLY, Front Seat.> |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### D: DTC 27 ODS COMMUNICATION ERROR

Perform the diagnosis using the diagnostic procedure for airbag system. <Ref. to AB(diag)-69, DTC 27 ODS COMMUNICATION ERROR, Diagnostic Chart with Trouble Code.>

### E: DTC 29 ODS FAILURE

#### DTC DETECTING CONDITION:

- Load cell sensor is faulty.
- Occupant detection control module is faulty.
- Occupant detection harness is faulty.
- Side airbag harness is faulty.
- Fuse No. 25 (in joint box) is blown.

| Step  | Check  | Yes   | No  |
|---|--|---|---|
| 1<br><b>CHECK POOR CONTACT IN CONNECTOR.</b><br>Check the connector between occupant detection control module and airbag control module for poor contact. | Is there poor contact?   | Reconnect the connector. If the fault is not corrected, replace the airbag harness. | Go to step 2.   |
| 2<br><b>CHECK DTC.</b><br>Read the DTC of airbag system.  | Is "2C BELT TENSION SENSOR FAILURE" or "37 BUCKLE SWITCH RH FAILURE" displayed in DTC? | Perform the diagnosis according to each DTC.  | Check the occupant detection harness and replace it if faulty. If the fault is not corrected, replace the occupant detection system. <Ref. to SE-8, DISASSEMBLY, Front Seat.> |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## F: DTC 37 BUCKLE SWITCH RH FAILURE

### DTC DETECTING CONDITION:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

### WIRING DIAGRAM:

OD-00047

| Step   | Check  | Yes   | No   |
|--|--|---|--|
| <b>1</b><br><b>CHECK POOR CONTACT IN CONNECTOR.</b><br>Check the connector between occupant detection control module and buckle switch for poor contact.   | Is there poor contact?   | Reconnect the connector. If the fault is not corrected, replace the airbag harness. | Go to step 2.  |
| <b>2</b><br><b>CHECK BUCKLE SWITCH.</b><br>1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait more than 20 seconds.<br>2) Disconnect the buckle switch connector (AB66).<br>3) Connect the test harness AE (1AE) and test harness connector Y to the buckle switch connector (AB66).<br>4) Connect the battery ground cable and turn the ignition switch to ON. | Does the airbag warning light illuminates for 6 seconds then go off? | Replace the buckle switch.<br><Ref. to SB-10, REMOVAL, Front Seat Belt.>            | Check the occupant detection harness and replace it if faulty. If the fault is not corrected, replace the occupant detection system. |

# General Description

## SEAT BELT SYSTEM

### 1. General Description

#### A: COMPONENT

#### 1. FRONT SEAT BELT

SB-00320

- (1) Adjuster anchor ASSY
- (2) Anchor cover
- (3) Outer seat belt ASSY

- (4) Inner seat belt ASSY
- (5) Belt tension sensor (passenger's side)

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 7.5 (0.76, 5.5)**

**T2: 30 (3.1, 22)**

**T3: 53 (5.4, 39)**

## 2. REAR SEAT BELT (SEDAN MODEL)

- |                                 |                          |
|---------------------------------|--------------------------|
| (1) Outer seat belt RH ASSY     | (5) Case center ELR      |
| (2) Shoulder seat belt CTR ASSY | (6) Anchor cover         |
| (3) Outer seat belt LH ASSY     | (7) Adjuster anchor ASSY |
| (4) Center seat belt LH ASSY    |                          |

**Tightening torque: N·m (kgf·m, ft·lb)**  
**T: 30 (3.1, 22)**

# General Description

## SEAT BELT SYSTEM

### 3. REAR SEAT BELT (WAGON MODEL)

SB-00135

- |                                 |                              |
|---------------------------------|------------------------------|
| (1) Outer seat belt RH ASSY     | (5) Center seat belt LH ASSY |
| (2) Shoulder seat belt CTR ASSY | (6) Anchor cover             |
| (3) Outer seat belt LH ASSY     | (7) Adjuster anchor ASSY     |
| (4) Center seat belt RH ASSY    |                              |

**Tightening torque: N·m (kgf·m, ft·lb)**  
**T: 30 (3.1, 22)**

### **B: CAUTION**

- Before starting, turn the ignition switch to OFF, disconnect the battery ground cable and wait for 20 seconds or more.
- The pretensioner system has a backup power source. The pretensioner might deploy if you do not wait for 20 seconds or more before starting work.
- Do not drop or apply any impact to the pretensioner.
- If oil, grease, or water gets on the pretensioner, wipe it off immediately with a dry cloth.
- Do not expose the pretensioner to high temperature or flame.
- Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.
- Do not disassemble or attempt to repair the pretensioner. If it is dented, cracked, or deformed, replace it with a new one.
- Do not use the airbag or pretensioner parts from other vehicles. Always replace parts with new parts.
- When handling a seat belt with a deployed pretensioner, wear gloves and goggles. Wash your hands afterwards.
- Do not re-use a seat belt with a deployed pretensioner again.
- If the material gets in your eyes or on your skin during deployment, wash it away with clean water, and then consult a doctor.

## 2. Pretensioner Connector

### A: PROCEDURE

Refer to “Airbag Connector” in AIRBAG SYSTEM section. <Ref. to AB-8, PROCEDURE, Airbag Connector.>

### 3. Inspection Locations After a Collision

#### A: INSPECTION

Check for the following, and then replace with new parts if necessary.

- Center pillar lower garnish is discolored or cracked.
- Wire harness and/or connector is damaged.

# Seat Belt Warning System

SEAT BELT SYSTEM

## 4. Seat Belt Warning System

### A: WIRING DIAGRAM

<Ref. to WI-113, WIRING DIAGRAM, Seat Belt Warning System.>

### B: INSPECTION

#### TROUBLE SYMPTOM:

- Seat belt warning light does not come on or go off.
- Buzzer does not beep.

| <b>10 CHECK HARNESS BETWEEN BODY INTEGRATED MODULE AND COMBINATION METER.</b><br>Measure the resistance of harness between body integrated module and combination meter.<br><i><b>Connector &amp; terminal:</b></i><br><i><b>(B280) No. 11 — (i10) No. 9:</b></i> | Is the resistance less than 1 $\Omega$ ?                                | Go to step 11.                                   | Repair the open circuit in harness between body integrated module and combination meter.   |
| <b>11 CHECK POOR CONTACT.</b><br>Check the poor contact of seat belt warning light circuit.   | Is there any poor contact?  | Repair the poor contact.                         | Go to step 12.   |
| <b>12 CHECK BODY INTEGRATED MODULE.</b><br>1) Connect all connectors.<br>2) Turn the ignition switch to ON.<br>3) Hold the tang plate disconnected from driver's seat belt buckle.<br>4) Check seat belt warning light comes on.                                  | Does the seat belt warning light come on?                               | Go to step 13.                                   | Check the connectors and the harness, and if there are no abnormalities, replace the bulb of the seat belt warning light in the combination meter. |
| <b>13 CHECK BODY INTEGRATED MODULE.</b><br>1) Connect all connectors.<br>2) Turn the ignition switch to ON.<br>3) Hold the tang plate disconnected from driver's seat belt buckle.<br>4) Check seat belt warning light comes on and buzzer beeps.                 | Does the seat belt warning light come on and buzzer beep for 6 seconds? | Check the connector or harness for poor contact. | Replace the body integrated module.  |

# Front Seat Belt

## SEAT BELT SYSTEM

### 5. Front Seat Belt

#### A: REMOVAL

##### 1. OUTER SEAT BELT ASSEMBLY

- 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for more than 20 seconds.
- 2) Fold backrest all the way forward, and then move front seat all the way forward.
- 3) Remove the center pillar lower trim. <Ref. to EI-51, REMOVAL, Lower Inner Trim.>
- 4) Remove the anchor cover. Loosen the shoulder anchor bolt, and then detach the shoulder anchor from center pillar.

- 5) Turn over the floor mat to disconnect the connector of belt tension sensor. (Passenger's side).

- 6) Turn over the floor mat to disconnect the connector (A) of pretensioner, and then loosen the three bolts to remove the outer seat belt assembly.

- 7) Remove the center pillar upper trim. <Ref. to EI-50, REMOVAL, Upper Inner Trim.>

- 8) Remove the two bolts and adjustable anchor assembly.

#### CAUTION:

- Do not drop or apply any impact to the pretensioner.
- Pretensioner and bracket should be treated as an assembly. Do not attempt to disassemble it.

##### 2. INNER SEAT BELT ASSEMBLY

- 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for more than 20 seconds before starting work.
- 2) Remove the console box. <Ref. to EI-46, REMOVAL, Console Box.>
- 3) Disconnect the seat belt warning light connector under the seat.
- 4) Remove the clip of harness from seat rail.
- 5) Remove the anchor bolt, and then remove the inner seat belt assembly.

#### B: INSTALLATION

##### 1. OUTER SEAT BELT ASSEMBLY

Install in the reverse order of removal.

#### CAUTION:

- Parts of the driver and passenger sides are not identical. Before installation, make sure the correct part is used.
- Be careful not to twist the seat belts during installation.

#### Tightening torque:

<Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

## 2. INNER SEAT BELT ASSEMBLY

Install in the reverse order of removal.

### CAUTION:

- After driver's and passenger's inner seat belt assemblies installation, check that the seat belt buckle switch operates normally using Subaru Select Monitor on the {Status Data} of «Airbag System». <Ref. to AB(diag)-27, STATUS DATA DISPLAY, OPERATION, Subaru Select Monitor.> Improper buckle switch function may cause airbag system malfunction.
- Inner seat belt assembly harness (1) must be routed securely as shown in the figure, since it may affect the performances of seat position sensor and occupant detection system.
- Driver's seat (with seat heater)

- Driver's seat (without seat heater)

- Passenger's seat

**Tightening torque:**  
 <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

### **C: INSPECTION**

#### **1. OUTER SEAT BELT ASSEMBLY**

Check for the following, and replace with new parts if necessary.

- Pretensioner is cracked or deformed.
- Seat belt is slackened, bent, or frayed. Seat belt is abnormally wound or extended.

#### **2. INNER SEAT BELT ASSEMBLY**

Check for the following, and replace with new parts if necessary.

- Inner seat belt assembly is deformed or damaged.
- Seat belt buckle is engaged improperly.

## 6. Rear Seat Belt

### A: REMOVAL

#### 1. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (SEDAN MODEL)

- 1) Remove the rear seat. <Ref. to SE-13, REMOVAL, Rear Seat.>
- 2) Remove the side sill rear lower cover. <Ref. to EI-51, REMOVAL, Lower Inner Trim.>
- 3) Remove the seat belt lower anchor bolt.

- 4) Remove the anchor cover. Remove the bolt from pillar and remove shoulder anchor.

- 5) Remove the quarter pillar trim. <Ref. to EI-52, REMOVAL, Rear Quarter Trim.>
- 6) Remove the bolts, and then detach the outer seat belt assembly.

- 7) Remove the two bolts and remove adjustable anchor ASSY.

#### 2. SHOULDER SEAT BELT CTR ASSEMBLY (SEDAN MODEL)

- 1) Remove the rear seat cushion. <Ref. to SE-13, REMOVAL, Rear Seat.>
- 2) Remove the seat belt lower anchor bolt.

- 3) Remove the quarter pillar trim. <Ref. to EI-52, REMOVAL, Rear Quarter Trim.>
- 4) Remove the rear shelf trim. <Ref. to EI-58, REMOVAL, Rear Shelf Trim.>
- 5) Remove the bolts, and then detach the shoulder seat belt assembly.

# Rear Seat Belt

## SEAT BELT SYSTEM

### 3. CENTER SEAT BELT LH ASSEMBLY (SEDAN MODEL)

- 1) Remove the rear seat cushion. <Ref. to SE-13, REMOVAL, Rear Seat.>
- 2) Remove the bolts, and then detach the center seat belt LH assembly.

### 4. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

- 1) Remove the luggage floor mat. <Ref. to EI-61, REMOVAL, Luggage Floor Mat.>
- 2) Remove the rear seat cushion. <Ref. to SE-13, REMOVAL, Rear Seat.>
- 3) Remove the side sill rear lower cover. <Ref. to EI-51, REMOVAL, Lower Inner Trim.>
- 4) Remove the seat belt lower anchor bolt.

- 5) Remove the anchor cover. Remove the bolt from pillar and remove shoulder anchor.

- 6) Remove the rear quarter trim. <Ref. to EI-52, REMOVAL, Rear Quarter Trim.>

- 7) Remove the bolts, and then detach the outer seat belt.

- 8) Remove the two bolts and remove adjustable anchor ASSEMBLY.

### 5. SHOULDER SEAT BELT CTR ASSEMBLY (WAGON MODEL)

- 1) Remove the shoulder anchor bolt, and then detach the shoulder anchor from quarter pillar.

- 2) Remove the quarter trim. <Ref. to EI-52, REMOVAL, Rear Quarter Trim.>

3) Remove the three bolts, and then detach the seat belt assembly.

## 6. CENTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

1) Remove the rear seat cushion.  
2) Remove the bolt, and then detach the center seat belt assembly.

## B: INSTALLATION

### 1. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (SEDAN MODEL)

Install in the reverse order of removal.

#### CAUTION:

- During installation, make sure that the seat belts are not twisted.
- After installation, make sure that the seat belts can be smoothly extended and wound.

### 2. SHOULDER SEAT BELT CTR ASSEMBLY (SEDAN MODEL)

Install in the reverse order of removal.

#### CAUTION:

- During installation, make sure that the seat belts are not twisted.
- After installation, make sure that the seat belts can be smoothly extended and wound.

### 3. CENTER SEAT BELT LH ASSEMBLY (SEDAN MODEL)

Install in the reverse order of removal.

#### CAUTION:

During installation, make sure that the seat belts are not twisted.

### 4. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

Install in the reverse order of removal.

#### CAUTION:

- During installation, make sure that the seat belts are not twisted.
- After installation, make sure that the seat belts can be smoothly extended and wound.

### 5. SHOULDER SEAT BELT CTR ASSEMBLY (WAGON MODEL)

Install in the reverse order of removal.

#### CAUTION:

- During installation, make sure that the seat belts are not twisted.
- After installation, make sure that the seat belts are smoothly extended and wound.

### 6. CENTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

Install in the reverse order of removal.

#### CAUTION:

During installation, make sure that the seat belts are not twisted.

## C: INSPECTION

### 1. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (SEDAN MODEL)

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent, or frayed. Seat belt is abnormally wound or extended.

### 2. SHOULDER SEAT BELT CTR ASSEMBLY (SEDAN MODEL)

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent, or frayed. Seat belt is abnormally wound or extended.

### 3. CENTER SEAT BELT LH ASSEMBLY (SEDAN MODEL)

Check for the following, and replace with new parts if necessary.

- Inner belt is deformed or damaged.
- Seat belt buckle is engaged improperly.

#### **4. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)**

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent, or frayed. Seat belt is abnormally wound or extended.

#### **5. SHOULDER SEAT BELT CTR ASSEMBLY (WAGON MODEL)**

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent, or frayed. Seat belt is abnormally wound or extended.

#### **6. CENTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)**

Check for the following, and replace with new parts if necessary.

- Inner belt is deformed or damaged.
- Seat belt buckle is engaged improperly.

# General Description

## LIGHTING SYSTEM

### 1. General Description

#### A: SPECIFICATION

|   |                       |                                  |                     |
|---|-----------------------|----------------------------------|---------------------|
| Headlight                                 | Halogen type low beam |                                  | 12 V — 55 W         |
|   | HID type low beam     |                                  | D2S 35W             |
|   | High beam             |                                  | 12 V — 60 W         |
| Front turn signal light                   |                       |                                  | 12 V — 21 W (WY21W) |
| Clearance/Parking/Front side marker light |                       |                                  | 12 V — 5 W          |
| Front fog light                           |                       |                                  | 12 V — 55 W         |
| Rear combination light                    | Sedan                 | Tail/Stop/Rear side marker light | 12 V — 5/21 W       |
|   |                       | Tail light                       | 12 V — 5/21 W       |
|   |                       | Stop light                       | 12 V — 21 W         |
|   | Wagon                 | Tail/Stop/Rear side marker light | 12 V — 5/21 W       |
|   |                       | Turn signal light                | 12 V — 21 W (WY21W) |
|   |                       | Back-up light                    | 12 V — 21 W         |
| License plate light                       |                       |                                  | 12 V — 5 W          |
| High-mounted stop light                   | Sedan                 | Standard type                    | 12 V — 21 W         |
|   |                       | Rear spoiler built-in type       | 12 V — 1.2 W (LED)  |
|   | Wagon                 |                                  | 12 V — 13 W         |
| Room light                                |                       |                                  | 12 V — 8 W          |
| Spot map light                            |                       |                                  | 12 V — 8 W          |
| Luggage room light                        |                       |                                  | 12 V — 5 W          |
| Trunk room light                          |                       |                                  | 12 V — 5 W          |
| Glove box light                           |                       |                                  | 12 V — 1.4 W        |

#### B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable. When replacing radio, control module and other parts provided with memory functions, record memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
- Reassemble in reverse order of disassembly, unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors and hoses securely during reassembly.

- After reassembly, make sure functional parts operate smoothly.

#### WARNING:

- **Airbag system wiring harness is routed near electrical parts and switches. Airbag system connectors are yellow. Do not use electric test equipment on these circuits.**
- **Be careful not to damage the airbag system wiring harness when servicing electrical parts and switches.**

#### C: PREPARATION TOOL

##### 1. GENERAL TOOL

| TOOL NAME      | REMARKS                                    |
|----------------|--|
| Circuit tester | Used for measuring resistance and voltage. |

## 2. Headlight and Tail Light System

### A: WIRING DIAGRAM

#### 1. HALOGEN TYPE HEADLIGHT

<Ref. to WI-116, WIRING DIAGRAM, Headlight System.>

#### 2. HID TYPE HEADLIGHT

<Ref. to WI-116, WIRING DIAGRAM, Headlight System.>

#### 3. CLEARANCE LIGHT AND ILLUMINATION LIGHT

<Ref. to WI-126, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

### B: INSPECTION

#### 1. HEADLIGHT SWITCH

<Ref. to LI-9, INSPECTION, Combination Switch (Light).>

#### 2. HEADLIGHT RELAY

Measure the headlight relay resistance between terminals when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.

| Current | Terminal No. | Standard       |
|---------|--------------|----------------|
| Flow    | 1 and 2      | Less than 1 Ω  |
| No flow |              | More than 1 MΩ |

#### 3. TAIL AND ILLUMINATION RELAY

Measure the tail and illumination relay resistance between terminals when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.

| Current | Terminal No. | Standard       |
|---------|--------------|----------------|
| Flow    | 1 and 2      | Less than 1 Ω  |
| No flow |              | More than 1 MΩ |

## 3. Front Fog Light System

### A: WIRING DIAGRAM

#### 1. FRONT FOG LIGHT

<Ref. to WI-123, WIRING DIAGRAM, Front Fog Light System.>

### B: INSPECTION

#### 1. FRONT FOG LIGHT SWITCH

Measure the resistance between front fog light switch terminals.

| Switch position | Terminal No. | Standard       |
|-----------------|--------------|----------------|
| OFF             | 3 and 5      | More than 1 MΩ |
| ON              |              | Less than 1 Ω  |

#### 2. FRONT FOG LIGHT RELAY

Measure the front fog light relay resistance between terminals when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.

| Current | Terminal No. | Standard       |
|---------|--------------|----------------|
| Flow    | 1 and 2      | Less than 1 Ω  |
| No flow |              | More than 1 MΩ |

## 4. Turn Signal Light and Hazard Light System

### A: WIRING DIAGRAM

#### 1. TURN SIGNAL LIGHT AND HAZARD LIGHT

<Ref. to WI-132, WIRING DIAGRAM, Turn Signal Light and Hazard Light System.>

### B: INSPECTION

#### 1. TURN SIGNAL SWITCH

<Ref. to LI-9, INSPECTION, Combination Switch (Light).>

#### 2. HAZARD SWITCH

Measure the resistance between hazard switch terminals.

| Switch position | Terminal No. | Standard             |
|-----------------|--------------|----------------------|
| OFF             | 6 and 7      | Less than 1 $\Omega$ |
| ON              | 1, 3 and 4   | Less than 1 $\Omega$ |
|                 | 7 and 8      | Less than 1 $\Omega$ |

#### 3. TURN SIGNAL AND HAZARD MODULE

Connect the battery and turn signal light bulb to the module, as shown in the figure. The module is properly functioning if it blinks when power is supplied to the circuit.

# Back-up Light System

LIGHTING SYSTEM

## 5. Back-up Light System

### A: WIRING DIAGRAM

#### 1. BACK-UP LIGHT

<Ref. to WI-124, WIRING DIAGRAM, Back-up Light System.>

### B: INSPECTION

#### 1. BACK-UP LIGHT SWITCH (MT MODEL)

Measure the resistance between back-up light switch terminals.

LI-00242

(A) Non-turbo model

(B) Turbo model (Except STI model)

(C) Turbo model (STI model)

| Switch position                             | Terminal No.  | Standard               |
|---|---|------------------------|
| When shift lever is set in reverse position | Turbo model (Except STI model): 2 and 4<br>Turbo model (STI model): 3 and 6<br>Non-turbo model: 1 and 2 | Less than 1 $\Omega$   |
| Other positions                             |   | More than 1 M $\Omega$ |

#### 2. INHIBITOR SWITCH (AT MODEL)

Measure the resistance between inhibitor switch terminals.

LI-00005

| Switch position                       | Terminal No. | Standard               |
|---------------------------------------|--------------|------------------------|
| When select lever is set in "R" range | 1 and 2      | Less than 1 $\Omega$   |
| Other positions                       |              | More than 1 M $\Omega$ |

## 6. Stop Light System

### A: WIRING DIAGRAM

#### 1. STOP LIGHT

<Ref. to WI-125, WIRING DIAGRAM, Stop Light System.>

### B: INSPECTION

#### 1. STOP LIGHT SWITCH

Measure the resistance between stop light switch terminals.

| Switch position               | Terminal No. | Standard               |
|-------------------------------|--------------|------------------------|
| When brake pedal is depressed | 2 and 3      | Less than 1 $\Omega$   |
| When brake pedal is released  |              | More than 1 M $\Omega$ |

## 7. Room Light System

### A: WIRING DIAGRAM

#### 1. INTERIOR LIGHT

<Ref. to WI-134, WIRING DIAGRAM, Interior Light System.>

### B: INSPECTION

#### 1. DOOR SWITCH

Measure the resistance between door switch terminals.

| Switch position     | Terminal No. | Standard               |
|---------------------|--------------|------------------------|
| When door is opened | 1 and 3      | Less than 1 $\Omega$   |
| When door is closed |              | More than 1 M $\Omega$ |

#### 2. REAR GATE LATCH SWITCH

Measure the resistance between rear gate latch switch terminals.

| Switch position          | Terminal No. | Standard               |
|--------------------------|--------------|------------------------|
| When rear gate is opened | 1 and 2      | Less than 1 $\Omega$   |
| When rear gate is closed |              | More than 1 M $\Omega$ |

#### 3. TRUNK ROOM LIGHT SWITCH

Measure the resistance between trunk room light switch terminals.

| Switch position          | Terminal No. | Standard               |
|--------------------------|--------------|------------------------|
| When trunk lid is opened | 1 and 2      | Less than 1 $\Omega$   |
| When trunk lid is closed |              | More than 1 M $\Omega$ |

## 8. Combination Switch (Light)

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Assembly.>
- 3) Remove the screws which secure the upper column cover to lower column cover.

- 4) Remove the screws which secure the upper column cover.

- 5) Disconnect the connector from combination switch.
- 6) Remove the screws which secure the switch, and then remove the switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the resistance between combination switch terminals.

(A) Lighting and turn signal switch connector

#### 1. LIGHTING SWITCH

| Switch position | Terminal No.  | Standard       |
|-----------------|---------------|----------------|
| OFF             | 13, 14 and 16 | More than 1 MΩ |
| Tail            | 14 and 16     | Less than 1 Ω  |
| Head            | 13, 14 and 16 | Less than 1 Ω  |

#### 2. DIMMER AND PASSING SWITCH

| Switch position | Terminal No. | Standard      |
|-----------------|--------------|---------------|
| Passing         | 7, 8 and 16  | Less than 1 Ω |
| Low beam        | 16 and 17    | Less than 1 Ω |
| High beam       | 7 and 16     | Less than 1 Ω |

#### 3. TURN SIGNAL SWITCH

| Switch position | Terminal No. | Standard       |
|-----------------|--------------|----------------|
| Left            | 1 and 2      | Less than 1 Ω  |
| Neutral         | 1, 2 and 3   | More than 1 MΩ |
| Right           | 2 and 3      | Less than 1 Ω  |

## 9. Headlight Beam Leveler System

### A: WIRING DIAGRAM

#### 1. HEADLIGHT BEAM LEVELER

<Ref. to WI-122, WIRING DIAGRAM, Headlight Beam Leveler System.>

### B: INSPECTION

#### 1. HEADLIGHT BEAM LEVELER ACTUATOR

- 1) Turn on the headlights.
- 2) Confirm the headlight beam level is lowered by changing the switch position to 0 - 1 - 2 - 3.

#### 2. HEADLIGHT BEAM LEVELER SWITCH

Measure the resistance between headlight beam leveler switch terminals.

| Switch position | Terminal No. | Standard               |
|-----------------|--------------|------------------------|
| 0               | 3 and 5      | Approx. 1 k $\Omega$   |
| 1               |              | Approx. 1,845 $\Omega$ |
| 2               |              | Approx. 2,650 $\Omega$ |
| 3               |              | Approx. 3,310 $\Omega$ |

## 10. Combination Base Switch Assembly

### A: REMOVAL

- 1) Remove the driver's airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>
- 2) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
- 3) Remove the steering column cover.
- 4) Remove the combination switch. <Ref. to LI-9, REMOVAL, Combination Switch (Light).> and <Ref. to WW-7, REMOVAL, Combination Switch (Wiper).>
- 5) Loosen the four screws and remove the roll connector.
- 6) Loosen the three screws.

- 7) Disconnect the connector and remove the combination base switch assembly.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Align the attaching direction of roll connector with the steering wheel, before installation of steering wheel. <Ref. to AB-20, ADJUSTMENT, Roll Connector.>

### C: INSPECTION

#### 1. COMBINATION BASE SWITCH ASSEMBLY

Perform the inspection for the following items and replace with a new one, if any damage is found.  
Crack or deformation of combination base switch assembly or roll connector.

#### 2. PARKING SWITCH

Measure the resistance between parking switch terminals.

| Switch position | Terminal No. | Standard      |
|-----------------|--------------|---------------|
| OFF             | 2 and 4      | Less than 1 Ω |
| ON              | 1 and 4      | Less than 1 Ω |

## 11. Headlight Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the duct (A) (when right side headlight is removed).

- 3) Remove the front bumper. <Ref. to EI-24, REMOVAL, Front Bumper.>
- 4) Disconnect each harness connector.
- 5) Remove the bolts on the side of headlight assembly.

- 6) Remove the three bolts and disengage the clips, and then detach the headlight assembly with bracket.

- 7) Remove the two nuts, and then detach the headlight assembly from bracket.

### B: INSTALLATION

Install in the reverse order of removal.

### C: ADJUSTMENT

#### 1. HEADLIGHT AIMING

#### CAUTION:

**Turn off the light before adjusting headlight aiming. If the light is necessary to check aiming, do not turn on for more than 2 minutes.**

- 1) Before checking the headlight aiming, be sure of the following:

- The area around the headlight has not sustained any accident, damage or other type of deformation.
- Vehicle is parked on level ground.
- The inflation pressure of tires is correct.
- Vehicle's gas tank is fully charged.
- Bounce the vehicle several times to normalize the suspension.

- Make certain that someone is seated in the driver's seat.

Turn the headlights on and then adjust the low beam pattern to the following positions on the screen.

- 2) Position the headlight beam leveler switch to "0".
- 3) Rotate the adjusting screw (A) to adjust aim.

# Headlight Assembly

## 12. Headlight Bulb

### A: REMOVAL

#### 1. HIGH BEAM AND HALOGEN TYPE LOW BEAM

**CAUTION:**

- Because the halogen bulb operates at a high temperature, dirt and oil on the bulb surface reduces the bulb's service life. Hold the flange portion when replacing the bulb. Never touch the glass portion.
- Do not leave the headlight without a bulb for a long time. Dust, moisture, etc. entering the headlight may affect its performance.

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake duct (A) (when right side headlight bulb is removed).

- 3) Disconnect the harness connector.
- 4) Remove the bulb assembly. To remove the low beam, remove the back cover and go to Step 5.

- (A) High beam
- (B) Low beam

- 5) Remove the light bulb retaining spring (A) to remove the bulb.

#### 2. HID TYPE LOW BEAM

**CAUTION:**

- Do not operate with wet hands.
- As the lightening circuit uses high voltage, be sure to confirm that the power supply is turned off before operation.
- When replacing the bulb, hold the flange portion and never touch the glass portion.
- Do not leave the headlight without a bulb for a long time. Dust, and moisture, etc. entering the headlight may affect its performance.

- 1) Remove the ground cable from battery.
- 2) Remove the headlight assembly. <Ref. to LI-14, HID TYPE LOW BEAM, REMOVAL, Headlight Bulb.>
- 3) Remove the back cover.

- 4) Disconnect the harness connector.

5) Remove the light bulb retaining spring, and then remove the bulb.

## B: INSTALLATION

Install in the reverse order of removal.

### CAUTION:

**Attach the rubber cap with letters TOP on the top so the drain hole will be on the lower side.**

## C: INSPECTION

### 1. HALOGEN TYPE

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

### 2. HID TYPE

#### CAUTION:

- Do not operate with wet hands.
- Do not touch the harness, inner headlight, or any metallic portion of the headlight when the light is illuminated (when the lighting switch is turned on).
- When performing a lighting test, make sure that the headlight is mounted on the vehicle, and the power supply is connected to the connector on the vehicle's side.

- 1) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 2) Use a normal HID bulb for headlight lighting test.
- 3) If the headlight does not illuminate, replace the bulb with a new one. <Ref. to LI-15, DISPOSAL, Headlight Bulb.>

## D: DISPOSAL

### 1. HID TYPE

#### CAUTION:

**HID type light bulb contains mercury. Dispose the bulb according to regional regulation and contact SOA Service Center.**

## 13. Front Turn Signal Light Bulb

### A: REMOVAL

- 1) When removing the turn signal light bulb, fully turn the direction of tire to the opposite side of desired turn signal light bulb.
- 2) Remove the clip, and turn the mud guard inward.

- 3) Turn the socket (A) from wheel arch part, and then remove the front turn signal light bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

## 14. Clearance/Parking Light Bulb

### A: REMOVAL

Turn the socket (A) and remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

## 15. Front Side Marker Light Bulb

### A: REMOVAL

- 1) When removing the turn signal light bulb, fully turn the direction of tire to the opposite direction of desired turn signal light bulb.
- 2) Remove the clip, and turn the mud guard inward.

- 3) Turn the socket (A) from wheel arch part, and then remove the front side marker light bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

## 16. Front Fog Light Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disengage three clips, and then turn over the lower mud guard.

- 3) Disconnect the harness connector.
- 4) Remove the mounting bolts, and then remove the fog light assembly.

- 3) Insert the flat-tip screwdriver or the like into lower side of front fog light cover, and remove the front fog light cover.

**NOTE:**

Be careful not to scratch the front bumper.

- 4) Insert the Phillips screwdriver to adjusting screw, and adjust the fog light pattern.

(A) Adjusting screw

### B: INSTALLATION

Install in the reverse order of removal.

### C: ADJUSTMENT

#### 1. FOG LIGHT AIMING

**NOTE:**

Before checking the fog light aiming, be sure of the following:

- There is no scratch, damage or other deformation on the area around the fog light.
- Vehicle is parked on level ground.
- The inflation pressure of tires is correct.
- Fuel tank is full.

- 1) Shake the vehicle up and down several times to make the suspension fit in.
- 2) Seat a person in the driver's seat.

# Front Fog Light Assembly

LIGHTING SYSTEM

LI-00498

(A) Vehicle center  
(B) 3 m (10 ft)

(H) Height of fog light center  
(363 mm (14.29 in))

(h) 40 mm (1.57 in)

## 17. Front Fog Light Bulb

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove three clips, and then turn over the lower mud guard.

- 3) Remove the harness connector.
- 4) Remove the back cover (A).

- 5) Remove the spring retainer, and then detach the fog light bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

# Rear Combination Light Assembly

LIGHTING SYSTEM

## 18. Rear Combination Light Assembly

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the clips, and then detach the trunk rear trim.

- 3) Remove the trunk side trim of rear portion.
- 4) Remove the four nuts, and then detach the rear combination light while disconnecting connector.

#### 2. WAGON MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the clips, and then detach the rear combination light covers.

- 3) Remove two bolts, and then remove the rear combination light by pulling it backward.

- 4) Turn the sockets to remove each bulb.

### B: INSTALLATION

#### 1. SEDAN MODEL

Install in the reverse order of removal.

#### 2. WAGON MODEL

Install in the reverse order of removal.

#### NOTE:

Install the rear combination light by aligning the clip with body side.

## 19. Tail/Stop Light Bulb

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Remove the trunk side trim of rear portion.
- 2) Turn the socket and remove the bulb.

- (A) Tail light  
(B) Stop/tail light

#### 2. WAGON MODEL

- 1) Remove the rear combination light assembly.  
<Ref. to LI-22, WAGON MODEL, REMOVAL, Rear Combination Light Assembly.>
- 2) Turn the socket and remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

## 20. Back-up Light Bulb

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Remove the trunk side trim of rear portion.
- 2) Turn the socket and remove the bulb.

#### 2. WAGON MODEL

- 1) Remove the rear combination light assembly. <Ref. to LI-22, WAGON MODEL, REMOVAL, Rear Combination Light Assembly.>
- 2) Turn the socket and remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

## 21. Rear Turn Signal Light Bulb

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Remove the trunk side trim of rear portion.
- 2) Turn the socket and remove the bulb.

#### 2. WAGON MODEL

- 1) Remove the rear combination light assembly.  
<Ref. to LI-22, WAGON MODEL, REMOVAL, Rear Combination Light Assembly.>
- 2) Turn the socket and remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

## 22. License Plate Light

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the license plate light mounting screw (A), and then remove the lens (B).

- 3) Remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

## 23. High-mounted Stop Light

### A: REMOVAL

#### 1. SEDAN MODEL (STANDARD TYPE)

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector of high-mounted stop light from body harness.
- 3) Remove the bolts, then detach the high-mounted stop light assembly.

#### 2. SEDAN MODEL (REAR SPOILER BUILT-IN TYPE)

- 1) Disconnect the ground cable from battery.
- 2) Remove the bolts, then detach the high-mounted stop light assembly.

- 3) Disconnect the connector of high-mounted stop light from body harness.

#### 3. WAGON MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the cap (a) by prying on the edge with screwdriver.
- 3) Remove the screws (b), and then the detach cover (c).

- 4) Remove screws (d), and then detach the high-mounted stop light while disconnecting connector.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) If NG, replace the high-mounted stop light with a new one.

## 24. Spot Map Light

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lens (A) and spot map light mounting screw (B).

- 3) Disconnect the harness connectors and remove the spot map light.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. SPOT MAP LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

#### 2. SPOT MAP LIGHT SWITCH

Measure the resistance between spot map light terminals.

| Switch position | Terminal No. | Standard       |
|-----------------|--------------|----------------|
| OFF             | 1 and 2      | More than 1 MΩ |
| ON              | 1 and 2      | 18±5.4 Ω       |

## 25.Room Light

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lens (A) and room light mounting screws (B).

- 3) Disconnect the harness connectors and remove the light.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

#### 2. ROOM LIGHT SWITCH

Measure the resistance between room light terminals.

| Switch position | Terminal No. | Standard       |
|-----------------|--------------|----------------|
| OFF             | —            | More than 1 MΩ |
| ON              | 1 and 3      | 1.5±0.5 Ω      |
| DOOR            | 1 and 2      | 1.5±0.5 Ω      |

# Luggage Room Light

## LIGHTING SYSTEM

### 26. Luggage Room Light

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lens (A) and luggage room light mounting screws (B).

- 3) Disconnect the harness connectors and remove the luggage room light.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

##### 1. LUGGAGE ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

##### 2. LUGGAGE ROOM LIGHT SWITCH

Measure the resistance between luggage room light terminals.

| Switch position | Terminal No. | Standard       |
|-----------------|--------------|----------------|
| OFF             | —            | More than 1 MΩ |
| DOOR            | 1 and 2      | 1.5±0.5 Ω      |

## 27.Trunk Room Light

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the harness connectors and remove the trunk room light.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

## 28. Glove Box Light

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the glove box. <Ref. to EI-43, REMOVAL, Glove Box.>
- 3) Disconnect the harness connector.
- 4) Remove the glove box light.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new one.

# General Description

## WIPER AND WASHER SYSTEMS

### 3. WASHER TANK

- |                     |                        |
|---------------------|------------------------|
| (1) Washer nozzle   | (5) Front washer motor |
| (2) Washer hose     | (6) Rear washer motor  |
| (3) Washer tank     | (7) Grommet            |
| (4) Washer tank cap | (8) Washer motor cover |

**Tightening torque: N·m (kgf·m, ft·lb)**  
**T: 6.0 (0.61, 4.4)**

### **C: CAUTION**

- Connect the connectors and hoses securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.
- Be careful that wiring harnesses of airbag system pass near electrical parts and switches.
- Airbag system connectors are colored yellow. Do not use a tester on these circuits.
- Care must be taken when connecting the piping hose so that no bending, jamming, etc. are caused.
- If even a little oil or grease such as silicon oil gets in the tank and washer passages, an oil film easily forms on the glass, causing the wiper to chatter and judder. Therefore, be careful not to let this happen.

## 3. Combination Switch (Wiper)

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Assembly.>
- 3) Loosen the screw to remove steering column cover lower.

- 4) Remove the screw to steering column cover upper.

- 5) Disconnect the connectors from combination switches.
- 6) Loosen the screw to remove combination switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- Inspect the continuity between each connector terminal.

|       | Switch position | Terminal No.                      | Standard       |
|-------|-----------------|-----------------------------------|----------------|
| FRONT | OFF             | 7 and 16                          | Less than 1 Ω  |
|       | INT             | 7 and 16                          | Less than 1 Ω  |
|       | LO              | 7 and 17                          | Less than 1 Ω  |
|       | HI              | 8 and 17                          | Less than 1 Ω  |
|       | Washer ON       | 2 and 11                          | Less than 1 Ω  |
| REAR  | Washer ON       | 2 and 10<br>10 and 12<br>2 and 12 | Less than 1 Ω  |
|       | OFF             | —                                 | More than 1 MΩ |
|       | ON              | 2 and 10                          | Less than 1 Ω  |
|       | Washer ON       | 2 and 10<br>10 and 12<br>2 and 12 | Less than 1 Ω  |

If continuity is not as specified, replace the switch.

- Intermittent operation inspection (inspection of wiper switch unit)

- 1) Position the voltage meter between the connector terminals No. 7 (+) and No. 2 (-).
- 2) Connect the battery positive lead to connector terminal No. 17 and the negative lead to connector terminals No. 2 and No. 16.
- 3) Turn the wiper switch to INT.
- 4) Disconnect the battery negative lead from connector terminal No. 16.
- 5) Connect the battery positive lead to connector terminal No. 16 for 5 seconds.

## Combination Switch (Wiper)

### WIPER AND WASHER SYSTEMS

---

6) Connect the battery negative lead to connector terminal No. 16, and check the voltage between the connector terminals No. 7 (+) and No. 2 (-).

7) Perform the above steps from 1) to 6) at the MIN and MAX positions of intermittent control switch, and replace the wiper switch assembly if it does not operate as specified.

#### **Intermittent time:**

**At MIN.**

**$1.6 \pm 1$  seconds**

**At MAX.**

**$16 \pm 6$  seconds**

S Intermittent time (sec.)

(A) Connecting the battery negative lead to connector terminal No. 16

## 4. Wiper Blade

### A: REMOVAL

While pushing the locking clip (A) up, pull out the blade from arm to arrow direction.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Confirm that the clip is locked securely.

### C: DISASSEMBLY

#### 1. METAL TYPE

Pull on the side (A) of wiper rubber stopper, and then remove the rubber from blade assembly.

#### 2. RESIN TYPE

Pull the wiper rubber top slightly from the stopper (A) and pull it out fully.

## D: ASSEMBLY

### 1. METAL TYPE

- 1) Insert the wiper rubber onto blade so that the stopper is in the position shown.

- 2) Make sure the wiper rubber is securely fastened to the pull stopper (A).

# Wiper Blade

## WIPER AND WASHER SYSTEMS

### 2. RESIN TYPE

1) Insert the wiper rubber through the claw (B).

2) Insert the wiper rubber top until it protrudes about 20 mm (0.79 in) from the stopper (D).

3) Insert the wiper rubber into the claw (A).

### E: INSPECTION

1) When the wiper does not perform well, inspect the following:

- Make sure the movable part of the blade assembly moves smoothly.
- Make sure the wiper rubber is not deformed or damaged.

2) Replace them with new parts if damaged.

## 5. Washer Tank and Motor

### A: REMOVAL

- 1) Open the hood.
- 2) Disconnect the ground cable from battery.
- 3) Remove the front bumper. <Ref. to EI-24, REMOVAL, Front Bumper.>
- 4) Remove the hose from L joint, and then drain washer fluid.

- 5) Remove the duct clip.

- 6) Remove the connector.

- 7) Remove the screw, and then remove the cover.

- 8) Disconnect the hose.

- 9) Remove the bolt and nut, and then remove the washer tank.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**6.0 N·m (0.61 kgf·m, 4.4 ft·lb)**

### C: DISASSEMBLY

Pull out the washer motor from tank.

- (A) Front
- (B) Rear

### D: ASSEMBLY

- 1) Assemble in the reverse order of disassembly.
- 2) Confirm that water does not leak from installation area of motor.

# Washer Tank and Motor

WIPER AND WASHER SYSTEMS

---

## E: INSPECTION

Apply battery voltage to the connector terminal of the washer motor and make sure the motor operates.

## 6. Front Wiper Arm

### A: REMOVAL

- 1) Open the hood.
- 2) Remove the cap.
- 3) Remove the nut to remove arm.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Operate the wiper once.
- 3) Align the wiper blade to the ceramic print point mark (A) of front window panel.

#### **Tightening torque:**

**Refer to COMPONENT in General Description.**

**<Ref. to WW-2, FRONT WIPER, COMPONENT, General Description.>**

### C: ADJUSTMENT

Operate the wiper once. Align the wiper blade to the ceramic print point mark (A) of front window panel.

# Front Wiper Motor and Link

## WIPER AND WASHER SYSTEMS

### 7. Front Wiper Motor and Link

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the cowl panel. <Ref. to EI-34, REMOVAL, Cowl Panel.>
- 3) Disconnect the connector of motor.
- 4) Remove the bolts to remove wiper link.

- 5) Remove the bolts and nuts to remove motor.

#### B: INSTALLATION

- 1) Connect the battery ground cable to battery.
- 2) To confirm that the motor is at auto stop position, connect the harness to motor and turn the wiper switch ON/OFF once.
- 3) Disconnect the ground cable from battery.
- 4) Tighten the nut where rod (A) and link plate (B) is aligned in a straight line.

- 5) Install in the reverse order of removal.

#### Tightening torque:

Refer to **COMPONENT** in *General Description*.

<Ref. to **WW-2, FRONT WIPER, COMPONENT, General Description.**>

#### C: INSPECTION

- 1) When the battery is connected to the terminal of connectors, confirm that the motor operates at low speed.

- 2) When the battery is connected to the terminal of connectors, confirm that the motor operates at high speed.

- 3) Connect the battery to terminals of connector, and then remove the terminal connection with motor rotated at low speed, and stop the wiper motor through operation.

4) Connect the battery and confirm that the motor stops at automatic stop position after the motor operates at low speed again.

### 8. Front Washer Nozzle

#### A: REMOVAL

- 1) Remove the washer hose from the washer nozzle.
- 2) Open the clips on the underside of the hood with a thin screwdriver or other tool, and remove the washer nozzle.

#### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the position of the washer liquid sprayer.  
<Ref. to WW-16, ADJUSTMENT, Front Washer Nozzle.>

#### C: INSPECTION

- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.

#### D: ADJUSTMENT

- 1) Turn the wiper switch to OFF position.
- 2) When the vehicle stops, adjust the washer fluid injection position as shown in the figure.

#### **Injection position:**

**A: 257 mm (10.12 in)**

**B: 512 mm (20.16 in)**

(1) Nozzle

## 9. Rear Wiper Arm

### A: REMOVAL

- 1) Remove the wiper arm cover (A).

- 2) Remove the nut to remove wiper arm.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Operate the rear wiper once.
- 3) Align the blade to rear defogger heat wire (A).

### C: ADJUSTMENT

- 1) Operate the rear wiper once.
- 2) Align the blade to rear defogger heat wire (A).

#### Tightening torque:

Refer to **COMPONENT** in **General Description**.

<Ref. to WW-3, **REAR WIPER, COMPONENT, General Description**.>

## 10. Rear Wiper Motor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear wiper arm. <Ref. to WW-17, REMOVAL, Rear Wiper Arm.>
- 3) Remove the rear gate lower trim. <Ref. to EI-57, REMOVAL, Rear Gate Trim.>
- 4) Unclip the clip of harness, and then disconnect the connector of wiper motor.
- 5) Loosen the bolts to remove the wiper motor assembly (A).

- 6) Remove rear wiper cushion.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Install the rear wiper cushion with the arrow mark facing up, as shown in the figure.

#### Tightening torque:

Refer to **COMPONENT** in **General Description**.

<Ref. to WW-3, REAR WIPER, COMPONENT, General Description.>

### C: INSPECTION

- 1) Connect the battery to wiper motor connector and confirm that the wiper motor operates.

- 2) Connect the battery to terminal of connector, and then remove the terminal connections with motor rotated, and stop the wiper motor through operation.

- 3) Connect the battery and confirm that the motor stops at automatic stop position after the motor operates at low speed again.

## 11.Rear Washer

### A: REMOVAL

- 1) Remove the high-mount stop light. <Ref. to LI-27, REMOVAL, High-mounted Stop Light.>
- 2) Remove the washer hose from washer nozzle.
- 3) Open the clips on the underside of hood with a thin screwdriver or other tool, and then remove the washer nozzle.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the position of the washer liquid sprayer. <Ref. to WW-19, ADJUSTMENT, Rear Washer.>

### C: INSPECTION

- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.

### D: ADJUSTMENT

- 1) Turn the wiper switch to OFF position.
- 2) When the vehicle stops, adjust the washer fluid injection position as shown in the figure.

#### **Injection position:**

**A: 39 mm (1.54 in)**

**B: 72°**

(1) Nozzle

# Wiper Control Relay

WIPER AND WASHER SYSTEMS

## 12. Wiper Control Relay

If operation is not as specified, replace the switch.

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the right quarter lower trim. <Ref. to EI-52, REMOVAL, Rear Quarter Trim.>
- 3) Loosen the nut to remove control unit.

### B: INSTALLATION

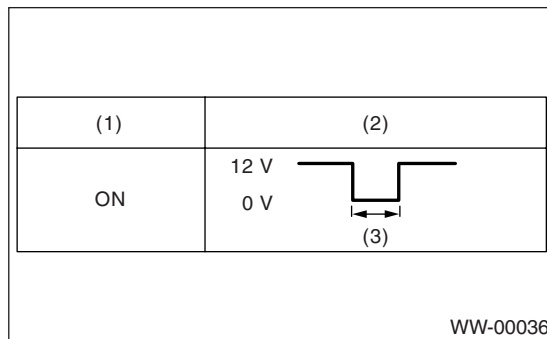

Install in the reverse order of removal.

### C: INSPECTION

- 1) Disconnect the connector from wiper control relay.
- 2) Connect the positive (+) lead from the battery to terminal 8 and the negative (-) lead to terminal 6. Connect the positive (+) lead from the voltmeter to terminal 3 and the negative (-) lead to ground.

- 3) Measure the voltage when the wiper relay is operated.

- (1) Switch position
- (2) Voltage
- (3)  $9 \pm 2$  sec.

## 1. General Description

### A: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable. When replacing the audio, control unit, and other parts provided with memory functions, record memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
- Reassemble in reverse order of disassembly, unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors and hoses securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.

### B: PREPARATION TOOL

#### 1. GENERAL TOOL

| TOOL NAME  | Remarks                                    |
|--|--|
| Circuit tester   | Used for measuring resistance and voltage. |
| Conductive silver composition<br>(DUPONT No. 4817 or equivalent) | Used for repairing antenna wire.           |

## 2. Audio System

### A: WIRING DIAGRAM

<Ref. to WI-139, WIRING DIAGRAM, Audio System.>

### B: INSPECTION

| Symptom  | Repair order  |
|--|---|
| No power coming in. (No display and no sound from speakers)) | (1) Check the fuse and power supply for audio.<br>(2) Check the audio ground.<br>(3) Remove the audio and repair it.  |
| A specific speaker does not operate.                         | (1) Check the speaker.<br>(2) Check the output circuit between audio and speaker.   |
| Audio generates noise with engine running.                   | (1) Check the audio ground.<br>(2) Check the generator.<br>(3) Check the ignition coil.<br>(4) Remove the audio and repair it.                                      |
| AM and FM modes are weak or noisy.                           | (1) Check the antenna.<br>(2) Check the antenna amplifier.<br>(3) Check the noise suppressor.<br>(4) Check the audio ground.<br>(5) Remove the audio and repair it. |

## **3. Front Accessory Power Supply Socket System**

### **A: WIRING DIAGRAM**

<Ref. to WI-141, WIRING DIAGRAM, Front Accessory Power Supply Socket System.>

## 4. Rear Accessory Power Supply Socket System

### A: WIRING DIAGRAM

<Ref. to WI-142, WIRING DIAGRAM, Rear Accessory Power Supply Socket System.>

## 5. Audio

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console front panel.
- 3) Remove the center panel while disconnecting connector.

(A) Hook pawl

- 4) Remove the fitting screws, and slightly pull out the audio from center console.

- 5) Disconnect the harness connectors and antenna feeder cord.

### B: INSTALLATION

Install in the reverse order of removal.

## 6. Front Speaker

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-41, REMOVAL, Front Door Trim.>
- 3) Remove the front speaker mounting screws.

- 4) Disconnect the harness connector and remove front speaker.

### B: INSTALLATION

Install in the reverse order of removal.

## 7. Tweeter

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-41, REMOVAL, Front Door Trim.>
- 3) Remove the tweeter mounting screws.

- 4) Disconnect the harness connector and remove tweeter.

### B: INSTALLATION

Install in the reverse order of removal.

## 8. Rear Speaker

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-42, REMOVAL, Rear Door Trim.>
- 3) Remove the rear speaker mounting screws.

- 4) Disconnect the harness connector and remove rear speaker.

### B: INSTALLATION

Install in the reverse order of removal.

## 9. Antenna

### A: INSPECTION

Measure the resistance between antenna terminal and each antenna wire.

If an antenna wire is OK, resistance will be less than 1  $\Omega$ . If an antenna wire is broken, the resistance will be more than 1 M $\Omega$ .

#### NOTE:

When checking the continuity, wind a piece of aluminum foil around the tip of tester probe, and then press the aluminum foil against wire with your finger.

- (A) Tester probe
- (B) Aluminum foil
- (C) Antenna wire

To locate the broken point, move the probe along antenna wire.

### B: REPAIR

1) Clean the antenna wire and surrounding area with a cloth dampened by alcohol.

2) Paste a thin masking film on the glass along broken wire.

3) Deposit conductive silver composition (DUPONT No. 4817) on the broken portion with a drawing pen.

- (A) Broken portion
- (B) Masking film
- (C) Conductive silver composition

4) Dry out the deposited portion.

5) After repair has been completed, measure the resistance in repaired wire.

## 10. Antenna Amplifier

### A: REMOVAL

#### 1. SEDAN

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear pillar upper trim. <Ref. to EI-52, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
- 3) Disconnect the harness connector and terminal.
- 4) Remove the mounting screw and bolt, and detach antenna amplifier.

#### • SEDAN

#### • WAGON

#### 2. WAGON

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear quarter upper trim and roof trim. <Ref. to EI-55, WAGON MODEL, REMOVAL, Roof Trim.> <Ref. to EI-52, WAGON MODEL, REMOVAL, Rear Quarter Trim.>
- 3) Disconnect the harness connector and terminal.
- 4) Remove the mounting screws and detach the antenna amplifier.

| Terminal No.           | Standard         |
|------------------------|------------------|
| 1-a and Amplifier body | More than 100 kΩ |
| 1-b and Amplifier body | Less than 1 Ω    |
| 2-a and Amplifier body | More than 100 kΩ |
| 3 and Amplifier body   | More than 100 kΩ |
| 4-a and Amplifier body | More than 100 kΩ |
| 4-b and Amplifier body | Less than 1 Ω    |

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the antenna amplifier resistance.

## 11.Noise Suppressor

### A: REMOVAL

#### 1. SEDAN

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear pillar upper trim. <Ref. to EI-52, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
- 3) Remove the rear shelf trim. <Ref. to EI-58, REMOVAL, Rear Shelf Trim.>
- 4) Disconnect the feeder cord connector from antenna amplifier.
- 5) Disconnect the harness connector of noise suppressor from terminal on glass antenna.
- 6) Remove the harness clip.
- 7) Remove the mounting nut and detach the noise suppressor.

#### 2. WAGON

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear gate trim. <Ref. to EI-57, REMOVAL, Rear Gate Trim.>
- 3) Disconnect the connector from noise suppressor.
- 4) Remove the mounting nut and detach the noise suppressor.

### B: INSTALLATION

Install in the reverse order of removal.

## 12. Front Accessory Power Supply Socket

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console front panel.
- 3) Disconnect the harness connectors and remove front accessory power supply socket.

### B: INSTALLATION

Install in the reverse order of removal.

## 13. Rear Accessory Power Supply Socket

### A: REMOVAL

#### 1. FRONT

- 1) Disconnect the ground cable from battery.
- 2) Remove the console cover. <Ref. to EI-46, REMOVAL, Console Box.>
- 3) Disconnect the harness connectors and remove accessory power supply socket.

### B: INSTALLATION

Install in the reverse order of removal.

## 1. General Description

### A: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable. When replacing radio, control module, and other parts provided with memory functions, record memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
- Reassemble in the reverse order of disassembly, unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors and hoses securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.

### B: PREPARATION TOOL

#### 1. GENERAL TOOLS

| TOOL NAME      | REMARKS                                    |
|----------------|--|
| Circuit tester | Used for measuring resistance and voltage. |

## 2. Horn System

### A: WIRING DIAGRAM

#### 1. HORN

<Ref. to WI-143, WIRING DIAGRAM, Horn System.>

### B: INSPECTION

#### 1. HORN RELAY

Measure the horn relay resistance between terminals (indicated in table below) when connecting the terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground cable.

| Current | Terminal No. | Standard       |
|---------|--------------|----------------|
| Flow    | 1 and 2      | Less than 1 Ω  |
| No Flow |              | More than 1 MΩ |

### 3. Horn

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front bumper. <Ref. to EI-24, REMOVAL, Front Bumper.>
- 3) Remove the horn bracket mounting bolt (A).
- 4) Disconnect the harness connector and remove the horn assembly (B).

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

With 12 V direct current supplied between horn terminal and case ground, check that the horn sounds properly.

## 4. Horn Switch

### A: REMOVAL

**WARNING:**

Before servicing, be sure to read the notes in AB section for proper handling of driver's airbag module. <Ref. to AB-3, CAUTION, General Description.>

**NOTE:**

Horn switch forms a unit with the driver's airbag module.

- 1) Disconnect the ground cable from battery.
- 2) Remove the driver's airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the resistance between horn switch terminal and airbag module bracket.

- (1) Horn switch terminal
- (2) Airbag module bracket

| Switch position                           | Terminal No.                                   | Resistance             |
|---|--|------------------------|
| When airbag module bracket is pushed.     | Horn switch terminal and Airbag module bracket | Less than 1 $\Omega$   |
| When airbag module bracket is not pushed. |  | More than 1 M $\Omega$ |

| (2) Door sash (Front)  | (7) Regulator ASSY     |
| (3) Door sash (Rear)   | (8) Motor ASSY         |
| (4) Weather strip      | (9) Mirror gusset      |
| (5) Stabilizer (Outer) | (10) Slider            |

- (11) Roller

**Tightening torque: N-m (kgf-m, ft-lb)**

**T1: 7.4 (0.75, 5.5)**

**T2: 13.7 (1.4, 10.1)**

## 4. REAR DOOR GLASS

GW-00537

- |                       |                        |
|-----------------------|------------------------|
| (1) Glass             | (5) Stabilizer (Outer) |
| (2) Door sash (Front) | (6) Stabilizer (Inner) |
| (3) Door sash (Rear)  | (7) Regulator ASSY     |
| (4) Weather strip     | (8) Motor ASSY         |

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 7.4 (0.75, 5.5)**

**T2: 13.7 (1.4, 10.1)**

# General Description

GLASS/WINDOWS/MIRRORS

## 5. MIRROR

(1) Outer mirror

(2) Inner rearview mirror

(3) Mount

(4) Spring

(5) Mirror

(6) Scalp cap

### **B: CAUTION**

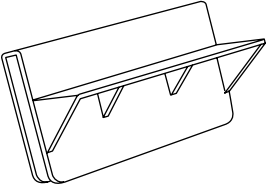

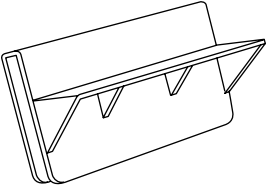

- When the electrical connectors are disconnected, always conduct an operational check after connecting them again.
- Avoid impact and damage to glass.

# General Description

GLASS/WINDOWS/MIRRORS

## C: PREPARATION TOOL

### 1. SPECIAL TOOL

| ILLUSTRATION  | TOOL NUMBER | DESCRIPTION | REMARKS   |
|---|-------------|-------------|---|
| <br><br>ST61299AE000 | 61299AE000  | SPACER      | Used for adjusting the upper end position of front door glass. (Glass thickness: 5 mm (0.197 in)) |
| <br><br>ST61299AE010 | 61299AE010  | SPACER      | Used for adjusting the upper end position of rear door glass. (Glass thickness: 4 mm (0.157 in))  |

### 2. GENERAL TOOL

| TOOL NAME        | REMARKS                                   |
|------------------|---|
| Circuit tester   | Used for checking voltage and continuity. |
| Piano wire       | Used for window glass removal.            |
| Windshield knife | Used for window glass removal.            |

# Power Window System

GLASS/WINDOWS/MIRRORS

---

## 2. Power Window System

### A: WIRING DIAGRAM

<Ref. to WI-144, Power Window System.>

### B: INSPECTION

| Symptom                           | Repair order  |
|-----------------------------------|---|
| All power windows do not operate. | (1) Fuse (SBF-6)<br>(2) Power window circuit breaker<br>(3) Power window relay<br>(4) Wiring harness        |
| One window does not operate.      | (1) Power window main switch<br>(2) Power window sub switch<br>(3) Power window motor<br>(4) Wiring harness |
| "Window Lock" does not operate.   | Power window main switch  |

## 3. Power Window Control Switch

### A: REMOVAL

#### 1. MAIN SWITCH

- 1) Disconnect the ground cable from battery.
- 2) Using a flat tip screwdriver, remove the screw cover.

- 3) Loosen the screw to remove the power window main switch.

- 4) Disconnect the connector.

#### 2. SUB SWITCH

- 1) Disconnect the ground cable from battery.
- 2) Remove the screw which secures switch panel.

- 3) Remove the switch panel.

- 4) Disconnect the connector.

### B: INSTALLATION

#### 1. MAIN SWITCH

Install in the reverse order of removal.

#### 2. SUB SWITCH

Install in the reverse order of removal.

### C: INSPECTION

#### 1. MAIN SWITCH

- 1) Remove the main switch. <Ref. to GW-9, REMOVAL, Power Window Control Switch.>
- 2) Turn the window lock switch to UNLOCK.
- 3) Connect the battery and main switch as shown in the figure below.

# Power Window Control Switch

GLASS/WINDOWS/MIRRORS

4) Measure the main switch resistance.

|                        | Switch position | Terminal No.         | Standard             |
|------------------------|-----------------|----------------------|----------------------|
| Driver's side          | UP              | 13 and 2, 1 and 5    | Less than 1 $\Omega$ |
|                        | OFF             | 1 and 5<br>2 and 5   | Less than 1 $\Omega$ |
|                        | DOWN            | 13 and 1, 2 and 5    | Less than 1 $\Omega$ |
|                        | AUTO DOWN       | 13 and 1, 2 and 5    | Less than 1 $\Omega$ |
| Front passenger's side | UP              | 13 and 6, 7 and 5    | Less than 1 $\Omega$ |
|                        | OFF             | 5 and 6<br>5 and 7   | Less than 1 $\Omega$ |
|                        | DOWN            | 13 and 7, 6 and 5    | Less than 1 $\Omega$ |
| Rear LH                | UP              | 11 and 13, 10 and 5  | Less than 1 $\Omega$ |
|                        | OFF             | 5 and 11<br>5 and 10 | Less than 1 $\Omega$ |
|                        | DOWN            | 13 and 10, 11 and 5  | Less than 1 $\Omega$ |
| Rear RH                | UP              | 13 and 16, 15 and 5  | Less than 1 $\Omega$ |
|                        | OFF             | 5 and 15<br>5 and 16 | Less than 1 $\Omega$ |
|                        | DOWN            | 13 and 15, 16 and 5  | Less than 1 $\Omega$ |

5) If NG, replace the main switch.

## 2. SUB SWITCH

1) Remove the sub switch. <Ref. to GW-9, REMOVAL, Power Window Control Switch.>

2) Measure the sub switch resistance.

|                               | Switch position | Terminal No.     | Standard             |
|-------------------------------|-----------------|------------------|----------------------|
| Front passenger's side & rear | UP              | 8 and 5, 4 and 7 | Less than 1 $\Omega$ |
|                               | OFF             | 6 and 5, 4 and 7 | Less than 1 $\Omega$ |
|                               | DOWN            | 8 and 7, 6 and 5 | Less than 1 $\Omega$ |

3) If NG, replace the sub switch.

## 4. Front Door Glass

### A: REMOVAL

- 1) Remove the front door trim. <Ref. to EI-41, REMOVAL, Front Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-17, REMOVAL, Front Sealing Cover.>
- 3) Remove the outer mirror assembly. <Ref. to GW-18, REMOVAL, Outer Mirror Assembly.>
- 4) Remove the mirror gusset.

- 5) Remove the stabilizer (Inner) and stabilizer (Outer).

- 6) Remove the screw at the rear end of weather strip, and remove weather strip.

- 7) Operate the power window switch to move the glass to position shown in the figure, and then remove the two nuts from service holes.

- 8) Take out the door glass.

### CAUTION:

- Do not turn the regulator in closing direction after removal of the glass. Otherwise gear may be disengaged.
- Avoid impact and damage to the glass.

### B: INSTALLATION

- 1) Install in the reverse order of removal.

### CAUTION:

**Make sure the slider (front) and roller (rear) of glass is placed securely in sash.**

- 2) Adjust the front door glass. <Ref. to GW-12, ADJUSTMENT, Front Door Glass.>

# Front Door Glass

GLASS/WINDOWS/MIRRORS

## Tightening torque:

Refer to **COMPONENT in General Description.** <Ref. to **GW-4, FRONT DOOR GLASS, COMPONENT, General Description.**>

## C: ADJUSTMENT

### NOTE:

Before adjustment, ensure that all adjusting nuts of stabilizer (inner), upper stopper, and sash are loosened and door glass is raised so that it is in contact with weather strip.

1) Temporarily tighten one adjusting bolt on one side of rear sash at the midpoint of slotted hole in the inner panel.

2) Temporarily tighten the regulator B-channel in a position at the top of slotted hole.

3) Lower the door glass 10 to 15 mm (0.39 to 0.59 in) from fully closed position. While applying outward pressure of  $45.0 \pm 5.0$  N ( $4.5 \pm 0.5$  kgf,  $9.9 \pm 1.1$  lbf) (F) to the upper edge of glass above midpoint of stabilizer (Outer), press the stabilizer (Inner) at pressure of  $30 \pm 5$  N ( $3.0 \pm 0.5$  kgf,  $6.6 \pm 1.1$  lbf) to the glass, then secure it.

- (1) Full close position
- (2) Stabilizer (Outer)
- (3) 10 — 15 mm (0.39 — 0.59 in)
- (4) Upper stopper

4) For adjustment of clearance between front glass and center pillar cover, loosen the nuts (A), and move the glass sash back and forward until clearance becomes the value shown.

- (1) 12 mm (0.472 in)

5) For adjustment of upper and lower ends of center pillar, loosen the adjusting nut (A) of B-channel (B).

6) Adjust so that the upper and lower ends of center pillar are the same size.

- (1) Narrow
- (2) Wide
- (3) Glass tilts too far rearward
- (4) Glass tilts too far forward
- (5) Raise B channel
- (6) Lower B channel

7) For glass stroke adjustment, set the ST on glass and close the door, raise glass until positional relationship between glass and weather strip becomes as shown. And secure the glass so that the upper stopper lightly touches the glass holder.

ST 61299AE000 SPACER (For front door glass of thickness 5 mm (0.197 in))

- (1) 2.7 — 4.3 mm (0.106 — 0.169 in)
- (2) 6 mm (0.236 in)
- (3) Special Tool

For preventing wind noise, adjust the glass at the position where tip of gusset is raised up a little.

(A) 0 — 1.5 mm (0 — 0.059 in)

8) After stabilizer adjustment, carry out the glass crimp adjustment. First, visually ensure positional relationship between retainer & molding and glass of the roof side, and then begin with rear sash adjustment. Set the ST on glass, and then adjust two adjusting bolts alternately step by step to obtain dimensions shown below (cross-section A).

ST 61299AE000 SPACER (For front door glass of thickness 5 mm (0.197 in))

**NOTE:**

If two nuts are loosened at the same time, sash moves back and forth. Therefore, when one nut is adjusted, leave the other secured.

9) Make the same adjustment of two adjusting bolts of rear sash.

- (1) 2.7 — 4.3 mm (0.106 — 0.169 in)
- (2) 6 mm (0.236 in)
- (3) Special Tool

## Front Door Glass

### GLASS/WINDOWS/MIRRORS

#### NOTE:

Do not tilt the sash bracket to inner panel during adjustment. Otherwise smooth regulator operation cannot be achieved.

- (1) Sash bracket
- (2) Rear sash
- (3) Adjust a line parallel
- (4) Sash
- (5) Inner panel

10) Make adjustment of front sash in the same manner as that of rear sash.

#### NOTE:

Although front and rear sashes must, as a rule, be adjusted in the same manner, in some door installation, the adjustment in a different manner may be required. However, adjustment of one sash to the maximum amount and the other to the minimum amount is not permitted. Such adjustment may result in application of excessive load to regulator.

11) After adjustments, tighten the nuts.

12) After adjustment to glass, close the door. If there is a gap between outer lip of gusset and glass surface, adjust the gap with adjusting bolt (A) in lower fitting part of the gusset to prevent generation of wind noise.

13) During adjustments, loosen the other three clamping bolts.

14) After adjustment, tighten the bolts and nuts.

## 5. Front Regulator and Motor Assembly

### A: REMOVAL

- 1) Remove the door glass. <Ref. to GW-11, REMOVAL, Front Door Glass.>
- 2) Loosen the nuts to remove the rear sash.

- 3) Disconnect the motor connector.
- 4) Loosen the four bolts and two nuts to remove the regulator assembly.

- 5) Loosen the screw to remove motor assembly.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the front door glass. <Ref. to GW-12, ADJUSTMENT, Front Door Glass.>

#### Tightening torque:

Refer to **COMPONENT** in *General Description*. <Ref. to GW-4, **FRONT DOOR GLASS, COMPONENT**, *General Description*.>

### C: INSPECTION

- 1) Make sure the power window motor rotates properly when battery voltage is applied to the terminals of motor connector.
- 2) Change polarity of battery connections to terminals to ensure the motor rotates in reverse direction.

# Remote Control Mirror System

GLASS/WINDOWS/MIRRORS

---

## 6. Remote Control Mirror System

### A: WIRING DIAGRAM

<Ref. to WI-150, Remote Control Mirror System.>

### B: INSPECTION

| Symptom  | Repair order   |
|--|--|
| All functions do not operate.                  | (1) Fuse (F/B No. 1) (F/B No. 4) (F/B No. 19)<br>(2) Mirror switch<br>(3) Wiring harness |
| One side of the mirror motor does not operate. | (1) Mirror switch<br>(2) Mirror motor<br>(3) Wiring harness                              |
| Mirror heater does not operate.                | (1) Mirror switch<br>(2) Mirror heater<br>(3) Wiring harness                             |

## 7. Scalp Cap

### A: REPLACEMENT

- 1) Turn the mirror downward.
- 2) Insert a thin screw driver, push the clip part of scalp cap, and remove the scalp cap.

- 3) Insert the claw at the bottom of scalp cap into outer mirror.

- 4) Install the scalp cap securely.

# Outer Mirror Assembly

GLASS/WINDOWS/MIRRORS

## 8. Outer Mirror Assembly

### A: REMOVAL

- 1) Remove the door trim. <Ref. to EI-41, REMOVAL, Front Door Trim.>
- 2) Remove the mirror gusset cover.

(1) Hook pawl

### C: INSPECTION

Check to ensure that the outer mirror moves properly when battery voltage is applied to terminals.

- Mirror heater not-equipped model:

- 3) Disconnect the outer mirror connector.
- 4) Remove the screws to remove the outer mirror assembly.

### B: INSTALLATION

Install in the reverse order of removal.

| Switch position | Terminal No.    |
|-----------------|-----------------|
| OFF             | —               |
| UP              | 4 (+) and 6 (-) |
| DOWN            | 6 (+) and 4 (-) |
| LEFT            | 5 (+) and 6 (-) |
| RIGHT           | 6 (+) and 5 (-) |

If NG, replace the outer mirror.

- Mirror heater equipped model:

| Switch position | Terminal No.    |
|-----------------|-----------------|
| OFF             | —               |
| UP              | 6 (+) and 8 (-) |
| DOWN            | 8 (+) and 6 (-) |
| LEFT            | 7 (+) and 8 (-) |
| RIGHT           | 8 (+) and 7 (-) |

If NG, replace the outer mirror.

## 9. Outer Mirror

### A: REPLACEMENT

- 1) Remove the outer mirror assembly. <Ref. to GW-18, REMOVAL, Outer Mirror Assembly.>
- 2) Warm the area around the mirror holder (A) with a hair drier until the edges of the mirror holder become soft (about 2 or 3 minutes with a 1,000 W drier).
- 3) Use a flat tip screwdriver without sharp edges to lift the mirror out of the mirror holder (A).

- 4) Disconnect the mirror heater connector. (Model with mirror heater)
- 5) Warm the area around the mirror holder with a hair drier until the edges of the mirror holder become soft (about 2 or 3 minutes with a 1,000 W drier).
- 6) Connect the mirror heater connector. (Model with mirror heater)
- 7) Remove the backing of the new double-stick tape, and push the mirror in to install it.

#### NOTE:

Unless the mirror holder is warmed sufficiently, the mirror holder edges may be damaged or the mirror cracked.

## 10. Remote Control Mirror Switch

### A: REMOVAL

Refer to Power Window Control Switch for removal procedure, because the remote control mirror switch is installed in power window control switch panel. <Ref. to GW-9, REMOVAL, Power Window Control Switch.>

### B: INSTALLATION

Refer to Power Window Control Switch for installation procedure, because the remote control mirror switch is installed in power window control switch panel. <Ref. to GW-9, INSTALLATION, Power Window Control Switch.>

### C: INSPECTION

Move the rearview mirror switch to each position and check continuity between terminals.

#### Change over switch right position:

| Switch position | Terminal No.     | Standard       |
|-----------------|------------------|----------------|
| OFF             | —                | More than 1 MΩ |
| UP              | 8 and 3, 6 and 7 | Less than 1 Ω  |
| DOWN            | 8 and 6, 3 and 7 | Less than 1 Ω  |
| LEFT            | 8 and 2, 6 and 7 | Less than 1 Ω  |
| RIGHT           | 8 and 6, 2 and 7 | Less than 1 Ω  |

#### Change over switch left position:

| Switch position | Terminal No.     | Standard       |
|-----------------|------------------|----------------|
| OFF             | —                | More than 1 MΩ |
| UP              | 8 and 4, 6 and 7 | Less than 1 Ω  |
| DOWN            | 8 and 6, 4 and 7 | Less than 1 Ω  |
| LEFT            | 8 and 5, 6 and 7 | Less than 1 Ω  |
| RIGHT           | 8 and 6, 5 and 7 | Less than 1 Ω  |

If NG, replace the switch.

## 11. Rear Door Glass

### A: REMOVAL

- 1) Remove the rear door trim. <Ref. to EI-42, REMOVAL, Rear Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Rear Sealing Cover.>
- 3) Remove the stabilizer.

- 4) Remove the front end and rear end of weather strip.

- 5) Remove the two screws to remove the weather strip outer.

- 6) Operate the power window switch to move the glass to position shown in the figure, and then remove two nuts from service holes.

- 7) Remove the two rear sash installation nuts, and then move the rear sash backward.
- 8) Remove the glass.

**CAUTION:**  
Avoid impact and damage to the glass.

### B: INSTALLATION

- 1) Install in the reverse order of removal.

#### NOTE:

Make sure the slider (front) and roller (rear) of glass stay is placed securely in front and rear sash.

- 2) Adjust the rear door glass. <Ref. to GW-23, ADJUSTMENT, Rear Door Glass.>

#### Tightening torque:

Refer to **COMPONENT** in **General Description**. <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>

## C: ADJUSTMENT

**NOTE:**

The rear door glass, as a rule, should be adjusted in the same manner as front door glass, although they are different in dimension. Special notes for the rear glass are given below.

1) Adjust the glass position using the following dimensions as a guide line.

(1) 12 mm (0.472 in)

**NOTE:**

- If the dimensions are smaller than the given dimensions, glass may get caught in weather strip during lifting/lowering operation. In the worst case, it may cause the glass not to be opened fully.
- After adjustment, move the glass up and down to check whether it is caught.

2) Set the ST on glass, and then adjust the contact degree of glass using the following dimensions as a guide line.

ST 61299AE010 SPACER (For rear door glass of thickness 4 mm (0.157 in))

(1) 3.7 — 5.3 mm (0.146 — 0.209 in)

(2) 6 mm (0.236 in)

(3) Special Tool

**NOTE:**

- If the contact degree of rear glass is higher than necessary, glass may get caught in weather strip of center pillar corner, resulting in early wear of weather strip. Be careful when adjusting.

## 12. Rear Regulator and Motor Assembly

### A: REMOVAL

- 1) Remove the rear door glass. <Ref. to GW-22, REMOVAL, Rear Door Glass.>
- 2) Remove the front sash.
- 3) Disconnect the motor connector.
- 4) Remove the four bolts and two nuts to remove regulator assembly.

- 5) Remove the screws to remove motor assembly.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the rear door glass. <Ref. to GW-23, ADJUSTMENT, Rear Door Glass.>

#### **Tightening torque:**

**Refer to COMPONENT in General Description. <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>**

### C: INSPECTION

- 1) Make sure that the power window motor rotates properly when battery voltage is applied to terminals of motor connector.
- 2) Change polarity of battery connections to terminals to ensure that the motor rotates in reverse direction.

## 13. Windshield Glass

### A: REMOVAL

#### 1. USING WINDSHIELD KNIFE

- 1) Disconnect the wiper deicer connector. (Model with wiper deicer)
- 2) Remove the cowl panel. <Ref. to EI-34, REMOVAL, Cowl Panel.>
- 3) Remove the glass molding.
- 4) Tape the body side of the circumference of windshield glass for protection.
- 5) Apply sufficient amount of soapy water to the adhesive layer.
- 6) Insert the windshield knife into the adhesive layer.
- 7) While holding the knife edge and windshield glass edge at a right angle, move the windshield knife in parallel to the windshield glass edge along face and edge of windshield glass to cut the adhesive layer.

#### NOTE:

- Do not twist the windshield knife.
- Cutting of adhesive layer shall be started with wider gap between windshield glass and body.

- (1) Protective tape
- (2) Locating pin
- (3) Windshield knife

- Because the locating pins are bonded to corners of glass, use piano wire to cut the pin.

- (1) Locating pin
- (2) Body panel
- (3) Windshield glass

#### 2. USING PIANO WIRE

- 1) Disconnect the wiper deicer connector. (Model with wiper deicer)
- 2) Remove the cowl panel. <Ref. to EI-34, REMOVAL, Cowl Panel.>
- 3) Remove the glass molding.
- 4) Tape the body side of circumference of windshield glass for protection.
- 5) Make a hole in adhesive layer using a drill or knife.
- 6) Pass the piano wire through hole, and attach securely both the piano wire ends to pieces of wood.

- 7) Pull the wire ends alternately to cut off the adhesive layer.

#### CAUTION:

- Do not tightly pull the piano wire against the windshield glass edge.
- Be careful not to damage the interior and exterior parts.
- Do not cross piano wires. Otherwise they may be cut.
- After removing the area near instrument panel, attach a protection plate to it. Use extreme care when removing.

# Windshield Glass

GLASS/WINDOWS/MIRRORS

## B: INSTALLATION

1) Clean the external circumference of windshield glass with alcohol or white gasoline.

2) Remove the adhesive layer on the body using cutter knife to obtain smooth face 2 mm (0.08 in) thick.

### CAUTION:

**Be careful not to damage the body and paint surface.**

- (1) Adhesive
- (2) 2 mm (0.08 in)
- (3) Dam rubber
- (4) Glass

3) Clean the body with alcohol or white gasoline to remove thoroughly chips, dusts, and dirt from body face.

- (1) Locating pin
- (2) Dam rubber
- (3) Fastener
- (4) 15 mm (0.591 in)
- (5) 11 mm (0.433 in)

4) Install the dam rubber.

5) Fit the mark (B) on molding to the notch (A) of glass side, and install the molding to the whole glass edge.

GW-00237

6) Apply two kinds of primer to the adhesive layer of glass using sponge.

**Glass primer:**

**Dow Automotive**

**ESSEX U-401 (for undercoat) and ESSEX U-402 (for overcoat) or equivalent**

7) Apply primer to adhesive layer of body.

**Painted surface primer:**

**Dow Automotive**

**ESSEX U-413 or equivalent**

**NOTE:**

- Primer once attached to painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such areas.
- Let the primer dry for about ten minutes before installing the glass.

- Do not touch the surface coated with primer.

GW-00073

- (1) Application of primer
- (2) Glass side
- (3) Body side

8) Cut off the cartridge nozzle tip as shown and set it in sealant gun.

GW-00238

- (1) 10 mm (0.39 in)
- (2) 15 mm (0.59 in)

9) Apply adhesive to the glass end surface as shown.

**Adhesive:**

**Dow Automotive**

**ESSEX U-400HV or equivalent**

GW-00239

- (1) 12 — 15 mm (0.47 — 0.59 in)

## Windshield Glass

### GLASS/WINDOWS/MIRRORS

---

10) Fit the locating pins using suction rubber cup to install the windshield glass.

- 11) Lightly press the windshield glass for tight fit.  
12) Make flush the adhesive surface jugged out using spatula.  
13) Connect the wiper deicer connector. (Model with wiper deicer)  
14) After completion of all work, allow the vehicle to stand for about 24 hours.

#### NOTE:

- When the door is opened/closed after glass is bonded, always lower the door glass and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and time the vehicle must be left standing before driving after bonding, follow the instructions or instruction manual from adhesive manufacturer.

15) After curing of adhesive, pour water on external surface of vehicle to check that there are no water leaks.

#### NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

16) Install the cowl panel. <Ref. to EI-34, INSTALLATION, Cowl Panel.>

## 14.Rear Gate Glass

### A: REMOVAL

- 1) Remove the rear wiper motor. <Ref. to WW-18, REMOVAL, Rear Wiper Motor.>
- 2) Disconnect the electrical connector from rear defogger terminal.
- 3) Remove the glass in the same procedure as for windshield glass. <Ref. to GW-25, REMOVAL, Windshield Glass.>

### B: INSTALLATION

- 1) Apply adhesive in the same procedure as for windshield glass. <Ref. to GW-26, INSTALLATION, Windshield Glass.>
- 2) Insert the glass locating pin into the rear gate hole, and after pushing on the area around the locating pin to secure it, push lightly all around the area to seal it.
- 3) About one hour after installation, conduct a water leak test.

#### NOTE:

- When the door is opened/closed after glass is bonded, always lower the door glass and then open/close it carefully.
  - Move the vehicle slowly.
  - For minimum drying time and time the vehicle must be left standing before driving after bonding, follow the instructions or instruction manual from adhesive manufacturer.
  - When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.
- 5) Connect the rear defogger terminals.
  - 6) Install the rear wiper. <Ref. to WW-18, INSTALLATION, Rear Wiper Motor.>

- (1) Upper side
- (2) Molding
- (3) Glass
- (4) Adhesive
- (5) Lower side
- (6) Glass
- (7) Molding
- (8) Adhesive

- 4) After completion of all work, allow the vehicle to stand for about 24 hours.

## 15. Rear Window Glass

### A: REMOVAL

- 1) Disconnect the electrical connectors from rear defogger terminals and antenna terminal.
- 2) Remove the glass in the same procedure as for windshield glass. <Ref. to GW-25, REMOVAL, Windshield Glass.>

### B: INSTALLATION

- 1) Install the dam rubber.

- (1) Locating pin
- (2) Dam rubber
- (3) Fastener
- (4) 14.5 mm (0.571 in)
- (5) 8 mm (0.315 in)
- (6) 22 mm (0.866 in)
- (7) R20

- 2) Install the glass in the same procedure as for windshield glass. <Ref. to GW-26, INSTALLATION, Windshield Glass.>
- 3) Connect the rear defogger terminals and antenna terminal.
- 4) After completion of all work, allow the vehicle to stand for about 24 hours.

#### NOTE:

- When the door is opened/closed after glass is bonded, always lower the door glass and then open/close door carefully.
- Move the vehicle slowly.

- For minimum drying time and time the vehicle must be left standing before driving after bonding, follow the instructions or instruction manual from adhesive manufacturer.

- 5) After curing of adhesive, pour water on external surface of vehicle to check that there are no water leaks.

#### NOTE:

When a vehicle is returned to user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

## 16.Rear Window Defogger System

### A: WIRING DIAGRAM

<Ref. to WI-148, Rear Defogger System.>

### B: INSPECTION

| Symptom                                | Repair order   |
|--|--|
| Rear window defogger does not operate. | (1) Fuse (M/B No. 1) (F/B No. 17)<br>(2) Rear defogger relay<br>(3) Rear defogger timer<br>(4) Defogger switch<br>(5) Rear defogger condenser<br>(6) Defogger wire<br>(7) Wiring harness |

# Rear Window Defogger

GLASS/WINDOWS/MIRRORS

## 17.Rear Window Defogger

### A: INSPECTION

#### CAUTION:

When wiping stain on glass off with cloth, use a dry and soft cloth and move it along the heat wire to avoid damage to heat wire.

- 1) Turn the ignition switch to ON.
- 2) Turn the defogger switch to ON.
- 3) Wrap the tips of tester pins with aluminum foil to avoid damage to heat wire.

- (1) Tester probe
- (2) Aluminum foil
- (3) Heat wire
- (4) Press

- 4) Measure the voltage at wire center with DC voltmeter.

**Standard voltage:**  
**Approx. 6 V**

- (1) Wire center

| Voltage             | Criteria |
|---------------------|----------|
| Approx. 6 V         | OK       |
| Approx. 12 V or 0 V | Broken   |

#### NOTE:

- If the measured value is 12 volts, heat wire is open between wire center and positive (+) end.
- If zero volt, heat wire is open between wire center and ground.

- 5) Apply positive lead of voltmeter to positive terminal of voltmeter, and then move the negative lead along the wire up to negative terminal end. If voltage changes from zero to several volts during movement of lead, heat wire is open at the voltage change point.

### B: REPAIR

- 1) Clean the broken portion with alcohol or white gasoline.
- 2) Mask both side of wire with thin film.
- 3) Apply conductive silver composition (DUPONT No. 4817) to broken portion.

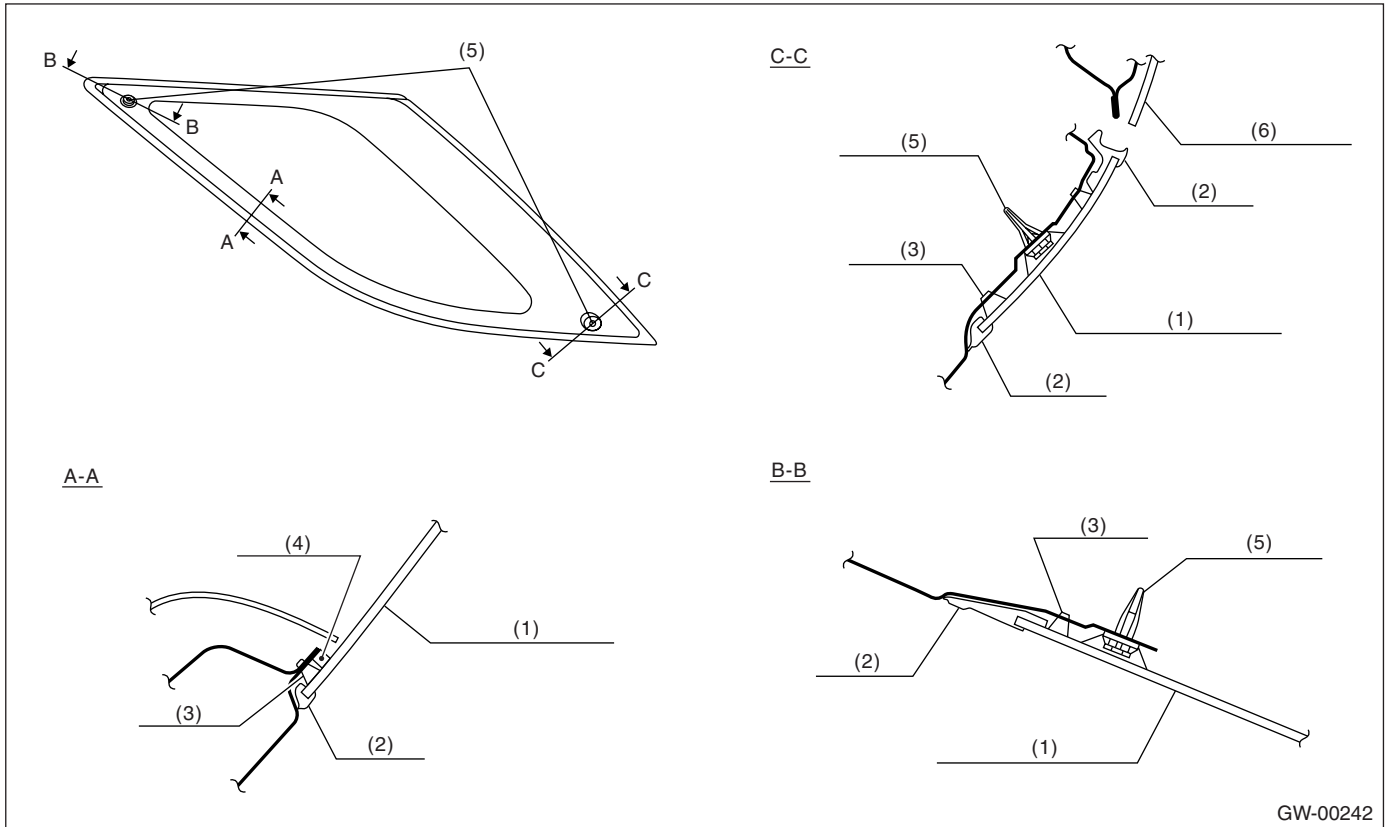

- (1) Broken portion
- (2) Masking thin film
- (3) Broken wire
- (4) Conductive silver composition (DUPONT No. 4817)

- 4) After repair, check the wire.

## 18.Rear Quarter Glass

### A: REMOVAL

Remove the glass in the same procedure as for windshield glass. <Ref. to GW-25, REMOVAL, Windshield Glass.>

GW-00242

- |                        |                |                     |
|------------------------|----------------|---------------------|
| (1) Rear quarter glass | (3) Adhesive   | (5) Locating pin    |
| (2) Molding            | (4) Dam rubber | (6) Rear gate glass |

### B: INSTALLATION

1) Cut off the nozzle tip as shown in the figure.

GW-00542

- |                                 |
|---------------------------------|
| (1) Locating pin                |
| (2) Dam rubber                  |
| (3) Adhesive                    |
| (4) Molding                     |
| (5) 12 — 15 mm (0.47 — 0.59 in) |
| (6) 15 mm (0.59 in)             |
| (7) 10 mm (0.39 in)             |

2) Install the glass in the same procedure as for windshield glass. <Ref. to GW-26, INSTALLATION, Windshield Glass.>

3) After completion of all work, allow the vehicle to stand for about 24 hours.

#### NOTE:

- When the door is opened/closed after glass is bonded, always lower the door glass and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and time the vehicle must be left standing before driving after bonding, follow the instructions or instruction manual from adhesive manufacturer.

4) After curing of adhesive, pour water on external surface of vehicle to check that there are no water leaks.

#### NOTE:

When a vehicle is returned to user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

### **19.Sun Roof Glass**

#### **A: REMOVAL**

<Ref. to SR-5, REMOVAL, Glass Lid.>

#### **B: INSTALLATION**

<Ref. to SR-5, INSTALLATION, Glass Lid.>

#### **C: ADJUSTMENT**

<Ref. to SR-5, ADJUSTMENT, Glass Lid.>

## 20.Rearview Mirror

### A: REMOVAL

#### NOTE:

The spring cannot be reused. Prepare a new spring before removal.

1) Turn the mirror base 90° clockwise or counter-clockwise to remove it.

2) Remove the spring from mirror base.

#### CAUTION:

**Be careful not to damage the mirror surface.**

3) If the mirror base is damaged, remove the mirror base using piano wire or spatula, etc.

#### CAUTION:

**Be careful not to damage the windshield glass.**

### B: INSTALLATION

1) If removing the mirror base, remove the remaining adhesive thoroughly, and then fit the mirror base to mark on windshield glass to install.

#### Adhesive:

**REPAIR KIT IN MR (Part No. 65029FC000) or equivalent**

2) Verify that the mirror base is adhered securely, and then install the spring.

3) Install in the reverse order of removal.

### C: INSPECTION

Make sure the mirror is not damaged.

Make sure the spring is not deteriorated.

### 21. Wiper Deicer System

#### **A: INSPECTION**

Refer to INSPECTION under Rear Window Defogger. <Ref. to GW-32, INSPECTION, Rear Window Defogger.>

#### **B: REPAIR**

Refer to REPAIR under Rear Window Defogger. <Ref. to GW-32, REPAIR, Rear Window Defogger.>

## 22. Wiper Deicer Switch

### A: REMOVAL

Remove the driver side lower cover, and then remove the wiper deicer switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Move wiper deicer switch to each position and check continuity between terminals.

| Switch position | Terminal No. | Standard       |
|-----------------|--------------|----------------|
| OFF             | 3 and 5      | More than 1 MΩ |
| ON              | 3 and 5      | Less than 1 Ω  |

If NG, replace the switch.

## BODY STRUCTURE

### 3. Datum Dimensions

#### A: MEASUREMENT

Refer to LOCATION for details on measurement points. <Ref. to BS-3, LOCATION, Datum Points.>

#### NOTE:

- Using a tram tracking gauge, measure all the dimensions.
- When using a tape measure, carefully measure dimensions without letting the tape measure sag or twist.
- Measure the linear dimensions between cores of holes.
- Suffixes “RH” and “LH” indicate right-hand and left-hand.

(1) Tram tracking gauge

- Measure at the center of the circle around the outside of the body panel.

- (1) Datum point
- (2) Body panel
- (3) Outside

### B: CAUTION

- Be careful not to damage the meters and instrument panel.
- Be careful not to damage the meter glasses.
- Make sure that electrical connector is connected securely.
- After installation, make sure that each meter operates normally.
- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Do not apply excessive force to the printed circuit.
- Do not drop or otherwise apply impact.

### C: PREPARATION TOOL

#### 1. GENERAL TOOL

| TOOL NAME      | REMARKS                                    |
|----------------|--|
| Circuit tester | Used for measuring resistance and voltage. |

## 2. Combination Meter System

### A: WIRING DIAGRAM

#### 1. COMBINATION METER

<Ref. to WI-151, WIRING DIAGRAM, Combination Meter System.>

#### 2. OUTSIDE TEMPERATURE INDICATOR

<Ref. to WI-163, WIRING DIAGRAM, Outside Temperature Display System.>

### B: INSPECTION

#### CAUTION:

**When measuring voltage and resistance of the ECM, TCM, or each sensor, use a tapered pin with a diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Do not insert the pin more than 2 mm (0.08 in).**

## 2. CHECK POWER SUPPLY AND GROUND CIRCUIT

| Step  | Check                                     | Yes  | No   |
|---|---|--|--|
| <b>1 CHECK POWER SUPPLY FOR COMBINATION METER.</b><br>1) Remove the combination meter. <Ref. to IDI-10, REMOVAL, Combination Meter.><br>2) Disconnect the combination meter harness connector.<br>3) Turn the ignition switch to ON.<br>4) Measure the voltage between combination meter connector and chassis ground.<br><b>Connector &amp; terminal</b><br><i>(i11) No. 7 (+) — Chassis ground (-):</i> | Is the voltage more than 10 V?            | Go to step 2.  | Check the harness for open or short between ignition switch and combination meter. |
| <b>2 CHECK POWER SUPPLY FOR COMBINATION METER.</b><br>Measure the voltage between combination meter connector and chassis ground.<br><b>Connector &amp; terminal</b><br><i>(i11) No. 10 (+) — Chassis ground (-):</i>   | Is the voltage more than 10 V?            | Go to step 3.  | Check the harness for open or short between fuse and combination meter.            |
| <b>3 CHECK GROUND CIRCUIT OF COMBINATION METER.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance of harness between combination meter connector and chassis ground.<br><b>Connector &amp; terminal</b><br><i>(i11) No. 6 — Chassis ground:</i>   | Is the resistance less than 10 $\Omega$ ? | Except STI model: Replace the combination meter printed circuit. STI model: Replace the meter main assembly. | Repair the wiring harness.   |

## 3. CHECK VEHICLE SPEED SENSOR

| Step   | Check   | Yes   | No  |
|--|---|---|---|
| <b>1 CHECK VEHICLE SPEED SENSOR.</b><br>1) Lift-up the vehicle.<br>2) Remove the combination meter with harness connector.<br>3) Drive the vehicle at a speed greater than 20 km/h (12 MPH).<br><b>Warning:</b><br><b>Be careful not to get caught in the running wheels.</b><br>4) Measure the voltage between combination meter connector and chassis ground.<br><b>Connector &amp; terminal</b><br><i>(i11) No. 2 (+) — Chassis ground (-):</i> | Is the voltage less than 1 V $\leftrightarrow$ more than 5 V? | Except STI model: Check the speedometer. <Ref. to IDI-13, REMOVAL, Speedometer.><br>STI model: Replace the meter main assembly. | Go to step 2.   |
| <b>2 CHECK VEHICLE SPEED SENSOR POWER SUPPLY.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the vehicle speed sensor harness connector.<br>3) Turn the ignition switch to ON.<br>4) Measure the voltage between vehicle speed sensor connector and engine ground.<br><b>Connector &amp; terminal</b><br><i>(B17) No. 3 (+) — Chassis ground (-):</i>   | Is the voltage more than 10 V?                                | Go to step 3.   | Check the harness for open or short between ignition switch and vehicle speed sensor. |

INSTRUMENTATION/DRIVER INFO

| Step   | Check                                     | Yes                               | No                         |
|--|---|-----------------------------------|----------------------------|
| <b>3</b><br><b>CHECK HARNESS BETWEEN VEHICLE SPEED SENSOR AND ENGINE GROUND.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between vehicle speed sensor connector and engine ground.<br><b>Connector &amp; terminal</b><br><b>(B17) No. 2 — Chassis ground:</b>  | Is the resistance less than 10 $\Omega$ ? | Go to step 4.                     | Repair the wiring harness. |
| <b>4</b><br><b>CHECK HARNESS BETWEEN VEHICLE SPEED SENSOR AND COMBINATION METER.</b><br>1) Disconnect the connector from combination meter.<br>2) Measure the resistance between vehicle speed sensor harness connector and combination meter harness connector.<br><b>Connector &amp; terminal</b><br><b>(B17) No. 1 — (i11) No. 2:</b> | Is the resistance less than 10 $\Omega$ ? | Replace the vehicle speed sensor. | Repair the wiring harness. |

## 4. CHECK TRANSMISSION CONTROL MODULE (TCM)

| Step  | Check   | Yes  | No   |
|---|---|--|--|
| <b>1</b><br><b>CHECK TCM SIGNAL.</b><br>1) Lift-up the vehicle.<br>2) Drive the vehicle faster than 10 km/h (6 MPH).<br><b>Warning:</b><br><b>Be careful not to get caught in the running wheels.</b><br>3) Measure the voltage between TCM connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B55) No. 21 (+) — Chassis ground (-):</b> | Is the voltage less than 1 V $\leftrightarrow$ more than 5 V? | Go to step 2.  | Check the TCM. <Ref. to 4AT(D)(diag)-2, Basic Diagnostic Procedure.> |
| <b>2</b><br><b>CHECK HARNESS BETWEEN TCM AND COMBINATION METER.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from TCM and combination meter.<br>3) Measure the resistance between TCM harness connector and combination meter harness connector.<br><b>Connector &amp; terminal</b><br><b>(B55) No. 21 — (i11) No. 2:</b>        | Is the resistance less than 10 $\Omega$ ?                     | Check the speed meter. <Ref. to IDI-13, REMOVAL, Speedometer.> | Repair the wiring harness.   |

# Combination Meter System

INSTRUMENTATION/DRIVER INFO

## 5. CHECK ENGINE CONTROL MODULE (ECM)

| Step  | Check                             | Yes  | No   |
|---|-----------------------------------|--|--|
| <b>1 CHECK ECM SIGNAL.</b><br>1) Start the engine.<br>2) Measure the voltage between ECM connector and engine ground.<br><b>Connector &amp; terminal</b><br><b>Except STI model:</b><br><i>(B136) No. 22 (+) — Chassis ground (-):</i><br><b>STI model:</b><br><i>(B134) No. 23 (+) — Chassis ground (-):</i>   | Is the voltage 0 ↔ 14 V or more?  | Go to step 2.  | Check the ECM.<br><Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.> or <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.> or <Ref. to EN(STI) section.> |
| <b>2 CHECK HARNESS BETWEEN COMBINATION METER AND ECM.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ECM and combination meter.<br>3) Measure the resistance between ECM harness connector and combination meter harness connector.<br><b>Connector &amp; terminal</b><br><b>Except STI model:</b><br><i>(B136) No. 22 — (i11) No. 5:</i><br><b>STI model:</b><br><i>(B134) No. 23 — (i11) No. 5:</i> | Is the resistance less than 10 Ω? | Except STI model: Check the tachometer. <Ref. to IDI-14, REMOVAL, Tachometer.> STI model: Replace the meter main assembly. | Repair the wiring harness.   |

## 6. CHECK FUEL LEVEL SENSOR

| Step  | Check   | Yes           | No                                 |
|---|---|---------------|------------------------------------|
| <b>1 CHECK FUEL LEVEL SENSOR.</b><br>1) Remove the fuel level sensor. <Ref. to FU(H4SO)-52, REMOVAL, Fuel Level Sensor.>, <Ref. to FU(H4DOTC)-60, REMOVAL, Fuel Level Sensor.> or <Ref. to FU(STI) section.><br>2) Measure the resistance between fuel level sensor terminals when setting the float to FULL and EMPTY position.<br><b>Terminals</b><br><b>No. 2 — No. 3:</b>                     | Is the resistance 0.5 to 2.5 Ω (FULL) and 50 to 52 Ω (EMPTY)? | Go to step 2. | Replace the fuel level sensor.     |
| <b>2 CHECK FUEL SUB LEVEL SENSOR.</b><br>1) Remove the fuel sub level sensor. <Ref. to FU(H4SO)-53, REMOVAL, Fuel Sub Level Sensor.>, <Ref. to FU(H4DOTC)-61, REMOVAL, Fuel Sub Level Sensor.> or <Ref. to FU(STI) section.><br>2) Measure the resistance between fuel sub level sensor terminals when setting the float to FULL and EMPTY position.<br><b>Terminals</b><br><b>No. 1 — No. 2:</b> | Is the resistance 0.5 to 2.5 Ω (FULL) and 42 to 44 Ω (EMPTY)? | Go to step 3. | Replace the fuel sub level sensor. |

# Combination Meter System

INSTRUMENTATION/DRIVER INFO

| Step   | Check                                     | Yes  | No                         |
|--|---|--|----------------------------|
| <b>3 CHECK HARNESS BETWEEN FUEL SUB LEVEL SENSOR AND COMBINATION METER.</b><br>1) Disconnect the connector from combination meter.<br>2) Measure the resistance between fuel sub level sensor harness connector terminal and combination meter harness connector terminal.<br><b>Connector &amp; terminal</b><br><b>Except STI model</b><br><b>(R59) No. 1 — (i12) No. 2:</b><br><b>STI model</b><br><b>(R59) No. 1 — (i12) No. 3:</b> | Is the resistance less than 10 $\Omega$ ? | Go to step 4.  | Repair the wiring harness. |
| <b>4 CHECK HARNESS BETWEEN FUEL LEVEL SENSOR AND FUEL SUB LEVEL SENSOR.</b><br>Measure the resistance between fuel level sensor harness connector terminal and fuel sub level sensor harness connector terminal.<br><b>Connector &amp; terminal</b><br><b>(R58) No. 3 — (R59) No. 2:</b>   | Is the resistance less than 10 $\Omega$ ? | Go to step 5.  | Repair the wiring harness. |
| <b>5 CHECK FUEL LEVEL SENSOR GROUND CIRCUIT.</b><br>Measure the resistance between fuel level sensor harness connector terminal and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(R58) No. 2 — Chassis ground:</b>   | Is the resistance less than 10 $\Omega$ ? | Except STI model: Check the fuel gauge. <Ref. to IDI-15, REMOVAL, Fuel Gauge.> STI model: Replace the meter main assembly. | Repair the wiring harness. |

## 7. CHECK ENGINE COOLANT TEMPERATURE SENSOR

| Step   | Check  | Yes  | No   |
|--|--|--|--|
| <b>1 CHECK ENGINE COOLANT TEMPERATURE SENSOR.</b><br>Check the engine coolant temperature sensor. <Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.> or <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.> or <Ref. to EN(STI) section.>   | Is the engine coolant temperature sensor OK? | Go to step 2.  | Replace the engine coolant temperature sensor. |
| <b>2 CHECK HARNESS BETWEEN ENGINE COOLANT TEMPERATURE SENSOR AND COMBINATION METER.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from engine coolant temperature sensor and combination meter.<br>3) Measure the resistance between engine coolant temperature sensor harness connector and combination meter harness connector.<br><b>Connector &amp; terminal</b><br><b>Except STI model:</b><br><b>(E8) No. 3 — (i12) No. 9:</b><br><b>STI model:</b><br><b>(E8) No. 3 — (i12) No. 11:</b> | Is the resistance less than 10 $\Omega$ ?    | Except STI model: Check the water temperature gauge. <Ref. to IDI-16, REMOVAL, Water Temperature Gauge.> STI model: Replace the meter main assembly. | Repair the wiring harness.                     |

# Combination Meter

## 3. Combination Meter

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Set the tilt steering at lowest position.
- 3) Remove the screws and detach the meter visor.

(A) Hook

- 4) Remove the screws of combination meter and pull out the meter toward you.

- 5) Disconnect the connector in the upper area of combination meter to remove the meter.

### CAUTION:

- Be careful not to damage the meter and instrument panel.
- Pay particular attention to avoid damaging the meter glass.

### B: INSTALLATION

Install in the reverse order of removal.

### CAUTION:

- Make sure that electrical connector is connected securely.
- Make sure that each meter operates normally.

### C: DISASSEMBLY

#### 1. EXCEPT STI MODEL

### CAUTION:

Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.

- 1) Disengage the claw (F) to remove the inner case (B) from back cover (A).
- 2) Disengage the claw (G) to remove the meter glass (E), reflector (D), and window plate (C) from inner case (B).

3) Pull up the claw (A) in portion (B) of combination meter printed circuit (C) with combination pliers. Push out the speedometer and tachometer assembly (D) and fuel gauge and water temperature gauge assembly (E) using hole (F).

4) Pull up the claw in center of combination meter printed circuit (C), and remove the printed circuit from case (G).

## 2. STI MODEL

### CAUTION:

- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Do not disassemble the meter main assembly for STI model.

Disengage the claw (E) to remove the meter glass (D), reflector (C), and window plate (B) from meter main assembly (A).

# Combination Meter

INSTRUMENTATION/DRIVER INFO

## 3. BULB REPLACEMENT

### • EXCEPT STI MODEL

- (1) Tachometer (Non-turbo model) or speedometer (Turbo model)
- (2) Speedometer and tachometer
- (3) Turn signal indicator light (RH)
- (4) HI-beam indicator light
- (5) Speedometer (Non-turbo model) or tachometer (Turbo model)
- (6) Cruise set indicator light
- (7) Cruise indicator light
- (8) Turn signal indicator light (LH)
- (9) Brake fluid and parking brake warning light
- (10) Fuel gauge
- (11) Temperature gauge
- (12) LCD (Outside temperature indicator)
- (13) Charge warning light
- (14) LCD (Odometer and tripmeter) (Non-turbo model)
- (15) LCD (Odometer and tripmeter) (Turbo model)

### • STI MODEL

Replace the meter main assembly of STI model if it does not function properly, because the warning light and indicator light are made from LED.

## D: ASSEMBLY

Assemble in the reverse order of disassembly.

## 4. Speedometer

### A: REMOVAL

#### NOTE:

Main meter assembly of STI model cannot be disassembled. Do not remove or inspect the speedometer as a single unit.

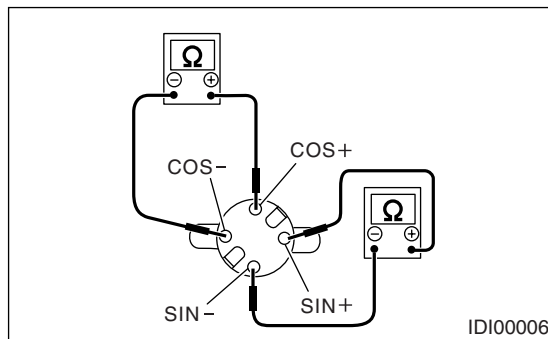

Disassemble the combination meter, and then remove the speedometer and tachometer assembly.  
<Ref. to IDI-10, DISASSEMBLY, Combination Meter.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the speedometer resistance.

| Terminal                | Resistance |
|-------------------------|------------|
| Terminals SIN+ and SIN- | 200±8 Ω    |
| Terminals COS+ and COS- | 200±8 Ω    |

If NG, replace the speedometer and tachometer assembly.

If OK, replace the combination meter printed circuit.

## 5. Tachometer

### A: REMOVAL

**NOTE:**

Main meter assembly of STI model cannot be disassembled. Do not remove or inspect the tachometer as a single unit.

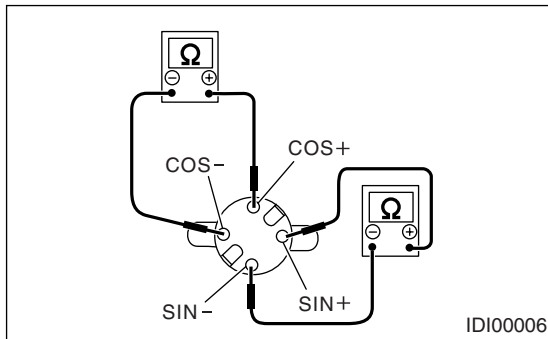

Disassemble the combination meter, and then remove the speedometer and tachometer assembly. <Ref. to IDI-10, DISASSEMBLY, Combination Meter.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the tachometer resistance.

| Terminal                | Resistance |
|-------------------------|------------|
| Terminals SIN+ and SIN- | 200±8 Ω    |
| Terminals COS+ and COS- | 200±8 Ω    |

If NG, replace the speedometer and tachometer assembly.

If OK, replace the combination meter printed circuit.

## 6. Fuel Gauge

### A: REMOVAL

**NOTE:**

Main meter assembly of STI model cannot be disassembled. Do not remove or inspect the fuel gauge as a single unit.

Disassemble the combination meter, and then remove the water temperature gauge and fuel gauge assembly. <Ref. to IDI-10, DISASSEMBLY, Combination Meter.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the fuel gauge resistance.

| Terminal               | Resistance |
|------------------------|------------|
| Terminals IGN and GND  | 170±10 Ω   |
| Terminals IGN and UNIT | 35±10 Ω    |
| Terminals UNIT and GND | 136±10 Ω   |

If NG, replace the water temperature gauge and fuel gauge assembly.

If OK, replace the combination meter printed circuit.

# Water Temperature Gauge

INSTRUMENTATION/DRIVER INFO

## 7. Water Temperature Gauge

### A: REMOVAL

#### NOTE:

Main meter assembly of STI model cannot be disassembled. Do not remove or inspect the water temperature gauge as a single unit.

Disassemble the combination meter, and then remove the tachometer and water temperature gauge and fuel gauge assembly. <Ref. to IDI-10, DISASSEMBLY, Combination Meter.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the water temperature gauge resistance.

| Terminal               | Resistance          |
|------------------------|---------------------|
| Terminals IGN and GND  | $208 \pm 10 \Omega$ |
| Terminals IGN and UNIT | $56 \pm 10 \Omega$  |
| Terminals UNIT and GND | $264 \pm 10 \Omega$ |

If NG, replace the water temperature gauge and fuel gauge assembly.

If OK, replace the combination meter printed circuit.

## 8. Ambient Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the ambient sensor connector.
- 3) Remove the ambient sensor from radiator lower panel.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the ambient sensor resistance.

| Terminal | Resistance                  |
|----------|-----------------------------|
| 1 and 2  | 2.2 k $\Omega$ /25°C (77°F) |

If NG, replace the ambient sensor.

# General Description

## SEATS

---

### **B: CAUTION**

- If the seat cushion cover has been removed or replaced, be sure to perform the system calibration for occupant detection system after installing seat to the vehicle. <Ref. to OD(diag)-19, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

Failure to do so may cause improper operation of occupant detection system.

- Never remove the occupant detection control module of occupant detection system (passenger's side only) or pressure sensor from seat cushion frame since the control module and occupant detection sensor are fixed to the seat cushion frame.
- Do not replace the seat cushion pad as a single unit. Be sure to replace the seat cushion pad and frame assembly together. Since the seat cushion pad and cushion frame have been adjusted at factory, installing them together with parts for other vehicle or ones of other set may cause improper operation of occupant detection system.
- If the seat cushion cover has been removed, be sure to replace wire on the seat cushion cover side with a new one. (Passenger's seat)
- Do not remove the seat position sensor from seat rail. (Driver's seat)
- When removing the front seat, follow cautions given in the airbag section. <Ref. to AB-3, CAUTION, General Description.>

### **C: PREPARATION TOOL**

#### **1. GENERAL TOOL**

| TOOL NAME        | Remarks                       |
|------------------|-------------------------------|
| Long nose pliers | Used for removing hog ring.   |
| Hog ring pliers  | Used for installing hog ring. |

## 2. Front Seat

### A: REMOVAL

1) Disconnect the ground cable from battery.

#### CAUTION:

The airbag system is fitted with a backup power source. If the airbag system is serviced within 20 seconds after the ground cable is disconnected, it may inflate.

2) While pressing the headrest lock button, remove the headrest.

3) Tilt forward the backrest.

4) Move the seat to full front end.

5) Remove the bolt cover at rear end of slide rail.

6) Remove the two bolts at rear side of seat rail.

7) Move the seat to full rear end.

8) Remove the two bolts at front side of seat rail.

9) Disconnect the connector under seat.

- Seat position sensor connector (Driver's seat)
- Seat belt buckle switch connector (Driver's seat)
- Occupant detection control module harness connector (Passenger's seat)
- Side airbag connector
- Seat heater connector (with seat heater)

(1) Driver's seat

(2) Passenger's seat

10) Remove the front seat from vehicle.

# Front Seat

## SEATS

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

After driver's seat installation, check that the seat position sensor LH operates normally using Subaru Select Monitor.

<Ref. to AB(diag)-27, STATUS DATA DISPLAY, OPERATION, Subaru Select Monitor.>

#### Tightening torque:

Refer to **COMPONENT** in *General Description*. <Ref. to SE-2, FRONT SEAT, COMPONENT, General Description.>

### C: DISASSEMBLY

#### CAUTION:

Refer to **CAUTION** in *General Description* before starting the work. <Ref. to SE-6, CAUTION, General Description.>

#### 1. STANDARD SEAT

1) Remove the seat from vehicle. <Ref. to SE-7, REMOVAL, Front Seat.>

2) Remove the seat lifter cover using a flat tip screwdriver or equivalent, and then loosen the inside bolt to remove seat lifter lever.

3) Remove the reclining lever and seat hinge outer cover.

4) Remove the seat hinge inner cover.

5) Remove the inner belt.

(1) Driver's seat

(2) Passenger's seat

6) Remove two bolts from reclining hinge on each side.

7) Remove the hook at the bottom-back side of backrest.

8) Open the zipper behind of backrest.

9) Remove the hog rings (A) of backrest cover.

10) Remove the hog rings (A) which secure the backrest cover and backrest pad.

11) Open the zipper behind of backrest cover, and then remove the hog rings (A) at the side-inner part of backrest from backrest frame.

# Front Seat

## SEATS

12) Remove the headrest bushings.

**NOTE:**

Push the headrest bushings out from seat inside, and then remove them.

13) Pull out the backrest frame.

14) Remove the hog rings (A) at the front-bottom of seat back.

15) Remove the hog rings (A) at the seat back front, and then remove the seat back cover from seat back.

16) Remove the hooks (A), and then remove the seat cushion frame assembly.

17) Remove the hog rings (A), and then remove the seat cushion cover from seat cushion pad.

18) Remove the bolt of sliding adjustment bar and connecting wire.

19) Remove the bolts, and then remove the slide rail.

20) Open the zipper at bottom of headrest, and then remove the headrest cover from headrest.

5) Remove the inner belt.

## 2. BUCKET TYPE SEAT

1) Remove the seat from vehicle. <Ref. to SE-7, REMOVAL, Front Seat.>

2) Remove the seat lifter cover using a flat tip screwdriver or equivalent, and then loosen inside bolt to remove seat lifter lever.

6) Remove two bolts from reclining hinge on each side.

3) Remove the reclining lever and seat hinge outer cover.

7) Remove the hook at the bottom-back side of backrest.

4) Remove the seat hinge inner cover.

## Front Seat

### SEATS

8) Remove the hooks (A), and then remove the seat cushion frame assembly.

9) Remove the bolt of sliding adjustment bar and connecting wire.

10) Remove the bolts, and then remove the slide rail.

## D: ASSEMBLY

### 1. STANDARD SEAT

#### CAUTION:

(1) Because it may cause the side airbag to activate incorrectly, observe the following steps to install the side airbag correctly.

- Be careful not to contaminate or damage the backrest cover.
- Always use new hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog ring to its original position, and not to twist or wrinkle the backrest cover.

(2) To avoid the improper operation of occupant detection system, strictly obey the following works at assembly of passenger's seat.

- If the seat cushion cover has been removed or replaced, be sure to perform the system calibration for occupant detection system after installing the seat. <Ref. to OD(diag)-19, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>
- Failure to do so may cause improper operation of passenger's airbag.
- Never remove the occupant detection control module of occupant detection system (passenger's side only) and occupant detection sensor from seat cushion frame since the control module, the sensor, seat cushion pad and seat cushion frame are the seat cushion pad and frame assembly.
- Do not remove the seat position sensor from seat rail. (Driver's seat)
- The seat cushion cover has been removed, be sure to replace wire on the seat cushion cover side with a new one. (Passenger's seat)
- Install the hog ring to the specified position correctly. Do not re-use the hog ring.

#### Tightening torque:

Refer to **COMPONENT** in *General Description*. <Ref. to SE-2, FRONT SEAT, COMPONENT, *General Description*.>

Assemble in the reverse order of disassembly.

### 2. BUCKET TYPE SEAT

Assemble in the reverse order of disassembly.

#### Tightening torque:

Refer to **COMPONENT** in *General Description*. <Ref. to SE-2, FRONT SEAT, COMPONENT, *General Description*.>

## 3. Rear Seat

### A: REMOVAL

#### 1. WAGON MODEL

1) Remove the bolts, and then detach the rear seat cushion.

- 2) Remove the headrest.
- 3) Remove the luggage floor mat. <Ref. to EI-61, REMOVAL, Luggage Floor Mat.>
- 4) Turn over the mat to remove the bolts.

5) Remove the rear seat backrest.

#### 2. SEDAN MODEL

1) Remove the bolts, and then detach the rear seat cushion.

2) Remove the bolts securing lower portion of backrest and then open the center trunk through lid.

3) Lift the rear seat backrest and then remove it.

### B: INSTALLATION

#### 1. WAGON MODEL

Install in the reverse order of removal.

#### *Tightening torque:*

*Refer to COMPONENT in General Description. <Ref. to SE-5, REAR SEAT (WAGON MODEL), COMPONENT, General Description.>*

#### 2. SEDAN MODEL

1) Hook and fasten the upper-back side of the rear seat backrest to the body hook.

# Rear Seat

## SEATS

2) Tighten the bolts.

3) Hook and fasten the seat cushion to the hook on the lower part of the rear seat backrest.

### Tightening torque:

Refer to **COMPONENT** in *General Description*. <Ref. to SE-5, REAR SEAT (WAGON MODEL), COMPONENT, General Description.>

## C: DISASSEMBLY

### 1. WAGON MODEL

1) Remove the rear seat. <Ref. to SE-13, WAGON MODEL, REMOVAL, Rear Seat.>

2) Remove the hog rings (A) behind of seat backrest.

3) Remove the hog rings (A) on front side of cushion pad, and remove the cover.

4) Remove the hog rings (A) behind of seat cushion.

5) Remove the hog rings (A), and then remove the seat cushion cover.

### 2. SEDAN MODEL

1) Remove the rear seat. <Ref. to SE-13, SEDAN MODEL, REMOVAL, Rear Seat.>

2) Remove two nuts, and then remove the armrest assembly.

3) Remove the hog rings (A) behind of seat backrest.

- Armrest through type model

- Unified type model

4) Remove the hog rings (A), and then remove the seat cover.

- Armrest through type model

- Unified type model

5) Remove the hog rings (A) behind of seat cushion.

6) Remove the hog rings (A), and then remove the seat cushion cover.

7) Remove the nuts and screws, and then disassemble the armrest assembly.

## D: ASSEMBLY

### 1. WAGON MODEL

Assemble in the reverse order of disassembly.

NOTE:

- Do not contaminate or damage the cover.
- While installing the hog rings, prevent the seat from getting wrinkled.

### 2. SEDAN MODEL

Assemble in the reverse order of disassembly.

NOTE:

- Do not contaminate or damage the cover.
- While installing the hog rings, prevent the seat from getting wrinkled.

## 4. Seat Heater System

### A: REMOVAL

#### 1. SEAT HEATER UNIT

- 1) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
- 2) Remove the backrest cover of front seat and seat cushion cover. <Ref. to SE-8, DISASSEMBLY, Front Seat.>
- 3) Remove the hog rings, and then remove the seat heater unit.

#### 2. SEAT HEATER SWITCH

- 1) Remove the console box. <Ref. to EI-46, REMOVAL, Console Box.>
- 2) Remove the seat heater switch from the console box.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. WIRING DIAGRAM

<Ref. to WI-114, WIRING DIAGRAM, Seat Heater System.>

#### 2. SEAT HEATER UNIT

Disconnect the seat heater unit connector, and check the continuity between terminals of connector.

#### Connector & terminal:

##### LHD side seat (R246)

No. 1 — No. 4:

No. 1 — No. 5:

No. 4 — No. 5:

##### RHD side seat (R41)

No. 1 — No. 3:

No. 1 — No. 4:

No. 3 — No. 4:

If no continuity exists, replace the seat heater unit with a new part.

#### 3. SEAT HEATER SWITCH

##### • CHECK THERMISTOR OUTPUT VOLTAGE

- 1) Connect the battery to the connector.  
**Connector terminals No. 2 (+):**
- 2) Measure the voltage between connector and chassis ground.

#### Connector & terminal:

##### Except for STI model

##### LHD side seat

(R43) No. 4 (+) — Chassis ground (-):

##### RHD side seat

(R42) No. 4 (+) — Chassis ground (-):

##### STI model

##### LHD side seat

(B383) No. 4 (+) — Chassis ground (-):

##### RHD side seat

(D120) No. 4 (+) — Chassis ground (-):

If voltage is not 1.5 V or more, replace the seat heater switch.

- **CHECK SWITCH OUTPUT VOLTAGE**

1) Connect the battery to the connector.

**Connector terminals No. 2 (+):**

2) Measure the voltage between connector and chassis ground while turning the switch to ON.

**Connector & terminal:**

**Except for STI model**

**LHD side seat**

**(R43) No. 3 (+) — Chassis ground (-):**

**RHD side seat**

**(R42) No. 3 (+) — Chassis ground (-):**

**STI model**

**LHD side seat**

**(B383) No. 3 (+) — Chassis ground (-):**

**RHD side seat**

**(D120) No. 3 (+) — Chassis ground (-):**

If voltage does not change from 10 V or more to zero, replace the seat heater switch.

# General Description

SECURITY AND LOCKS

## 1. General Description

### A: COMPONENT

#### 1. DOOR LOCK ASSEMBLY

SL-00458

(A) Front

(B) Rear

- (1) Inner remote ASSY
- (2) Inner remote cover
- (3) Bell crank
- (4) Door lock actuator

- (5) Door latch
- (6) Striker
- (7) Outer handle
- (8) Key cylinder

**Tightening torque: N-m (kgf-m, ft-lb)**

**T1: 6.4 (0.65, 4.7)**

**T2: 7.4 (0.75, 5.5)**

**T3: 17.6 (1.8, 13.0)**

## 2. TRUNK LID AND REAR GATE LOCK

(A) Trunk

(B) Rear gate

- (1) Key cylinder
- (2) Cable
- (3) Striker
- (4) Trunk lid lock ASSY

- (5) Trunk lid release handle
- (6) Rear gate outer handle
- (7) Rear gate actuator
- (8) Rear gate latch

**Tightening torque: N-m (kgf-m, ft-lb)**

**T1: 4.5 (0.45, 3.3)**

**T2: 25 (2.5, 18.4)**

**T3: 18 (1.84, 13.3)**

# General Description

## SECURITY AND LOCKS

### 3. HOOD LOCK AND REMOTE OPENERS

(A) Sedan

(B) Wagon

(C) Hood

(1) Hood lock ASSY

(4) Cover

**Tightening torque: N·m (kgf·m, ft·lb)**

(2) Lever ASSY

(5) Pull handle ASSY

**T1: 6.5 (0.66, 4.7)**

(3) Cable

**T2: 32 (3.3, 23.9)**

### 4. KEYLESS ENTRY SYSTEM

SL-00472

- (1) Keyless entry control unit
- (2) Rear gate latch (Wagon model)
- (3) Door switch
- (4) Body integrated module

### 5. IMMOBILIZER SYSTEM

IM-00155

- (1) Antenna
- (2) Security indicator light (LED bulb)
- (3) Immobilizer control module (IMM ECM)
- (4) Transponder

# General Description

## SECURITY AND LOCKS

### 6. SECURITY SYSTEM

SL-00473

- |   |   |                                   |
|---|---|-----------------------------------|
| (1) Horn  | (4) Trunk room light switch (Sedan model), rear gate latch switch (Wagon model) | (6) Keyless entry control unit    |
| (2) Security horn                                   | (5) Door switch   | (7) Security horn relay           |
| (3) Security indicator light (in combination meter) |   | (8) Interrupt relay               |
|   |   | (9) Horn relay (in main fuse box) |

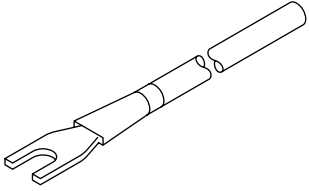

## B: CAUTION

- Before disassembling or reassembling parts, always disconnect the ground cable from battery. When repairing audio, control module, etc. which are provided with memory functions, record the memory contents before disconnecting the ground cable from battery. Otherwise, these contents are cancelled upon disconnection.
- Reassemble parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the specifications contained in this manual if so designated.

- Connect the connectors securely during reassembly.
- After reassembly, ensure all functional parts operate smoothly.
- Airbag system wiring harness is routed near the electrical parts and switch.
- Airbag system connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the ignition key cylinder.

## C: PREPARATION TOOL

### 1. SPECIAL TOOL

| ILLUSTRATION  | TOOL NUMBER | DESCRIPTION | REMARKS                      |
|---|-------------|-------------|------------------------------|
|  <p style="text-align: right; font-size: small;">ST-925580000</p> | 925580000   | PULLER      | Used for removing trim clip. |

### 2. GENERAL TOOL

| TOOL NAME      | REMARKS                                    |
|----------------|--|
| Circuit tester | Used for measuring resistance and voltage. |
| Drill          | Used for replacing ignition key lock.      |

## 2. Door Lock Control System

### A: WIRING DIAGRAM

#### 1. DOOR LOCK CONTROL

<Ref. to WI-166, WIRING DIAGRAM, Keyless Entry System.>

### B: INSPECTION

#### 1. SYMPTOM CHART

| Symptom   | Repair order   | Reference  |
|---|--|--|
| The door lock control system does not operate.  | 1. Check the fuse.   | <Ref. to SL-8, CHECK FUSE, INSPECTION, Door Lock Control System.>                            |
|   | 2. Check the power supply and ground circuit for the body integrated module. | <Ref. to SL-9, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.> |
|   | 3. Check the door lock switch and the circuit.                               | <Ref. to SL-9, CHECK DOOR LOCK SWITCH AND CIRCUIT, INSPECTION, Door Lock Control System.>    |
|   | 4. Check the door lock actuator and the circuit.                             | <Ref. to SL-10, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.> |
| The door lock switch does not operate.          | Check the door lock switch and the circuit.                                  | <Ref. to SL-9, CHECK DOOR LOCK SWITCH AND CIRCUIT, INSPECTION, Door Lock Control System.>    |
| A specific door lock actuator does not operate. | Check the door lock actuator and the circuit.                                | <Ref. to SL-10, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.> |

#### 2. CHECK FUSE

| Step   | Check                  | Yes                              | No  |
|--|------------------------|----------------------------------|---|
| 1<br><b>CHECK FUSE.</b><br>Remove and visually check the fuses No. 2 (in the main fuse box) No. 3 (in fuse & relay box). | Is the fuse blown out? | Replace the fuse with a new one. | Check the power supply and ground circuit. <Ref. to SL-9, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.> |

## 3. CHECK POWER SUPPLY AND GROUND CIRCUIT

| Step   | Check                                     | Yes  | No   |
|--|---|--|--|
| <b>1 CHECK POWER SUPPLY.</b><br>1) Disconnect the body integrated module harness connector.<br>2) Measure the voltage between the harness connector terminal and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B280) No. 2 (+) — Chassis ground (-):</b></i> | Is the voltage more than 10 V?            | Go to step 2.                              | Check the harness for open circuits or shorts between the body integrated module and the fuse. |
| <b>2 CHECK GROUND CIRCUIT.</b><br>Measure the resistance between the harness connector terminal and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B280) No. 4, 13 — Chassis ground:</b></i>  | Is the resistance less than 10 $\Omega$ ? | The power supply and ground circuit is OK. | Repair the harness.  |

## 4. CHECK DOOR LOCK SWITCH AND CIRCUIT

| Step  | Check                                     | Yes  | No                            |
|---|---|--|-------------------------------|
| <b>1 CHECK DOOR LOCK SWITCH CIRCUIT.</b><br>1) Disconnect the body integrated module harness connector.<br>2) Measure the resistance between the harness connector terminal and chassis ground when moving the door lock switch to LOCK.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B281) No. 12 — Chassis ground:</b></i>   | Is the resistance less than 10 $\Omega$ ? | Go to step 2.  | Go to step 3.                 |
| <b>2 CHECK DOOR LOCK SWITCH CIRCUIT.</b><br>Measure the resistance between the harness connector terminal and chassis ground when the door lock switch is moved to UNLOCK.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B281) No. 11 — Chassis ground:</b></i>   | Is the resistance less than 10 $\Omega$ ? | The door lock switch is OK.  | Go to step 3.                 |
| <b>3 CHECK DOOR LOCK SWITCH.</b><br>1) Disconnect the door lock switch harness connector.<br>2) Measure the resistance between the door lock switch terminals when moving the door lock switch to LOCK.<br><i><b>Connector &amp; terminal</b></i><br><i><b>Driver's side:</b></i><br><i><b>(D7) No. 5 — No. 9</b></i><br><i><b>Passenger's side:</b></i><br><i><b>(D62) No. 4 — No. 5</b></i> | Is the resistance less than 10 $\Omega$ ? | Go to step 4.  | Replace the door lock switch. |
| <b>4 CHECK DOOR LOCK SWITCH.</b><br>Measure the resistance between the door lock switch terminals when moving the door lock switch to UNLOCK.<br><i><b>Connector &amp; terminal</b></i><br><i><b>Driver's side:</b></i><br><i><b>(D7) No. 5 — No. 8</b></i><br><i><b>Passenger's side:</b></i><br><i><b>(D62) No. 2 — No. 5</b></i>   | Is the resistance less than 1 $\Omega$ ?  | Check the harness for open circuits or shorts between the body integrated module and the door lock switch. | Replace the door lock switch. |

# Door Lock Control System

SECURITY AND LOCKS

## 5. CHECK DOOR LOCK ACTUATOR AND CIRCUIT

| Step  | Check                          | Yes  | No                                  |
|---|--------------------------------|--|-------------------------------------|
| <b>1 CHECK OUTPUT SIGNAL.</b><br>Measure the voltage between the harness connector terminal of body integrated module and chassis ground when moving the door lock switch to LOCK.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B280) No. 6 (+) — Chassis ground (-):</b></i>                | Is the voltage more than 10 V? | Go to step 2.  | Replace the body integrated module. |
| <b>2 CHECK OUTPUT SIGNAL.</b><br>Measure the voltage between the harness connector terminal of body integrated module and chassis ground when moving the door lock switch to UNLOCK.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B280) No. 7, 8 (+) — Chassis ground (-):</b></i>           | Is the voltage more than 10 V? | Go to step 3.  | Replace the body integrated module. |
| <b>3 CHECK DOOR LOCK ACTUATOR.</b><br>Check the door lock actuator.<br>Front door lock actuator: <Ref. to SL-32, Front Door Lock Actuator.><br>Rear door lock actuator: <Ref. to SL-36, Rear Door Lock Actuator.><br>Rear gate latch lock actuator: <Ref. to SL-39, Rear Gate Latch Lock Actuator.> | Is the door lock actuator OK?  | Check the harness for open circuits or shorts between the body integrated module and the door lock actuator. | Replace the door lock actuator.     |

## 3. Keyless Entry System

### A: WIRING DIAGRAM

#### 1. KEYLESS ENTRY

<Ref. to WI-166, WIRING DIAGRAM, Keyless Entry System.>

### B: ELECTRICAL SPECIFICATION

#### 1. KEYLESS ENTRY CONTROL UNIT

SL-00478

| Content                                | Terminal No. | Measuring condition  |
|--|--------------|--|
| Turn signal light (Left)               | 1 (OUTPUT)   | Battery voltage is present when pressing the transmitter UNLOCK/DISARM or LOCK/ARM button. |
| Power supply (Backup)                  | 2            | Battery voltage is constantly present.   |
| Keyless buzzer                         | 3 (OUTPUT)   | 0 V is present when pressing the transmitter UNLOCK/DISARM or LOCK/ARM button.             |
| Door unlock switch                     | 4 (INPUT)    | 0 V is present when operating the door lock switch.  |
| Door lock switch                       | 5 (INPUT)    | 0 V is present when operating the door lock switch.  |
| Door switch and rear gate latch switch | 6 (INPUT)    | 0 V is present when any door or rear gate is open.   |
| Trunk latch switch                     | 7 (INPUT)    | 0 V is present when trunk is open.   |
| Key warning switch                     | 9 (INPUT)    | Battery voltage is present when inserting the key into the ignition switch.                |
| Ignition switch (ON)                   | 10 (INPUT)   | Battery voltage is present when ignition switch is turned to ON.                           |
| Turn signal light (Right)              | 13 (OUTPUT)  | Battery voltage is present when pressing the transmitter UNLOCK/DISARM or LOCK/ARM button. |
| Ground                                 | 14           | 0 V is constantly present.   |
| Body integrated module                 | 18 (OUTPUT)  | Battery voltage is present when pressing the transmitter UNLOCK/DISARM button.             |
| Body integrated module                 | 19 (OUTPUT)  | Battery voltage is present when pressing the transmitter LOCK/ARM button.                  |
| Horn relay                             | 24 (OUTPUT)  | 0 V is present when pressing the transmitter LOCK/ARM button three times within 5 seconds. |
| Power supply (Backup)                  | 26           | Battery voltage is constantly present.   |

# Keyless Entry System

## SECURITY AND LOCKS

### 2. BODY INTEGRATED MODULE

| Content   | Terminal No. | Measuring condition  |
|---|--------------|--|
| Door switch (Except driver's door)                    | B7 (INPUT)   | 0 V is present when any door is open (Except driver's door).                             |
| Door switch (Driver's door)                           | B8 (INPUT)   | 0 V is present when driver's door is open.   |
| Door unlock switch                                    | B11 (INPUT)  | 0 V is present when operating the door unlock switch.                                    |
| Door lock switch                                      | B12 (INPUT)  | 0 V is present when operating the door lock switch.                                      |
| Keyless entry control unit                            | B13 (INPUT)  | Battery voltage is present when pressing the transmitter LOCK/ARM button.                |
| Keyless entry control unit                            | B14 (INPUT)  | Battery voltage is present when pressing the transmitter UNLOCK/DISARM button.           |
| Ignition switch (ON)                                  | B19 (INPUT)  | Battery voltage is present when ignition switch is turned to ON.                         |
| Key warning switch                                    | B20 (INPUT)  | Battery voltage is present when inserting the key into the ignition switch.              |
| Power supply  | A2           | Battery voltage is constantly present.   |
| Ground  | A4           | 0 V is constantly present.   |
| Room light  | A5 (OUTPUT)  | 0 V is present when pressing the transmitter UNLOCK/DISARM button.                       |
| Door and rear gate lock actuator                      | A6 (OUTPUT)  | Battery voltage is present when pressing the transmitter LOCK/ARM button.                |
| Door and rear gate lock actuator (Except driver side) | A7 (OUTPUT)  | Battery voltage is present when pressing the transmitter UNLOCK/DISARM button two times. |
| Door lock actuator (Driver side)                      | A8 (OUTPUT)  | Battery voltage is present when pressing the transmitter UNLOCK/DISARM button once.      |
| Ground  | A13          | 0 V is constantly present.   |

## C: INSPECTION

### 1. SYMPTOM CHART

| Symptom   | Repair order   | Reference   |
|---|--|---|
| None of the functions of the keyless entry system operate.  | 1. Check the transmitter battery and function.                           | <Ref. to SL-15, CHECK TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>        |
|   | 2. Check the fuse.   | <Ref. to SL-16, CHECK FUSE, INSPECTION, Keyless Entry System.>                                    |
|   | 3. Check the keyless entry control unit power supply and ground circuit. | <Ref. to SL-17, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.>         |
|   | 4. Replace the keyless entry control unit.                               | <Ref. to SL-55, Keyless Entry Control Unit.>  |
| The transmitter cannot be registered.   | 1. Check the transmitter battery and function.                           | <Ref. to SL-15, CHECK TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>        |
|   | 2. Check the ignition switch circuit.                                    | <Ref. to SL-17, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Keyless Entry System.>                 |
|   | 3. Check the door switch.  | <Ref. to SL-17, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>                             |
|   | 4. Replace the keyless entry control unit.                               | <Ref. to SL-55, Keyless Entry Control Unit.>  |
| The door lock or unlock does not operate.<br>NOTE:<br>If the door lock control system does not operate when using the door lock switch, check the door lock control system. <Ref. to SL-8, INSPECTION, Door Lock Control System.> | 1. Check the transmitter battery and function.                           | <Ref. to SL-15, CHECK TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>        |
|   | 2. Check the key warning switch.   | <Ref. to SL-18, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>                      |
|   | 3. Check the door switch.  | <Ref. to SL-17, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>                             |
|   | 4. Check the output signal to body integrated module.                    | <Ref. to SL-19, CHECK OUTPUT SIGNAL TO BODY INTEGRATED MODULE, INSPECTION, Keyless Entry System.> |
|   | 5. Replace the keyless entry control unit.                               | <Ref. to SL-55, Keyless Entry Control Unit.>  |
| The panic alarm does not operate.   | 1. Check the transmitter battery and function.                           | <Ref. to SL-15, CHECK TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>        |
|   | 2. Check the horn operation.   | <Ref. to SL-20, CHECK HORN OPERATION, INSPECTION, Keyless Entry System.>                          |
|   | 3. Replace the keyless entry control unit.                               | <Ref. to SL-55, Keyless Entry Control Unit.>  |

# Keyless Entry System

## SECURITY AND LOCKS

| Symptom   | Repair order                                    |              | Reference  |
|---|---|--------------|--|
| The buzzer chirp and hazard light do not operate. | 1. Check the buzzer chirp function.             |              | <Ref. to SL-16, CHECK BUZZER CHIRP SETTING, INSPECTION, Keyless Entry System.>   |
|   | 2. Check the buzzer and hazard light operation. | Buzzer       | <Ref. to SL-20, CHECK KEYLESS BUZZER, INSPECTION, Keyless Entry System.>         |
|   |   | Hazard light | <Ref. to SL-20, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.> |

|   | 3. Replace the keyless entry control unit.      |              | <Ref. to SL-55, Keyless Entry Control Unit.>                                     |

## 2. CHECK TRANSMITTER BATTERY AND FUNCTION

| Step  | Check   | Yes                        | No  |
|---|---|----------------------------|---|
| <b>1 CHECK TRANSMITTER BATTERY.</b><br>1) Remove the battery from the transmitter. <Ref. to SL-57, REMOVAL, Transmitter.><br>2) Check the battery voltage. <Ref. to SL-57, INSPECTION, Transmitter.>  | Is the voltage more than 2.5 V?                                     | Go to step 2.              | Replace the transmitter battery. <Ref. to SL-57, Transmitter.>  |
| <b>2 CHECK TRANSMITTER.</b><br>Register the transmitter which operates normally on other vehicles to inspection target vehicle. <Ref. to SL-57, REGISTRATION OF TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.><br>1) Close all the doors and rear gate of inspection target vehicle.<br>2) Using transmitter, lock and unlock the doors and rear gate of inspection target vehicle. | Is the inspection target vehicle operates lock and unlock normally? | Go to step 3.              | Due to vehicle malfunction, continue the keyless entry system diagnosis.  |
| <b>3 CHECK TRANSMITTER.</b><br>Register the transmitter of inspection target vehicle to the other vehicle which operates keyless system normally. <Ref. to SL-57, REGISTRATION OF TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.>  | Is the transmitter registered correctly?                            | Go to step 4.              | Replace the transmitter. <Ref. to SL-57, REGISTRATION OF TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.> |
| <b>4 CHECK TRANSMITTER.</b><br>Check the registered transmitter.<br>1) Close all the doors and rear gate of the vehicle which operates keyless system normally.<br>2) Using transmitter, lock and unlock the doors and rear gate of inspection target vehicle.  | Is the vehicle operates lock and unlock normally?                   | The transmitter is normal. | Replace the transmitter. <Ref. to SL-57, REGISTRATION OF TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.> |

**CAUTION:**

**Be sure to reset the transmitter, which is registered from other vehicle to inspection target vehicle, and the vehicle, to which is registered transmitter, to the condition of before inspection. (Register the transmitter to original condition.)**

# Keyless Entry System

## SECURITY AND LOCKS

### 3. CHECK BUZZER CHIRP SETTING

| Step   | Check                         | Yes                          | No   |
|--|-------------------------------|------------------------------|--|
| <b>1</b><br><b>CHECK BUZZER CHIRP SETTING.</b><br>1) Check the current setting of the buzzer chirp.<br>2) Remove the key from the ignition switch.<br>3) Close all doors and the rear gate.<br>4) Press the LOCK/ARM or UNLOCK/DIS-ARM button.   | Does the buzzer signal chirp? | Buzzer chirp function is OK. | Go to step 2.  |
| <b>2</b><br><b>CHECK BUZZER CHIRP SETTING.</b><br>1) Open the driver's door, and remove the key from the ignition switch.<br>2) Insert the key into ignition switch with the manual UNLOCK switch on vehicle side turned to ON.<br>3) Repeat the procedure of removing → inserting the key five times within 10 seconds from step 2).<br>4) Perform opening → closing the door within 5 seconds from the fifth procedure in step 3).<br>5) Switch the setting (ON ↔ OFF) of answer back buzzer. The hazard light will blink three times.<br><b>NOTE:</b><br>If not performing opening → closing the door within 10 seconds, the hazard light will blink once. In that case, perform the procedure from the beginning again.<br>6) Press the LOCK/ARM or UNLOCK/DIS-ARM button. | Does the buzzer signal chirp? | Buzzer chirp function is OK. | Check the transmitter function. <Ref. to SL-15, CHECK TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.> |

### 4. CHECK FUSE

| Step   | Check                  | Yes                              | No   |
|--|------------------------|----------------------------------|--|
| <b>1</b><br><b>CHECK FUSE.</b><br>Remove and visually check the fuse No. 6 (in the main fuse box) and No. 3 (in the fuse and relay box). | Is the fuse blown out? | Replace the fuse with a new one. | Check the power supply and ground circuit. <Ref. to SL-17, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.> |

## 5. CHECK POWER SUPPLY AND GROUND CIRCUIT

| Step   | Check                                     | Yes   | No  |
|--|---|---|---|
| <b>1 CHECK POWER SUPPLY.</b><br>1) Disconnect the keyless entry control unit harness connector.<br>2) Measure the voltage between the harness connector terminal and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B176) No. 2, 26 (+) — Chassis ground (-):</b></i> | Is the voltage more than 10 V?            | Go to step 2.                               | Check the harness for open circuits and shorts between the keyless entry control unit and fuse. |
| <b>2 CHECK GROUND CIRCUIT.</b><br>Measure the resistance between the harness connector terminal and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B176) No. 14 — Chassis ground:</b></i>   | Is the resistance less than 10 $\Omega$ ? | The power supply and ground circuit are OK. | Repair the harness.   |

## 6. CHECK IGNITION SWITCH CIRCUIT

| Step  | Check                          | Yes                            | No  |
|---|--------------------------------|--------------------------------|---|
| <b>1 CHECK IGNITION SWITCH SIGNAL.</b><br>1) Disconnect the keyless entry control unit harness connector.<br>2) Turn the ignition switch to ON.<br>3) Measure the voltage between harness connector terminal and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B176) No. 10 (+) — Chassis ground (-):</b></i> | Is the voltage more than 10 V? | Ignition switch circuit is OK. | Check the harness for open circuits and shorts between the keyless entry control unit and ignition relay. |

## 7. CHECK DOOR SWITCH

| Step  | Check   | Yes                    | No                       |
|---|---|------------------------|--------------------------|
| <b>1 CHECK DOOR SWITCH CIRCUIT.</b><br>Measure the voltage between the keyless entry control unit harness connector terminal and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>Front and rear side door:</b></i><br><i><b>(B176) No. 6 (+) — Chassis ground (-):</b></i><br><i><b>Rear gate:</b></i><br><i><b>(B176) No. 7 (+) — Chassis ground (-):</b></i> | Is the voltage 0 V when each door or rear gate is opened?                   | Go to step 2.          | Go to step 3.            |
| <b>2 CHECK DOOR SWITCH CIRCUIT.</b><br>Measure the voltage between the keyless entry control unit harness connector terminal and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>Front and rear side door:</b></i><br><i><b>(B176) No. 6 (+) — Chassis ground (-):</b></i><br><i><b>Rear gate:</b></i><br><i><b>(B176) No. 7 (+) — Chassis ground (-):</b></i> | Is the voltage more than 10 V when each door or rear gate is closed?        | The door switch is OK. | Go to step 3.            |
| <b>3 CHECK DOOR SWITCH.</b><br>1) Disconnect the door switch harness connector.<br>2) Measure the resistance between the door switch terminals.<br><i><b>Terminals</b></i><br><i><b>Door switch No. 1 — No. 3:</b></i><br><i><b>Rear gate latch switch No. 1 — No. 2:</b></i>   | Is the resistance more than 1 M $\Omega$ when the door switch is depressed? | Go to step 4.          | Replace the door switch. |

# Keyless Entry System

## SECURITY AND LOCKS

| Step   | Check  | Yes  | No                       |
|--|--|--|--------------------------|
| <b>4 CHECK DOOR SWITCH.</b><br>Measure the resistance between the door switch terminals.<br><i><b>Terminals</b></i><br><i><b>Door switch No. 1 — No. 3:</b></i><br><i><b>Rear gate latch switch No. 1 — No. 2:</b></i> | Is the resistance less than 1 $\Omega$ when the door switch is released? | Check the harness for open circuits and shorts between the body integrated module and door switch. | Replace the door switch. |

### 8. CHECK KEY WARNING SWITCH

| Step  | Check                                      | Yes   | No                              |
|---|--|---|---------------------------------|
| <b>1 CHECK FUSE.</b><br>Remove and visually check the fuse No. 6 (in the main fuse box).  | Is the fuse blown out?                     | Replace the fuse with a new one.  | Go to step 2.                   |
| <b>2 CHECK KEY WARNING SWITCH CIRCUIT.</b><br>1) Disconnect the keyless entry control unit harness connector.<br>2) Insert the key into the ignition switch. (LOCK position)<br>3) Measure the voltage between the harness connector terminal and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B176) No. 9 (+) — Chassis ground (-):</b></i> | Is the voltage more than 10 V?             | Go to step 3.   | Go to step 4.                   |
| <b>3 CHECK KEY WARNING SWITCH CIRCUIT.</b><br>1) Remove the key from the ignition switch.<br>2) Measure the voltage between the harness connector terminal and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B176) No. 9 (+) — Chassis ground (-):</b></i>  | Is the voltage 0 V?                        | Key warning switch is OK.   | Go to step 4.                   |
| <b>4 CHECK KEY WARNING SWITCH.</b><br>1) Disconnect the key warning switch harness connector.<br>2) Insert the key into the ignition switch. (LOCK position)<br>3) Measure the resistance between the key warning switch terminals.<br><i><b>Terminals</b></i><br><i><b>No. 1 — No. 2:</b></i>  | Is the resistance less than 1 $\Omega$ ?   | Go to step 5.   | Replace the key warning switch. |
| <b>5 CHECK KEY WARNING SWITCH.</b><br>1) Remove the key from the ignition switch.<br>2) Measure the resistance between the key warning switch terminals.<br><i><b>Terminals</b></i><br><i><b>No. 1 — No. 2:</b></i>   | Is the resistance more than 1 M $\Omega$ ? | Check the following: <ul style="list-style-type: none"> <li>• Harness for open circuits and shorts between the key warning switch and fuse</li> <li>• Harness for open circuits and shorts between the keyless entry control unit and key warning switch</li> </ul> | Replace the key warning switch. |

## 9. CHECK ROOM LIGHT OPERATION

| Step   | Check                                     | Yes                                     | No   |
|--|---|---|--|
| <b>1 CHECK ROOM LIGHT OPERATION.</b><br>Make sure the room light illuminates when the room light switch is turned ON.  | Does the room light illuminate?           | Go to step 2.                           | Check the room light circuit.  |
| <b>2 CHECK HARNESS BETWEEN ROOM LIGHT AND BODY INTEGRATED MODULE.</b><br>1) Disconnect the body integrated module harness connector and room light harness connector.<br>2) Measure the resistance between the body integrated module harness connector terminal and the room light harness connector terminal.<br><i>Connector &amp; terminal</i><br><i>(B280) No. 5 — (R52) No. 2:</i> | Is the resistance less than 10 $\Omega$ ? | The room light operation circuit is OK. | Check the harness for open circuits and/or shorts between the body integrated module and room light. |

## 10. CHECK OUTPUT SIGNAL TO BODY INTEGRATED MODULE

| Step   | Check                                     | Yes                                 | No  |
|--|---|-------------------------------------|---|
| <b>1 CHECK OUTPUT SIGNAL.</b><br>Measure the voltage between the keyless entry control unit harness connector terminal and chassis ground when UNLOCK/DISARM button of transmitter is pressed.<br><i>Connector &amp; terminal</i><br><i>(B176) No. 18 (+) — Chassis ground (-):</i>  | Is the voltage more than 10 V?            | Go to step 2.                       | Replace the keyless entry control unit.   |
| <b>2 CHECK OUTPUT SIGNAL.</b><br>Measure the voltage between the keyless entry control unit harness connector terminal and chassis ground when LOCK/ARM button of transmitter is pressed.<br><i>Connector &amp; terminal</i><br><i>(B176) No. 19 (+) — Chassis ground (-):</i>   | Is the voltage more than 10 V?            | Go to step 3.                       | Replace the keyless entry control unit.   |
| <b>3 CHECK HARNESS BETWEEN KEYLESS ENTRY CONTROL UNIT AND BODY INTEGRATED MODULE.</b><br>1) Disconnect the keyless entry control unit harness connector and body integrated module harness connector.<br>2) Measure the resistance between the keyless entry control unit harness connector terminal and body integrated module harness connector terminal.<br><i>Connector &amp; terminal</i><br><i>(B176) No. 18 — (B281) No. 14:</i><br><i>(B176) No. 19 — (B281) No. 13:</i> | Is the resistance less than 10 $\Omega$ ? | Replace the body integrated module. | Check the harness for open circuit or shorts between the keyless entry control unit and body integrated module. |

# Keyless Entry System

## SECURITY AND LOCKS

### 11.CHECK HORN OPERATION

| Step   | Check                | Yes                                     | No   |
|--|----------------------|---|--|
| 1<br><b>CHECK HORN OPERATION</b><br>Make sure the horn sounds when the horn switch is pushed.  | Does the horn sound? | Go to step 2.                           | Check the horn circuit.  |
| 2<br><b>CHECK HORN OPERATION</b><br>1) Disconnect the keyless entry control unit harness connector.<br>2) Ground the harness connector terminal with a suitable wire.<br><b>Connector &amp; terminal</b><br><b>(B176) No. 24 — Chassis ground:</b> | Does the horn sound? | Replace the keyless entry control unit. | Check the harness for open circuits and/or shorts between the keyless entry control unit and horn relay. |

### 12.CHECK HAZARD LIGHT OPERATION

| Step  | Check                          | Yes  | No                                      |
|---|--------------------------------|--|---|
| 1<br><b>CHECK HAZARD LIGHT OPERATION.</b><br>Make sure the hazard light blinks when hazard switch is turned ON.   | Does the hazard light blink?   | Go to step 2.  | Check the hazard light circuit.         |
| 2<br><b>CHECK OUTPUT SIGNAL.</b><br>1) Remove the key from ignition switch.<br>2) Close all doors and rear gate.<br>3) Measure the voltage between keyless entry control unit harness connector terminal and chassis ground when LOCK/ARM button of transmitter is pressed.<br><b>Connector &amp; terminal</b><br><b>(B176) No. 1, 13 (+) — Chassis ground (-):</b> | Is the voltage more than 10 V? | Check the harness for open or short between keyless entry control unit and turn signal lights. | Replace the keyless entry control unit. |

### 13.CHECK KEYLESS BUZZER

| Step   | Check                                     | Yes                                     | No  |
|--|---|---|---|
| 1<br><b>CHECK FUSE.</b><br>Remove and check the fuse No. 2 (located in main fuse box).   | Is the fuse blown out?                    | Replace the fuse with a new one.        | Go to step 2.   |
| 2<br><b>CHECK KEYLESS POWER SUPPLY.</b><br>1) Disconnect the connector from keyless buzzer.<br>2) Measure the voltage between keyless buzzer harness connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(F102) No. 2 (+) — Chassis ground (-):</b>   | Is the voltage more than 10 V?            | Go to step 3.                           | Check the harness for open or short between fuse and keyless buzzer.      |
| 3<br><b>CHECK HARNESS BETWEEN KEYLESS BUZZER AND KEYLESS ENTRY CONTROL UNIT.</b><br>1) Disconnect the connector from keyless entry control unit.<br>2) Measure the resistance between keyless buzzer and keyless entry control unit.<br><b>Connector &amp; terminal</b><br><b>(F102) No. 1 — (B176) No. 3:</b> | Is the resistance less than 10 $\Omega$ ? | Go to step 4.                           | Repair the harness between keyless buzzer and keyless entry control unit. |
| 4<br><b>CHECK KEYLESS BUZZER.</b><br>Make sure that the buzzer sounds when connecting battery positive lead to No. 2 terminal of keyless buzzer connector and battery ground lead to No. 1 terminal of keyless buzzer connector.   | Does the buzzer sound?                    | Replace the keyless entry control unit. | Replace the keyless buzzer.   |

# Security System

## SECURITY AND LOCKS

### C: INSPECTION

#### 1. BASIC DIAGNOSTIC PROCEDURE

**NOTE:**

- Turbo model has immobilizer.
- Non-turbo model has no immobilizer.

| Step   | Check  | Yes           | No   |
|--|--|---------------|--|
| <b>1 SET SECURITY SYSTEM.</b><br>Set the security system to ON. <Ref. to SL-24, SYMPTOM CHART, INSPECTION, Security System.>   | Is the setting completed correctly?  | Go to step 2. | <ul style="list-style-type: none"> <li>• Check the ignition switch circuit. &lt;Ref. to SL-28, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Security System.&gt;</li> <li>• Check the door lock switch. &lt;Ref. to SL-9, CHECK DOOR LOCK SWITCH AND CIRCUIT, INSPECTION, Door Lock Control System.&gt;</li> </ul> |
| <b>2 CHECK FOR OPERATION OF SECURITY SYSTEM SETTING.</b><br>1) Before starting this diagnosis, open all doors.<br>2) Remove the key from ignition key cylinder, and then close all doors or rear gate.<br>3) Press the LOCK/ARM button of transmitter.                                       | Can the security system be set?  | Go to step 3. | Go to symptom 1. <Ref. to SL-24, SYMPTOM CHART, INSPECTION, Security System.>  |
| <b>3 CHECK FOR STATUS OF BLINKING OF SECURITY INDICATOR LIGHT AND HAZARD LIGHT</b><br>Check for the status of blinking of security indicator light and hazard light.<br><b>NOTE:</b><br>For model with immobilizer, the light blinks 2 times, for model without immobilizer, it blinks once. | Do the security indicator light and hazard light blink?  | Go to step 4. | Go to symptom 2. <Ref. to SL-24, SYMPTOM CHART, INSPECTION, Security System.>  |
| <b>4 CHECK SECURITY SYSTEM OPERATION.</b><br>Press the LOCK button of transmitter, and wait for 30 seconds.  | Is the blinking pattern of security indicator light blink twice within 0.5 second in 2 seconds cycle?                    | Go to step 5. | Replace the keyless control unit.  |
| <b>5 CHECK SECURITY ALARM OPERATION.</b><br>1) Unlock all doors using the door lock switch on front door.<br>2) Open any door or rear gate.  | Does the security alarm operate when opening any door or rear gate?  | Go to step 6. | Go to symptom 3. <Ref. to SL-24, SYMPTOM CHART, INSPECTION, Security System.>  |
| <b>6 CHECK SECURITY ALARM OPERATION.</b><br>Check the security alarm operation.  | Does the all security alarm (horn, hazard light and security indicator light) operate, and is the starter motor stopped? | Go to step 7. | Go to symptom 4. <Ref. to SL-24, SYMPTOM CHART, INSPECTION, Security System.>  |

| Step  | Check  | Yes  | No   |
|---|--|--|--|
| <b>7 CHECK SECURITY ALARM CANCEL OPERATION.</b><br>Press the UNLOCK/DISARM button of transmitter.<br>NOTE:<br>For model with immobilizer, the light blinks once, for model without immobilizer, it remains off.         | Does the all security alarm (horn and hazard light) stop, and is the starter motor operated? | Go to step 8.  | Go to symptom 5. <Ref. to SL-24, SYMPTOM CHART, INSPECTION, Security System.>                      |
| <b>8 CHECK BATTERY OPEN PROTECTION FUNCTION</b><br>Check the system function properly when the battery is not connected temporarily. <Ref. to SL-23, CHECK BATTERY DISCONNECT PROTECTION, INSPECTION, Security System.> | Does the system function properly when the battery is not connected temporarily?             | Go to step 9.  | Replace the keyless control unit.  |
| <b>9 CHECK IMPACT SENSOR.</b><br>Check impact sensor. <Ref. to SL-53, CHECK IMPACT SENSOR, ADJUSTMENT, Impact Sensor.>  | Is the sensibility set properly?   | Press the UNLOCK/DISARM button of transmitter, and finish the diagnosis. | Adjust the sensibility. <Ref. to SL-53, IMPACT SENSITIVITY ADJUSTMENT, ADJUSTMENT, Impact Sensor.> |

## 2. CHECK BATTERY DISCONNECT PROTECTION

- 1) Remove the key from the ignition switch.
- 2) Close all doors and the rear gate.
- 3) Open the front hood.
- 4) Press the LOCK/ARM button of the transmitter.
- 5) Disconnect the ground cable from the battery.
- 6) Reconnect the cable to the battery.
- 7) Check that the security indicator light blinks after reconnecting the battery cable.

If NG, replace the keyless entry control unit.

## 3. SECURITY SYSTEM ON/OFF SETTING

- 1) Close all doors and rear gate, sit down on the driver seat. Press the UNLOCK button of transmitter.
- 2) Turn the ignition switch to ON.
- 3) Press the centralized door lock switch to UNLOCK side and open the driver's door simultaneously, and maintain this state for 10 seconds.
- 4) The setting of security system (ON ↔ OFF) will be switched, and the horn sounds.

| Setting  | Notice             |
|----------|--------------------|
| OFF → ON | Horn sounds once.  |
| ON → OFF | Horn sounds twice. |

**NOTE:**

Refer to the following for the ON/OFF setting of security system using Subaru Select Monitor. <Ref. to SL-49, PROCEDURE, Security Control Unit.>

# Security System

## SECURITY AND LOCKS

### 4. SYMPTOM CHART

| Symptom |  | Repair order   | Reference  |
|---------|--|--|--|
| 1       | Security system cannot be set.   | 1. Check the transmitter function.                                       | <Ref. to SL-15, CHECK TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>   |
|         |  | 2. Check the fuse.   | <Ref. to SL-25, CHECK FUSE, INSPECTION, Security System.>  |
|         |  | 3. Check the keyless entry control unit power supply and ground circuit. | <Ref. to SL-25, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Security System.>   |
|         |  | 4. Check the door switch.  | <Ref. to SL-25, CHECK DOOR SWITCH, INSPECTION, Security System.>   |
|         |  | 5. Replace the keyless entry control unit.                               | <Ref. to SL-49, Security Control Unit.>  |
| 2       | Security indicator light or hazard light does not blink.                               | Security indicator light   | <Ref. to SL-27, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Security System.>  |
|         |  | Hazard light   | <Ref. to SL-28, CHECK HAZARD LIGHT OPERATION, INSPECTION, Security System.>  |
| 3       | Security system does not alarm when one of the door, trunk lid or rear gate is opened. | Check the door switch.   | <Ref. to SL-25, CHECK DOOR SWITCH, INSPECTION, Security System.>   |
| 4       | Security alarm does not activate.  | All functions  | Check the door switch.<br><Ref. to SL-25, CHECK DOOR SWITCH, INSPECTION, Security System.>   |

## 5. CHECK FUSE

| Step   | Check                  | Yes                              | No  |
|--|------------------------|----------------------------------|---|
| <b>1 CHECK FUSE.</b><br>Remove and visually check the fuse No. 2 (in main fuse box). | Is the fuse blown out? | Replace the fuse with a new one. | Check the power supply and ground circuit. <Ref. to SL-25, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Security System.> |

## 6. CHECK POWER SUPPLY AND GROUND CIRCUIT

| Step   | Check                                     | Yes   | No  |
|--|---|---|---|
| <b>1 CHECK POWER SUPPLY.</b><br>1) Disconnect the keyless entry control unit harness connector.<br>2) Measure the voltage between the harness connector terminal and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B176) No. 2 (+) — Chassis ground (-):</i> | Is the voltage more than 10 V?            | Go to step 2.                               | Check the harness for open circuits and shorts between the keyless entry control unit and fuse. |
| <b>2 CHECK GROUND CIRCUIT.</b><br>Measure the resistance between the harness connector terminal and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B176) No. 14 — Chassis ground:</i>   | Is the resistance less than 10 $\Omega$ ? | The power supply and ground circuit are OK. | Repair the harness.   |

## 7. CHECK DOOR SWITCH

| Step   | Check                          | Yes                    | No            |
|--|--------------------------------|------------------------|---------------|
| <b>1 CHECK DOOR SWITCH CIRCUIT.</b><br>Measure the voltage between the keyless entry control unit harness connector terminal and chassis ground when any door or rear gate is opened.<br><i>Connector &amp; terminal</i><br><i>Front and rear door:</i><br><i>(B176) No. 6 (+) — Chassis ground (-):</i><br><i>Trunk lid or rear gate:</i><br><i>(B176) No. 7 (+) — Chassis ground (-):</i>    | Is the voltage 0 V?            | Go to step 2.          | Go to step 3. |
| <b>2 CHECK DOOR SWITCH CIRCUIT.</b><br>Measure the voltage between the keyless entry control unit harness connector terminal and chassis ground when all doors and rear gate are closed.<br><i>Connector &amp; terminal</i><br><i>Front and rear door:</i><br><i>(B176) No. 6 (+) — Chassis ground (-):</i><br><i>Trunk lid or rear gate:</i><br><i>(B176) No. 7 (+) — Chassis ground (-):</i> | Is the voltage more than 10 V? | The door switch is OK. | Go to step 3. |

# Security System

## SECURITY AND LOCKS

| Step  | Check  | Yes  | No                       |
|---|--|--|--------------------------|
| <b>3</b><br><b>CHECK DOOR SWITCH.</b><br>1) Disconnect the door switch harness connector.<br>2) Measure the resistance between the door switch terminals.<br><b>Terminals</b><br><i>Door switch No. 1 — No. 3:</i><br><i>Rear gate latch switch (Wagon model)</i><br><i>No. 1 — No. 2:</i><br><i>Trunk room light switch (Sedan model)</i><br><i>No. 1 — No. 2:</i> | Is the resistance more than 1 M $\Omega$ when door switch is pushed? | Go to step 4.  | Replace the door switch. |
| <b>4</b><br><b>CHECK DOOR SWITCH.</b><br>Measure the resistance between the door switch terminals.<br><b>Terminals</b><br><i>Door switch No. 1 — No. 3:</i><br><i>Rear gate latch switch (Wagon model)</i><br><i>No. 1 — No. 2:</i><br><i>Trunk room light switch (Sedan model)</i><br><i>No. 1 — No. 2:</i>  | Is the resistance less than 1 $\Omega$ when door switch is released? | Check the harness for open circuits and shorts between the keyless entry control unit and door switch. | Replace the door switch. |

## 8. CHECK SECURITY INDICATOR LIGHT CIRCUIT

| Step  | Check   | Yes  | No   |
|---|---|--|--|
| <b>1 CHECK SECURITY INDICATOR LIGHT.</b><br>1) Disconnect the keyless entry control unit harness connector.<br>2) Ground the harness connector terminal with a suitable wire.<br><i>Connector &amp; terminal</i><br><i>(B176) No. 15 — Chassis ground:</i>  | Does the security indicator light illuminate? | Replace the keyless entry control unit.        | Go to step 2.  |
| <b>2 CHECK POWER SUPPLY FOR SECURITY INDICATOR LIGHT.</b><br>1) Disconnect the connector from the combination meter.<br>2) Measure the voltage between the combination meter harness connector terminal and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(i11) No. 10 (+) — Chassis ground (-):</i> | Is the voltage more than 10 V?                | Go to step 3.                                  | Check the harness for open circuits and shorts between the combination meter and the fuse.                   |
| <b>3 CHECK SECURITY INDICATOR LIGHT CIRCUIT.</b><br>Measure the resistance between the combination meter harness connector terminal and keyless entry control unit harness connector terminal.<br><i>Connector &amp; terminal</i><br><i>(i10) No. 6 — (B176) No. 15:</i>  | Is the resistance less than 10 $\Omega$ ?     | Replace the combination meter printed circuit. | Check the harness for open circuits and shorts between the combination meter and keyless entry control unit. |

## 9. CHECK SECURITY HORN

| Step   | Check                                     | Yes                                     | No   |
|--|---|---|--|
| <b>1 CHECK SECURITY HORN RELAY.</b><br>Remove and check the security horn relay. <Ref. to SL-52, Security Horn Relay.>   | Is the security horn OK?                  | Go to step 2.                           | Replace the security horn relay.   |
| <b>2 CHECK POWER SUPPLY FOR SECURITY HORN RELAY.</b><br>Measure the voltage between the security horn relay harness connector terminal and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B243) No. 1 (+) — Chassis ground (-):</i>   | Is the voltage more than 10 V?            | Go to step 3.                           | Check the harness for open circuits and shorts between the security horn relay and horn relay.                 |
| <b>3 CHECK POWER SUPPLY FOR SECURITY HORN RELAY.</b><br>Measure the voltage between the security horn relay harness connector terminal and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B243) No. 2 (+) — Chassis ground (-):</i>   | Is the voltage more than 10 V?            | Go to step 4.                           | Check the harness for open circuits and shorts between the security horn relay and the fuse.                   |
| <b>4 CHECK HARNESS BETWEEN SECURITY HORN RELAY AND KEYLESS ENTRY CONTROL UNIT.</b><br>Measure the resistance between the security horn relay harness connector terminal and keyless entry control unit harness connector terminal.<br><i>Connector &amp; terminal</i><br><i>(B243) No. 4 — (B93) No. 16:</i> | Is the resistance less than 10 $\Omega$ ? | Go to step 5.                           | Check the harness for open circuits and shorts between the security horn relay and keyless entry control unit. |
| <b>5 CHECK SECURITY HORN.</b><br>Remove and check the security horn. <Ref. to SL-51, Security Horn.>   | Is the security horn OK?                  | Replace the keyless entry control unit. | Replace the security horn.   |

# Security System

## SECURITY AND LOCKS

### 10.CHECK HAZARD LIGHT OPERATION

| Step  | Check                        | Yes  | No                                      |
|---|------------------------------|--|---|
| 1<br><b>CHECK HAZARD LIGHT OPERATION.</b><br>Check the hazard light blinks when hazard switch is turned ON.   | Does the hazard light blink? | Go to step 2.  | Check the hazard light circuit.         |
| 2<br><b>CHECK KEYLESS ENTRY CONTROL UNIT OUTPUT SIGNAL.</b><br>1) Remove the key from ignition switch.<br>2) Open the driver's window, and then close all doors and rear gate.<br>3) Lock all doors with the transmitter or door lock switch to arm the security system.<br>4) Unlock all doors with the door lock switch.<br>5) Measure the voltage between the keyless entry control unit harness connector terminal and chassis ground when any door is open.<br><b>Connector &amp; terminal</b><br><b>(B176) No. 14 — Chassis ground:</b> | Is the voltage 1 — 4 V?      | Check the harness for open or short between keyless entry control unit and turn signal lights. | Replace the keyless entry control unit. |

### 11.CHECK INTERRUPT RELAY CIRCUIT

| Step   | Check  | Yes                                     | No   |
|--|--|---|--|
| 1<br><b>CHECK INTERRUPT RELAY.</b><br>Remove and check the interrupt relay. <Ref. to SL-54, Interrupt Relay.>  | Is the interrupt relay OK?   | Go to step 2.                           | Replace the interrupt relay.   |
| 2<br><b>CHECK POWER SUPPLY FOR INTERRUPT RELAY.</b><br>Measure the voltage between the interrupt relay harness connector terminal and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B422) No. 5 (+) — Chassis ground (-):</b>  | Is the voltage more than 10 V when ignition switch is turned to START? | Go to step 3.                           | Check the harness for open circuits and shorts between the interrupt relay and ignition switch.            |
| 3<br><b>CHECK HARNESS BETWEEN INTERRUPT RELAY AND KEYLESS ENTRY CONTROL UNIT.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the keyless entry control unit harness connector.<br>3) Measure the resistance between the interrupt relay harness connector terminal and keyless entry control unit harness connector.<br><b>Connector &amp; terminal</b><br><b>(B422) No. 1 — (B176) No. 12:</b> | Is the resistance less than 10 $\Omega$ ?                              | Replace the keyless entry control unit. | Check the harness for open circuits and shorts between the interrupt relay and keyless entry control unit. |

### 12.CHECK IGNITION SWITCH CIRCUIT

| Step   | Check                          | Yes                            | No   |
|--|--------------------------------|--------------------------------|--|
| 1<br><b>CHECK IGNITION SWITCH SIGNAL.</b><br>1) Disconnect the keyless entry control unit harness connector.<br>2) Turn the ignition switch to ON.<br>3) Measure the voltage between the harness connector terminal and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B176) No. 10 (+) — Chassis ground (-):</b> | Is the voltage more than 10 V? | Ignition switch circuit is OK. | Check the harness for open circuits and shorts between the keyless entry control unit and ignition switch. |

## 5. Front Inner Remote

### A: REMOVAL

- 1) Remove the door trim. <Ref. to EI-41, REMOVAL, Front Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-17, REMOVAL, Front Sealing Cover.>
- 3) Remove a screw and two rod joints.
- 4) Remove the front inner remote.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Make sure the front inner remote works properly after installation.

### C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the lever and rod work smoothly.

## 6. Front Outer Handle

### A: REMOVAL

- 1) Remove the door trim. <Ref. to EI-41, REMOVAL, Front Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-17, REMOVAL, Front Sealing Cover.>
- 3) Remove the bolt (A).
- 4) Move the front door glass downward. Remove the bolt and rod clamp.
- 5) Remove the front outer handle.

### CAUTION:

**Do not use excessive force to remove the handle from door panel. This will deform it.**

### B: INSTALLATION

Install in the reverse order of removal.

### NOTE:

Make sure the front outer handle works properly after installation.

### C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the lever and rod work smoothly.

## 7. Front Door Latch and Door Lock Actuator Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-41, REMOVAL, Front Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-17, REMOVAL, Front Sealing Cover.>
- 4) Remove the front inner remote. <Ref. to SL-29, REMOVAL, Front Inner Remote.>
- 5) Remove three screws and a bolt.

- 6) Remove the front door latch assembly, and then disconnect the connector.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Make sure the lock works properly after installation.

### C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the lever and rod work smoothly.

## 8. Front Door Lock Actuator

### A: REMOVAL

- 1) Remove the front door latch assembly. <Ref. to SL-31, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
- 2) Remove the two screws to remove front door lock actuator.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the lock works properly after installation.

### C: INSPECTION

- 1) Disconnect the front door lock actuator harness connector.
- 2) Connect the battery to front door lock actuator terminals.

If NG, replace the door lock actuator.

| Terminal No.            | Actuator operation |
|-------------------------|--------------------|
| No. 3 (+) and No. 1 (-) | Unlocked → Locked  |
| No. 1 (+) and No. 3 (-) | Locked → Unlocked  |

## 9. Rear Inner Remote

### A: REMOVAL

- 1) Remove the rear door trim. <Ref. to EI-42, REMOVAL, Rear Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Rear Sealing Cover.>
- 3) Remove a screw and two rod joints.
- 4) Remove the rear inner remote.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Make sure the rear inner remote works properly after installation.

### C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the lever and rod work smoothly.
- 3) Make sure the child safety lock work properly.

## 10.Rear Outer Handle

### A: REMOVAL

- 1) Remove the rear door trim. <Ref. to EI-42, REMOVAL, Rear Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Rear Sealing Cover.>
- 3) Remove the rear inner remote. <Ref. to SL-33, REMOVAL, Rear Inner Remote.>
- 4) Remove the rear door latch assembly. <Ref. to SL-35, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
- 5) Loosen two bolts and a nut to remove the rear outer handle.

### CAUTION:

**Do not use excessive force to remove the handle from door panel. This will deform it.**

### B: INSTALLATION

Install in the reverse order of removal.

### NOTE:

Make sure the rear outer handle works properly after installation.

### C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the outer handle and rod move smoothly.

## 11. Rear Door Latch and Door Lock Actuator Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-42, REMOVAL, Rear Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-20, REMOVAL, Rear Sealing Cover.>
- 4) Remove the rear inner remote. <Ref. to SL-33, REMOVAL, Rear Inner Remote.>
- 5) Remove three screws and a bolt.

- 6) Disconnect the connector, and then remove the rear door latch assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Make sure the lock works properly after installation.

### C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the outer handle, rear remote handle and rod move smoothly.

## 12.Rear Door Lock Actuator

### A: REMOVAL

- 1) Remove the rear door latch assembly. <Ref. to SL-35, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
- 2) Loosen two screws to remove rear door lock actuator.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the lock works properly after installation.

### C: INSPECTION

- 1) Disconnect the rear door lock actuator harness connector.
- 2) Connect the battery to rear door lock actuator terminals.

| Terminal No.            | Actuator operation |
|-------------------------|--------------------|
| No. 3 (+) and No. 1 (-) | Unlocked → Locked  |
| No. 1 (+) and No. 3 (-) | Locked → Unlocked  |

If NG, replace the door lock actuator.

## 13.Rear Gate Outer Handle

### A: REMOVAL

- 1) Remove the rear gate trim. <Ref. to EI-57, REMOVAL, Rear Gate Trim.>
- 2) Remove the rear gate latch assembly. <Ref. to SL-38, REMOVAL, Rear Gate Latch Assembly.>
- 3) Remove the two nuts to remove the rear gate outer handle.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Make sure the rear gate outer handle works properly after installation.

### C: INSPECTION

- 1) Inspect the rod for deformation.
- 2) Make sure the outer handle and cable move smoothly.

## 14. Rear Gate Latch Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear gate trim. <Ref. to EI-57, REMOVAL, Rear Gate Trim.>
- 3) Remove three bolts.

- 4) Disconnect the connectors, and then remove the rear gate latch assembly.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the lock works properly after installation.

### C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the outer handle and cable move smoothly.

## 15. Rear Gate Latch Lock Actuator

### A: REMOVAL

- 1) Remove the rear gate latch assembly. <Ref. to SL-38, REMOVAL, Rear Gate Latch Assembly.>
- 2) Loosen two screws to remove the rear gate lock actuator.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the lock works properly after installation.

### C: INSPECTION

- 1) Disconnect the rear gate latch lock actuator harness connector.
- 2) Connect the battery to rear gate latch lock actuator terminals.

| Terminal No.            | Actuator operation |
|-------------------------|--------------------|
| No. 1 (+) and No. 2 (-) | Unlocked → Locked  |
| No. 2 (+) and No. 1 (-) | Locked → Unlocked  |

If NG, replace the rear gate latch lock actuator.

### 16. Trunk Lid Lock Assembly

#### A: REMOVAL

- 1) Remove the trunk lid key cylinder rod clamp.
- 2) Loosen two bolts to remove the trunk lid lock assembly.

#### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

- Apply grease to parts that rub.
- Make sure the lock works properly after installation.

#### C: INSPECTION

- 1) Check the striker for bending or abnormal wear.
- 2) Check the safety lever for improper movement.
- 3) Check other levers and the spring for rust formation and unsmooth movement.

## 17. Trunk Lid Release Handle

### A: REMOVAL

1) Remove the five clips.

2) Remove the cable from trunk lid release handle.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Make sure the cable is not deformed.
- 2) Make sure the lever works smoothly.

## 18. Front Hood Lock Assembly

### A: REMOVAL

- 1) Open the front hood.
- 2) Remove the bolts. Remove the hood lock assembly.

- 3) Remove the release cable from front hood lock assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

- Apply grease to parts that rub.
- Make sure the release cable works properly after installation.

### C: ADJUSTMENT

Loosen the bolt. Adjust the front hood lock assembly while moving it up and down.

### D: INSPECTION

- 1) Check the striker for bending or abnormal wear.
- 2) Check the safety lever for improper movement.
- 3) Check other levers and the spring for rust formation and unsmooth movement.

## 19. Remote Openers

### A: REMOVAL

#### 1. HOOD OPENER

- 1) Remove the release cable from front hood lock assembly.
- 2) Remove the bolt. Remove the lever assembly.

#### 2. TRUNK LID OPENER

- 1) Remove the rear seat. <Ref. to SE-13, REMOVAL, Rear Seat.>
- 2) Remove the center pillar lower trim, and remove the side sill cover on passenger side. Remove the rear pillar lower trim. Pull back the floor mat. Remove the clip holding the cable.
- 3) Remove the bolt. Remove the pull handle assembly.

- (1) Sedan
- (2) Wagon
- (3) Cover
- (4) Pull handle ASSY
- (5) Cable

- 4) Remove the cable from pull handle assembly.
- 5) Remove the striker from trunk lid.

- 6) Remove the cable from striker.

- (1) Striker
- (2) Cable

#### 3. FUEL FLAP OPENER

- 1) Remove the rear seat. <Ref. to SE-13, REMOVAL, Rear Seat.>
- 2) Remove the center pillar lower trim, and remove the side sill cover on passenger side. Remove the rear pillar lower trim. Pull back the floor mat. Remove the clip holding the cable.
- 3) Remove the bolt. Remove the pull handle assembly.

- (1) Sedan
- (2) Wagon
- (3) Cover
- (4) Pull handle ASSY
- (5) Cable

- 4) Remove the cable from pull handle assembly.
- 5) Remove the right rear quarter trim. <Ref. to EI-52, REMOVAL, Rear Quarter Trim.>

# Remote Openers

## SECURITY AND LOCKS

---

6) Rotate the fuel lock inside the quarter panel to left and remove.

### **B: INSTALLATION**

#### **1. HOOD OPENER**

Install in the reverse order of removal.

#### **2. TRUNK LID OPENER**

Install in the reverse order of removal.

#### **3. FUEL FLAP OPENER**

Install in the reverse order of removal.

### **C: INSPECTION**

Make sure the fuel filler flap lid opens and closes smoothly.

## 20. Ignition Key Lock

### A: REPLACEMENT

- 1) Remove the ground cable from battery.
- 2) Remove the steering column. <Ref. to PS-23, REMOVAL, Tilt Steering Column.>
- 3) Secure the steering column in a vise. Remove the bolt with a drill.

- 4) Remove the ignition key lock.
- 5) Use a new torn bolt. Tighten the torn bolt to end of thread.

### B: INSPECTION

- 1) Remove the instrument panel lower cover.
- 2) Remove the lower column cover.
- 3) Unfasten the hold-down clip which secures harness and disconnect the connector of ignition switch from body harness.
- 4) Turn the ignition key plate to each position and check the continuity between terminals of ignition connector.

| Switch position | Terminal No.  | Standard      |
|-----------------|---|---------------|
| LOCK            | —   | —             |
| ACC             | No. 1 and No. 2                                       | Less than 1 Ω |
| ON              | No. 1 and No. 2<br>No. 1 and No. 4<br>No. 2 and No. 4 | Less than 1 Ω |
| ST              | No. 1 and No. 3<br>No. 1 and No. 4<br>No. 3 and No. 4 | Less than 1 Ω |

If NG, replace the ignition switch.

## 21. Key Lock Cylinders

### A: REPLACEMENT

#### 1. FRONT DOOR

- 1) Remove the door trim. <Ref. to EI-41, REMOVAL, Front Door Trim.>
- 2) Pull back the sealing cover.
- 3) Move the front door glass downward.
- 4) Remove the rod clamp. Remove the bolt. Replace the key cylinder.

#### 2. TRUNK LID

- 1) Remove the trunk lid release handle. <Ref. to SL-41, Trunk Lid Release Handle.>
- 2) Remove the rod clamp. Remove the lock plate. Replace the key cylinder.

## 22. Immobilizer Control Unit

### A: REMOVAL

NOTE:

- Prepare the security ID plate.
- Prepare all registered immobilizer keys for the model with immobilizer.
- Make a registration of immobilizer when replacing the immobilizer control unit. New immobilizer key is required for registration. For detailed operation procedure, refer to "IMMOBILIZER REGISTRATION MANUAL".
- If the keys are added without replacing the immobilizer control unit, maximum 4 keys can be registered including new keys.

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Assembly.>
- 3) Disconnect the connector from immobilizer control unit.
- 4) Remove the immobilizer control unit.

### B: INSTALLATION

Install in the reverse order of removal.

## 23. Immobilizer Antenna

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Assembly.>
- 3) Remove the screws, separate upper column cover and lower column cover.

- 4) Disconnect the immobilizer antenna connector (A) from body harness.
- 5) Remove the screw, and detach the immobilizer antenna (B).

### B: INSTALLATION

Install in the reverse order of removal.

## 24. Security Control Unit

### A: NOTE

The control of security system is performed by the keyless entry control unit.

### B: REMOVAL

<Ref. to SL-55, REMOVAL, Keyless Entry Control Unit.>

### C: INSTALLATION

<Ref. to SL-55, INSTALLATION, Keyless Entry Control Unit.>

### D: PROCEDURE

#### 1. FUNCTION SETTING (ECM CUSTOMIZING)

- 1) Connect the Subaru Select Monitor to data link connector.
- 2) Turn the ignition switch to ON.
- 3) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 4) On the «System Selection Menu» display screen, select the {Keyless Unit Mode} and press the [YES] key.
- 5) On the «Integ. Unit mode failuer diag» display screen, select the {ECM customizing} and press the [YES] key.
- 6) Change the setting with UP/DOWN key and press the [YES] key.
  - List of function setting item (ECM customizing)

| No. | Data                      | Initial setting value | Customize setting | Remarks  |
|-----|---------------------------|-----------------------|-------------------|--|
| 1   | Security Alarm Setup      | OFF                   | ON                | Security alarm (hazard, horn) is active.   |
|     |                           |                       | OFF               | Security alarm is inactive.  |
| 2   | Alarm monitor delay setup | ON                    |                   | After doors are locked by keyless entry system operated, Alarm monitor starts in the following delay time.   |
|     |                           |                       | ON                | Delay time is 30 seconds.  |
|     |                           |                       | OFF               | Delay time is 0 seconds.   |
| 3   | Impact Sensor Setup       | OFF                   | ON                | Workable when Impact Sensor Setup is set to "ON". Impact sensor is in active condition.  |
|     |                           |                       | OFF               | Impact sensor is in inactive condition. (Set Impact Sensor Setup of model without impact sensor to "OFF".)   |
| 4   | Impact sensor             | OFF                   | ON                | Vehicle is controlled with impact sensor equipped mode. (Set it to "OFF" for the model without impact sensor. If it is set to "ON", hazard, horn or siren operates with keyless entry system operated (alarm monitor starting).) |
|     |                           |                       | OFF               | Vehicle is controlled in impact sensor no-equipped mode.   |
| 5   | Passive Alarm             | OFF                   | ON                | There is no function that it is automatically set to ARM without user's intentional locking (ARM).   |
|     |                           |                       | OFF               | Workable when passive arming is set to "ON".   |

7) After setting, make sure that vehicle equipment is same as the setting changed in the {Current Data Display & Save}.

#### CAUTION:

- It is possible to control the original functions of vehicle when settings above are corresponded to vehicle equipment.
- Do not change the settings except for setting above during operation of equipment setting.
- Resetting is needed if installing a new keyless unit.
- In passive mode, the system will automatically activate the alarm but WILL NOT automatically lock the doors. Failure to lock the doors manually will result in a higher security risk.

#### NOTE:

For details concerning operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

8) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

# Security Control Unit

## SECURITY AND LOCKS

---

### 2. ALARM HISTORY REPORT MODE

- 1) Turn the ignition switch to ON.
- 2) Security indicator light blinks.

| The number of times security indicator light blinks | Vehicle state  |
|---|--|
| Once  | WARNNG is activated by impact sensor (OP). It may be caused by light impact on outside of vehicle or other person's vandalism. |
| 2 times   | ALARM is activated by impact sensor (OP). It may be caused by strong impact on outside of vehicle or other person's vandalism. |
| 3 times   | The ignition switch has been turned to ON.   |
| 4 times   | The rear gate has been opened.   |
| 5 times   | One of the doors has been opened.  |

#### NOTE:

- If the ALARM/WARNING occurs in the ARM mode, the indicator light blinks when the ignition switch is turned to OFF → ON at the next DISARM mode.
- If ALARM/WARNING does not occur, the light does not blink.
- More than one alarm or warning occurs, the most numbers of blinking times have priority to blink.
- Anytime the ignition switch is turned to ON in the DISARM mode, it blinks. The memory will be updated at the next ARM mode.

## 25. Security Horn

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the nuts and then detach the security horn while disconnecting the connector.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Connect the battery to the security horn terminal and case ground and make sure the horn sounds properly.

(A) Battery

If NG, replace the security horn.

## 26. Security Horn Relay

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the mounting bolt and detach the security horn relay.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the security horn relay resistance between terminals (indicated in the table below) when connecting terminal No. 4 to battery positive terminal and terminal No. 1 to battery ground terminal.

| Current | Terminal No. | Standard value         |
|---------|--------------|------------------------|
| Flow    | 2 and 3      | Less than 1 $\Omega$   |
| No flow |              | More than 1 M $\Omega$ |

(A) Battery

If NG, replace the security horn relay.

## 27. Impact Sensor

### A: REMOVAL

- 1) Remove the key from ignition switch.
- 2) Close all the doors, trunk lid and rear gate.
- 3) Press the UNLOCK button of transmitter.
- 4) Change the setting of impact sensor using Subaru Select Monitor.
- 5) Disconnect the ground cable from battery.
- 6) Remove the impact sensor.

### B: INSTALLATION

- 1) Remove the key from ignition switch.
- 2) Close all the doors, trunk lid and rear gate.
- 3) Press the UNLOCK button of transmitter.
- 4) Disconnect the ground cable from battery.
- 5) Install the impact sensor.
- 6) Connect the battery ground cable to battery.
- 7) Change the setting of impact sensor using Subaru Select Monitor.

### C: OPERATION

#### 1. IMPACT SENSOR SETTING USING SUBARU SELECT MONITOR

- 1) Connect the Subaru Select Monitor to data link connector.
- 2) Turn the ignition switch to ON.
- 3) Select {Keyless Unit} from the main menu.
- 4) Select {ECU customizing}.
- 5) Make a impact monitor setting.
  - When installing: ON
  - When removing: OFF
- 6) Make a impact monitor ON/OFF setting.
  - When installing: ON
  - When removing: OFF
- 7) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

### D: ADJUSTMENT

#### 1. CHECK IMPACT SENSOR

- 1) Remove the key from ignition switch.
- 2) Close all windows.
- 3) Close all the doors, trunk lid and rear gate. Leave open the front hood.
- 4) Press the LOCK button of the transmitter from outside vehicle.
- 5) Check that the security indicator light blinks twice within 0.5 seconds in 2 seconds cycle after 30 seconds.
- 6) Hit the windshield with your palm continuously and check the security alarm operates. Lift up the front hood approx. 12 cm (4.7 in), and then drop it off to check the operation of security alarm.
- 7) If NG, adjust the impact sensitivity.

## 2. IMPACT SENSITIVITY ADJUSTMENT

- 1) Connect the Subaru Select Monitor to data link connector.
- 2) Turn the ignition switch to ON.
- 3) Select {Impact Sensor} from the main menu.
- 4) Make a {ECU customizing}.
  - Sensitivity can be adjusted in 11 levels (0 to 10).
  - Initial setting is 5.
  - Smaller number means more sensitive.
  - Larger number means less sensitive.
- 5) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

#### NOTE:

- Set the sensor so as not to let the alarm on normal vibration (reclining to the door, hit the ball and etc.).
- Set the sensor to operate the alarm with hitting the door or window glass, etc. continuously like a mayhem by robbery.
- Ask the customer about parking situation for setting, because the alarm operate when the vibration not only the burglar but also the construction etc.

## 28. Interrupt Relay

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the audio instrument. <Ref. to ET-6, REMOVAL, Audio.>
- 3) Remove the interrupt relay.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the interrupt relay resistance between terminals (indicated in the table below) when connecting terminal No. 3 to battery positive terminal and terminal No. 1 to battery ground terminal.

| Current | Terminal No. | Standard value |
|---------|--------------|----------------|
| Flow    | 2 and 5      | More than 1 MΩ |
| No flow |              | Less than 1 Ω  |
| Flow    | 4 and 5      | Less than 1 Ω  |
| No flow |              | More than 1 MΩ |

(A) Battery

If NG, replace the interrupt relay.

### CAUTION:

**Do not connect the terminals to battery positive terminal and ground terminal incorrectly. If this happens, replace the interrupt relay.**

## 29. Keyless Entry Control Unit

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Assembly.>
- 3) Remove the nut, and then remove the keyless entry control unit while disconnecting connector.

- 4) Disconnect the keyless entry control unit and other electrical control module.

### B: INSTALLATION

Install in the reverse order of removal.

## 30. Body Integrated Module

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover. <Ref. to EI-47, REMOVAL, Instrument Panel Assembly.>
- 3) Remove the nut, then remove the body integrated module while disconnecting the connector.

### B: INSTALLATION

Install in the reverse order of removal.

### 31. Transmitter

#### A: REMOVAL

##### 1. TRANSMITTER BATTERY

Remove the battery (1) from transmitter.

**NOTE:**

To prevent static electricity damage to transmitter printed circuit board, touch the steel area of building with hand to discharge the static electricity carried on body or clothes before disassembling transmitter.

#### B: INSTALLATION

##### 1. TRANSMITTER BATTERY

Install in the reverse order of removal.

#### C: INSPECTION

##### 1. TRANSMITTER BATTERY

Measure the voltage between the transmitter battery (+) terminal and (-) terminal.

**NOTE:**

Battery discharge occurs during measurement. Complete the measurement within 5 seconds.

(A) Resistance 47 Ω

| Tester connection         |                         | Standard    |
|---------------------------|-------------------------|-------------|
| (+)                       | (-)                     |             |
| Battery Positive terminal | Battery Ground terminal | 2.5 — 3.0 V |

If NG, replace the battery. (Use CR2025 or equivalent.)

#### D: REPLACEMENT

##### 1. REGISTRATION OF TRANSMITTER WITH SUBARU SELECT MONITOR

**NOTE:**

- A maximum of four transmitters can be registered for each individual vehicle.
- When replacing or adding the transmitter, new registration of transmitter is necessary.

- 1) Connect the Subaru Select Monitor to the vehicle.
- 2) Turn the ignition switch to ON.
- 3) From the «Main menu» on the Subaru Select Monitor, select the {2. Check individual system} → {Keyless unit mode} → {1. Keyless ID registration}, and press the [YES] key.
- 4) Input the 8-digit ID number from the left attached to the plastic bag of transmitter or circuit board inside transmitter.

**NOTE:**

Press the [▲] key on the Subaru Select Monitor to increase the number, and the [▼] key to decrease. Press the [<] key to move to the digit in the left, and [>] to the right.

- 5) The ID number you have entered will be shown. Make sure that the ID number shown is the same as that of plastic bag.
- 6) Press the [YES] key if the ID number is correct. Press the [NO] key if incorrect, to return to the step 3) and try again.
- 7) «ID registration in process...» will be displayed and registration started.
- 8) «ID registration done» will be shown when the process is done.
- 9) To end, select the «END:NO», and press the [NO] key to return to {1. Keyless ID registration}. If there are additional transmitters to be registered, select the «Next registration:YES», and press the [YES] key to return to the step 3).

**NOTE:**

- If the registration fails, «ID registration failed. Try again.» will be shown. Press the [YES] key to return to the {1. Keyless ID registration} and retry from the step 2).
- «END: NO» is shown on the Subaru Select Monitor when four transmitters have been registered. Press the [NO] key to return to {1. Keyless ID registration}.

## General Description

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

---

### B: CAUTION

- Before disassembling or reassembling parts, always disconnect battery ground cable. When replacing radio, control module, and other parts provided with memory functions, record memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
- Reassemble in the reverse order of disassembly, unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors and hoses securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.

### C: PREPARATION TOOL

#### 1. GENERAL TOOL

| TOOL NAME      | REMARKS                                    |
|----------------|--|

## Glass Lid

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

### 3. Glass Lid

#### A: REMOVAL

- 1) Completely close the glass lid and open the sunshade.
- 2) Remove the cover (A) then remove the nuts (B).

- 3) Remove the glass lid carefully.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: ADJUSTMENT

##### 1. ALIGNMENT OF HEIGHT BETWEEN GLASS LID AND ROOF PANEL

Loosen the glass lid installation nuts and then adjust the height by adding (max: three pieces) or extracting (min: zero piece) shims (standard: one piece).

*Difference in height between glass lid and roof panel L:*

*$2.0 \pm 0.5$  mm ( $0.079 \pm 0.020$  in)*

- (A) Shim  
(B) Glass lid

# Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 4. Sunroof Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the roof trim. <Ref. to EI-55, REMOVAL, Roof Trim.>
- 3) Remove the glass lid. <Ref. to SR-5, REMOVAL, Glass Lid.>
- 4) Disconnect the drain tubes from sunroof frame.
- 5) Remove the room lamp harness clip (A).

- 6) Disconnect the sunroof harness connector.
- 7) Remove the motor cover.

- 8) Remove the assist grip bracket (A) and sunroof bracket (B).

- 9) Remove the nuts then detach the sunroof frame.

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

Be careful not to snag the harness.

#### NOTE:

- Make sure to connect the harness connector.
- When installing the drain tube, insert it securely onto drain pipe.

#### Length A:

15 mm (0.59 in) or more

### C: DISASSEMBLY

- 1) Remove the sunroof frame.
- 2) Remove the rail stoppers (A).

# Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

- 3) Pull out the sunshade (A) from sunroof frame.

## D: ASSEMBLY

Assemble in the reverse order of disassembly.

## E: INSPECTION

### 1. CHECK FOR MOVING LOAD OF SUNSHADE

- 1) Attach a spring scale to sunshade edge using a cloth.

- 2) Pull the spring scale back to measure moving load of the sunshade.

#### ***Moving load of rear sunshade:***

***Less than  $24.5 \pm 4.9$  N ( $2.5 \pm 0.5$  kgf,  $5.5 \pm 1.1$  lbf)***

#### **NOTE:**

Moving load is larger at the beginning of pulling a spring scale, so take a scale reading while sunshade sliding smoothly.

- 3) If moving load exceeds specifications, check the glass lid, sunshade and guide rail assembly for improper installation.

# Sunroof Motor

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 5. Sunroof Motor

### A: REMOVAL

#### CAUTION:

- When removing the clip, use great care to not damage the roof trim.
- Never rotate the sunroof motor after removing it.

- 1) Completely close the sunroof.
- 2) Disconnect the ground cable from battery.
- 3) Remove the glass lid. <Ref. to SR-5, REMOVAL, Glass Lid.>
- 4) Confirm the alignment mark (A) of sunroof bracket link and the guide from sunroof opening. (If the mark does not align, adjust to align the mark.)

- 5) Remove the roof trim. <Ref. to EI-55, REMOVAL, Roof Trim.>
- 6) Remove the motor cover.

- 7) Disconnect the harness connector and remove the sunroof motor mounting screw.

### B: INSTALLATION

#### CAUTION:

Be careful not to move the sunroof cable when installing sunroof motor.

- 1) Check the alignment mark (A) of sunroof motor.

- 2) Confirm the alignment mark (A) of sunroof bracket link.

- 3) Install the sunroof motor.
- 4) After installing the motor, reconfirm the alignment marks of motor side and sunroof bracket link side.
- 5) Connect the sunroof motor harness connector and then connect the battery ground cable.
- 6) Check the sunroof operation with the procedure as shown in the table.

| Checking order   | Switch position |
|--|-----------------|
| (1) Completely close sunroof.  | Closed          |
| (2) Tilt-up sunroof to most upper position.                              | Tilt-up         |
| (3) Lower sunroof completely.  | Tilt-down       |
| (4) Open sunroof to near the completely open position.                   | Open            |
| (5) Completely open sunroof.   | Open            |
| (6) Close sunroof 150 mm (5.91 in) away from completely closed position. | Closed          |
| (7) Completely close sunroof.  | Closed          |

- 7) Install the glass lid and trims in the reverse order of removal.

## 6. Sunroof Switch

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the spot light lens (A) and sunroof switch mounting screw (B).

- 3) Disconnect the harness connectors and remove the sunroof switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the sunroof switch resistance.

| Switch    | Terminal No. | Standard value       |
|-----------|--------------|----------------------|
| Open      | S1: 3 and 4  | Less than 1 $\Omega$ |
| Close     | S1: 1 and 3  | Less than 1 $\Omega$ |
| Tilt-up   | S2: 3 and 4  | Less than 1 $\Omega$ |
| Tilt-down | S2: 1 and 3  | Less than 1 $\Omega$ |

**B: PREPARATION TOOL**

| TOOL NAME         | REMARKS                                       |
|-------------------|---|
| Clip remover      | Used for removal of trim.                     |
| Clip clamp pliers | Used for removal of various clips and clamps. |

# Front Grille

EXTERIOR/INTERIOR TRIM

## 2. Front Grille

### A: REMOVAL

1) Remove the six clips (A).

(A) Clip

2) Remove the clip on the upper side and the hooks on the right, left and lower sides, and remove the grille LH, grille RH and grille center.

(A) Clip

(B) Hook

3) Remove the screw and disassemble front grille.

(A) Screw

### B: INSTALLATION

Install in the reverse order of removal.

## 3. Front Hood Grille

### A: REMOVAL

- 1) Open the front hood.
- 2) Remove the intercooler water spray hose. (STI model)
- 3) Remove the seven bolts and clip (A) to remove the hood duct.

- 4) Loosen the six nuts (B), remove the four clips (A), and then remove the hood grille.

### B: INSTALLATION

- 1) Replace the four clips with new ones.

- 2) Engage the four clips of hood grille to front hood panel.

### CAUTION:

Make sure that the anchor portion of each clip is firmly engaged.

- 3) Install the six nuts.

### Tightening torque:

**4.5 N·m (0.46 kgf·m, 3.32 ft·lb)**

- 4) Catch the two hooks (A) of hood duct to hood holes.

- 5) Install the hood duct with clip (A) and seven bolts.

# Front Hood Grille

EXTERIOR/INTERIOR TRIM

---

## **Tightening torque:**

**1.0 N·m (0.1 kgf-m, 0.74 ft-lb)**

6) Install the intercooler water spray hose. (STI model)

## **C: INSPECTION**

Make sure that the clip is firmly engaged.

Make sure that there is no abnormal gap at whole periphery of hood grille.

Make sure that there is no damage on hood grille.

## 4. Front Under Cover

### A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove the bolts and clips to remove under cover.

### B: INSTALLATION

Install in the reverse order of removal.

***Tightening torque:***

***14 N·m (1.4 kgf-m, 10.3 ft-lb)***

# Front Bumper

EXTERIOR/INTERIOR TRIM

## 5. Front Bumper

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front grille RH and front grille LH. <Ref. to EI-20, REMOVAL, Front Grille.>
- 3) Remove the clips inside the mounting portion of front grille RH and front grille LH.

- 4) Remove the six clips on the upper part of bumper.

- 5) Remove the clips, which secure the front bumper to fender.

- 6) Remove the clips, and turn over the mud guard LH and RH.

- (A) Mud guard (LH)  
(B) Mud guard (RH)

- 7) Remove the three clips in the center, right and left part of bumper.

- 8) Remove the fog light. <Ref. to LI-19, REMOVAL, Front Fog Light Assembly.>
- 9) Remove the bumper from body.
- 10) Remove the energy absorber foam from front bumper beam.

11) Loosen the bolt and nut, and then remove the bumper beam from body.

## B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Align the front bumper mounting hole with the pawl of slider (A) to install.

### **Tightening torque:**

**Refer to COMPONENT in General Description.**

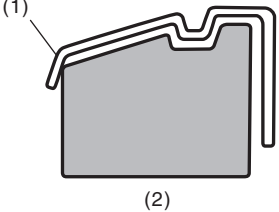

**<Ref. to EI-4, FRONT BUMPER, COMPONENT, General Description.>**

# Front Bumper

EXTERIOR/INTERIOR TRIM

## C: REPAIR

### 1. COATING METHOD FOR PP BUMPER

| Process No. | Process name         | Job contents  |   |
|-------------|----------------------|---|---|
| 1           | Bumper mounting      | Set the bumper on paint worktable if required. Use paint worktable conforming to inner shape of bumper when possible.   |  <p>(1) Bumper<br/>(2) Set bumper section</p> <p>EI-00234</p>  |
| 2           | Masking              | Mask specified part (black base) with masking tape. Use masking tape for PP (example, Nichiban No. 533, etc.).  |   |
| 3           | Degreasing, cleaning | Clean all parts to be painted with white gasoline, normal alcohol, etc. to remove dirt, oil, fat, etc.  |   |
| 4           | Primer paint         | Apply primer one to all parts to be painted, using air gun. Use primer (clear).   |   |
| 5           | Drying               | Dry at normal temperature [10 to 15 min. at 20°C (68°F)].<br>In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc. Therefore, if dust or dirt must be removed, use ordinary alcohol, etc.  |   |
| 6           | Top coat paint (I)   | Solid color   | Metallic color  |
|             |                      | Use section (block) paint for top coat.<br>• Paint in use (for each color):<br>Solid paint<br>Hardener PB<br>Thinner T-301<br>• Mixing ratio:<br>Main agent vs. hardener = 4:1<br>• Viscosity: 10 — 13 sec/20°C (68°F)<br>• Film thickness: 35 — 45μ<br>• Spraying pressure: 245 — 343 kPa<br>(2.5 — 3.5 kgf/cm <sup>2</sup> , 36 — 50 psi) | Use section (block) paint for top coat.<br>• Paint in use (for each color):<br>Metallic paint<br>Hardener PB<br>Thinner T-306<br>• Mixing ratio:<br>Main agent vs. hardener = 10:1<br>• Viscosity: 10 — 13 sec/20°C (68°F)<br>• Film thickness: 15 — 20μ<br>• Spraying pressure: 245 — 343 kPa<br>(2.5 — 3.5 kgf/cm <sup>2</sup> , 36 — 50 psi)                             |
| 7           | Drying               | Not required.   | Dry at normal temperature [10 min. or more at 20°C (68°F)].<br>In half-dried condition, avoid dust, dirt.   |
| 8           | Top coat paint (II)  | Not required.   | Apply a clear coat to parts with top coat paint (I), three times, at 5 — 7 minutes intervals.<br>• Paint in use:<br>Metallic paint<br>Hardener PB<br>Thinner T-301<br>• Mixing ratio: Clear vs. hardener = 6:1<br>• Viscosity: 14 — 16 sec/20°C (68°F)<br>• Film thickness: 25 — 30μ<br>• Spraying pressure: 245 — 343 kPa<br>(2.5 — 3.5 kgf/cm <sup>2</sup> , 36 — 50 psi) |
| 9           | Drying               | 60°C (140°F), 60 min. or 80°C (176°F), 30 min.<br>If higher than 80°C (176°F), PP may be deformed. Keep maximum temperature of 80°C (176°F).  |   |
| 10          | Inspection           | Paint check.  |   |
| 11          | Masking removal      | Remove the masking in process No. 2.  |   |

## 2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER

**NOTE:**

All PP bumpers are provided with a grained surface, and if the surface is damaged, it cannot normally be restored to its former condition. Damage limited to shallow scratches that cause only a change in the lustre of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and get an understanding about the matter. Repair methods are outlined below, based on a classification of the extent of damage.

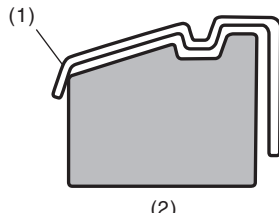

1) Minor damage causing only a change in the lustre of the bumper due to a light touch  
Almost restorable.

| Process No. | Process name | Job contents  |   |
|-------------|--------------|---|---|
| 1           | Cleaning     | Clean the area to be repaired using water.  |   |
| 2           | Sanding      | Grind the repairing area with #500 sand paper in a "feathering" motion.   |   |
| 3           | Finish       | Resin section   | Coated section  |
|             |              | Repeatedly apply wax to the affected area using a soft cloth (such as flannel). Recommended wax: NITTO KASEI Soft 99 TIRE WAX BLACK, or equivalent. | Perform either the same operation as for the resin section or process No. 18 and subsequent operations in the "3)" section, depending on the degree and nature of damage. |
|             |              | Polish the waxed area with a clean cloth after 5 to 10 minutes.   |   |

2) Deep damage caused by scratching fences, etc.  
A dent cannot be repaired but a whitened or swelled part can be removed.

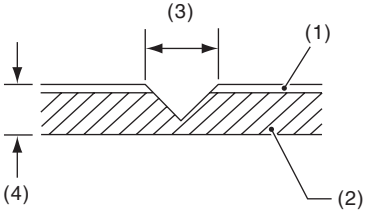

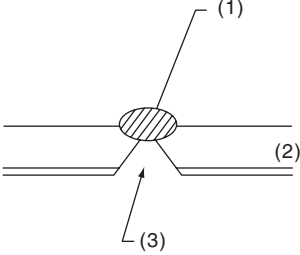

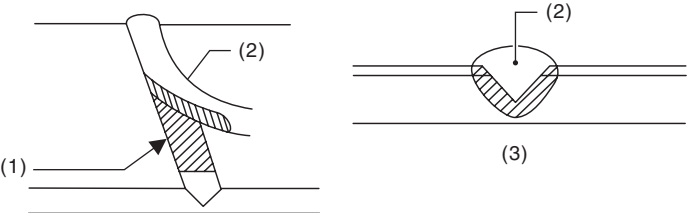

| Process No. | Process name            | Job contents  |   |
|-------------|-------------------------|---|---|
| 1           | Cleaning                | Clean the damaged area with water.                                      |   |
| 2           | Removal of damaged area | Cut off protruding area, if any, due to collision, using a putty knife. |   |
| 3           | Sanding                 | Grind the affected area with #100 to #500 sand paper.                   |   |
| 4           | Finish                  | Resin section   | Coated section  |
|             |                         | Same as Process No. 3 in the "1)" section.                              | Perform Process No. 12 and subsequent operations in the "3)" section. |

3) Deep damage such as a break or hole that requires filling  
Much of the peripheral grained surface must be sacrificed for repair, and the degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)  
Recommended repair kit: PP Part Repair Kit (NRM)

| Process No. | Process name        | Job contents   |  |
|-------------|---------------------|--|--|
| 1           | Bumper removal      | Remove the bumper as required.   |  |
| 2           | Part removal        | Remove the parts built into bumper as required.  |  |
| 3           | Bumper placement    | Place the bumper on a paint worktable as required.<br>It is recommended that contour of worktable accommodate internal shape of bumper.              |  <p style="text-align: right;">EI-00234</p> |
| 4           | Surface preparation | Remove dust, oil, etc. from areas to be repaired and surrounding areas, using a suitable solvent (NRM No. 900 Precleno, white gasoline, or alcohol). |  |

# Front Bumper

## EXTERIOR/INTERIOR TRIM

| Process No. | Process name      | Job contents  |  |
|-------------|-------------------|---|--|
| 5           | Cutting           | <p>If nature of damage are cracks or holes, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole up to the bumper's base surface. Then, bevel or "vee-out" the affected area using a knife or grinder.</p> |  <p style="text-align: right;">EI-00235</p> <p>(1) Paint surface<br/>           (2) PP base surface<br/>           (3) 20 — 30 mm (0.79 — 1.18 in)<br/>           (4) 3 mm (0.12 in)</p>  |
| 6           | Sanding (I)       | Grind beveled surface with sand paper (#40 to #60) to smooth finish.  |  |
| 7           | Cleaning          | Clean the sanded surface with the same solvent as used in Process No. 4.  |  |
| 8           | Temporary welding | <p>Grind the side just opposite the beveled area with sand paper (#40 to #60) and clean using a solvent.<br/>           Temporarily spot-weld the side, using a PP welding rod and heater gun.</p>  |  <p style="text-align: right;">EI-00236</p> <p>(1) Welded spot (Use heater gun and PP welding rod)<br/>           (2) PP base surface<br/>           (3) Beveled section</p> <p>NOTE:</p> <ul style="list-style-type: none"> <li>• Do not melt the welding rod until it flows out. This results in reduced strength.</li> <li>• Leave the welded spot unattended until it cools completely.</li> </ul>  |
| 9           | Welding           | <p>Using a heater gun and PP welding rod, weld the beveled spot while melting the rod and damaged area.</p>   |  <p style="text-align: right;">EI-00237</p> <p>(1) Melt hatched area<br/>           (2) Welding rod<br/>           (3) Section</p> <p>NOTE:</p> <ul style="list-style-type: none"> <li>• Melt the sections indicated by hatched area.</li> <li>• Do not melt the welding rod until it flows out, in order to provide strength.</li> <li>• Always keep the heater gun 1 to 2 cm (0.4 to 0.8 in) away from the welding spot.</li> <li>• Leave the welded spot unattended until it cools completely.</li> </ul> |

# Front Bumper

EXTERIOR/INTERIOR TRIM

| Process No. | Process name            | Job contents   |
|-------------|-------------------------|--|
| 10          | Sanding (II)            | Remove excess part of weld with a putty knife. If a drill or disc wheel is used instead of the knife, operate it at a rate lower than 1,500 rpm and grind the excess part little by little. A higher rpm will cause the PP substrate to melt from the heat.  |
|             |                         |  <p style="text-align: right;">EI-00042</p>  |
|             |                         | Sand the welded spot smooth with #240 sand paper.  |
| 11          | Masking                 | Mask the black substrate section using masking tape.<br>Recommended masking tape: Nichiban No. 533 or equivalent   |
| 12          | Cleaning/<br>degreasing | Completely clean the entire coated area, using solvent similar to that used in Process No. 4.  |
| 13          | Primer coating          | Apply a coat of primer to the repaired surface and its surrounding areas. Mask these areas, if necessary.<br>Recommended primer: Mp/ 364 PP Primer<br>NOTE:<br>Be sure to apply one coat of primer at a spraying pressure of 245 to 343 kPa (2.5 to 3.5 kgf/cm <sup>2</sup> , 36 to 50 psi) with a spray gun.  |
| 14          | Leave unattended.       | Leave the repaired area unattended at 20°C (68°F) for 10 to 15 minutes until primer is half-dry.<br>NOTE:<br>If dirt or dust comes in contact with the coated area, wipe it off with a cloth impregnated with alcohol. (Do not use thinner since the coated area tends to melt.)   |
| 15          | Primer surfacer coating | Apply a coat of primer surfacer to the repaired area two or three times at an interval of 3 to 5 minutes.<br>Recommended surfacer:<br><ul style="list-style-type: none"> <li>• UPS 300 Flex Primer</li> <li>• No. 303 UPS 300 Exclusive hardener</li> <li>• NPS 725 Exclusive Reducer (thinner)</li> <li>• Mixing ratio: 2: 1 (UPS 300: No. 303)</li> <li>• Viscosity: 12 — 14 sec/20°C (68°F)</li> <li>• Coated film thickness: 40 — 50μ</li> </ul>   |
| 16          | Drying                  | Allow the coated surface to dry for 30 minutes at 20°C (68°F) or 20 minutes at 60°C (140°F).   |
| 17          | Sanding (III)           | Sand the coated surface and its surrounding areas using #400 sand paper and water.   |
| 18          | Cleaning/<br>degreasing | Same as Process No. 12.  |
| 19          | Top coat (I)            | Solid color  |
|             |                         | <p>Use a “block” coating method.</p> <ul style="list-style-type: none"> <li>• Recommended paint: Suncryl (SC)</li> <li>• No. 307 Flex Hardener</li> <li>• SC Reducer (thinner)</li> <li>• Mixing ratio: 3: 1</li> </ul> <p>Suncryl (SC) vs. No. 307 Flex Hardener</p> <ul style="list-style-type: none"> <li>• Viscosity: 11 — 13 sec/20°C (68°F)</li> <li>• Coated film thickness: 40 — 50μ</li> <li>• Spraying thickness: 245 — 343 kPa (2.5 — 3.5 kgf/cm<sup>2</sup>, 36 — 50 psi)</li> </ul> |
|             |                         | Metallic color   |

# Front Bumper

## EXTERIOR/INTERIOR TRIM

| Process No. | Process name        | Job contents  |  |
|-------------|---------------------|---|--|
| 20          | Leave unattended.   | Not required.   | Leave unattended at 20°C (68°F) for at least 10 minutes until the topcoated area is half-dry.<br>NOTE:<br>Be careful to keep dust or dirt from coming in contact with the affected area.   |
| 21          | Top coat (II)       | Not required.   | Apply a clear coat three times at an interval of 3 to 5 minutes.<br>• Recommended paint:<br>SC710 Overlay Clear<br>No. 307 Flex Hardener<br>SC Reducer (thinner)<br>• Mixing ratio: 3: 1<br>Suncryl (SC) vs. No. 307 Flex Hardener<br>• Viscosity: 10 — 13 sec/20°C (68°F)<br>• Coated film thickness: 20 — 30μ<br>• Spraying pressure: 245 — 343 kPa<br>(2.5 — 3.5 kgf/cm <sup>2</sup> , 36 — 50 psi) |
| 22          | Drying              | Allow the coated surface to dry at 20°C (68°F) for two hours or 60°C (140°F) for 30 minutes.<br>NOTE:<br>Do not allow the temperature to exceed 80°C (176°F) since this will deform the PP substrate. |  |
| 23          | Inspection          | Carefully check the condition of the repaired area.   |  |
| 24          | Masking removal     | Remove the masking tape applied in Process No. 11 and 13.   |  |
| 25          | Parts installation  | Install the parts on bumper in reverse order of removal.  |  |
| 26          | Bumper installation | Install the bumper.   |  |

## 6. Rear Bumper

### A: REMOVAL

#### 1. WAGON MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the bolt inside wheel house (both sides), and the clips on lower side of bumper.

- 3) Remove the rear combination light assembly. <Ref. to LI-22, REMOVAL, Rear Combination Light Assembly.>
- 4) Remove the screw and two clips (both sides).

- 5) Remove the floor box.
- 6) Remove the rear skirt trim.

- 7) Turn over the rear quarter lower trims on both sides, and then loosen the four nuts.

- 8) Disconnect the license plate light connector, and then remove the rear bumper.
- 9) Remove the E/A FORM from bumper beam.

**CAUTION:**  
E/A FORM may easily break. Do not apply excessive force to it during removal.

- 10) Remove the bolt.

- 11) Remove the three bolts, then remove the bumper beam.

# Rear Bumper

## EXTERIOR/INTERIOR TRIM

### NOTE:

In the case of right side, remove the canister first. Loosen the bolt, and then remove the bumper beam.

12) Remove the five clips, and then remove the bumper upper beam.

13) Remove the license plate light.

14) Remove the six clips, and then remove the bumper side cover.

15) Remove the upper bracket from body.

## 2. SEDAN MODEL

Refer to description about removal of rear bumper of wagon model. <Ref. to EI-31, WAGON MODEL, REMOVAL, Rear Bumper.>

## B: INSTALLATION

### 1. WAGON MODEL

Install in the reverse order of removal.

#### Tightening torque:

Refer to **COMPONENT** in *General Description*.

<Ref. to EI-5, REAR BUMPER, COMPONENT, General Description.>

### 2. SEDAN MODEL

Install in the reverse order of removal.

#### Tightening torque:

Refer to **COMPONENT** in *General Description*.

<Ref. to EI-5, REAR BUMPER, COMPONENT, General Description.>

## C: REPAIR

Refer to description about repair of front bumper. <Ref. to EI-24, REMOVAL, Front Bumper.>

## 7. Mud Guard

### A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove the screws and clips to remove mud guard.

### B: INSTALLATION

Insert the hook into body, and tighten it with screw and clip.

**Tightening torque:**

***T: 4.5 N·m (0.46 kgf-m, 3.3 ft-lb)***

## 8. Cowl Panel

### A: REMOVAL

- 1) Open the front hood.
- 2) Remove the wiper arm. <Ref. to WW-13, REMOVAL, Front Wiper Arm.>
- 3) Remove the front panel seal.

- 4) Disengage the clips (A) to remove the cowl panel.

(A) Clip

### B: INSTALLATION

Install in the reverse order of removal.

## 9. Roof Spoiler

### A: REMOVAL

- 1) Remove the bolt cap, and then remove the two bolts.
- 2) Remove the roof spoiler.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

*7.5 N·m (0.76 kgf-m, 5.5 ft-lb)*

## 10. Rear Spoiler

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Open the trunk lid.
- 3) Remove the electrical connector (A) of high mount stop light.

- 4) Loosen the mounting nut of rear spoiler to remove rear spoiler.

### CAUTION:

- When removing the nut, do not drop it into trunk lid.
- Pay attention to avoid damage during removal or installation.

Small-sized rear spoiler: Four tightening positions, two clips

(A) Connector

Large-sized rear spoiler: Twelve tightening positions, four clips

(A) Connector

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Clean the mounting surfaces of trunk lid and spoiler before installation.

### Tightening torque:

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

## 11.Side Sill Spoiler

### A: REMOVAL

1) Remove the clips (one on front fender arch, six on bottom of side sill spoiler), then remove the side spoiler.

2) Remove the one rivet clip (A) and two clips, and then remove the end cover. (Except STI model)

3) Remove the rear air flap plate from side sill spoiler.

### B: INSTALLATION

Install in the reverse order of removal.

## 12.Side Protector

### A: REMOVAL

EI-01135

(A) STI model

1) Slide in a thin thread (A) of 0.8 mm (0.031 in) diameter or less (fishing line etc.) between body and protector, and then remove the protector detaching double-sided tape. Remove the protector using clip remover.

- If the double-sided tape remains thick on surface due to interfacial peeling, apply the solvent after slicing off the double-sided tape using a cutter.

EI-00153

#### NOTE:

- To optimize the effect of solvent, slide the thread along the body without removing the double-sided tape on surface of body and spoiler.
- If it is difficult to detach the double-sided tape, warm up to approx. 40°C (104°F).

EI-00478

- (A) Panel  
(B) Spoiler  
(C) Double-sided tape

- 2) Adhere the masking tape around the double-sided tape remaining on surface of body and spoiler.
- 3) Apply the solvent uniformly on double-sided tape using a brush.

#### CAUTION:

- Do not use the solvent to body which is repaired with lacquer paint.
- Wipe off immediately when the solvent is touched on surface of body and spoiler.

#### Solvent:

**3M 8907 or equivalent**

4) Cover the area where solvent is applied using plastic wrap (A), and then heat the double-sided tape for 5 to 10 minutes in 40 to 60°C (104 to 140°F) using a heat lamp (B).

**Primer:**  
*3M K-500 or equivalent*

**Double-sided tape:**  
*3M 5531-5 or equivalent*

2) Heat the adhering part using a heat lamp.

Body side: 40 — 60°C (104 — 140°F)

Protector side: 20 — 30°C (68 — 86°F)

3) Detach the double-sided tape backing sheet, align to clip position, and then adhere to body using care to avoid air entering.

**CAUTION:**

**To keep the adhesion, do not wash the vehicle within 24 hours.**

**CAUTION:**

**Do not heat the double-sided tape until the surface becomes white and excessively dried.**

5) Remove the double-sided tape using a plastic spatula.

6) After completely removing the double-sided tape, detach the masking tape and clean the surface using a cotton cloth waste damped with white gasoline.

**B: INSTALLATION**

1) Apply the primer to protector surface where the double-sided tape is adhered, and then adhere the double-sided tape as shown in the figure.

(1) Double-sided tape; thickness: 1.2 mm (0.047 in), width: 5 mm (0.197 in)

## 13. Arch Cover

### A: REMOVAL

#### CAUTION:

Never remove the arch cover unless necessary.  
Otherwise the arch cover may be damaged.

- 1) Lift-up the vehicle.
- 2) Remove the bolt inside the wheel house.

- 3) Remove the two hook of arch cover by pulling the rear bumper outward.

- 4) Remove the arch cover using clip remover.

### B: INSTALLATION

Install in the reverse order of removal.

## 14. Front Door Trim

### A: REMOVAL

**CAUTION:**

**Do not apply excessive force to the clip. Otherwise the clip may be broken.**

- 1) Disconnect the ground cable from battery.
- 2) Remove the gusset cover.
- 3) Insert the flat tip screw driver into A part of inner remote cover, and then remove the lower hook with turning screw driver.

Remove the upper hook with pulling inner remote cover, and then remove the inner remote cover.

- 4) Remove the power window control switch. <Ref. to GW-9, REMOVAL, Power Window Control Switch.>
- 5) Remove the clips of trim panel using clip remover to remove trim panel.

### B: INSTALLATION

Install in the reverse order of removal.

## 15.Rear Door Trim

### A: REMOVAL

**CAUTION:**

**Do not apply excessive force to the clip. Otherwise the clip may be broken.**

- 1) Disconnect the ground cable from battery.
- 2) Insert the flat tip screw driver into A part of inner remote cover, and then remove the lower hook with turning screw driver.

Remove the upper hook with pulling inner remote cover, and then remove the inner remote cover.

- 3) Remove the power window control switch. <Ref. to GW-9, REMOVAL, Power Window Control Switch.>

- 4) Remove the clips of trim panel using clip remover to remove trim panel.

### B: INSTALLATION

Install in the reverse order of removal.

## 16. Glove Box

### A: REMOVAL

- 1) Open the glove box.
- 2) Remove the screws to remove glove box.

### B: INSTALLATION

Install in the reverse order of removal.

## 17. Roof Rail

### A: REMOVAL

- 1) Remove the roof trim. <Ref. to EI-55, REMOVAL, Roof Trim.>
- 2) Remove the four mounting nuts, and then detach the roof rail carefully.

EI-00467

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

Be careful not to scratch the body panels with roof rail stud bolts when removing and installing them.

#### Tightening torque:

*7.4 N·m (0.75 kgf·m, 5.46 ft·lb)*

## 18. Roof Molding

### A: REMOVAL

1) Turn over the edge of roof molding, and then remove it by sliding the internal clip using a flat tip screwdriver.

RH: Slide the molding toward the rear side of vehicle.

LH: Slide the molding toward the front side of vehicle.

Sedan model: six clips

Wagon model (without roof rail): eight clips

Wagon model (with roof rail): seven clips

2) For sedan model, remove four clips of rear pillar. Turn over the roof molding on rear glass side, insert a board of about 0.5 mm (0.020 in) thickness into clearance between roof molding and glass, and then remove the claw of internal clip.

### B: INSTALLATION

1) Remove the clip of roof and rear pillar (sedan model) from roof molding, and then install it to body side.

#### CAUTION:

**Make sure to replace the clips broken when removing the roof molding with new ones.**

2) Put the front edge of roof molding onto front window molding, and insert the front locating pin into body side cap.

(1) Front window

(2) Locating pin

(3) Roof molding

(4) Cap

(5) Clip (roof)

3) Install the roof molding to body, by pushing the roof molding from above being careful not to deform it.

# Console Box

EXTERIOR/INTERIOR TRIM

## 19. Console Box

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console front panel.

(A) Hook pawl

- 3) Remove the shift knob (MT model).
- 4) Remove the screws to remove console cover.

(A) Clip

- 5) Remove the screws.

- 6) Remove the hook pawl of console side panel to remove console box.

### B: INSTALLATION

Install in the reverse order of removal.

## 20. Instrument Panel Assembly

### A: REMOVAL

#### CAUTION:

- All airbag system connectors are colored yellow. Do not use electrical equipment on these circuits.
- Be careful not to damage the airbag system harness when servicing the instrument panel.

- 1) Disconnect the ground cable from battery.
- 2) Loosen the screws, remove the clip (A), disconnect the connectors, and then remove the instrument panel lower cover.

- 3) Remove the console front panel and console cover. <Ref. to EI-46, REMOVAL, Console Box.>
- 4) Remove the clip (A), and then remove the center console panel.

- 5) Remove the glove box. <Ref. to EI-43, REMOVAL, Glove Box.>
- 6) Loosen the screws, and then remove the console side panel.

- 7) Remove the passenger's airbag module. <Ref. to AB-15, Passenger's Airbag Module.>
- 8) Loosen the four screws and two nuts, and then remove the lower console panel.

- 9) Remove the hook, and then remove the defroster panel.

- 10) Remove the front pillar upper trim. <Ref. to EI-50, REMOVAL, Upper Inner Trim.>
- 11) Disconnect the two connectors, and then loosen the nuts.

# Instrument Panel Assembly

EXTERIOR/INTERIOR TRIM

12) Remove the instrument panel installation bolts.

EI-01016

13) Make sure that all the harnesses are disconnected, and then remove the instrument panel from vehicle.

**NOTE:**

- Put alignment marks as necessary, in order to facilitate the reassembly.
- When storing the removed instrument panel, place it standing up on the floor.

## B: INSTALLATION

**CAUTION:**

- Be careful not to snag the harness.
- Carry out installation checking that the harness is connected correctly.
- When setting the instrument panel into vehicle, do not damage trim panels.

1) Install in the reverse order of removal.

**NOTE:**

When installing the instrument panel into position, push the hook into grommet (A) on the body panel. After tightening the bolts, recheck the installation.

## 21.Upper Inner Trim

### A: REMOVAL

- 1) Remove the lower inner trim. <Ref. to EI-51, REMOVAL, Lower Inner Trim.>
- 2) Remove the front molding (A).
- 3) Remove the front pillar upper trim (B).
- 4) Detach the front seat belt shoulder anchor, and then remove the center pillar upper trim (C).

(D) Clip

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

**Be sure to securely hook the pawls of inner trim panel to body flange.**

#### NOTE:

When installing the center pillar upper trim and front pillar upper trim, be sure to set the front molding as shown in the figure.

- (A) Outside
- (B) Inside
- (C) Molding
- (D) Weather strip
- (E) Trim
- (F) Body

## 22. Lower Inner Trim

### A: REMOVAL

- 1) Remove the side sill front cover (A).
- 2) Remove the rear seat cushion, and then remove side sill rear cover (B). <Ref. to SE-13, REMOVAL, Rear Seat.>
- 3) Remove the center pillar lower trim (C).

(D) Clip

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

**Be sure to securely hook pawls of inner trim panel to body flange.**

# Rear Quarter Trim

EXTERIOR/INTERIOR TRIM

## 23. Rear Quarter Trim

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Remove the rear seat. <Ref. to SE-13, REMOVAL, Rear Seat.>
- 2) Remove the side sill rear cover. <Ref. to EI-51, REMOVAL, Lower Inner Trim.>
- 3) Remove the rear pillar lower cover (A).
- 4) Remove the seat belt lower anchor bolt, and then remove the rear pillar upper trim (B).

(C) Clip

#### 2. WAGON MODEL

- 1) Remove the rear seat. <Ref. to SE-13, REMOVAL, Rear Seat.>
- 2) Remove the side sill rear cover.
- 3) Remove the rear rail trim (A).
- 4) Loosen the screws and clips to remove the rear quarter upper trim (B).
- 5) Remove the rear skirt trim (C).

- 6) Remove the bolts and clips to remove the rear quarter lower trim (D).

(E) Clip

- 7) Remove the nut, and remove the luggage compartment side rail.

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

Be sure to securely hook the pawls of inner trim panel to body flange.

**NOTE:**

When installing the rear quarter upper trim, be sure to set the rear molding as shown in the figure.

- (A) Outside
- (B) Inside
- (C) Molding
- (D) Weather strip
- (E) Trim
- (F) Body

## 24.Sun Visor

### A: REMOVAL

Remove the mounting screws, and then detach the sun visor (A) and hook (B).

### B: INSTALLATION

Install in the reverse order of removal.

## 25. Roof Trim

### A: REMOVAL

#### CAUTION:

When removing the clip, use great care not to damage the roof trim.

#### 1. SEDAN MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the sunroof switch. (Model with sunroof) <Ref. to SR-9, REMOVAL, Sunroof Switch.>
- 3) Remove the spot map light. <Ref. to LI-28, REMOVAL, Spot Map Light.>
- 4) Remove the room light. <Ref. to LI-29, REMOVAL, Room Light.>
- 5) Remove the sun visor and hook on right or left side, or on both sides. <Ref. to EI-54, REMOVAL, Sun Visor.>
- 6) In the case of models with sunroof, remove the sunroof weather strip.

- 7) Remove the assist-grips (A).

- 8) Remove the upper inner trim. <Ref. to EI-50, REMOVAL, Upper Inner Trim.>
- 9) Remove the quarter upper trim. <Ref. to EI-52, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>

- 10) Remove the clips, and then remove the roof trim.

#### 2. WAGON MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the sunroof switch. (Model with sunroof) <Ref. to SR-9, REMOVAL, Sunroof Switch.>
- 3) Remove the room light. <Ref. to LI-29, REMOVAL, Room Light.>
- 4) Remove the sun visor and hook or both sides. <Ref. to EI-54, REMOVAL, Sun Visor.>
- 5) In case of models with sunroof, remove the sunroof weather strip.

- 6) Remove the assist-grips (A).

- 7) Remove the upper inner trim. <Ref. to EI-50, REMOVAL, Upper Inner Trim.>
- 8) Remove the rear quarter upper trim shown in the figure.
- 9) Remove the rear rail trim (A).

# Roof Trim

## EXTERIOR/INTERIOR TRIM

---

10) Remove the rear quarter upper trim (B) of both sides.

(C) Clip

11) Remove the clips, and then remove the roof trim.

## **B: INSTALLATION**

Install in the reverse order of removal.

## 26.Rear Gate Trim

### A: REMOVAL

#### CAUTION:

Be careful not to damage the clips or their holes.

Remove the clips, and then detach the rear gate trim.

(A) Clip

### B: INSTALLATION

Install in the reverse order of removal.

## 27.Rear Shelf Trim

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the high-mounted stop light.

- 3) Remove the rear quarter upper trim. <Ref. to EI-52, REMOVAL, Rear Quarter Trim.>
- 4) Remove the seat belt center anchor lower bolt.
- 5) Remove the rear shelf trim.

(A) Clip

### B: INSTALLATION

Install in the reverse order of removal.

## 28. Trunk Room Trim

### A: REMOVAL

- 1) Remove the rear seat backrest. <Ref. to SE-13, SEDAN MODEL, REMOVAL, Rear Seat.>
- 2) Remove the trunk room mat.

- 3) Remove the clip (A).
- 4) Remove the clips, and then detach the trunk rear trim (B).
- 5) Remove the clips to remove trunk side trim (C).

(D) Clip

### B: INSTALLATION

Install in the reverse order of removal.

## 29. Floor Mat

### A: REMOVAL

- 1) Remove the front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
- 2) Remove the rear seat cushion. <Ref. to SE-13, REMOVAL, Rear Seat.>
- 3) Remove the console box. <Ref. to EI-46, Console Box.>
- 4) Remove the side sill front cover, side sill rear cover and center pillar lower trim. <Ref. to EI-51, REMOVAL, Lower Inner Trim.>
- 5) Remove the foot rest.
- 6) Remove the clips from floor mat.
- 7) Remove the mat hook.
- 8) Remove the mat from toe board area.
- 9) Remove the mat from rear heater duct.
- 10) Roll the mat, and then take it out of opened rear door.

- (A) Front  
(1) Floor mat

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

- Secure the mat firmly with hook and Velcro tape.
- Insert the mat edge firmly into the groove of side sill cover.

## 30. Luggage Floor Mat

### A: REMOVAL

Remove the clips, and then detach the rear floor mats.

### B: INSTALLATION

Install in the reverse order of removal.

# Heat Shield Cover

EXTERIOR/INTERIOR TRIM

## 31.Heat Shield Cover

### A: REMOVAL

#### 1. CENTER HEAT SHIELD COVER

- 1) Remove the rear exhaust pipe and muffler.
  - Non-turbo model  
<Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>
  - Turbo model and STI model  
<Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>
- 2) Remove the propeller shaft. <Ref. to DS-16, REMOVAL, Propeller Shaft.>
- 3) Remove the four bolts to remove center heat shield cover. (Except STI model)

- 4) Remove the four nuts and two clips to remove center heat shield cover. (STI model)

- (1) Center heat shield cover
- (2) Fuel tank band
- (3) Fuel tank
- (4) Clips

#### 2. REAR HEAT SHIELD COVER

- 1) Remove the muffler. <Ref. to EX(H4SO)-8, REMOVAL, Muffler.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>
- 2) Remove the four bolts to remove rear heat shield cover.

### B: INSTALLATION

Install in the reverse order of removal.

## 32. Diffuser

### A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Loosen the five bolts to remove rear diffuser.

- 3) Remove the two bolts, and remove the diffuser bracket.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Hang the back side of rear diffuser on diffuser bracket to install.

#### *Tightening torque:*

*<Ref. to EI-19, DIFFUSER, COMPONENT, General Description.>*

| (1) Rear gate damper stay | (4) Stopper rubber  |
| (2) Hinge                 | (5) Protector sheet |
| (3) Rear gate panel       | (6) Stud bolt       |

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 19.6 (2.0, 14.5)**

**T2: 24.5 (2.5, 18.1)**

### C: CAUTION

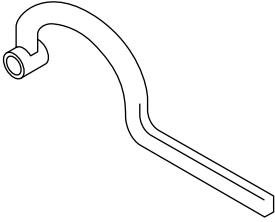

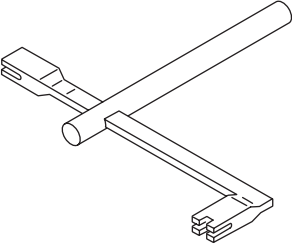

- Exterior body panels are heavy. Do not drop or damage the panels. During removal and installation, do not damage the panel painting surface.
- While removing the mounting bolts, using assistance devices such as a support jack will help support the panel.
- Be careful not to lose small parts.

# General Description

EXTERIOR BODY PANELS

## D: PREPARATION TOOL

### 1. SPECIAL TOOL

| ILLUSTRATION   | TOOL NUMBER | DESCRIPTION | REMARKS   |
|--|-------------|-------------|---|
| <br>ST-925610000  | 925610000   | WRENCH      | Used for removing and installing door hinge.        |
| <br>ST-927780000 | 927780000   | REMOVER     | Used for removing and installing trunk torsion bar. |

### 2. GENERAL TOOL

| TOOL NAME    | REMARKS                         |
|--------------|---------------------------------|
| Support jack | Used for supporting door panel. |

## 2. Front Hood

### A: REMOVAL

- 1) Open the front hood to remove washer nozzles.
- 2) Release the clips to remove hood insulator.

- 3) Remove the bolts to remove the front hood from hinges.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the clearance between front hood panel and front fender panel. Clearance must be equal at both sides.

#### **Tightening torque:**

**37.0 N·m (3.6 kgf·m, 27.3 ft·lb)**

### C: ADJUSTMENT

- 1) Use the hinge mounting holes to align the front hood longitudinally and laterally.

- 2) Adjust the height at front end of hood. <Ref. to SL-42, ADJUSTMENT, Front Hood Lock Assembly.>
- 3) Rotate the hood buffer to adjust lateral height.

### 3. Front Fender

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the side sill spoilers. <Ref. to EI-37, Side Sill Spoiler.> (Model with side sill spoiler)
- 3) Remove the front bumper face. <Ref. to EI-24, REMOVAL, Front Bumper.>
- 4) Remove the headlight. <Ref. to LI-12, REMOVAL, Headlight Assembly.>
- 5) Remove the mud guard. <Ref. to EI-33, REMOVAL, Mud Guard.>
- 6) Remove the bolts to remove front fender panel.

#### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) When the front fender panel is installed, clearance between front fender panel and front hood panel must be equal.

#### ***Tightening torque:***

***7.5 N·m (0.76 kgf-m, 5.5 ft-lb)***

## 4. Front Door

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-41, REMOVAL, Front Door Trim.>
- 3) Remove the outer mirror assembly. <Ref. to GW-18, REMOVAL, Outer Mirror Assembly.>
- 4) Remove the front door glass. <Ref. to GW-11, REMOVAL, Front Door Glass.>
- 5) Remove the front door regulator and motor. <Ref. to GW-15, REMOVAL, Front Regulator and Motor Assembly.>
- 6) Remove the front door latch assembly. <Ref. to SL-31, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
- 7) Remove the front outer handle. <Ref. to SL-30, REMOVAL, Front Outer Handle.>
- 8) Remove the front pillar lower trim to disconnect the connector from body harness.

- 9) Put a wooden block on jack and place the jack under front door panel. Support the front door with the jack to protect it from damage.

#### NOTE:

When supporting the door with jack, do not deform the hinge portion of door during work.

- 10) Remove the checker bolts.

- 11) Remove the door-side bolts for upper and lower hinges to remove the front door panel.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Apply grease to the sliding area of door hinges.

#### Tightening torque:

Refer to **COMPONENT in General Description**.

<Ref. to **EB-8, FRONT DOOR PANEL, COMPONENT, General Description**.>

### C: ADJUSTMENT

- 1) Using the ST, loosen the body-side bolts of upper and lower hinges to align the position of front door panel longitudinally and vertically.

ST 925610000 WRENCH

- 2) Loosen the screw (A) and tap striker (B) using a plastic hammer to adjust striker to align the position of front door panel laterally at the rear end.

# Front Door

## EXTERIOR BODY PANELS

---

### CAUTION:

Do not use an impact wrench. Welding area on the striker nut plate is easily broken.

## 5. Front Sealing Cover

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-41, REMOVAL, Front Door Trim.>
- 3) Remove the front speaker. <Ref. to ET-7, REMOVAL, Front Speaker.>
- 4) Remove the door trim bracket.

- 5) Remove the sealing cover.

#### NOTE:

- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If the cover gets broken, replace it with a new one.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) When replacing the sealing cover, use the butyl tape.
- 3) Press the butyl tape-applied area firmly to prevent any floating on surface.

#### **Butyl tape:**

**3M 8626 or equivalent**

#### NOTE:

- Apply a uniform bead of butyl tape.
- Attach the sealing cover, keeping it from becoming wrinkled.
- Breaks in the bead will allow water leakage and contamination.

### C: INSPECTION

If the sealing cover is damaged, replace it with a new one.

## 6. Rear Door

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-42, REMOVAL, Rear Door Trim.>
- 3) Remove the rear door glass. <Ref. to GW-22, REMOVAL, Rear Door Glass.>
- 4) Remove the rear door regulator and motor assembly. <Ref. to GW-24, REMOVAL, Rear Regulator and Motor Assembly.>
- 5) Remove the rear door latch. <Ref. to SL-33, REMOVAL, Rear Inner Remote.>
- 6) Remove the rear outer handle. <Ref. to SL-34, REMOVAL, Rear Outer Handle.>
- 7) Remove the connection of rubber dust (A) from center pillar, pull out the connector of door harness to separate.

- 8) Put a wooden block on the jack and place the jack under the rear door. Support the rear door with jack to protect it.

**NOTE:**

When supporting the door with jack, do not deform the hinge portion of door during work.

- 9) Remove the checker bolts.

- 10) Remove the door-side bolts for upper and lower hinges to remove the rear door panel.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Apply grease to the sliding area of door hinges.

**Tightening torque:**

*Refer to COMPONENT in General Description.*

*<Ref. to EB-9, REAR DOOR PANEL, COMPONENT, General Description.>*

### C: ADJUSTMENT

- 1) Open the rear door, and then loosen the body-side bolts of upper and lower hinges to align the position of rear door panel longitudinally and vertically.

- 2) Loosen the screw (A), and then tap striker (B) using plastic hammer to adjust striker to align the position of rear door panel laterally at the rear end.

**CAUTION:**  
Do not use an impact wrench. The welding area  
on the striker nut plate is easily broken.

## 7. Rear Sealing Cover

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-42, REMOVAL, Rear Door Trim.>
- 3) Remove the rear speaker. <Ref. to ET-9, REMOVAL, Rear Speaker.>
- 4) Remove the door trim bracket.

- 5) Remove the sealing cover.

#### NOTE:

- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If the cover gets broken, replace it with a new one.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) When replacing the sealing cover, use butyl tape.
- 3) Press the butyl tape-applied area firmly to prevent any floating on surface.

#### **Butyl tape:**

**3M 8626 or equivalent**

#### NOTE:

- Apply an uniform bead of butyl tape.
- Attach the sealing cover, keeping it from becoming wrinkled.
- Breaks in the bead will allow water leakage and contamination.

### C: INSPECTION

If the sealing cover is damaged, replace it with a new one.

## 8. Trunk Lid

### A: REMOVAL

#### 1. TRUNK LID

- 1) Open the trunk lid.
- 2) Disconnect the trunk lid connector.
- 3) Loosen the trunk lid mounting bolts to remove the trunk lid from hinges.

#### 2. TORSION BAR

- 1) Open the trunk lid.
- 2) Using the ST, remove the torsion bar from hinge link.

ST 927780000 REMOVER

#### CAUTION:

During removal and installation, carefully handle the torsion bar, because it will generate reactive force.

- 3) Remove the right/left torsion bars.

#### CAUTION:

Be careful not to get hit by the trunk lid, because the trunk lid will slam shut after the torsion bar is removed.

### B: INSTALLATION

#### 1. TRUNK LID

- 1) Install in the reverse order of removal.
- 2) Install the trunk lid with uniform clearance.

#### Tightening torque:

**14 N·m (1.43 kgf·m, 10.3 ft·lb)**

## 9. Rear Gate

### A: REMOVAL

#### 1. REAR GATE PANEL

- 1) Disconnect the ground cable from battery.
- 2) Open the rear gate.
- 3) Remove the rear gate outer handle. <Ref. to SL-37, REMOVAL, Rear Gate Outer Handle.>
- 4) Remove the rear gate latch assembly. <Ref. to SL-38, REMOVAL, Rear Gate Latch Assembly.>
- 5) Remove the rear wiper. <Ref. to WW-18, REMOVAL, Rear Wiper Motor.>
- 6) Disconnect the connectors of rear wiper, rear defogger and other lighting devices.
- 7) Disconnect the washer hose.
- 8) Remove the rubber duct (A) connection, and then pull out the harness and washer hose from rear gate.

- 9) Using a support, support jack the rear gate while removing the rear gate damper stay mounting bolts.

### CAUTION:

When the rear gate is released, it may hit and damage the body. To prevent this, place a shop cloth between the body and gate.

- 10) Remove the rear gate bolts to remove rear gate.

#### 2. REAR GATE DAMPER STAY

- 1) Open the rear gate. Use a support jack to support the rear gate.

### NOTE:

After the rear gate damper stay is removed, the rear gate cannot stay open. Supporting the rear gate with a support jack, remove the bolts.

### CAUTION:

- Do not damage the piston rods and oil seals.
- Never disassemble the cylinders: They contain gas.

2) Loosen the bolts to remove the rear gate damper stay from rear gate.

**NOTE:**

After supporting the rear gate with a support jack, start the work.

**C: DISPOSAL**

**1. REAR GATE DAMPER STAY**

**CAUTION:**

Gas is colorless, odorless, and harmless. However, gas pressure may spray the cutting powder or oil. Be sure to wear dust-resistant goggles.

1) Cover with a vinyl case as shown in the figure.

- (1) Rear gate damper stay
- (2) Vinyl sack

**B: INSTALLATION**

**1. REAR GATE PANEL**

1) Install in the reverse order of removal.  
 2) Install the rear gate panel with uniform clearance to the body.  
 Refer to COMPONENT of General Description for tightening torque. <Ref. to EB-11, REAR GATE PANEL, COMPONENT, General Description.>

**CAUTION:**

Do not damage the painted surfaces of body and rear gate panel.

**2. REAR GATE DAMPER STAY**

1) Install the mounting bolt (A) to the rear gate and body.

**Tightening torque:**

**19.6 N·m (2.0 kgf·m, 14.5 ft·lb)**

2) Firmly install the rear gate damper stay (B) to mounting bolt (A).

**NOTE:**

Prevent the vinyl case from being caught by drill cutting edge

2) Lift the body side slightly with piston rods fully extended, and secure the body side on vise stand. Drill a hole in 2 to 3 mm (0.08 to 0.12 in) diameter at a point 10 to 200 mm (0.39 to 7.87 in) from door side, and bleed the rear gate damper stay completely.

- (1) Body side
- (2) Door side
- (3) 190 mm (7.48 in)
- (4) 10 mm (0.39 in)
- (5) Piston rod
- (6) Cylinder
- (7) Position to be drilled

## B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable. When repairing the radio, control module and other parts with memory functions, make note of the memory before disconnecting the battery ground cable. All memory will be erased.
- Reassemble parts in the reverse order of disassembly unless otherwise indicated.
- Adjust parts to specifications specified in this manual.
- Connect the connectors and hoses securely during reassembly.
- After reassembly, ensure functional parts operate properly.

## C: PREPARATION TOOL

| TOOL NAME      | REMARKS                                    |
|----------------|--|
| Circuit Tester | Used for measuring resistance and voltage. |

## 2. Cruise Control Unit

### A: REMOVAL

The control of cruise control system is performed by Engine control module (ECM).

#### 1. NON-TURBO MODEL

<Ref. to FU(H4SO)-38, REMOVAL, Engine Control Module (ECM).>

#### 2. TURBO MODEL

<Ref. to FU(H4DOTC)-45, REMOVAL, Engine Control Module (ECM).>

#### 3. STI MODEL

<Ref. to FU(STI)-39, REMOVAL, Engine Control Module (ECM).>

### B: INSTALLATION

#### 1. NON-TURBO MODEL

<Ref. to FU(H4SO)-38, INSTALLATION, Engine Control Module (ECM).>

#### 2. TURBO MODEL

<Ref. to FU(H4DOTC)-45, INSTALLATION, Engine Control Module (ECM).>

#### 3. STI MODEL

<Ref. to FU(STI)-39, INSTALLATION, Engine Control Module (ECM).>

## 3. Cruise Control Command Switch

### A: REMOVAL

**WARNING:**

Before servicing, be sure to read the notes in the AB section for proper handling of the driver's airbag module. <Ref. to AB-3, CAUTION, General Description.>

- 1) Set the front wheels in straight ahead position.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 4) Using the TORX® BIT T30 (Tamper resistant type), loosen the two TORX® bolts which secure driver's airbag module.

(1) TORX® BIT T30

- 5) Disconnect the airbag module connector on back of airbag module.
- 6) Remove the steering wheel. <Ref. to PS-20, REMOVAL, Steering Wheel.>
- 7) Remove four screws, and then remove the lower cover from steering wheel.

- 8) Remove the screw, and then remove the cruise control command switch from lower cover.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the cruise control command switch resistance.

| Switch       | Position | Terminal No.    | Standard value |
|--------------|----------|-----------------|----------------|
| CANCEL       | ON       | 1 (+) and 2 (-) | Less than 1 Ω  |
|              | ON       | 1 (+) and 3 (-) | Less than 1 Ω  |
| SET/COAST    | OFF      | 1 and 2         | More than 1 MΩ |
|              | ON       | 1 and 2         | Less than 1 Ω  |
| RESUME/ACCEL | OFF      | 1 and 3         | More than 1 MΩ |
|              | ON       | 1 and 3         | Less than 1 Ω  |
| MAIN SWITCH  | OFF      | 5 and 4         | More than 1 MΩ |
|              | ON       | 5 and 4         | Less than 1 MΩ |

If NG, replace the cruise control command switch.

# Stop Light and Brake Switch

CRUISE CONTROL SYSTEM

## 4. Stop Light and Brake Switch

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from stop and brake switch, and then remove the switch. <Ref. to BR-55, REMOVAL, Stop Light Switch.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the brake switch (A) and stop light switch (B) resistance.

| Switch     | Pedal     | Terminal No. | Standard       |
|------------|-----------|--------------|----------------|
| Brake      | Released  | 1 and 4      | Less than 1 Ω  |
|            | Depressed | 1 and 4      | More than 1 MΩ |
| Stop light | Released  | 2 and 3      | More than 1 MΩ |
|            | Depressed | 2 and 3      | Less than 1 Ω  |

If NG, replace the stop light and brake switch.

## 5. Clutch Switch

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from clutch switch, and then remove the switch. <Ref. to CL-32, REMOVAL, Clutch Pedal.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the clutch switch resistance.

| Switch | Pedal     | Terminal No. | Standard               |
|--------|-----------|--------------|------------------------|
| Clutch | Released  | 1 and 2      | Less than 1 $\Omega$   |
|        | Depressed | 1 and 2      | More than 1 M $\Omega$ |

If NG, replace the clutch switch.

## 6. Inhibitor Switch

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from inhibitor switch, and then remove the switch. <Ref. to 4AT-48, REMOVAL, Inhibitor Switch.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the inhibitor switch resistance.

| Select lever position | Terminal No. | Standard       |
|-----------------------|--------------|----------------|
| P                     | 7 and 12     | Less than 1 Ω  |
| N                     |              | Less than 1 Ω  |
| Except P and N        |              | More than 1 MΩ |

If NG, replace the inhibitor switch.

## 7. Neutral Position Switch

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from neutral position switch, and then remove the switch.

5MT model:

<Ref. to 5MT-36, BACK-UP LIGHT AND NEUTRAL POSITION SWITCH, REMOVAL, Switches and Harness.>

6MT model:

<Ref. to 6MT-47, REMOVAL, Neutral Position Switch.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the neutral position switch resistance.

- Non-turbo model

| Gear shift position | Terminal No. | Specified resistance   |
|---------------------|--------------|------------------------|
| Neutral position    | 1 and 2      | Less than 1 $\Omega$   |
| Other positions     |              | More than 1 M $\Omega$ |

- Turbo model

| Gear shift position | Terminal No. | Specified resistance   |
|---------------------|--------------|------------------------|
| Neutral position    | 1 and 3      | Less than 1 $\Omega$   |
| Other positions     |              | More than 1 M $\Omega$ |

- STI model

| Gear shift position | Terminal No. | Specified resistance   |
|---------------------|--------------|------------------------|
| Neutral position    | 2 and 5      | Less than 1 $\Omega$   |
| Other positions     |              | More than 1 M $\Omega$ |

If NG, replace the neutral position switch.

(MT model)</li> <li>• Finish the diagnosis. (AT model)</li> </ul> | Go to phenomenon 8. <Ref. to CC(ETC)(diag)-12, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>  |
| <b>12</b><br><b>CHECK CRUISE CONTROL RELEASE OPERATION.</b><br>Check the cruise control release operation. | Is the cruise control released after clutch pedal has been depressed? (MT model) | Go to step <b>13</b> .   | Go to phenomenon 9. <Ref. to CC(ETC)(diag)-12, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>  |
| <b>13</b><br><b>CHECK CRUISE CONTROL RELEASE OPERATION.</b><br>Check the cruise control release operation. | Is the cruise control released after shifting to neutral position? (MT model)    | Finish the diagnosis.  | Go to phenomenon 10. <Ref. to CC(ETC)(diag)-12, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.> |

## General Description

### CRUISE CONTROL SYSTEM (DIAGNOSTICS)

## 2. General Description

### A: CAUTION

#### 1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

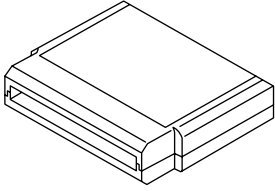

Airbag system wiring harness is routed near the cruise control switch.

#### CAUTION:

- Airbag system connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the cruise control switch.

### B: PREPARATION TOOL

#### 1. SPECIAL TOOL

<Ref. to WI-102, WIRING DIAGRAM, Cruise Control System.>

# Subaru Select Monitor

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

### 5. Subaru Select Monitor

#### A: OPERATION

##### 1. GENERAL

The on-board diagnosis function of the cruise control system uses the Subaru Select Monitor.

The on-board diagnosis function operates in two categories, which are used depending on the type of problems;

##### 1) Cruise cancel conditions diagnosis:

(1) This category of diagnosis requires actual vehicle driving in order to determine the cause, (as when cruise speed is cancelled during driving although cruise cancel condition is not entered).

(2) Cruise control memory of ECM stores the cancel condition (Code No.) which occurred during driving. When there are plural cancel conditions (Code No.), they are shown on the Subaru Select Monitor.

#### CAUTION:

- The cruise control memory stores not only the cruise “cancel” which occurred (although “cancel” operation is not entered by the driver), but also the “cancel” condition input by the driver.

- The content of memory is cleared when ignition switch or cruise control main switch is turned OFF.

##### 2) Real-time diagnosis:

The real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.

(1) Vehicle cannot be driven at cruise speed because problem occurs in the cruise control system or its associated circuits.

(2) Monitor the signal conditions from switches and sensors.

#### 2. CRUISE CANCEL CONDITIONS DIAGNOSIS

##### 1) Prepare the Subaru Select Monitor kit.

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor. <Ref. to CC(ETC)(diag)-4, SPECIAL TOOL, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

5) Start the engine and turn the cruise control main switch to ON.

6) Turn the Subaru Select Monitor power switch to ON.

(1) Power switch

7) On the Main Menu display screen, select the {2. Each System Diagnosis} and press [YES] key. Select the {Engine} on the System Selection display screen and press [YES] key. Press [YES] key after the engine type displayed.

8) Drive the vehicle at least 40 km/h (25 MPH) with cruise speed set.

9) If the cruise speed is canceled itself (without doing any cancel operations), a DTC will appear on the display after {Cancel Code(s) Display} is selected on the Engine Diagnosis display screen and [YES] key is pressed.

### **CAUTION:**

- **When performing diagnostics, observe the legal speed of the road.**
- **A DTC will also appear when cruise cancel is effected by driver. Do not confuse.**
- **Have a co-worker ride in the vehicle to assist in diagnosis during driving.**

### **NOTE:**

DTC will be cleared by turning the ignition switch or cruise control main switch to OFF.

## **3. REAL-TIME DIAGNOSIS**

- 1) Connect the select monitor.
- 2) Turn the ignition switch and cruise control main switch to ON.
- 3) Turn the Subaru Select Monitor power switch to ON.
- 4) On the Main Menu display screen, select the {2. Each System Check} and press [YES] key.
- 5) On the System Selection display screen, select the {Engine} and press [YES] key.
- 6) Press the [YES] key after the information of engine type has been displayed.
- 7) On the Cruise Control Diagnosis display screen, select the {Current Data Display & Save} and press [YES] key.
- 8) Make sure that normal indication is displayed when operated as indicated below:
  - Depress/release the brake pedal. (Stop light switch and brake switch turn ON.)
  - Turn ON the "SET/COAST" switch.
  - Turn ON the "RES/ACC" switch.
  - Turn ON the "CANCEL" switch. (The "SET/COAST" and "RES/ACC" switch are turned ON at same time.)
  - Depress/release the clutch pedal. (MT model)
  - Set the shift lever to any position other than neutral. (MT model)
  - Place the select lever in any position other than "P" or "N". (AT model)

### **NOTE:**

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For details concerning DTCs, refer to the List of DTC. <Ref. to CC(ETC)(diag)-19, List of Diagnostic Trouble Code (DTC).>

## Diagnostics with Phenomenon

### CRUISE CONTROL SYSTEM (DIAGNOSTICS)

## 6. Diagnostics with Phenomenon

### A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

| Phenomenon |  | Checking item                                  | Reference   |
|------------|--|--|---|
| 1          | Cruise control main switch is not turned to ON. (Cruise indicator light does not illuminate)           | (1) Check the cruise indicator light.          | <Ref. to CC(ETC)(diag)-13, CHECK CRUISE INDICATOR LIGHT, Diagnostics with Phenomenon.>  |
|            |  | (2) Check the cruise control command switch.   | <Ref. to CC(ETC)(diag)-22, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| 2          | Cruise control cannot be set.  | (1) Check the cruise control command switch    | <Ref. to CC(ETC)(diag)-22, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
|            |  | (2) Check the stop light and brake switch.     | <Ref. to CC(ETC)(diag)-25, DTC 12 AND 25 STOP LIGHT SWITCH AND BRAKE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>    |
|            |  | (3) Check the clutch switch. (MT model)        | <Ref. to CC(ETC)(diag)-27, DTC 13 CLUTCH SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                |
|            |  | (4) Check the neutral position switch.         | <Ref. to CC(ETC)(diag)-29, DTC 14 NEUTRAL POSITION SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |
|            |  | (5) Check the vehicle speed sensor. (MT model) | <Ref. to CC(ETC)(diag)-35, DTC 22 AND 32 VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                  |
| 3          | Cruise set indicator light does not illuminate.  | Check the cruise set indicator light.          | <Ref. to CC(ETC)(diag)-16, CHECK CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>  |
| 4          | Vehicle speed is not held within set speed $\pm 3$ km/h ( $\pm 2$ MPH).                                | Check the vehicle speed sensor.                | <Ref. to CC(ETC)(diag)-35, DTC 22 AND 32 VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                  |
| 5          | Vehicle speed does not increase or does not return to set speed after RES/ACC switch has been pressed. | Check the RES/ACC switch.                      | <Ref. to CC(ETC)(diag)-22, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| 6          | Vehicle speed does not decrease after SET/COAST switch has been pressed.                               | Check the SET/COAST switch.                    | <Ref. to CC(ETC)(diag)-22, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| 7          | Cruise control is not released after CANCEL switch has been pressed.                                   | Check the CANCEL switch.                       | <Ref. to CC(ETC)(diag)-22, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| 8          | Cruise control is not released after the brake pedal has been depressed.                               | Check the stop light and brake switch.         | <Ref. to CC(ETC)(diag)-25, DTC 12 AND 25 STOP LIGHT SWITCH AND BRAKE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>    |
| 9          | Cruise control is not released after the clutch pedal has been depressed. (MT model)                   | Check the clutch switch.                       | <Ref. to CC(ETC)(diag)-27, DTC 13 CLUTCH SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                |
| 10         | Cruise control is not released after shifting to neutral position.                                     | Check the neutral position switch.             | <Ref. to CC(ETC)(diag)-29, DTC 14 NEUTRAL POSITION SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |

## List of Diagnostic Trouble Code (DTC)

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

### 7. List of Diagnostic Trouble Code (DTC)

#### A: LIST

| DTC | Item                        | Contents of diagnosis  | Reference   |
|-----|-----------------------------|--|---|
| 11  | Cruise control main switch  | Cruise control is released after the cruise control main switch of cruise control switch is turned to OFF. | This DTC is indicated without operating the cruise control main switch. <Ref. to CC(ETC)(diag)-22, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| 12  | Stop light and brake switch | Cruise control is released after the stop light switch or brake switch is turned to ON.                    | This DTC is indicated without depressing the brake pedal. <Ref. to CC(ETC)(diag)-25, DTC 12 AND 25 STOP LIGHT SWITCH AND BRAKE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                  |
| 13  | Clutch switch (MT model)    | Cruise control is released after the clutch switch is turned to ON.  | This DTC is indicated without depressing the clutch pedal. <Ref. to CC(ETC)(diag)-27, DTC 13 CLUTCH SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| 14  | Neutral position switch     | Cruise control is released after the neutral position switch is turned to ON.                              | This DTC is indicated without shifting to neutral position. <Ref. to CC(ETC)(diag)-29, DTC 14 NEUTRAL POSITION SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                  |
| 15  | CANCEL switch               | Cruise control is released after the CANCEL switch is turned to ON.  | This DTC is indicated without operating the CANCEL switch. <Ref. to CC(ETC)(diag)-22, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>              |
| 16  | Ignition switch             | Cruise control is released after the ignition switch is turned to OFF.                                     | This DTC is indicated without operating the ignition switch. <Ref. to CC(ETC)(diag)-33, DTC 16 IGNITION SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |

## List of Diagnostic Trouble Code (DTC)

### CRUISE CONTROL SYSTEM (DIAGNOSTICS)

| DTC | Item  | Contents of diagnosis   | Reference   |
|-----|---|---|---|
| 21  | Cruise control switch is abnormal when the ignition switch is turned to ON. | Each switch of cruise control command switch has already been ON when the ignition switch is turned to ON.  | This DTC is indicated without operating the cruise control main switch. <Ref. to CC(ETC)(diag)-22, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| 22  | Vehicle speed variation is abnormal.  | Abnormality of vehicle speed variation is detected.   | <Ref. to CC(ETC)(diag)-35, DTC 22 AND 32 VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| 23  | Engine-related sensor is abnormal.  | Abnormality related to engine is detected.  | H4SO model: <Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.><br>STI model: <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>  |
| 24  | Cruise control-related switch is abnormal.                                  | Abnormality of cruise control command switch is detected. (Open circuit is detected when continuing to be ON for an extremely long time [approx. two minutes].)   | This DTC is indicated with normal operation. <Ref. to CC(ETC)(diag)-22, DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| 25  | Brake switch input circuit is abnormal.                                     | Abnormality of brake switch input circuit in ECM is detected.   | <Ref. to CC(ETC)(diag)-25, DTC 12 AND 25 STOP LIGHT SWITCH AND BRAKE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| 31  | Engine speed signal.  | <ul style="list-style-type: none"> <li>• Abnormal increase of engine speed is detected.</li> <li>• Gear is shifted to neutral, 1st or reverse position.</li> </ul>  | Cruise with more than 2nd shift position.   |
| 32  | Out of vehicle speed range of cruise control operation.                     | <ul style="list-style-type: none"> <li>• Vehicle speed becomes under the control limit during cruise driving.</li> <li>• Set operation is conducted out of vehicle speed range for setting</li> <li>• RES operation is conducted without vehicle speed memory.</li> </ul> | This DTC is also indicated when increasing the speed to the cruise set available vehicle speed and conducting the set operation again. <Ref. to CC(ETC)(diag)-35, DTC 22 AND 32 VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |

# List of Diagnostic Trouble Code (DTC)

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

| DTC | Item  | Contents of diagnosis  | Reference   |
|-----|---|--|---|
| 33  | Prohibition of WAIT after acceleration operation.               | Vehicle speed becomes over the control limit during cruise driving.  | This DTC is indicated when running at the high speed which is not suitable for cruise control. In this case, conduct the cruise set operation again after decreasing the speed to the cruise set available vehicle speed. |
| 34  | Prohibition when accelerator position is continued to be large. | Vehicle is driven at the higher speed than set vehicle speed for an extremely long time (approx. 10 minutes) during cruise driving.                      | This DTC is indicated when running for a long time at the higher speed than cruise set available vehicle speed by accelerator operation. In this case, release the cruise set.  |
| 35  | Prohibition when vehicle speed feedback is impossible.          | During cruise driving, set vehicle speed cannot be maintained for some reasons such as sharp upslope, parking brake and engine output abnormal decrease. | This DTC is indicated when the driving condition is not suitable for cruise control. Conduct the cruise set operation again after clearing the estimated reasons.   |

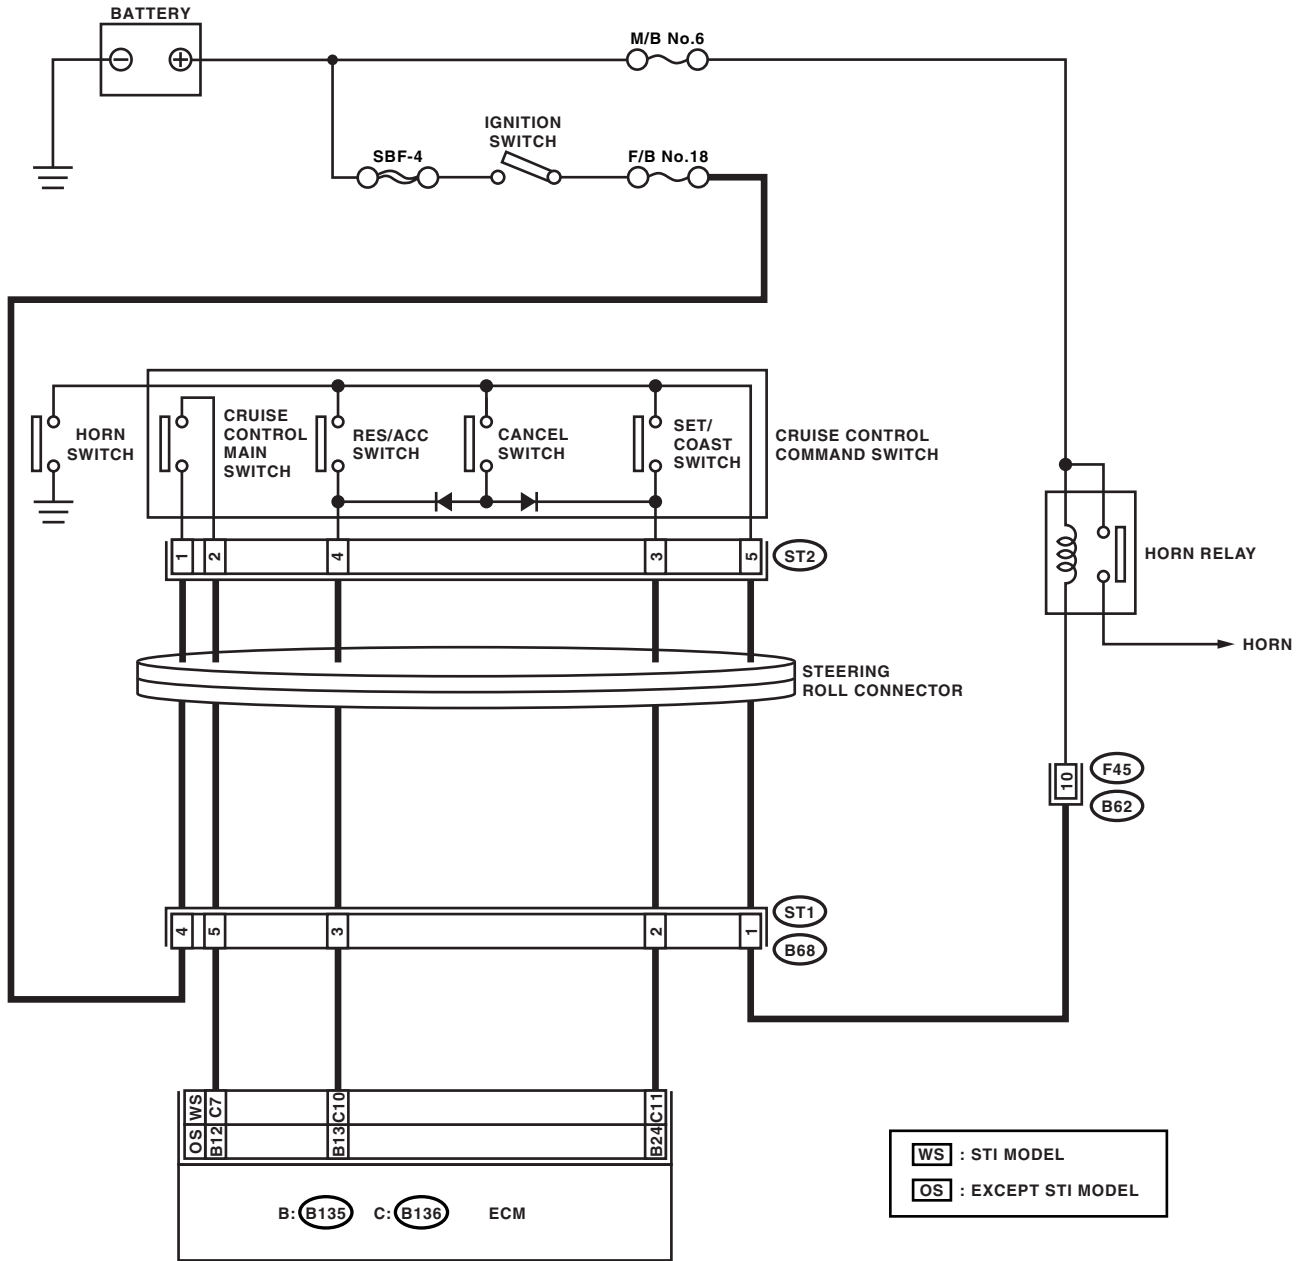

## 8. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### A: DTC 11, 15, 21 AND 24 CRUISE CONTROL COMMAND SWITCH

**TROUBLE SYMPTOM:**

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

**WIRING DIAGRAM:**

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

| Step  | Check  | Yes  | No   |
|---|--|--|--|
| <b>1 CHECK CRUISE CONTROL MAIN SWITCH CIRCUIT.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the ECM harness connector.<br>3) Turn the ignition switch to ON.<br>4) Measure the voltage between harness connector terminal and chassis ground when the cruise control main switch is pressed and is not pressed.<br><br><b>Connector &amp; terminal</b><br><b>Except STI model:</b><br>(B135) No. 12 (+) — Chassis ground (-);<br><b>STI model:</b><br>(B136) No. 7 (+) — Chassis ground (-); | Is the voltage 0 V when the cruise control main switch is not pressed? Is the voltage more than 10 V when the cruise control main switch is pressed? | Go to step 2.                                | <ul style="list-style-type: none"> <li>• Check the fuse No. 18 (in fuse &amp; relay box).</li> <li>• Check the harness for open or short between cruise control command switch and fuse &amp; relay box. If no malfunction is found after checking above, Go to step 6.</li> </ul> |
| <b>2 CHECK SET/COAST SWITCH CIRCUIT.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the ECM harness connector.<br>3) Measure the voltage between harness connector terminal and chassis ground when SET/COAST switch is pressed and not pressed.<br><br><b>Connector &amp; terminal</b><br><b>Except STI model:</b><br>(B135) No. 24 (+) — Chassis ground (-);<br><b>STI model:</b><br>(B136) No. 11 (+) — Chassis ground (-);   | Is the voltage 0 V when SET/COAST switch is not pressed? Is the voltage more than 10 V when SET/COAST switch is pressed?                             | Go to step 3.                                | Go to step 5.  |
| <b>3 CHECK RES/ACC SWITCH CIRCUIT.</b><br>Measure the voltage between harness connector terminal and chassis ground when RES/ACC switch is pressed and not pressed.<br><br><b>Connector &amp; terminal</b><br><b>Except STI model:</b><br>(B135) No. 13 (+) — Chassis ground (-);<br><b>STI model:</b><br>(B136) No. 10 (+) — Chassis ground (-);   | Is the voltage 0 V when RES/ACC switch is not pressed? Is the voltage more than 10 V when RES/ACC switch is pressed?                                 | Go to step 4.                                | Go to step 5.  |
| <b>4 CHECK CANCEL SWITCH CIRCUIT.</b><br>Measure the voltage between harness connector terminal and chassis ground when CANCEL switch is pressed and not pressed.<br><br><b>Connector &amp; terminal</b><br><b>Except STI model:</b><br>(B135) No. 13 (+) — Chassis ground (-);<br>(B135) No. 24 (+) — Chassis ground (-);<br><b>STI model:</b><br>(B136) No. 10 (+) — Chassis ground (-);<br>(B136) No. 11 (+) — Chassis ground (-);   | Is the voltage 0 V when CANCEL switch is not pressed? Is the voltage more than 10 V when CANCEL switch is pressed?                                   | Cruise control command switch circuit is OK. | Go to step 5.  |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

| Step  | Check                                    | Yes  | No   |
|---|--|--|--|
| <b>5</b><br><b>CHECK POWER SUPPLY FOR CRUISE CONTROL COMMAND SWITCH.</b><br>Check the horn operation.   | Does the horn sound?                     | Go to step 6.  | <ul style="list-style-type: none"><li>• Check the fuse No. 6 (in main fuse box).</li><li>• Check the horn relay. &lt;Ref. to COM-3, HORN RELAY, INSPECTION, Horn System.&gt;</li><li>• Check the harness for open or short between cruise control command switch and fuse &amp; relay box.</li></ul> |

# Basic Diagnostic Procedure

IMMOBILIZER (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

| Step   | Check  | Yes  | No   |
|--|--|--|--|
| <b>1 CHECK ILLUMINATION OF SECURITY INDICATOR LIGHT.</b><br>1) Turn the ignition switch to OFF or ACC position.<br>2) Wait at least 60 seconds.  | Does the security indicator light blink?   | Go to step 2.  | Check the security indicator light circuit. <Ref. to IM(diag)-10, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.> |
| <b>2 CHECK ILLUMINATION OF SECURITY INDICATOR LIGHT.</b><br>Remove the key from ignition switch.   | Does the security indicator light begin to blink within 1 second after the key is removed? | Go to step 3.  | Check the key switch circuit. <Ref. to IM(diag)-12, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>                             |
| <b>3 CHECK ENGINE START.</b><br>Turn the ignition switch to START position.  | Does the engine start?   | Go to step 4.  | Go to step 5.  |
| <b>4 CHECK ILLUMINATION OF SECURITY INDICATOR LIGHT.</b><br>Turn the ignition switch to ON.  | Does the security indicator light illuminate?  | Check the security indicator light circuit. <Ref. to IM(diag)-10, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.> | Immobilizer system is normal.  |
| <b>5 CHECK INDICATION OF DTC ON DISPLAY.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the Subaru Select Monitor to data link connector. <Ref. to IM(diag)-7, Subaru Select Monitor.><br>3) Turn the ignition switch and Subaru Select Monitor switch to ON.<br>4) Read any DTC on the display. | Are DTCs indicated on display?   | Go to step 6.  | Repair the related parts.  |
| <b>6 PERFORM THE DIAGNOSIS.</b><br>1) Inspect using "Diagnostics Chart with Trouble Code". <Ref. to IM(diag)-15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).><br>2) Repair the trouble cause.<br>3) Perform the clear memory mode.<br>4) Read any DTC again.                                  | Are DTCs indicated on display?   | Inspect using "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>               | Finish the diagnostics.  |

## 2. General Description

### A: CAUTION

#### CAUTION:

- The airbag system wiring harnesses routed near the immobilizer control module. Airbag system connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the immobilizer control module.
- While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.

- When the ignition switch is being turned ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If the ignition key is in a key holder, remove it from the holder before carrying out diagnoses.

- When repeatedly turning the ignition switch to ON or OFF while diagnostic items are being checked, it should be switched in cycles of "ON" for at least 5 seconds → "OFF" for at least 8 seconds.

(1) Ignition switch position

(2) Sec.

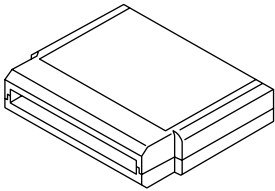

- If the engine fails to start with a registered ignition key, detach the ignition key from ignition switch and wait for approx. 1 second until security indicator light begins to flash. And then start the engine again.
- Before checking the diagnostic items, obtain all keys and security ID for the vehicle to be checked possessed by owner.

# General Description

IMMOBILIZER (DIAGNOSTICS)

## B: PREPARATION TOOL

### 1. SPECIAL TOOL

| ILLUSTRATION   | TOOL NUMBER                        | DESCRIPTION                  | REMARKS                                |

### 2. GENERAL TOOL

| TOOL NAME      | REMARKS  |
|----------------|--|
| Circuit tester | Used for measuring resistance, voltage and ampere. |

## 3. Electrical Component Location

### A: LOCATION

IM-00155

- (1) Antenna
- (2) Security indicator light (LED bulb)
- (3) Immobilizer control module (IMM ECM)
- (4) Transponder

## Immobilizer Control Module I/O Signal

IMMOBILIZER (DIAGNOSTICS)

---

### 4. Immobilizer Control Module I/O Signal

#### A: WIRING DIAGRAM

##### 1. IMMOBILIZER

<Ref. to WI-100, WIRING DIAGRAM, Immobilizer System.>

## 5. Subaru Select Monitor

### A: OPERATION

#### 1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit.

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor.

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

#### CAUTION:

Do not connect the scan tools except for Subaru Select Monitor.

5) Turn the ignition switch to ON (engine OFF), and the Subaru Select Monitor power switch to ON.

(1) Power switch

6) Using the Subaru Select Monitor, call up DTCs and various data, then record them.

#### 2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE

Refer to Read Diagnostic Trouble Code for information about how to indicate DTC. <Ref. to IM(diag)-8, Read Diagnostic Trouble Code (DTC).>

#### 3. COMMUNICATION LINE CHECK

##### NOTE:

The communication line between ECM and body integrated module can be checked in "System Operation Check Mode". This is referred to as "Communication line check".

1) Connect the Subaru Select Monitor.

2) On the «Each system check» display, select the {Engine}.

3) Start the communication line check.

4) Is «Communication Line not Shorted» displayed on screen?

If displayed, go to step 5).

If "NO", go to step 6).

5) After diagnostic results, it is determined that the circuit is not shorted. Finish the communication line check.

6) If a problem is detected, repair the trouble cause. <Ref. to IM(diag)-16, DTC P1572 EGI IMMOBILIZER COMMUNICATION (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

## Read Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

---

### 6. Read Diagnostic Trouble Code (DTC)

#### A: OPERATION

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type has been displayed.
- 4) On the «Engine Diagnosis» display screen, select the {Diagnostic Code(s) Display}, and then press the [YES] key.
- 5) On the «Diagnostic Code(s) Display» display screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)}, and then press the [YES] key.

#### NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning DTC, refer to the List of DTC. <Ref. to IM(diag)-14, LIST, List of Diagnostic Trouble Code (DTC).>

## 7. Clear Memory Mode

### A: OPERATION

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type has been displayed.
- 4) On the «Engine Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.
- 5) When the 'Done' are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

#### NOTE:

- After the memory has been cleared, the idle air control solenoid valve must be initialized. To execute this procedure, turn the ignition switch to ON. Wait 3 seconds before starting the engine.
- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

IMMOBILIZER (DIAGNOSTICS)

| Step   | Check                                      | Yes  | No  |
|--|--|--|---|
| <b>1 CHECK POWER SUPPLY CIRCUIT.</b><br>1) Disconnect the harness connector from key warning switch.<br>2) Measure the voltage between key warning switch harness connector terminal and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B370) No. 1 (+) — Chassis ground (-):</b></i>   | Is the voltage more than 10 V?             | Go to step 2.  | Check the harness for open or short between key warning switch and fuse.  |
| <b>2 CHECK KEY WARNING SWITCH.</b><br>1) Insert the ignition key to the ignition switch. (OFF or ACC position)<br>2) Measure the resistance between key warning switch connector terminals.<br><i><b>Terminal</b></i><br><i><b>No. 1 — No. 2:</b></i>  | Is the resistance less than 1 $\Omega$ ?   | Go to step 3.  | Replace the key warning switch.   |
| <b>3 CHECK KEY WARNING SWITCH.</b><br>1) Remove the ignition key from the ignition switch.<br>2) Measure the resistance between key warning switch connector terminals.<br><i><b>Terminal</b></i><br><i><b>No. 1 — No. 2:</b></i>  | Is the resistance more than 1 M $\Omega$ ? | Go to step 4.  | Replace the key warning switch.   |
| <b>4 CHECK HARNESS BETWEEN KEY WARNING SWITCH AND BODY INTEGRATED MODULE.</b><br>1) Disconnect the harness connector from key warning switch.<br>2) Disconnect the harness connector from body integrated module.<br>3) Measure the resistance between key warning switch harness connector terminal and body integrated module harness connector terminal.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B370) No. 2 — (B280) No. 20:</b></i> | Is the resistance less than 10 $\Omega$ ?  | Replace the body integrated module <Ref. to SL-47, Immobilizer Control Unit.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to teaching operation manual. | Repair the harness between key warning switch and body integrated module. |

## List of Diagnostic Trouble Code (DTC)

### IMMOBILIZER (DIAGNOSTICS)

## 9. List of Diagnostic Trouble Code (DTC)

### A: LIST

| DTC   | Item   | Contents of diagnosis  | Index No.   |
|-------|--|--|---|
| P0513 | Incorrect Immobilizer Key                              | Incorrect immobilizer key (Use of unregistered key in IMM ECM) | <Ref. to IM(diag)-21, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                              |
| P1570 | ANTENNA  | Faulty antenna   | <Ref. to IM(diag)-22, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1571 | Reference Code Incompatibility                         | Reference code incompatibility between IMM ECM and ECM         | <Ref. to IM(diag)-15, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                         |
| P1572 | EGI Immobilizer Communication (Except Antenna Circuit) | Communication failure between IMM ECM and ECM                  | <Ref. to IM(diag)-16, DTC P1572 EGI IMMOBILIZER COMMUNICATION (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P1574 | Key Immobilizer Communication                          | Failure of IMM ECM to verify key (transponder) ID code         | <Ref. to IM(diag)-20, DTC P1574 KEY IMMOBILIZER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                          |
| P1576 | EGI Control Module EEPROM                              | ECM malfunctioning   | <Ref. to IM(diag)-21, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                              |
| P1577 | IMM Control Module EEPROM                              | IMM ECM malfunctioning   | <Ref. to IM(diag)-21, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                              |

#### NOTE:

Perform the engine DTC when the DTC except immobilizer DTC is detected. <Ref. to EN(H4DOTC)(diag)-74, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).>

## 10. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### A: DTC P1571 REFERENCE CODE INCOMPATIBILITY

#### DTC DETECTING CONDITION:

Reference code incompatibility between IMM ECM and ECM

| Step | Check  | Yes   | No   |   |
|------|--|---|--|---|
| 1    | <b>PERFORM TEACHING OPERATION ON IGNITION KEY.</b><br>Perform teaching operation on all keys of the vehicle. Refer to the teaching operation manual. | Is teaching operation for all keys completed?             | Finish the diagnosis.  | Go to step 2.   |
| 2    | <b>CHECK DTC.</b>  | Is there any DTC related to immobilizer except DTC P1571? | Eliminate the cause of DTC except DTC P1571, and perform the teaching operation again. | Replace the ECM <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> <Ref. to FU(STI)-39, Engine Control Module (ECM).>, IMM ECM <Ref. to SL-47, Immobilizer Control Unit.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to the teaching operation manual. |

Refer to the teaching operation manual.</p> |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### IMMOBILIZER (DIAGNOSTICS)

#### C: DTC P1574 KEY IMMOBILIZER COMMUNICATION

##### DTC DETECTING CONDITION:

Failure of IMM ECM to verify key (transponder) ID code

| Step  | Check  | Yes  | No  |
|---|--|--|---|
| <b>1</b><br><b>CHECK IMM ECM FUNCTION.</b><br>Insert the key to ignition switch (LOCK position), measure changes in voltage between Antenna connector.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B142) No. 1 (+) — No. 2 (-):</b></i> | Is the voltage 0 — 30 V immediately after inserting the key (approx. 0.1 sec.) and 0 V after inserting the key (approx. 1 sec.)? | Go to step 2.  | Replace the IMM ECM <Ref. to SL-47, Immobilizer Control Unit.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to the teaching operation manual. |
| <b>2</b><br><b>CHECK IGNITION KEY (TRANSPONDER).</b><br>1) Remove the key from ignition switch.<br>2) Start the engine using other keys that have undergone the teaching operation, furnished with vehicle.                                     | Does the engine start?   | Replace the ignition key (including the transponder). Then perform teaching operation. Refer to the teaching operation manual. | Replace the IMM ECM <Ref. to SL-47, Immobilizer Control Unit.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to the teaching operation manual. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

## D: DTC P0513 INCORRECT IMMOBILIZER KEY

### DTC DETECTING CONDITION:

Incorrect immobilizer key. (Use of unregistered key in IMM ECM)

|   | Step   | Check   | Yes                   | No  |
|---|--|---|-----------------------|---|
| 1 | <b>PERFORM TEACHING OPERATION ON IGNITION KEY.</b><br>Perform teaching operation on all keys of the vehicle. Refer to the teaching operation manual. | Is teaching operation for all keys completed? | Finish the diagnosis. | Replace all ignition keys (including the transponder). Go to step 2.  |
| 2 | <b>PERFORM TEACHING OPERATION ON IGNITION KEY.</b><br>Perform teaching operation on all keys with vehicle. Refer to the teaching operation manual.   | Is teaching operation for all keys completed? | Finish the diagnosis. | Replace the IMM ECM <Ref. to SL-47, Immobilizer Control Unit.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to the teaching operation manual. |

## E: DTC P1576 EGI CONTROL MODULE EEPROM

### DTC DETECTING CONDITION:

ECM malfunctioning

### REPLACE ECM

Replace the ECM.

<Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> <Ref. to FU(STI)-39, Engine Control Module (ECM).>

Then perform teaching operation. Refer to the teaching operation manual.

## F: DTC P1577 IMM CONTROL MODULE EEPROM

### DTC DETECTING CONDITION:

IMM ECM malfunctioning

### REPLACE IMM ECM

Replace the IMM ECM <Ref. to SL-47, Immobilizer Control Unit.>, and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to the teaching operation manual.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

# General Description

OPTION PARTS

## 1. General Description

### A: COMPONENT

#### 1. REAR SPOILER

OP-00027

(1) Rear spoiler

(2) High mounted stop light

**Tightening torque: N·m (kgf·m, ft·lb)**  
**T: 7.5±2 (0.76±0.20, 5.5±1.4)**

#### 2. CROSSBAR

OP-00002

(1) Front crossbar

(2) Caution label (Front crossbar)

(3) Rear crossbar

## 3. TRAILER HITCH

OP-00003

- |                    |                     |
|--------------------|---------------------|
| (1) Receiver hitch | (4) Ball mount clip |
| (2) Ball mount     | (5) Receiver cover  |
| (3) Ball mount pin |                     |

**Tightening torque: N·m (kgf·m, ft·lb)**  
**T: 95 (9.7, 70)**

# General Description

OPTION PARTS

## 4. REAR DIFFERENTIAL PROTECTOR

OP-00029

- |                               |                                 |
|-------------------------------|---------------------------------|
| (1) Differential front member | (4) Spacer (Long)               |
| (2) Differential rear member  | (5) Rear differential protector |
| (3) Spacer (Short)            | (6) Washer                      |

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 70 (7.1, 51.6)**

**T2: 90 (9.2, 66.4)**

## 2. Rear Spoiler

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Open the trunk lid.
- 3) Disconnect the connector of high mounted stop light.

- (1) Connector
- (2) Trunk hinge

- 4) Remove the mounting nuts of rear spoiler.

- (1) Mounting nut

- 5) Remove the rear spoiler.

**CAUTION:**

Pay attention to avoid damage during removal or installation.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**Rear spoiler to trunk lid**

**$7.5 \pm 2$  N·m ( $0.76 \pm 0.20$  kgf·m,  $5.5 \pm 1.4$  ft·lb)**

# Crossbar

## OPTION PARTS

### 3. Crossbar

#### A: REMOVAL

- 1) Remove the TORX® bolt T30 from each end support.
- 2) Rotate the lower clamp of each end support about 90° downward to remove the crossbar.

- (1) TORX® bolt T30
- (2) End support
- (3) Roof rail
- (4) Lower clamp

#### CAUTION:

Pay attention to avoid damage to the roof panel during removal or installation.

#### B: INSTALLATION

- 1) Rotate the lower clamp of each end support about 90° downward.
- 2) Set the front crossbar so that front direction mark on the right side top face of crossbar point in the direction of vehicle front.
- 3) Place the crossbar end support in a position 76.2 mm (3 in) behind the joint of front roof rail support and roof rail.

#### Length A:

76.2 mm (3 in)

- (1) Front of vehicle
- (2) Front direction mark
- (3) Caution label (Front crossbar)

- 4) Set the rear crossbar so that front direction mark on the right side top face of crossbar point in the direction of vehicle front.
- 5) Place the crossbar end support on a joint of rear roof rail support and roof rail.

- (1) Front of vehicle
- (2) Front direction mark

- 6) Tighten the end support and clamp using TORX® bolt T30.

## 4. Trailer Hitch

### A: REMOVAL

**CAUTION:**

**Because the trailer hitch is heavy, two people are required to remove it.**

- 1) Lift-up the vehicle.
- 2) Remove the cushion rubber from body.

- 3) Remove the canister. <Ref. to EC(H4SO)-6, REMOVAL, Canister.>
- 4) Remove the trailer hitch installation bolts.

- 5) Remove the trailer hitch while lowering exhaust pipe.

### B: INSTALLATION

**CAUTION:**

**Because the trailer hitch is heavy, two people are required to install it.**

Install in the reverse order of removal.

**Tightening torque:**

**Trailer hitch to body:**

**95 N·m (9.7 kgf-m, 70 ft-lb)**

**Canister:**

**23 N·m (2.3 kgf-m, 17 ft-lb)**

# Rear Differential Protector

OPTION PARTS

## 5. Rear Differential Protector

### A: REMOVAL

- 1) Remove the rear exhaust pipe and muffler. <Ref. to EX(H4SO)-7, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, Muffler.> <Ref. to EX(H4DOTC)-15, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, Muffler.>
- 2) Remove the differential front member installation bolts.

- 3) Loosen the nuts until the rear differential protector can be removed.

- 4) Remove the rear differential protector.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**90 N·m (9.2 kgf·m, 66.4 ft·lb)**

**NOTE:**

Install the protector between the nuts and differential rear member.

**Tightening torque:**

**70 N·m (7.1 kgf·m, 51.6 ft·lb)**

**WIRING SYSTEM SECTION**

**WIRING SYSTEM**

**WI**

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

## 1. Basic Diagnostic Procedure

### A: BASIC PROCEDURES

#### 1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to determine which part is malfunctioning quickly, to save time and labor.

#### 2. IDENTIFICATION OF TROUBLE SYMPTOM

Determine what the problem is based on the symptom.

#### 3. PROBABLE CAUSE OF TROUBLE

Look at the wiring diagram and check system's circuit. Then check the switch, relay, fuse, ground, etc.

#### 4. LOCATION AND REPAIR OF TROUBLE

- 1) Using the diagnostics, narrow down the causes.
- 2) If necessary, use a voltmeter, ohmmeter, etc.
- 3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problems are encountered, check the component parts.

#### 5. CHECK SYSTEM OPERATION

After repairing, ensure that the system operates properly.

### B: BASIC INSPECTION

#### 1. VOLTAGE MEASUREMENT

- 1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
- 2) Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
- 3) Shift the positive lead to connector (B). The voltmeter will indicate no voltage.

- 4) With the test set-up held as it is, turn the switch ON. The voltmeter will indicate a voltage and, at the same time, the light will come on.

- 5) The circuit is in good order. If a problem such as a light failing to illuminate occurs, use the procedures outlined above to track down malfunction.

#### 2. CIRCUIT CONTINUITY CHECKS

- 1) Disconnect the battery terminal or connector so there is no voltage between check points. Contact the two leads of an ohmmeter to each of the check points.

If the circuit has diodes, reverse the two leads and check again.

- 2) Use an ohmmeter to check for the diode continuity. When contacting the negative lead to diode positive side and positive lead to negative side, there should be continuity.

When contacting the two leads in reverse, there should be no continuity.

- 3) Symbol "○ — ○" indicates that continuity exists between two points or terminals. For example, when a switch position is at "3", continuity exists among terminals 1, 3 and 6, as shown in table below.

| Terminal        | 1     | 2     | 3     | 4     | 5 | 6 |
|-----------------|-------|-------|-------|-------|---|---|
| Switch Position |       |       |       |       |   |   |
| OFF             |       |       |       |       |   |   |
| 1               | ○ — ○ |       |       |       |   |   |
| 2               |       | ○ — ○ |       |       |   |   |
| 3               | ○ — ○ |       | ○ — ○ |       |   |   |
| 4               |       |       |       | ○ — ○ |   |   |

WI-00096

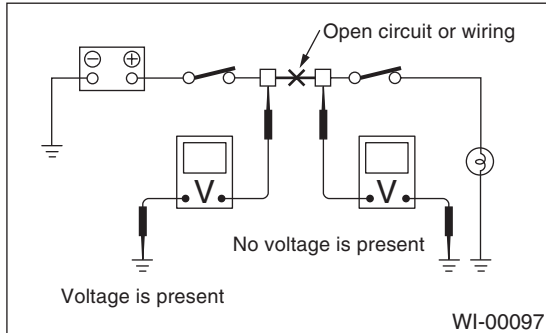

# Basic Diagnostic Procedure

## WIRING SYSTEM

### 3. HOW TO DETERMINE AN OPEN CIRCUIT

#### 1) WITH VOLTMETER:

An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and previous connector is open.

#### 2) WITH OHMMETER:

Disconnect all connectors affected, and check the continuity in wiring between adjacent connectors. When the ohmmeter indicates "infinite", the wiring is open.

### 4. HOW TO DETERMINE A SHORT CIRCUIT

#### 1) WITH TEST LIGHT:

Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit, starting with the one located farthest from power supply. If the test light goes out when a connector is disconnected, the wiring between that connector and next connector (farther from the power supply) is shorted.

#### 2) WITH OHMMETER:

Disconnect all affected connectors, and check the continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that the connector is shorted.

## C: HOW TO READ WIRING DIAGRAMS

### 1. WIRING DIAGRAM

The wiring diagram of each system is illustrated so that you can understand the path through which electric current flows from battery.

Sketches and codes are used in the diagrams. They should read as follows:

- Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from front.

- The number of poles or pins, presence of a lock are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which connector has. For example, the sketch of connector shown in the figure indicates the connector has 9 poles.

| Connector used in vehicle | Connector shown in wiring diagram   |        |  |
|---------------------------|---|--------|--|
|                           | Sketch  | Symbol | Number of poles  |
|                           | <p>Double frames</p> <p>Indicates a lock is included.</p> <p>Indicates the number of poles.</p> |        | <p>Numbered in order from upper right to lower left.</p> |
|                           | <p>Indicates a lock is included.</p> <p>Single frame</p>  |        | <p>Numbered in order from upper left to lower right</p>  |

WI-00102

# Basic Diagnostic Procedure

## WIRING SYSTEM

- When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of other. When these two connectors are connected as a unit, the poles which have the same number are joined.

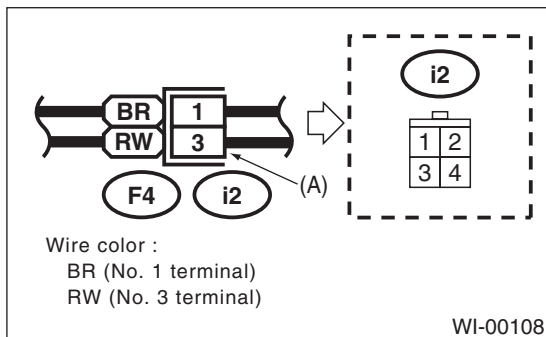

### WIRING DIAGRAM:

The connectors are numbered along with the number of poles, external colors, and mating connections in accompanying list.

- The sketch of each connector in the wiring diagram usually shows (A) side of the connector. The relationship between wire color, terminal number and connector is described in figure.

### NOTE:

A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.

- In the wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.

- The following color codes are used to indicate the colors of the wires used.

| Color code | Color          |
|------------|----------------|
| L          | Blue           |
| B          | Black          |
| Y          | Yellow         |
| G          | Green          |
| R          | Red            |
| W          | White          |
| Br         | Brown          |
| Lg         | Light green    |
| Gr         | Gray           |
| P          | Pink           |
| Or         | Orange         |
| Sb         | Sky blue       |
| V          | Violet         |
| SA         | Sealed (Inner) |
| SB         | Sealed (Outer) |

- The wire color code, which consists of two letters (or three letters including Br or Lg), indicates the standard color (base color of the wire covering) by its first letter and stripe marking by its second letter.

- The table lists the nominal sectional areas and allowable currents of wires.

### CAUTION:

**When replacing or repairing a wire, be sure to use the same size and type of wire which was originally used.**

### NOTE:

- The allowable current in the table indicates tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
- The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

| Nominal sectional area<br>mm <sup>2</sup> | No. of strands/<br>strand diameter | Outside diameter of finished wiring<br>mm | Allowable current<br>Amps/<br>40°C (104°F) |
|---|------------------------------------|---|--|
| 0.3                                       | 7/0.26                             | 1.8                                       | 7  |
| 0.5                                       | 7/0.32                             | 2.2 (or 2.0)                              | 12   |
| 0.75                                      | 30/0.18                            | 2.6 (or 2.4)                              | 16   |
| 0.85                                      | 11/0.32                            | 2.4 (or 2.2)                              | 16   |
| 1.25                                      | 16/0.32                            | 2.7 (or 2.5)                              | 21   |
| 2   | 26/0.32                            | 3.1 (or 2.9)                              | 28   |
| 3   | 41/0.32                            | 3.8 (or 3.6)                              | 38   |
| 5   | 65/0.32                            | 4.6 (or 4.4)                              | 51   |
| 8   | 50/0.45                            | 5.5                                       | 67   |

- Each unit is either directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.

- The ground points shown in the wiring diagram refer to the following:

### NOTE:

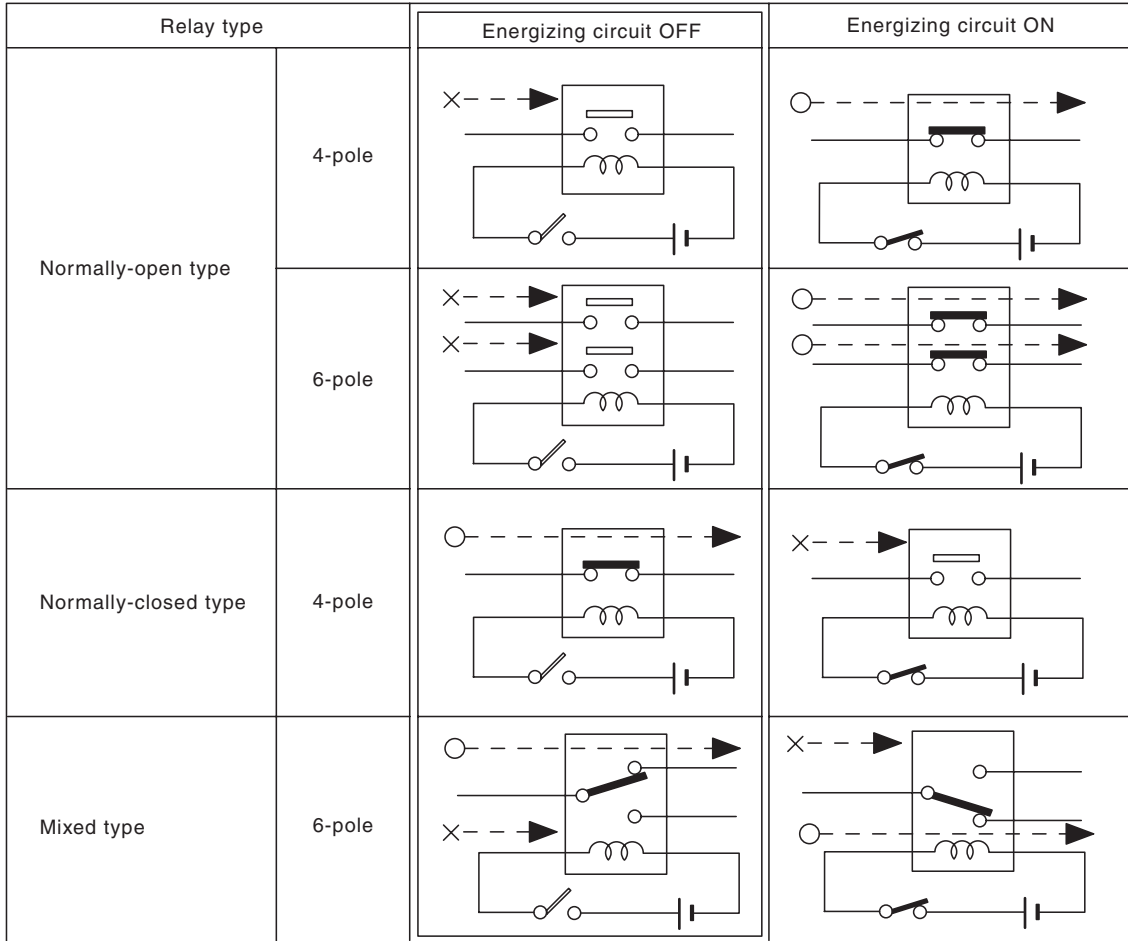

All wiring harnesses are provided with a ground point which should be securely connected.

# Basic Diagnostic Procedure

## WIRING SYSTEM

- Relays are classified as normally-open or normally-closed.
- The normally-closed relay has one or more contacts. The wiring diagram shows the relay mode when energizing circuit is OFF.

Key to symbols:

○ —▶ : Current flows.

× —▶ : Current does not flow.

WI-00114

- Each connector number shown in the wiring diagram corresponds to that in wiring harness. The location of each connector in actual vehicle is determined by reading the first character of the connector (for example, a “F” for F8, “i” for i16, etc.) and type of wiring harness. The first character of each connector number refers to the area or system of the vehicle.

| Symbol | Wiring harness and cord                                   |
|--------|---|
| F      | Front wiring harness                                      |
| B      | Bulkhead wiring harness                                   |
| E      | Engine wiring harness                                     |
| T      | Transmission cord, Rear oxygen sensor cord                |
| D      | Door cord LH & RH, Rear door cord LH & RH, Rear gate cord |
| i      | Instrument panel wiring harness                           |
| R      | Rear wiring harness, Fuel tank cord, Roof cord            |
| AB     | Airbag wiring harness                                     |

# Basic Diagnostic Procedure

## WIRING SYSTEM

### D: SYMBOLS IN WIRING DIAGRAMS

A number of symbols are used in each wiring diagram to easily identify parts or circuits.

#### 1. RELAY

A symbol used to indicate a relay.

#### 2. CONNECTOR-1

The sketch of the connector indicates one-pole types.

#### 3. WIRING CONNECTION

Some wiring diagrams are indicated in foldouts for convenience. Wiring destinations are indicated where necessary by corresponding symbols. (When two pages are needed for clear indication)

#### 4. FUSE No. & RATING

The "FUSE No. & RATING" corresponds with that used in fuse box (main fuse box, fuse and joint box).

#### 5. CONNECTOR-2

- Each connector is indicated by a symbol.
- Each terminal number is indicated in the corresponding wiring diagram in an abbreviated form.
- For example, terminal number "G4" refers to No. 4 terminal of connector (G: F41) shown in the connector sketch.

## 6. CONNECTOR SKETCH

- Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in natural color.
- When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

## 7. GROUND

Each grounding point can be located easily by referring to the corresponding wiring harness.

## 8. DIODE

A symbol is used to indicate a diode.

## 9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS

For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.

A ↔ A, B ↔ B

## 10. SYMBOLS OF WIRE CONNECTION AND CROSSING

## 11. POWER SUPPLY CIRCUIT

A symbol is used to indicate the power supply in each wiring diagram.

“MB-5”, “MB-6”, etc., which are used as power-supply symbols throughout the text, correspond with those shown in POWER SUPPLY CIRCUIT in the wiring diagram.

Accordingly, using the POWER SUPPLY CIRCUIT and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

## 12. CLASSIFICATION BY SPECIFICATION

When the wiring diagrams differ according to vehicle specifications, the specification difference is described by using abbreviations.

## 13. HARNESS REPAIR KIT

The connector adapting to Harness repair kit is shown as “HR” in the right-upper of connector number.

Refer to “Harness Repair Kit” for harness repair kit. <Ref. to WI-204, SPECIFICATION, Harness Repair Kit.>

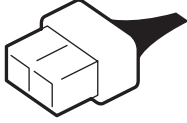

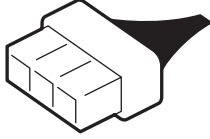

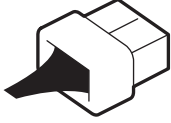

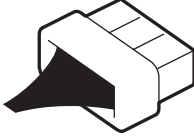

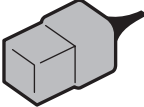

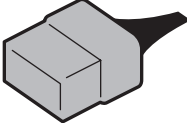

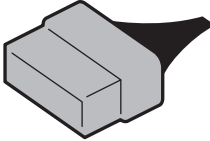

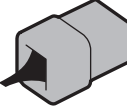

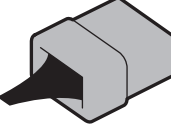

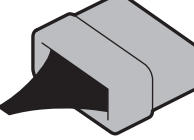

## Basic Diagnostic Procedure

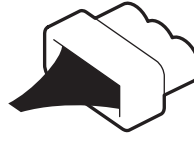

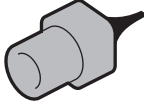

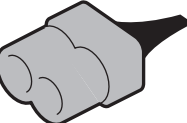

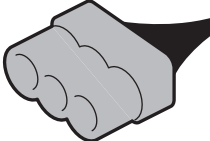

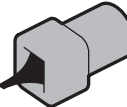

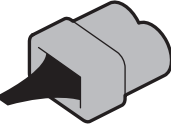

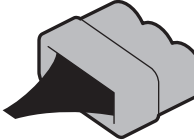

WIRING SYSTEM

---

### **E: CONNECTOR SYMBOL IN WIRING HARNESS**

A number of connector symbols are used in each wiring diagram to easily identify the wiring harness connectors.

| Standard type: Female   |   |   |
|---|---|---|
| Pole: From 1 to 8   | Pole: From 9 to 20  | Pole: More than 21  |
|  |  |  |
|  |  |  |
| Standard type: Male   |   |   |
|  |  |  |
|  |  |  |

| Water proof type: Female  |   |   |
|---|---|---|
| Pole: From 1 to 8   | Pole: From 9 to 20  | Pole: More than 21  |
|  |  |  |
|  |  |  |
| Water proof type: Male  |   |   |
|  |  |  |
|  |  |  |

# Basic Diagnostic Procedure

## WIRING SYSTEM

---

### F: ABBREVIATION IN WIRING DIAGRAMS

| Abbreviation | Full name                        |
|--------------|----------------------------------|
| ABS          | Antilock Brake System            |
| ACC          | Accessory                        |
| A/C          | Air Conditioning                 |

## 2. Working Precautions

### A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE

- 1) When working under a vehicle which is jacked-up, always be sure to use rigid racks.
- 2) The parking brake must always be applied during working. Also, in automatic transmission models, keep the select lever set to P (Parking) range.
- 3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
- 4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been turned off.

### B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS

- 1) The battery cable must be disconnected from battery's (-) terminal, and the ignition switch must be set to OFF position, unless otherwise required by the diagnostics.
- 2) Securely fasten the wiring harness with clamps and slips so that the harness does not interfere with body end parts or edges and bolts or screws.
- 3) When installing the parts, be careful not to catch them on the wiring harness.
- 4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.

- 5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector.

To connect, insert the connector until it snaps and confirm that it is tightly connected.

- 6) When checking continuity between connector terminals, or measuring the voltage across the terminal and ground, always contact tester probe(s) on terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use "mini" test leads.

To check water-proof connectors (which are not measurable from the wiring side), contact test probes on the terminal side. Be careful not to bend or damage terminals.

- 7) Sensors, relays, electrical unit, etc., are sensitive to strong impacts. Handle them with care so that they are not dropped or mishandled.
