**GENERAL INFORMATION  
SECTION**

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

## 1. Foreword

### A: FOREWORD

These manuals are used when performing maintenance, repair, or diagnosis of the Subaru IMPREZA.

Applied model:

GD\*\*\*\*, GG\*\*\*\* from 2006 MY

The manuals contain the latest information at the time of publication. Changes in specifications, methods, etc. may be made without notice.

### **1. How to Use This Manuals**

#### **A: HOW TO USE THIS MANUALS**

##### **1. STRUCTURE**

Each section consists of SCT that are broken down into SC that are divided into sections for each component. The specification, maintenance and other information for the components are included, and diagnosis information has also been added where necessary.

##### **2. INDEX**

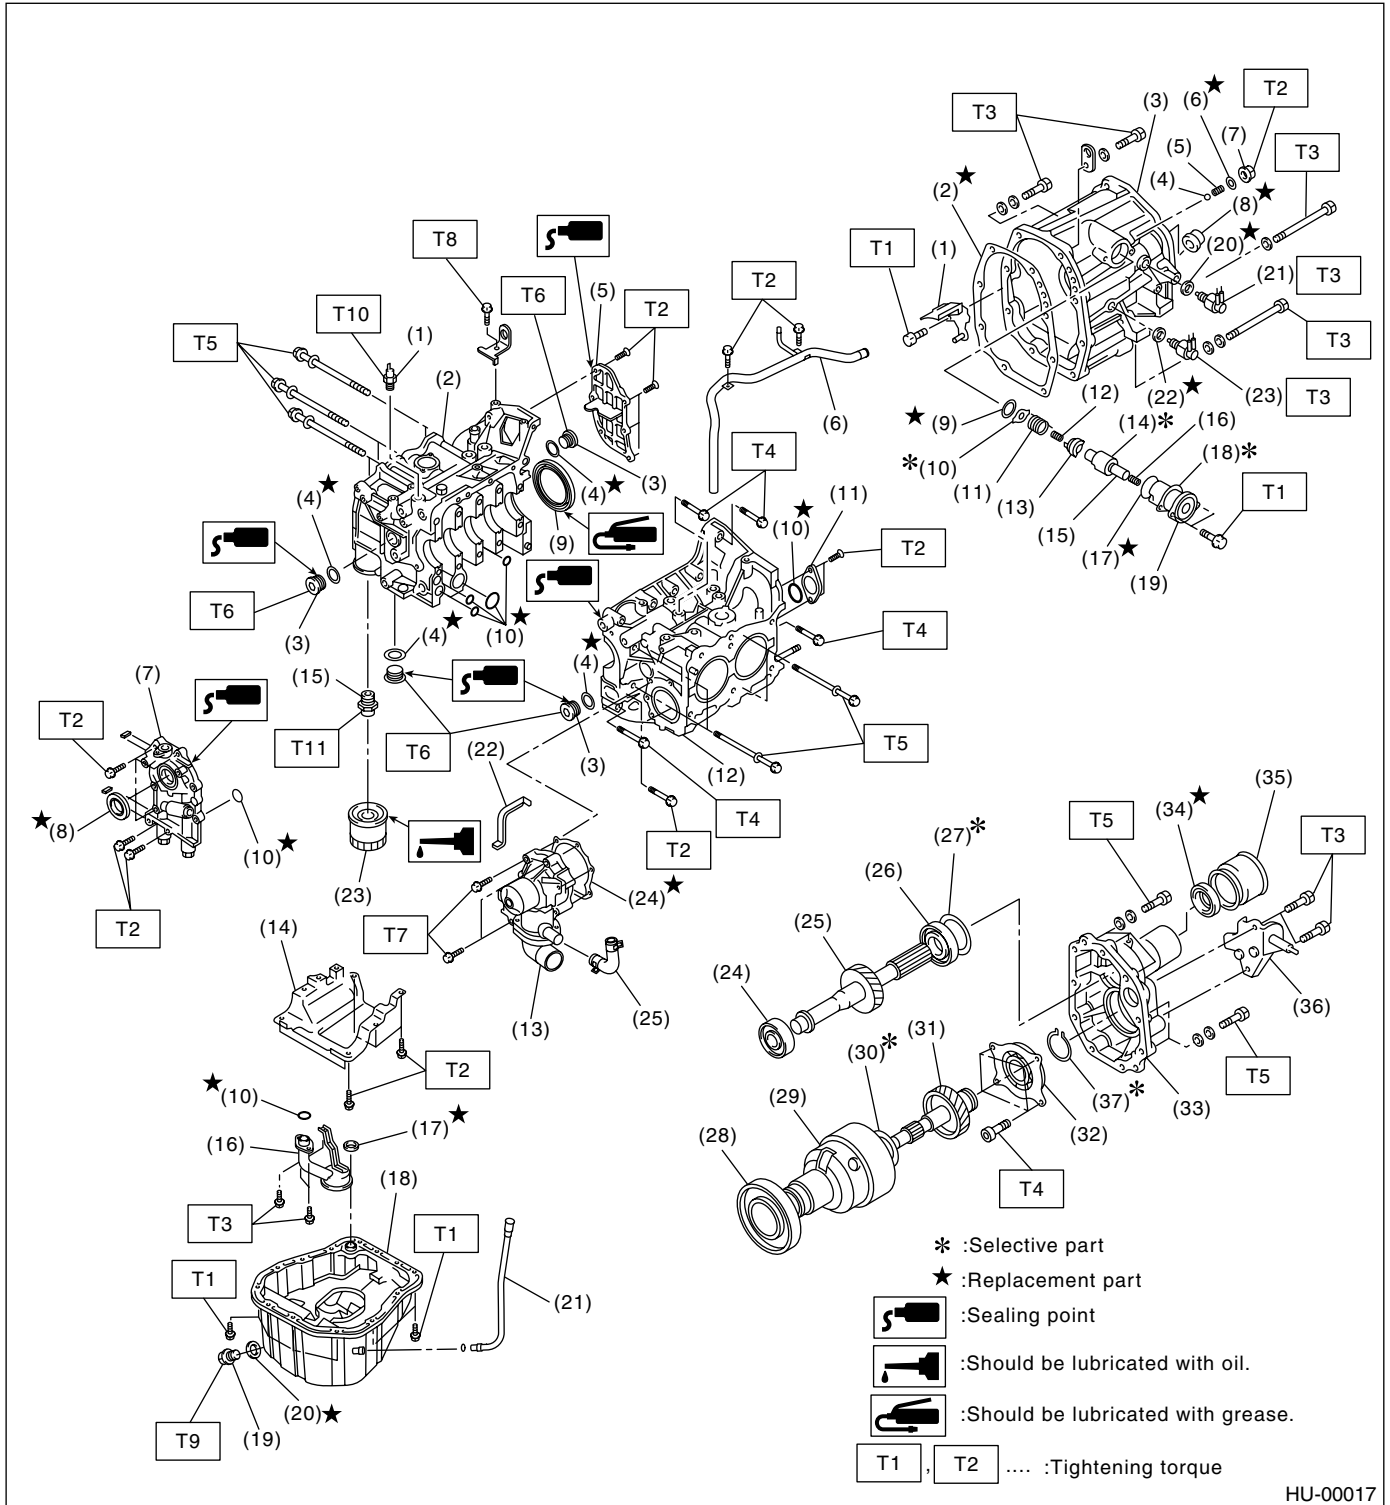

The first page has an index with tabs.

## 3. COMPONENTS

Illustrations are listed for each component. The information necessary for repair work (tightening torque, grease up points, etc.) is described on these illustrations. Information is described using symbol.

To order the parts, refer to parts catalogue.

**Example:**

HU-00017

# How to Use This Manuals

## HOW TO USE THIS MANUALS

### 4. SPECIFICATION

If necessary, specifications are also included.

### 5. INSPECTION

Inspections are included to be carried out before and after maintenance.

### 6. MAINTENANCE

- Maintenance instructions for serviceable parts describes work area and detailed steps with illustration. It also describes the use of special tool, tightening torque, cautions for each procedure.
- If many serviceable parts are included in one service procedure, appropriate reference are provided for each part.

**Example:**

#### 15. Main Shaft Assembly for Single-Range ← (A)

#### A: REMOVAL ← (B)

1) Remove the manual transmission assembly from vehicle. <Ref. to MT-33, REMOVAL, Manual Transmission Assembly.> ← (C)

11) Tighten the lock nuts to the specified torque using ST1 and ST2.

NOTE: ← (D)

Secure the lock nuts in two Places after tightening.

ST1 498937000 TRANSMISSION HOLDER

ST2 499987003 (E) SOCKET WRENCH (35) (F)

**Tightening torque:** ← (G)  
**118 N·m (12.0 kgf-m, 86.8 ft-lb)**

HU-00020

(A) Component

(B) Process

(C) Reference

(D) Caution

(E) Tool number of special tool

(F) Name of special tool

(G) Tightening torque

(H) Illustration

## 7. DIAGNOSIS

Tables showing a step-by-step process make it easy to conduct diagnosis.

## 8. SI UNITS

Measurements in these manuals are according to the SI units. Metric and yard/pound measurements are also included.

**Example:**

*Tightening torque:*

*44 N·m (4.5 kgf-m, 33 ft-lb)*

# PRECAUTION

# *PC*

---

|                     | Page |
|---------------------|------|
| 1. Precaution ..... | 2    |

### 1. Precaution

#### A: CAUTION

The following precautions must be understood and strictly adhered to avoid minor or serious injury to the person doing the work or people in the area and to make an effort for environmental protection.

#### 1. ABS

Handle the ABS as a total system. Do not disassemble or attempt to repair parts which are not instructed in this manual. Follow the instructions in this manual during performing the maintenance of ABSCM&H/U. To disassemble parts without instructions could prevent the ABS system from operating when needed or cause it to operate incorrectly and result in injury.

#### 2. BRAKE FLUID

If brake fluid gets in your eyes or on your skin, do the following:

- Wash out your eyes and seek immediate medical attention.
- Wash your skin with soap and then rinse thoroughly with water.

#### 3. RADIATOR FAN

The radiator fan may rotate without warning, even when the engine is not on. Do not place your hand, cloth, tools, or other items near the fan at any time.

#### 4. ROAD TESTS

Always conduct road tests in accordance with traffic rules and regulations to avoid bodily injury and interrupting traffic.

#### 5. AIRBAG

To prevent bodily injury from unexpected deployment of airbags and unnecessary maintenance, follow the instructions in this manual when performing maintenance on airbag components or nearby, and airbag wiring harnesses or nearby.

To prevent unexpected deployment, perform the steps below and then wait at least 20 seconds to discharge electricity before beginning work.

- Step 1: Turn the ignition switch OFF.
- Step 2: Disconnect the ground cable from battery.

#### 6. AIRBAG DISPOSAL

To prevent bodily injury from unexpected airbag deployment, do not dispose airbag modules in the same way as other refuse. Follow all government regulations concerning disposal of refuse.

#### 7. AIRBAG MODULE

Adhere to the following when handling and storing the airbag module to prevent bodily injury from unexpected deployment:

- Do not hold the harnesses or connectors to carry module.
- Do not face the bag in the direction that it opens towards yourself or other people.
- Do not face the bag in the direction that it opens towards the floor or walls.

#### 8. AIRBAG SPECIAL TOOL

To prevent unexpected deployment, only use special tools.

#### 9. WINDOW

Always wear safety glasses when working around any glass to prevent glass fragments from damaging your eyes.

#### 10. WINDOW ADHESIVE

Always use the recommended or alternative adhesive when attaching glass to prevent adhesive or glass separation, resulting in accidents and injury.

#### 11. OIL

When handling oil, adhere to the following to prevent from unexpected accident.

- Prepare a container and cloth when performing work in which oil possibly spills. If oil spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

#### 12. FUEL

When handling and storing fuel, adhere to the following to prevent from unexpected accident.

- Be careful with fire.
- Prepare a container and cloth when performing work which fuel possibly spills to prevent from scatter. If it spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

### 13. ENGINE COOLANT

When handling engine coolant, adhere to the following to prevent from unexpected accident.

- Never remove the radiator cap when engine coolant is hot since it may blow out.
- Prepare a container and cloth when performing work which engine coolant possibly spills to prevent from scatter. If it spills, wipe it off immediately to prevent from penetrating into floor or flowing out for environmental protection.
- Follow all government and local regulations concerning disposal of refuse when disposing.

### 14. AIR CONDITIONER REFRIGERANT

In order to prevent from global warming, avoid releasing air conditioner refrigerant into the atmosphere. Using a refrigerant recovery system, discharge and reuse it.

### 15. HOSE REMOVAL/INSTALLATION PROCEDURES

#### 1. Hose Removal/Installation Pre-Procedures

- Be careful to inspect hoses so as not to use damaged or deformed hoses. Using such hoses could cause leakage or loss of oil, with leaked oil splashing on exhaust pipes or other hot parts, resulting in smoke or fire.
- Always remove hoses when performing work. Not removing the hoses and moving parts out of the way when performing procedures may damage the inside of hoses and cause other negative affects.

#### 2. Hose Removal/Installation Procedures and Inspection

##### • Remove hoses according to the following instructions.

- If using the hose remover (general tool), do not use the sharp-pointed hose remover (hose plucker) as it may damage pipe surfaces or hoses.

(1) Hose remover

- When using pliers to make hose removal easier, always be sure to use a cloth to protect the hose, slightly rotate the hose, and then pull straight out by hand.

# Precaution

## PRECAUTION

- **Inspect the following points in continuous use, and replace any hoses that are damaged or defective with new parts.**

- Replace any hoses that are riding over the stay or spool with new parts.

(1) Hose riding over a stay

(1) Hose riding over a spool

- Check the inner and outer surfaces of the hose for damage, cracks, breakage, hardening/softening/swelling of rubber, internal peeling, and that there are no deformations caused by infiltration/adhesion of foreign matter, and no twisted hoses. Replace any defective hoses with new parts.

- **Install hoses according to the following instructions.**

- Carefully check the installation positions.
- Do not use any lubricants.
- Securely insert until the specified positions (until contacting spool).

- (1) Contacting the spool. (Do not excessively insert the hose to prevent the hose from becoming wrinkled up.)
- (2) Apply an equal clamping force all around the hose periphery.

- Check that the position and orientation of hose clamps, and the hose layout are correct. (Check that the position and orientation are matching, they are not excessively short/long, there are no differences with before performing the procedures, and that there is clearance between hoses and surrounding parts.)
- After installing, check that there are no disconnection of hoses or leakage from hoses. (Check that hoses are securely fixed by the clamps.)
- **Inspect the hose clips and clamps according to the following points, and replace any parts that are damaged or defective with new parts.**
  - Check for deformations, rust, damage, and adhering of foreign matter.
  - For clips, check that the spring functions and has clamping force.
  - For clamps, check that the screw can clinch, the clamp has not become oval shaped, and the screw is not damaged.
- **Inspect the pipes according to the following points, and replace any parts that are damaged or defective with new parts.**

Check that the pipes do not have any damage, rust, peeling (including peeling plating), foreign matter adhering, twisting, crushing, bending, or cracks.
- **Replace the following parts with new parts if the hoses have been removed or their installation positions have been changed.**

ATF cooler hose, engine oil cooler hose, MT oil cooler hose, power steering suction hose, and power steering return hose.

# NOTE

# *NT*

|              | <b>Page</b> |
|--------------|-------------|
| 1. Note..... | 2           |

## 1. Note

### A: NOTE

This is information that can improve efficiency of maintenance and assure sound work.

#### 1. FASTENER NOTICE

Fasteners are used to prevent parts from damage and dislocation due to looseness. Fasteners must be tightened to the specified torque.

Do not apply paint, lubricant, rust retardant, or other substances to the surface around bolts, fasteners, etc. Doing so will make it difficult to obtain the correct torque and result in looseness and other problems.

#### 2. STATIC ELECTRICITY DAMAGE

Do not touch the control unit, connectors, logic boards, and other such parts when there is a risk of static electricity. Always use a static electricity prevention cord or touch grounded metal before conducting work.

#### 3. BATTERY

When removing the battery cables, always be sure to turn the ignition off to prevent electrical damage to the control unit from rush current.

#### 4. SERVICE PARTS

Use authentic service parts for maximum performance and maintenance, when conducting repairs. Subaru/FHI will not be responsible for poor performance resulting from the use of parts not specified by a genuine dealer.

#### 5. PROTECTING VEHICLE UNDER MAINTENANCE

Make sure to attach the fender cover, seat covers, etc. before work.

#### 6. ENSURING SAFETY DURING WORK

When working in a group of two or more, perform the work with calling each other to ensure mutual safety.

**7. LIFTS AND JACKS**

When using a lift or rigid racks to raise a vehicle, always follow instructions concerning jack-up points and weight limits to prevent the vehicle from falling, which could result in injury. Be especially careful to make sure the vehicle is balanced before raising it.

Be sure to set the wheel stoppers when jacking-up only the front or rear of the vehicle.

(A) Front

(B) Rear

(1) Front crossmember

(2) Rear differential

## 8. TIE-DOWNS

Tie downs are used when transporting vehicles and when using the chassis dynamo. Attach tie downs only to the specified points on the vehicle.

### • Tie-down point

NT-00143

(1) Hook for tie-down

(2) Hook for towing and tie-down

• Chain direction at tie-down condition

• Chain pulling range at tie-down condition

(1) Chain pulling range at tie-down condition

• Vehicle sinking volume at tie-down condition

Measure the distance “L” from tire highest point to arch highest point before tie-down and after tie-down. Difference of measurement value (drop height) shall be within 50 mm (1.97 in). Make sure to fix the vehicle securely.

## Note

NOTE

### 9. TOWING

Avoid towing vehicles except when the vehicle cannot be driven. For models with AWD, AT, or VTD, use a loader instead of towing. When towing other vehicles, to prevent excessive weight from damaging the hook or vehicle:

- Do not install the hook except when towing.
- Do not tow other vehicles with a front hook for tie down.
- Make sure the vehicle towing is heavier than the vehicle being towed.

#### • Front

NT-00145

(1) Eye bolt

(2) Jack handle

#### • Rear

NT-00146

## 10.FRONT HOOD STAY INSTALLATION

- At the check and general maintenance

NT-00147

- When wider hood opening is necessary

- 1) Remove the hook stay.
- 2) Set the upper end of stay into the hole of hood inner.
- 3) Remove the grommet in the wheel apron, and set the lower end of stay into hole.

NT-00148

## 11.TRAINING

For information about training, contact a dealer or agent.

## 12.GENERAL SCAN TOOL

Using general scan tools will greatly improve efficiency of repairing engine electronic controls. The Subaru Select Monitor can be used to diagnose the engine, ABS, AT and other parts.

# Recommended Materials

## RECOMMENDED MATERIALS

### 1. Recommended Materials

#### A: RECOMMENDED MATERIALS

##### 1. GENERAL

To insure the best performance, always use the specified oil, gasoline, adhesive, sealant, etc. or a substitute of equivalent quality.

##### 2. FUEL

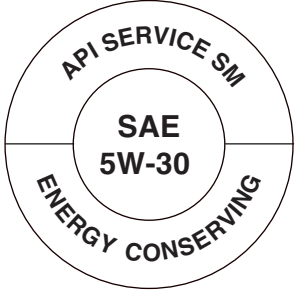

Always use a gasoline of the same or higher octane value than specified in the owner's manual. Ignoring the specifications below will result in damage or poor operation of the engine and fuel injection system. Use the specified gasoline to correct performance.

##### • Unleaded gasoline

Use unleaded gasoline and not leaded gasoline on vehicles with catalytic converter installed to reduce air pollution. Using leaded gasoline will damage the catalytic converter.

##### 3. LUBRICANTS

Use either the lubricants in the table below or equivalent lubricants. See the table below to choose the correct SAE viscosity.

| Lubricant                      | Recommended   |   |
|--------------------------------|---|---|
|                                | API standard  | ILSAC standard  |
| Engine oil                     | SM Grade "Energy conserving"<br><br>RM-00049 | GF-4<br><br>RM-00002 |
| Manual transmission oil        | GL-5  | —   |
| AT front differential gear oil | GL-5  | —   |
| Rear differential gear oil     | Except STI model  | GL-5  |
|                                | STI model   | GL-5 (For mechanical LSD)   |

## Recommended Materials

### RECOMMENDED MATERIALS

---

#### 4. FLUID

Use the fluids specified in the table below. Do not mix two different kinds or makes of fluid.

| Fluid                        | Recommended        | Alternative                             | Remarks |
|------------------------------|--------------------|---|---------|
| Automatic transmission fluid | SUBARU ATF Type-HP | Idemitsu: ATF HP<br>Castrol: Transmax J | —       |
| Power steering fluid         | DEXRON III         | —                                       | —       |
| Brake fluid                  | FMVSS No. 116 DOT3 | FMVSS No. 116 DOT4                      | —       |
| Clutch fluid                 | FMVSS No. 116 DOT3 | FMVSS No. 116 DOT4                      | —       |

#### 5. COOLANT

Use the coolant specified in the table below to protect the engine.

| Coolant                         | Recommended                | Item number | Alternative            |
|---------------------------------|----------------------------|-------------|------------------------|
| Coolant                         | SUBARU coolant             | 000016218   | None                   |
| Water for dilution              | Distilled water            | —           | Tap water (Soft water) |
| Cooling system protective agent | Cooling system conditioner | SOA635071   | None                   |

#### 6. REFRIGERANT

Standard air conditioners on Subaru vehicles use HFC134a refrigerant. Do not mix it with other refrigerants. Also, do not use any compressor oil except for DH-PR.

| Air conditioner | Recommended | Item number | Alternative |
|-----------------|-------------|-------------|-------------|
| Refrigerant     | HFC134a     | —           | None        |
| Compressor oil  | DH-PR       | —           | None        |

# Recommended Materials

## 7. GREASE

Use the grease and supplementary lubricants shown in the table below.

| Grease                   | Application point  | Recommended          | Item number | Alternative                  |
|--------------------------|--|----------------------|-------------|------------------------------|
| Supplementary lubricants | <ul style="list-style-type: none"> <li>• O<sub>2</sub> sensor</li> <li>• Bolts, etc.</li> </ul>  | Spray type lubricant | 004301003   | —                            |
| Grease                   | MT main shaft  | NICHIMOLY N-130      | —           | —                            |
|                          | Clutch master cylinder push rod  | Silicolube G-40M     | 004404003   | —                            |
|                          | <ul style="list-style-type: none"> <li>• Gear shift lever</li> <li>• Clutch operating cylinder</li> <li>• Clutch pedal</li> <li>• Brake pedal</li> <li>• Clutch bearing</li> <li>• Clutch release lever</li> <li>• Select lever</li> </ul> | KOPR-KOTE            | 003603001   | —                            |
|                          | Select lever (lock plate)  | Suncall GLO-224      | —           | —                            |
|                          | Steering gear box  | VALIANT GREASE M-2   | 003608001   | One-Luber SG<br>One-Luber MO |
|                          | Disc brake   | Niglube RX-2         | K0779GA102  | —                            |
|                          | Brake pad  | Molykote AS-880N     | K0777YA010  | —                            |
|                          | Front axle PTJ   | NKG302               | 28495AE010  | —                            |
|                          | <ul style="list-style-type: none"> <li>• Front axle EBJ</li> <li>• Rear axle EBJ</li> </ul>  | NTG2218-M            | 28395AG010  | —                            |
|                          | Front axle BJ (STI model)  | NTG2218-M            | 28395AG030  | —                            |
|                          | <ul style="list-style-type: none"> <li>• Front axle DOJ (STI model)</li> <li>• Rear axle EDJ (STI model)</li> </ul>  | NKG205               | 28495AG010  | —                            |
|                          | Rear axle DOJ (Except STI model)   | NKG205               | 28495AG000  | —                            |
|                          | <ul style="list-style-type: none"> <li>• Throttle cable end</li> <li>• Door latch</li> <li>• Door striker</li> </ul>   | Silicolube G-30M     | 004404002   | —                            |

## Recommended Materials

### RECOMMENDED MATERIALS

#### 8. ADHESIVES

Use the adhesives shown in the table below, or equivalent.

| Adhesive | Application point   | Recommended  | Item number | Alternative                                 |
|----------|---|--|-------------|---|
| Adhesive | Windshield, rear window glass, rear quarter glass, rear gate and body | Dow Automotive's Adhesive: ESSEX U-400HV or equivalent<br>Glass primer: U-401 and U-402<br>Paint surface primer: U-413 | —           | —   |
|          | Inner rearview mirror base  | REPAIR KIT IN MR   | 65029FC000  | —   |
|          | Soft vinyl  | Cemedine 540   | —           | 3M's EC-776, EC-847 or EC-1022 (Spray type) |
|          | Momentary sealant   | Cemedine 3000  | —           | Armstrong's Eastman 910                     |

#### 9. SEAL MATERIAL

Use seal material shown in the table below, or equivalent.

| Seal material | Application point  | Recommended          | Item number | Alternative            |
|---------------|--|----------------------|-------------|------------------------|
| Seal material | <ul style="list-style-type: none"> <li>• Cylinder block</li> <li>• Torque converter clutch case</li> <li>• Transmission case</li> <li>• Transmission oil pan (6MT model)</li> <li>• Oil pump</li> <li>• DOHC rocker cover</li> </ul> | Three Bond 1215B     | 004403007   | Dow Corning's No. 7038 |
|               | Transmission oil pan (AT model)  | Three Bond 1217B     | K0877YA020  | —                      |
|               | <ul style="list-style-type: none"> <li>• Rear differential</li> <li>• Oil pressure swtch</li> </ul>  | Three Bond 1324      | 004403042   | —                      |
|               | <ul style="list-style-type: none"> <li>• Rear differential</li> <li>• Service hole plug</li> </ul>   | Three Bond 1105      | 004403010   | Dow Corning's No. 7038 |
|               | Steering adjusting screw   | Three Bond 1141      | 004403006   | —                      |
| Camshaft cap  | NA model   | Three Bond 1280B     | K0877YA018  | —                      |
|               | Turbo model  | Three Bond 1215      | 004403007   | —                      |
|               | <ul style="list-style-type: none"> <li>• Front sealing cover</li> <li>• Rear sealing cover</li> </ul>  | 3M Butyl Rubber 8626 | —           | —                      |
|               | Engine pressure switch   | Three Bond 1207C     | 004403012   | —                      |
|               | <ul style="list-style-type: none"> <li>• Separator cover</li> <li>• DOHC half moon plug</li> </ul>   | Three Bond 1280B     | K0877YA018  | —                      |

# PRE-DELIVERY INSPECTION

# Pre-delivery Inspection

## PRE-DELIVERY INSPECTION

### 1. Pre-delivery Inspection

#### A: GENERAL DESCRIPTION

The purposes of the pre-delivery inspection (PDI) are as follows.

- Remove the additional parts used for ensuring the vehicle quality during transportation and restore the vehicle to its normal state.
- Check if the vehicle before delivery is in a normal state.
- Check for any damage to the vehicle or parts that may have taken place during transportation or storage.
- Check if the vehicle after repair is in a normal state.
- Make sure to provide a complete vehicle to the customer.

For the above reasons, all SUBARU dealers (dealerships) carry out the PDIs before delivering a vehicle. Refer to this manual unless otherwise specified.

#### B: PRE-DELIVERY INSPECTION (PDI) PROCEDURE

Follow the procedures shown in the table below.

##### Static Checks Just After Vehicle Receipt

| Step  | Check point   |
|---|---|
| 1. Appearance check   | (1) If the vehicle is covered with protective coating, visually check the vehicle body for damage and dents. If the protective coating has been removed, visually check the body paints for small areas of damage or stains.<br>(2) Visually check the glass and light lenses for any damage and cracks or excessive gaps to the body sheet metal.<br>(3) Visually check the plated parts for any damage. |
| 2. Tire check   | (1) Check the tires for damage, abnormal conditions, and dents on the wheels.<br>(2) Check the tire air pressure.   |
| 3. Fuse installation  | If the vehicle is about to be delivered to the customer, attach a room light fuse.  |
| 4. Connection of air conditioner harness                          | If the vehicle is about to be delivered to the customer, connect the air conditioner harness.   |
| 5. Check the doors for lock/unlock and open/close operations.     | (1) Using the key, check that the door can be locked and unlocked normally.<br>(2) Open and close all doors to see that there are no abnormal conditions.<br>(3) Operate the power door locking switch to check that the rear gate is locked and unlocked normally.   |
| 6. Operation check of the child safety lock system                | Check that the child safety lock system operates normally.  |
| 7. Check the trunk lid for open/close operations.                 | (1) Using the key, check that the trunk lid can be unlocked normally.<br>(2) Operate the trunk lock release lever to check that the trunk opens normally.<br>(3) Check that the trunk lid does not unlock using valet key.<br>(4) Open and close the trunk lid to see that there are no abnormal conditions.  |
| 8. Check the rear gate for lock/unlock and open/close operations. | (1) Check if the rear gate can be unlocked normally through the emergency hole.<br>(2) Open and close the rear gate to see that there are no abnormal conditions.   |
| 9. Operation check of trunk lid release handle.                   | Operate the trunk lid release handle to check that the trunk lock opens normally.   |
| 10. Operation check of fuel lid opener lock release lever         | Operate the fuel lid opener to check that the fuel filler flap lid is unlocked normally.  |
| 11. Accessory check   | Check that the following accessories are provided: <ul style="list-style-type: none"><li>• Owner's manual</li><li>• Warranty booklet</li><li>• Service booklet</li><li>• Spare key</li><li>• Jack</li><li>• Tool set</li><li>• Spare tire</li></ul>   |
| 12. Operation check of hood lock release system                   | Operate the hood lock release lever to check that the hood opens normally.  |

# Pre-delivery Inspection

PRE-DELIVERY INSPECTION

| Step                          | Check point  |
|-------------------------------|--|
| 13. Battery                   | Check the battery for any abnormal conditions such as rust and trace of battery fluid leaks.                     |
| 14. Brake fluid               | Check the fluid amount.  |
| 15. Engine oil                | Check the oil amount.  |
| 16. Transmission fluid        | Check the fluid amount.  |
| 17. AT front differential oil | Check the AT front differential oil amount.  |
| 18. Engine coolant            | Check the coolant amount.  |
| 19. Clutch fluid              | Check the clutch fluid amount.   |
| 20. Window washer fluid       | Check the window washer fluid amount.  |
| 21. Hood latch check          | Check that the hood is closed and latched securely.  |
| 22. Keyless entry system      | Check that the keyless entry system operates normally.   |
| 23. Security system           | Check that the security system operates normally.  |
| 24. Seat                      | (1) Check the seat surfaces for smears or dirt.<br>(2) Check the seat installation conditions and functionality. |
| 25. Seat belt                 | Check the seat belt installation conditions and functionality.   |

## Checks with the Engine Running

| Step                                     | Check point  |
|--|--|
| 26. Test mode connector                  | Test mode connector.   |
| 27. Immobilizer system                   | (1) Check that the engine starts with all keys that are equipped on vehicle.<br>(2) 60 seconds after turning ignition switch from ON to ACC or OFF, or immediately after removing key, check that the security indicator light blinking. |
| 28. Starting condition                   | Start the engine and check that the engine starts smoothly.  |
| 29. Exhaust system                       | Check that the exhaust noise is normal and no leaks are found.   |
| 30. Indicator light                      | Check that all the indicator lights operate normally.  |
| 31. Clock                                | Check that the clock operates normally.  |
| 32. Radio                                | Check that the radio system operates normally.   |
| 33. Front accessory power supply socket  | Check that the front accessory power supply socket operates normally.  |
| 34. Lighting system                      | Check that the lighting systems operate normally.  |
| 35. Window washer                        | Check that the window washer system operates normally.   |
| 36. Wiper                                | Check that the wiper system operates normally.   |
| 37. Power window operation check         | Check the power window for correct operations.   |
| 38. Driver's control center differential | Check that the indicator light operates normally.  |

## Dynamic Test with the Vehicle Running

| Step                     | Check point   |
|--------------------------|---|
| 39. Brake test           | Check that the foot brake operates normally.                  |
| 40. Parking brake        | Check that the parking brake operates normally.               |
| 41. AT shift control     | Check the AT shift patterns are correct.                      |
| 42. Heater & ventilation | Check that the heater & ventilation system operates normally. |
| 43. Air conditioner      | Check that the air conditioner operates normally.             |
| 44. Cruise control       | Check that the cruise control system operates normally.       |

## Checks after Dynamic Test

| Step                           | Check point  |
|--------------------------------|--|
| 45. ATF level                  | Check that the ATF level is normal.  |
| 46. Power steering fluid level | Check that the power steering fluid level is normal.   |
| 47. Fluid leak check           | Check for fluid/oil leaks.   |
| 48. Water leak check           | Spray the vehicle with water and check for water leaks.  |
| 49. Appearance check 2         | (1) Remove the protective coating (if any).<br>(2) Check the body paints for damage and smears.<br>(3) Check the plated parts for damage and rust. |

# Pre-delivery Inspection

## PRE-DELIVERY INSPECTION

### 1. APPEARANCE CHECK

- If the vehicle is covered with protective coating, visually check the vehicle body for damage and dents.
- If there is no protective coating, check the body paints for small areas of damage or stains and repair as necessary.
- Check the window glass, door glass, and lights for any cracks or damage and repair or replace the parts as necessary.
- Check the plated parts, such as the grilles and door knobs, for damage or loss of gloss and repair or replace the parts as necessary.

### 2. TIRE CHECK

- Check the tire outer faces for any damage.
- Check the tire air pressure by referring to the following table.

| Tire size  | Tire inflation pressure<br>kPa (kgf/cm <sup>2</sup> , psi) |               |
|------------|--|---------------|
|            | Front  | Rear          |
| P205/55R16 | 230 (2.3, 33)  | 210 (2.1, 30) |
| 215/45R17  | 230 (2.3, 33)  | 220 (2.2, 32) |
| 225/45R17  | 250 (2.5, 36)  | 210 (2.1, 30) |

### 3. FUSE INSTALLATION

A vehicle just delivered has no fuse for the room light circuit to prevent battery discharge. Attach a 20 A fuse (A) as shown in the figure.

### 4. CONNECTION OF AIR CONDITIONER HARNESS

A vehicle just delivered has its air conditioner harness disconnected to protect the air conditioner compressor. Connect the harness as shown in the figure.

### 5. CHECK THE DOORS FOR LOCK/UNLOCK AND OPEN/CLOSE OPERATIONS

1) Using the key, lock and unlock the door several times to check for normal operation. Open and close the door several times for smooth movement.

- (A) Unlock
- (B) Lock

2) Close the driver's door completely, and place the door lock knob (A) to the lock position. Then pull inner remotes (B) to ensure that doors will not open. For other doors, place the door lock knob (A) to the lock positions and then pull the inner remote to check that the doors will not open.

(A) Door lock knob  
(B) Inner remote

3) Close all the doors and press the driver's and passenger's side power door lock switch to lock side. Check that all doors including rear gate are locked.

- Driver's side

- Passenger's side

4) Press the driver's and passenger's side power door lock switch to unlock side. Check that all doors including rear gate are unlocked.

- Driver's side

- Passenger's side

## 6. CHECK THE OPERATION OF CHILD SAFETY LOCKS SYSTEM

- 1) Set the child safety lock on both rear doors to the lock positions.
- 2) Close the rear doors completely.
- 3) Check that the lock levers of the rear doors are in the unlock positions. Then, pull the inner remotes of the rear doors to ensure that the doors will not open.
- 4) Next, pull the outside door handles of the rear doors to ensure that the doors will open.

(A) Unlock  
(B) Lock

# Pre-delivery Inspection

## PRE-DELIVERY INSPECTION

### 7. CHECK THE TRUNK LID FOR OPEN/CLOSE OPERATIONS

- 1) Operate the trunk lock release lever and verify that the trunk lid opens.
- 2) Using the key, open the trunk lid several times to check for normal operation.
- 3) Open and close the trunk lid several times for smooth movement.

- 4) Check the trunk lid and glove box do not open using valet key.
- 5) Set the trunk lid release lever to the cancel position, and check that the trunk lid can only be opened with the key.

### 8. CHECK THE REAR GATE FOR LOCK/UNLOCK AND OPEN/CLOSE OPERATIONS

- 1) Open and close the rear gate several times for smooth movement.
- 2) Operate the rear gate lever to check that the rear gate is locked and unlocked normally.

- (1) Remove the blind cover inside the rear gate.

- (2) Check that the rear gate is locked correctly when lever is operated using a finger.

### 9. OPERATION CHECK OF TRUNK LID RELEASE HANDLE

- 1) Use a flat-tip screwdriver. Slide the screwdriver blade from the slit aperture of the lock assembly fully to the end until you hear a click. This places the latch in the locked position.

2) Move the release handle from outside the vehicle in the direction of the arrow to check if the latch is released.

## 10. OPERATION CHECK OF FUEL LID OPENER LOCK RELEASE LEVER

Operate the fuel lid opener and verify that the fuel lid is unlocked normally. Check that the filler cap is securely closed.

## 11. ACCESSORY CHECK

Check that the following accessories are provided in the luggage compartment or cargo area.

- Owner's manual
- Warranty booklet
- Service booklet
- Spare key
- Jack
- Tool set
- Spare tire

- (A) Jack
- (B) Jack handle

## 12. OPERATION CHECK OF HOOD LOCK RELEASE SYSTEM

Operate the hood release knob and check that the hood is unlocked normally.

# Pre-delivery Inspection

## PRE-DELIVERY INSPECTION

Operate the lever (A) and check that the hood is opened normally. Then support the hood with hood stay.

### 13. BATTERY

Check the battery terminals to make sure that no rust or corrosions due to fluid leaks are found. Check that the battery caps are securely tightened.

- (A) Cap
- (B) Upper level
- (C) Lower level

### 14. BRAKE FLUID

Check the brake fluid amount. If the amount is insufficient, carry out a brake line test to identify brake fluid leaks and check the brake operation. After that, refill the necessary amount of brake fluid tank with the specified type of fluid.

### 15. ENGINE OIL

Check the engine oil amount. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of the specified engine oil.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. 1.0 ℓ (1.1 US qt, 0.9 Imp qt)

### 16. TRANSMISSION FLUID

Check the transmission fluid amount. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of the specified fluid.

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

## 17. AT FRONT DIFFERENTIAL OIL

Check the AT front differential oil amount. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of the specified AT front differential oil.

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

## 18. ENGINE COOLANT

Check the coolant amount on the reservoir. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of coolant with the specified concentration.

## 19. CLUTCH FLUID

Check the clutch fluid amount. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of the specified fluid.

- (A) Reservoir tank
- (B) MIN level
- (C) MAX level

## 20. WINDOW WASHER FLUID

Check the window washer fluid amount. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of washer fluid commercially available.

## 21. HOOD LATCH CHECK

Retract the hood stay and close the hood. Check that the hood is securely latched.

## 22. KEYLESS ENTRY SYSTEM

Check the keyless entry system operations as follows:

- Fully open all the door windows.
- Remove the key from the ignition switch and close all the doors including rear gate.
- Press the “LOCK/ARM” button on the keyless transmitter momentarily once and check if all the doors are locked, the buzzer chirps once, and the hazard light flashes once.

- Press the “UNLOCK/DISARM” button on the keyless transmitter momentarily once and check if the driver’s door is unlocked, the buzzer chirps twice, and the hazard light flashes twice.

- Press the “UNLOCK/DISARM” button on the keyless transmitter momentarily once again within five seconds and check if all the doors including the rear gate on wagon are unlocked.
  - Press the “LOCK/ARM” button on the keyless transmitter a little bit of time (approx. 2 sec.) and check if a panicking condition occurs; the horn sounds continuously. Also, check if that condition lasts for 30 seconds or until any button of the keyless transmitter is pressed.
  - Press the “LOCK/ARM” button on the keyless transmitter momentarily once with one of the doors including the rear gate open. Check if the buzzer chirps five times and the hazard light flashes five times to warn of a door ajar.
- Then, bring all the doors including the rear gate in closed condition and check if all the doors are locked, the buzzer chirps once, and the hazard light flashes once.

# Pre-delivery Inspection

## PRE-DELIVERY INSPECTION

- Press the “LOCK” side of the power door locking switch with any one of the doors including the rear gate open. Then, bring all the doors including the rear gate in the closed condition and check if all the doors are locked, the buzzer chirps once, and the hazard light flashes once.

- Driver’s seat

- Passenger’s seat

Check selecting audible signal operation.

- Using the buzzer, the system will give you an audible signal when the doors lock and unlock. If desired, you may turn the audible signal off. To turn the audible signal from ON to OFF, close all the doors (the key is not inserted into key cylinder), and insert the key into key cylinder while the “UN-LOCK” side of power door lock switch is pressed. Within 10 seconds after repeating the procedure of removing and inserting the key five times or more, open and close the door. With the door closed, the hazard light will flash three times to inform you that the audible signal has been turned to OFF. To turn the audible signal from OFF to ON, perform this procedure again. The hazard light will flash three times to inform you that the audible signal has been turned to ON.

## 23.SECURITY SYSTEM

Check the security system operations as follows:

- 1) Fully open all door windows.
- 2) Remove the key from the ignition switch and close all the doors including rear gate.
- 3) Press the “LOCK/ARM” button of keyless transmitter once.

- 4) If all the doors are locked, the buzzer chirps once, the hazard lights flash once and the security indicator light flashes as shown in the figure below, the alarm system is in the monitoring preparatory state.

- Alarm system in monitoring preparatory state

- (A) ON
- (B) OFF
- (C) 2 seconds

5) Check that it becomes the monitoring state 30 seconds after the state of step 4).

- Alarm system in monitoring state (all models)

- (A) ON
- (B) OFF
- (C) 2 seconds

6) Press the “UNLOCK/DISARM” button of keyless transmitter once.

7) If the driver’s door is unlocked, the buzzer chirps twice, the hazard lights flash twice, the dome light illuminates and the security indicator light goes off, the alarm system is in the non-monitoring state.

**NOTE:**

For models without immobilizer, the security indicator light does not flash after pressing the “UNLOCK/DISARM” button of keyless transmitter.

- Alarm system in non-monitoring state (Model with immobilizer)

- (A) ON
- (B) OFF
- (C) 3 seconds

8) Press the “LOCK/ARM” button on the keyless transmitter once with any one of the doors including the rear gate open.

9) Check the buzzer chirps five times to warn door ajar.

10) Close all the doors including the rear gate.

11) Check if it becomes in the monitoring preparatory state (all the doors are locked, the buzzer chirps once and the hazard light flashes once).

- Alarm system in monitoring preparatory state

- (A) ON
- (B) OFF
- (C) 2 seconds

# Pre-delivery Inspection

## PRE-DELIVERY INSPECTION

12) Check that it becomes the monitoring state 30 seconds after the state of step 11).

- (A) ON
- (B) OFF
- (C) 2 seconds

13) Press the “LOCK” side of the power door locking switch with any one of the doors including the rear gate open.

- Driver’s seat

- Passenger’s seat

14) Close all the doors including the rear gate.

15) If all the doors are locked, the buzzer chirps once and the hazard lights flash, the alarm system is in the monitoring preparatory state.

- Alarm system in monitoring preparatory state

- (A) ON
- (B) OFF
- (C) 2 seconds

16) Check that it becomes the monitoring state 30 seconds after the state of step 15).

- (A) ON
- (B) OFF
- (C) 2 seconds

17) Unlock the door using the inner lock knob or the key, and open the door while the alarm system is in the monitoring state.

18) Make sure that the alarming condition occurs (the horn sounds continuously, the hazard lights flash and the security indicator light comes on).

19) Check that the state of step 18) lasts for more than 30 seconds or until the “UNLOCK/DISARM” button on the keyless transmitter is pressed.

20) Check that turning the ignition key to the “START” position in the monitoring state does not cause the starter motor to turn, thus the engine being prevented from starting.

21) For models with impact sensor, hit the windshield with your hands and make sure the alarming state occurs.

22) Troubleshoot the security system if any one of the above-mentioned checks does not meet the requirements. <Ref. to SL-22, INSPECTION, Security System.>

## 24. SEAT

1) Check that each seat provides full functionality in sliding and reclining. Check all available functions of the rear seat such as a trunk-through center arm rest.

2) Check occupant detection system for passenger seat.

- (1) Turn the ignition switch to ON.
- (2) Check that the both ON and OFF of passenger's airbag ON/OFF indicator light come on simultaneously for about six seconds and go off for two seconds, and then only the OFF comes on again.

- (A) Airbag ON/OFF indicator light (For U.S. Model)
- (B) Airbag ON/OFF indicator light (For Canada Model)

3) Let a person weighing more than 70 kg (155 lb) sit down on the passenger seat, and check that the ON light of passenger's airbag ON/OFF indicator light comes on.

4) Let the person get off the passenger seat, and check that the OFF light of passenger's airbag ON/OFF indicator light comes on.

## 25. SEAT BELT

Pull out the seat belt and then release it. Check that the belt webbing retracts smoothly.

## 26. TEST MODE CONNECTOR

Turn the ignition switch to ON and check that the malfunction indicator light starts blinking. If the light blinks, return the ignition key to LOCK and disconnect the test mode connector. Then, turn the ignition key to ON again. If the malfunction indicator light blinks at that time in spite of the disconnected test mode connector, carry out an engine diagnosis.

(A) Test mode connector (Green)

## 27. IMMOBILIZER SYSTEM

1) Check that the engine starts with all keys that are equipped on vehicle.

2) 60 seconds after turning the ignition switch from ON to ACC or OFF, or immediately after removing the key, check that the security indicator light blinking.

## 28. STARTING CONDITION

Start the engine and check that the engine starts smoothly. If any battery voltage problems are found, recharge or replace the battery. If any abnormal noises are observed, immediately stop the engine and check and repair the necessary components.

## 29. EXHAUST SYSTEM

Listen to the exhaust noise to see if no abnormal noises are observed.

## 30. INDICATOR LIGHT

Check that all the indicator lights and warning lights operate normally.

## 31. CLOCK

Check the clock for normal operations and enough accuracy.

## 32. RADIO

Check the radio for full functionality and normal noise level. Also check the CD unit operations.

# Pre-delivery Inspection

## PRE-DELIVERY INSPECTION

### 33.FRONT ACCESSORY POWER SUPPLY SOCKET

Check the front accessory power supply socket operations.

### 34.LIGHTING SYSTEM

- 1) Check the headlight operations.
- 2) Check the stop light operations.
- 3) Check the other lights for normal operations.

### 35.WINDOW WASHER

Check that the window washer system injects washer fluid to the specified area of windshield shown in the figure.

#### Front injection position:

**A: 257 mm (10.12 in)**

**B: 512 mm (20.16 in)**

(1) Nozzle

#### Rear injection position:

**A: 39 mm (1.53 in)**

**B: 72°**

### 36.WIPER

Check the front and rear wipers for normal operations.

### 37.POWER WINDOW OPERATION CHECK

Manipulate the power window switches one by one to check that each of the power windows goes up and down with no abnormal noises.

### 38.DRIVER'S CONTROL CENTER DIFFERENTIAL

Check that the driver's control center differential indicator light operates normally.

### 39.BRAKE TEST

Check the foot brake for normal operations.

### 40.PARKING BRAKE

Check the parking brake for normal operations.

### 41.AT SHIFT CONTROL

- 1) Turn the ignition switch to ON.
- 2) Check that the select lever can not be moved from "P" range when brake pedal is not depressed.
- 3) Check that the select lever can be moved from "P" range when brake pedal is depressed.
- 4) Select the select lever to except "P" range.
- 5) Check that the ignition key can not be removed from ignition switch when ignition switch is turned to OFF.
- 6) Set the AT select lever to each gear position and check the shifting while driving the vehicle.

PI-00077

| Selector Position | Gear Position |     |     |     |
|-------------------|---------------|-----|-----|-----|
|                   | 1st           | 2nd | 3rd | 4th |
| D                 | Yes           | Yes | Yes | Yes |
| 3                 | Yes           | Yes | Yes | —   |
| 2                 | —             | Yes | —   | —   |
| 1                 | Yes           | —   | —   | —   |

### 42.HEATER & VENTILATION

Operate the heater and ventilation system to check for normal outlet selection, air inlet selection, air-flow and heating capacity.

### 43.AIR CONDITIONER

Operate the air conditioner. Check that the A/C compressor operates normally and enough cooling is provided.

### 44.CRUISE CONTROL

Operate the cruise control system. Check that the system is activated and deactivated correctly.

## 45. ATF LEVEL

Set the select lever “P” range after selecting all positions (P, R, N, D, 3, 2, 1). Measure the ATF level after the engine idles for 1 to 2 minutes. If the amount is insufficient, check that no leaks are found. Then add the necessary amount of the specified ATF.

- (A) Level gauge
- (B) Check position when “HOT” [70 — 80°C (158 — 176°F)]
- (C) Upper level
- (D) Lower level
- (E) Check position when “COLD” [20 — 30°C (68 — 86°F)]

## 46. POWER STEERING FLUID LEVEL

Check that the power steering fluid level is normal. If insufficient, check that no leaks are found. Then add the necessary amount of the specified power steering fluid.

- (A) Reservoir tank
- (B) MIN level
- (C) MAX level

## 47. FLUID LEAK CHECK

Check the entire areas of the vehicle for any trace of coolant/oil/fluid leaks.

## 48. WATER LEAK TEST

Spray the vehicle with water and check that no water enters the passenger compartment.

- Before performing the water leakage test, remove anything that may obstruct the operation or which must be kept dry.
- Close all windows completely, and then close all doors tightly. Close the hood and trunk lid or rear gate before starting the test.
- Connect a hose to a tap, and spray water on the vehicle. The rate of water discharge must be approx. 20 — 25 ℓ (5.3 — 6.6 US gal, 4.4 — 5.5 Imp gal) per minute.

When spraying water on areas adjacent to the floor and wheel house, increase the pressure. When directing water on areas other than the floor portion and wheel house, decrease the pressure. But the force of water must be made strong occasionally by pressing the end of the hose.

### NOTE:

Be sure to keep the hose at least 10 cm (3.9 in) from the vehicle.

Check the following areas:

- Front window and body framework mating portion
- Door mating portions
- Glass mating portions
- Rear quarter window mating portions
- Rear window and body framework mating portion
- Around roof drips

If any dampness in the compartment is discovered after the water has been applied, carefully check all areas that may have possibly contributed to the leak.

## 49. APPEARANCE CHECK 2

1) When vehicle body is covered with protective film, peel it off.

### NOTE:

- Use of steam eases peeling off the warp guard.
- When performing on the vehicles left for a long time, or during low temperature period, sprinkle some water heated to 50 — 60°C (122 — 140°F) over the vehicle to raise its surface temperature before peeling off the wrap guard.

Do not use the water heated to over 60°C (140°F).

- If the adhesive remains on the coated surface, rub the portion with a flannel rag, etc. soaked with a coat of coating wax or a solvent, such as oil benzene and IPA, and then wipe it off.

- Avoid adhesion of the solvent to resin or rubber components. Do not use coating wax or a solvent while the component surface temperature is high due to hot weather, etc.

## Pre-delivery Inspection

### PRE-DELIVERY INSPECTION

---

- If the coated surface is swollen out due to seams or moisture, expose the vehicle to the sun light for a few hours. Otherwise, heat the portion with seams or moisture using a dryer, etc.
- Dispose of the peeled wrap guard as burnable industrial garbage.

2) Check the whole vehicle body for stains, flaking, damage caused by transportation, rust, dirt, cracks, or blistering.

#### NOTE:

- It is better to determine an inspection pattern in order to avoid missing an area, since the total inspection area is wide.
- It is desirable not to make corrections to the body paint unless absolutely needed. However, if any corrections are required to remove scratches or rust, the area to be corrected must be limited as much as possible. Re-painting and spray painting must be avoided whenever possible.

3) Carefully check each window glass for scratches. Slight damage may be removed by polishing with cerium oxide. (Half-fill a cup with cerium oxide, and add warm water to it. Then agitate the content until it turn to wax. Apply this wax to a soft cloth, and polish the glass.)

4) Check each portion of the vehicle body and underside components for the formation of rust. If rust is discovered, remove it with #80 — #180 emery paper, and treat the surface with rust preventive. After this treatment is completed, flush the portion thoroughly, and prepare the surface for repair painting.

5) Check each portion of the body and all of the chrome parts for deformation or distortion. Also check each lamp lens for cracks.

Symbols used:

R: Replace

I: Inspection

(I): Recommended service for safe vehicle operation.

**NOTE:**

(1) This inspection is not required to maintain emission warranty eligibility and it does not affect the manufacturer's obligations under EPA's in-use compliance program.

(2) When the vehicle is used in extremely dusty conditions, the air cleaner element should be replaced more often.

(3) ATF filter is maintenance free part. ATF filter needs replacement, when it has physically damaged or ATF leaked.

(4) A tire should be replaced when the tread wear indicator appears as a solid band across the tread. The indicators appear when the remaining tread has been worn to 1.6 mm (0.063 in) or less.

(5) When the A/C filter is installed.

# Engine Oil

## PERIODIC MAINTENANCE SERVICES

### 3. Engine Oil

#### A: REPLACEMENT

1) Open the engine oil filler cap for quick draining of the engine oil.

- (A) Oil level gauge  
(B) Oil filler cap

2) Drain the engine oil by loosening engine oil drain plug.

#### NOTE:

If engine oil adheres to the exhaust pipe, wipe it off completely.

3) Replace the drain plug gasket.

4) Tighten the engine oil drain plug after draining engine oil.

#### Tightening torque:

**44 N·m (4.5 kgf·m, 32.5 ft·lb)**

5) Use the engine oil of proper quality and viscosity, fill with the engine oil through oil filler duct up to upper level on level gauge. Make sure that the vehicle is placed level when checking oil level.

#### Recommended oil:

**API standard SM with the “Energy Conserving” logo is printed**

**ILSAC standard, GF4 “Star burst mark” label is on the container.**

#### Engine oil capacity:

##### Upper level

**Approx. 4.0 ℓ (4.2 US qt, 3.5 Imp qt)**

##### Lower level

**Approx. 3.0 ℓ (3.2 US qt, 2.6 Imp qt)**

| SAE (1) |                        |
|---------|------------------------|
| (°C)    | -30 -20 -15 0 15 30 40 |
| (°F)    | -22 -4 5 32 59 86 104  |

10W-30, 10W-50

5W-30 (2)

LU-02250

- (1) SAE viscosity No. and applicable temperature  
(2) Recommended

The proper viscosity helps vehicle get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.

#### NOTE:

• When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the API standard and SAE viscosity No. designated by SUBARU.

• If vehicle is used in desert areas with very high temperatures or for other heavy duty applications, the following viscosity oils may be used:

API standard: SM or SL.

ILSAC standard: GF-4.

SAE Viscosity No.: 30, 40, 10W-50, 20W-40, 20W-50

6) Close the engine oil filler cap.

7) Start the engine and warm it up for a time.

8) After the engine stops, recheck the oil level. <Ref. to PM-6, INSPECTION, Engine Oil.>

#### B: INSPECTION

1) Park the vehicle on a level surface.

2) Remove the oil level gauge and wipe it clean.

3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper orientation.

4) Remove it again and note the reading. If the engine oil level is below the “L” line, add oil to bring the level up to the “F” line.

- (A) Oil level gauge
- (B) Oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. 1 ℓ (1.1 Us qt, 0.9 Imp qt)

5) After turning off the engine, wait a few minutes for the oil to drain back into oil pan before checking the level.

6) Just after driving or while the engine is warm, engine oil level may show in the range between the “F” line and the notch mark. This is caused by thermal expansion of the engine oil.

7) To prevent overfilling the engine oil, do not add oil above the “F” line when the engine is cold.

# Engine Oil Filter

## PERIODIC MAINTENANCE SERVICES

### 4. Engine Oil Filter

#### A: REPLACEMENT

- 1) Remove the under cover.
- 2) Remove the oil filter with ST.

ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))

ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))

#### NOTE:

- Standard oil filter is outer diameter of 68 mm (2.68 in). However, SUBARU genuine oil filter having outer diameter of 65 mm (2.56 in) can also be used.
- If engine oil adheres to the exhaust pipe, wipe it off completely.
- Non-turbo model

- Turbo model

- 3) Wipe clean the oil filter matching surface on cylinder block or oil cooler.
- 4) Get a new engine oil filter and apply a thin coat of engine oil to the seal rubber.

#### CAUTION:

**Be careful not to use the oil filter 80 mm (3.15 in) in diameter.**

- 5) Install the oil filter by turning it by hand, being careful not to damage the seal rubber.
  - Tighten the oil filter 68 mm (2.68 in) in diameter by approx. 1 rotation more after the seal rubber of oil filter comes in contact with cylinder block or oil cooler. If using a torque wrench, tighten it to 14 N·m (1.4 kgf·m, 10.3 ft·lb).

- Tighten the oil filter 65 mm (2.56 in) in diameter by approx. 2/3 — 3/4 rotation more after the seal rubber of oil filter comes in contact with cylinder block or oil cooler. If using a torque wrench, tighten it to 12 N·m (1.2 kgf·m, 8.7 ft·lb).

#### CAUTION:

**Do not tighten excessively, or oil may leak.**

- 6) After installing the oil filter, run the engine and make sure that no oil is leaking around seal rubber.

#### NOTE:

The filter element and filter case are permanently joined; therefore, interior cleaning is not necessary.

- 7) Check the engine oil level. <Ref. to PM-6, INSPECTION, Engine Oil.>

## 5. Spark Plugs

### A: REPLACEMENT

#### 1. SOHC MODEL

- 1) Disconnect the battery cables, and then remove the battery and battery carrier.
- 2) Remove the air cleaner lower case.
- 3) Disconnect the spark plug cord.
- 4) Remove the spark plug with a plug-wrench.

- 5) Set the new spark plugs.

**Recommended spark plug:**

**NGK: FR5AP-11**

- 6) Tighten the spark plug lightly with hand, and then secure with a plug-wrench to the specified torque.

**Tightening torque:**

**21 N·m (2.1 kgf-m, 15.2 ft-lb)**

**NOTE:**

- Be sure to place the gasket between the cylinder head and spark plug.
- If a torque wrench is not available, tighten the spark plug until gasket contacts cylinder head; then tighten further 1/4 to 1/2 turns.

#### 2. DOHC MODEL

- 1) Disconnect the battery cables, and then remove the battery and battery carrier.
- 2) Remove the air cleaner lower case.
- 3) Disconnect the connector from ignition coil and ignitor assembly.
- 4) Remove the ignition coil and ignitor assembly.

- 5) Remove the spark plug with a spark plug socket.

- 6) Set new spark plugs.

**Recommended spark plug:**

**NGK: ILFR6B**

- 7) Tighten the spark plug lightly with hand, and then secure with a plug-wrench to the specified torque.

**Tightening torque:**

**21 N·m (2.1 kgf-m, 15.2 ft-lb)**

- 8) Tighten the ignition coil and ignitor assembly.

**Tightening torque:**

**16 N·m (1.6 kgf-m, 11.7 ft-lb)**

**NOTE:**

- Be sure to place the gasket between the cylinder head and spark plug.
- If a torque wrench is not available, tighten the spark plug until gasket contacts cylinder head; then tighten further 1/4 to 1/2 turns.

## 6. V-belt

### A: INSPECTION

#### 1. WITHOUT USING BELT TENSION GAUGE

- 1) Replace the belts, if cracks, fraying or wear is found.
- 2) Check the V-belt tension and adjust it if necessary by changing the generator installing position and/or idler pulley installing position. <Ref. to PM-11, REPLACEMENT, V-belt.>

#### Belt tension

(A)

**Replaced: 7 — 9 mm (0.276 — 0.354 in)**

**Reused: 9 — 11 mm (0.354 — 0.433 in)**

(B)

**Replaced: 7.5 — 8.5 mm (0.295 — 0.335 in)**

**Reused: 9.0 — 10.0 mm (0.354 — 0.394 in)**

(A) Front side belt

(B) Rear side belt

(C) 98 N (10 kgf, 22 lbf)

C/P Crankshaft pulley

GEN Generator

P/S Power steering oil pump pulley

A/C Air conditioning compressor pulley

I/P Idler pulley

#### 2. WITH USING BELT TENSION GAUGE

- 1) Replace the belts, if cracks, fraying or wear is found.
- 2) Remove the V-belt cover and radiator reservoir tank.
- 3) Check the belt tension using belt tension gauge. And adjust it if necessary by changing the generator installing position and/or idler pulley installing position.

#### Belt tension (Non-turbo model)

(A)

**When installing new parts:**

**618 — 755 N (63 — 77 kgf, 139 — 170 lbf)**

**At inspection:**

**490 — 640 N (50 — 65 kgf, 110 — 144 lbf)**

(B)

**When installing new parts:**

**740 — 880 N (75 — 90 kgf, 166 — 198 lbf)**

**At inspection:**

**350 — 450 N (36 — 46 kgf, 79 — 101 lbf)**

#### Belt tension (Turbo model)

(A)

**When installing new parts:**

**640 — 780 N (65 — 80 kgf, 144 — 175 lbf)**

**At inspection:**

**490 — 640 N (50 — 65 kgf, 110 — 144 lbf)**

(B)

**When installing new parts:**

**740 — 880 N (75 — 90 kgf, 166 — 198 lbf)**

**At inspection:**

**350 — 450 N (36 — 46 kgf, 79 — 101 lbf)**

#### Belt tension (STI model)

**(A) 490 — 640 N (50 — 65 kgf, 110 — 144 lbf)**

**(B) 350 — 450 N (36 — 46 kgf, 79 — 101 lbf)**

(A) Front side belt

(B) Rear side belt

C/P Crank pulley

GEN Generator

P/S Power steering oil pump pulley

A/C A/C compressor pulley

I/P Idler pulley

## B: REPLACEMENT

### 1. V-BELT COVER

Remove the V-belt cover.

- Non-turbo model

- Turbo model

### 2. FRONT SIDE BELT (FOR POWER STEERING OIL PUMP AND GENERATOR)

NOTE:

Wipe off any oil or water on the belt and pulley.

- 1) Loosen the lock bolt (A).
- 2) Loosen the slider bolt (B).
- 3) Remove the front side belt (C).
- 4) Install a new belt, and tighten the slider bolt so as to obtain the specified belt tension.
- 5) Tighten the lock bolt (A).
- 6) Tighten the slider bolt (B).

**Tightening torque:**

**Lock bolt:**

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

**Slider bolt:**

**8 N·m (0.8 kgf-m, 5.9 ft-lb)**

- 7) Idle the engine for approx. 5 min. to normalize the V-belt. (With using tension gauge)
- 8) Stop the engine, and then check the belt tension and adjust it. (With using tension gauge)
- 9) Idle the engine for approx. 1 min. to normalize the V-belt. (With using tension gauge)
- 10) Stop the engine, and then check the belt tension is within specified value. (With using tension gauge)
- 11) Adjust the belt tension until the value within specification. (With using tension gauge)

### 3. REAR SIDE BELT (FOR A/C)

NOTE:

Wipe off any oil or water on the belt and pulley.

- 1) Remove the front side belt.
  - 2) Loosen the lock nut (A).
  - 3) Loosen the slider bolt (B).
  - 4) Remove the rear side belt.
  - 5) Install a new belt, and tighten the slider bolt so as to obtain the specified belt tension.
  - 6) Tighten the lock nut (A).
  - 7) Install the front side belt.
- Non-turbo model  
<Ref. to ME(H4SO)-40, FRONT SIDE BELT, INSTALLATION, V-belt.>
  - Turbo model  
<Ref. to ME(H4DOTC)-41, FRONT SIDE BELT, INSTALLATION, V-belt.>
  - STI model  
<Ref. to ME(STI)-40, FRONT SIDE BELT, INSTALLATION, V-belt.>

### **Tightening torque:**

**23 N·m (2.3 kgf·m, 17.0 ft·lb)**

- 8) Idle the engine for approx. 5 min. to normalize the V-belt. (With using tension gauge)
- 9) Stop the engine, and then check the belt tension and adjust it. (With using tension gauge)
- 10) Idle the engine for approx. 1 min. to normalize the V-belt. (With using tension gauge)
- 11) Stop the engine, and then check the belt tension is within specified value. (With using tension gauge)
- 12) Adjust the belt tension until the value within specification. (With using tension gauge)

## 7. Timing Belt

### A: REPLACEMENT

#### 1. NON-TURBO MODEL

- 1) Remove the radiator fan and air conditioner fan. <Ref. to CO(H4SO)-27, Radiator Main Fan and Fan Motor.>, <Ref. to CO(H4SO)-28, Radiator Sub Fan and Fan Motor.>
- 2) Shield the radiator from any damage using cardboard and blanket.
- 3) Remove the V-belt cover.

- 4) Remove the V-belts. <Ref. to ME(H4SO)-40, V-belt.>
  - 5) Remove the air conditioning compressor drive belt tensioner.
  - 6) To lock the crankshaft, use ST. Remove the pulley bolt.
- ST 499977100 CRANK PULLEY WRENCH

- 7) Remove the crankshaft pulley.
- 8) Remove the left side belt cover.
- 9) Remove the front timing belt cover.
- 10) Remove the timing belt guide. (MT model)

- 11) Turn the crankshaft and align alignment marks on crankshaft, and right and left cam sprockets with notches of belt cover and cylinder block.
- ST 499987500 CRANKSHAFT SOCKET

- (A) Notch  
(B) Alignment mark

- 12) Remove the belt idler.
- 13) Remove the belt idler (No. 2).

- 14) Remove the timing belt.
- 15) Remove the automatic belt tension adjuster assembly.

# Timing Belt

## PERIODIC MAINTENANCE SERVICES

16) Install in the reverse order of removal. <Ref. to ME(H4SO)-45, INSTALLATION, Timing Belt.>

### 2. TURBO MODEL

1) Remove the radiator fan and air conditioner fan. <Ref. to CO(H4DOTC)-28, Radiator Main Fan and Fan Motor.>, <Ref. to CO(H4DOTC)-30, Radiator Sub Fan and Fan Motor.>

2) Protect the radiator with cardboard and blanket.  
3) Remove the V-belts. <Ref. to ME(H4DOTC)-41, V-belt.>

4) Remove the air conditioning compressor drive belt tensioner.

5) Remove the pulley bolt. To lock the crankshaft use ST.

ST 499977100 CRANK PULLEY WRENCH

6) Remove the crank pulley.

7) Remove the air conditioning compressor drive belt tensioner.

8) Remove the belt cover (LH).

9) Remove the belt cover (RH).

10) Remove the front belt cover.

11) Remove the timing belt guide. (MT model)

12) Turn the crankshaft and align alignment marks on crankshaft, and right and left cam sprockets with notches of belt cover and cylinder block. To turn the crankshaft, use ST.

ST 499987500 CRANKSHAFT SOCKET

13) Remove the belt idler.

14) Remove the timing belt.

15) Remove the automatic belt tension adjuster assembly.

16) Install in the reverse order of removal. <Ref. to ME(H4DOTC)-45, Timing Belt.>

**CAUTION:**

When installing the timing belt, be sure to align all alignment marks on the belt with corresponding marks on the sprockets. If incorrectly installed, interference between pistons and valves may occur.

**B: INSPECTION**

**1. NON-TURBO MODEL**

- 1) Remove the front timing belt cover and timing belt cover (LH).
- 2) While cranking the engine at least four rotations, check the timing belt back surface for cracks or damage. Replace the faulty timing belt as needed.
- 3) Measure the timing belt width W. If it is less than 26 mm (1.02 in), check idlers, tensioner, water pump pulley and cam sprocket to determine idler alignment (squareness). Replace the worn timing belt.

- 4) Install the front timing belt cover and timing belt cover (LH).

**2. TURBO MODEL**

- 1) Remove the timing belt cover (LH).
- 2) While cranking the engine at least four rotations, check the timing belt back surface for cracks or damage. Replace the faulty timing belt as needed.
- 3) Measure the timing belt width W. If it is less than 29 mm (1.14 in), check idlers, tensioner, water pump pulley and cam sprocket to determine idler alignment (squareness). Replace the worn timing belt.
- 4) Install the timing belt cover (LH).

## 8. Fuel Line

### A: INSPECTION

The fuel line is located mostly internally, so check pipes, areas near pipes, and engine compartment piping for rust, hose damage, loose bands, etc. If faulty parts are found, repair or replace them.

- Non-turbo model

<Ref. to FU(H4SO)-57, Fuel Delivery & Evaporation Lines.>

- Turbo model

<Ref. to FU(H4DOTC)-65, Fuel Delivery, Return and Evaporation lines.>

- STI model

<Ref. to FU(STI)-60, Fuel Delivery, Return and Evaporation Lines.>

## 9. Fuel Filter

### A: REPLACEMENT

For fuel filter replacement procedures, refer to “FU” section.

- Non-turbo model

<Ref. to FU(H4SO)-54, Fuel Filter.>

- Turbo model

<Ref. to FU(H4DOTC)-62, Fuel Filter.>

- STI model

<Ref. to FU(STI)-57, Fuel Filter.>

### B: INSPECTION

If it is clogged, or if replacement interval has been reached, replace it.

# Air Cleaner Element

## PERIODIC MAINTENANCE SERVICES

### 10. Air Cleaner Element

#### A: REPLACEMENT

##### 1. NON-TURBO MODEL

1) Remove the clip (B) above the air cleaner case.

2) Remove the air cleaner.

3) Install in the reverse order of removal.

#### NOTE:

Align the hole of air cleaner upper cover with protruding portion of air cleaner lower case, then secure upper cover to case.

##### 2. TURBO MODEL

1) Remove the clip (B) above the air cleaner case.

2) Remove the air cleaner.

3) Install in the reverse order of removal.

#### NOTE:

Align the protruding portion of air cleaner upper cover with holes of air cleaner lower case, then secure upper cover to case.

## 11. Cooling System

### A: INSPECTION

1) Check the radiator for leakage, filling it with coolant and attach the radiator cap tester (A) to filler neck. Then apply a pressure. Check the following points:

#### *Non-turbo model*

**157 kPa (1.6 kgf/cm<sup>2</sup>, 23 psi)**

#### *Turbo model*

**122 kPa (1.2 kgf/cm<sup>2</sup>, 18 psi)**

- Each portion of radiator for leakage
- Hose joints and other connections for leakage

#### NOTE:

- For turbo model, be sure to install the tester to filler tank side.
- When attaching or detaching tester and when operating tester, use special care not to deform radiator filler neck.
  - Non-turbo model

- Turbo model

- When performing this check, be sure to keep the engine stationary and fill the radiator with coolant.
  - Wipe off check points before applying pressure.
  - Use care not to spill coolant when detaching the tester from radiator.
  - If engine coolant adheres to the exhaust pipe, wipe it off completely.
  - Do not remove the radiator side cap. (Turbo model)
- 2) Check the radiator cap valve open pressure using radiator cap tester.

#### NOTE:

Rust or dirt on the cap may prevent the valve from functioning normally: be sure to clean the cap before testing.

Raise the pressure until the needle of gauge stops and see if the pressure can be retained for 5 to 6 seconds. The radiator cap is normal if a pressure above the service limit value has been maintained for this period.

#### *Radiator cap valve open pressure:*

#### *Non-turbo model*

##### *Standard value:*

**93 — 123 kPa (0.95 — 1.25 kgf/cm<sup>2</sup>, 14 — 18 psi)**

##### *Service limit:*

**83 kPa (0.85 kgf/cm<sup>2</sup>, 12 psi)**

#### *Turbo model*

#### *Filler tank side:*

##### *Standard value:*

**93 — 123 kPa (0.95 — 1.25 kgf/cm<sup>2</sup>, 14 — 18 psi)**

##### *Service limit:*

**83 kPa (0.85 kgf/cm<sup>2</sup>, 12 psi)**

# Cooling System

## PERIODIC MAINTENANCE SERVICES

### Radiator side:

#### Standard value:

122 — 152 kPa (1.24 — 1.55 kgf/cm<sup>2</sup>, 18 — 22 psi)

#### Service limit:

112 kPa (1.14 kgf/cm<sup>2</sup>, 16 psi)

(A) Deformation

(B) Deformation, damage, rust

- Non-turbo model  
<Ref. to CO(H4SO)-6, Radiator Main Fan System.>  
<Ref. to CO(H4SO)-11, Radiator Sub Fan System.>
- Turbo model  
<Ref. to CO(H4DOTC)-7, Radiator Main Fan System.>  
<Ref. to CO(H4DOTC)-12, Radiator Sub Fan System.>
- STI model  
<Ref. to CO(H4DOTC)-7, Radiator Main Fan System.>  
<Ref. to CO(H4DOTC)-12, Radiator Sub Fan System.>

3) Start the engine, and then check it does not overheat or it is cooled excessively. If it overheats or it is cooled excessively, check the cooling system.

- Non-turbo model

<Ref. to CO(H4SO)-18, Water Pump.>

<Ref. to CO(H4SO)-21, Thermostat.>

<Ref. to CO(H4SO)-23, Radiator.>

<Ref. to CO(H4SO)-26, Radiator Cap.>

- Turbo model

<Ref. to CO(H4DOTC)-19, Water Pump.>

<Ref. to CO(H4DOTC)-21, Thermostat.>

<Ref. to CO(H4DOTC)-23, Radiator.>

<Ref. to CO(H4DOTC)-27, Radiator Cap.>

- STI model

<Ref. to CO(H4DOTC)-19, Water Pump.>

<Ref. to CO(H4DOTC)-21, Thermostat.>

<Ref. to CO(H4DOTC)-23, Radiator.>

<Ref. to CO(H4DOTC)-27, Radiator Cap.>

4) Check the electric fan operates using Subaru Select Monitor, when the coolant temperature exceeds 95°C (203°F). If not operate, check the electric fan system.

## 12.Engine Coolant

### A: REPLACEMENT

#### 1. REPLACEMENT OF COOLANT

**WARNING:**

The radiator is of the pressurized type. Do not attempt to open the radiator cap immediately after the engine has been stopped.

- 1) Lift-up the vehicle.
- 2) Remove the under cover.
- 3) Place a container under drain pipe.
- 4) Loosen and remove the drain cock to drain engine coolant into container.

- 5) For quick draining, open the radiator cap.

**NOTE:**

- In the case of turbo model, be sure to open the radiator cap of filler tank side.
- Be careful not to spill coolant on the floor.
- If engine coolant adheres to the exhaust pipe, wipe it off completely.

- 6) Drain the coolant from reservoir tank.
- 7) Tighten the radiator drain cock securely after draining coolant.
- 8) Pour cooling system conditioner through the filler neck.

**Cooling system protective agent:**

**COOLING SYSTEM CONDITIONER (Part No. SOA635071)**

- 9) Pour the engine coolant into the radiator (for turbo model, coolant filler tank) up to the filler neck position.
- 10) Fill engine coolant into the reservoir tank up to "FULL" level.

**Coolant capacity (fill up to "FULL" level):**

**Turbo AT model:**

Approx. 7.6 ℓ (8.0 US qt, 6.7 Imp qt)

**Turbo MT model:**

Approx. 7.7 ℓ (8.1 US qt, 6.8 Imp qt)

**Non-turbo AT model:**

Approx. 6.9 ℓ (7.3 US qt, 6.1 Imp qt)

**Non-turbo MT model:**

Approx. 7.0 ℓ (7.4 US qt, 6.2 Imp qt)

**STI model:**

Approx. 7.7 ℓ (8.1 US qt, 6.8 Imp qt)

**NOTE:**

The SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crankcase. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.

11) Close the radiator (for turbo model, coolant filler tank) cap to start the engine and race 5 to 6 times at less than 3,000 rpm, then stop the engine. (Complete this operation within 40 seconds.)

12) Wait for one minute after the engine stops, open the radiator (for turbo model, coolant filler tank) cap. If the engine coolant level drops, add engine coolant to the filler neck position of radiator (for turbo model, coolant filler tank).

13) Perform the procedures 11) and 12) again.

14) Attach the radiator (for turbo model, coolant filler tank) cap and reservoir tank cap properly.

15) Start the engine and operate the heater at maximum hot position and the blower speed setting to "LO".

16) Run the engine at 2,000 rpm or less until radiator fan starts and stops.

**NOTE:**

- Be careful with the engine coolant temperature gauge to prevent overheating.
- If the radiator hose becomes to harden by the pressure of engine coolant, air bleeding operation seems to be almost completed.

17) Stop the engine and wait until engine coolant temperature lowers to 30°C (86°F) or less.

18) Open the radiator (for turbo model, coolant filler tank) cap. If the engine coolant level drops, add engine coolant to the filler neck position of radiator and the "FULL" level of reservoir tank.

19) Attach the radiator (for the turbo model, coolant filler tank) cap and reservoir tank cap properly.

20) Operate the heater at maximum hot position and the blower speed setting to "LO" and start the engine. Race at less than 3,000 rpm. If the flowing sound is heard, perform the procedures from 16) again.

# Engine Coolant

## PERIODIC MAINTENANCE SERVICES

### 2. RELATIONSHIP OF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

Concentration and safe operating temperature of SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.

[Example]

If the coolant temperature is 25°C (77°F) and its specific gravity is 1.054 and the concentration is 35% (point A), the safe operating temperature is -14°C (7°F) (point B), and the freezing temperature is -20°C (-4°F) (point C).

### 3. PROCEDURE TO ADJUST THE CONCENTRATION OF THE COOLANT

To adjust the concentration of the coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50%).

The amount of coolant that should be replaced can be determined using the diagram.

[Example]

Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 ℓ (2.2 US qt, 1.8 Imp qt). Drain 2.1 ℓ (2.2 US qt, 1.8 Imp qt) of coolant from the cooling system and add 2.1 ℓ (2.2 US qt, 1.8 Imp qt) of the undiluted solution of SUBARU coolant.

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.

## 13. Clutch System

### A: INSPECTION AND ADJUSTMENT

1) Push the release lever to retract the push rod of the operating cylinder and check if the fluid level in the clutch reservoir tank rises or not.

- Non-turbo model

- (A) Release lever
- (B) Push rod
- (C) Operating cylinder

- Turbo model

- (A) Release lever
- (B) Push rod
- (C) Operating cylinder

- STI model

- (A) Release lever
- (B) Push rod
- (C) Operating cylinder

2) If the fluid level rises, pedal free play is correct.

3) If the fluid level does not rise, or the push rod cannot be retracted, adjust the clutch pedal. <Ref. to CL-32, Clutch Pedal.>

4) Check the fluid level using the scale on the outside of the clutch master cylinder tank (A). If the level is below "MIN" (B), inspect the clutch master cylinder, operating cylinder and hydraulic line for fluid leaks. If fluid leaks are found, repair or replace. If fluid leaks are not found, add clutch fluid to bring it up to "MAX" (C) of clutch reservoir tank.

#### Recommended clutch fluid:

**FMVSS No. 116, fresh DOT3 or DOT4 brake fluid**

#### CAUTION:

**Prevent the clutch fluid from being splashed over vehicle body. If the clutch fluid is splashed over vehicle body, flush it, and then wipe it up.**

#### NOTE:

- Avoid mixing different brands of brake fluid to prevent degradation of the fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.
- If clutch fluid adheres to the exhaust pipe, wipe it off completely.

- (A) Reservoir tank
- (B) MIN level
- (C) MAX level

# Transmission Gear Oil

## PERIODIC MAINTENANCE SERVICES

### 14. Transmission Gear Oil

#### A: REPLACEMENT

##### 1. MANUAL TRANSMISSION

1) Drain the gear oil by removing drain plug.

NOTE:

- Before starting work, cool off the transmission gear oil well.
- If transmission gear oil adheres to the exhaust pipe, wipe it off completely.
- Drain the gear oil by removing drain plug using TORX® BIT T70. (5MT model)
- 5MT

- 6MT

- (A) Drain plug (Oil pan side)
- (B) Drain plug (Clutch housing side)

2) Replace the gasket with new one, and then tighten it to the specified torque.

**Tightening torque:**

**5MT (Aluminum gasket)**

**44 N·m (4.5 kgf·m, 32.5 ft·lb)**

**5MT (Copper gasket)**

**70 N·m (7.1 kgf·m, 51.6 ft·lb)**

**6MT (Oil pan side):**

**44 N·m (4.5 kgf·m, 32.5ft·lb)**

**6MT (Clutch housing side):**

**70 N·m (7.1 kgf·m, 51.6 ft·lb)**

3) Fill transmission gear oil through the oil level gauge hole up to the upper point of level gauge.

NOTE:

Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.

**Gear oil capacity:**

**5MT model**

**3.5 L (3.7 US qt, 3.1 Imp qt)**

**6MT model**

**4.1 L (4.3 US qt, 3.6 Imp qt)**

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

## 15.ATF

### A: INSPECTION

#### CAUTION:

The level of ATF varies with fluid temperature. Pay attention to the fluid temperature when checking ATF level.

1) Raise the ATF temperature by driving a distance of 5 to 10 km (3 to 6 miles). Otherwise, idle the engine to raise ATF temperature to 70 — 80°C (158 — 176°F) on Subaru Select Monitor. <Ref. to 4AT(D)(diag)-13, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

2) Make sure the vehicle is level.

3) After selecting all positions (P, R, N, D, 3, 2, 1), set the select lever in “P” range. Measure the ATF level with the engine idling for one or two minutes.

- (A) Level gauge
- (B) Hot side
- (C) Upper level
- (D) Lower level
- (E) Cold side

4) Make sure that ATF level is between the upper and lower marks of “HOT” side.

#### CAUTION:

- Use care not to exceed the upper limit level.
- Remember that the addition of ATF to the upper limit mark when the transmission is cold will result in overfilling of ATF, causing a transmission failure.

5) Check ATF level after raising ATF temperature to 70 — 80°C (158 — 176°F) by running the vehicle or by idling the engine again.

6) Check the ATF for leaks.

Check for leaks in the transmission. If there are leaks, it is necessary to repair or replace gasket, oil seals, plugs or other parts.

### B: REPLACEMENT

#### 1. AUTOMATIC TRANSMISSION FLUID

1) Drain the ATF (Automatic Transmission Fluid) by removing drain plug.

#### NOTE:

- Before starting work, cool off the ATF well.
- If ATF adheres to the exhaust pipe, wipe it off completely.

- (A) Oil pan
- (B) Drain plug (ATF)

2) Replace the gasket with a new one, and then tighten the specified torque.

#### Tightening torque:

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

3) Fill ATF up to the middle of the “COLD” side on level gauge by using the gauge hole.

#### Recommended fluid:

**<Ref. to RM-4, FLUID, RECOMMENDED MATERIALS, Recommended Materials.>**

#### Fluid capacity:

**Fill the same amount drained from ATF drain plug hole.**

4) Check the ATF level. <Ref. to PM-25, INSPECTION, ATF.>

- (A) Level gauge
- (B) Hot side
- (C) Upper level
- (D) Lower level
- (E) Cold side

## 2. ATF FILTER

### NOTE:

ATF filter is a maintenance free part. ATF filter needs replacement, when it has physically damaged or ATF leaked.

For the replacement procedures of the ATF filter:  
<Ref. to 4AT-63, ATF Filter.>

## 16. Front and Rear Differential Gear Oil

### A: REPLACEMENT

#### 1. FRONT DIFFERENTIAL (MT MODEL)

For MT vehicle, differential oil works as manual transmission oil to lubricate differential. Refer to "Transmission Oil". <Ref. to PM-24, Transmission Gear Oil.>

#### 2. FRONT DIFFERENTIAL (AT MODEL)

1) Drain the differential gear oil by removing drain plug using TORX® BIT T70.

**NOTE:**

- Before starting work, cool off the differential gear oil well.
- If front differential gear oil adheres to the exhaust pipe, wipe it off completely.

2) Replace the gasket with a new one, and then tighten the drain plug to specified torque.

**Tightening torque:**

**44 N·m (4.5 kgf·m, 32.5 ft·lb) (Aluminum gasket)**

**70 N·m (7.1 kgf·m, 51.6 ft·lb) (Copper gasket)**

3) Fill differential gear oil through the oil level gauge hole up to the upper point of level gauge.

**NOTE:**

Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.

**Differential gear oil capacity:**

**1.1 — 1.3 ℓ (1.2 — 1.4 US qt, 1.0 — 1.1 Imp qt)**

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

#### 3. REAR DIFFERENTIAL

- 1) Drain the oil by removing drain plug.
- 2) Remove the filler plug or rear differential oil temperature switch for quick draining oil.
- 3) Install the drain plug after draining oil.

**NOTE:**

Apply liquid gasket to the drain plug threads.

**Liquid gasket:**

**Three Bond 1105 (Part No. 004403010)**

**Tightening torque:**

**49.0 N·m (5.0 kgf·m, 36.2 ft·lb)**

4) After installing the drain plug onto rear differential gear case firmly, fill oil up fully to the mouth of filler plug.

**CAUTION:**

**Mechanical LSD oil must be used for STI model.**

**Recommended gear oil:**

**Except STI model**

**GL-5 (75W-90) or equivalent**

**STI model**

**Gear oil LSD (Part No. K0305Y0900), GL-5 (90) or equivalent**

- (A) Filler plug
- (B) Drain plug

## Front and Rear Differential Gear Oil

### PERIODIC MAINTENANCE SERVICES

---

#### **Oil capacity:**

##### **Except for STI model:**

**0.8 ℓ (0.8 US qt, 0.7 Imp qt)**

##### **STI model:**

**1.0 ℓ (1.1 US qt, 0.9 Imp qt)**

#### **NOTE:**

Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.

5) Install the filler plug or rear differential oil temperature switch onto rear differential gear case firmly.

#### **NOTE:**

Apply liquid gasket to the filler plug or rear differential oil temperature switch threads.

#### **Liquid gasket:**

**Three Bond 1105 (Part No. 004403010)**

#### **Tightening torque:**

**49.0 N·m (5.0 kgf-m, 36.2 ft-lb)**

## 17. Brake Line

### A: INSPECTION

#### 1. BRAKE LINE

- 1) Check scratches, swelling, corrosion, traces of fluid leakage on the brake hoses or pipe joints.
- 2) Check the possibility of adjacent parts interfering with brake pipes/hoses during driving, and loose connections/clamps.
- 3) Check any trace of fluid leakage, scratches, etc. on the master cylinder, wheel cylinder and pressure control valve.

**NOTE:**

- When the brake fluid level in the reservoir tank is lower than the specified limit, the brake fluid warning light on the combination meter will come on.
- Visually check the brake hose (using a mirror where it is difficult to see) for any damage.

- (1) Front brake hose
- (2) Front brake pipe

- (1) Rear brake pipe
- (2) Rear brake hose
- (3) Clamp

#### 2. SERVICE BRAKE

- 1) Check the free play of brake pedal with a force of less than 10 N (1 kgf, 2 lbf).

**Brake pedal free play:**

**0.5 — 2.0 mm (0.02 — 0.08 in)**

(A) Brake pedal free play

- 2) If the free play is out of specifications above, adjust the brake pedal as follows:

(1) Be sure the engine is off. (No vacuum is applied to brake booster.)

(2) There should be play between brake booster clevis and pin at brake pedal installing portion.

[Depress brake pedal pad with a force of less than 10 N (1 kgf, 2 lbf) to a stroke of 0.5 to 2.0 mm (0.02 to 0.08 in).]

(3) Depress the surface of brake pad by hand.

(4) If there is no free play between clevis pin and clevis, turn the brake switch adjusting nut until the clearance between stopper and screw of brake switch becomes 0.3 mm (0.012 in).

- (A) Brake switch
- (B) Adjusting nut
- (C) 0.3 mm (0.012 in)
- (D) Stopper
- (E) Clevis pin
- (F) Clevis
- (G) Brake pedal free play
- (H) Lock nut
- (I) Brake booster operating rod
- (J) Play at pin

# Brake Line

## PERIODIC MAINTENANCE SERVICES

### 3) Check the pedal stroke.

While the engine is idling, depress the brake pedal with a 490 N (50 kgf, 110 lbf) load and measure the distance between brake pedal and steering wheel. With the brake pedal released, measure the distance between pedal and steering wheel again. The difference between the two measurements must be less than specified value. If the distance is more than specified, there is possibility of air inside the hydraulic unit.

#### **Brake pedal reserve distance A:**

##### **Turbo AT model**

**105 mm (4.13 in) / 490 N (50 kgf, 110 lbf) or less**

##### **Except turbo AT model**

**90 mm (3.54 in) / 490 N (50 kgf, 110 lbf) or less**

- (A) Steering wheel
- (B) Toe board

4) Check to see if air is in the hydraulic brake line by the feel of pedal operation. If air appears to exist in the line, bleed it from the system.

5) Check for even operation of all brakes, using a brake tester or by driving the vehicle for a short distance on a straight road.

### 3. BRAKE SERVO SYSTEM

1) With the engine off, depress the brake pedal several times applying the same pedal force: Make sure the travel distance should not change.

2) With the brake pedal depressed, start the engine: Make sure the pedal should move slightly toward the floor.

3) With the brake pedal depressed, stop the engine and keep the pedal depressed for 30 seconds: Make sure the pedal height should not change.

4) Check valve is built into the vacuum hose. Disconnect the vacuum hose to inspect function of check valve.

Blow air into the vacuum hose from its brake booster side end: Air must flow out of engine side end of hose. Next blow air into the hose from engine side: Air should not flow out of hose.

Replace both check valve and vacuum hose if the check valve is faulty. Engine side of vacuum hose is indicated by marking "ENG" as shown.

- (A) Engine side
- (B) Brake booster side
- (C) ENG

5) Check the vacuum hose for cracks or other damage.

#### **NOTE:**

When installing the vacuum hose on the engine and brake booster, do not use soapy water or lubricating oil on their connections.

6) Check vacuum hose to make sure it is tight and secure.

## 18.Brake Fluid

### A: REPLACEMENT

#### CAUTION:

- Do not allow brake fluid to come in contact with vehicle body; wash away with water and wipe off completely if spilled.
- Avoid mixing different brands of brake fluid to prevent degrading the quality of fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.

#### NOTE:

- During the operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
  - The brake pedal operating must be very slow.
  - For convenience and safety, two people should do the work.
  - The amount of brake fluid required is approximately 500 m ℓ (16.9 US fl oz, 17.6 Imp fl oz) for total brake system.
  - If brake fluid adheres to the exhaust pipe, wipe it off completely.
- 1) Either jack-up the vehicle to place a rigid racks under it, or lift-up the vehicle.
  - 2) Remove both the front and rear wheels.
  - 3) Drain brake fluid from the reservoir tank.
  - 4) Refill the reservoir tank with recommended brake fluid.

#### **Recommended brake fluid:**

**Refer to the specification. <Ref. to BR-2, SPECIFICATION, General Description.>**

Perform the same procedure as bleeding operation of brake line until the new brake fluid coming out from vinyl tube. <Ref. to BR-47, PROCEDURE, Air Bleeding.>

#### NOTE:

Perform the brake fluid replacement in order from the farthest wheel cylinder from master cylinder.

# Disc Brake Pads and Discs

## PERIODIC MAINTENANCE SERVICES

### 19. Disc Brake Pads and Discs

#### A: INSPECTION

##### 1. DISC BRAKE PAD AND DISC

- 1) Jack-up the vehicle and support with rigid racks. Then remove the wheels.
- 2) Visually check the pad thickness through inspection hole of disc brake assembly. Replace the pad if necessary.

#### NOTE:

When replacing a pad, always replace the pads for both the right and left wheels at the same time. Also replace the pad clips if they are twisted or worn.

(A) Inspection hole

- Front (except back metal)

| Pad thickness |         | mm (in) |       |
|---------------|---------|---------|-------|
| Standard      | 15 inch | 11      | 0.43  |
|               | 16 inch | 10      | 0.393 |
|               | 17 inch | 9.2     | 0.362 |
| Service limit | 15 inch | 1.5     | 0.059 |
|               | 16 inch | 1.5     | 0.059 |
|               | 17 inch | 1.2     | 0.047 |

- Rear (except back metal)

| Pad thickness |         | mm (in) |       |
|---------------|---------|---------|-------|
| Standard      | 14 inch | 9       | 0.354 |
|               | 15 inch | 11.5    | 0.452 |
|               | 17 inch | 9       | 0.354 |
| Service limit | 14 inch | 1.5     | 0.059 |
|               | 15 inch | 1.5     | 0.059 |
|               | 17 inch | 1.2     | 0.047 |

- (1) Thickness of pad
- (2) Back metal
- (3) Lining

- 3) Check the disc rotor, and correct or replace if it is damaged or worn.

- Front

| Disc rotor thickness |             | mm (in) |      |
|----------------------|-------------|---------|------|
| Standard             | 15, 16 inch | 24      | 0.94 |
|                      | 17 inch     | 30      | 1.18 |
| Service limit        | 15, 16 inch | 22      | 0.87 |
|                      | 17 inch     | 28      | 1.10 |

- Rear

| Disc rotor thickness |         | mm (in) |       |
|----------------------|---------|---------|-------|
| Standard             | 14 inch | 10      | 0.39  |
|                      | 15 inch | 18      | 0.71  |
|                      | 17 inch | 20      | 0.79  |
| Service limit        | 14 inch | 8.5     | 0.335 |
|                      | 15 inch | 16      | 0.63  |
|                      | 17 inch | 18      | 0.71  |

- 4) Remove the caliper body. <Ref. to BR-23, Front Disc Brake Assembly.>, <Ref. to BR-34, Rear Disc Brake Assembly.>

- 5) Tighten the wheel nuts to secure disk rotor.

- 6) Set a dial gauge at a point less than 10 mm (0.39 in) from outer periphery of rotor, and then measure the disk rotor runout.

#### Disc rotor runout limit:

**Front: 0.075 mm (0.0030 in)**

**Rear: 0.070 mm (0.0028 in)**

## 20. Parking Brake

### A: INSPECTION

Inspect the brake linings and drums of both sides of the rear brake at the same time by removing brake drums.

1) Inspect the brake shoes for damage or deformation and check brake linings for wear.

**NOTE:**

Always replace both primary and secondary brake shoes for the right and left wheels at the same time.

**Brake lining thickness (except back metal):**

**Standard value:**

**3.2 mm (0.126 in)**

**Wear limit:**

**1.5 mm (0.059 in)**

- (A) Forward
- (B) Brake shoe (Primary side)
- (C) Brake shoe (Secondary side)

2) Check the disk rotor for wear, dents or other damage. If the inside surface of disk rotor is streaked, correct the surface with emery cloth (#200 or more). If it is unevenly worn or tapered, correct or replace it.

**Brake drum inside diameter:**

**Except for STI model**

**Standard value:**

**170 mm (6.69 in)**

**Wear limit:**

**171 mm (6.73 in)**

**STI model**

**Standard value:**

**190 mm (7.48 in)**

**Wear limit:**

**191 mm (7.52 in)**

- (A) Inside diameter
- (B) Disk

3) If the deformation or wear of back plate, shoe, etc. is noticeable, replace them.

4) When the shoe return spring tension is excessively weakened, replace it.

### B: ADJUSTMENT

For rear disc brake, adjust the parking brake after bleeding air.

1) Remove the rear cover (rubber) installed at back plate.

2) Turn the adjuster toward arrow mark (upward) until it is locked slightly, by using a flat tip screwdriver as shown in illustration.

- (A) Adjuster
- (B) Cover (rubber)
- (C) Back plate

3) Turn back (downward) the adjuster 3 to 4 notches.

4) Install the cover (rubber) at original position correctly.

## 21. Suspension

### A: INSPECTION

#### 1. SUSPENSION BALL JOINT

- 1) Jack-up the vehicle until front wheels are off ground.
- 2) Next, grasp the bottom of tire and move it in and out. If relative movement (B) is observed between the brake disc cover (A) and end of transverse link (D), ball joint (C) may be excessively worn.

- 3) Next, grasp the end of transverse link and move it up and down. Relative movement (A) between the housing (D) and transverse link (C) boss indicates ball joint (B) may be excessively worn.

- 4) If relative movement is observed in the immediately preceding two steps, remove and inspect the ball joint. If free play exceeds standard, replace the ball joint. <Ref. to FS-17, Front Ball Joint.>

#### 5) Damage of dust seal

Visually inspect the ball joint dust seal. If it is damaged, remove the transverse link. <Ref. to FS-14, Front Transverse Link.> And measure free play of ball joint. <Ref. to FS-17, Front Ball Joint.>

- (1) When looseness exceeds standard value, replace the ball joint.
- (2) If the dust seal is damaged, replace with the new ball joint.

#### NOTE:

When the transverse link ball joint has been removed or replaced, check the toe-in of front wheel. If the front wheel toe-in is not at specified value, adjust the toe-in. <Ref. to FS-6, Wheel Alignment.>

(A) Dust seal

#### 2. TRANSVERSE LINK'S REAR BUSHING

Check oil leaks at around liquid-filled bushing. If oil leaks, replace the bushing.

(A) Rear bushing  
(B) Transverse link

#### 3. WHEEL ARCH HEIGHT

- 1) Unload cargoes and set the vehicle in curb weight (empty) condition.
- 2) Then, check the wheel arch height of front and rear suspensions to ensure that they are within specified values. <Ref. to FS-6, Wheel Alignment.>
- 3) When the wheel arch height is out of standard, visually inspect the following components and replace deformed parts.

- Suspension components [Front strut assembly and rear shock absorber assembly]
  - Parts connecting between suspension and body.
- 4) When no components are deformed, adjust the wheel arch height by replacing coil spring in the suspension which wheel arch height is out of standard. <Ref. to FS-6, Wheel Alignment.> <Ref. to RS-7, Wheel Alignment.>

## 4. WHEEL ALIGNMENT OF FRONT SUSPENSION

1) Check the alignment of front suspension to ensure that following items conform to standard values.

- Toe-in
- Camber angle
- Caster angle
- Steering angle

<Ref. to FS-6, Wheel Alignment.>

2) When the caster angle does not conform to reference, visually inspect the following components and replace deformed parts.

- Suspension components [Strut assembly, crossmember, transverse link, etc.]
- Body parts to which suspensions are installed.

3) When the toe-in and camber are out of standard value, adjust them so that they conform to respective service value.

4) When the right-and-left turning angles of tire are out of standard, adjust to standard value.

## 5. WHEEL ALIGNMENT OF REAR SUSPENSION

1) Check the alignment of rear suspension to ensure that following items are within standard values.

- Toe-in
- Camber angle
- Thrust angle

<Ref. to RS-7, Wheel Alignment.>

2) When the camber angle does not conform to reference, visually inspect parts listed below. If deformation is observed, replace the damaged parts.

- Suspension components [Shock absorber, link F, link R, link UPR, arm R, sub frame, etc.]
- Body parts to which suspensions are installed.

3) When the toe-in and thrust angle are out of standard value, adjust them so that they conform to respective service value.

## 6. OIL LEAKAGE OF STRUT

Visually inspect the front strut and rear strut for oil leakage as instructed. Replace front strut and rear strut if oil leaks excessively.

## 7. TIGHTNESS OF BOLTS AND NUTS

Check the bolts and nuts shown in the figure for looseness. Retighten the bolts and nuts to specified torque. If the self-lock nuts and bolts are removed, replace them with new ones.

Front suspension: <Ref. to FS-2, General Description.>

Rear suspension: <Ref. to RS-2, General Description.>

## 8. DAMAGE TO SUSPENSION PARTS

Check the following parts and the fastening portion of the vehicle body for deformation or excessive rusting which impairs the suspension. If necessary, replace the damaged parts with new ones. If minor rust formation, pitting, etc. are noted, remove the rust and apply remedial anti-corrosion measures.

- Front suspension
  - Transverse link
  - Crossmember
  - Strut
- Rear suspension
  - Crossmember
  - Lateral links
  - Trailing link
  - Strut

• In the district where salt is sprayed to melt snow on a road in winter, check suspension parts for damage caused by rust every 12 months after lapse of 60 months. Take rust prevention measure as required.

# Wheel Bearing

## 22. Wheel Bearing

### A: INSPECTION

#### 1. FRONT WHEEL BEARING

**NOTE:**

Inspect the condition of front wheel bearing grease.

- 1) Jack-up the front of vehicle.
- 2) While holding the front wheel by hand, swing it in and out to check bearing free play.
- 3) Loosen the wheel nuts and remove front wheel.
- 4) If bearing free play exists in step 2) above, attach a dial gauge to the hub and measure axial displacement in axial direction.

**Service limit:**

***Straight-ahead position within 0.05 mm (0.0020 in)***

- 5) Remove the bolts and self-locking nuts, and extract transverse link from front crossmember.
- 6) Remove the PTJ or DOJ of front drive shaft from transmission. <Ref. to DS-19, Front Axle.>
- 7) While supporting the front drive shaft horizontally with one hand, turn the hub with the other to check for noise or binding.

- Except STI model

If the hub is noisy or binds, disassemble the front axle and replace oil seal or bearings.

- (A) Inner oil seal
- (B) Snap ring
- (C) Bearing
- (D) Housing
- (E) Outer oil seal
- (F) Hub bolt
- (G) Hub

- STI model

If the hub is noisy or binds, replace the front hub unit bearing.

#### 2. REAR WHEEL BEARING

- 1) Jack-up the rear of vehicle.
- 2) While holding the rear wheel by hand, swing it in and out to check bearing free play.
- 3) Loosen the wheel nuts and remove rear wheel.
- 4) If the bearing free play exists in step 2) above, attach a dial gauge to the hub COMPL and measure axial displacement in axial direction.

**Service limit:**

***Straight-ahead position within 0.05 mm (0.0020 in)***

- 5) Remove the DOJ of rear drive shaft from rear differential. <Ref. to DS-41, Rear Drive Shaft.>
- 6) While supporting the rear drive shaft horizontally with one hand, turn the hub COMPL with the other to check for noise or binding.

If the hub COMPL is noisy or binds, disassemble the rear axle and replace the oil seals or bearings.

- (A) Inner oil seal
- (B) Rear housing
- (C) Bearing
- (D) Snap ring
- (E) Outer oil seal
- (F) Tone wheel
- (G) Hub bolt
- (H) Hub
- (I) Socket bolt

## 23. Axle Boots and Joints

### A: INSPECTION

#### 1. FRONT AND REAR AXLE BOOTS

Inspect the front axle boots (A) and rear axle boots (B) for deformation, damage or failure. If faulty, replace them with new ones. <Ref. to DS-33, Front Drive Shaft.> <Ref. to DS-41, Rear Drive Shaft.>

#### 2. PROPELLER SHAFT

Inspect the propeller shaft for damage or failure. If faulty, replace with a new one. <Ref. to DS-16, Propeller Shaft.>

## 24. Tire Rotation

### A: INSPECTION

1) If the tread depth is less than 1.6 mm (0.063 in) or if the wear indicator appears across the tread, replace the tire. (It is recommended to replace both left and right tires as a set.)

2) If abnormal uneven wear is found on the tire, adjust the wheel alignment.

3) Also, tire rotations should be done by interchanging front and rear tires as shown to ensure even wear of the tires.

- (A) New tread
- (B) Worn tread
- (C) Tread wear indicator

## 25. Steering System (Power Steering)

### A: INSPECTION

#### 1. STEERING WHEEL

- 1) Set the steering wheel in a straight-ahead position, and check the wheel spokes to make sure they are correctly set in their specified positions.
- 2) Lightly turn the steering wheel to the right and left to determine the point where front wheels start to move.

Measure the distance of the movement of steering wheel at the outer periphery of wheel.

**Steering wheel free play:**  
**0 — 17 mm (0 — 0.67 in)**

(1) Steering wheel free play

Move the steering wheel vertically toward the shaft to ascertain if there is play in the direction.

**Maximum permissible play:**  
**0.5 mm (0.020 in)**

- 3) Drive the vehicle and check the following items during operation.

(1) Steering force:

The effort required for steering should be smooth and even at all points, and should not vary.

(2) Pull to one side:

Steering wheel should not be pulled to either side while driving on a level surface.

(3) Wheel runout:

Steering wheel should not be runout.

(4) Return factor:

Steering wheel should return to its original position after it has been turned and then released.

#### 2. STEERING SHAFT JOINT

When the steering wheel free play is excessive, disconnect the universal joint of steering shaft and check it for any play and yawing torque (at the point of the crossing direction). Also inspect for any damage to sealing or worn serrations. If the joint is loose, retighten the mounting bolts to the specified torque.

**Tightening torque:**  
**24 N·m (2.4 kgf-m, 17.4 ft-lb)**

#### 3. GEARBOX

• Non-turbo model

- 1) With vehicle placed on a level surface, turn the steering wheel 90° in both the right and left directions.

While the steering wheel is being rotated, reach under the vehicle and check for looseness in gearbox.

**Tightening torque:**  
**60 N·m (6.1 kgf-m, 44.3 ft-lb)**

(A) Boot

(B) Gear box mounting bolt

- 2) Check the boot for damage, cracks or deterioration.

- 3) With the vehicle on a level surface, quickly turn the steering wheel to the right and left.

While the steering wheel is being rotated, check the gear backlash. If any unusual noise is noticed, adjust the gear backlash in the following manner.

# Steering System (Power Steering)

## PERIODIC MAINTENANCE SERVICES

- (1) Tighten the adjusting screw to 7.4 N·m (0.75 kgf·m, 5.4 ft·lb) and then loosen. Repeat this operation twice.
- (2) Retighten the adjusting screw to 7.4 N·m (0.75 kgf·m, 5.4 ft·lb) and back off 25°.
- (3) Apply liquid packing to at least 1/3 of entire perimeter of adjusting screw thread.

(A) Apply liquid packing to at least 1/3 of entire perimeter

- (4) Install the lock nut. While holding the adjusting screw with a wrench, tighten the lock nut using ST.

ST 926230000 SPANNER

### **Tightening torque (Lock nut):**

**40 N·m (4.1 kgf·m, 29.5 ft·lb)**

Hold the adjusting screw with a wrench to prevent it from turning, while tightening the lock nut.

### • Turbo model & STI model

- 1) With vehicle placed on a level surface, turn the steering wheel 90° in both the right and left directions. While the steering wheel is being rotated, reach under the vehicle and check for looseness in gearbox.

### **Tightening torque:**

**60 N·m (6.1 kgf·m, 44.3 ft·lb)**

(A) Boot  
(B) Gear box mounting bolt

- 2) Check the boot for damage, cracks or deterioration.

- 3) With the vehicle on a level surface, quickly turn the steering wheel to the right and left. While the steering wheel is being rotated, check the gear backlash. If any unusual noise is noticed, adjust the gear backlash in the following manner.

- (1) Tighten the adjusting screw to 9.8 N·m (1.0 kgf·m, 7.2 ft·lb) and then loosen.
- (2) Retighten the adjusting screw to 4.8 N·m (0.49 kgf·m, 3.5 ft·lb) and then loosen.
- (3) Retighten the adjusting screw to 4.8 N·m (0.49 kgf·m, 3.5 ft·lb) and back off 37°.
- (4) Apply liquid packing to at least 1/3 of entire perimeter of adjusting screw thread.

(A) Apply liquid packing to at least 1/3 of entire perimeter

- (5) Install the lock nut. While holding the adjusting screw with a wrench, tighten the lock nut using ST.

ST 926230000 SPANNER

### **Tightening torque (Lock nut):**

**40 N·m (4.1 kgf·m, 29.5 ft·lb)**

Hold the adjusting screw with a wrench to prevent it from turning, while tightening the lock nut.

## 4. TIE-ROD

- 1) Check the tie-rod and tie-rod ends for bends, scratches or other damage.

(A) Tie-rod end  
(B) Knuckle arm

2) Check the connections of knuckle ball joints for play, inspect for damage on dust seals, and check free play of ball studs. If the castle nut is loose, retighten it to the specified torque, then tighten further up to 60° until the cotter pin hole is aligned.

**Tightening torque:**

**27 N·m (2.75 kgf·m, 19.9 ft·lb)**

3) Check the lock nut on tie-rod end for tightness. If it is loose, retighten it to the specified torque.

**Tightening torque:**

**83 N·m (8.5 kgf·m, 61.5 ft·lb)**

## 5. POWER STEERING FLUID LEVEL

**NOTE:**

- Check at power steering fluid temperature 20°C (68°F); read the fluid level on the “COLD” side.
- Check at power steering fluid temperature 80°C (176°F); read the fluid level on the “HOT” side.

1) Place the vehicle with engine “OFF” on a flat and level surface.

2) Check the fluid level using the scale on the outside of reservoir tank (A). If the level is below “MIN” (B), add fluid to bring it up to “MAX” (C).

**NOTE:**

- If the fluid level is at MAX level or above, drain fluid to keep the level in specified range of indicator by using a syringe or the like.
- If power steering fluid adheres to the exhaust pipe, wipe it off completely.

**Recommended fluid:**

**Dexron III**

**Fluid capacity:**

**0.7 ℓ (0.7 US qt, 0.6 Imp qt)**

## 6. POWER STEERING FLUID FOR LEAKS

Inspect the underside of oil pump and gearbox for power steering system, hoses, piping and their couplings for fluid leaks.

If fluid leaks are found, correct them by retightening their fitting bolts (or nuts) and/or replacing their parts.

**NOTE:**

- Wipe the leakage fluid off after correcting fluid leaks, or a wrong diagnosis is taken later.
- Also pay attention to clearances between hoses (or pipings) and other parts when inspecting fluid leaks.

## 7. HOSES OF OIL PUMP FOR DAMAGES

Check the pressure hose and return hose of oil pump for crack, swell or damage. Replace the hose with a new one if necessary.

**NOTE:**

Prevent the hoses from revolving and/or turning when installing hoses.

## 8. POWER STEERING PIPES FOR DAMAGE

Check the power steering pipes for corrosion and damage.

Replace the pipes with a new one if necessary.

## 9. GEARBOX BOOTS

Inspect both sides of gearbox boots as follows, and correct the defects if necessary.

- 1) (A) and (B) positions of gearbox boot are fitted correspondingly in (A) and (B) grooves of gearbox and the rod (C).
- 2) Clips are fitted outside of (A) and (B) positions of boot.
- 3) Boot does not have crack and hole.

**NOTE:**

Rotate (B) the position of gearbox boot against twist of it produced by adjustment of toe-in, etc.

## Steering System (Power Steering)

PERIODIC MAINTENANCE SERVICES

---

### 10.FITTING BOLTS AND NUTS

Inspect the fitting bolts and nuts of oil pump and bracket for looseness, and retighten them if necessary.

Inspect and/or retighten them when engine is cold.

## 26. Supplemental Restraint System

### A: INSPECTION

Check the airbag system in accordance with the result of the self-diagnosis. <Ref. to AB(diag)-2, Basic Diagnostic Procedure.>

1) Ensure that airbag connectors are connected. If not, properly connect. When the ignition switch is turned ON with the connector(s) disconnected, the airbag warning light blinks to identify the fault.

2) When the warning light turns on, check the airbag system in accordance with the troubleshooting procedure. <Ref. to AB(diag)-2, Basic Diagnostic Procedure.>

**ENGINE SECTION 1**

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

# General Description

FUEL INJECTION (FUEL SYSTEMS)

## C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.

- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

## D: PREPARATION TOOL

| ILLUSTRATION  | TOOL NUMBER | DESCRIPTION       | REMARKS  |
|---|-------------|-------------------|--|
| <br><br>ST42099AE000 | 42099AE000  | CONNECTOR REMOVER | Used for removing quick connector in engine compartment. |

## 2. Throttle Body

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake chamber. <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 3) Disconnect the connectors from the throttle position sensor and manifold absolute pressure sensor.
- 4) Disconnect the engine coolant hoses from throttle body.
- 5) Remove the bolts which secure throttle body to intake manifold.

- (A) Throttle position sensor
- (B) Manifold absolute pressure sensor
- (C) Engine coolant hose

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

**Tightening torque:**

**8 N·m (0.8 kgf-m, 5.8 ft-lb)**

## 3. Intake Manifold

### A: REMOVAL

1) Release the fuel pressure. <Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Disconnect the ground cable from battery.

3) Open the fuel filler flap lid, and remove the fuel filler cap.

4) Remove the air intake duct, air cleaner case and air intake chamber. <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.> <Ref. to IN(H4SO)-5, REMOVAL, Air Cleaner Case.> <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>

5) Remove the generator. <Ref. to SC(H4SO)-14, REMOVAL, Generator.>

6) Remove the power steering pump and reservoir tank from bracket.

(1) Remove the bolts which hold power steering pipes onto the protector.

#### NOTE:

Do not disconnect the power steering hose.

(2) Remove the bolts which install power steering pump bracket.

(3) Disconnect the connector (A) from the power steering pump switch.

(4) Remove the reservoir tank from the bracket by pulling it upwards.

(5) Place the power steering pump on the right side wheel apron.

7) Disconnect the spark plug cords from spark plugs by pulling the plug cap. (Do not pull the cord.)

8) Disconnect the engine coolant hoses (A) from throttle body.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

9) Disconnect the brake booster hose (A).

10) Disconnect the PCV hose (A) from intake manifold.

11) Disconnect the engine harness connectors (B) from bulkhead harness connectors.

12) Disconnect the connectors from engine coolant temperature sensor.

13) Disconnect the knock sensor connector.

14) Disconnect the connector from crankshaft position sensor.

15) Disconnect the connector from oil pressure switch (A).

16) Disconnect the connector from camshaft position sensor.

17) Remove the EGR pipe from intake manifold.

18) Disconnect the fuel hoses from fuel pipes.

(1) Separate the quick connectors of fuel delivery line and return line by pushing the ST to the direction of arrow.

ST 42099AE00 CONNECTOR REMOVER

(2) Remove the clip, and separate the evaporation hose from pipe.

**WARNING:**

- Be careful not to spill fuel.
- Catch the fuel from hoses using a container or cloth.

(A) Fuel delivery hose  
(B) Evaporation hose

**NOTE:**

If hoses are damaged, replace them with new ones.

(A) Fuel delivery hose  
(B) Evaporation hose

19) Remove the bolts which secure intake manifold to cylinder head.

20) Remove the intake manifold.

**B: INSTALLATION**

1) Install the intake manifold onto cylinder heads.

**NOTE:**

Use a new gasket.

**Tightening torque:**

**25 N-m (2.5 kgf-m, 18.1 ft-lb)**

2) Connect the fuel hoses and evaporation hose to fuel pipe.

3) Install the EGR pipe to intake manifold.

**Tightening torque:**

**34 N-m (3.4 kgf-m, 24.6 ft-lb)**

4) Connect the connector to camshaft position sensor.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

5) Connect the connector to oil pressure switch (A).

6) Connect the connector to crankshaft position sensor.

7) Connect the knock sensor connector.

8) Connect the connectors to engine coolant temperature sensor.

9) Connect the PCV hose (A) to intake manifold.

10) Connect the engine harness connectors (B) to bulkhead harness connectors.

11) Connect the brake booster hose (A).

12) Connect the engine coolant hoses (A) to throttle body.

13) Connect the spark plug cords to spark plugs.

14) Install the power steering pump and reservoir tank to bracket.

(1) Install the reservoir tank to bracket.

- (2) Connect the connector (A) to the power steering pump switch.

- (3) Tighten the bolts which install power steering pump bracket.

**Tightening torque:**  
**22 N·m (2.2 kgf·m, 15.9 ft·lb)**

- (4) Install the power steering pipes onto the right side intake manifold protector.

**Tightening torque:**  
**13 N·m (1.3 kgf·m, 9.4 ft·lb)**

- 15) Install the generator. <Ref. to SC(H4SO)-14, INSTALLATION, Generator.>

- 16) Install the air intake duct, air cleaner case and air intake chamber. <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.> <Ref. to IN(H4SO)-5, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO)-6, INSTALLATION, Air Intake Chamber.>

- 17) Connect the connector to fuel pump relay.  
 18) Connect the battery ground cable to battery.

## C: DISASSEMBLY

- 1) Disconnect the engine ground terminal from intake manifold.

- 2) Remove the ignition coil and ignitor assembly. <Ref. to IG(H4SO)-7, REMOVAL, Ignition Coil and Ignitor Assembly.>

- 3) Remove the throttle body. <Ref. to FU(H4SO)-12, REMOVAL, Throttle Body.>

- 4) Remove the EGR valve. <Ref. to FU(H4SO)-29, REMOVAL, EGR Valve.>

- 5) Remove the PCV pipe.

- 6) Remove the fuel pipe protector LH.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

7) Remove the fuel pipe protector RH.

8) Disconnect the connectors (A) from fuel injector.  
9) Remove the harness band (B) which holds engine harness to fuel injector pipe.

10) Remove the purge control solenoid valve.  
<Ref. to EC(H4SO)-7, REMOVAL, Purge Control Solenoid Valve.>

11) Remove the harness band clips which install the engine harness.

12) Remove the bolts which hold the engine harness to intake manifold.

13) Remove the engine harness from intake manifold.

14) Remove the bolts which secure fuel injector pipe on the intake manifold as shown in the figure.

• RH side

• LH side

15) Remove the fuel injectors from fuel injector pipe.

16) Disconnect the quick connector which holds the fuel injector pipe RH to fuel pipe.

# Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

17) Disconnect the quick connector which holds the fuel injector pipe LH to fuel pipe.

NOTE:  
Connect the quick connector securely.

18) Remove the fuel injector pipes RH and LH.  
19) Remove the bolt which installs the fuel pipe assembly on intake manifold.

3) Connect the fuel injector pipe RH to fuel pipe.

NOTE:  
Connect the quick connector securely.

20) Remove the fuel pipe assembly from intake manifold.

## D: ASSEMBLY

NOTE:  
When assembling the nipple, apply liquid gasket.

**Liquid gasket:**  
**THREE BOND 1105 (Part No. 004403010)**

1) Tighten the bolt which installs the fuel pipe assembly on intake manifold.

**Tightening torque:**  
**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

4) Install the fuel injectors.  
5) Tighten the bolts which install fuel injector pipe on intake manifold.  
• RH side

**Tightening torque:**  
**19 N·m (1.9 kgf-m, 13.7 ft-lb)**

2) Connect the fuel injector pipe LH to fuel pipe.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

- LH side

**Tightening torque:**

**19 N·m (1.9 kgf-m, 13.7 ft-lb)**

**Tightening torque:**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

- 6) Install the engine harness onto intake manifold.
- 7) Tighten the bolts which install engine harness on intake manifold.

**Tightening torque:**

**19 N·m (1.9 kgf-m, 13.7 ft-lb)**

- 8) Hold the engine harness by harness band clips.

- 9) Install the purge control solenoid valve. <Ref. to EC(H4SO)-7, INSTALLATION, Purge Control Solenoid Valve.>

- 10) Connect the connectors (A) to fuel injector.

- 11) Hold the engine harness to fuel injector pipe by harness band (B).

- 12) Install the fuel pipe protector RH.

**Tightening torque:**

**19 N·m (1.9 kgf-m, 13.7 ft-lb)**

- 13) Install the fuel pipe protector LH.

**Tightening torque:**

**19 N·m (1.9 kgf·m, 13.7 ft·lb)**

**E: INSPECTION**

Make sure the fuel pipe and fuel hoses are not damaged and the connections are tightened firmly.

14) Install the PCV pipe.

- (1) Connect the hoses (A) and (B) to intake manifold.
- (2) Tighten the bolts (C) — (E) in alphabetical sequence.

**Tightening torque:**

**6.4 N·m (0.65 kgf·m, 4.7 ft·lb)**

15) Install the EGR valve. <Ref. to FU(H4SO)-29, INSTALLATION, EGR Valve.>

16) Install the throttle body to intake manifold. <Ref. to FU(H4SO)-12, INSTALLATION, Throttle Body.>

17) Install the ignition coil & ignitor ASSY. <Ref. to IG(H4SO)-7, INSTALLATION, Ignition Coil and Ignitor Assembly.>

18) Install the engine ground terminal to intake manifold.

**Tightening torque:**

**19 N·m (1.9 kgf·m, 13.7 ft·lb)**

# Engine Coolant Temperature Sensor

FUEL INJECTION (FUEL SYSTEMS)

---

## 4. Engine Coolant Temperature Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the generator. <Ref. to SC(H4SO)-14, REMOVAL, Generator.>
- 3) Disconnect the connectors from engine coolant temperature sensor.

- 4) Remove the engine coolant temperature sensor.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

## 5. Crankshaft Position Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the generator. <Ref. to SC(H4SO)-14, REMOVAL, Generator.>
- 3) Remove the bolt which installs crankshaft position sensor to cylinder block.

- 4) Remove the crankshaft position sensor, and disconnect the connector from it.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

***T: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)***

# Camshaft Position Sensor

FUEL INJECTION (FUEL SYSTEMS)

## 6. Camshaft Position Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from camshaft position sensor.

- 3) Remove the bolt which installs camshaft position sensor to the support.

- 4) Remove the bolt which installs the camshaft position sensor support to camshaft cap LH.

- 5) Remove the camshaft position sensor and the support as a unit.

- 6) Remove the camshaft position sensor itself.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Camshaft position sensor support**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

**Camshaft position sensor**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

## 7. Knock Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake chamber. <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 3) Disconnect the knock sensor connector.

- 2) Connect the knock sensor connector.

- 3) Install the air intake chamber. <Ref. to IN(H4SO)-6, INSTALLATION, Air Intake Chamber.>
- 4) Connect the battery ground cable to battery.

- 4) Remove the knock sensor from cylinder block.

### B: INSTALLATION

- 1) Install the knock sensor to cylinder block.

#### NOTE:

Extraction area of knock sensor cord must be positioned at a 60° angle relative to the engine rear.

#### Tightening torque:

**24 N·m (2.4 kgf-m, 17.4 ft-lb)**

(A) Front side

### 8. Throttle Position Sensor

#### A: SPECIFICATION

Throttle body is a non-disassembled part, so do not remove the throttle position sensor from throttle body.

Refer to “Throttle Body” for removal and installation procedure. <Ref. to FU(H4SO)-12, REMOVAL, Throttle Body.> <Ref. to FU(H4SO)-12, INSTALLATION, Throttle Body.>

## 9. Manifold Absolute Pressure Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from manifold absolute pressure sensor.

- 3) Remove the manifold absolute pressure sensor from throttle body.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use new O-rings.

**Tightening torque:**

**2.0 N·m (0.20 kgf-m, 1.5 ft-lb)**

# Mass Air Flow and Intake Air Temperature Sensor

FUEL INJECTION (FUEL SYSTEMS)

---

## 10. Mass Air Flow and Intake Air Temperature Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from mass air flow and intake air temperature sensor.
- 3) Remove the mass air flow and intake air temperature sensor.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**1.0 N·m (0.10 kgf-m, 0.74 ft-lb)**

## 11.EGR Valve

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from EGR valve.

- 3) Remove the EGR valve from intake manifold.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

**Tightening torque:**

**19 N·m (1.9 kgf·m, 13.7 ft-lb)**

## 12. Fuel Injector

### A: REMOVAL

#### 1. RH SIDE

- 1) Release the fuel pressure.  
<Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.
- 3) Open the fuel filler flap lid, and remove the fuel filler cap.
- 4) Remove the air intake chamber and air cleaner case. <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.> <Ref. to IN(H4SO)-5, REMOVAL, Air Cleaner Case.>
- 5) Remove the power steering pump and tank.
  - (1) Remove the front side V-belt. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
  - (2) Remove the bolts which hold the power steering pipes onto the intake manifold protector RH.

**NOTE:**

Do not disconnect the power steering hose.

- (3) Remove the bolts which install the power steering pump to the bracket.

- (4) Disconnect the power steering pump switch connector (A).

- (5) Remove the reservoir tank from the bracket by pulling it upwards.

- (6) Place the power steering pump and tank on the right side wheel apron.

- 6) Remove the spark plug cords from spark plugs (#1 and #3 cylinders).
- 7) Remove the fuel pipe protector RH.

- 8) Disconnect the connector (A) from fuel injector.

# Fuel Injector

FUEL INJECTION (FUEL SYSTEMS)

9) Remove the harness band (B) which holds engine harness to fuel injector pipe.

7) Remove the harness band (B) which holds engine harness to fuel injector pipe.

10) Remove the bolts which hold fuel injector pipe onto intake manifold.

8) Remove the bolts which hold fuel injector pipe onto intake manifold.

11) Remove the fuel injector while lifting up the fuel injector pipe.

## 2. LH SIDE

1) Release the fuel pressure. <Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Remove the battery. <Ref. to SC(H4SO)-20, REMOVAL, Battery.>

3) Open the fuel filler flap lid, and remove the fuel filler cap.

4) Remove the spark plug cords from spark plugs (#2 and #4 cylinders).

5) Remove the fuel pipe protector LH.

9) Remove the fuel injector while lifting up the fuel injector pipe.

6) Disconnect the connector (A) from fuel injector.

# Fuel Injector

## FUEL INJECTION (FUEL SYSTEMS)

### B: INSTALLATION

#### 1. RH SIDE

Install in the reverse order of removal.

NOTE:

Use new O-rings.

- (A) O-ring
- (B) O-ring
- (C) Fuel injector
- (D) O-ring

**Tightening torque:**

**19 N·m (1.9 kgf-m, 13.7 ft-lb)**

**Tightening torque:**

**19 N·m (1.9 kgf-m, 13.7 ft-lb)**

#### 2. LH SIDE

Install in the reverse order of removal.

NOTE:

Use new O-rings.

- (A) O-ring
- (B) O-ring
- (C) Fuel injector
- (D) O-ring

**Tightening torque:**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

**Tightening torque:**

**19 N·m (1.9 kgf-m, 13.7 ft-lb)**

**Tightening torque:**  
**19 N·m (1.9 kgf-m, 13.7 ft-lb)**

FU-02325

# Variable Valve Lift Diagnosis Oil Pressure Switch

FUEL INJECTION (FUEL SYSTEMS)

## 13. Variable Valve Lift Diagnosis Oil Pressure Switch

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake chamber.  
<Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 3) Remove the engine harness connector from bracket.
- 4) Disconnect the connector from variable valve lift diagnosis oil pressure switch.
- 5) Remove the variable valve lift diagnosis oil pressure switch.

- LH side

- RH side

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Apply liquid gasket to the thread of variable valve lift diagnosis oil pressure switch.

**Liquid gasket:**

**THREE BOND 1324 (Part No. 004403042) or equivalent**

**Tightening torque:**

**17 N·m (1.7 kgf·m, 12.5 ft·lb)**

## 14. Oil Temperature Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake chamber.  
<Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 3) Remove the engine harness connector from bracket.
- 4) Disconnect the connector from oil temperature sensor.
- 5) Remove the oil temperature sensor.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**18 N·m (1.8 kgf·m, 13.3 ft·lb)**

# Front Oxygen (A/F) Sensor

FUEL INJECTION (FUEL SYSTEMS)

## 15. Front Oxygen (A/F) Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the front oxygen (A/F) sensor connector.

NOTE:

Remove the harness clip from bracket.

- (A) Front oxygen (A/F) sensor connector  
(B) Rear oxygen sensor connector

- 3) Lift up the vehicle.
- 4) Remove the under cover.
- 5) Apply spray type lubricant to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.
- 6) Remove the front oxygen (A/F) sensor.

**CAUTION:**

When removing the oxygen (A/F) sensor, wait until exhaust pipe cools, otherwise it will damage exhaust pipe.

- (A) Front oxygen (A/F) sensor  
(B) Rear oxygen sensor

### B: INSTALLATION

- 1) Before installing front oxygen (A/F) sensor, apply the anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

**Anti-seize compound:**

**NEVER-SEEZ NS-165 or equivalent**

**CAUTION:**

Never apply anti-seize compound to protector of front oxygen (A/F) sensor.

- 2) Install the front oxygen (A/F) sensor.

**Tightening torque:**

**21 N·m (2.1 kgf-m, 15.2 ft-lb)**

- (A) Front oxygen (A/F) sensor  
(B) Rear oxygen sensor

- 3) Install the under cover.
- 4) Lower the vehicle.
- 5) Connect the connector of front oxygen (A/F) sensor.

NOTE:

Install the harness clip to bracket.

- (A) Front oxygen (A/F) sensor connector  
(B) Rear oxygen sensor connector

- 6) Connect the battery ground cable to battery.

## 16.Rear Oxygen Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector of rear oxygen sensor.

**NOTE:**

Remove the harness clip from bracket.

- (A) Front oxygen (A/F) sensor connector
- (B) Rear oxygen sensor connector

- 3) Lift up the vehicle.
- 4) Remove the under cover.
- 5) Apply spray type lubricant to the threaded portion of rear oxygen sensor, and leave it for one minute or more.
- 6) Remove the rear oxygen sensor.

**CAUTION:**

**When removing the rear oxygen sensor, wait until the exhaust pipe cools, otherwise it will damage the exhaust pipe.**

- (A) Front oxygen (A/F) sensor
- (B) Rear oxygen sensor

### B: INSTALLATION

- 1) Before installing the rear oxygen (A/F) sensor, apply the anti-seize compound only to the threaded portion of the rear oxygen (A/F) sensor to make the next removal easier.

**CAUTION:**

**Never apply anti-seize compound to protector of rear oxygen sensor.**

**Anti-seize compound:**

**NEVER-SEEZ NS-165 or equivalent**

- 2) Install the rear oxygen sensor.

**Tightening torque:**

**21 N·m (2.1 kgf-m, 15.2 ft-lb)**

- (A) Front oxygen (A/F) sensor
- (B) Rear oxygen sensor

- 3) Install the under cover.
- 4) Lower the vehicle.
- 5) Connect the connector to the rear oxygen sensor.

**NOTE:**

Install the harness clip to bracket.

- (A) Front oxygen (A/F) sensor connector
- (B) Rear oxygen sensor connector

- 6) Connect the battery ground cable to battery.

# Engine Control Module (ECM)

FUEL INJECTION (FUEL SYSTEMS)

## 17.Engine Control Module (ECM)

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lower inner trim of passenger side.  
<Ref. to EI-51, REMOVAL, Lower Inner Trim.>
- 3) Detach the floor mat of front passenger seat.
- 4) Remove the protect cover.

- 5) Remove the nuts (A) which hold ECM to the bracket.
- 6) Remove the clip (B) from the bracket.

- 7) Disconnect the ECM connectors and take out the ECM.

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

- When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage to fuel injection system.
- When replacing the ECM, be careful not to damage the harnesses and connectors.

#### Tightening torque:

5 N·m (0.5 kgf·m, 3.7 ft·lb)

## 18.Main Relay

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the passenger's side front side sill cover.
- 3) Remove the bolt which holds the relay bracket on the body.
- 4) Disconnect the connectors from the main relay.

- 5) Remove the main relay from the mounting bracket.

### B: INSTALLATION

Install in the reverse order of removal.

## 19. Fuel Pump Relay

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the passenger's side front side sill cover.
- 3) Remove the bolt which holds relay bracket on the body.
- 4) Disconnect the connector from fuel pump relay.

- 5) Remove the fuel pump relay from the mounting bracket.

### B: INSTALLATION

Install in the reverse order of removal.

## 20. Electronic Throttle Control Relay

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the passenger's side front side sill cover.
- 3) Remove the bolt which holds relay bracket on the body.
- 4) Disconnect the connector from electronic throttle control relay.

- 5) Remove the electronic throttle control relay from the mounting bracket.

### B: INSTALLATION

Install in the reverse order of removal.

### 21. Fuel

#### A: PROCEDURE

##### 1. RELEASING OF FUEL PRESSURE

**WARNING:**

Place “NO FIRE” signs near the working area.

**CAUTION:**

Be careful not to spill the fuel.

- 1) Disconnect the connector from the fuel pump relay.

- 2) Start the engine and run it until it stalls.
- 3) After the engine stalls, crank it for five more seconds.
- 4) Turn the ignition switch to OFF.

##### 2. DRAINING FUEL

- Model with fuel drain plug

**WARNING:**

Place “NO FIRE” signs near the working area.

**CAUTION:**

Be careful not to spill the fuel.

- 1) Set the vehicle on a lift.
  - 2) Disconnect the ground cable from battery.
  - 3) Open the fuel filler flap lid, and then remove the fuel filler cap.
  - 4) Lift up the vehicle.
  - 5) Drain the fuel from the fuel tank.
- Set a container under the vehicle and remove the fuel drain plug from the fuel tank.

- 6) Tighten the fuel drain plug.

**NOTE:**

Use a new gasket.

**Tightening torque:**

26 N·m (2.65 kgf-m, 19.2 ft-lb)

- Model without fuel drain plug

**WARNING:**

Place “NO FIRE” signs near the working area.

**CAUTION:**

Be careful not to spill the fuel.

- 1) Release the fuel pressure. <Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.
- 3) Remove the fuel pump. <Ref. to FU(H4SO)-50, REMOVAL, Fuel Pump.>
- 4) Drain fuel from the fuel pump installing part using a pump etc.

**CAUTION:**

Use a pump resistant to gasoline.

- 5) Install the fuel pump. <Ref. to FU(H4SO)-50, INSTALLATION, Fuel Pump.>

## 22. Fuel Tank

### A: REMOVAL

**WARNING:**

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Set the vehicle on a lift.
- 2) Release the fuel pressure.  
<Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 3) Drain the fuel from the fuel tank.  
<Ref. to FU(H4SO)-42, DRAINING FUEL, PROCEDURE, Fuel.>
- 4) Remove the rear seat.
- 5) Disconnect the connector (A) of fuel tank cord to the rear harness.
- 6) Push the grommet (B) which holds the fuel tank cord on floor panel into under the body.

- 7) Remove the rear crossmember. <Ref. to RS-17, REMOVAL, Rear Crossmember.>
- 8) Remove the canister. <Ref. to EC(H4SO)-6, REMOVAL, Canister.>
- 9) Disconnect the connector from pressure control solenoid valve.

- 10) Loosen the clamp and disconnect the fuel filler hose (A) and evaporation hose (B) from the fuel filler pipe.

- 11) Move the clips, and disconnect the quick connector. <Ref. to FU(H4SO)-57, REMOVAL, Fuel Delivery & Evaporation Lines.>
- 12) Disconnect the fuel hoses.

- 13) Support the fuel tank with a transmission jack, remove the bolts from bands and dismount the fuel tank from the vehicle.

# Fuel Tank

## FUEL INJECTION (FUEL SYSTEMS)

### WARNING:

- An assistant is required to perform this work.
- Fuel may be left in the side, which has no drain plug, of the fuel tank. In this case, the tank is imbalanced between right and left sides. Be careful not to drop it when removing.

### B: INSTALLATION

- 1) Support the fuel tank with a transmission jack and push the fuel tank harness into the access hole with the grommet.
- 2) Set the fuel tank and temporarily tighten the bolts of fuel tank bands.

### WARNING:

An assistant is required to perform this work.

- 3) Insert the fuel filler hose (A) approx. 35 to 40 mm (1.38 to 1.57 in) over the lower end of fuel filler pipe, and tighten the clamp.
- 4) Insert the evaporation hose (B) to the lower end of evaporation pipe, and hold the clamp and clip.

### CAUTION:

Do not allow clips to touch hose (A) and rear suspension crossmember.

- 5) Connect the fuel hoses, and hold them with clips and quick connector. <Ref. to FU(H4SO)-57, REMOVAL, Fuel Delivery & Evaporation Lines.>

- 6) Connect the connector to the pressure control solenoid valve.
- 7) Install the canister. <Ref. to EC(H4SO)-6, INSTALLATION, Canister.>
- 8) Tighten the band mounting bolts.

### Tightening torque:

**33 N·m (3.4 kgf-m, 25 ft-lb)**

- 9) Install the rear crossmember. <Ref. to RS-17, INSTALLATION, Rear Crossmember.>

- 10) Connect the connectors (A) to the fuel tank cord and plug the service hole with grommet (B).

- 11) Set the rear seat and floor mat.
- 12) Connect the connector to the fuel pump relay.

### **C: INSPECTION**

- 1) Make sure there are no cracks, holes, or other damage on the fuel tank.
- 2) Make sure that the fuel hoses and fuel pipes are not cracked and the connections are tight.

# Fuel Filler Pipe

FUEL INJECTION (FUEL SYSTEMS)

## 23. Fuel Filler Pipe

### A: REMOVAL

#### WARNING:

- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Disconnect the ground cable from battery.
- 2) Open the fuel filler flap lid and remove the filler cap.
- 3) Remove the screws holding packing in place.

- 4) Lift up the vehicle.
- 5) Remove the rear right side wheel nuts.
- 6) Remove the rear right side wheel.

- 7) Drain the fuel from the fuel tank.  
<Ref. to FU(H4SO)-42, DRAINING FUEL, PROCEDURE, Fuel.>

- 8) Remove the fuel filler pipe protector.

- 9) Separate the evaporation hoses from the clip of fuel filler pipe.

- 10) Disconnect the evaporation hoses from fuel pipes.

- 11) Remove the bolts which hold the fuel filler pipe bracket on the body.

- 12) Loosen the clamp and separate the fuel filler hose (A) from the fuel filler pipe.

- 13) Move the clip and separate the evaporation hose (B).

- 14) Remove the fuel filler pipe to under side of the vehicle.

# Fuel Filler Pipe

FUEL INJECTION (FUEL SYSTEMS)

15) Remove the evaporation pipe together with clip from the body.

## B: INSTALLATION

- 1) Open the fuel filler flap lid.
- 2) Set the fuel saucer (A) with rubber packing (C) and insert the fuel filler pipe into hole from the inner side of apron.
- 3) Align the holes in fuel filler pipe neck and set the cup (B), and tighten the screws.

### NOTE:

If the edges of rubber packing are folded toward the inside, straighten it with a screwdriver.

4) Install the evaporation pipe.

5) Connect the evaporation hoses to fuel pipes.

6) Insert the fuel filler hose (A) approximately 35 to 40 mm (1.38 to 1.57 in) over the lower end of fuel filler pipe and tighten the clamp.

7) Insert the evaporation hose (B) approximately 25 to 30 mm (0.98 to 1.18 in) into the lower end of evaporation pipe and hold the clip.

### CAUTION:

**Do not allow clips to touch evaporation hose (B) and rear suspension crossmember.**

**$L = 27.5 \pm 2.5 \text{ mm (1.083 \pm 0.098 in)}$**

- (1) Hose
- (2) Clip
- (3) Pipe

8) Tighten the bolt which holds the fuel filler pipe bracket on the body.

# Fuel Filler Pipe

## FUEL INJECTION (FUEL SYSTEMS)

### Tightening torque:

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

9) Secure the evaporation hose to clip of fuel filler pipe.

10) Install the fuel filler pipe protector.

11) Install the rear right wheel.

12) Lower the vehicle.

13) Tighten the wheel nuts.

14) Connect the battery ground cable to battery.

### C: DISASSEMBLY

1) Move the clamp, and disconnect the evaporation hose from the joint pipe.

2) Remove the bolt which installs the joint pipe on the fuel filler pipe.

3) Disconnect the evaporation hose from the fuel filler pipe.

4) Remove the shut valve from the fuel filler pipe.  
<Ref. to EC(H4SO)-15, REMOVAL, Shut Valve.>

## D: ASSEMBLY

- 1) Install the shut valve on the fuel filler pipe. <Ref. to EC(H4SO)-15, INSTALLATION, Shut Valve.>
- 2) Connect the evaporation hose to the fuel filler pipe.

- 3) Connect the evaporation hose to the evaporation pipe.

- 4) Install the evaporation pipe to the fuel filler pipe.

# Fuel Pump

FUEL INJECTION (FUEL SYSTEMS)

## 24. Fuel Pump

### A: REMOVAL

#### WARNING:

Place "NO FIRE" signs near the working area.

#### CAUTION:

Be careful not to spill the fuel.

#### NOTE:

The fuel pump assembly consists of a fuel pump and a fuel level sensor.

- 1) Release the fuel pressure.  
<Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.
- 3) Open the fuel filler flap lid and remove the fuel filler cap.
- 4) Remove the luggage floor mat. <Ref. to EI-61, REMOVAL, Luggage Floor Mat.>
- 5) Remove the service hole cover.

- 6) Disconnect the connector from fuel pump.

- 7) Disconnect the quick connector and then disconnect the fuel delivery hose. <Ref. to FU(H4SO)-57, REMOVAL, Fuel Delivery & Evaporation Lines.>

- 8) Move the clip and then disconnect the jet pump hose (A).

- 9) Remove the nuts which install the fuel pump assembly onto the fuel tank.

- 10) Take off the fuel pump assembly from the fuel tank.

### B: INSTALLATION

Install in the reverse order of removal. Do the following:

#### NOTE:

Use a new gasket and retainer.

- (1) Ensure the sealing portion is free from fuel or foreign particles before installation.
- (2) Tighten the nuts in alphabetical sequence shown in figure to specified torque.

#### Tightening torque:

**4.4 N·m (0.45 kgf·m, 3.3 ft·lb)**

## C: INSPECTION

Connect the lead harness to the connector terminal of fuel pump and apply the battery power supply to check whether the pump operates.

### WARNING:

- Wipe off the fuel completely.
- Keep battery as far apart from fuel pump as possible.
- Be sure to turn the battery supply ON and OFF on the battery side.
- Do not run fuel pump for a long time under non-load condition.

## 25. Fuel Level Sensor

### A: REMOVAL

**WARNING:**

- Place “NO FIRE” signs near the working area.
- Be careful not to spill the fuel.

**NOTE:**

Fuel level sensor is built in fuel pump assembly.

- 1) Remove the fuel pump assembly.  
<Ref. to FU(H4SO)-50, REMOVAL, Fuel Pump.>
- 2) Disconnect the connector from the fuel pump bracket.

- 3) Remove the fuel temperature sensor (A).
- 4) Remove the bolt (B) which installs the fuel level sensor on mounting bracket.

### B: INSTALLATION

Install in the reverse order of removal.

## 26. Fuel Sub Level Sensor

### A: REMOVAL

**WARNING:**

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Disconnect the ground cable from battery.
- 2) Lift up the vehicle.
- 3) Drain the fuel from the fuel tank.  
<Ref. to FU(H4SO)-42, DRAINING FUEL, PROCEDURE, Fuel.>
- 4) Remove the luggage floor mat. <Ref. to EI-61, REMOVAL, Luggage Floor Mat.>
- 5) Remove the service hole cover.

- 6) Disconnect the connector from the fuel sub level sensor.
- 7) Disconnect the fuel jet pump hose.

- 8) Remove the bolts which install the fuel sub level sensor on the fuel tank.

- 9) Remove the fuel sub level sensor.

### B: INSTALLATION

Install in the reverse order of removal.

**NOTE:**

Use a new gasket.

- (1) Ensure the sealing portion is free from fuel or foreign particles before installation.
- (2) Tighten the nuts and bolts to specified torque in the order as shown in the figure.

**Tightening torque:**

**4.4 N·m (0.45 kgf·m, 3.3 ft·lb)**

# Fuel Filter

FUEL INJECTION (FUEL SYSTEMS)

## 27. Fuel Filter

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill the fuel.

#### NOTE:

Fuel filter is built into the fuel pump assembly.

1) Release the fuel pressure.

<Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Remove the fuel pump assembly. <Ref. to FU(H4SO)-50, REMOVAL, Fuel Pump.>

3) Remove the fuel pump. <Ref. to FU(H4SO)-50, REMOVAL, Fuel Pump.>

4) Separate the fuel filter from fuel pump.

- (A) Fuel filter
- (B) Fuel pump

5) Turn the filter holder around to the arrow direction, and then remove the filter.

### B: INSTALLATION

#### CAUTION:

- If fuel hoses are damaged at the connecting portion, replace them with new ones.
- If clamps are badly damaged, replace them with new ones.

Install in the reverse order of removal.

### C: INSPECTION

- 1) Check the inside of fuel filter for dirt and water sediment.
- 2) If it is clogged, or if replacement interval has been reached, replace it.

## 28. Fuel Cut Valve

### A: REMOVAL

- 1) Remove the fuel tank.  
<Ref. to FU(H4SO)-43, REMOVAL, Fuel Tank.>
- 2) Remove the protect cover.

- 3) Move the clip and disconnect the evaporation hose from fuel cut valve.

- 4) Remove the bolts which install the fuel cut valve.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

**Tightening torque:**

**4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

## 29. Fuel Damper Valve

### A: REMOVAL

- 1) Release the fuel pressure.  
<Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Remove the fuel damper valve from the fuel delivery line.

### WARNING:

- Be careful not to spill fuel.
- Catch the fuel from hoses using a container or cloth.

### B: INSTALLATION

Install in the reverse order of removal.

### *Tightening torque:*

***1.25 N·m (0.13 kgf-m, 0.94 ft-lb)***

## 30. Fuel Delivery & Evaporation Lines

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Release the fuel pressure. <Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 3) Open the fuel filler flap lid and remove the fuel filler cap.
- 4) Remove the floor mat. <Ref. to EI-60, REMOVAL, Floor Mat.>
- 5) Disconnect the fuel delivery pipes and hoses, and disconnect the evaporation pipes and hoses.

6) In engine compartment, detach the fuel delivery hoses and evaporation hose.

- (1) Separate the quick connectors of fuel delivery line by pushing the ST to the direction of arrow.

ST 42099AE000 CONNECTOR REMOVER

- (2) Remove the clip, and separate the evaporation hose from pipe.

#### WARNING:

- Be careful not to spill fuel.
- Catch the fuel from hoses using a container or cloth.

(A) Fuel delivery hose

(B) Evaporation hose

- 7) Lift up the vehicle.

# Fuel Delivery & Evaporation Lines

## FUEL INJECTION (FUEL SYSTEMS)

- 8) Disconnect the quick connector on fuel line.
- (1) Clean the pipe and connector, if they are covered with dust.
  - (2) To prevent from damaging or entering foreign matter, wrap the pipes and connectors with plastic bag, etc.

- (3) Hold the connector (A) and push retainer (B) down.
- (4) Pull out the connector (A) from retainer (B).

- (A) Connector
- (B) Retainer
- (C) Pipe

## B: INSTALLATION

- 1) Connect the quick connector on fuel line.

### CAUTION:

- Use a new retainer except for use of engine compartment.
- Make sure that the connected portion is not damaged or has dust. If necessary, clean seal surface of pipe.

- (A) Seal surface
- (B) Pipe

- (1) Set the new retainer (B) to connector (A).
- (2) Push the pipe into the connector completely.

### NOTE:

At this time, two clicking sounds are heard.

- (A) Connector
- (B) Retainer
- (C) Pipe

### CAUTION:

- Pull the connector to ensure it is connected securely.
- Ensure the two retainer pawls are engaged in their mating positions in the connector.

# Fuel Delivery & Evaporation Lines

FUEL INJECTION (FUEL SYSTEMS)

- Be sure to inspect hoses and their connections for any leakage of fuel.

- (A) Connector
- (B) Retainer
- (C) Pipe

2) Connect the fuel delivery hose by inserting it into the pipe for 20 to 25 mm (0.79 to 0.98 in) in length.  
 Type A: When the fitting length is specified.  
 Type B: When the fitting length is not specified.

$\varnothing : 2.5 \pm 1.5 \text{ mm } (0.098 \pm 0.059 \text{ in})$

$L : 22.5 \pm 2.5 \text{ mm } (0.886 \pm 0.098 \text{ in})$

**CAUTION:**

Be sure to inspect hoses and their connections for any leakage of fuel.

- (1) Type A
- (2) Type B
- (3) Pipe
- (4) Clamp
- (5) Hose

3) Connect the evaporation hose by inserting it into the pipe for 15 to 20 mm (0.59 to 0.79 in) in length.

$L = 17.5 \pm 2.5 \text{ mm } (0.689 \pm 0.098 \text{ in})$

- (1) Hose
- (2) Clip
- (3) Pipe

**C: INSPECTION**

- 1) Make sure that there are no cracks on the fuel pipes and fuel hoses.
- 2) Make sure that the fuel pipe and fuel hose connections are tight.

# Fuel System Trouble in General

FUEL INJECTION (FUEL SYSTEMS)

## 31. Fuel System Trouble in General

### A: INSPECTION

| Trouble and possible cause                     |  | Corrective action   |
|--|--|---|
| <b>1. Insufficient fuel supply to injector</b> |  |   |
| 1)   | Fuel pump does not operate.  |   |
|  | ○ Defective terminal contact.  | Inspect contact, especially ground, and tighten it securely.  |
|  | ○ Trouble in electromagnetic or electronic circuit parts.              | Replace the faulty parts.                                     |
| 2)   | Lowering of fuel pump function.  | Replace the fuel pump.  |
| 3)   | Clogged dust or water in the fuel filter.                              | Replace fuel filter, clean or replace fuel tank.              |
| 4)   | Clogged or bent fuel pipe or hose.                                     | Clean, correct or replace the fuel pipe or hose.              |
| 5)   | Air is mixed in the fuel system.                                       | Inspect or retighten each connection part.                    |
| 6)   | Clogged or bent air breather tube or pipe.                             | Clean, correct or replace air breather tube or pipe.          |
| 7)   | Damaged diaphragm of pressure regulator.                               | Replace.  |
| <b>2. Leakage or blow out of fuel</b>          |  |   |
| 1)   | Loosened joints of the fuel pipe.                                      | Retightening.   |
| 2)   | Cracked fuel pipe, hose and fuel tank.                                 | Replace.  |
| 3)   | Defective welding part on the fuel tank.                               | Replace.  |
| 4)   | Defective drain packing of the fuel tank.                              | Replace.  |
| 5)   | Clogged air breather tube or air vent tube.                            | Clean, correct or replace air breather tube or air vent tube. |
| <b>3. Gasoline smell inside of compartment</b> |  |   |
| 1)   | Loose joints at air breather tube, air vent tube and fuel filler pipe. | Retightening.   |
| 2)   | Defective packing air tightness on the fuel saucer.                    | Correct or replace the packing.                               |
| 3)   | Inoperative fuel pump modulator or circuit.                            | Replace.  |
| <b>4. Defective fuel meter indicator</b>       |  |   |
| 1)   | Defective operation of fuel level sensor.                              | Replace.  |
| 2)   | Defective operation of fuel meter.                                     | Replace.  |
| <b>5. Noise</b>                                |  |   |
| 1)   | Large operation noise or vibration of fuel pump.                       | Replace.  |

#### NOTE:

- When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. Fill fuel fully to prevent those problem. And also drain the water condensation from fuel filter.
- In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop below 0°C (32°F) throughout the winter season, use water removing agent in the fuel system to prevent freezing fuel system and accumulating water. Fill the water removing agent at the time when the fuel reduced at half to maintain the advantage.
- When water condensation is noticed in the fuel filter, drain the water from both the fuel filter and fuel tank or use water removing agent in the fuel tank.
- Before using a water removing agent, follow the cautions that noted on the bottle.

# General Description

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 1. General Description

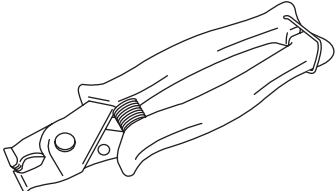

### A: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.

### B: PREPARATION TOOL

#### 1. SPECIAL TOOLS

- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

| ILLUSTRATION   | TOOL NUMBER | DESCRIPTION  | REMARKS  |
|--|-------------|--------------|--|
| <br>ST18353AA000 | 18353AA000  | CLAMP PLIERS | <ul style="list-style-type: none"><li>• Used for removing and installing PCV hose.</li><li>• This tool is a general tool that is made by CAILLAU in France. (Code: 54.0.000.205)<br/>Tool number is fixed as special tool in order to obtain it as easily as SUBARU genuine parts.</li></ul> |

# Front Catalytic Converter

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

## 2. Front Catalytic Converter

### A: REMOVAL

Front catalytic converter and front exhaust pipe are integrated into one unit; therefore, the removal procedure is the same as that for front exhaust pipe. <Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.>

### B: INSTALLATION

Front catalytic converter and front exhaust pipe are integrated into one unit; therefore, the installation procedure is the same as that for front exhaust pipe. <Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.>

### C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

## Rear Catalytic Converter

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### 3. Rear Catalytic Converter

#### A: REMOVAL

Rear catalytic converter and center exhaust pipe are integrated into one unit; therefore, the removal procedure is the same as that for front catalytic converter. <Ref. to EX(H4SO)-6, REMOVAL, Center Exhaust Pipe.>

#### B: INSTALLATION

Rear catalytic converter and center exhaust pipe are integrated into one unit; therefore, the installation procedure is the same as that for front catalytic converter. <Ref. to EX(H4SO)-6, INSTALLATION, Center Exhaust Pipe.>

#### C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

## **EGR Valve**

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### **4. EGR Valve**

#### **A: SPECIFICATION**

Refer to "EGR Valve" for removal and installation.

<Ref. to FU(H4SO)-29, EGR Valve.>

# Canister

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 5. Canister

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift up the vehicle.
- 3) Disconnect connector (A) from drain valve.
- 4) Disconnect evaporation hoses (B) and (C) from canister.

- 5) Disconnect quick connector (A) from canister.
- 6) Disconnect drain hoses (B) from canister.

- 7) Remove the canister from vehicle.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Replace the retainer of quick connector with new one.

#### Tightening torque:

**23 N·m (2.3 kgf-m, 17 ft-lb)**

### C: INSPECTION

Make sure the canister and canister hoses are not cracked or loose.

# Purge Control Solenoid Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 6. Purge Control Solenoid Valve

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector and hoses of purge control solenoid valve, and then remove the purge control solenoid valve.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**19 N·m (1.9 kgf-m, 14.0 ft-lb)**

#### NOTE:

Connect the evaporation hose as shown in the figure.

(A) To intake manifold

(B) To fuel pipe (Evaporation line)

### C: INSPECTION

Make sure the hoses are not cracked or loose.

## Fuel Level Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### 7. Fuel Level Sensor

#### A: REMOVAL

For removal procedure, refer to "FU" section. <Ref. to FU(H4SO)-52, REMOVAL, Fuel Level Sensor.>

#### B: INSTALLATION

For installation procedure, refer to "FU" section. <Ref. to FU(H4SO)-52, INSTALLATION, Fuel Level Sensor.>

## 8. Fuel Temperature Sensor

### A: REMOVAL

Fuel temperature sensor and fuel level sensor are integrated into one unit; therefore, the removal procedure is the same as that for fuel level sensor. <Ref. to FU(H4SO)-52, REMOVAL, Fuel Level Sensor.>

### B: INSTALLATION

Fuel temperature sensor and fuel level sensor are integrated into one unit; therefore, the installation procedure is the same as that for fuel level sensor. <Ref. to FU(H4SO)-52, INSTALLATION, Fuel Level Sensor.>

## Fuel Sub Level Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### 9. Fuel Sub Level Sensor

#### A: REMOVAL

For removal procedure, refer to "FU" section. <Ref. to FU(H4SO)-53, REMOVAL, Fuel Sub Level Sensor.>

#### B: INSTALLATION

For installation procedure, refer to "FU" section. <Ref. to FU(H4SO)-53, INSTALLATION, Fuel Sub Level Sensor.>

# Fuel Tank Pressure Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 10. Fuel Tank Pressure Sensor

### A: REMOVAL

#### WARNING:

- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel.

- 1) Remove the fuel tank. <Ref. to FU(H4SO)-43, REMOVAL, Fuel Tank.>
- 2) Remove the protector cover.

- 3) Disconnect the connector from fuel tank pressure sensor.
- 4) Release the clips which hold the fuel pipes onto fuel tank.

- 5) Remove the nuts and bolts which install the fuel tank pressure sensor on bracket.

- 6) Disconnect the pressure hose from fuel tank pressure sensor.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**7.4 N·m (0.75 kgf·m, 5.4 ft·lb)**

#### Tightening torque:

**T: 4.4 N·m (0.45 kgf·m, 3.3 ft·lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

# Pressure Control Solenoid Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 11. Pressure Control Solenoid Valve

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Lift up the vehicle.
- 4) Remove the canister. <Ref. to EC(H4SO)-6, REMOVAL, Canister.>
- 5) Remove the bolt which installs the pressure control solenoid valve holding bracket on body.

- 6) Remove the pressure control solenoid valve with bracket.
- 7) Disconnect the connector from pressure control solenoid valve.

- 8) Disconnect the two evaporation hoses from pressure control solenoid valve.

- 9) Remove the pressure control solenoid valve from bracket.

- 10) Disconnect the pressure control valve hose from pressure control solenoid valve.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**  
**25 N·m (2.6 kgf·m, 18.8 ft·lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

## **Drain Filter**

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### **12.Drain Filter**

#### **A: SPECIFICATION**

Drain filter is built in the canister, and it is a part which cannot be disassembled.

# Vent Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 13. Vent Valve

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel.

- 1) Remove the fuel tank. <Ref. to FU(H4SO)-43, REMOVAL, Fuel Tank.>
- 2) Remove the protector cover.

- 3) Remove the clips, and disconnect the hoses from vent valve.

- 4) Remove the nuts, and then remove the vent valve.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Replace the gasket with a new one.

#### Tightening torque:

**T: 4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

(A) Gasket

#### Tightening torque:

**T: 4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

# Shut Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 14. Shut Valve

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel.

1) Remove the fuel filler pipe.

<Ref. to FU(H4SO)-46, REMOVAL, Fuel Filler Pipe.>

2) Disconnect the evaporation hoses from shut valve.

3) Remove the shut valve from fuel filler pipe.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**4.5 N·m (0.46 kgf-m, 3.3 ft-lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

## Drain Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### 15.Drain Valve

#### A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Disconnect the ground cable from battery.
- 3) Lift up the vehicle.
- 4) Remove the canister. <Ref. to EC(H4SO)-6, REMOVAL, Canister.>
- 5) Remove clip (A), and then remove drain valve (B) from canister.
- 6) Remove the filter from drain valve (B).

#### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

- Assemble the drain valve filter without any clearance.
- Make sure the packing in the groove before assembling drain valve to canister.
- Replace the clip with new one.

#### C: INSPECTION

- 1) Make sure that all hoses are installed securely.
- 2) Make sure that hoses are not cracked or loose.

## 16.PCV Hose Assembly

### A: REMOVAL

#### CAUTION:

Removal is not allowed except for the damage of PCV hose, diagnosis connector and PCV valve.

- 1) Remove the intake manifold. <Ref. to FU(H4DOTC)-14, REMOVAL, Intake Manifold.>
  - 2) Clip the protrusion of clamp after aligning the concave portion of ST with protrusion of clamp, and then unlock the lock.
  - 3) Remove the PCV hose assembly.
- ST 18353AA000 CLAMP PLIERS

### B: INSTALLATION

#### NOTE:

Replace the clamp with a new one.

- 1) Install the PCV hose assembly, and then lock the clamp with protrusion of clamp clipped by pliers.
- ST 18353AA000 CLAMP PLIERS

- 2) Install the intake manifold. <Ref. to FU(H4DOTC)-17, INSTALLATION, Intake Manifold.>

---

## B: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensor or units, be sure to disconnect the ground cable from battery.

# Air Cleaner Element

INTAKE (INDUCTION)

---

## 2. Air Cleaner Element

### A: REMOVAL

1) Remove the clip (B) above air cleaner case.

2) Remove the air cleaner element.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Fasten it with a clip after inserting the lower tab of case.

### C: INSPECTION

Replace it if excessively damaged or dirty.

## 3. Air Cleaner Case

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Loosen the clamp (A) which connects the air cleaner case and intake duct.
- 3) Remove the clips (B) of air cleaner case.
- 4) Disconnect the connector (C) of mass air flow and intake air temperature sensor.

- 5) Remove the intake duct and upper cover from air cleaner case.
- 6) Remove the air cleaner element.
- 7) Remove the bolts which install the air cleaner case to body.

- 8) Remove the air cleaner case.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**33 N·m (3.4 kgf·m, 24.6 ft·lb)**

### C: INSPECTION

Inspect for cracks and loose connections.

### 4. Air Intake Chamber

#### A: REMOVAL

- 1) Loosen the clamp (A) which connects the air intake chamber and throttle body.
- 2) Loosen the clamp (B) which connects the air intake chamber and intake duct.
- 3) Remove the bolts (C) which connects the air intake chamber to the stay.
- 4) Disconnect the connector (D).

- 5) Disconnect the two blow-by hoses, and then remove the air intake chamber.

#### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**Clamp (A), (B)**

**3 N·m (0.3 kgf-m, 2.1 ft-lb)**

**Bolt (C)**

**6.5 N·m (0.66 kgf-m, 4.8 ft-lb)**

#### C: INSPECTION

- 1) Inspect for cracks and loose connections.
- 2) Inspect that no foreign objects are mixed in air intake chamber.

## 5. Air Intake Duct

### A: REMOVAL

- 1) Remove the bolts which install the air intake duct on the front side of body.
- 2) Remove the air intake duct.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

***7.5 N·m (0.76 kgf-m, 5.5 ft-lb)***

### C: INSPECTION

- 1) Inspect for cracks and loose connections.
- 2) Inspect that no foreign objects are mixed in the air intake duct.

## 6. Resonator Chamber

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Remove the air intake duct.
- 3) Remove the air cleaner lower case. <Ref. to IN(H4SO)-5, REMOVAL, Air Cleaner Case.>
- 4) Remove the resonator chamber mounting nut on the right side of engine compartment.

- 5) Lift-up the vehicle, and then remove the front wheel RH.
- 6) Remove the front mud guard RH.
- 7) Remove the resonator chamber from inside front fender.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

### C: INSPECTION

- 1) Inspect for cracks and loose connections.
- 2) Inspect that no foreign objects are mixed in resonator chamber.

## 6. CRANKSHAFT AND PISTON

ME-02693

- |                              |                             |                                |
|------------------------------|-----------------------------|--------------------------------|
| (1) Flywheel (MT model)      | (8) Piston pin              | (15) Crankshaft bearing #1, #3 |
| (2) Reinforcement (AT model) | (9) Snap ring               | (16) Crankshaft bearing #2, #4 |
| (3) Drive plate (AT model)   | (10) Connecting rod         | (17) Crankshaft bearing #5     |
| (4) Top ring                 | (11) Connecting rod bearing |                                |
| (5) Second ring              | (12) Connecting rod cap     |                                |
| (6) Oil ring                 | (13) Crankshaft             |                                |
| (7) Piston                   | (14) Woodruff key           |                                |

**Tightening torque: N-m (kgf-m, ft-lb)**

**T1: 45 (4.6, 33.2)**

**T2: 72 (7.3, 52.8)**

**ME(H4SO)-12**

## 7. ENGINE MOUNTING

(1) Front cushion rubber

(2) Front engine mounting bracket

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 35 (3.6, 25.8)**

**T2: 42 (4.3, 31.0)**

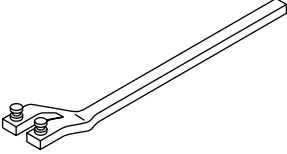

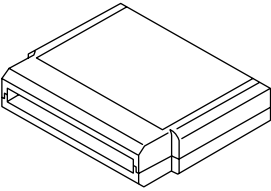

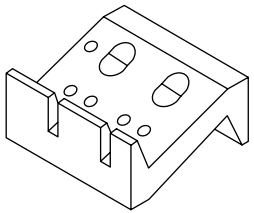

**T3: 85 (8.7, 63)**

### **C: CAUTION**

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- All parts should be thoroughly cleaned, paying special attention to the engine oil passages, pistons and bearings.
- Rotating parts and sliding parts such as piston, bearing and gear should be coated with oil prior to assembly.
- Be careful not to let oil, grease or coolant contact the timing belt, clutch disc and flywheel.
- All removed parts, if to be reused, should be re-installed in the original positions and directions.
- Bolts, nuts and washers should be replaced with new ones as required.
- Even if necessary inspections have been made in advance, proceed with assembly work while making rechecks.
- Remove or install the engine in an area where chain hoists, lifting devices, etc. are available for ready use.
- Be sure not to damage coated surfaces of body panels with tools, or not to stain seats and windows with coolant or oil. Place a cover over fenders, as required, for protection.
- Prior to starting work, prepare the following:  
Service tools, clean cloth, containers to catch coolant and oil, wire ropes, chain hoist, transmission jacks, etc.
- Lift-up or lower the vehicle when necessary. Make sure to support the correct positions.

## 2. GENERAL TOOL

| TOOL NAME                           | REMARKS                         |
|-------------------------------------|---------------------------------|
| Compression gauge                   | Used for measuring compression. |
| Tachometer (Secondary pick-up type) | Used for measuring idle speed.  |

## E: PROCEDURE

It is possible to conduct the following service procedures with engine on the vehicle, however, the procedures described in this section are based on the condition that the engine is removed from the vehicle.

- V-belt
- Timing belt
- Valve rocker assembly
- Camshaft
- Cylinder head

## 2. Compression

### A: INSPECTION

#### CAUTION:

**After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.**

- 1) After warming-up the engine, turn the ignition switch to OFF.
- 2) Make sure that the battery is fully charged.
- 3) Release the fuel pressure.  
<Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 4) Remove all the spark plugs. <Ref. to IG(H4SO)-4, REMOVAL, Spark Plug.>
- 5) Fully open the throttle valve.
- 6) Check the starter motor for satisfactory performance and operation.
- 7) Fix the compression gauge securely against the spark plug hole.

#### NOTE:

The screw of screw-in type compression gauge (put into cylinder head spark plug hole) should be less than 18 mm (0.71 in) long.

- 8) Crank the engine by means of the starter motor, and then read the maximum value on the gauge when the needle of gauge is steady.

- 9) Perform at least two measurements per cylinder, and make sure that the values are correct.

#### **Compression (350 rpm and fully open throttle):**

##### **Standard:**

**1,020 — 1,275 kPa (10.4 — 13.0 kgf/cm<sup>2</sup>,  
148 — 185 psi)**

##### **Difference between cylinders:**

**49 kPa (0.5 kgf/cm<sup>2</sup>, 7 psi) or less**

## 3. Idle Speed

### A: INSPECTION

1) Before checking the idle speed, check the following:

- (1) Ensure the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and hoses are connected properly.
- (2) Ensure the malfunction indicator light does not illuminate.

2) Idle the engine.

3) Stop the engine, and turn the ignition switch to OFF.

4) When using Subaru Select Monitor, refer to the following. <Ref. to ME(H4SO)-15, SPECIAL TOOL, PREPARATION TOOL, General Description.>

- (1) Insert the cartridge to the Subaru Select Monitor.
- (2) Connect the Subaru Select Monitor to data link connector.

(3) Turn the ignition switch to ON, and Subaru Select Monitor power switch to ON.

(4) Select {Each System Check} in the Main Menu.

(5) Select {Engine} in the Selection Menu.

(6) Select {Current Data Display & Save} in the Engine Control System Diagnosis.

(7) Select {Data Display} in the Data Display Menu.

(8) Start the engine, and read engine idle speed.

5) When using the tachometer (Secondary pick-up type):

- (1) Attach the pick-up clip to No. 1 cylinder spark plug cord.

(2) Start the engine, and read engine idle speed.

#### NOTE:

This ignition system provides simultaneous ignition for #1 and #2 plugs. It must be noted that some tachometers may register twice that of actual engine speed.

6) Check the idle speed when unloaded. (With headlights, heater fan, rear defroster, radiator fan, A/C, etc. OFF)

**Idle speed [No load and gears in "N" or "P" range]:**

**MT model**  
**650±100 rpm**

**AT model**  
**700±100 rpm**

7) Check the idle speed when loaded. (Turn the A/C switch to "ON" and operate the compressor for at least one minute before measurement.)

**Idle speed [A/C "ON" and gears in "N" or "P" range]:**

**850±100 rpm**

#### NOTE:

Idle speed cannot be adjusted manually, because the idle speed is automatically adjusted. If the idle speed is out of specifications, refer to General Diagnosis Table under "Engine Control System". <Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.>

## 4. Ignition Timing

### A: INSPECTION

#### CAUTION:

**After warming-up, engine becomes very hot. Be careful not to burn yourself at measurement.**

1) Before checking the ignition timing, check the following:

(1) Ensure the air cleaner element is free from clogging, spark plugs are in good condition, and that hoses are connected properly.

(2) Ensure the malfunction indicator light does not illuminate.

2) Idle the engine.

3) Stop the engine, and turn the ignition switch to OFF.

4) When using Subaru Select Monitor, refer to the following. <Ref. to ME(H4SO)-15, SPECIAL TOOL, PREPARATION TOOL, General Description.>

(1) Insert the cartridge to the Subaru Select Monitor.

(2) Connect the Subaru Select Monitor to data link connector.

(3) Turn the ignition switch to ON, and Subaru Select Monitor power switch to ON.

(4) Select {Each System Check} in the Main Menu.

(5) Select {Engine} in the Selection Menu.

(6) Select {Current Data Display & Save} in the Engine Control System Diagnosis.

(7) Select {Data Display} in the Data Display Menu.

(8) Start the engine, and read the ignition timing by idle speed.

#### **Ignition timing [BTDC/rpm]:**

##### **MT model**

**$10^{\circ} \pm 8^{\circ} / 650$**

##### **AT model**

**$15^{\circ} \pm 8^{\circ} / 700$**

If the timing is not correct, check the ignition control system. <Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.>

## 5. Intake Manifold Vacuum

### A: INSPECTION

- 1) Idle the engine.
- 2) Disconnect the brake vacuum hose from the intake manifold, and then install the vacuum gauge.
- 3) Keep the engine at the idle speed, and read the vacuum gauge indication.

By observing the gauge needle movement, the internal condition of the engine can be diagnosed as described below.

**Vacuum pressure (at idling, A/C “OFF”):**  
**Less than -60.0 kPa (-450 mmHg, -17.72 in-Hg)**

| Diagnosis of engine condition by measurement of intake manifold vacuum  |   |
|---|---|
| Vacuum gauge indication   | Possible engine condition   |
| 1. Needle is steady but lower than normal position. This tendency becomes more evident as engine temperature rises.                                     | Air leakage around intake manifold gasket, disconnection or damage of vacuum hose |
| 2. Needle intermittently drops to position lower than normal position.  | Leakage around cylinder   |
| 3. Needle drops suddenly and intermittently from normal position.   | Valve anchoring   |
| 4. When engine speed is gradually increased, needle begins to vibrate rapidly at certain speed, and then vibration increases as engine speed increases. | Weak or broken valve springs  |
| 5. Needle vibrates above and below normal position in narrow range.   | Defective ignition system   |

## 6. Engine Oil Pressure

### A: INSPECTION

- 1) Disconnect the ground cable from battery.
- 2) Remove the generator from bracket.  
<Ref. to SC(H4SO)-14, REMOVAL, Generator.>
- 3) Disconnect the connector from oil pressure switch.
- 4) Remove the pressure switch from cylinder block.  
<Ref. to LU(H4SO)-18, REMOVAL, Oil Pressure Switch.>
- 5) Connect the oil pressure gauge hose to cylinder block.
- 6) Connect the battery ground cable to battery.
- 7) Start the engine, and measure oil pressure.

#### **Oil pressure:**

##### **Standard**

**98 kPa (1.0 kgf/cm<sup>2</sup>, 14 psi) or more at 600 rpm**

**294 kPa (3.0 kgf/cm<sup>2</sup>, 43 psi) or more at 5,000 rpm**

##### **CAUTION:**

- If the oil pressure is out of specification, check oil pump, oil filter and lubrication line. <Ref. to LU(H4SO)-20, INSPECTION, Engine Lubrication System Trouble in General.>
- If the oil pressure warning light is turned to ON but oil pressure is within specification, replace the oil pressure switch. <Ref. to LU(H4SO)-20, INSPECTION, Engine Lubrication System Trouble in General.>

##### **NOTE:**

The specified value is based on an engine oil temperature of 80°C (176°F).

- 8) After measuring the oil pressure, install the oil pressure switch. <Ref. to LU(H4SO)-18, INSTALLATION, Oil Pressure Switch.>

##### **Tightening torque:**

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

## 7. Fuel Pressure

### A: INSPECTION

**WARNING:**

**Before removing the fuel pressure gauge, release fuel pressure.**

- 1) Release the fuel pressure.  
<Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the fuel delivery hose from fuel damper, and connect a fuel pressure gauge.

- 3) Connect the connector of fuel pump relay.

- 4) Start the engine.
- 5) After warming-up the engine, measure the fuel pressure.

**Fuel pressure:**

**Standard:**

**339.5 — 360.5 kPa (3.5 — 3.7 kgf/cm<sup>2</sup>, 49 — 52 psi)**

**NOTE:**

The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kgf/cm<sup>2</sup>, 1 to 3 psi) higher than standard values during high-altitude operations.

# Valve Clearance

MECHANICAL

## 8. Valve Clearance

### A: INSPECTION

#### CAUTION:

Inspection and adjustment of valve clearance should be performed while engine is cold.

- 1) Set the vehicle on a lift.
- 2) Lift-up the vehicle.
- 3) Remove the under cover.
- 4) Lower the vehicle.
- 5) Disconnect the ground cable from battery.
- 6) Remove the timing belt cover (LH).

- 7) Remove the fuel injector.  
<Ref. to FU(H4SO)-30, REMOVAL, Fuel Injector.>
- 8) When inspecting #1 and #3 cylinders:
  - (1) Disconnect the spark plug cords from spark plugs RH side. <Ref. to IG(H4SO)-4, RH SIDE, REMOVAL, Spark Plug.>
  - (2) Disconnect the PCV hose from rocker cover (RH).
  - (3) Remove the bolts, then remove the rocker cover (RH).
- 9) When inspecting #2 and #4 cylinders:
  - (1) Disconnect the spark plug cords from spark plugs (LH Side). <Ref. to IG(H4SO)-4, LH SIDE, REMOVAL, Spark Plug.>
  - (2) Disconnect the PCV hose from rocker cover (LH).
  - (3) Remove the bolts, then remove the rocker cover (LH).
- 10) Set #1 cylinder piston to top dead center of compression stroke by rotating the crank pulley clockwise using the socket wrench.

#### NOTE:

When the arrow mark (A) on cam sprocket (LH) comes exactly to the top, #1 cylinder piston is brought to the top dead center of compression stroke.

- 11) Measure #1 cylinder valve clearance using thickness gauge.

#### CAUTION:

- Insert the thickness gauge (A) in as horizontally as possible with respect to the valve stem end face.
- Measure the exhaust valve clearances while lifting-up the vehicle.

#### Valve clearance (Standard):

##### Intake:

$0.20 \pm 0.04$  mm (0.0079 ± 0.0016 in)

##### Exhaust:

$0.25 \pm 0.04$  mm (0.0098 ± 0.0016 in)

- 12) If necessary, adjust the valve clearance. <Ref. to ME(H4SO)-31, ADJUSTMENT, Valve Clearance.>

- 13) Measure the valve clearance in #3, #2 and #4 cylinder in the same measurement procedure as #1 cylinder.

#### NOTE:

- Be sure to set the cylinder pistons to their respective top dead centers on compression stroke before measuring valve clearances.

- By rotating the crank pulley clockwise every 180° from the state that #1 cylinder piston is on the top dead center of compression stroke, #3, #2 and #4 cylinder pistons come to the top dead center of compression stroke in this order.

14) After inspection, install the related parts in the reverse order of removal.

## B: ADJUSTMENT

### CAUTION:

**Adjustment of valve clearance should be performed while engine is cold.**

1) Set #1 cylinder piston to top dead center of compression stroke by rotating the crank pulley clockwise using the socket wrench.

### NOTE:

When the arrow mark (A) on cam sprocket (LH) comes exactly to the top, #1 cylinder piston is brought to the top dead center of compression stroke.

2) Adjust the #1 cylinder valve clearance.

- (1) Loosen the valve rocker nut and screw.
- (2) Place a suitable thickness gauge.
- (3) While noting the valve clearance, tighten the valve rocker adjusting screw.
- (4) When the specified valve clearance is obtained, tighten the valve rocker nut.

### Tightening torque:

**9.75 N·m (1.0 kgf·m, 7.2 ft·lb)**

### CAUTION:

- Insert the thickness gauge in as horizontally as possible with respect to the valve stem end face.
- Adjust the exhaust valve clearances while lifting-up the vehicle.

### Valve clearance

#### Intake:

**0.20±0.04 mm (0.0079±0.0016 in)**

#### Exhaust:

**0.25±0.04 mm (0.0098±0.0016 in)**

3) Adjust the valve clearance in #3, #2 and #4 cylinder in the same adjustment procedure as #1 cylinder.

### NOTE:

- Be sure to set the cylinder pistons to their respective top dead centers on compression stroke before adjusting valve clearances.
  - By rotating the crank pulley clockwise every 180° from the state that #1 cylinder piston is on the top dead center of compression stroke, #3, #2 and #4 cylinder pistons come to the top dead center of compression stroke in this order.
- 4) Ensure the valve clearances of each cylinder are within specifications. If necessary, readjust the valve clearances.

## 9. Engine Assembly

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Open the front hood fully and support with the front food stay.
- 3) Collect the refrigerant from A/C system. <Ref. to AC-20, PROCEDURE, Refrigerant Recovery Procedure.>
- 4) Release the fuel pressure.  
<Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 5) Disconnect the ground cable from battery.
- 6) Open the fuel filler flap lid and remove the fuel filler cap.
- 7) Remove the air intake duct, air cleaner case and air intake chamber.  
<Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>  
<Ref. to IN(H4SO)-5, REMOVAL, Air Cleaner Case.> <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 8) Remove the under cover.
- 9) Remove the radiator from vehicle. <Ref. to CO(H4SO)-23, REMOVAL, Radiator.>
- 10) Disconnect the A/C pressure hoses from A/C compressor.
- 11) Remove the air intake chamber stay.

- 12) Disconnect the following connectors and cables.

- (1) Front oxygen (A/F) sensor connector
- (2) Rear oxygen sensor connector

- (A) Front oxygen (A/F) sensor connector  
(B) Rear oxygen sensor connector

- (3) Engine ground cable

- (4) Engine harness connectors

- (5) Generator connector and terminal

- (A) Terminal  
(B) Generator connector

- (6) A/C compressor connectors

(7) Power steering switch connector

13) Disconnect the following hoses.

(1) Brake booster vacuum hose

(2) Heater inlet and outlet hoses

14) Remove the power steering pump from bracket.

(1) Loosen the lock bolt and slider bolt, and then remove the front side V-belt. <Ref. to ME(H4SO)-40, FRONT SIDE BELT, REMOVAL, V-belt.>

(2) Remove the pipe with bracket.

(3) Remove the bolts which install the power steering pump to bracket.

(4) Remove the power steering tank from bracket by pulling it upward.

(5) Move the power steering pump to the right side wheel apron to prevent it from falling.

NOTE:

Use a shop cloth not to scratch.

15) Remove the front and center exhaust pipe. <Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.>

# Engine Assembly

## MECHANICAL

16) Remove the nuts which hold lower side of transmission to engine.

17) Remove the nuts which install front cushion rubber onto front crossmember.

18) Remove the housing cover mounting bolts.

19) Separate the torque converter clutch from drive plate. (AT model)

- (1) Lower the vehicle.
- (2) Remove the service hole plug.
- (3) Remove the bolts which hold torque converter clutch to drive plate.
- (4) Remove all the bolts by rotating them in the direction of engine rotation little by little using a socket wrench.

20) Remove the pitching stopper.

21) Disconnect the fuel delivery hose (A) and evaporation hose (B). <Ref. to FU(H4SO)-57, REMOVAL, Fuel Delivery & Evaporation Lines.>

### CAUTION:

- Catch fuel from the hose into container.
- Disconnect the hose with its end wrapped with cloth to prevent fuel from splashing.

ST 42099AE000 CONNECTOR REMOVER

(A) Fuel delivery hose

(B) Evaporation hose

22) Support the engine with a lifting device and wire ropes.

23) Support the transmission with a garage jack.

**CAUTION:**

Doing this is very important because the transmission lowers for its own weight. This work is also of great importance for facilitating reinstallation.

- (A) Transmission
- (B) Garage jack

**CAUTION:**

Before removing the engine away from transmission, check to be sure no work has been overlooked.

24) Separation of engine and transmission.

- (1) Remove the starter. <Ref. to SC(H4SO)-8, REMOVAL, Starter.>
- (2) Remove the bolts which hold upper side of transmission to engine.

25) Set the ST to converter case. (AT model)  
ST 498277200 STOPPER SET

26) Remove the engine from vehicle.

- (1) Slightly raise the engine.
- (2) Raise the transmission with garage jack.

(3) Move the engine horizontally until main shaft is withdrawn from clutch cover.

(4) Slowly move the engine away from engine compartment.

**NOTE:**

Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

27) Remove the front cushion rubbers.

**B: INSTALLATION**

1) Install the front cushion rubbers.

**Tightening torque:**

**35 N·m (3.6 kgf-m, 25.8 ft-lb)**

2) Position the engine in engine compartment and align it with transmission.

**NOTE:**

Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

3) Apply a small amount of grease to splines of main shaft. (MT model)

4) Tighten the bolts which hold upper side of transmission to engine.

**Tightening torque:**

**50 N·m (5.1 kgf-m, 36.9 ft-lb)**

5) Remove the lifting device and wire ropes.

6) Remove the garage jack.

7) Install the pitching stopper.

# Engine Assembly

MECHANICAL

## Tightening torque:

**T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)**

**T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)**

8) Remove the ST from converter case. (AT model)

### NOTE:

Be careful not to drop the ST into the converter case when removing the ST.

ST 498277200 STOPPER SET

9) Install the starter. <Ref. to SC(H4SO)-8, INSTALLATION, Starter.>

10) Install the torque converter clutch to drive plate. (AT model)

(1) Tighten the bolts which hold torque converter clutch to drive plate.

(2) Tighten all the bolts by rotating them in the direction of engine rotation little by little using a socket wrench.

### CAUTION:

Be careful not to drop bolts into the torque converter clutch housing.

## Tightening torque:

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

(3) Clog the service hole plug and prevent foreign matters from being mixed.

11) Install the power steering pump on bracket.

(1) Install the power steering tank to bracket.

(2) Install the power steering pump on bracket, and tighten the bolts.

## Tightening torque:

**22 N·m (2.2 kgf-m, 16 ft-lb)**

(3) Install the pipe with their bracket.

(4) Connect the power steering switch connector.

(5) Install the front side belt and adjust it. <Ref. to ME(H4SO)-40, FRONT SIDE BELT, INSTALLATION, V-belt.>

- 12) Lift-up the vehicle.
- 13) Tighten the nuts which hold lower side of transmission to engine.

**Tightening torque:**

**50 N·m (5.1 kgf·m, 36.9 ft·lb)**

- 14) Tighten the nuts which install the front cushion rubber onto crossmember.

**Tightening torque:**

**85 N·m (8.7 kgf·m, 63 ft·lb)**

**NOTE:**

Make sure the front cushion rubber mounting bolts (A) and locator (B) are securely installed.

- 15) Install the front and center exhaust pipe. <Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.>

- 16) Lower the vehicle.

- 17) Connect the following hoses:

- (1) Fuel delivery hose and evaporation hose
- (2) Heater inlet and outlet hoses
- (3) Brake booster vacuum hose

- 18) Connect the following connectors:

- (1) Front oxygen (A/F) sensor connector
- (2) Rear oxygen sensor connector
- (3) Engine ground cable

**Tightening torque:**

**14 N·m (1.4 kgf·m, 10.1 ft·lb)**

- (4) Engine harness connectors
- (5) Generator connector and terminal
- (6) A/C compressor connector

- 19) Install the air intake chamber stay.

**Tightening torque:**

**16 N·m (1.6 kgf·m, 11.6 ft·lb)**

- 20) Tighten the engine ground cable.

**Tightening torque:**

**14 N·m (1.4 kgf·m, 10.1 ft·lb)**

- 21) Install the A/C pressure hoses. <Ref. to AC-36, INSTALLATION, Hose and Tube.>
- 22) Install the radiator to vehicle. <Ref. to CO(H4SO)-24, INSTALLATION, Radiator.>
- 23) Install the air intake duct, air cleaner case and air intake chamber. <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.> <Ref. to IN(H4SO)-5, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO)-6, INSTALLATION, Air Intake Chamber.>

- 24) Install the under cover.

- 25) Install the battery in the vehicle, and connect cables.

- 26) Fill engine coolant.

<Ref. to CO(H4SO)-16, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

- 27) Check the ATF level and replenish it if necessary.

<Ref. to 4AT-30, INSPECTION, Automatic Transmission Fluid.>

- 28) Charge the A/C system with refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

- 29) Remove the front hood stay, and close the front hood.

- 30) Take off the vehicle from a lift.

## C: INSPECTION

- 1) Check pipes, hoses, connectors and clamps are installed firmly.
- 2) Check that the engine coolant and ATF are at specified levels.
- 3) Start the engine, and make sure that no leaks of exhaust gas, engine coolant and fuel, noise and vibrations.

## 10.Engine Mounting

### A: REMOVAL

- 1) Remove the engine assembly. <Ref. to ME(H4SO)-32, REMOVAL, Engine Assembly.>
- 2) Remove the engine mounting from engine assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

#### *Engine mounting:*

*35 N·m (3.6 kgf-m, 25.8 ft-lb)*

### C: INSPECTION

Make sure that no crack or other damages do not exist.

## 11. Preparation for Overhaul

### A: PROCEDURE

1) After removing the engine from the body, secure it in the ST shown below.

|     |           |                            |
|-----|-----------|----------------------------|
| ST1 | 498457000 | ENGINE STAND ADAPTER<br>RH |
| ST2 | 498457100 | ENGINE STAND ADAPTER<br>LH |
| ST3 | 499817100 | ENGINE STAND               |

2) In this section the procedures described under each index are all connected and stated in order. The procedure for overhauling of the engine will be completed when you go through all steps in the process.

Therefore, in this section, to conduct the particular procedure within the flow of a section, you need to go back and conduct the procedure described previously in order to do that particular procedure.

## 12.V-belt

### A: REMOVAL

**NOTE:**

Perform the following procedures with the engine installed to the body.

#### 1. FRONT SIDE BELT

- 1) Remove the V-belt covers.

- 2) Loosen the lock bolt (A).
- 3) Loosen the slider bolt (B).
- 4) Remove the front side belt (C).

#### 2. REAR SIDE BELT

- 1) Loosen the lock nut (A).
- 2) Loosen the slider bolt (B).

- 3) Remove the rear side belt.

- 4) Remove the belt tensioner.

### B: INSTALLATION

**NOTE:**

Wipe off any oil or water on the belt and pulley.

#### 1. FRONT SIDE BELT

- 1) Install a V belt (C), and tighten the slider bolt so as to obtain the specified belt tension. <Ref. to ME(H4SO)-41, INSPECTION, V-belt.>
- 2) Tighten the lock bolt (A).
- 3) Tighten the slider bolt (B).

**Tightening torque:**

**Lock bolt (A):**

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

**Slider bolt (B):**

**8 N·m (0.8 kgf-m, 5.9 ft-lb)**

#### 2. REAR SIDE BELT

- 1) Install the belt tensioner.
- 2) Install a V belt, and tighten the slider bolt (B) so as to obtain the specified belt tension. <Ref. to ME(H4SO)-41, INSPECTION, V-belt.>
- 3) Tighten the lock nut (A).

**Tightening torque:**

**Lock nut (A):**

**23 N·m (2.3 kgf·m, 17.0 ft·lb)**

**C: INSPECTION**

- 1) Replace the belts, if cracks, fraying or wear is found.
- 2) Remove the V-belt cover and reservoir tank. (with belt tension gauge)
- 3) Check the V-belt tension and adjust it if necessary by changing the generator installing position or idler pulley installing position.

**Belt tension (with belt tension gauge)**

**(A)**

**When installing new parts:**

**618 — 755 N (63 — 77 kgf, 139 — 170 lbf)**

**At inspection:**

**490 — 640 N (50 — 65 kgf, 110 — 144 lbf)**

**(B)**

**When installing new parts:**

**740 — 880 N (75 — 90 kgf, 166 — 198 lbf)**

**At inspection:**

**350 — 450 N (36 — 46 kgf, 79 — 101 lbf)**

- (A) Front side belt
- (B) Rear side belt
- C/P Crank pulley
- GEN Generator
- P/S Power steering oil pump pulley
- A/C Air conditioning compressor pulley
- I/P Idler pulley

**Belt tension (without belt tension gauge)**

**(A)**

**When installing new parts:**

**7 — 9 mm (0.276 — 0.354 in)**

**At inspection:**

**9 — 11 mm (0.354 — 0.433 in)**

**(B)**

**When installing new parts:**

**7.5 — 8.5 mm (0.295 — 0.335 in)**

**At inspection:**

**9.0 — 10.0 mm (0.354 — 0.394 in)**

- (A) Front side belt
- (B) Rear side belt
- (C) 98 N (10 kgf, 22 lbf)
- C/P Crank pulley
- GEN Generator
- P/S Power steering oil pump pulley
- A/C Air conditioning compressor pulley
- I/P Idler pulley

## 13.Crank Pulley

### A: REMOVAL

1) Remove the V-belts. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.>

2) Remove the crank pulley bolt. To lock the crankshaft, use ST.

ST 499977100 CRANK PULLEY WRENCH

3) Remove the crank pulley.

### B: INSTALLATION

1) Install the crank pulley.

2) Install the pulley bolt.

To lock the crankshaft, use ST.

ST 499977100 CRANK PULLEY WRENCH

(1) Clean the crankshaft thread using compressed air.

(2) Apply engine oil to the crank pulley bolt seat and thread.

(3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft·lb).

(4) Tighten the crank pulley bolts.

#### Tightening torque:

**180 N·m (18.4 kgf·m, 132.8 ft·lb)**

3) Confirm that the tightening angle of crank pulley bolt is 65° or more. If the tightening angle of crank pulley bolt is less than 65°, conduct the following procedures.

(1) Replace the crank pulley bolts and clean them.

#### Crank pulley bolt:

**Part No. 12369AA011**

(2) Clean the crankshaft thread using compressed air.

(3) Apply engine oil to the crank pulley bolt seat and thread.

(4) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft·lb).

(5) Tighten the crank pulley bolts keeping them in an angle between 65° and 75°.

#### NOTE:

Conduct the tightening procedures by confirming the turning angle of crank pulley bolt referring to the gauge indicated on timing belt cover.

4) Install the belt tensioner.

5) Install the V-belts. <Ref. to ME(H4SO)-40, INSTALLATION, V-belt.>

### C: INSPECTION

1) Make sure the V-belt is not worn or otherwise damaged.

2) Check the tension of the belt. <Ref. to ME(H4SO)-41, INSPECTION, V-belt.>

## 14. Timing Belt Cover

### A: REMOVAL

- 1) Remove the V-belts. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4SO)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover (LH).
- 4) Remove the front timing belt cover.

- (A) Timing belt cover (LH)
- (B) Front timing belt cover

### B: INSTALLATION

- 1) Install the front timing belt cover.

**Tightening torque:**

**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

- 2) Install the timing belt cover (LH).

**Tightening torque:**

**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

- (A) Timing belt cover (LH)
- (B) Front timing belt cover

- 3) Install the crank pulley. <Ref. to ME(H4SO)-42, INSTALLATION, Crank Pulley.>
- 4) Install the V-belts. <Ref. to ME(H4SO)-40, INSTALLATION, V-belt.>

### C: INSPECTION

Check the cover for damage.

# Timing Belt

MECHANICAL

ST 499987500 CRANKSHAFT SOCKET

## 15. Timing Belt

### A: REMOVAL

#### 1. TIMING BELT

- 1) Remove the V-belts. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4SO)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(H4SO)-43, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt guide. (MT model)

5) If the alignment mark or arrow mark (which indicates rotation direction) on timing belt fade away, put new marks before removing the timing belt as shown in procedures below.

- (1) To turn crankshaft, use the ST: Align the mark (a) of sprocket to the cylinder block notch (b), and then ensure the right side cam sprocket mark (c), cam cap and cylinder head matching surface (d) or left side cam sprocket mark (e), timing belt cover notch (f) are properly adjusted.

- (2) Using white paint, put alignment marks or arrow marks on the timing belts in relation to the crank sprocket and cam sprockets.

**Specified data:**

**Z<sub>1</sub>: Length of 46.8 teeth**

**Z<sub>2</sub>: Length of 43.7 teeth**

6) Remove the belt idler (No. 2).

7) Remove the belt idler No. 2.

8) Remove the timing belt.

**2. BELT IDLER AND AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY**

1) Remove the belt idler (No. 1).

2) Remove the automatic belt tension adjuster assembly.

**B: INSTALLATION**

**1. AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER**

1) Preparation for installation of automatic belt tension adjuster assembly.

**CAUTION:**

- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.
- Press-in the push adjuster rod gradually taking more than three minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lbf).
- Press the adjuster rod as far as the end surface of the cylinder. Do not press the adjuster rod into cylinder. Doing so may damage the cylinder.
- Do not release the press pressure until stopper pin is completely inserted.

(1) Attach the automatic belt tension adjuster assembly to the vertical pressing tool.

(2) Slowly move the adjuster rod down with a pressure of more than 165 N (16.8 kgf, 37.1 lbf) until the adjuster rod is aligned with the stopper pin hole in the cylinder.

# Timing Belt

## MECHANICAL

(3) With a 2 mm (0.08 in) dia. stopper pin or a 2 mm (0.08 in) (nominal) dia. hex wrench inserted into the stopper pin hole in cylinder, secure the adjuster rod.

2) Install the automatic belt tension adjuster assembly.

**Tightening torque:**

**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

3) Install the belt idler (No. 1).

**Tightening torque:**

**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

## 2. TIMING BELT

1) Prepare for installation of automatic belt tension adjuster assembly. <Ref. to ME(H4SO)-45, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt.>

2) Installation of timing belt

(1) Turn the cam sprocket No. 2 using ST1, and turn the cam sprocket No. 1 using ST2 so that their alignment marks (A) come to top positions.

ST1 18231AA010 CAM SPROCKET WRENCH

NOTE:

CAM SPROCKET WRENCH (499207100) can also be used.

ST2 499207400 CAM SPROCKET WRENCH

(2) While aligning the alignment mark (B) on timing belt with the mark (A) on sprockets, position the timing belt properly.

3) Install the belt idler (No. 2).

**Tightening torque:**

**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

4) After ensuring the marks on timing belt and cam sprockets are aligned, remove the stopper pin from belt tension adjuster.

5) Install the timing belt guide. (MT model)  
 (1) Temporarily tighten the timing belt guide mounting bolts.

(2) Check and adjust the clearance between timing belt and timing belt guide by using thickness gauge.

**Clearance:**

**$1.0 \pm 0.5 \text{ mm (0.039} \pm 0.020 \text{ in)}$**

(3) Tighten the timing belt guide mounting bolts.

**Tightening torque:**  
 **$9.75 \text{ N}\cdot\text{m (1.0 kgf}\cdot\text{m, 7.2 ft}\cdot\text{lb)}$**

6) Install the timing belt cover.  
 <Ref. to ME(H4SO)-43, INSTALLATION, Timing Belt Cover.>

7) Install the crank pulley. <Ref. to ME(H4SO)-42, INSTALLATION, Crank Pulley.>

8) Install the V-belts. <Ref. to ME(H4SO)-40, INSTALLATION, V-belt.>

## C: INSPECTION

### 1. TIMING BELT

1) Check the timing belt teeth for breaks, cracks and wear. If any fault is found, replace the belt.

2) Check the condition of the backside of belt. If cracks are found, replace the belt.

#### CAUTION:

- Be careful not to let oil, grease or coolant contact the belt. Remove quickly and thoroughly if this happens.
- Do not bend the timing belt sharply.

**In radial diameter h:**

**$60 \text{ mm (2.36 in)}$  or more**

# Timing Belt

MECHANICAL

## 2. AUTOMATIC BELT TENSION ADJUST-ER

1) Visually check the oil seals for leaks, and rod ends for abnormal wear or scratches. If necessary, replace the automatic belt tension adjuster assembly.

### NOTE:

Slight traces of oil at rod's oil seal does not indicate a problem.

2) Check that the adjuster rod does not move when a pressure of 165 N (16.8 kgf, 37.1 lbf) is applied to it. This is to check adjuster rod stiffness.

3) If the adjuster rod is not stiff and moves freely when applying 165 N (16.8 kgf, 37.1 lbf), check it using the following procedures:

(1) Slowly press the adjuster rod down to the end surface of the cylinder. Repeat this operation two to three times.

(2) With the adjuster rod moved all the way up, apply a pressure of 165 N (16.8 kgf, 37.1 lbf) to it. Check the adjuster rod stiffness.

(3) If the adjuster rod is not stiff and moves down, replace the automatic belt tension adjuster assembly with a new one.

### CAUTION:

- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.
- Press the adjuster rod gradually taking more than three minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lbf).
- Press the adjuster rod as far as the end surface of cylinder. Do not press the adjuster rod into cylinder. Doing so may damage the cylinder.

4) Measure the amount of rod protrusion beyond the body. If it is not within specifications, replace with a new one.

### Amount of rod protrusion H:

$5.7 \pm 0.5 \text{ mm}$  ( $0.224 \pm 0.020 \text{ in}$ )

## 3. BELT TENSION PULLEY

1) Check the mating surfaces of timing belt and contact point of adjuster rod for abnormal wear or scratches. Replace the automatic belt tension adjuster assembly if faulty.

2) Check the belt tension pulley for smooth rotation. Replace if noise or excessive play occurs.

3) Check the belt tension pulley for grease leakage.

## 4. BELT IDLER

1) Check the belt idler for smooth rotation. Replace if noise or excessive play occurs.

2) Check the outer contacting surfaces of idler pulley for abnormal wear and scratches.

3) Check the belt idler for grease leakage.

## 16. Cam Sprocket

### A: REMOVAL

- 1) Remove the V-belts. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4SO)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(H4SO)-43, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(H4SO)-44, REMOVAL, Timing Belt.>
- 5) Remove the camshaft position sensor. <Ref. to FU(H4SO)-24, REMOVAL, Camshaft Position Sensor.>
- 6) Remove the cam sprocket No. 2. To lock the camshaft, use ST.  
ST 18231AA010 CAM SPROCKET WRENCH

**NOTE:**

CAM SPROCKET WRENCH (499207100) can also be used.

- 7) Remove the cam sprocket No. 1. To lock the camshaft, use ST.  
ST 499207400 CAM SPROCKET WRENCH

### B: INSTALLATION

- 1) Install the cam sprocket No. 1. To lock the camshaft, use ST.  
ST 499207400 CAM SPROCKET WRENCH

**Tightening torque:**

**78 N·m (8.0 kgf·m, 57.9 ft·lb)**

**NOTE:**

Do not confuse left and right side cam sprockets during installation. Identify by indication of L or R.

- 2) Install the cam sprocket No. 2. To lock the camshaft, use ST.  
ST 18231AA010 CAM SPROCKET WRENCH

**NOTE:**

CAM SPROCKET WRENCH (499207100) can also be used.

**Tightening torque:**

**78 N·m (8.0 kgf·m, 57.9 ft·lb)**

- 3) Install the camshaft position sensor. <Ref. to FU(H4SO)-24, INSTALLATION, Camshaft Position Sensor.>
- 4) Install the timing belt. <Ref. to ME(H4SO)-45, INSTALLATION, Timing Belt.>
- 5) Install the timing belt cover. <Ref. to ME(H4SO)-43, INSTALLATION, Timing Belt Cover.>
- 6) Install the crank pulley. <Ref. to ME(H4SO)-42, INSTALLATION, Crank Pulley.>
- 7) Install the V-belts. <Ref. to ME(H4SO)-40, INSTALLATION, V-belt.>

### C: INSPECTION

- 1) Check the cam sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between cam sprocket and key.
- 3) Check the cam sprocket protrusion used for sensor for damage and contamination of foreign matter.

## 17. Crank Sprocket

### A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4SO)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(H4SO)-43, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(H4SO)-44, REMOVAL, Timing Belt.>
- 5) Remove the crank sprocket.

### B: INSTALLATION

- 1) Install the crank sprocket.

- 2) Install the timing belt. <Ref. to ME(H4SO)-45, INSTALLATION, Timing Belt.>
- 3) Install the timing belt cover. <Ref. to ME(H4SO)-43, INSTALLATION, Timing Belt Cover.>
- 4) Install the crank pulley. <Ref. to ME(H4SO)-42, INSTALLATION, Crank Pulley.>
- 5) Install the V-belts. <Ref. to ME(H4SO)-40, INSTALLATION, V-belt.>

### C: INSPECTION

- 1) Check the crank sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between crank sprocket and key.
- 3) Check the crank sprocket protrusion used for sensor for damage and contamination of foreign matter.

## 18. Valve Rocker Assembly

### A: REMOVAL

- 1) Remove the V-belts. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4SO)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(H4SO)-43, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(H4SO)-44, REMOVAL, Timing Belt.>
- 5) Remove the cam sprocket. <Ref. to ME(H4SO)-49, REMOVAL, Cam Sprocket.>
- 6) Disconnect the PCV hose and remove the rocker cover.
- 7) Remove the valve rocker assembly.

- (1) Using ST, rotate the spring stopper in the arrow direction to remove it from adjuster pin.

ST 18258AA000 SPRING INSTALLER

- (A) Adjuster pin
- (B) Spring stopper
- (C) Spring

- (2) Remove the bolts (a) through (j) in alphabetical sequence.

### NOTE:

Leave two or three threads of bolts (i) and (j) engaged in order to retain the valve rocker assembly.

- (3) Remove the valve rocker assembly.

### NOTE:

Set the ST in the position shown in the figure to remove the intake valve rocker assembly.

ST 18354AA000 VALVE ROCKER HOLDER

### B: INSTALLATION

- 1) Install the valve rocker assembly.

- (1) Temporarily tighten the bolts equally in alphabetical order.

### NOTE:

- Do not temporarily tighten the bolts (i) and (j).
- Set the ST in the position shown in the figure to install the intake valve rocker assembly.

ST 18354AA000 VALVE ROCKER HOLDER

- (2) Tighten the bolts (a) through (h) to specified torque.

### Tightening torque:

25 N·m (2.5 kgf-m, 18.4 ft-lb)

# Valve Rocker Assembly

## MECHANICAL

(3) Tighten the bolts (i) through (j) to specified torque.

### Tightening torque:

**8 N·m (0.8 kgf·m, 5.9 ft·lb)**

(4) Using ST, rotate the spring stopper in the arrow direction to secure it to adjuster pin.

ST 18258AA000 SPRING INSTALLER

- (A) Adjuster pin
- (B) Spring stopper
- (C) Spring

2) Adjust the valve clearance. <Ref. to ME(H4SO)-31, ADJUSTMENT, Valve Clearance.>

3) Tighten the bolts of rocker cover and rocker cover gasket in alphabetical order shown in the figure, and connect the PCV hose.

### NOTE:

- Use new rocker cover gasket.
- Tighten bolts in two stages in alphabetical sequence as shown in the figure.

### Tightening torque:

#### 1st

**6.4 N·m (0.65 kgf·m, 4.7 ft·lb)**

#### 2nd

**6.4 N·m (0.65 kgf·m, 4.7 ft·lb)**

- RH side

- LH side

4) Install the cam sprocket. <Ref. to ME(H4SO)-49, INSTALLATION, Cam Sprocket.>

5) Install the timing belt. <Ref. to ME(H4SO)-45, INSTALLATION, Timing Belt.>

6) Install the timing belt cover.

<Ref. to ME(H4SO)-43, INSTALLATION, Timing Belt Cover.>

7) Install the crank pulley. <Ref. to ME(H4SO)-42, INSTALLATION, Crank Pulley.>

8) Install the V-belt. <Ref. to ME(H4SO)-40, INSTALLATION, V-belt.>

## C: DISASSEMBLY

### NOTE:

Intake valve rocker assembly can not be disassembled.

1) Remove the exhaust valve rocker arm from rocker shaft.

### NOTE:

Keep all the removed parts in order for re-installing in their original positions.

2) Remove the nut and adjusting screw from valve rocker.

## D: ASSEMBLY

**NOTE:**

Intake valve rocker assembly can not be disassembled.

- 1) Install the adjusting screw and nut to exhaust valve rocker arm.
- 2) Insert the valve rocker arm into rocker shaft.

**NOTE:**

Valve rocker arms and rocker shaft have identification marks. Ensure the parts with same markings are properly assembled.

## E: INSPECTION

### 1. INTAKE VALVE ROCKER ASSEMBLY

- 1) If the roller or valve contact surface of valve rocker arm is worn or dented excessively, replace the valve rocker assembly.
- 2) Check that the valve rocker arm roller rotates smoothly. If not, replace the valve rocker assembly.

### 2. EXHAUST VALVE ROCKER ASSEMBLY

- 1) Measure the inner diameter of valve rocker arm and outer diameter of valve rocker shaft, and make sure the difference (oil clearance) between the two values.

**Clearance between arm and shaft:**

**Standard:**

**0.020 — 0.054 mm (0.0008 — 0.0021 in)**

**Limit:**

**0.10 mm (0.0039 in)**

- 2) If the oil clearance exceeds the limit, replace the valve rocker arm or shaft, whichever shows greater amount of wear.

**Rocker arm inside diameter:**

**22.020 — 22.041 mm (0.8669 — 0.8678 in)**

**Rocker shaft diameter:**

**21.987 — 22.000 mm (0.8656 — 0.8661 in)**

- 3) If the cam or valve contact surface of valve rocker arm is worn or dented excessively, replace the valve rocker arm.
- 4) Check that the valve rocker arm roller rotates smoothly. If not, replace the valve rocker arm.

## 19. Camshaft

### A: REMOVAL

- 1) Remove the V-belts. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4SO)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(H4SO)-43, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(H4SO)-44, REMOVAL, Timing Belt.>
- 5) Remove the cam sprocket. <Ref. to ME(H4SO)-49, REMOVAL, Cam Sprocket.>
- 6) Remove the timing belt cover No. 2 (LH).
- 7) Remove the timing belt cover No. 2 (RH).

#### NOTE:

Do not damage or lose the seal rubber when removing the timing belt covers.

- 8) Remove the tensioner bracket.

- 9) Remove the camshaft position sensor support. (LH side only)
- 10) Remove the oil level gauge guide. (LH side only)
- 11) Remove the valve rocker assembly. <Ref. to ME(H4SO)-51, REMOVAL, Valve Rocker Assembly.>

- 12) Remove the camshaft cap.
  - (1) Remove the bolts (a) and (b) in alphabetical sequence.

- (2) Equally loosen the bolts (c) through (j) all the way in alphabetical sequence.

- (3) Remove the bolts (k) through (p) in alphabetical sequence using ST.

ST 499497000 TORX PLUS®

- (4) Remove the camshaft cap.
- 13) Remove the camshaft.
- 14) Remove the oil seal.
- 15) Remove the plug from the rear side of camshaft.

#### CAUTION:

- Do not remove the oil seal unless necessary.
- Do not scratch the journal surface when removing the oil seal.

## B: INSTALLATION

- 1) Apply a coat of engine oil to camshaft journals and install the camshaft.
- 2) Install the camshaft cap.

- (1) Apply liquid gasket to the mating surfaces of camshaft cap.

### Liquid gasket:

**THREE BOND 1280B (Part No. K0877YA018)**

### NOTE:

- Apply a coat of liquid gasket of 3 mm (0.12 in) in diameter (A) along the edge (B) of camshaft cap (C) mating surface.
- Assemble them within 20 min. after applying liquid gasket.

- (2) Temporarily tighten the bolts (a) through (d) in alphabetical sequence.

- (3) Install the valve rocker assembly.  
<Ref. to ME(H4SO)-51, INSTALLATION, Valve Rocker Assembly.>

- (4) Tighten the TORX® bolts (e) through (j) in alphabetical sequence using ST.

ST 499497000 TORX PLUS®

### Tightening torque:

**18 N·m (1.8 kgf·m, 13.3 ft·lb)**

- (5) Tighten the bolts (k) through (r) in alphabetical sequence.

### Tightening torque:

**9.75 N·m (1.0 kgf·m, 7.2 ft·lb)**

- (6) Tighten the bolts (s) and (t) in alphabetical sequence.

### Tightening torque:

**9.75 N·m (1.0 kgf·m, 7.2 ft·lb)**

- 3) Apply engine oil to the outer perimeter and lips of oil seal, and install the oil seal (A) on camshaft using ST1 and ST2.

### NOTE:

Use a new oil seal.

ST1 499597000 OIL SEAL GUIDE

# Camshaft

MECHANICAL

ST2 499587500 OIL SEAL INSTALLER

4) Install the plug (A) using ST.

ST 499587700 CAMSHAFT OIL SEAL INSTALLER

5) Adjust the valve clearance. <Ref. to ME(H4SO)-31, ADJUSTMENT, Valve Clearance.>

6) Tighten the bolts of rocker cover and rocker cover gasket in alphabetical order shown in the figure, and connect the PCV hose.

NOTE:

- Use new rocker cover gasket.
- Tighten bolts in two stages in alphabetical sequence as shown in the figure.

**Tightening torque:**

**1st**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

**2nd**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

- RH side

- LH side

7) Install the oil level gauge guide. (LH side)

8) Install the camshaft position sensor support. (LH side)

9) Install the tensioner bracket.

**Tightening torque:**

**24.5 N·m (2.5 kgf-m, 18.1 ft-lb)**

10) Install the timing belt cover No. 2 (RH).

**Tightening torque:**

**5 N·m (0.5 kgf-m, 3.6 ft-lb)**

11) Install the timing belt cover No. 2 (LH).

**Tightening torque:**

**5 N·m (0.5 kgf-m, 3.6 ft-lb)**

12) Install the cam sprocket. <Ref. to ME(H4SO)-49, INSTALLATION, Cam Sprocket.>

13) Install the timing belt. <Ref. to ME(H4SO)-45, INSTALLATION, Timing Belt.>

14) Install the timing belt cover.

<Ref. to ME(H4SO)-43, INSTALLATION, Timing Belt Cover.>

- 15) Install the crank pulley. <Ref. to ME(H4SO)-42, INSTALLATION, Crank Pulley.>  
 16) Install the V-belt. <Ref. to ME(H4SO)-40, INSTALLATION, V-belt.>

## C: INSPECTION

- 1) Measure the bend, and repair or replace if necessary.

**Service limit:**  
**0.025 mm (0.00098 in)**

- 2) Check the journal for damage and wear. Replace if faulty.  
 3) Measure the outer diameter of camshaft journal and inner diameter of cylinder head journal, and make sure the difference (oil clearance) between the two values. If the oil clearance exceeds standard value, replace the camshaft or cylinder head as necessary.

| Unit: mm (in)         |          |                                   |
|-----------------------|----------|-----------------------------------|
| Oil clearance         | Standard | 0.055 — 0.090 (0.0022 — 0.0035)   |
|                       | Limit    | 0.10 (0.0039)                     |
| Camshaft journal O.D. |          | 31.928 — 31.945 (1.2570 — 1.2577) |
| Journal hole I.D.     |          | 32.000 — 32.018 (1.2598 — 1.2605) |

- 4) Check the cam face condition, and remove the minor faults by grinding with oil stone. Measure the cam height H. If it exceeds the limit, replace it.

### Cam height H:

| Parts   |            | Unit: mm (in)                     |                                   |
|---------|------------|-----------------------------------|-----------------------------------|
| Intake  | Fixed      | Standard                          | 40.075 — 40.175 (1.5778 — 1.5817) |
|         |            | Limit                             | 39.975 (1.5738)                   |
|         | Low speed  | Standard                          | 35.182 — 35.282 (1.3851 — 1.3891) |
|         |            | Limit                             | 35.082 (1.3812)                   |
|         | High speed | Standard                          | 40.315 — 40.415 (1.5872 — 1.5911) |
|         |            | Limit                             | 40.215 (1.5833)                   |
| Exhaust | Standard   | 40.149 — 40.249 (1.5807 — 1.5846) |                                   |
|         | Limit      | 40.049 (1.5767)                   |                                   |

**Cam base circle diameter A:**  
**Intake: 34.00 mm (1.3386 in)**  
**Exhaust: 34.00 mm (1.3386 in)**

**Difference between base circles of adjacent intake cams (low speed and high speed):**  
**0.03 mm (0.001 in) or less**

- 5) Measure the thrust clearance of camshaft with setting the dial gauge at end of camshaft. If the thrust clearance exceeds the limit, replace the camshaft cap and cylinder head as a set. If necessary, replace the camshaft.

**Standard:**  
**0.030 — 0.090 mm (0.0012 — 0.0035 in)**

**Limit:**  
**0.10 mm (0.0039 in)**

## 20. Cylinder Head

### A: REMOVAL

- 1) Remove the V-belts. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4SO)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(H4SO)-43, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(H4SO)-44, REMOVAL, Timing Belt.>
- 5) Remove the cam sprocket. <Ref. to ME(H4SO)-49, REMOVAL, Cam Sprocket.>
- 6) Remove the intake manifold. <Ref. to FU(H4SO)-13, REMOVAL, Intake Manifold.>
- 7) Remove the bolt which installs the A/C compressor bracket on cylinder head.
- 8) Remove the valve rocker assembly. <Ref. to ME(H4SO)-51, REMOVAL, Valve Rocker Assembly.>
- 9) Remove the camshaft. <Ref. to ME(H4SO)-54, REMOVAL, Camshaft.>
- 10) Remove the cylinder head bolts in alphabetical sequence as shown in the figure.

#### NOTE:

Leave bolts (a) and (c) engaged by three or four threads to prevent the cylinder head from falling.

- 11) While tapping the cylinder head with a plastic hammer, separate it from cylinder block.
- 12) Remove the bolts (a) and (c) to remove the cylinder head.

- 13) Remove the cylinder head gasket.

#### CAUTION:

Be careful not to scratch the mating surface of cylinder head and cylinder block.

- 14) Similarly, remove the right side cylinder head.

### B: INSTALLATION

- 1) Install the cylinder head and gaskets on cylinder block.

#### CAUTION:

- Use new cylinder head gaskets.
- Be careful not to scratch the mating surface of cylinder block and cylinder head.

- 2) Tighten the cylinder head bolts.
  - (1) Apply a coat of engine oil to washers and bolt threads.
  - (2) Tighten all bolts to 29 N·m (3.0 kgf-m, 21.4 ft-lb) in alphabetical sequence. Then tighten all bolts to 69 N·m (7.0 kgf-m, 50.9 ft-lb) in alphabetical sequence.
  - (3) Back off all bolts by 180° in reverse order of installation, and back them off again by 180°.
  - (4) Tighten all bolts to 42 N·m (4.3 kgf-m, 31 ft-lb) in alphabetical sequence.
  - (5) Tighten all bolts by 80° — 90° in alphabetical sequence.
  - (6) Tighten all bolts by 40° — 45° in alphabetical sequence.

#### CAUTION:

Tightening angle of the bolt must not exceed 45°.

- (7) Further tighten bolts (a) and (b) by 40° — 45°.

#### CAUTION:

Total “re-tightening angle” of the step (6) and (7) must not exceed 90°.

- 3) Install the camshaft. <Ref. to ME(H4SO)-55, INSTALLATION, Camshaft.>
- 4) Install the valve rocker assembly. <Ref. to ME(H4SO)-51, INSTALLATION, Valve Rocker Assembly.>
- 5) Install the A/C compressor bracket on cylinder head.

- 6) Install the intake manifold.  
<Ref. to FU(H4SO)-15, INSTALLATION, Intake Manifold.>
- 7) Install the cam sprocket. <Ref. to ME(H4SO)-49, INSTALLATION, Cam Sprocket.>
- 8) Install the timing belt. <Ref. to ME(H4SO)-45, INSTALLATION, Timing Belt.>
- 9) Install the timing belt cover.  
<Ref. to ME(H4SO)-43, INSTALLATION, Timing Belt Cover.>
- 10) Install the crank pulley. <Ref. to ME(H4SO)-42, INSTALLATION, Crank Pulley.>
- 11) Install the V-belts. <Ref. to ME(H4SO)-40, INSTALLATION, V-belt.>

## C: DISASSEMBLY

- 1) Place the cylinder head on the ST.  
ST 498267800 CYLINDER HEAD TABLE
- 2) Set the ST on valve spring. Compress the valve spring and remove the valve spring retainer key. Remove each valve and valve spring.

## D: ASSEMBLY

- ST 499718000 VALVE SPRING REMOVER
- NOTE:
- Keep all the removed parts in order for re-installing in their original positions.
  - Mark each valve to prevent confusion.
  - Use extreme care not to damage the lips of the intake valve oil seals and exhaust valve oil seals.

- |                       |                       |                        |
|-----------------------|-----------------------|------------------------|
| (1) Valve             | (6) Retainer          | (11) Plug              |
| (2) Valve guide       | (7) Retainer key      | (12) Camshaft cap      |
| (3) Valve spring seat | (8) Spark plug gasket | (13) Valve rocker ASSY |
| (4) Oil seal          | (9) Camshaft          |                        |
| (5) Valve springs     | (10) Oil seal         |                        |

# Cylinder Head

## MECHANICAL

- 1) Installation of valve spring and valve:
    - (1) Place the cylinder head on the ST.
- ST 498267800 CYLINDER HEAD TABLE
- (2) Coat the stem of each valve with engine oil and insert the valve into valve guide.

### CAUTION:

**Use extreme care not to damage the oil lips when inserting the valve into valve guide.**

- (3) Install the valve spring and retainer.

### NOTE:

Be sure to install the valve springs with their close-coiled end facing the seat on the cylinder head.

- (4) Set the ST on valve spring.

ST 499718000 VALVE SPRING REMOVER

- (5) Compress the valve spring, and then fit the valve spring retainer and valve spring retainer key.

- (A) Retainer key
- (B) Valve spring
- (C) Valve spring retainer

- (6) After installing, tap the valve spring retainers lightly with a plastic hammer for better seating.

## E: INSPECTION

### 1. CYLINDER HEAD

- 1) Make sure that no crack or other damage do not exist. In addition to visual inspection, inspect important areas by means of liquid penetrant tester.

Also make sure the gasket installing surface shows no trace of gas and water leaks.

- 2) Place the cylinder head on the ST.

ST 498267800 CYLINDER HEAD TABLE

- 3) Measure the warping of the cylinder head surface that mates with crankcase using a straight edge and thickness gauge.

If the warping exceeds the limit, regrind the surface with a surface grinder.

### Warping limit:

**0.03 mm (0.0012 in)**

### Grinding limit:

**0.1 mm (0.004 in)**

### Standard height of cylinder head:

**97.5 mm (3.84 in)**

### NOTE:

Uneven torque for the cylinder head bolts can cause warping. When reassembling, pay special attention to the torque so as to tighten evenly.

- (A) Straight edge
- (B) Thickness gauge

## 2. VALVE SEAT

Inspect the intake and exhaust valve seats, and correct the contact surfaces with a valve seat cutter if they are defective or when valve guides are replaced.

**Valve seat width *W*:**

**Standard**

**Intake (A)**

0.8 — 1.4 mm (0.03 — 0.055 in)

**Exhaust (B)**

1.2 — 1.8 mm (0.047 — 0.071 in)

**Limit**

**Intake (A)**

1.7 mm (0.067 in)

**Exhaust (B)**

2.2 mm (0.087 in)

## 3. VALVE GUIDE

1) Check the clearance between valve guide and stem. The clearance can be checked by measuring respectively the outer diameter of valve stem with a micrometer and inner diameter of valve guide with a caliper gauge.

**Clearance between the valve guide and valve stem:**

**Standard**

**Intake**

0.035 — 0.062 mm (0.0014 — 0.0024 in)

**Exhaust**

0.040 — 0.067 mm (0.0016 — 0.0026 in)

**Limit**

0.15 mm (0.059 in)

(A) Valve guide

2) If the clearance between valve guide and stem exceeds the standard value, replace the valve guide or valve itself whichever shows greater amount of wear. See the following procedure for valve guide replacement.

**Valve guide inner diameter:**

6.000 — 6.012 mm (0.2362 — 0.2367 in)

**Valve stem outer diameters:**

**Intake**

5.950 — 5.965 mm (0.2343 — 0.2348 in)

**Exhaust**

5.945 — 5.960 mm (0.2341 — 0.2346 in)

# Cylinder Head

## MECHANICAL

- (1) Place the cylinder head on ST1 with the combustion chamber upward so that valve guides enter the holes in ST1.
- (2) Insert ST2 into the valve guide and press it down to remove the valve guide.

ST1 498267800 CYLINDER HEAD TABLE  
ST2 499767200 VALVE GUIDE REMOVER

- (3) Turn the cylinder head upside down and place the ST as shown in the figure.

Intake side:  
ST 499767700 VALVE GUIDE ADJUSTER  
Exhaust side:  
ST 499767800 VALVE GUIDE ADJUSTER

(A) Valve guide

- (4) Before installing a new valve guide, make sure that neither scratches nor damages exist on the inside surface of the valve guide holes in cylinder head.
- (5) Put a new valve guide, coated with sufficient oil, in cylinder, and insert the ST1 into valve guide. Press in until the valve guide upper end is flush with the upper surface of ST2.

ST1 499767200 VALVE GUIDE REMOVER  
Intake side:  
ST2 499767700 VALVE GUIDE ADJUSTER

Exhaust side:  
ST2 499767800 VALVE GUIDE ADJUSTER

- (6) Check the valve guide protrusion.

### Valve guide protrusion L:

#### Intake

20.0 — 21.0 mm (0.787 — 0.827 in)

#### Exhaust

16.5 — 17.5 mm (0.650 — 0.689 in)

(A) Valve guide

- (7) Ream the inside of valve guide using ST. Put the reamer in valve guide, and rotate the reamer slowly clockwise while pushing it lightly. Bring the reamer back while rotating it clockwise. After reaming, clean the valve guide to remove chips.

### CAUTION:

- Apply engine oil to the reamer when reaming.
- If the inner surface of the valve guide is torn, the edge of the reamer should be slightly ground with an oil stone.
- If the inner surface of the valve guide becomes lustrous and the reamer does not chip, use a new reamer or remedy the reamer.

ST 499767400 VALVE GUIDE REAMER

(8) Recheck the contact condition between valve and valve seat after replacing the valve guide.

## 4. INTAKE AND EXHAUST VALVE

1) Inspect the flange and stem of valve, and replace if damaged, worn or deformed, or if “H” exceed the standard value.

**H:**

**Intake**

**Standard: 0.8 — 1.2 mm (0.03 — 0.047 in)**

**Limit: 0.6 mm (0.024 in)**

**Exhaust**

**Standard: 1.0 — 1.4 mm (0.039 — 0.055 in)**

**Limit: 0.6 mm (0.024 in)**

**Valve overall length:**

**Intake**

**120.6 mm (4.75 in)**

**Exhaust**

**121.7 mm (4.79 in)**

2) Put a small amount of grinding compound on the seat surface and lap the valve and seat surface. <Ref. to ME(H4SO)-61, VALVE SEAT, INSPECTION, Cylinder Head.> Install a new intake valve oil seal after lapping.

## 5. VALVE SPRING

1) Check the valve springs for damage, free length, and tension. Replace the valve spring if it is not within the standard value presented in the table.

2) To measure the squareness of the valve spring, stand the spring on a surface plate and measure its deflection at the top of spring using a try square.

|                       |                      |   |
|-----------------------|----------------------|---|
| Free length           | mm (in)              | 55.2 (2.173)  |
| Squareness            |                      | 2.5°, 2.4 mm (0.094 in) or less                         |
| Tension/spring height | Set                  | 235.3 — 270.7 (24 — 27.6, 52.9 — 60.8)/45.0 (1.772)     |
|                       | Lift                 | 578.9 — 639.9 (59.1 — 65.3, 130.3 — 143.9)/34.7 (1.366) |
|                       | N (kgf, lbf)/mm (in) |   |

## 6. INTAKE AND EXHAUST VALVE OIL SEAL

In the following case, pinch and remove the oil seal from valve using pliers, and then replace it with a new one.

- When the lip is damaged.
- When the spring is out of the specified position.
- When readjusting the surfaces of intake valve and valve sheet.
- When replacing the intake valve guide.

1) Place the cylinder head on ST1.

2) Using ST2, press-fit the oil seal.

**CAUTION:**

- Apply engine oil to oil seal before press-fitting.
- When press-fitting the oil seal, do not use a hammer or strike in.
- Differentiate between the intake valve oil seal and exhaust valve oil seal by noting their difference in color.

**Exhaust [Green]**

## 21. Cylinder Block

### A: REMOVAL

**NOTE:**

Before conducting this procedure, drain the engine oil completely.

- 1) Remove the intake manifold. <Ref. to FU(H4SO)-13, REMOVAL, Intake Manifold.>
- 2) Remove the V-belts. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
- 3) Remove the crank pulley. <Ref. to ME(H4SO)-42, REMOVAL, Crank Pulley.>
- 4) Remove the timing belt cover. <Ref. to ME(H4SO)-43, REMOVAL, Timing Belt Cover.>
- 5) Remove the timing belt. <Ref. to ME(H4SO)-44, REMOVAL, Timing Belt.>
- 6) Remove the cam sprocket. <Ref. to ME(H4SO)-49, REMOVAL, Cam Sprocket.>
- 7) Remove the crank sprocket. <Ref. to ME(H4SO)-42, REMOVAL, Crank Pulley.>
- 8) Remove the generator and A/C compressor with their brackets.
- 9) Remove the rocker cover.
- 10) Remove the cylinder head bolts in alphabetical sequence as shown in the figure.

**NOTE:**

Leave bolts (a) and (d) engaged by three or four threads to prevent the cylinder head from falling.

(A) Front side

- 11) While tapping the cylinder head with a plastic hammer, separate it from cylinder block.

- 12) Remove the bolts (a) and (d) to remove the cylinder head.

(A) Front side

- 13) Remove the cylinder head gasket.

**NOTE:**

Do not scratch the mating surface of cylinder head and cylinder block.

- 14) Similarly, remove the right side cylinder head.
- 15) Remove the clutch housing cover. (MT model)
- 16) Remove the flywheel (MT model) or drive plate (AT model).

Lock the crankshaft using ST.

ST 498497100 CRANKSHAFT STOPPER

- MT model

- AT model

- 17) Remove the oil separator cover.
- 18) Remove the water by-pass pipe for heater.

# Cylinder Block

## MECHANICAL

19) Remove the water pump after loosening the bolts in alphabetical sequence as shown in the figure.

20) Remove the bolts which install the oil pump onto cylinder block.

### NOTE:

If disassembling or inspecting the oil pump, loosen the plug of relief valve before removing the oil pump.

21) Remove the oil pump from cylinder block. Use a flat tip screwdriver when removing the oil pump.

### CAUTION:

Be careful not to scratch the mating surface of cylinder block and oil pump.

22) Remove the oil pan.

- (1) Place the cylinder block to face the #2 and #4 piston side upward.
- (2) Remove the bolts which secure oil pan to cylinder block.
- (3) Insert a oil pan cutter blade between cylinder block-to-oil pan clearance and remove the oil pan.

### NOTE:

Do not use a screwdriver or similar tools in place of oil pan cutter.

23) Remove the oil strainer stay.

24) Remove the oil strainer.

25) Remove the baffle plate.

26) Remove the oil filter using ST.

ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))

ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))

### NOTE:

Standard oil filter is outer diameter of 68 mm (2.68 in). However, SUBARU genuine oil filter having outer diameter of 65 mm (2.56 in) can also be used.

27) Remove the water pipe.

# Cylinder Block

MECHANICAL

- |                       |                        |                 |
|-----------------------|------------------------|-----------------|
| (1) Service hole plug | (4) Piston pin         | (7) Washer      |
| (2) Gasket            | (5) Service hole cover | (8) Seal washer |
| (3) Snap ring         | (6) O-ring             |                 |

28) Remove the service hole cover and service hole plugs using a hexagon wrench (14 mm).

29) Rotate the crankshaft to bring #1 and #2 pistons to bottom dead center position, then remove

the piston snap ring through service hole of #1 and #2 cylinders.

30) Draw out the piston pin from #1 and #2 pistons using ST.

ST 499097700 PISTON PIN REMOVER ASSY

# Cylinder Block

## MECHANICAL

### NOTE:

Be careful not to confuse the original combination of piston, piston pin and cylinder.

31) Similarly remove the piston pins from #3 and #4 pistons.

32) Remove the bolts which connect cylinder block on the side of #2 and #4 cylinders.

33) Back off the bolts which connect cylinder block on the side of #1 and #3 cylinders two or three turns.

34) Set up the cylinder block so that #1 and #3 cylinders are on the upper side, then remove the cylinder block connecting bolts.

35) Separate the cylinder block (RH) and (LH).

### NOTE:

When separating the cylinder block, do not allow the connecting rod to fall or damage the cylinder block.

(1) Cylinder block

(2) Rear oil seal

(3) Crankshaft

(4) Crankshaft bearing

(5) Piston

(6) Seal washer

(7) Washer

36) Remove the rear oil seal.

37) Remove the crankshaft together with connecting rod.

38) Remove the crankshaft bearings from cylinder block using a hammer handle.

### NOTE:

Be careful not to confuse the crankshaft bearing combination. Press the bearing at the end opposite to locking lip.

39) Draw out each piston from cylinder block using a wooden bar or hammer handle.

### NOTE:

Be careful not to confuse the original combination of piston and cylinder.

## B: INSTALLATION

- |                        |                   |            |
|------------------------|-------------------|------------|
| (1) Crankshaft bearing | (4) Rear oil seal | (7) Washer |
| (2) Crankshaft         | (5) O-ring        |            |
| (3) Cylinder block     | (6) Seal washer   |            |

**NOTE:**

Remove oil on the mating surface of bearing and cylinder block before installation. Apply engine oil to crankshaft pins.

1) Position the crankshaft and O-ring on the #1 and #3 cylinder block.

2) Apply liquid gasket to the mating surface of #1 and #3 cylinder block, and position #2 and #4 cylinder block.

**Liquid gasket:**

**THREE BOND 1215 (Part No. 004403007) or equivalent**

**NOTE:**

Do not allow liquid gasket to flow into O-ring grooves, oil passages, bearing grooves, etc.

- 3) Apply engine oil to washers and thread of bolts.  
 4) Tighten the 10 mm cylinder block connecting bolts on LH side (A — D) in alphabetical sequence.

# Cylinder Block

MECHANICAL

**Tightening torque:**  
**10 N·m (1.0 kgf·m, 7.4 ft·lb)**

5) Tighten the 10 mm cylinder block connecting bolts on RH side (E — J) in alphabetical sequence.

**Tightening torque:**  
**10 N·m (1.0 kgf·m, 7.4 ft·lb)**

6) Further tighten the LH side bolts (A — D) in alphabetical sequence.

**Tightening torque:**  
**18 N·m (1.8 kgf·m, 13.3 ft·lb)**

7) Further tighten the RH side bolts (E — J) in alphabetical sequence.

**Tightening torque:**  
**18 N·m (1.8 kgf·m, 13.3 ft·lb)**

8) Further tighten the LH side bolts (A), (C) to 90°, (B), (D) to 40 N·m (4.1 kgf·m, 29.5 ft·lb) in alphabetical sequence.

9) Further tighten the RH side bolts (E — J) to 90° in alphabetical sequence.

10) Tighten the 8 mm and 6 mm cylinder block connecting bolts on LH side (A — H) in alphabetical sequence.

**Tightening torque:**

(A) — (G): 25 N·m (2.5 kgf·m, 18.4 ft·lb)

(H): 6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

11) Apply engine oil to the outer perimeter of rear oil seal, and install the rear oil seal using ST1 and ST2.

**NOTE:**

Use a new rear oil seal.

(A) Rear oil seal

(B) Flywheel attaching bolt

12) Position the top ring gap at (A) or (B) in the figure.

**NOTE:**

Assemble the piston ring with stamped mark “R” facing toward upside of piston.

13) Position the second ring gap at 180° on the reverse side of the top ring gap.

**NOTE:**

Assemble the piston ring with stamped mark “R” facing toward upside of piston.

14) Position the upper rail gap at (C) in the figure.

15) Align upper rail spin stopper (E) with piston side surface hole (D).

16) Position the expander gap on the opposite side position (F) 180° away from upper rail gap position (C).

# Cylinder Block

## MECHANICAL

17) Position the lower rail gap on the position (G) 120° away from upper rail gap position (C).

NOTE:  
Use new snap rings.

### CAUTION:

- Ensure ring gaps do not face the same direction.
- Ensure ring gaps are not within the piston skirt area.

18) Install the snap ring.

Install snap rings in the piston holes located opposite to the service holes in cylinder block, when positioning all pistons in the corresponding cylinders.

### CAUTION:

Piston front mark faces towards the front of engine.

19) Install the piston.

- (1) Place the cylinder block to face the #1 and #2 cylinder side upward.
- (2) Using ST1, turn the crankshaft so that #1 and #2 connecting rods are set at bottom dead center.

ST1 499987500 CRANKSHAFT SOCKET

- (3) Apply a coat of engine oil to the pistons and cylinders and insert pistons in their cylinders using ST2.

ST2 498747300 PISTON GUIDE

20) Install the piston pin.

- (1) Apply a coat of engine oil to ST3.
- (2) Insert ST3 into the service hole to align piston pin hole with connecting rod small end.

ST3 499017100 PISTON PIN GUIDE

- (3) Apply a coat of engine oil to piston pin, and insert the piston pin into piston and connecting rod through service hole.
- (4) Install the snap ring.

NOTE:

Use new snap rings.

- (5) Apply liquid gasket around the service hole plug.

**Liquid gasket:**

**THREE BOND 1105 (Part No. 004403010) or equivalent**

- (6) Install the service hole plug and gasket.

NOTE:

Use a new gasket.

# Cylinder Block

- (1) Piston
- (2) Piston pin
- (3) Snap ring
- (4) Gasket
- (5) Service hole plug
- (6) Service hole cover
- (7) O-ring

**Tightening torque: N-m (kgf-m, ft-lb)**  
**T1: 6.4 (0.65, 4.7)**  
**T2: 70 (7.1, 50.6)**

- (7) Place the cylinder block to face the #3 and #4 cylinder sides upward. Following the same procedures as used for #1 and #2 cylinders, install the pistons and piston pins.
- 21) Install the water pipe.

- 25) Apply liquid gasket to mating surfaces and install the oil pan.

**Liquid gasket:**  
**THREE BOND 1207C (Part No. 004403012) or equivalent**

- 22) Install the baffle plate.

**Tightening torque:**  
**6.4 N-m (0.65 kgf-m, 4.7 ft-lb)**

- 23) Install the oil strainer and O-ring.

**Tightening torque:**  
**10 N-m (1.0 kgf-m, 7.4 ft-lb)**

- 24) Install the oil strainer stay.

- 26) Apply liquid gasket to the mating surfaces and threaded portion of bolt (A) as shown in the figure, and then install the oil separator cover.

# Cylinder Block

MECHANICAL

## Liquid gasket:

### Mating surface

**THREE BOND 1207C (Part No. 004403012)  
or equivalent**

### Thread portion of bolt (A)

**THREE BOND 1324 (Part No. 004403042) or  
equivalent**

## Tightening torque:

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

- 27) Install the flywheel. (MT model)  
<Ref. to CL-17, INSTALLATION, Flywheel.>  
To lock the crankshaft, use the ST.  
ST 498497100 CRANKSHAFT STOPPER

## Tightening torque:

**72 N·m (7.3 kgf-m, 52.8 ft-lb)**

- 28) Install the drive plate.  
To lock the crankshaft, use the ST.  
ST 498497100 CRANKSHAFT STOPPER

## Tightening torque:

**72 N·m (7.3 kgf-m, 52.8 ft-lb)**

- 29) Install the housing cover.

## 30) Installation of oil pump:

- (1) Discard the front oil seal after removal. Re-  
place with a new one using ST.

ST 499587100 OIL SEAL INSTALLER

- (2) Apply liquid gasket to the matching surface  
of oil pump.

## Liquid gasket:

**THREE BOND 1215 (Part No. 004403007) or  
equivalent**

(A) O-ring

- (3) Apply a coat of engine oil to the inside of oil  
seal.

- (4) Install the oil pump on cylinder block. Be  
careful not to damage the oil seal during instal-  
lation.

## CAUTION:

- Make sure the oil seal lip is not folded.
- Do not forget to install the O-ring and seal  
when installing the oil pump.

- (5) Apply liquid gasket to the threaded portion  
of three bolts.

# Cylinder Block

MECHANICAL

## Liquid gasket:

**THREE BOND 1324 (Part No. 004403042) or equivalent**

## Tightening torque:

**T: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

31) Install the water pump and gasket.

## Tightening torque:

**First: 12 N·m (1.2 kgf-m, 8.7 ft-lb)**

**Second: 12 N·m (1.2 kgf-m, 8.7 ft-lb)**

## CAUTION:

- Be sure to use a new gasket.
- When installing the water pump, tighten bolts in two stages in alphabetical sequence as shown in the figure.

32) Install the water by-pass pipe for heater.

33) Install the oil filter using ST.

ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))

ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))

## NOTE:

Standard oil filter is outer diameter of 68 mm (2.68 in). However, SUBARU genuine oil filter having outer diameter of 65 mm (2.56 in) can also be used.

Install the oil filter by turning it by hand, being careful not to damage the seal rubber.

- Tighten the oil filter 68 mm (2.68 in) in diameter by approx. 1 rotation more after the seal rubber of oil filter comes in contact with cylinder block or oil cooler. If using a torque wrench, tighten it to 14 N·m (1.4 kgf-m, 10.3 ft-lb).

- Tighten the oil filter 65 mm (2.56 in) in diameter by approx. 2/3 — 3/4 rotation more after the seal rubber of oil filter comes in contact with cylinder block or oil cooler. If using a torque wrench, tighten it to 12 N·m (1.2 kgf-m, 8.7 ft-lb).

## CAUTION:

**Do not tighten excessively, or oil may leak.**

34) Tighten the cylinder head bolts.

- (1) Apply a coat of engine oil to washers and bolt threads.
- (2) Tighten all bolts to 29 N·m (3.0 kgf-m, 22 ft-lb) in alphabetical sequence. Then tighten all bolts to 69 N·m (7.0 kgf-m, 51 ft-lb) in alphabetical sequence.
- (3) Back off all bolts by 180° in reverse order of installation, and back them off again by 180°.
- (4) Tighten all bolts to 42 N·m (4.3 kgf-m, 31 ft-lb) in alphabetical sequence.
- (5) Tighten all bolts by 80 — 90° in alphabetical sequence.
- (6) Tighten all bolts by 40 — 45° in alphabetical sequence.

## CAUTION:

**Tightening angle of the bolt must not exceed 45°.**

- (7) Further tighten the bolts (a) and (b) by 40 — 45°.

## CAUTION:

**Total “re-tightening angle” of the step (6) and (7) must not exceed 90°.**

35) Install the oil level gauge guide and tighten the bolt. (LH side)

36) Install the rocker cover and rocker cover gasket.

## NOTE:

Use new rocker cover gasket.

37) Install the crank sprocket.

<Ref. to ME(H4SO)-50, INSTALLATION, Crank Sprocket.>

38) Install the cam sprocket. <Ref. to ME(H4SO)-49, INSTALLATION, Cam Sprocket.>

39) Install the timing belt. <Ref. to ME(H4SO)-45, INSTALLATION, Timing Belt.>

- 40) Install the timing belt cover.  
<Ref. to ME(H4SO)-43, INSTALLATION, Timing Belt Cover.>
- 41) Install the crank pulley. <Ref. to ME(H4SO)-42, INSTALLATION, Crank Pulley.>
- 42) Install the generator and A/C compressor brackets on cylinder head.

- 43) Install the V-belts. <Ref. to ME(H4SO)-40, INSTALLATION, V-belt.>
- 44) Install the intake manifold.  
<Ref. to FU(H4SO)-15, INSTALLATION, Intake Manifold.>

## C: DISASSEMBLY

- |                            |                 |               |
|----------------------------|-----------------|---------------|
| (1) Connecting rod cap     | (3) Top ring    | (5) Oil ring  |
| (2) Connecting rod bearing | (4) Second ring | (6) Snap ring |

- 1) Remove the connecting rod cap.
- 2) Remove the connecting rod bearing.

### NOTE:

Arrange the removed connecting rod, connecting rod cap and bearing in order, to prevent confusion.

- 3) Remove the piston rings using the piston ring expander.
- 4) Remove the oil ring by hand.

### NOTE:

Arrange the removed piston rings in proper order, to prevent confusion.

- 5) Remove the snap ring.

# Cylinder Block

MECHANICAL

## D: ASSEMBLY

ME-00392

- |                            |                 |
|----------------------------|-----------------|
| (1) Connecting rod bearing | (5) Second ring |
| (2) Connecting rod         | (6) Top ring    |
| (3) Connecting rod cap     | (7) Snap ring   |
| (4) Oil ring               | (8) Side mark   |

**Tightening torque: N·m (kgf·m, ft·lb)**  
**T: 45 (4.6, 33.2)**

- 1) Apply oil to the surfaces of the connecting rod bearings.
- 2) Install the connecting rod bearings on connecting rods and connecting rod caps.
- 3) Position each connecting rod with the marked side facing forward, and install it.
- 4) Install the connecting rod cap with connecting rod nut.  
Ensure the connecting rod side mark faces toward front during installation.

### CAUTION:

- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching number.
- When tightening the connecting rod nuts, apply oil on the threads.

- 5) Install the expander, lower rail and upper rail in this order by hand. Install the second ring and top ring with a piston ring expander.

## E: INSPECTION

### 1. CYLINDER BLOCK

- 1) Visually check for cracks and damage. Especially, inspect the important parts by means of liquid penetrant tester.
- 2) Check the oil passages for clogging.
- 3) Inspect the cylinder block surface that mates with cylinder head for warping by using a straight edge, and correct by grinding if necessary.

### Warping limit:

**0.025 mm (0.00098 in)**

### Grinding limit:

**0.1 mm (0.004 in)**

### Standard height of cylinder block:

**201.0 mm (7.91 in)**

## 2. CYLINDER AND PISTON

- 1) The cylinder bore size is stamped on the cylinder block's front upper surface.

### NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Standard sized pistons are classified into two grades, "A" and "B". These grades should be used as guide lines in selecting a standard piston.

# Cylinder Block

MECHANICAL

## Standard diameter:

**A: 99.505 — 99.515 mm (3.9175 — 3.9179 in)**

**B: 99.495 — 99.505 mm (3.9171 — 3.9175 in)**

- (A) Main journal size mark
- (B) Cylinder block (RH)- (LH) combination mark
- (C) #1 cylinder bore size mark
- (D) #2 cylinder bore size mark
- (E) #3 cylinder bore size mark
- (F) #4 cylinder bore size mark

2) How to measure the inner diameter of each cylinder:

Measure the inner diameter of each cylinder in both the thrust and piston pin directions at the heights as shown in the figure, using a cylinder bore gauge.

### NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

## Taper:

### Standard

**0.015 mm (0.0006 in)**

### Limit

**0.050 mm (0.0020 in)**

## Out-of-roundness:

### Standard

**0.010 mm (0.0004 in)**

### Limit

**0.050 mm (0.0020 in)**

- (A) Piston pin direction
- (B) Thrust direction
- H1 10 mm (0.39 in)
- H2 45 mm (1.77 in)
- H3 80 mm (3.15 in)
- H4 115 mm (4.53 in)

3) When the piston is to be replaced due to general or cylinder wear, determine a suitable sized piston by measuring the piston clearance.

4) How to measure the outer diameter of each piston:

Measure the outer diameter of each piston at the height as shown in the figure. (Thrust direction)

### NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

## Piston grade point H:

**38.2 mm (1.504 in)**

### Standard

**A: 99.505 — 99.515 mm (3.9175 — 3.9179 in)**

**B: 99.495 — 99.505 mm (3.9171 — 3.9175 in)**

### 0.25 mm (0.0098 in) oversize

**99.745 — 99.765 mm (3.9270 — 3.9278 in)**

# Cylinder Block

MECHANICAL

**0.50 mm (0.0197 in) oversize**  
**99.995 — 100.015 mm (3.9368 — 3.9376 in)**

5) Calculate the clearance between cylinder and piston.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

**Cylinder to piston clearance at 20°C (68°F):**

**Standard**

**-0.010 — 0.010 mm (-0.00039 — 0.00039 in)**

**Limit**

**0.030 mm (0.0012 in)**

6) Boring and honing

(1) If the value of taper, out-of-roundness, or cylinder-to-piston clearance measured exceeds the standard value or if there is any damage on the cylinder wall, rebores it to use an oversize piston.

**CAUTION:**

**When any of the cylinders needs reboring, all other cylinders must be bored at the same time, and use oversize pistons. Do not perform boring on one cylinder only. Nor use an oversize piston for one cylinder only.**

(2) If the cylinder inner diameter exceeds limit after boring and honing, replace the cylinder block.

**Limit of cylinder inner diameter (diameter):**

**100.005 mm (3.937 in)**

NOTE:

Immediately after reboring, the cylinder diameter may differ from its real diameter due to temperature rise. Thus, pay attention when measuring the cylinder diameter.

## 3. PISTON AND PISTON PIN

1) Check the pistons and piston pins for damage, cracks and wear, and the piston ring grooves for wear and damage. Replace if defective.

2) Measure the piston-to-cylinder clearance at each cylinder. <Ref. to ME(H4SO)-78, CYLINDER AND PISTON, INSPECTION, Cylinder Block.> If any of the clearances is not within the standard value, replace the piston. Or bore the cylinder to use an oversize piston.

3) Make sure that the piston pin can be inserted into the piston pin hole with a thumb at 20°C (68°F). Replace if defective.

**Clearance between piston hole and piston pin:**

**Standard**

**0.004 — 0.008 mm (0.0002 — 0.0003 in)**

**Limit**

**0.020 mm (0.0008 in)**

4) Check the snap ring installation groove (A) on the piston for burr. If necessary, remove burr from the groove so that the piston pin can lightly move.

5) Check the piston pin snap ring for distortion, cracks and wear.

## 4. PISTON RING

1) If the piston ring is broken, damaged or worn, or if its tension is insufficient, or when the piston is replaced, replace the piston ring with a new one of the same size as the piston.

**CAUTION:**

- Mark is displayed on the end of top and second rings. When installing the rings to the piston, face these marks upward.
- Oil ring consists of the upper rail, expander and lower rail. Be careful about the direction of rail when installing the oil ring to piston.

- (A) Upper rail
- (B) Expander
- (C) Lower rail

2) Clean the piston ring groove and piston ring.  
 3) Squarely place the piston ring and oil ring in cylinder, and measure the piston ring gap with a thickness gauge.

|                           |                | Standard<br>mm (in)                 | Limit<br>mm (in) |
|---------------------------|----------------|-------------------------------------|------------------|
| Piston ring<br>closed gap | Top ring       | 0.20 — 0.35<br>(0.0079 —<br>0.0138) | 1.0 (0.039)      |
|                           | Second<br>ring | 0.37 — 0.52<br>(0.0144 —<br>0.0203) | 1.0 (0.039)      |
|                           | Oil ring rail  | 0.20 — 0.50<br>(0.0079 —<br>0.0197) | 1.5 (0.059)      |

4) Measure the clearance between piston ring and piston ring groove with a thickness gauge.

|  |                | Standard<br>mm (in)                   | Limit<br>mm (in) |
|--|----------------|---------------------------------------|------------------|
| Clearance<br>between<br>piston ring<br>and piston<br>ring groove | Top ring       | 0.040 — 0.080<br>(0.0016 —<br>0.0031) | 0.15 (0.0059)    |
|  | Second<br>ring | 0.030 — 0.070<br>(0.0012 —<br>0.0028) | 0.15 (0.0059)    |

## 5. CONNECTING ROD

1) Replace the connecting rod, if the large or small end thrust surface is damaged.  
 2) Check for bend or twist using a connecting rod aligner. Replace the connecting rod if the bend or twist exceeds the limit.

# Cylinder Block

MECHANICAL

**Limit of bend or twist per 100 mm (3.94 in) in length:**

**0.10 mm (0.0039 in)**

- (A) Thickness gauge
- (B) Connecting rod

3) Install the connecting rod fitted with bearing to crankshaft and measure the side clearance (thrust clearance). If side clearance exceeds the limit, replace the connecting rod.

**Connecting rod side clearance:**

**Standard**

**0.070 — 0.330 mm (0.0028 — 0.0130 in)**

**Limit**

**0.4 mm (0.016 in)**

4) Inspect the connecting rod bearing for scar, peeling, seizure, melting, wear, etc.

5) Measure the oil clearance on individual connecting rod bearings by means of plastigauge. If any oil clearance is not within the specification, replace the defective bearing with a new one of standard size or undersize as necessary. (See the table below.)

**Connecting rod oil clearance:**

**Standard**

**0.016 — 0.044 mm (0.00063 — 0.0017 in)**

**Limit**

**0.05 mm (0.0020 in)**

| Unit: mm (in)                 |                                       |                                      |
|-------------------------------|---------------------------------------|--------------------------------------|
| Bearings                      | Bearing size<br>(Thickness at center) | Outer diameter of<br>crank pin       |
| Standard                      | 1.492 — 1.501<br>(0.0587 — 0.0591)    | 51.984 — 52.000<br>(2.0466 — 2.0472) |
| 0.03<br>(0.0012)<br>undersize | 1.510 — 1.513<br>(0.0594 — 0.0596)    | 51.954 — 51.970<br>(2.0454 — 2.0461) |
| 0.05<br>(0.0020)<br>undersize | 1.520 — 1.523<br>(0.0598 — 0.0600)    | 51.934 — 51.950<br>(2.0446 — 2.0453) |
| 0.25<br>(0.0098)<br>undersize | 1.620 — 1.623<br>(0.0638 — 0.0639)    | 51.734 — 51.750<br>(2.0368 — 2.0374) |

6) Inspect the bushing at connecting rod small end, and replace if worn or damaged. Also measure the piston pin clearance at the connecting rod small end.

**Clearance between piston pin and bushing:**

**Standard**

**0 — 0.022 mm (0 — 0.0009 in)**

**Limit**

**0.030 mm (0.0012 in)**

7) Replacement procedure is as follows.

(1) Remove the bushing from connecting rod with ST and press.

(2) Press the bushing with ST after applying oil on the periphery of bushing.

ST 499037100 CONNECTING ROD BUSHING REMOVER & INSTALLER

(3) Make two 3 mm (0.12 in)-holes in bushing. Ream the inside of bushing.

(4) After completion of reaming, clean the bushing to remove chips.

## 6. CRANKSHAFT AND CRANKSHAFT BEARING

1) Clean the crankshaft completely, and check it for cracks using liquid penetrant tester. Replace if faulty.

2) Measure the bend of crankshaft. If it exceeds the limit, repair or replace it.

### NOTE:

If a suitable V-block is not available, install #1 and #5 crankshaft bearing on cylinder block, position the crankshaft on these bearings, and then measure the crankshaft bend using a dial gauge.

**Crankshaft bend limit:**  
**0.035 mm (0.0014 in)**

3) Inspect the crank journal and crank pin for wear. If they are not within the specifications, replace the bearing with a suitable (undersize) one, and replace or recondition crankshaft as necessary. When grinding the crank journal or crank pin, finish them to the specified dimensions according to the undersize bearing to be used.

### Crank pin:

**Out-of-roundness**

**0.003 mm (0.0001 in)**

**Cylindricality**

**0.004 mm (0.0002 in)**

**Grinding limit**

**To 51.750 mm (2.0374 in) dia.**

### Crank journal:

**Out-of-roundness**

**0.005 mm (0.0002 in)**

**Cylindricality**

**0.006 mm (0.0002 in)**

**Grinding limit**

**To 59.750 mm (2.3524 in) dia.**

4) Measure the side clearance of crankshaft at center bearing. If clearance exceeds the limit, replace the bearing.

### **Crankshaft side clearance:**

#### **Standard**

**0.030 — 0.115 mm (0.0012 — 0.0045 in)**

#### **Limit**

**0.25 mm (0.0098 in)**

5) Inspect individual crankshaft bearings for signs of flaking, seizure, melting and wear.

6) Measure the oil clearance on each crankshaft bearing by means of plastigauge. If the measurement is not within the specification, replace the defective bearing with an undersize one, and replace or recondition the crankshaft as necessary.

### **Crankshaft oil clearance:**

#### **Standard**

**0.010 — 0.030 mm (0.0004 — 0.0012 in)**

#### **Limit**

**0.040 mm (0.0016 in)**

## 22. Oil Switching Solenoid Valve

### A: REMOVAL

#### 1. RH SIDE

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake chamber. <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 3) Remove the engine harness connector from bracket.

- 4) Disconnect the connector from the oil switching solenoid valve.
- 5) Remove the oil switching solenoid valve.
- 6) Remove the variable valve lift diagnosis oil pressure switch. <Ref. to FU(H4SO)-34, REMOVAL, Variable Valve Lift Diagnosis Oil Pressure Switch.>
- 7) Remove the oil temperature sensor. <Ref. to FU(H4SO)-35, REMOVAL, Oil Temperature Sensor.>
- 8) Remove the oil switching solenoid valve holder from cylinder head.

- (A) Oil switching solenoid valve
- (B) Variable valve lift diagnosis oil pressure switch
- (C) Oil temperature sensor
- (D) Oil switching solenoid valve holder
- (E) Gasket

#### 2. LH SIDE

- 1) Disconnect the ground cable from battery.
- 2) Remove the V-belt. <Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
- 3) Remove the crank pulley. <Ref. to ME(H4SO)-42, REMOVAL, Crank Pulley.>
- 4) Remove the timing belt cover. <Ref. to ME(H4SO)-43, REMOVAL, Timing Belt Cover.>
- 5) Remove the timing belt. <Ref. to ME(H4SO)-44, REMOVAL, Timing Belt.>
- 6) Remove the cam sprocket. <Ref. to ME(H4SO)-49, REMOVAL, Cam Sprocket.>
- 7) Remove the timing belt cover No. 2 (LH).
- 8) Disconnect the connector from the oil switching solenoid valve.
- 9) Remove the oil switching solenoid valve.
- 10) Remove the variable valve lift diagnosis oil pressure switch. <Ref. to FU(H4SO)-34, REMOVAL, Variable Valve Lift Diagnosis Oil Pressure Switch.>
- 11) Remove the oil switching solenoid valve holder from cylinder head.

- (A) Oil switching solenoid valve
- (B) Variable valve lift diagnosis oil pressure switch
- (C) Oil switching solenoid valve holder
- (D) Gasket

# Oil Switching Solenoid Valve

MECHANICAL

## B: INSTALLATION

### 1. RH SIDE

Install in the reverse order of removal.

NOTE:

- Apply liquid gasket to the thread of variable valve lift diagnosis oil pressure switch.
- Use a new gasket.

**Liquid gasket:**

**THREE BOND 1324 (Part No. 004403042)**

**Tightening torque:**

**T1: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

**T2: 10 N·m (1.0 kgf-m, 7.4 ft-lb)**

**T3: 17 N·m (1.7 kgf-m, 12.5 ft-lb)**

**T4: 18 N·m (1.8 kgf-m, 13.3 ft-lb)**

- (A) Oil switching solenoid valve
- (B) Variable valve lift diagnosis oil pressure switch
- (C) Oil temperature sensor
- (D) Oil switching solenoid valve holder
- (E) Gasket
- (F) Oil temperature sensor gasket

### 2. LH SIDE

Install in the reverse order of removal.

NOTE:

- Apply liquid gasket to the thread of variable valve lift diagnosis oil pressure switch.
- Use a new gasket.

**Liquid gasket:**

**THREE BOND 1324 (Part No. 004403042)**

**Tightening torque:**

**T1: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

**T2: 10 N·m (1.0 kgf-m, 7.4 ft-lb)**

**T3: 17 N·m (1.7 kgf-m, 12.5 ft-lb)**

- (A) Oil switching solenoid valve
- (B) Variable valve lift diagnosis oil pressure switch
- (C) Oil switching solenoid valve holder
- (D) Gasket

## 23.Intake and Exhaust Valve

### A: SPECIFICATION

For the removal and installation procedure of intake and exhaust valve, refer to "Cylinder Head". <Ref. to ME(H4SO)-58, REMOVAL, Cylinder Head.>  
<Ref. to ME(H4SO)-58, INSTALLATION, Cylinder Head.>

## 24.Piston

### A: SPECIFICATION

For the removal and installation procedure of piston, refer to "Cylinder Block". <Ref. to ME(H4SO)-65, REMOVAL, Cylinder Block.> <Ref. to ME(H4SO)-69, INSTALLATION, Cylinder Block.>

## 25.Connecting Rod

### A: SPECIFICATION

For the removal and installation procedure of connecting rod, refer to "Cylinder Block". <Ref. to ME(H4SO)-65, REMOVAL, Cylinder Block.> <Ref. to ME(H4SO)-69, INSTALLATION, Cylinder Block.>

## 26.Crankshaft

### A: SPECIFICATION

For the removal and installation procedure of crankshaft, refer to "Cylinder Block". <Ref. to ME(H4SO)-65, REMOVAL, Cylinder Block.> <Ref. to ME(H4SO)-69, INSTALLATION, Cylinder Block.>

## 27.Engine Trouble in General

### A: INSPECTION

NOTE:

“RANK” shown in the chart refers to the possibility of reason for the trouble in order (“Very often” to “Rarely”)

A — Very often

B — Sometimes

C — Rarely

| Symptom                               | Problem parts, etc.   | Possible cause                                   | RANK |
|---------------------------------------|---|--|------|
| 1. Engine does not start.             |   |  |      |
| 1) Starter does not turn.             | Starter   | Defective battery-to-starter harness             | B    |
|                                       |   | Defective starter switch                         | C    |
|                                       |   | Defective inhibitor switch                       | C    |
|                                       |   | Defective starter                                | B    |
|                                       | Battery   | Poor terminal connection                         | A    |
|                                       |   | Run-down battery                                 | A    |
|                                       |   | Defective charging system                        | B    |
|                                       | Friction  | Seizure of crankshaft and connecting rod bearing | C    |
|                                       |   | Seized camshaft                                  | C    |
| Seized or stuck piston and cylinder   |   | C  |      |
| 2) Initial combustion does not occur. | Starter   | Defective starter                                | C    |
|                                       | Engine control system <Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.> |  | A    |
|                                       | Fuel line   | Defective fuel pump and relay                    | A    |
|                                       |   | Clogged fuel line                                | A    |
|                                       |   | Lack of or insufficient fuel                     | B    |
|                                       | Belt  | Trouble  | B    |
|                                       |   | Defective timing                                 | B    |
|                                       | Compression   | Incorrect valve clearance                        | C    |
|                                       |   | Loosened spark plug or defective gasket          | C    |
|                                       |   | Loosened cylinder head bolt or defective gasket  | C    |
|                                       |   | Improper valve sealing                           | C    |
|                                       |   | Defective valve stem                             | C    |
|                                       |   | Worn or broken valve spring                      | B    |
|                                       |   | Worn or stuck piston rings, cylinder and piston  | C    |
| Incorrect valve timing                |   | B  |      |
| Improper engine oil (low viscosity)   | B   |  |      |

|                                |   | Defective valve stem                            |      | C |
|                                |   | Worn or broken valve spring                     |      | C |
|                                |   | Worn or stuck piston rings, cylinder and piston |      | B |
|                                |   | Incorrect valve timing                          |      | B |
|                                | Lubrication system  | Incorrect oil pressure                          | C    |   |
|                                | Cooling system  | Over-cooling                                    | C    |   |

## 28.Engine Noise

### A: INSPECTION

| Type of sound   | Condition  | Possible cause  |
|---|--|---|
| Regular clicking sound  | Sound increases as engine speed increases.   | <ul style="list-style-type: none"> <li>• Valve mechanism is defective.</li> <li>• Incorrect valve clearance</li> <li>• Worn valve rocker</li> <li>• Worn camshaft</li> <li>• Broken valve spring</li> </ul> |
| Heavy and dull clank  | Oil pressure is low.   | <ul style="list-style-type: none"> <li>• Worn crankshaft main bearing</li> <li>• Worn connecting rod bearing (big end)</li> </ul>   |
|   | Oil pressure is normal.  | Damaged engine mounting   |
| High-pitched clank (Spark knock)  | Sound is noticeable when accelerating with an overload.                                  | <ul style="list-style-type: none"> <li>• Ignition timing advanced</li> <li>• Accumulation of carbon inside combustion chamber</li> <li>• Wrong spark plug</li> <li>• Improper gasoline</li> </ul>           |
| Clank when engine speed is 1,000 to 2,000 rpm                                 | Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*) | <ul style="list-style-type: none"> <li>• Worn crankshaft main bearing</li> <li>• Worn bearing at crankshaft end of connecting rod</li> </ul>  |
| Knocking sound when engine is operating under idling speed and engine is warm | Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*) | <ul style="list-style-type: none"> <li>• Worn cylinder liner and piston ring</li> <li>• Broken or stuck piston ring</li> <li>• Worn piston pin and hole at piston end of connecting rod</li> </ul>          |
|   | Sound is not reduced if each fuel injector connector is disconnected in turn. (NOTE*)    | <ul style="list-style-type: none"> <li>• Worn cam sprocket</li> <li>• Worn camshaft journal bore in cylinder head assembly</li> </ul>   |
| Squeaky sound   | —  | Insufficient generator lubrication  |
| Rubbing sound   | —  | Defective generator brush and rotor contact   |
| Gear scream when starting engine  | —  | <ul style="list-style-type: none"> <li>• Defective ignition starter switch</li> <li>• Worn gear and starter pinion</li> </ul>   |
| Sound like polishing glass with a dry cloth                                   | —  | <ul style="list-style-type: none"> <li>• Loose drive belt</li> <li>• Defective water pump shaft</li> </ul>  |
| Hissing sound   | —  | <ul style="list-style-type: none"> <li>• Loss of compression</li> <li>• Air leakage in air intake system, hoses, connections or manifolds</li> </ul>  |
| Timing belt noise   | —  | <ul style="list-style-type: none"> <li>• Loose timing belt</li> <li>• Belt contacting with case/adjacent part</li> </ul>  |
| Valve noise   | —  | Incorrect valve clearance   |

NOTE\*)

When disconnecting the fuel injector connector, the malfunction indicator light illuminates and DTC is stored in ECM memory. Therefore, carry out the clear memory mode <Ref. to EN(H4SO)(diag)-46, OPERATION, Clear Memory Mode.> and inspection mode <Ref. to EN(H4SO)(diag)-36, PROCEDURE, Inspection Mode.> after connecting the fuel injector connector.

## B: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

# Front Exhaust Pipe

EXHAUST

## 2. Front Exhaust Pipe

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the front oxygen (A/F) sensor connector (A) and rear oxygen sensor connector (B).

- 3) Lift-up the vehicle.
- 4) Separate the front and center exhaust pipe assembly and rear exhaust pipe.

#### CAUTION:

Be careful, the exhaust pipe is hot.

- 5) Remove the under cover.
- 6) Remove the nuts which hold the front exhaust pipe onto cylinder heads.

#### CAUTION:

Be careful not to pull down the front and center exhaust pipe assembly.

- 7) Remove the bolt which installs the front and center exhaust pipe assembly to hanger bracket.

- 8) Remove the front and center exhaust pipe assembly from vehicle.

#### CAUTION:

- Be careful not to let the front and center exhaust pipe assembly fall off when removing as it is quite heavy.
- After removing the front and center exhaust pipe assembly, do not apply excessive pulling force on the rear exhaust pipe.

- 9) Separate the front exhaust pipe from center exhaust pipe.

- 10) Remove the front oxygen (A/F) sensor and the rear oxygen sensor. <Ref. to FU(H4SO)-36, REMOVAL, Front Oxygen (A/F) Sensor.> <Ref. to FU(H4SO)-37, REMOVAL, Rear Oxygen Sensor.>

### B: INSTALLATION

#### CAUTION:

If the covers have been removed, tighten the front catalytic converter cover first for noise suppression. Then install the other covers.

- 1) Install the front oxygen (A/F) sensor and the rear oxygen sensor. <Ref. to FU(H4SO)-36, INSTALLATION, Front Oxygen (A/F) Sensor.> <Ref. to FU(H4SO)-37, INSTALLATION, Rear Oxygen Sensor.>
- 2) Install the front exhaust pipe to center exhaust pipe.

#### NOTE:

Replace the gaskets with new ones.

**Tightening torque:**  
**40 N·m (4.1 kgf·m, 29.5 ft·lb)**

- 3) Install the front and center exhaust pipe assembly to vehicle.
- 4) Temporarily tighten the bolt which installs the front and center exhaust pipe assembly to hanger bracket.

- 5) Tighten the nuts which hold the front exhaust pipe onto cylinder heads.

**Tightening torque:**  
**30 N·m (3.1 kgf·m, 22.4 ft·lb)**

- 6) Install the under cover.
- 7) Tighten the bolts which install the front and center exhaust pipe assembly to rear exhaust pipe.

**Tightening torque:**  
**18 N·m (1.8 kgf·m, 13.0 ft·lb)**

- 8) Tighten the bolt which holds the front and center exhaust pipe assembly to hanger bracket.

**Tightening torque:**  
**35 N·m (3.6 kgf·m, 26.0 ft·lb)**

- 9) Lower the vehicle.
- 10) Connect the front oxygen (A/F) sensor connector (A) and rear oxygen sensor connector (B).

- 11) Connect the ground cable to battery.

## C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

## 3. Center Exhaust Pipe

### A: REMOVAL

After removing the center and front exhaust pipes as one unit, separate them. Refer to the procedure for removing the front exhaust pipe. <Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.>

### B: INSTALLATION

Install the center exhaust pipe and front exhaust pipe as one unit. Refer to the procedure for installing the front exhaust pipe. <Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.>

### C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

## 4. Rear Exhaust Pipe

### A: REMOVAL

1) Separate the rear exhaust pipe from center exhaust pipe.

**CAUTION:**

Be careful, the exhaust pipe is hot.

2) Separate the rear exhaust pipe from muffler.

**CAUTION:**

Be careful not to pull down the rear exhaust pipe.

3) Apply a coat of spray type lubricant to the mating area of cushion rubbers in advance.

4) Remove the rear exhaust pipe bracket from cushion rubber.

### B: INSTALLATION

1) Apply a coat of spray type lubricant to the mating area of cushion rubbers in advance.

2) Install the rear exhaust pipe bracket to cushion rubber.

3) Install the rear exhaust pipe to muffler.

**NOTE:**

Replace the gaskets and self-locking nuts with new ones.

**Tightening torque:**

**48 N·m (4.9 kgf-m, 35.4 ft-lb)**

4) Install the rear exhaust pipe to center exhaust pipe.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

### C: INSPECTION

1) Make sure there are no exhaust leaks from connections and welds.

2) Make sure there are no holes or rusting.

3) Make sure the cushion rubber is not worn or cracked.

# Muffler

## EXHAUST

### 5. Muffler

#### A: REMOVAL

1) Separate the muffler from rear exhaust pipe.

#### CAUTION:

Be careful, the exhaust pipe is hot.

2) Apply a coat of spray type lubricant to the mating area of cushion rubbers in advance.

3) Remove the front, right and left cushion rubber, and detach the muffler assembly.

#### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Replace the gasket and self-locking nuts with new ones.

#### Tightening torque:

**48 N·m (4.9 kgf·m, 35.4 ft·lb)**

#### C: INSPECTION

1) Make sure there are no exhaust leaks from connections and welds.

2) Make sure there are no holes or rusting.

3) Make sure the cushion rubber is not worn or cracked.

## C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

COOLING

## 2. Radiator Main Fan System

### A: WIRING DIAGRAM

RELAY HOLDER (BLACK)

CO-02237

## B: INSPECTION

### DETECTING CONDITION:

- Engine coolant temperature is above 96°C (205°F).
- A/C compressor is rotated.
- Vehicle speed is below 19 km/h (12 MPH).

### TROUBLE SYMPTOM:

- Radiator main fan does not rotate under the above conditions.
- Radiator main fan does not rotate at high speed when the following conditions are both met:
  - (1) Engine coolant temperature is above 90°C (194°F).
  - (2) A/C is ON.

| Step   | Check   | Yes  | No  |
|--|---|--|---|
| <b>1</b><br><b>CHECK OPERATION OF RADIATOR.</b><br>1) Run the engine at idle. (Vehicle stationary)<br>2) Turn the A/C switch to OFF.<br>3) Warm the engine coolant temperature over 96°C (205°F).  | Does the main radiator fan rotate?  | Go to step 2.  | Go to step 3.   |
| <b>2</b><br><b>CHECK OPERATION OF RADIATOR.</b><br>Turn the A/C switch to ON at condition of step 1.   | Does the main radiator fan rotate faster when A/C compressor is operated? | Radiator main fan system is okay.                    | Go to step 17.  |
| <b>3</b><br><b>CHECK POWER SUPPLY TO MAIN FAN MOTOR.</b><br><b>CAUTION:</b><br><b>Be careful not to overheat the engine during repair.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from main fan motor.<br>3) Start the engine, and warm it up until engine coolant temperature increases over 96°C (205°F).<br>4) Stop the engine and turn ignition switch to ON.<br>5) Measure the voltage between main fan motor connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(F17) No. 1 (+) — Chassis ground (-):</b> | Is the voltage more than 10 V?  | Go to step 4.  | Go to step 7.   |

# Radiator Sub Fan System

COOLING

## B: INSPECTION

### DETECTING CONDITION:

- Engine coolant temperature is above 96°C (205°F).
- A/C compressor is rotated.
- Vehicle speed is below 19 km/h (12 MPH).

### TROUBLE SYMPTOM:

- Radiator sub fan does not rotate under the above conditions.
- Radiator sub fan does not rotate at high speed when the following conditions are both met:
  - (1) Engine coolant temperature is above 90°C (194°F).
  - (2) A/C is ON.

|   | Step  | Check  | Yes   | No   |
|---|---|--|---|--|
| 1 | <b>CHECK OPERATION OF RADIATOR.</b><br>1) Run the engine at idle. (Vehicle stationary)<br>2) Turn the A/C switch to OFF.<br>3) Warm the engine coolant temperature over 96°C (205°F).   | Does the radiator sub fan rotate?  | Go to step 2.                                       | Go to step 3.  |
| 2 | <b>CHECK OPERATION OF RADIATOR.</b><br>Turn the A/C switch to ON at condition of step 1.  | Does the radiator sub fan rotate faster when A/C compressor is operated? | Radiator sub fan system is okay.                    | Go to step 17.   |
| 3 | <b>CHECK POWER SUPPLY TO SUB FAN MOTOR.</b><br><b>CAUTION:</b><br><b>Be careful not to overheat the engine during repair.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from sub fan motor.<br>3) Start the engine, and warm it up until engine coolant temperature increases over 96°C (205°F).<br>4) Stop the engine and turn ignition switch to ON.<br>5) Measure the voltage between sub fan motor connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(F16) No. 1 (+) — Chassis ground (-):</b> | Is the voltage more than 10 V?   | Go to step 4.                                       | Go to step 7.  |
| 4 | <b>CHECK GROUND CIRCUIT OF SUB FAN MOTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between sub fan motor connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(F16) No. 3 — Chassis ground:</b><br><b>(F16) No. 4 — Chassis ground:</b>  | Is the resistance less than 5 Ω?   | Go to step 5.                                       | Repair the open circuit in harness between sub fan motor connector and chassis ground. |
| 5 | <b>CHECK POOR CONTACT.</b><br>Check poor contact in sub fan motor connector.  | Is there poor contact in sub fan motor connector?                        | Repair the poor contact in sub fan motor connector. | Go to step 6.  |

## 4. Engine Coolant

### A: REPLACEMENT

#### 1. DRAINING OF ENGINE COOLANT

- 1) Lift-up the vehicle.
- 2) Remove the under cover.
- 3) Remove the drain plug to drain engine coolant into container.

**NOTE:**

- Remove the radiator cap so that engine coolant will drain faster.
- If engine coolant adheres to the exhaust pipe, wipe it off completely.

- 4) Install the drain plug.

#### 2. FILLING OF ENGINE COOLANT

- 1) Pour cooling system conditioner through the filler neck.

**Cooling system protective agent:**

**COOLING SYSTEM CONDITIONER (Part No. SOA635071)**

- 2) Fill engine coolant into the radiator up to filler neck position.

**Coolant capacity (fill up to "FULL" level):**

**AT model:**

**Approx. 6.9 ℓ (7.3 US qt, 6.1 Imp qt)**

**MT model:**

**Approx. 7.0 ℓ (7.4 US qt, 6.2 Imp qt)**

**NOTE:**

The SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crankcase. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.

- 3) Fill engine coolant into the reservoir tank up to "FULL" level.

- 4) Close the radiator cap and start the engine. Race 5 to 6 times at less than 3,000 rpm, then stop the engine. (Complete this operation within 40 seconds.)
- 5) Wait for one minute after the engine stops, open the radiator cap. If the engine coolant level drops, add engine coolant into radiator up to the filler neck position.
- 6) Perform the procedures 4) and 5) again.
- 7) Attach the radiator cap and reservoir tank cap properly.
- 8) Start the engine and operate the heater at maximum hot position and the blower speed setting to "LO".
- 9) Run the engine at 2,000 rpm or less until radiator fan starts and stops.

**NOTE:**

- Be careful with the engine coolant temperature gauge to prevent overheating.
  - If the radiator hose becomes to harden by the pressure of engine coolant, air bleeding operation seems to be almost completed.
- 10) Stop the engine and wait until engine coolant temperature lowers to 30°C (86°F).
  - 11) Open the radiator cap. If the engine coolant level drops, add engine coolant into radiator up to the filler neck position and reservoir tank to "FULL" level.
  - 12) Attach the radiator cap and reservoir tank cap properly.
  - 13) Operate the heater at maximum hot position and the blower speed setting to "LO" and start the engine. Race at less than 3,000 rpm. If the flowing sound is heard at this time, perform the procedures from 9) again.

## B: INSPECTION

### 1. RELATIONSHIP OF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

The concentration and safe operating temperature of the SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.

[Example]

If the coolant temperature is 25°C (77°F) and its specific gravity is 1.054 and the concentration is 35% (point A), the safe operating temperature is -14°C (7°F) (point B), and the freezing temperature is -20°C (-4°F) (point C).

### 2. PROCEDURE TO ADJUST THE CONCENTRATION OF THE COOLANT

To adjust the concentration of the coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50%).

The amount of coolant that should be replaced can be determined using the diagram.

[Example]

Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 ℓ (2.2 US qt, 1.8 Imp qt). Drain 2.1 ℓ (2.2 US qt, 1.8 Imp qt) of coolant from the cooling system and add 2.1 ℓ (2.2 US qt, 1.8 Imp qt) of the undiluted solution of SUBARU coolant.

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.

# Water Pump

COOLING

## 5. Water Pump

### A: REMOVAL

- 1) Remove the radiator. <Ref. to CO(H4SO)-23, REMOVAL, Radiator.>
- 2) Remove the V-belts.  
<Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
- 3) Remove the crank pulley.  
<Ref. to ME(H4SO)-42, REMOVAL, Crank Pulley.>
- 4) Remove the timing belt.  
<Ref. to ME(H4SO)-44, TIMING BELT, REMOVAL, Timing Belt.>
- 5) Remove the automatic belt tension adjuster.

- 6) Remove the belt idler No. 2.

- 7) Remove the cam sprocket (LH) by using ST.  
ST 18231AA010 CAM SPROCKET WRENCH

#### NOTE:

Also the CAM SPROCKET WRENCH (499207100) can be used.

- 8) Remove the belt cover No. 2 (LH).

- 9) Remove the tensioner bracket.

- 10) Disconnect the hose from water pump.
- 11) Remove the water pump.

### B: INSTALLATION

- 1) Install the water pump onto cylinder block (LH).

#### NOTE:

- Replace the gasket with a new one.
- When installing the water pump, tighten the bolts in two stages in alphabetical sequence as shown in the figure.

**Tightening torque:**

**First:**

**12 N·m (1.2 kgf·m, 8.7 ft·lb)**

**Second:**

**12 N·m (1.2 kgf·m, 8.7 ft·lb)**

- 2) Connect the hose to water pump.
- 3) Install the tensioner bracket.

**Tightening torque:**

**24.5 N·m (2.5 kgf·m, 18.1 ft·lb)**

- 4) Install the belt cover No. 2 (LH).

**Tightening torque:**

**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

- 5) Install the cam sprockets (LH) by using ST.  
ST 18231AA010 CAM SPROCKET WRENCH

**NOTE:**

Also the CAM SPROCKET WRENCH (499207100) can be used.

**Tightening torque:**

**78 N·m (8.0 kgf·m, 57.9 ft·lb)**

- 6) Install the belt idler No. 2.

**Tightening torque:**

**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

- 7) Install the automatic belt tension adjuster whose tension rod is held with pin. <Ref. to ME(H4SO)-45, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt.>
- 8) Install the timing belt. <Ref. to ME(H4SO)-46, TIMING BELT, INSTALLATION, Timing Belt.>
- 9) Install the crank pulley. <Ref. to ME(H4SO)-42, INSTALLATION, Crank Pulley.>
- 10) Install the V-belts. <Ref. to ME(H4SO)-40, INSTALLATION, V-belt.>
- 11) Install the radiator. <Ref. to CO(H4SO)-24, INSTALLATION, Radiator.>

**C: INSPECTION**

- 1) Check the water pump bearing for smooth rotation.
- 2) Check the water pump pulley for abnormalities.
- 3) Check the impeller for damage or abnormal deformation.
- 4) Check the clearance between impeller and pump case.

# Water Pump

COOLING

---

**Clearance between impeller and pump case:**

**Standard**

**0.5 — 1.5 mm (0.020 — 0.060 in)**

5) After water pump installation, check the pulley shaft for engine coolant leaks. If leaks are noted, replace the water pump assembly.

## 6. Thermostat

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Lift-up the vehicle.
- 3) Remove the under cover.
- 4) Drain the engine coolant completely. <Ref. to CO(H4SO)-16, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

- 5) Disconnect the radiator outlet hose from thermostat cover.

- 6) Remove the thermostat cover, and then remove the gasket and thermostat.

- (A) Thermostat cover
- (B) Gasket
- (C) Thermostat

### B: INSTALLATION

- 1) Install a gasket to thermostat, and install the thermostat and gasket to water pump as a unit. Then, install the thermostat cover.

#### NOTE:

- When reinstalling the thermostat, use a new gasket.
- The thermostat must be installed with the jiggle pin facing to the up side.

# Thermostat

## COOLING

### Tightening torque:

**12 N·m (1.2 kgf·m, 8.7 ft·lb)**

- (A) Thermostat cover
- (B) Gasket
- (C) Thermostat
- (D) Jiggle pin

- 2) Connect the radiator outlet hose to thermostat cover.
- 3) Install the under cover.
- 4) Lower the vehicle.
- 5) Fill with engine coolant. <Ref. to CO(H4SO)-16, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

## C: INSPECTION

Replace the thermostat if the valve does not close completely at an ambient temperature or if the following test shows unsatisfactory results.

### • Inspection method

Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and measure the temperature and valve lift when the valve begins to open and when the valve is fully opened. During the test, agitate the water for even temperature distribution. The measured value should meet the specification.

### NOTE:

- Leave the thermostat in the boiling water for more than five minutes before measuring the valve lift.
- Hold the thermostat with a wire or the like to avoid contacting with container bottom.

### Starting temperature to open:

**80 — 84°C (176 — 183°F)**

### Fully opens:

**95°C (203°F)**

### Valve lift:

**9.0 mm (0.354 in) or more.**

- (A) Thermometer
- (B) Thermostat

## 7. Radiator

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Lift-up the vehicle.
- 4) Remove the under cover.
- 5) Drain the engine coolant completely. <Ref. to CO(H4SO)-16, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 6) Disconnect the connectors of radiator main fan motor (A) and sub fan motor (B).

- 7) Disconnect the radiator outlet hose from water pump.

- 8) Disconnect the ATF cooler hoses from ATF pipe. (AT model) Plug the openings in the hose and radiator with caps in order to prevent ATF from leaking.

- 9) Lower the vehicle.
- 10) Disconnect the overflow hose.
- 11) Remove the reservoir tank. <Ref. to CO(H4SO)-29, REMOVAL, Reservoir Tank.>
- 12) Remove the air intake duct.
- 13) Disconnect the radiator inlet hose from engine.

- 14) Remove the radiator upper brackets.

- 15) Detach the power steering hose from clip on radiator.

# Radiator

## COOLING

16) Lift the radiator up and away from the vehicle.

### B: INSTALLATION

1) Attach the radiator lower cushions to holes on the radiator lower bracket.

2) Install the radiator to vehicle.

#### NOTE:

Fit the pins on lower side of radiator into the cushions on the body side.

3) Install the radiator upper brackets, and then tighten the bolts.

#### Tightening torque:

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

4) Attach the power steering hose to radiator.

5) Connect the radiator inlet hose.

6) Install the air intake duct.

7) Install the reservoir tank.

8) Connect the overflow hose.

9) Lift-up the vehicle.

10) Connect the ATF cooler hoses. (AT model)

11) Connect the radiator outlet hose.

12) Connect the connectors to radiator main fan motor (A) and sub fan motor (B).

- If engine coolant adheres to the exhaust pipe, wipe it off completely.
- Be careful to prevent engine coolant from spurting out when removing the tester.
- Be careful also not to deform the filler neck of radiator when installing or removing tester.

13) Install the under cover.

14) Lower the vehicle.

15) Connect the battery ground cable to battery.

16) Fill engine coolant. <Ref. to CO(H4SO)-16, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

17) Check the ATF level. <Ref. to 4AT-30, INSPECTION, Automatic Transmission Fluid.>

## C: INSPECTION

1) Remove the radiator cap, top off radiator, and then attach the tester to radiator in place of cap.

2) Apply a pressure of 157 kPa (1.6 kgf/cm<sup>2</sup>, 23 psi) to the radiator in the follow cases.

(1) Engine coolant leaks at/around radiator.

(2) Engine coolant leaks at/around hoses or connections.

### CAUTION:

- Engine should be turned off.
- Wipe engine coolant from check points in advance.

## 8. Radiator Cap

### A: INSPECTION

1) Attach the radiator cap to tester.

2) Increase the pressure until tester gauge pointer stops. Radiator cap is functioning properly if it holds the service limit pressure for 5 to 6 seconds.

**Standard pressure:**

**93 — 123 kPa (0.95 — 1.25 kgf/cm<sup>2</sup>, 14 — 18 psi)**

**Service limit pressure:**

**83 kPa (0.85 kgf/cm<sup>2</sup>, 12 psi)**

**CAUTION:**

**Be sure to remove foreign matter and rust from the cap in advance. Otherwise, results of pressure test will be incorrect.**

## 9. Radiator Main Fan and Fan Motor

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Lift-up the vehicle.
- 4) Remove the under cover.
- 5) Disconnect the connector of main fan motor (A).

- 6) Remove the ATF hose from clip of radiator main fan motor assembly. (AT model)
- 7) Lower the vehicle.
- 8) Disconnect the overflow hose.
- 9) Remove the reservoir tank. <Ref. to CO(H4SO)-29, REMOVAL, Reservoir Tank.>
- 10) Remove the bolts which secure the radiator main fan shroud to radiator.

- 11) Remove the radiator fan motor assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

- If it is difficult to install the radiator main fan motor assembly, first loosen the bolts which hold the radiator sub fan motor assembly.
- Refer to COMPONENT for tightening torque. <Ref. to CO(H4SO)-3, COMPONENT, General Description.>

### C: DISASSEMBLY

- 1) Remove the nut which holds the fan onto fan motor.

- 2) Remove the bolts which install the fan motor onto shroud.

### D: ASSEMBLY

Assemble in the reverse order of disassembly.

#### Tightening torque:

**4.4 N·m (0.45 kgf·m, 3.3 ft·lb)**

#### Tightening torque:

**3.4 N·m (0.35 kgf·m, 2.5 ft·lb)**

# Radiator Sub Fan and Fan Motor

COOLING

## 10. Radiator Sub Fan and Fan Motor

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Lift-up the vehicle.
- 4) Remove the under cover.
- 5) Disconnect the connector of sub fan motor (B).

- 6) Remove the ATF hose from clips of radiator sub fan motor assembly. (AT model)
- 7) Lower the vehicle.
- 8) Remove the air intake duct.
- 9) Remove the bolts which hold the radiator sub fan shroud to radiator.

- 10) Remove the radiator sub fan motor assembly through the under side of vehicle.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Refer to COMPONENT for tightening torque. <Ref. to CO(H4SO)-3, COMPONENT, General Description.>

### C: DISASSEMBLY

- 1) Remove the clip which holds the motor connector onto shroud.

- 2) Remove the nut which holds the fan onto fan motor.

- 3) Remove the bolts which install the fan motor onto shroud.

### D: ASSEMBLY

Assemble in the reverse order of disassembly.

#### Tightening torque:

**4.4 N·m (0.45 kgf·m, 3.3 ft·lb)**

#### Tightening torque:

**3.4 N·m (0.35 kgf·m, 2.5 ft·lb)**

## 11. Reservoir Tank

### A: REMOVAL

- 1) Disconnect the overflow hose from the radiator filler neck position.
- 2) While pressing the pawl (A), remove the reservoir tank by pulling in the direction of arrow.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Make sure the engine coolant level is between "FULL" and "LOW".

# Engine Cooling System Trouble in General

COOLING

## 12.Engine Cooling System Trouble in General

### A: INSPECTION

| Trouble                        | Possible cause  | Corrective action  |
|--------------------------------|---|--|
| Over-heating                   | a. Insufficient engine coolant  | Replenish the engine coolant, inspect for leakage, and repair.   |
|                                | b. Loose timing belt  | Repair or replace the timing belt tensioner.   |
|                                | c. Oil on timing belt   | Replace.   |
|                                | d. Malfunction of thermostat  | Replace.   |
|                                | e. Malfunction of water pump  | Replace.   |
|                                | f. Clogged engine coolant passage   | Clean.   |
|                                | g. Improper ignition timing   | Inspect and repair the ignition control system.<br><Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.> |
|                                | h. Clogged or leaking radiator  | Clean or repair, or replace.   |
|                                | i. Improper engine oil in engine coolant  | Replace the engine coolant.  |
|                                | j. Air/fuel mixture ratio too lean  | Inspect and repair the fuel injection system.<br><Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.>   |
|                                | k. Excessive back pressure in exhaust system  | Clean or replace.  |
|                                | l. Insufficient clearance between piston and cylinder   | Adjust or replace.   |
|                                | m. Slipping clutch  | Repair or replace.   |
| n. Dragging brake              | Adjust.   |  |
| o. Malfunction of radiator fan | Inspect the radiator fan relay, engine coolant temperature sensor or radiator motor and replace them. |  |
| Over-cooling                   | a. Atmospheric temperature extremely low  | Partly cover the radiator front area.  |
|                                | b. Defective thermostat   | Replace.   |
| Engine coolant leaks           | a. Loosened or damaged connecting units on hoses  | Repair or replace.   |
|                                | b. Leakage from water pump  | Replace.   |
|                                | c. Leakage from water pipe  | Repair or replace.   |
|                                | d. Leakage around cylinder head gasket  | Retighten the cylinder head bolts or replace gasket.   |
|                                | e. Damaged or cracked cylinder head and cylinder block  | Repair or replace.   |
|                                | f. Damaged or cracked thermostat case   | Repair or replace.   |
|                                | g. Leakage from radiator  | Repair or replace.   |
| Noise                          | a. Defective timing belt  | Replace.   |
|                                | b. Defective radiator fan   | Replace.   |
|                                | c. Defective water pump bearing   | Replace the water pump.  |
|                                | d. Defective water pump mechanical seal   | Replace the water pump.  |

|                                  | When replacing engine oil only                   |                          | 4.0 ℓ (4.2 US qt, 3.5 Imp qt)                        |

#### Recommended oil:

**API standard SM with the “Energy Conserving” logo is printed.**

**ILSAC standard, GF4 “Star burst mark” label is on the container.**

- (1) SAE viscosity No. and applicable temperature  
 (2) Recommended

The proper viscosity helps vehicle get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.

**CAUTION:**

**When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the API standard and SAE viscosity No. designated by SUBARU.**

**NOTE:**

If the vehicle is used in areas with very high temperatures or for other heavy duty applications, the following viscosity oils may be used: API standard:

SM or SL

SAE Viscosity No.: 30, 40, 10W-50, 20W-40, 20W-50.

# General Description

LUBRICATION

## B: COMPONENT

LU-02222

- |                         |                            |                   |

| (2) Gasket              | (14) Oil filler duct       | (26) Metal gasket |
| (3) Relief valve spring | (15) O-ring                | (27) Gasket       |
| (4) Relief valve        | (16) Oil filler cap        | (28) Seal         |
| (5) Oil seal            | (17) O-ring                | (29) Rocker cover |
| (6) Oil pump case       | (18) Baffle plate          |                   |
| (7) Inner rotor         | (19) O-ring                |                   |
| (8) Outer rotor         | (20) Oil strainer          |                   |
| (9) Oil pump cover      | (21) Oil level gauge guide |                   |
| (10) Oil filter         | (22) O-ring                |                   |
| (11) O-ring             | (23) Oil pan               |                   |
| (12) Oil pump ASSY      | (24) Oil level gauge       |                   |

### Tightening torque: N-m (kgf-m, ft-lb)

**T1: 5.4 (0.55, 4.0)**

**T2: 6.4 (0.65, 4.7)**

**T3: 10 (1.0, 7.2)**

**T4: 25 (2.5, 18.1)**

**T5: 44 (4.5, 32.5)**

LU(H4SO)-4

### **C: CAUTION**

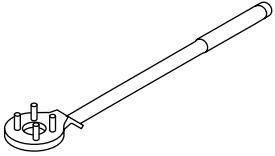

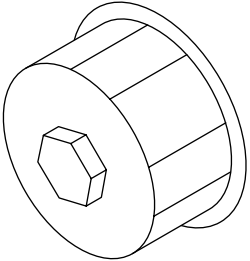

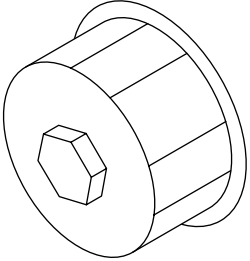

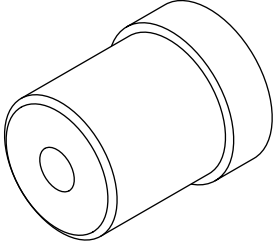

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

# General Description

LUBRICATION

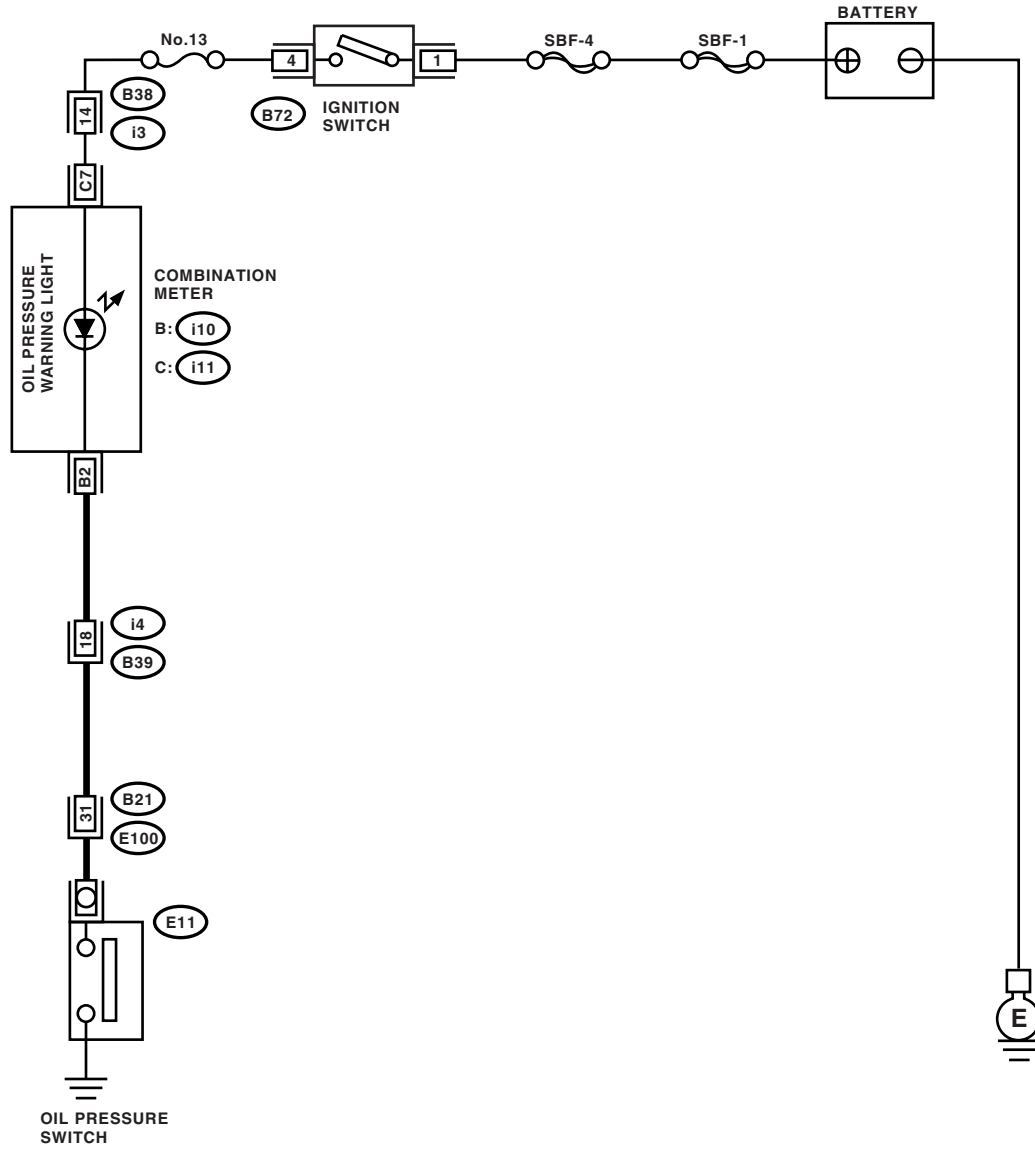

## D: PREPARATION TOOL

### 1. SPECIAL TOOL

| ILLUSTRATION  | TOOL NUMBER | DESCRIPTION         | REMARKS   |
|---|-------------|---------------------|---|
|  <p style="text-align: center;">ST-499977100</p>   | 499977100   | CRANK PULLEY WRENCH | Used for stopping rotation of crankshaft pulley when loosening and tightening crankshaft pulley bolt. |
|  <p style="text-align: center;">ST18332AA000</p>  | 18332AA000  | OIL FILTER WRENCH   | Used for removing and installing oil filter. (Outer diameter: 68 mm (2.68 in))                        |
|  <p style="text-align: center;">ST18332AA010</p> | 18332AA010  | OIL FILTER WRENCH   | Used for removing and installing oil filter. (Outer diameter: 65 mm (2.56 in))                        |
|  <p style="text-align: center;">ST-499587100</p> | 499587100   | OIL SEAL INSTALLER  | Used for installing oil pump oil seal.  |

## 2. Oil Pressure System

# Oil Pressure System

LUBRICATION

## B: INSPECTION

| Step  | Check                                     | Yes  | No  |
|---|---|--|---|
| <b>1 CHECK COMBINATION METER.</b><br>1) Turn the ignition switch to ON (engine OFF).<br>2) Check other warning lights.  | Does the warning lights go on?            | Go to step 2.  | Repair or replace the combination meter. <Ref. to IDI-3, INSPECTION, Combination Meter System.> |
| <b>2 CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND OIL PRESSURE SWITCH.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from oil pressure switch.<br>3) Turn the ignition switch to ON.<br>4) Measure the voltage of harness between the oil pressure switch connector and chassis ground.<br><i>Connector &amp; terminal<br/>(E11) No. 1 (+) — Chassis ground (-):</i> | Is the voltage more than 10 V?            | Replace the oil pressure switch.   | Go to step 3.   |
| <b>3 CHECK COMBINATION METER.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the combination meter.<br>3) Measure the resistance of combination meter.<br><i>Terminals<br/>(i11) No. 7 — (i10) No. 2:</i>  | Is the resistance less than 10 $\Omega$ ? | Replace the harness connector between combination meter and oil pressure switch. | Repair or replace the combination meter. <Ref. to IDI-3, INSPECTION, Combination Meter System.> |

## 3. Engine Oil

### A: INSPECTION

- 1) Park the vehicle on a level surface.
- 2) After turning off the engine, wait a few minutes for the oil to drain back into the oil pan before checking the level.
- 3) Just after driving or while the engine is warm, engine oil level may show in the range between the "F" line and notch mark. This is caused by thermal expansion of the engine oil.
- 4) Remove the oil level gauge and wipe it clean.
- 5) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper orientation.
- 6) Remove it again and note the reading. If the engine oil level is below the "L" line, add oil to bring the level up to "F" line.

**NOTE:**

To prevent overfilling the engine oil, do not add oil above the "F" line when the engine is cold.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. 1.0 ℓ (1.1 US qt, 0.9 Imp qt)

### B: REPLACEMENT

- 1) Open the engine oil filler cap for quick draining of the engine oil.
- 2) Lift up the vehicle.
- 3) Drain the engine oil by loosening the engine oil drain plug.

**NOTE:**

Prepare the container for draining of engine oil.

- (A) Gasket
- (B) Drain plug

- 4) Replace the drain plug gasket.
- 5) Tighten the engine oil drain plug after draining engine oil.

**Tightening torque:**

**44 N·m (4.5 kgf-m, 32.5 ft-lb)**

- 6) Use the engine oil of proper quality and viscosity, fill engine oil through the oil filler duct up to upper level on level gauge. Make sure that the vehicle is placed level when checking oil level.

**Recommended oil:**

**API standard SM with the "Energy Conserving" logo is printed.**

**ILSAC standard, GF4 "Star burst mark" label is on the container.**

**Engine oil capacity:**

**Upper level**

**4.0 ℓ (4.2 US qt, 3.5 Imp qt)**

**Lower level**

**3.0 ℓ (3.2 US qt, 2.6 Imp qt)**

| SAE (1) |                        |
|---------|------------------------|
| (°C)    | -30 -20 -15 0 15 30 40 |
| (°F)    | -22 -4 5 32 59 86 104  |
|         | 10W-30, 10W-50         |
|         | 5W-30 (2)              |

LU-02250

- (1) SAE viscosity No. and applicable temperature
- (2) Recommended

The proper viscosity helps vehicle get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.

# Engine Oil

## LUBRICATION

### CAUTION:

When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the API standard and SAE viscosity No. designated by SUBARU.

### NOTE:

If the vehicle is used in areas with very high temperatures or for other heavy duty applications, the following viscosity oils may be used: API standard: SM or SL  
SAE Viscosity No.: 30, 40, 10W-50, 20W-40, 20W-50.

7) Close the engine oil filler cap.

8) Start the engine and warm it up for a time.

9) After the engine stops, recheck the oil level. If necessary, add engine oil up to the upper level on level gauge.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. 1.0 ℓ (1.1 US qt, 0.9 Imp qt)

## 4. Oil Pump

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Remove the under cover.
- 4) Lower the vehicle.
- 5) Remove the radiator. <Ref. to CO(H4SO)-23, REMOVAL, Radiator.>
- 6) Remove the crankshaft position sensor.

- 7) Remove the V-belts.  
<Ref. to ME(H4SO)-40, REMOVAL, V-belt.>
- 8) Remove the belt tensioner.

- 9) Remove the crankshaft pulley by using ST.  
ST 499977100 CRANK PULLEY WRENCH

- 10) Remove the timing belt. <Ref. to ME(H4SO)-44, REMOVAL, Timing Belt.>

- 11) Remove the timing belt guide. (MT model)

- 12) Remove the water pump. <Ref. to CO(H4SO)-18, REMOVAL, Water Pump.>
- 13) Remove the crank sprocket.

- 14) Remove the bolts which install the oil pump onto cylinder block.

#### NOTE:

If disassembling or inspecting the oil pump, loosen the plug of relief valve before removing the oil pump.

- 15) Remove the oil pump by using flat tip screwdriver.

# Oil Pump

## LUBRICATION

### CAUTION:

Be careful not to scratch the mating surfaces of cylinder block and oil pump.

### B: INSTALLATION

Install in the reverse order of removal.

Do the following:

1) Apply liquid gasket to the matching surfaces of oil pump.

#### Liquid gasket:

**THREE BOND 1215 (Part No. 004403007) or equivalent**

2) Replace the O-ring (A) with a new one.

3) Apply a coat of engine oil to the inside of oil seal.

4) Be careful not to scratch the oil seal when installing oil pump on cylinder block.

5) Position the oil pump, aligning the notched area with crankshaft, and push the oil pump straight.

### CAUTION:

Make sure the oil seal lip is not folded.

6) Install the oil pump.

7) Apply liquid gasket to the threaded portion of three bolts in.

#### Liquid gasket:

**THREE BOND 1324 (Part No. 004403042) or equivalent**

#### Tightening torque:

**6.4 N·m (0.65 kgf·m, 4.7 ft·lb)**

### C: DISASSEMBLY

Remove the screws which secure the oil pump cover and disassemble oil pump. Inscribe alignment marks on the inner and outer rotors so that they can be replaced in their original positions during reassembly.

**CAUTION:**  
Before disassembling the oil pump, remove the relief valve.

- (A) Oil seal
- (B) Oil pump case
- (C) Inner rotor
- (D) Outer rotor
- (E) Oil pump cover
- (F) Relief valve
- (G) Relief valve spring
- (H) Plug
- (I) Gasket

## D: ASSEMBLY

1) Install the front oil seal by using ST.  
ST 499587100 OIL SEAL INSTALLER

**NOTE:**  
Use a new oil seal.

2) Apply a coat of engine oil to the inner and outer rotors.

- 3) Install the inner and outer rotors in their original positions.
- 4) Install the oil relief valve and relief valve spring and plug.

**NOTE:**  
Use a new gasket.

5) Install the oil pump cover.

### Tightening torque:

**T1: 5.4 N·m (0.55 kgf-m, 4.0 ft-lb)**

**T2: 44 N·m (4.5 kgf-m, 32.5 ft-lb)**

## E: INSPECTION

### 1. TIP CLEARANCE

Measure the tip clearance of rotors. If clearance exceeds the standard, replace the rotors as a matched set.

#### Tip clearance:

**Standard**

**0.04 — 0.14 mm (0.0016 — 0.0055 in)**

**Limit**

**0.18 mm (0.0071 in)**

## 2. CASE CLEARANCE

Measure the clearance between the outer rotor and oil pump rotor housing. If clearance exceeds the standard, replace the rotor.

### **Case clearance:**

#### **Standard**

**0.10 — 0.175 mm (0.0039 — 0.0069 in)**

#### **Limit**

**0.20 mm (0.0079 in)**

## 3. SIDE CLEARANCE

Measure the clearance between the oil pump inner rotor and pump cover. If clearance exceeds the standard, replace the rotor or pump body.

### **Side clearance:**

#### **Standard**

**0.02 — 0.07 mm (0.0008 — 0.0028 in)**

#### **Limit**

**0.12 mm (0.0047 in)**

## 4. OIL RELIEF VALVE

Check the valve for fitting condition and damage, and the relief valve spring for damage and deterioration. Replace the parts if defective.

### **Relief valve spring:**

#### **Free length**

**73.7 mm (2.902 in)**

#### **Installed length**

**54.7 mm (2.154 in)**

#### **Load when installed**

**93.1 N (9.49 kgf, 20.88 lbf)**

## 5. OIL PUMP CASE

Check the oil pump case for worn shaft hole, clogged oil passage, worn rotor chamber, cracks, and other faults.

## 6. OIL SEAL

Check the oil seal lips for deformation, hardening, wear, etc. and replace if defective.

## 5. Oil Pan and Strainer

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Remove the front wheels.
- 3) Disconnect the ground cable from battery.
- 4) Remove the air intake duct and air cleaner case.  
<Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>  
and <Ref. to IN(H4SO)-5, REMOVAL, Air Cleaner Case.>
- 5) Remove the resonator chamber. <Ref. to IN(H4SO)-8, REMOVAL, Resonator Chamber.>
- 6) Remove the pitching stopper.

- 7) Remove the radiator upper brackets.

- 8) Support the engine with a lifting device and wire ropes.

- 9) Lift-up the vehicle.

**CAUTION:**

**When lifting up the vehicle, rise up the wire rope together.**

- 10) Remove the under cover.

- 11) Drain the engine oil.

Set a container under the vehicle, and then remove the drain plug from oil pan.

- (A) Gasket
- (B) Drain plug

- 12) Remove the front and center exhaust pipes.  
<Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.>

- 13) Remove the nuts which install the front cushion rubber onto front crossmember.

- 14) Remove the bolts which install the oil pan on cylinder block while raising up engine.

- 15) Insert the oil pan cutter blade to the clearance between the cylinder block and oil pan.

**CAUTION:**

**Do not use a screwdriver or similar tool in place of oil pan cutter.**

- 16) Remove the oil strainer.

# Oil Pan and Strainer

## LUBRICATION

17) Remove the baffle plate.

- (A) Oil pan
- (B) Oil strainer
- (C) Baffle plate
- (D) Cylinder block

## B: INSTALLATION

### CAUTION:

**Before installing the oil pan, clean the sealant from oil pan and engine block.**

1) Check the seal (A) is securely installed in baffle plate in the direction as shown in the figure.

2) Install the baffle plate.

### Tightening torque:

**6.4 N·m (0.65 kgf·m, 4.7 ft·lb)**

3) Install the oil strainer onto baffle plate.

### NOTE:

Replace the O-ring with a new one.

### Tightening torque:

**10 N·m (1.0 kgf·m, 7.2 ft·lb)**

4) Apply liquid gasket to the mating surfaces, and then install the oil pan.

### Liquid gasket:

**THREE BOND 1207C (Part No. 004403012) or equivalent**

5) Tighten the bolts which install the oil pan onto engine block.

### Tightening torque:

**5.4 N·m (0.55 kgf·m, 4.0 ft·lb)**

- (A) Oil pan
- (B) Oil strainer
- (C) Baffle plate
- (D) Cylinder block

6) Lower the engine onto front crossmember.

7) Tighten the nuts which install the front cushion rubber onto front crossmember.

**Tightening torque:**

**69 N·m (7.0 kgf-m, 50.9 ft-lb)**

8) Install the front and center exhaust pipes. <Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.>

9) Install the under cover.

10) Lower the vehicle.

**CAUTION:**

**When lowering the vehicle, lower the lifting device and wire rope together.**

11) Remove the lifting device and steel cables.

12) Install the pitching stopper.

**Tightening torque:**

**T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)**

**T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)**

13) Install the radiator upper brackets.

14) Install the resonator chamber. <Ref. to IN(H4SO)-8, INSTALLATION, Resonator Chamber.>

15) Install the air intake duct and air cleaner case. <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.> and <Ref. to IN(H4SO)-5, INSTALLATION, Air Cleaner Case.>

16) Install the front wheels.

17) Connect the battery ground cable to battery.

18) Fill engine oil. <Ref. to LU(H4SO)-9, INSPECTION, Engine Oil.>

**C: INSPECTION**

By visual check, make sure the oil pan, oil strainer, oil strainer stay and baffle plate are not damaged.

# Oil Pressure Switch

LUBRICATION

## 6. Oil Pressure Switch

### A: REMOVAL

- 1) Remove the generator from bracket. <Ref. to SC(H4SO)-14, REMOVAL, Generator.>
- 2) Disconnect the terminal from oil pressure switch.

- 3) Remove the oil pressure switch.

### B: INSTALLATION

- 1) Apply liquid gasket to the oil pressure switch threads.

**Liquid gasket:**  
**THREE BOND 1324 (Part No. 004403042) or equivalent**

- 2) Install the oil pressure switch onto engine block.

**Tightening torque:**  
**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

- 3) Connect the terminal of oil pressure switch.

- 4) Install the generator on bracket. <Ref. to SC(H4SO)-14, INSTALLATION, Generator.>

### C: INSPECTION

Make sure oil does not leak or seep from the place where the oil pressure switch is installed.

## 7. Engine Oil Filter

### A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the under cover.
- 3) Remove the oil filter with ST.

ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))

ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))

#### NOTE:

Standard oil filter is outer diameter of 68 mm (2.68 in). However, SUBARU genuine oil filter having outer diameter of 65 mm (2.56 in) can also be used.

### B: INSTALLATION

- 1) Get a new oil filter and apply a thin coat of engine oil to the seal rubber.
- 2) Install the oil filter by turning it by hand, being careful not to damage seal rubber.
  - Tighten the oil filter 68 mm (2.68 in) in diameter by approx. 1 rotation more after the seal rubber of oil filter comes in contact with cylinder block. If using a torque wrench, tighten it to 14 N·m (1.4 kgf-m, 10.3 ft-lb).
  - Tighten the oil filter 65 mm (2.56 in) in diameter by approx. 2/3 — 3/4 rotation more after the seal rubber of oil filter comes in contact with cylinder block. If using a torque wrench, tighten it to 12 N·m (1.2 kgf-m, 8.7 ft-lb).

#### CAUTION:

**Do not tighten excessively, or oil may leak.**

### C: INSPECTION

- 1) After installing the oil filter, run the engine and make sure no oil is leaking around seal rubber.

#### NOTE:

The filter element and filter case are permanently jointed; therefore, interior cleaning is not necessary.

- 2) Check the engine oil level. <Ref. to LU(H4SO)-9, INSPECTION, Engine Oil.>

# Engine Lubrication System Trouble in General

LUBRICATION

## 8. Engine Lubrication System Trouble in General

### A: INSPECTION

Before performing diagnostics, make sure the engine oil level is correct and no oil leakage exists.

| Symptom                                | Possible cause                           |   | Corrective action  |
|--|--|---|--|
| 1. Warning light remains on.           | 1) Oil pressure switch failure           | Cracked diaphragm or oil leakage within switch                        | Replace.   |
|  |  | Broken spring or seized contacts                                      | Replace.   |
|  | 2) Low oil pressure                      | Clogged oil filter  | Replace.   |
|  |  | Malfunition of oil by-pass valve of oil filter                        | Clean or replace.  |
|  |  | Malfunition of oil relief valve of oil pump                           | Clean or replace.  |
|  |  | Clogged oil passage   | Clean.   |
|  |  | Excessive tip clearance and side clearance of oil pump rotor and gear | Replace.   |
|  |  | Clogged oil strainer or broken pipe                                   | Clean or replace.  |
|  | 3) No oil pressure                       | Shortage of engine oil  | Replenish.   |
|  |  | Broken pipe of oil strainer   | Replace.   |
| Stuck oil pump rotor                   |  | Replace.  |  |
| 2. Warning light does not go on.       | 1) Malfunition of combination meter      |   | Replace.   |
|  | 2) Poor contact of switch contact points |   | Replace.   |
|  | 3) Disconnection of wiring               |   | Repair.  |
| 3. Warning light flickers momentarily. | 1) Poor contact at terminals             |   | Repair.  |
|  | 2) Defective wiring harness              |   | Repair.  |
|  | 3) Low oil pressure                      |   | Check for the same possible causes as listed in 1. — 2). |

## 1. General Description

### A: SPECIFICATION

|                                    | Item                                     | Designation               |
|------------------------------------|--|---------------------------|
| Ignition coil and ignitor assembly | Model                                    | FH 0286                   |
|                                    | Manufacturer                             | DIAMOND                   |
|                                    | Secondary coil resistance                | 11.7 k $\Omega$ ±15%      |
| Spark plug                         | Manufacturer and Type                    | NGK: FR5AP-11             |
|                                    | Thread size (diameter, pitch, length) mm | 14, 1.25, 19              |
|                                    | Spark plug gap mm (in)                   | 1.0 — 1.1 (0.039 — 0.043) |
|                                    | Electrode                                | Platinum                  |

## B: COMPONENT

- (1) Spark plug
- (2) Spark plug cord (#1, #3)
- (3) Ignition coil and ignitor ASSY
- (4) Spark plug cord (#2, #4)

**Tightening torque: N-m (kgf-m, ft-lb)**

**T1: 6.4 (0.65, 4.7)**

**T2: 21 (2.1, 15.2)**

### C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.

- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

# Spark Plug

IGNITION

## 2. Spark Plug

### A: REMOVAL

#### CAUTION:

All spark plugs installed on an engine must be of the same heat range.

#### Spark plug:

<Ref. to IG(H4SO)-2, SPECIFICATION, General Description.>

### 1. RH SIDE

- 1) Disconnect the ground cable from battery.
- 2) Remove the air cleaner case. <Ref. to IN(H4SO)-5, REMOVAL, Air Cleaner Case.>
- 3) Remove the spark plug cords by pulling the boot. (Do not pull the cord itself.)

- 4) Remove the spark plug with a spark plug socket.

### 2. LH SIDE

- 1) Remove the battery.
- 2) Remove the spark plug cords by pulling the boot. (Do not pull the cord itself.)

- 3) Remove the spark plug with a spark plug socket.

### B: INSTALLATION

#### 1. RH SIDE

Install in the reverse order of removal.

#### Tightening torque:

**21 N·m (2.1 kgf-m, 15.2 ft-lb)**

#### NOTE:

The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.

#### 2. LH SIDE

Install in the reverse order of removal.

#### Tightening torque:

**21 N·m (2.1 kgf-m, 15.2 ft-lb)**

#### NOTE:

The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.

## C: INSPECTION

Check the electrodes and inner and outer ceramic insulator of plugs, noting the type of deposits and the degree of electrode erosion.

- (A) Spark plug gap
- (B) Carbon accumulation or wear
- (C) Crack
- (D) Damage
- (E) Damaged gasket

### 1) Normal:

Brown to grayish-tan deposits and slight electrode wear indicate correct spark plug heat range.

### 2) Carbon fouled:

Dry fluffy carbon deposits on insulator and electrode are mostly caused by slow speed driving in the city, weak ignition, too rich fuel mixture and dirty air cleaner.

### 3) Oil fouled:

Wet black deposits show excessive oil entrance into combustion chamber through worn rings and pistons or excessive clearance between valve guides and stems.

### 4) Overheating:

White or light gray insulator with black or brown spots and bluish burnt electrodes indicate engine overheating. Moreover, the appearance results from incorrect ignition timing, loose spark plugs, wrong selection of fuel, etc.

### CAUTION:

**Avoid using a plug cleaner because of the spark plug with a platinum tip.**

## D: ADJUSTMENT

Clean the spark plugs with a wire brush. Clean and remove the carbon or oxide deposits, but do not wear away ceramic insulator.

If deposits are too stubborn, replace the plugs.

After cleaning the spark plugs, correct the spark plug gap using a gap gauge.

### NOTE:

Do not use spark plug cleaners, because the spark plugs are applied with platinum tips.

# Spark Plug

IGNITION

---

**Spark plug gap L:**

**1.0 — 1.1 mm (0.039 — 0.043 in)**

**IG(H4SO)-6**

## 3. Ignition Coil and Ignitor Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the spark plug cords from ignition coil and ignitor assembly.

*Specified resistance:*

*[Secondary side]*

*Between (A) and (B)*

*11.7 kΩ±15%*

*Between (C) and (D)*

*11.7 kΩ±15%*

- 3) Disconnect the connector (A) from ignition coil and ignitor assembly.
- 4) Remove the bolt (B) which secures the ignition coil and ignitor assembly to intake manifold.

### B: INSTALLATION

Install in the reverse order of removal.

*Tightening torque:*

*6.4 N·m (0.65 kgf-m, 4.7 ft-lb)*

**CAUTION:**

Connect the spark plug cords to correct positions. Failure to do so will damage the unit.

### C: INSPECTION

Check the following using a tester. Replace if defective.

- Secondary coil resistance

**CAUTION:**

- If the resistance is extremely low, it indicates the presence of a short-circuit.
- Ignitor is integrated with the coil. Therefore the resistance of primary side coil cannot be measured.

## 4. Spark Plug Cord

### A: INSPECTION

Check the following items:

- Damage to cords, deformation, burning, or rust formation of terminals
- Resistance values of cords

#### **Resistance value:**

**#1 cord: 7.1 — 12.1 k $\Omega$**

**#2 cord: 12.1 — 19.9 k $\Omega$**

**#3 cord: 7.7 — 13.0 k $\Omega$**

**#4 cord: 12.3 — 20.2 k $\Omega$**

| (5) Stopper set        | (11) Packing           | (17) Rear bracket      |
| (6) Overrunning clutch | (12) Yoke ASSY         |                        |

## 2. GENERATOR

SC-00144

- |                      |                             |                 |
|----------------------|-----------------------------|-----------------|
| (1) Pulley           | (5) Rotor                   | (9) Brush       |
| (2) Front cover      | (6) Bearing                 | (10) Rectifier  |
| (3) Ball bearing     | (7) Stator coil             | (11) Rear cover |
| (4) Bearing retainer | (8) IC regulator with brush | (12) Terminal   |

### C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.

- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

# Starter

## STARTING/CHARGING SYSTEMS

### 2. Starter

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the air cleaner case. (Non-turbo model)  
<Ref. to IN(H4SO)-5, REMOVAL, Air Cleaner Case.>
- 3) Remove the intercooler. (Turbo model)  
<Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 4) Remove the air cleaner case stay. (Non-turbo model)

- MT model

- AT model

- 5) Disconnect the connector and terminal from starter.

- (A) Terminal
- (B) Connector

- 6) Remove the starter from transmission.

#### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**50 N·m (5.1 kgf·m, 37 ft·lb)**

#### C: DISASSEMBLY

##### 1. STARTER ASSEMBLY

- 1) Loosen the nut which holds the terminal M of switch assembly, and then disconnect the connector.
- 2) Remove the bolts which hold the switch assembly, and then remove switch assembly, plunger and plunger spring from starter as a unit.

#### NOTE:

Be careful because the pinion gap adjustment washer may sometimes be used on the mounting surface of switch assembly.

- (A) Magnet switch ASSY
- (B) Plunger

# Starter

## STARTING/CHARGING SYSTEMS

3) Remove both through-bolts and brush holder screws, and then detach the rear cover and brush holder.

- (A) Brush holder
- (B) Rear cover

4) Remove the armature and yoke assembly from front bracket. The ball used as a bearing will come off from the armature end.

**NOTE:**

Before removal of the yoke, put alignment marks on the yoke assembly and front bracket.

- (A) Front bracket
- (B) Yoke ASSY
- (C) Ball
- (D) Armature

5) Remove packing A, planetary gears, packing B and plate.

- (A) Packing A
- (B) Planetary gear
- (C) Plate
- (D) Packing B

6) Remove the shaft assembly and overrunning clutch as a unit.

**NOTE:**

Note the direction of the lever before removing.

- (A) Shaft ASSY
- (B) Overrunning clutch
- (C) Lever

7) Remove the overrunning clutch from shaft assembly as follows:

(1) Remove the stopper from ring by lightly tapping the stopper with an appropriate tool (such as a fit socket wrench).

# Starter

## STARTING/CHARGING SYSTEMS

(2) Remove the ring, stopper and clutch from shaft.

- (A) Socket wrench
- (B) Ring
- (C) Shaft
- (D) Stopper

## 2. BRUSH HOLDER

### NOTE:

Only the brush holder of turbo MT model and STI model starters can be disassembled.

Slightly open the metal fitting while holding the insulating plate against the brush holder. Remove the insulating plate.

The brush and spring can be easily removed from the brush holder at this time.

- (A) Brush holder
- (B) Insulating plate
- (C) Metal fitting

## D: ASSEMBLY

1) Assemble in the reverse order of disassembly.  
2) Apply grease to the following parts before assembly.

- Front and rear bracket sleeve bearings
- Armature shaft gear
- Outer periphery of plunger
- Mating surfaces of plunger and lever
- Gear shaft splines
- Mating surfaces of lever and clutch
- Ball at armature shaft end
- Planetary gear

## E: INSPECTION

### 1. ARMATURE

1) Check the commutator for any sign of burns of rough surfaces or stepped wear. If wear is of a minor nature, correct it by using sand paper.

2) Run-out test

Check the commutator run-out, and then replace if it exceeds the limit.

### Commutator run-out:

#### Standard

**0.05 mm (0.0020 in)**

#### Service limit

**Less than 0.10 mm (0.0039 in)**

- (A) Dial gauge
- (B) V-block

3) Depth of segment mold

Check the depth of segment mold.

**Depth of segment mold:**  
**0.5 mm (0.020 in)**

- (A) Depth of mold
- (B) Segment
- (C) Mold

#### 4) Armature short-circuit test

Check the armature for short-circuit by placing it on a growler tester. Hold an iron sheet against the armature core while slowly rotating armature. A short-circuited armature will cause the iron sheet to vibrate and to be attracted to core. If the iron sheet is attracted or vibrates, the armature, which is short-circuited, must be replaced or repaired.

- (A) Iron sheet
- (B) Growler tester

#### 5) Armature ground test

Using a circuit tester, touch one probe to the commutator segment and the other to shaft. There should be no continuity. If there is continuity, the armature is grounded.

Replace the armature if it is grounded.

## 2. YOKE

Make sure the pole is set in position.

## 3. OVERRUNNING CLUTCH

Inspect the teeth of pinion for wear and damage. Replace if it is damaged. It is normal if the pinion rotates smoothly in direction of rotation (counterclockwise) and does not rotate in the opposite direction.

### CAUTION:

**Do not clean the overrunning clutch with oil to prevent grease from flowing out.**

## 4. BRUSH AND BRUSH HOLDER

### 1) Brush length

Measure the brush length, and then replace if it is worn down to under the service limit.

Replace if abnormal wear or cracks are noticed.

### Brush length:

#### Standard

**12.3 mm (0.484 in)**

#### Service limit

**7.0 mm (0.276 in)**

- (A) Service limit line
- (B) Brush

### 2) Brush movement

Be sure the brush moves smoothly inside brush holder.

### 3) Brush spring force

Measure the brush spring force with a spring scale. If it is less than the service limit, replace the brush holder.

# Starter

## STARTING/CHARGING SYSTEMS

### Brush spring force:

#### Standard

*Except turbo MT model and STI model*

15.9 — 19.5 N (1.62 — 1.99 kgf, 3.57 — 4.38 lbf) (when new)

*Turbo MT model and STI model*

21.6 N (2.2 kgf, 4.9 lbf) (when new)

#### Service limit

*Except turbo MT model and STI model*

2.5 N (0.25 kgf, 0.56 lbf)

*Turbo MT model and STI model*

5.9 N (0.6 kgf, 1.3 lbf)

## 5. SWITCH ASSEMBLY

Using a circuit tester (set in “ohm”), check that there is continuity between terminals S and M, and between terminal S and ground.

Also check to be sure there is no continuity between terminals M and B.

### Terminal/Specified resistance:

**S — M/Less than 1  $\Omega$**

**S — Ground/Less than 1  $\Omega$**

**M — B/More than 1 M $\Omega$**

## 6. SWITCH ASSEMBLY OPERATION

1) Connect the terminal S of switch assembly to positive terminal of battery with a lead wire, and starter body to ground terminal of battery. The pinion should be forced endwise on shaft.

### CAUTION:

**With the pinion forced endwise on shaft, the starter motor may rotate because current flows through the pull-in coil to motor, however, this is not a problem.**

2) Disconnect the connector from terminal M, and then connect the positive terminal of battery and terminal M using a lead wire and ground terminal to starter body.

In this test set up, the pinion should return to its original position even when it is pulled out with a screwdriver.

(A) Terminal S

(B) Terminal M

## 7. PINION GAP

Measure the pinion gap while the pinion is pulled out as shown in the figure.

### Pinion gap:

**0.5 — 2.0 mm (0.020 — 0.079 in)**

(A) Pinion

(B) Gap

(C) Stopper

If the motor is running with the pinion forced endwise on shaft, disconnect the connector from terminal M of magnet switch assembly, and then connect terminal M to ground terminal (–) of battery with a lead wire. Next, gently push the pinion back with your fingertips, and then measure the pinion gap.

## 8. PERFORMANCE TEST

The starter should be submitted to performance tests whenever it has been overhauled, to assure its satisfactory performance when installed on the engine.

Three performance tests, no-load test, load test, and lock test, are presented here; however, if the load test and lock test cannot be performed, carry out at least the no-load test.

For these performance tests, use the circuit shown in figure.

- (A) Variable resistor
- (B) Magnet switch
- (C) Starter body

### 1) No-load test

With switch on, adjust the variable resistor to obtain 11 V, take the ammeter reading, and then measure the starter speed. Compare these values with the specifications.

#### No-load test (standards):

##### Voltage/Current

**Non-turbo, MT model**

**MAX. 11 V/95 A**

**Turbo MT model and STI model**

**MAX. 11 V/90 A**

**AT model**

**MAX. 11 V/90 A**

##### Rotating speed

**Non-turbo, MT model**

**More than 2,500 rpm**

**Turbo MT model and STI model**

**More than 2,860 rpm**

**AT model**

**More than 2,000 rpm**

### 2) Load test

Apply the specified braking torque to starter. The condition is satisfactory if the current draw and starter speed are within the specifications.

#### Load test (standards):

##### Voltage/Load

**Non-turbo, MT model**

**8 V/8.5 N·m (0.87 kgf-m, 6.3 ft-lb)**

**Turbo MT model and STI model**

**8 V/9.3 N·m (0.95 kgf-m, 6.9 ft-lb)**

**AT model**

**8 V/9.8 N·m (1.0 kgf-m, 7.2 ft-lb)**

##### Current/Speed

**Non-turbo, MT model**

**More than 280 A/970 rpm**

**Turbo MT model and STI model**

**More than 280 A/860 rpm**

**AT model**

**More than 280 A/1,000 rpm**

### 3) Lock test

With the starter stalled, or not rotating, measure the torque developed and current draw when the voltage is adjusted to the specified voltage.

#### Lock test (standards):

##### Voltage/Current

**Non-turbo, MT model**

**Less than 4 V/680 A**

**Turbo MT model and STI model**

**Less than 4 V/515 A**

**AT model**

**Less than 3.5 V/960 A**

##### Torque

**Non-turbo, MT model**

**17 N·m (1.73 kgf-m, 12.5 ft-lb)**

**Turbo MT model and STI model**

**16 N·m (1.63 kgf-m, 11.8 ft-lb)**

**AT model**

**31 N·m (3.16 kgf-m, 22.9 ft-lb)**

## 3. Generator

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector and terminal from generator.

- Non-turbo model

- Turbo model and STI model

- 3) Remove the V-belt cover.
- 4) Remove the front side V-belt.  
<Ref. to ME(H4SO)-40, FRONT SIDE BELT, REMOVAL, V-belt.> <Ref. to ME(H4DOTC)-41, FRONT SIDE BELT, REMOVAL, V-belt.>
- 5) Remove the bolts which install generator onto bracket.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**25 N·m (2.5 kgf-m, 18.1 ft-lb)**

#### CAUTION:

Check and adjust the V-belt tension. <Ref. to ME(H4SO)-41, INSPECTION, V-belt.> <Ref. to ME(H4DOTC)-41, INSPECTION, V-belt.>

### C: DISASSEMBLY

- 1) Remove the four through-bolts.

- 2) Heat portion (A) of rear cover to 50°C (122°F) with a heater drier.

3) Then insert the tip of a flat tip screwdriver into the gap between stator core and front cover. Pry them apart to disassemble.

(A) Screwdriver

4) Hold the rotor with a vise and remove pulley nut.

**CAUTION:**  
When holding the rotor with a vise, place aluminum plates or wooden pieces on the vise jaws to prevent rotor from damage.

- (A) Front cover
- (B) Pulley
- (C) Nut
- (D) Rotor

5) Remove the ball bearing as follows.

(1) Remove the bolt, and then remove the bearing retainer.

(2) Firmly install an appropriate tool (such as a fit socket wrench) to bearing inner race.

(3) Push the ball bearing off the front cover using a press.

6) Remove the bearing from rotor using a bearing puller.

7) Unsolder connection between rectifier and stator coil to remove the stator coil.

# Generator

## STARTING/CHARGING SYSTEMS

### CAUTION:

Do not allow a 180 — 270 W soldering iron to contact the terminals for more than 5 seconds at once because the rectifier cannot withstand so much heat.

8) Remove the IC regulator as follows.

(1) Remove the screws which secure IC regulator to rear cover.

(2) Unsolder the connection between IC regulator and rectifier to remove the IC regulator.

9) Remove the brush as follows.

(1) Remove cover A.

(A) Cover A

(2) Remove cover B.

(A) Cover B

(3) Separate the brush from connection to remove.

10) Remove the rectifier as follows.

(1) Remove the bolts which secure the rectifier.

(2) Remove the cover of terminal B.

(3) Remove the nut of terminal B, and then remove the rectifier.

### D: ASSEMBLY

Assemble in the reverse order of disassembly.

1) Pulling up brush

Before assembling, press the brush down into brush holder, and then fix them in that position by passing a [1 mm (0.08 in) dia. 40 to 50 mm (1.6 to 2.0 in) long] wire through the hole as shown in the figure.

#### CAUTION:

**Be sure to remove the wire after reassembly.**

(A) Wire

2) Install the ball bearing.

(1) Set the ball bearing on the front cover, and then securely install an appropriate tool (such as a fit socket wrench) to the bearing outer race.

(2) Press the ball bearing into the specified position using a press.

(3) Install the bearing retainer.

3) Press the bearing (rear side) into the rotor shaft using a press to install.

4) Heat the bearing box in rear cover [50 to 60°C (122 to 140°F)], and then press the rear bearing into rear cover.

#### CAUTION:

**Grease should not be applied to rear bearing. Remove the oil completely if it is found on bearing box.**

5) After reassembly, turn the pulley by hand to check that rotor turns smoothly.

### E: INSPECTION

1. DIODE

#### CAUTION:

**Never use a mega tester (designed for reading high voltage) or any other similar instrument for this test; otherwise, the diodes may be damaged.**

1) Checking positive diode

Check for continuity between the diode lead and positive side heat sink. The positive diode is in good condition if resistance is 1 Ω or less only in the direction from the diode lead to heat sink.

(A) Diode lead

(B) Heat sink (positive side)

# Generator

## STARTING/CHARGING SYSTEMS

### 2) Checking negative diode

Check for continuity between the negative side heat sink and diode lead. The negative diode is in good condition if resistance is  $1\ \Omega$  or less only in the direction from the heat sink to diode lead.

- (A) Diode lead
- (B) Heat sink (negative side)

## 2. ROTOR

### 1) Slip ring surface

Inspect the slip rings for contamination or any roughness on the sliding surface. Repair the slip ring surface using a lathe or sand paper.

### 2) Slip ring outer diameter

Measure the slip ring outer diameter. If the slip ring is worn, replace the rotor assembly.

#### **Slip ring outer diameter:**

##### **Standard**

**22.7 mm (0.894 in)**

##### **Limit**

**22.1 mm (0.870 in)**

### 3) Continuity test

Check the resistance between slip rings using circuit tester.

If the resistance is not within the specified range, replace the rotor assembly.

#### **Specified resistance:**

**Approx. 1.8 — 2.2  $\Omega$**

### 4) Insulation test

Check the continuity between slip ring and rotor core or shaft. If resistance is  $1\ \Omega$  or less, the rotor coil is grounded, and so replace the rotor assembly.

### 5) Ball bearing (rear side)

Check the rear ball bearing. Replace if it is noisy or if the rotor does not turn smoothly.

## 3. STATOR

### 1) Continuity test

Inspect the stator coil for continuity between each end of the lead wires. If resistance is  $1\ M\Omega$  or more, the lead wire is broken, and so replace the stator assembly.

(A) Stator

### 2) Insulation test

Inspect the stator coil for continuity between stator core and each end of lead wire. If resistance is  $1\ \Omega$  or less, the stator coil is grounded, and so replace the stator assembly.

#### 4. BRUSH

1) Measure the length of each brush. If wear exceeds the service limit, replace the brush. Each brush has the service limit mark (A) on it.

**Brush length:**

**Standard**

**18.5 mm (0.728 in)**

**Service limit**

**5.0 mm (0.197 in)**

2) Checking brush spring for proper pressure

Using a spring pressure indicator, push the brush into the brush holder until its tip protrudes 2 mm (0.08 in). Then measure the pressure of brush spring. If the pressure is less than 2.648 N (270 g, 9.52 oz), replace the brush spring with a new one. The new spring must have a pressure of 4.609 to 5.786 N (470 to 590 g, 16.58 to 20.810 oz).

#### 5. BEARING (FRONT SIDE)

Check the front ball bearing. If the resistance is felt while rotating, or if abnormal noise is heard, replace the ball bearing.

# Battery

## STARTING/CHARGING SYSTEMS

### 4. Battery

#### A: REMOVAL

- 1) Disconnect the positive (+) cable after disconnecting the ground (-) cable of battery.
- 2) Remove the flange nuts from battery rods, and then take off the battery holder.
- 3) Remove the battery.

#### B: INSTALLATION

Install in the reverse order of removal.

##### **Tightening torque:**

**3.4 N·m (0.35 kgf-m, 2.5 ft-lb)**

##### **NOTE:**

- Clean the battery cable terminals, and then apply grease to retard formation of corrosion.
- Connect the positive (+) cable of battery and then the ground (-) cable of battery.
- Starting engine should be performed more than 10 seconds after the ignition switch is turned to ON because initial diagnosis for electronic throttle control is performed after installation of battery.

#### C: INSPECTION

##### **WARNING:**

- Electrolyte has toxicity; be careful handling the fluid.
- Avoid contact with skin, eyes or clothing. Especially at contact with eyes, flush with running water for 15 minutes and get prompt medical attention.
- Batteries produce explosive gasses. Keep sparks, flame, cigarettes away.
- Ventilate when charging or using in enclosed space.
- For safety, in case an explosion does occur, wear eye protection or shield your eyes when working near any battery. Never lean over a battery.
- Do not let the battery fluid contact eyes, skin, fabrics, and paint-work because battery fluid is corrosive acid.
- To lessen the risk of sparks, remove rings, metal watch-bands, and other metal jewelry. Never allow metal tools to contact the positive battery terminal and anything connected to it while you are at the same time in contact with any other metallic portion of the vehicle. This may cause a short circuit.

#### 1. EXTERNAL PARTS

Check for the existence of dirt or cracks on battery case, top cover, vent plugs, and terminal posts. If necessary, clean with water and wipe with a dry cloth.

Apply a thin coat of grease on the terminal posts to prevent corrosion.

#### 2. ELECTROLYTE LEVEL

Check the electrolyte level in each cell. If the level is below MIN LEVEL, bring the level to MAX LEVEL by pouring distilled water into the battery cell. Do not fill beyond MAX LEVEL.

#### 3. SPECIFIC GRAVITY OF ELECTROLYTE

1) Measure the specific gravity of electrolyte using a hydrometer and a thermometer.

Specific gravity varies with temperature of electrolyte so that it must be corrected at 20°C (68°F) using the following equation:

$$S_{20} = St + 0.0007 \times (t - 20)$$

***S<sub>20</sub>***: Specific gravity corrected at electrolyte temperature of 20°C

***St***: Measured specific gravity

***t***: Measured temperature (°C)

**Determine whether or not battery must be charged, according to corrected specific gravity.**

**Standard specific gravity: 1.220 — 1.290 [at 20°C (68°F)]**

2) Measuring the specific gravity of the electrolyte in battery will disclose the state of charge of battery. The relation between specific gravity and state of charge is as shown in the figure.

#### D: MEASUREMENT

##### **WARNING:**

Do not bring an open flame close to the battery at this time.

##### **CAUTION:**

- Prior to charging, corroded terminals should be cleaned with a brush and common caustic soda solution.

- Be careful since the battery electrolyte overflows while charging the battery.
- Observe the instructions when handling battery charger.
- Before charging the battery on vehicle, disconnect battery ground terminal to prevent damage of generator diodes or other electrical units.

## 1. JUDGMENT OF BATTERY IN CHARGED CONDITION

1) Specific gravity of electrolyte is held within the specified range from 1.250 to 1.290 for more than one hour.

2) Voltage per battery cell is held at the specified range from 2.5 to 2.8 volts for more than one hour.

## 2. STATE OF CHARGE CHECK USING A HYDROMETER

| Hydrometer indicator | State of charge | Corrective action                              |
|----------------------|-----------------|--|
| Green dot            | Above 65%       | Load test                                      |

\*: Check electrical system before replacement.

## 3. NORMAL CHARGING

Charge the battery at current value specified by manufacturer or at approx. 1/10 of the battery's ampere-hour rating.

## 4. QUICK CHARGING

Quick charging is a method in which the battery is charged in a short period of time with a relatively large current by using a quick charger.

Since a large current flow raises electrolyte temperature, the battery is subject to damage if large current is used for prolonged time. For this reason, the quick charging must be carried out within a current range that will not increase the electrolyte temperature above 40°C (104°F).

It should be also remembered that the quick charging is a temporary means to bring battery voltage up to a fair value and, as a rule, a battery should be charged slowly with a low current.

### CAUTION:

- Observe the items in 3. NORMAL CHARGING.
- Never use more than 10 amperes when charging the battery because that will shorten battery life.

# Check List for Interview

ENGINE (DIAGNOSTICS)

## 2. CHECK LIST No. 2

Check the following items about the vehicle's state when malfunction indicator light turns on.

NOTE:

Use copies of this page for interviewing customers.

|  |
|--|
| a) Other warning lights or indicators turn on. <input type="checkbox"/> Yes / <input type="checkbox"/> No  |
| <input type="checkbox"/> Low fuel warning light<br><input type="checkbox"/> Charge indicator light<br><input type="checkbox"/> AT diagnostics indicator light<br><input type="checkbox"/> ABS warning light<br><input type="checkbox"/> Engine oil pressure warning light  |
| b) Fuel level  |
| <ul style="list-style-type: none"><li>• Lack of gasoline: <input type="checkbox"/> Yes / <input type="checkbox"/> No</li><li>• Indicator position of fuel gauge:</li><li>• Experienced running out of fuel?: <input type="checkbox"/> Yes / <input type="checkbox"/> No</li></ul>  |
| c) Intentional connecting or disconnecting of harness connectors or spark plug cords: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| <ul style="list-style-type: none"><li>• What:</li></ul>  |
| d) Intentional connecting or disconnecting of hoses: <input type="checkbox"/> Yes / <input type="checkbox"/> No  |
| <ul style="list-style-type: none"><li>• What:</li></ul>  |
| e) Installing of parts other than genuine parts: <input type="checkbox"/> Yes / <input type="checkbox"/> No  |
| <ul style="list-style-type: none"><li>• What:</li><li>• Where:</li></ul>   |
| f) Occurrence of noise: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| <ul style="list-style-type: none"><li>• From where:</li><li>• What kind:</li></ul>   |
| g) Occurrence of smell: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| <ul style="list-style-type: none"><li>• From where:</li><li>• What kind:</li></ul>   |
| h) Intrusion of water into engine compartment or passenger compartment: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| i) Troubles occurred   |
| <input type="checkbox"/> Engine does not start.<br><input type="checkbox"/> Engine stalls during idling.<br><input type="checkbox"/> Engine stalls while driving.<br><input type="checkbox"/> Engine speed decreases.<br><input type="checkbox"/> Engine speed does not decrease.<br><input type="checkbox"/> Rough idling<br><input type="checkbox"/> Poor acceleration<br><input type="checkbox"/> Back fire<br><input type="checkbox"/> After fire<br><input type="checkbox"/> No shift<br><input type="checkbox"/> Excessive shift shock |

## 3. General Description

### A: CAUTION

1) Airbag system wiring harness is routed near the ECM, main relay and fuel pump relay.

#### CAUTION:

- Airbag system connectors are colored yellow. Do not use electrical test equipment on these circuit.
- Be careful not to damage the airbag system wiring harness when servicing the ECM, TCM, main relay and fuel pump relay.

2) Never connect the battery in reverse polarity.

- The ECM will be destroyed instantly.
- The fuel injector and other part will be damaged.

3) Do not disconnect the battery terminals while the engine is running.

A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as ECM, etc.

4) Before disconnecting the connectors of each sensor and the ECM, be sure to turn OFF the ignition switch.

5) Poor contact has been identified as a primary cause of this problem. To measure the voltage and/or resistance of individual sensors or all electrical control modules at the harness side connector, use a tapered pin with a diameter of less than 0.64 mm (0.025 in). Do not insert the pin more than 5 mm (0.20 in) into the part.

6) Before removing the ECM from the located position, disconnect two cables on battery. Otherwise, the ECM may be damaged.

#### CAUTION:

**When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage on fuel injection system.**

7) The connectors to each sensor in the engine compartment and the harness connectors on the engine side and body side are all designed to be waterproof. However, it is still necessary to take care not to allow water to get into the connectors when washing the vehicle, or when servicing the vehicle on a rainy day.

8) Use ECM mounting stud bolts at the body side grounding point when measuring voltage and resistance inside the passenger compartment.

(A) Stud bolt

9) Use engine grounding terminal or engine proper as the grounding point to the body when measuring voltage and resistance in the engine compartment.

10) Every MFI-related part is a precision part. Do not drop them.

11) Observe the following cautions when installing a radio in MFI equipped models.

#### CAUTION:

- The antenna must be kept as far apart as possible from the control unit. (The ECM is located under the steering column, inside of the instrument panel lower trim panel.)
- The antenna feeder must be placed as far apart as possible from the ECM and MFI harness.
- Carefully adjust the antenna for correct matching.
- When mounting a large power type radio, pay special attention to the three items above mentioned.
- Incorrect installation of the radio may affect the operation of the ECM.

12) Before disconnecting the fuel hose, release the fuel pressure. <Ref. to FU(H4SO)-42, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

# General Description

## ENGINE (DIAGNOSTICS)

13) On models with ABS, when performing driving test in jacked-up or lifted-up position, sometimes the warning light may be lit, but this is not a malfunction of the system. The reason for this is the speed difference between the front and rear wheels. After diagnosis of engine control system, perform the ABS memory clearance procedure of self-diagnosis system.

### B: INSPECTION

Before performing diagnostics, check the following items which might affect engine problems:

#### 1. BATTERY

1) Measure battery voltage and specific gravity of electrolyte.

**Standard voltage: 12 V**

**Specific gravity: Above 1.260**

2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

#### 2. ENGINE GROUNDING

Make sure the engine grounding terminal is properly connected to the engine.

### C: NOTE

#### 1. DESCRIPTION

- The on-board diagnostics (OBD) system detects and indicates a fault in various inputs and outputs of the complex electronic control. Malfunction indicator light in the combination meter indicates occurrence of a fault or trouble.
- Further, against such a failure or sensors as may disable the drive, the fail-safe function is provided to ensure the minimal driveability.
- The OBD system incorporated with the vehicles within this engine family complies with OBD-II Regulations. The OBD system monitors the components and the system malfunction listed in Engine Section which affects on emissions.

- When the system decides that a malfunction occurs, malfunction indicator light illuminates. At the same time of the malfunction indicator light illumination or blinking, a DTC and a freeze frame engine conditions are stored into on-board computer.
- The OBD system stores freeze frame engine condition data (engine load, engine coolant temperature, fuel trim, engine speed and vehicle speed, etc.) into on-board computer when it detects a malfunction first.
- If the OBD system detects the various malfunctions including the fault of fuel trim or misfire, the OBD system first stores freeze frame engine conditions about the fuel trim or misfire.
- When the malfunction does not occur again for three consecutive driving cycles, malfunction indicator light is turned off, but DTC remains at on-board computer.
- When troubleshooting the vehicle which complies with OBD-II Regulations, connect the Subaru Select Monitor or general scan tool to the vehicle.

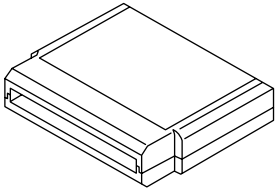

#### 2. ENGINE AND EMISSION CONTROL SYSTEM

- The Multipoint Fuel Injection (MFI) system is a system that supplies the optimum air-fuel mixture to the engine for all the various operating conditions through the use of the latest electronic technology. With this system fuel, which is pressurized at a constant pressure, is injected into the intake air passage of the cylinder head. The injection quantity of fuel is controlled by an intermittent injection system where the electro-magnetic injection valve (fuel injector) opens only for a short period of time, depending on the quantity of air required for one cycle of operation. In actual operation, the injection quantity is determined by the duration of an electric pulse applied to the fuel injector and this permits simple, yet highly precise metering of the fuel.
  - Further, all the operating conditions of the engine are converted into electric signals, and this results in additional features of the system, such as large improved adaptability, easier addition of compensating element, etc.
- The MFI system also has the following features:
- Reduced emission of harmful exhaust gases.
  - Reduction in fuel consumption.
  - Increased engine output.
  - Superior acceleration and deceleration.
  - Superior startability and warm-up performance in cold weather since compensation is made for coolant and intake air temperature.

# Engine Control Module (ECM) I/O Signal

ENGINE (DIAGNOSTICS)

| Input/Output          | Measuring condition  | Waveform  |
|-----------------------|--|---|
| 1. Rear oxygen sensor | 5 minutes after driving at a constant speed of 80 — 113 km/h (50 — 70 MPH) |  <p>The top waveform shows a stable signal for the Rear O2 Sensor around 1.0V, with a large circle indicating a good signal. The bottom waveform shows a noisy signal for the Rear O2 Sensor, with a large 'X' indicating a bad signal. Both graphs show the A/F Sensor #1 signal below it.</p> |
| 2. Rear oxygen sensor | While idling (Oxygen sensor in active status)                              |  <p>The top waveform shows a stable signal for the Rear O2 Sensor around 1.0V, with a large circle indicating a good signal. The bottom waveform shows a signal with sharp spikes for the Rear O2 Sensor, with a large 'X' indicating a bad signal.</p>                                       |

EN-04680

EN-04681

## 6. Engine Condition Data

### A: ELECTRICAL SPECIFICATION

| Content     | Specified data                     |
|-------------|------------------------------------|
| Engine load | 17.6 — 40.5 (%): Idling            |
|             | 14.72 — 29.8 (%): 2,500 rpm racing |

Measuring condition:

- After the engine is warmed-up.
- Gear position is in “N” or “P” range.
- A/C is turned OFF.
- All accessory switches are turned OFF.

# Data Link Connector

ENGINE (DIAGNOSTICS)

## 7. Data Link Connector

### A: NOTE

This connector is used both for general scan tools and the Subaru Select Monitor.

### CAUTION:

Do not connect any scan tools other than the general scan tools and the Subaru Select Monitor, because the circuit for the Subaru Select Monitor may be damaged.

| Terminal No. | Contents     | Terminal No. | Contents                     |

## 8. General Scan Tool

### A: OPERATION

#### 1. HOW TO USE GENERAL SCAN TOOL

- 1) Prepare a general scan tool required by SAE J1978.
- 2) Open the cover and connect the general scan tool to data link connector located in the lower portion of instrument panel (on the driver's side).

- 3) Using the general scan tool, call up DTC and freeze frame data.

General scan tool functions consist of:

#### 2. MODE \$01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refers to data denoting the current operating condition of analog input/output, digital input/output and/or the powertrain system.

A list of the support data and PID (Parameter Identification) codes are shown in the following table.

| PID | Data   | Unit of measure |
|-----|--|-----------------|
| 01  | Number of emission-related powertrain DTC and malfunction indicator light status and diagnosis support information | —               |
| 03  | Fuel system control status   | —               |
| 04  | Calculated engine load value   | %               |
| 05  | Engine coolant temperature   | °C              |
| 06  | Short term fuel trim   | %               |
| 07  | Long term fuel trim  | %               |
| 0B  | Intake manifold absolute pressure  | kPa             |
| 0C  | Engine revolution  | rpm             |
| 0D  | Vehicle speed  | km/h            |
| 0E  | Ignition timing advance  | °               |
| 0F  | Intake air temperature   | °C              |
| 10  | Air flow rate from mass air flow sensor  | g/sec           |
| 11  | Throttle valve absolute opening angle  | %               |
| 13  | Check whether oxygen sensor is installed.  | —               |
| 15  | Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor                                | V and %         |
| 1C  | Supporting OBD system  | —               |
| 24  | A/F value and A/F sensor output voltage  | — and V         |
| 34  | A/F value and A/F current  | — and mA        |

NOTE:

Refer to general scan tool manufacturer's instruction manual to access generic OBD-II PIDs (MODE \$01).

- (1) MODE \$01: Current powertrain diagnostic data
- (2) MODE \$02: Powertrain freeze frame data
- (3) MODE \$03: Emission-related powertrain DTC
- (4) MODE \$04: Clear/Reset emission-related diagnostic information
- (5) MODE \$06: Request on-board monitoring test results for non-continuously monitored systems
- (6) MODE \$07: Request on-board monitoring test results for continuously monitored systems
- (7) MODE \$09: Request vehicle information

Read out the data according to repair procedures. (For detailed operation procedures, refer to the General Scan Tool Operation Manual.)

NOTE:

For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4SO)(diag)-73, List of Diagnostic Trouble Code (DTC).>

# General Scan Tool

## ENGINE (DIAGNOSTICS)

### 3. MODE \$02 (POWERTRAIN FREEZE FRAME DATA)

Refers to data denoting the operating condition when trouble is sensed by the on-board diagnosis system. A list of the support data and PID (Parameter Identification) codes are shown in the following table.

| PID | Data  | Unit of measure |
|-----|---|-----------------|
| 02  | DTC that caused CARB required freeze frame data storage                             | —               |
| 03  | Fuel system control status  | —               |
| 04  | Calculated engine load value  | %               |
| 05  | Engine coolant temperature  | °C              |
| 06  | Short term fuel trim  | %               |
| 07  | Long term fuel trim   | %               |
| 0B  | Intake manifold absolute pressure   | kPa             |
| 0C  | Engine revolution   | rpm             |
| 0D  | Vehicle speed   | km/h            |
| 0E  | Ignition timing advance   | °               |
| 0F  | Intake air temperature  | °C              |
| 10  | Air flow rate from mass air flow sensor   | g/sec           |
| 11  | Throttle valve opening angle  | %               |
| 15  | Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor | V and %         |
| 1C  | Supporting OBD system   | —               |

**NOTE:**

Refer to general scan tool manufacturer's instruction manual to access freeze frame data (MODE \$02).

### 4. MODE \$03 (EMISSION-RELATED POWERTRAIN DIAGNOSTIC TROUBLE CODE (DTC))

Refer to Read Diagnostic Trouble Code (DTC) for information about data denoting emission-related powertrain DTC. <Ref. to EN(H4SO)(diag)-73, List of Diagnostic Trouble Code (DTC).>

### 5. MODE \$04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refers to the mode used to clear or reset emission-related diagnostic information (OBD-II trouble diagnostic information).

**NOTE:**

Refer to general scan tool manufacturer's instruction manual to clear or reset emission-related diagnostic information (MODE \$04).

## 6. MODE \$06

Refer to test value of troubleshooting and data of test limit on support data bit sequence table. List of support data is shown in the following table.

| TID  | CID  | Test value & Test limit  |
|------|------|--|
| \$41 | \$81 | Rear oxygen sensor circuit (Bank 1 Sensor 2)                                   |
|      | \$02 |  |
| \$81 | \$01 | Catalyst system  |
| \$82 | \$01 | Exhaust gas recirculation system   |
|      | \$02 |  |
| \$83 | \$01 | Evaporative emission control system (0.04 inch leak)                           |
|      | \$02 | Evaporative emission control system (0.04 inch leak)                           |
|      | \$03 | Evaporative emission control system (0.04 inch leak)                           |
|      | \$04 | Evaporative emission control system (0.04 inch leak)                           |
|      | \$05 | Evaporative emission control system (0.02 inch leak)                           |
|      | \$06 | Evaporative emission control system (0.02 inch leak)                           |
| \$84 | \$01 | Front oxygen (A/F) sensor circuit slow response (Bank 1 Sensor 1)              |
| \$85 | \$01 | Rear O <sub>2</sub> sensor circuit slow response (Bank 1 Sensor 2) Rich → Lean |
|      | \$02 | Rear O <sub>2</sub> sensor circuit slow response (Bank 1 Sensor 2) Lean → Rich |

## 7. MODE \$07

Refer to data of DTC (pending code) for troubleshooting result about emission in first time.

## 8. MODE \$09

Refer to data of vehicle specification (VIN, calibration ID, diagnosis frequency etc.).

# Subaru Select Monitor

ENGINE (DIAGNOSTICS)

## 9. Subaru Select Monitor

### A: OPERATION

#### 1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4SO)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(H4SO)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector located in the lower portion of instrument panel (on driver's side).

(2) Connect the diagnosis cable to data link connector.

#### CAUTION:

Do not connect scan tools except for Subaru Select Monitor and general scan tool.

5) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor power switch to ON.

(A) Power switch

6) Using the Subaru Select Monitor, call up DTC and various data, then record them.

#### 2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE)

Refer to Read Diagnostic Trouble Code (DTC) for information about how to indicate DTC. <Ref. to EN(H4SO)(diag)-35, Read Diagnostic Trouble Code (DTC).>

#### 3. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (OBD MODE)

Refer to Read Diagnostic Trouble Code (DTC) for information about how to indicate DTC. <Ref. to EN(H4SO)(diag)-35, Read Diagnostic Trouble Code (DTC).>

## 4. READ CURRENT DATA FOR ENGINE. (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
  - 2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
  - 3) Press the [YES] key after the information of engine type has been displayed.
  - 4) On the «Engine Diagnosis» display screen, select the {Current Data Display/Save}, and then press the [YES] key.
  - 5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
  - 6) Using the scroll key, scroll the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

| Remarks                           | Display                  | Unit of measure         | Note (at idling)   |
|-----------------------------------|--------------------------|-------------------------|--|
| Engine load                       | Engine Load              | %                       | 21.0%  |
| Engine coolant temperature signal | Coolant Temp.            | °C or °F                | 92°C or 198F   |
| A/F correction 1                  | A/F Correction #1        | %                       | -0.8%  |
| A/F learning 1                    | A/F Learning #1          | %                       | 0.0%   |
| Intake manifold absolute pressure | Mani. Absolute Pressure  | mmHg, kPa, inHg or psig | 200 — 300 mmHg, 26.7 — 40 kPa, 7.8 — 11.8 inHg or 3.8 — 5.8 psig |
| Engine speed signal               | Engine Speed             | rpm                     | 600 — 800 rpm (Agree with the tachometer indication)             |

| Fuel pump relay signal                                     | Fuel Pump Relay          | —               | ON                            |
| Pressure control solenoid valve signal                     | PCV Solenoid             | —               | OFF                           |
| PCV hose ASSY diagnosis signal                             | Blow-by leak Connector   | —               | ON                            |
| Drain valve signal   | Vent Control Solenoid    | —               | OFF                           |
| Variable valve lift diagnosis oil pressure switch signal 1 | Eng. Oil Press. SW1      | —               | ON                            |
| Variable valve lift diagnosis oil pressure switch signal 2 | Eng. Oil Press. SW2      | —               | ON                            |
| AT coordinate retard angle demand signal                   | Retard Signal from AT    | —               | OFF                           |
| AT coordinate fuel cut demand signal                       | Fuel Cut Signal from AT  | —               | OFF                           |
| AT coordinate permission demand                            | Torque Permission Signal | —               | ON                            |
| Electronic throttle control motor relay signal             | ETC Motor Relay          | —               | ON                            |
| Clutch switch signal                                       | Clutch Switch            | —               | OFF (At OFF)                  |
| Stop light switch signal                                   | Stop Light Switch        | —               | OFF (At OFF)                  |
| SET/COAST switch signal                                    | SET/COAST Switch         | —               | OFF (At OFF)                  |
| RES/ACC switch signal                                      | RESUME/ACCEL Switch      | —               | OFF (At OFF)                  |
| Brake switch signal  | Brake Switch             | —               | OFF (At OFF)                  |
| Main switch signal   | Main Switch              | —               | OFF (At OFF)                  |

# Subaru Select Monitor

ENGINE (DIAGNOSTICS)

| Remarks                              | Display      | Unit of measure | Note (at idling) |
|--------------------------------------|--------------|-----------------|------------------|
| Crusise control cancel switch signal | CC Cancel SW | —               | OFF (At OFF)     |

**NOTE:**

For detailed operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

## 5. READ CURRENT DATA FOR ENGINE (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type has been displayed.
- 4) On the «Engine Diagnosis» display screen, select the {OBD system} and press the [YES] key.
- 5) On the «OBD Menu» display screen, select the {Current Data Display/Save}, and press the [YES] key.
- 6) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
- 7) Using the scroll key, scroll the display screen up or down until the desired data is shown.

- A list of the support data is shown in the following table.

| DESCRIPTION                                       | Display                  | Unit of measure         | Note (at idling)                           |
|---|--------------------------|-------------------------|--|
| Number of diagnosis code                          | Number of Diag. Code:    | —                       | 0  |
| Condition of malfunction indicator light          | MI (MIL)                 | —                       | OFF  |
| Monitoring test of misfire                        | Misfire monitoring       | —                       | complete                                   |

# Subaru Select Monitor

## ENGINE (DIAGNOSTICS)

| DESCRIPTION                                 | Display        | Unit of measure | Note (at idling) |
|---|----------------|-----------------|------------------|
| Front oxygen (A/F) sensor (Bank 1 Sensor 1) | A/F sensor #11 | mA              | 0.00 mA          |

**NOTE:**

For detailed operation procedure, refer to “SUBARU SELECT MONITOR OPERATION MANUAL”.

### 6. READ FREEZE FRAME DATA FOR ENGINE (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
  - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
  - 3) Press the [YES] key after the information of engine type has been displayed.
  - 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
  - 5) On the «OBD Menu» display screen, select the {Freeze Frame Data} and press the [YES] key.
- A list of support data is shown in the following table.

| Contents  | Display                  | Unit of measure              |
|---|--------------------------|------------------------------|
| DTC for freeze frame data                         | Freeze frame data        | DTC                          |
| Air fuel ratio control system for bank 1          | Fuel system for Bank1    | CLOSE normal or OPEN initial |
| Engine load data                                  | Engine Load              | %                            |
| Engine coolant temperature signal                 | Coolant Temp.            | °C or °F                     |
| Short term fuel trim by front oxygen (A/F) sensor | Short term fuel trim B1  | %                            |
| Long term fuel trim by front oxygen (A/F) sensor  | Long term fuel trim B1   | %                            |
| Intake manifold absolute pressure signal          | Mani. Absolute Pressure  | mmHg, kPa, inHg or psig      |
| Engine speed signal                               | Engine Speed             | rpm                          |
| Vehicle speed signal                              | Vehicle Speed            | km/h or MPH                  |
| Ignition timing signal                            | Ignition Timing          | °                            |
| Intake air volume                                 | Mass Air Flow            | g/sec                        |
| Intake air temperature signal                     | Intake Air Temp          | °C                           |
| Throttle position signal                          | Throttle Opening Angle   | %                            |
| Oxygen sensor (Bank 1 Sensor 2)                   | Oxygen sensor #12        | V                            |
| A/F correction (Bank 1 Sensor 2)                  | Short term fuel trim #12 | %                            |
| Front oxygen (A/F) sensor (Bank 1 Sensor 1)       | Oxygen sensor #11        | Support                      |
| Oxygen sensor (Bank 1 Sensor 2)                   | Oxygen sensor #12        | Support                      |

**NOTE:**

For detailed operation procedure, refer to SUBARU SELECT MONITOR OPERATION MANUAL.

## 7. LED OPERATION MODE FOR ENGINE

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
  - 2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
  - 3) Press the [YES] key after the information of engine type has been displayed.
  - 4) On the «Engine Diagnosis» display screen, select the {Current Data Display/Save}, and then press the [YES] key.
  - 5) On the «Data Display Menu» display screen, select the {Data & LED Display} and press the [YES] key.
  - 6) Using the scroll key, scroll the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

| Remarks  | Display                    | Message   | LED "ON" requirements  |
|--|----------------------------|-----------|--|
| AT/MT identification signal                                | AT Vehicle ID Signal       | ON or OFF | Illuminate (AT model)  |
| Test mode signal   | Test Mode Signal           | ON or OFF | D check  |
| Neutral position switch signal                             | Neutral Position Switch    | ON or OFF | When neutral position signal is entered.                             |
| Idle switch signal   | Idle Switch Signal         | ON or OFF | When idle switch signal is entered.                                  |
| Ignition switch signal                                     | Ignition Switch            | ON or OFF | When ignition switch is turned to ON.                                |
| Power steering switch signal                               | P/S Switch                 | ON or OFF | When power steering switch is entered.                               |
| Air conditioning switch signal                             | A/C Switch                 | ON or OFF | When air conditioning switch is input.                               |
| Starter switch signal                                      | Starter Switch             | ON or OFF | When starter switch is input.  |
| Rear oxygen sensor rich signal                             | Rear O2 Rich Signal        | ON or OFF | When rear oxygen sensor mixture ratio is rich.                       |
| Knocking signal  | Knocking Signal            | ON or OFF | When knocking signal is input.                                       |
| Crankshaft position sensor signal                          | Crankshaft Position Signal | ON or OFF | When crankshaft position sensor signal is input.                     |
| Camshaft position sensor signal                            | Camshaft Position Signal   | ON or OFF | When camshaft position sensor signal is entered.                     |
| Rear defogger switch signal                                | Rear Defogger Switch       | ON or OFF | When rear defogger switch is turned to ON.                           |
| Blower fan switch signal                                   | Blower Fan Switch          | ON or OFF | When blower fan switch is turned to ON.                              |
| Light switch signal  | Light Switch               | ON or OFF | When light switch is turned to ON.                                   |
| A/C middle pressure switch signal                          | A/C Mid Pressure Switch    | ON or OFF | When A/C middle pressure switch is turned to ON.                     |
| Air conditioning relay signal                              | A/C Compressor Signal      | ON or OFF | When air conditioning relay is in function.                          |
| Radiator fan relay 1 signal                                | Radiator Fan Relay #1      | ON or OFF | When radiator fan relay 1 is in function.                            |
| Radiator fan relay 2 signal                                | Radiator Fan Relay #2      | ON or OFF | When radiator fan relay 2 is in function.                            |
| Fuel pump relay signal                                     | Fuel Pump Relay            | ON or OFF | ON output  |
| PCV hose ASSY diagnosis signal                             | Blow-by leak Connector     | ON or OFF | PCV hose ASSY is connected.  |
| Pressure control solenoid valve signal                     | PCV Solenoid               | ON or OFF | When pressure control solenoid valve is in operation.                |
| Drain valve signal   | Vent Control Solenoid      | ON or OFF | When drain valve is in operation.                                    |
| Variable valve lift diagnosis oil pressure switch signal 1 | Engine Oil Pressure SW1    | ON or OFF | Variable valve lift diagnosis oil pressure switch signal 1 is input. |

# Subaru Select Monitor

## ENGINE (DIAGNOSTICS)

| Remarks  | Display                   | Message   | LED "ON" requirements  |
|--|---------------------------|-----------|--|
| Variable valve lift diagnosis oil pressure switch signal 2 | Engine Oil Pressure SW2   | ON or OFF | Variable valve lift diagnosis oil pressure switch signal 2 is input. |
| AT retard angle demand signal                              | Retard Signal             | ON or OFF | When AT retard angle demand signal is input.                         |
| AT fuel cut signal   | Fuel Cut                  | ON or OFF | When AT fuel cut signal is input.                                    |
| AT coordinate permission signal                            | Torque Control Permission | ON or OFF | When AT coordinate permission signal is input.                       |
| Electronic throttle control motor relay signal             | ETC Motor Relay           | ON or OFF | When electronic throttle control is in function.                     |
| Clutch switch signal                                       | Clutch Switch             | ON or OFF | When clutch switch is turned to ON.                                  |
| Stop light switch signal                                   | Stop Light Switch         | ON or OFF | When stop switch is turned to ON.                                    |
| SET/COAST switch signal                                    | SET/COAST Switch          | ON or OFF | When SET/COAST switch is turned to ON.                               |
| RES/ACC switch signal                                      | RESUME/ACCEL Switch       | ON or OFF | When RES/ACC switch is turned to ON.                                 |
| Brake switch signal  | Brake Switch              | ON or OFF | When brake switch is turned to ON.                                   |
| Main switch signal   | Main Switch               | ON or OFF | When main switch is turned to ON.                                    |
| Cancel switch signal                                       | Cancel Switch             | ON or OFF | When cancel switch is turned to ON.                                  |

**NOTE:**

For detailed operation procedure, refer to "SUBARU SELECT MONITOR OPERATION MANUAL".

### 8. VIN REGISTRATION

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type has been displayed.
- 4) On the «Engine Diagnosis» display screen, select the {VIN registration} and press the [YES] key.
- 5) Perform the procedure as shown in the display.

**NOTE:**

For detailed operation procedure, refer to "SUBARU SELECT MONITOR OPERATION MANUAL".

## 10. Read Diagnostic Trouble Code (DTC)

### A: OPERATION

#### 1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On «Engine Diagnosis» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.
- 5) On «Diagnostic Code(s) Display» display screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)} and press the [YES] key.

NOTE:

- For detailed operation procedure, refer to SUBARU SELECT MONITOR OPERATION MANUAL.
- For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4SO)(diag)-73, List of Diagnostic Trouble Code (DTC).>

#### 2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
- 5) On «OBD Menu» display screen, select the {Diagnosis Code(s) Display} and press the [YES] key.
- 6) Make sure that a DTC is shown on display screen.

NOTE:

- For detailed operation procedure, refer to SUBARU SELECT MONITOR OPERATION MANUAL.
- For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4SO)(diag)-73, List of Diagnostic Trouble Code (DTC).>

#### 3. GENERAL SCAN TOOL

Refers to data denoting emission-related powertrain DTC.

For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4SO)(diag)-73, List of Diagnostic Trouble Code (DTC).>

NOTE:

Refer to general scan tool manufacturer's instruction manual to access emission-related powertrain DTC (MODE \$03).

# Inspection Mode

ENGINE (DIAGNOSTICS)

## 11. Inspection Mode

### A: PROCEDURE

Carry out trouble diagnosis shown in the following DTC table.

When performing trouble diagnosis which is not shown in the DTC table, refer to the next item Drive cycle.

<Ref. to EN(H4SO)(diag)-41, Drive Cycle.>

| DTC   | Item   |
|-------|--|
| P0031 | HO2S Heater Control Circuit Low (Bank 1 Sensor 1)                                |
| P0032 | HO2S Heater Control Circuit High (Bank 1 Sensor 1)                               |
| P0037 | HO2S Heater Control Circuit Low (Bank 1 Sensor 2)                                |
| P0038 | HO2S Heater Control Circuit High (Bank 1 Sensor 2)                               |
| P0077 | Intake Valve Control Solenoid Circuit High (Bank 1)                              |

# Inspection Mode

## ENGINE (DIAGNOSTICS)

### 1. PREPARATION FOR THE INSPECTION MODE

- 1) Make sure the fuel remains approx. half amount [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)] and the battery voltage is 12 V or more.
- 2) Raise the vehicle using a garage jack and place on rigid racks or drive the vehicle onto free rollers.

#### WARNING:

- Before raising the vehicle, ensure the parking brake is applied.
- Do not use a pantograph jack in place of a rigid rack.
- Secure a rope or wire to the front and rear towing or tie-down hooks to prevent the lateral runout of front wheels.
- Do not abruptly depress/release the clutch pedal or accelerator pedal during works even when engine is operating at low speeds since this may cause vehicle to jump off free rollers.
- In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the rigid racks and the vehicle.
- Since the rear wheels will also rotate, do not place anything near them. Also, make sure nobody goes in front of the vehicle.

- (A) Rigid rack  
(B) Free rollers

### 2. SUBARU SELECT MONITOR

- 1) After clearing the memory, check for any remaining unresolved trouble data. <Ref. to EN(H4SO)(diag)-46, Clear Memory Mode.>
- 2) Warm up the engine.
- 3) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4SO)(diag)-7, PREPARATION TOOL, General Description.>

- 4) Connect the diagnosis cable to Subaru Select Monitor.
- 5) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(H4SO)(diag)-7, PREPARATION TOOL, General Description.>

- 6) Connect the test mode connector (A) at the lower portion of instrument panel (on driver's side).

- 7) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

**CAUTION:**

**Do not connect the scan tools except for Subaru Select Monitor and general scan tool.**

8) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor power switch to ON.

(A) Power switch

9) On «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.

10) On «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.

11) Press the [YES] key after the information of engine type is displayed.

12) On «Engine Diagnosis» display screen, select the {Dealer Check Mode Procedure} and press the [YES] key.

13) When the “Perform Inspection (Dealer Check) Mode?” is shown on display screen, press the [YES] key.

14) Perform subsequent procedures as instructed on display screen.

- If trouble still remains in memory, the corresponding DTC appears on display screen.

**NOTE:**

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

- For details concerning the DTC, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(H4SO)(diag)-73, List of Diagnostic Trouble Code (DTC).>

- Release the parking brake.

- The speed difference between front and rear wheels may light either the ABS warning light, but this indicates no malfunctions. When the engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

### 3. GENERAL SCAN TOOL

1) After clearing memory, check for any remaining unresolved trouble data: <Ref. to EN(H4SO)(diag)-46, Clear Memory Mode.>

2) Warm up the engine.

3) Connect the test mode connector (A) at the lower side of instrument panel (on the driver's side).

4) Connect the general scan tool to its data link connector.

**CAUTION:**

**Do not connect the scan tools except for Subaru Select Monitor and general scan tool.**

5) Start the engine.

**NOTE:**

- Ensure the selector lever is placed in “P” position before starting. (AT models)

- Depress the clutch pedal when starting engine. (MT models)

6) Using the selector lever or shift lever, turn the “P” position switch and “N” position switch to ON.

## Inspection Mode

### ENGINE (DIAGNOSTICS)

---

7) Depress the brake pedal to turn brake switch ON. (AT models)

8) Keep the engine speed in 2,500 — 3,000 rpm range for 40 seconds.

9) Place the selector lever or shift lever in “D” position (AT models) or “1st” gear (MT models) and drive the vehicle at 5 to 10 km/h (3 to 6 MPH).

#### NOTE:

- On AWD vehicles, release the parking brake.
- The speed difference between front and rear wheels may light ABS warning light, but this indicates no malfunctions. When the engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

10) Using the general scan tool, check for DTC and record the result(s).

#### NOTE:

- For detailed operation procedures, refer to the General Scan Tool Instruction Manual.
- For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(H4SO)(diag)-73, List of Diagnostic Trouble Code (DTC).>

## 12. Drive Cycle

### A: PROCEDURE

There are some drive patterns shown below for the trouble diagnosis. Performing the specified drive pattern allows to diagnose malfunctioning items listed below. After the malfunctioning items listed below are repaired, always check if they correctly resume their functions by performing the required drive pattern.

#### 1. PREPARATION FOR DRIVE CYCLE

- 1) Make sure that the fuel remains approx. half amount [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)], and battery voltage is 12 V or more.
- 2) After performing the diagnostics and cleaning memory, check for any remaining unresolved trouble data. <Ref. to EN(H4SO)(diag)-46, Clear Memory Mode.>
- 3) Disconnect the test mode connector.

#### NOTE:

- Except for the water temperature specified items at starting, the diagnosis is carried out after engine warm up.
- Carry out the diagnosis which is marked \* on DTC twice, then, after finishing first diagnosis, stop the engine and do second time at the same condition.

#### 2. DRIVE CYCLE A (AFTER RUNNING 20 MINUTES AT 80 KM/H (50 MPH), IDLE ENGINE FOR 1 MINUTE.)

| DTC    | Item   | Condition  |
|--------|--|--|
| *P0125 | Insufficient Coolant Temperature for Closed Loop Fuel Control                    | Coolant temperature at start is less than 20°C (68°F). |
| *P0128 | Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature) | —  |
| *P0133 | O <sub>2</sub> Sensor Circuit Slow Response (Bank 1 Sensor 1)                    | —  |
| *P0171 | System too Lean (Bank 1)   | Diagnosis completes in drive cycle B or C as well.     |
| *P0172 | System too Rich (Bank 1)   | Diagnosis completes in drive cycle B or C as well.     |
| *P0196 | Engine Oil Temperature Sensor Circuit Range/Performance                          | —  |
| *P0301 | Cylinder 1 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.     |
| *P0302 | Cylinder 2 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.     |
| *P0303 | Cylinder 3 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.     |
| *P0304 | Cylinder 4 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.     |
| *P0420 | Catalyst System Efficiency Below Threshold (Bank 1)                              | —  |
| *P0442 | Evaporative Emission Control System Leak Detected (small leak)                   | Coolant temperature at start is less than 25°C (77°F). |
| *P0451 | Evaporative Emission Control System Pressure Sensor Range/Performance            | —  |
| *P0456 | Evaporative Emission Control System Leak Detected (very small leak)              | Coolant temperature at start is less than 25°C (77°F). |
| *P0457 | Evaporative Emission Control System Leak Detected (fuel cap loose/off)           | Coolant temperature at start is less than 25°C (77°F). |
| *P0459 | Evaporative Emission Control System Purge Control Valve Circuit High             | —  |
| P1443  | Vent Control Solenoid Valve Function Problem                                     | —  |
| *P2096 | Post Catalyst Fuel Trim System Too Lean Bank 1                                   | Diagnosis completes in drive cycle B or C as well.     |
| *P2097 | Post Catalyst Fuel Trim System Too Rich Bank 1                                   | Diagnosis completes in drive cycle B or C as well.     |

# Drive Cycle

## ENGINE (DIAGNOSTICS)

### 3. DRIVE CYCLE B (TEN MINUTES IDLING)

**NOTE:**

Drive the vehicle at 10 km/h (6 MPH) or more before diagnosis.

| DTC    | Item  | Condition  |
|--------|---|--|
| *P0126 | Insufficient Coolant Temperature for Stable Operation | —  |
| *P0171 | System Too Lean (Bank 1)                              | Diagnosis completes in drive cycle A or C as well. |
| *P0172 | System Too Rich (Bank 1)                              | Diagnosis completes in drive cycle A or C as well. |
| *P0301 | Cylinder 1 Misfire Detected                           | Diagnosis completes in drive cycle A or C as well. |
| *P0302 | Cylinder 2 Misfire Detected                           | Diagnosis completes in drive cycle A or C as well. |
| *P0303 | Cylinder 3 Misfire Detected                           | Diagnosis completes in drive cycle A or C as well. |
| *P0304 | Cylinder 4 Misfire Detected                           | Diagnosis completes in drive cycle A or C as well. |
| *P0464 | Fuel Level Sensor Circuit Intermittent                | —  |
| *P0483 | Cooling Fan Rationality Check                         | —  |
| *P0506 | Idle Control System RPM Lower Than Expected           | —  |
| *P0507 | Idle Control System RPM Higher Than Expected          | —  |
| *P2096 | Post Catalyst Fuel Trim System Too Lean Bank 1        | Diagnosis completes in drive cycle A or C as well. |
| *P2097 | Post Catalyst Fuel Trim System Too Rich Bank 1        | Diagnosis completes in drive cycle A or C as well. |

## 4. DRIVE CYCLE C (DRIVE ACCORDING TO THE FOLLOWING DRIVE PATTERN)

- |  |   |  |
|--|---|--|
| (A) Idle engine for 1 minute.                                  | (E) Drive vehicle at 65 km/h (40 MPH) for 10 seconds. | (G) Stop vehicle with throttle fully closed. |
| (B) Accelerate to 96 km/h (60 MPH) within 20 seconds.          | (F) Accelerate to 96 km/h (60 MPH) within 10 seconds. | (H) Vehicle speed km/h (MPH)                 |
| (C) Drive vehicle at 96 km/h (60 MPH) for 20 seconds.          |   | (I) Seconds                                  |
| (D) Decelerate with fully closed throttle to 65 km/h (40 MPH). |   |  |

| DTC    | Item   | Condition  |
|--------|--|--|
| P0026  | Intake Valve Control Solenoid Circuit Range/Performance (Bank 1)                 | —  |
| P0028  | Intake Valve Control Solenoid Circuit Range/Performance (Bank 2)                 | —  |
| *P0030 | HO2S Heater Control Circuit (Bank 1 Sensor 1)                                    | —  |

### 5. DRIVE CYCLE D

#### • DRIFT DIAGNOSIS

- 1) Make sure that the engine coolant temperature at engine starting is less than 30°C (86°F).
- 2) Make sure that fuel of more than 9.0 ℓ (2.4 US gal, 2.0 Imp gal) remains and the battery voltage is more than 10.9 V.
- 3) Make sure that the engine coolant temperature rises for more than 10°C (50°F) from the level of engine starting and is also more than 75°C (167°F).
- 4) Idle the engine for more than 120 seconds in the condition of step 3).

#### • STUCK DIAGNOSIS

- 1) Make sure that the battery voltage is more than 10.9 V.
- 2) Perform the clear memory mode. <Ref. to EN(H4SO)(diag)-46, Clear Memory Mode.>
- 3) Drive the vehicle for the distance equal to fuel of 50 ℓ (13.2 US gal, 11 Imp gal).

#### NOTE:

- It is possible to drive intermittently.
- Do not disconnect the terminal of battery during diagnosis. (If disconnecting the terminal of battery, the data will be cleared.)

| DTC   | Item  | Condition |
|-------|---|-----------|
| P0181 | Fuel Temperature Sensor "A" Circuit Range/Performance | —         |

### 6. DRIVE CYCLE E

- 1) Make sure that the battery voltage is more than 10.9 V.
- 2) Perform the clear memory mode. <Ref. to EN(H4SO)(diag)-46, Clear Memory Mode.>
- 3) Drive the vehicle for the distance equal to fuel of 30 ℓ (7.9 US gal, 6.6 Imp gal).

#### NOTE:

- It is possible to drive intermittently.
- Do not disconnect the terminal of battery during diagnosis. (If disconnecting the terminal of battery, the data will be cleared.)

| DTC   | Item  | Condition |
|-------|---|-----------|
| P0461 | Fuel Level Sensor Circuit Range/Performance | —         |

## 7. DRIVE CYCLE F

- 1) Make sure that the engine coolant temperature at engine starting is less than 30°C (86°F).
- 2) Warm-up the engine until the engine coolant temperature is more than 95°C (203°F) from engine starting.
- 3) Idle the engine for more than 10 minutes in the condition of step 2).

**NOTE:**

Do not disconnect the terminal of battery during diagnosis. (If disconnecting the terminal of battery, the data will be cleared.)

| DTC   | Item   | Condition |
|-------|--|-----------|
| P0111 | Intake Air Temperature Circuit Range/Performance | —         |

## 13. Clear Memory Mode

### A: OPERATION

#### 1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On «Engine Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.
- 5) When the 'Done' and 'Turn Ignition Switch OFF' are shown on display screen, turn the ignition switch to OFF, and then turn the Subaru Select Monitor to OFF.

**NOTE:**

For detailed operation procedure, refer to SUBARU SELECT MONITOR OPERATION MANUAL.

#### 2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
- 5) On «OBD Menu» display screen, select the {4. Diagnosis Code(s) Cleared} and press the [YES] key.
- 6) When the 'Clear Diagnostic Code?' is shown on the display screen, press the [YES] key.
- 7) Turn the Subaru Select Monitor and ignition switch to OFF.

**NOTE:**

For detailed operation procedure, refer to SUBARU SELECT MONITOR OPERATION MANUAL.

#### 3. GENERAL SCAN TOOL

For clear memory procedures using the general scan tool, refer to General Scan Tool Instruction Manual.

After the memory has been cleared, the idle air control solenoid valve must be initialized. To do this, turn the ignition switch to ON position. Wait 3 seconds before starting the engine.

## 14. Compulsory Valve Operation Check Mode

### A: OPERATION

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4SO)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(H4SO)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the test mode connector (A) at the lower portion of instrument panel (on driver's side).

5) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of instrument panel (on driver's side).

(2) Connect the diagnosis cable to data link connector.

### CAUTION:

**Do not connect scan tools except for Subaru Select Monitor and general scan tool.**

6) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor power switch to ON.

(A) Power switch

7) On «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.

8) On «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.

9) Press the [YES] key after the information of engine type is displayed.

10) On «Engine Diagnosis» display screen, select the {System Operation Check Mode} and press the [YES] key.

11) On «System Operation Check Mode» display screen, select the {Actuator ON/OFF Operation} and press the [YES] key.

12) Select the desired compulsory actuator on the «Actuator ON/OFF Operation» display screen and press the [YES] key.

13) Pressing the [NO] key completes the compulsory valve operation check mode. The display will then return to the «Actuator ON/OFF Operation» screen.

# Compulsory Valve Operation Check Mode

## ENGINE (DIAGNOSTICS)

---

- A list of support data is shown in the following table.

| Contents  | Display                     |
|---|-----------------------------|
| Compulsory fuel pump relay operation check                        | Fuel Pump Relay             |
| Compulsory radiator fan relay operation check                     | Radiator Fan Relay          |
| Compulsory air conditioning relay operation check                 | A/C Compressor Relay        |
| Compulsory purge control solenoid valve operation check           | CPC Solenoid Valve          |
| Compulsory pressure control solenoid valve operation check        | PCV Solenoid Valve          |
| Compulsory air assist vent control solenoid valve operation check | Vent Control Solenoid Valve |

### NOTE:

- The following parts will be displayed but not functional.

| Display                               |
|---------------------------------------|
| EGR Solenoid Valve                    |
| ASV Solenoid Valve                    |
| FICD Solenoid                         |
| Pressure Switching Sol. 1             |
| Pressure Switching Sol. 2             |
| Turbocharger Wastegate Solenoid       |
| AAI Solenoid                          |
| Emission-bypass valve permission flag |

- For detailed operation procedure, refer to SUBARU SELECT MONITOR OPERATION MANUAL.

## 15. Malfunction Indicator Light

### A: PROCEDURE

|   |
|---|
| 1. Activation of malfunction indicator light. <Ref. to EN(H4SO)(diag)-49, ACTIVATION OF MALFUNCTION INDICATOR LIGHT, Malfunction Indicator Light.>  |
| ↓   |
| 2. Malfunction indicator light does not come on. <Ref. to EN(H4SO)(diag)-51, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>  |
| ↓   |
| 3. Malfunction indicator light does not go off. <Ref. to EN(H4SO)(diag)-53, MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF., Malfunction Indicator Light.>   |
| ↓   |
| 4. Malfunction indicator light does not blink at a cycle of 3 Hz. <Ref. to EN(H4SO)(diag)-54, MALFUNCTION INDICATOR LIGHT DOES NOT BLINK AT A CYCLE OF 3 HZ., Malfunction Indicator Light.>     |
| ↓   |
| 5. Malfunction indicator light remains blinking at a cycle of 3 Hz. <Ref. to EN(H4SO)(diag)-56, MALFUNCTION INDICATOR LIGHT REMAINS BLINKING AT A CYCLE OF 3 HZ., Malfunction Indicator Light.> |

### B: ACTIVATION OF MALFUNCTION INDICATOR LIGHT

1) When the ignition switch is turned to ON (engine off), the malfunction indicator light (A) in the combination meter illuminates.

**NOTE:**

If the malfunction indicator light does not illuminate, perform diagnostics of the malfunction indicator light circuit or the combination meter circuit. <Ref. to EN(H4SO)(diag)-51, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>

2) After starting the engine, the malfunction indicator light goes out. If it does not, either the engine or the emission control system is malfunctioning.

- (1) No trouble
- (2) Trouble occurs
- (3) ON
- (4) OFF
- (5) Ignition switch ON
- (6) Engine start

# Malfunction Indicator Light

## ENGINE (DIAGNOSTICS)

3) If the diagnosis system detects a misfire which could damage the catalyst, the malfunction indicator light blink at a cycle of 1 Hz.

- (1) ON
- (2) OFF
- (3) Ignition switch ON
- (4) Engine start
- (5) Misfire start
- (6) 1 second

4) When the ignition switch is turned to ON (engine off) or to "START" with test mode connector connected, the malfunction indicator light blinks at a cycle of 3 Hz.

- (1) ON
- (2) OFF
- (3) Ignition switch ON
- (4) 1 second

# Malfuction Indicator Light

ENGINE (DIAGNOSTICS)

## C: MALFUNCTION INDICATOR LIGHT DOES NOT COME ON

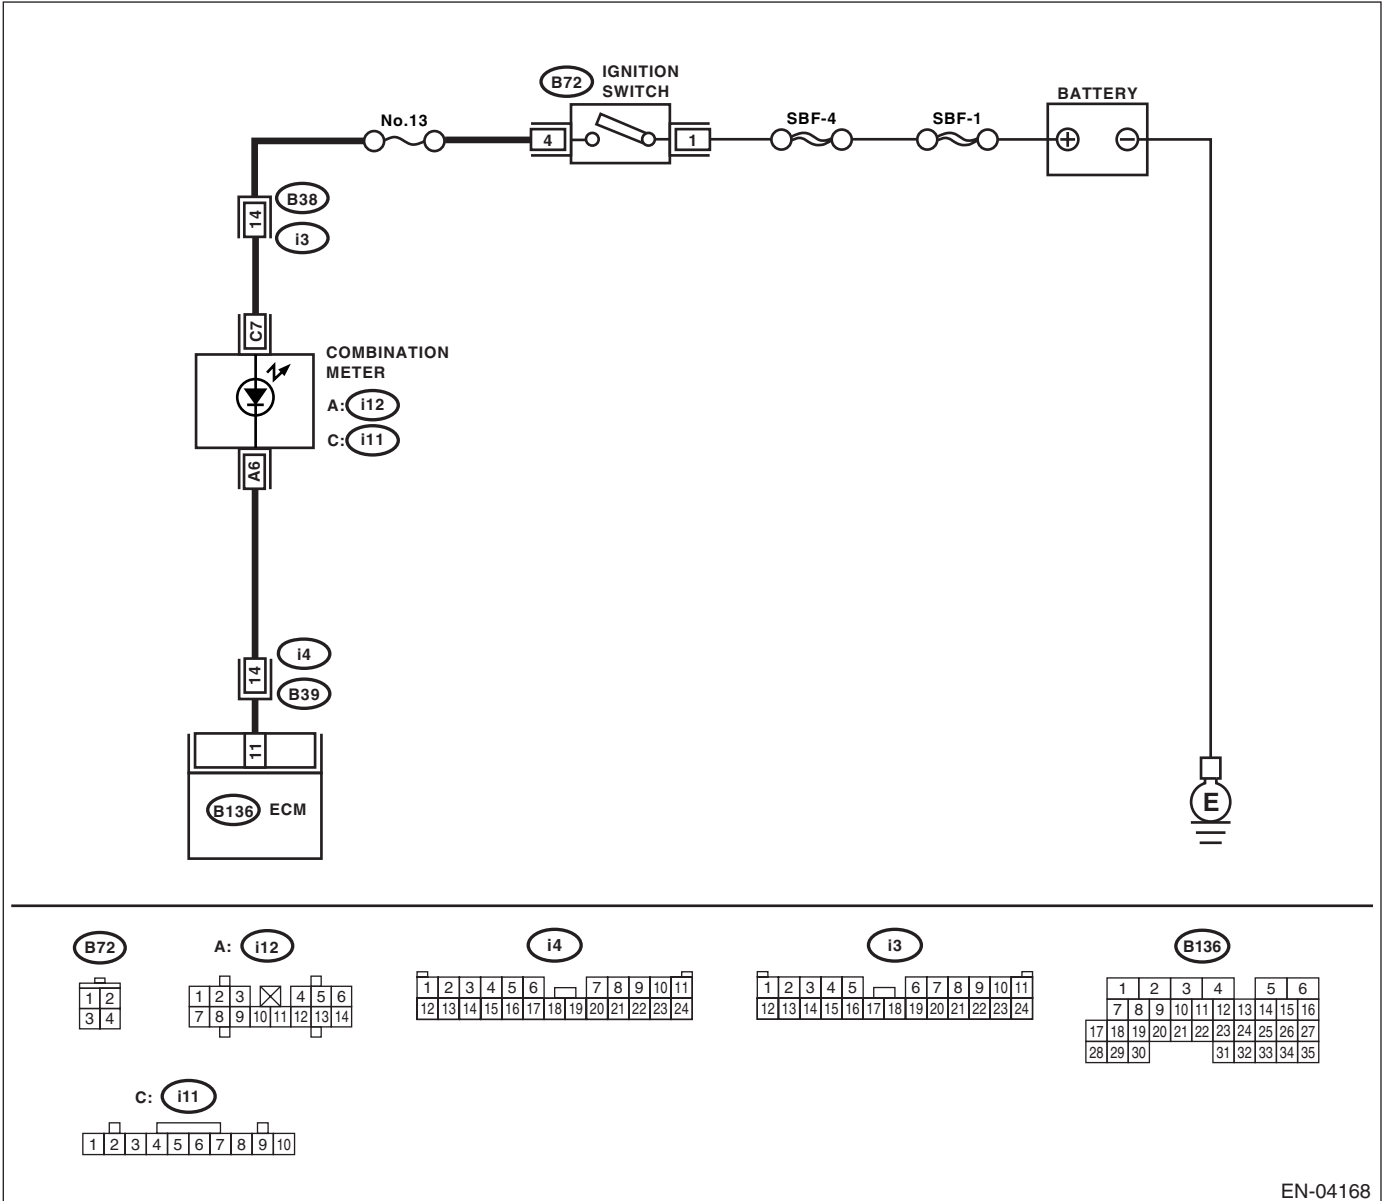

### DIAGNOSIS:

The malfunction indicator light circuit is open or shorted.

### TROUBLE SYMPTOM:

When the ignition switch is turned ON (engine OFF), malfunction indicator light does not come on.

### WIRING DIAGRAM:

EN-04168

## Malfunction Indicator Light

ENGINE (DIAGNOSTICS)

| Step  | Check   | Yes   | No  |
|---|---|---|---|
| <b>1 CHECK OUTPUT SIGNAL FROM ECM.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between ECM connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B136) No. 11 (+) — Chassis ground (-):</b>   | Is the voltage less than 1 V?                         | Go to step 4.   | Go to step 2.   |
| <b>2 CHECK POOR CONTACT.</b><br>Check poor contact by shaking or pulling ECM connector and harness.   | Does the malfunction indicator light illuminate?      | Repair poor contact in ECM connector.   | Go to step 3.   |
| <b>3 CHECK ECM CONNECTOR.</b><br>Check the ECM connector connection.  | Is the ECM connector correctly connected?             | Replace the ECM.<br><Ref. to FU(H4SO)-38, Engine Control Module (ECM).>           | Repair connection of ECM connector.   |
| <b>4 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the combination meter. <Ref. to IDI-10, Combination Meter.><br>3) Disconnect the connector from ECM and combination meter.<br>4) Measure the resistance of harness between ECM and combination meter connector.<br><b>Connector &amp; terminal</b><br><b>(B136) No. 11 — (i12) No. 6:</b> | Is the resistance less than 1 $\Omega$ ?              | Go to step 5.   | Repair harness and connector.<br>NOTE:<br>In this case, repair the following: <ul style="list-style-type: none"> <li>• Open circuit in harness between ECM and combination meter connector</li> <li>• Poor contact in coupling connector</li> </ul>                           |
| <b>5 CHECK POOR CONTACT.</b><br>Check poor contact in combination meter connector.  | Is there poor contact in combination meter connector? | Repair poor contact in combination meter connector.                               | Go to step 6.   |
| <b>6 CHECK HARNESS BETWEEN COMBINATION METER AND IGNITION SWITCH CONNECTOR.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between combination meter connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(i11) No. 7 (+) — Chassis ground (-):</b>  | Is the voltage more than 10 V?                        | Replace the combination meter circuit board. <Ref. to IDI-10, Combination Meter.> | Check the following and repair if necessary.<br>NOTE: <ul style="list-style-type: none"> <li>• Blown out fuse (No. 13)</li> <li>• Open or short circuit in harness between fuse (No. 13) and battery terminal</li> <li>• Poor contact in ignition switch connector</li> </ul> |

## D: MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF.

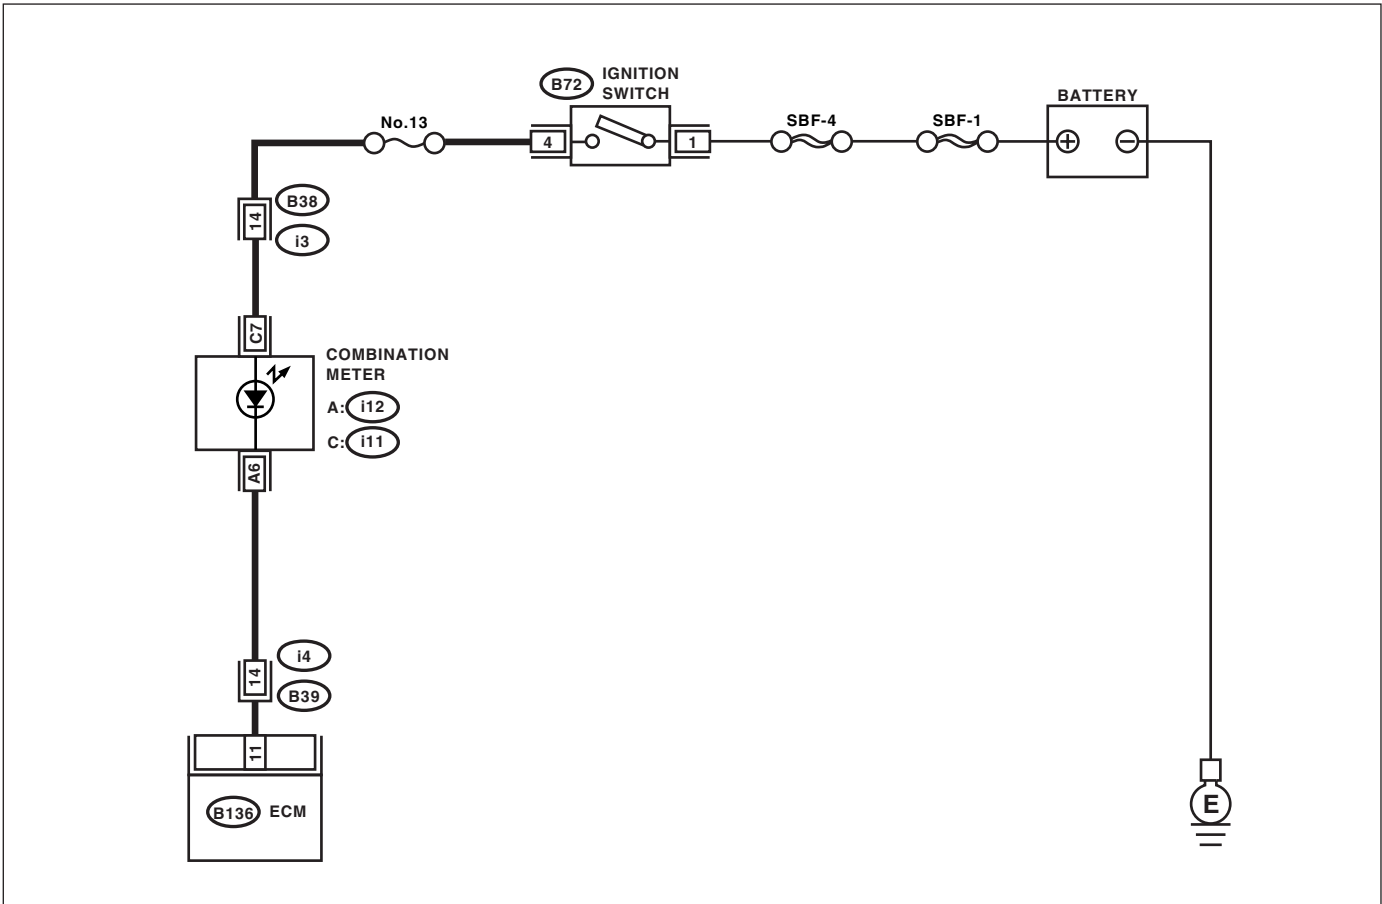

### DIAGNOSIS:

The malfunction indicator light circuit is shorted.

### TROUBLE SYMPTOM:

Although malfunction indicator light comes on when the engine runs, DTC is not shown on Subaru select monitor or general scan tool display.

### WIRING DIAGRAM:

EN-04168

| Step  | Check  | Yes  | No  |
|---|--|--|---|
| <b>1</b><br><b>CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ECM.<br>3) Turn the ignition switch to ON. | Does the malfunction indicator light illuminate? | Repair short circuit in harness between combination meter and ECM connector. | Replace the ECM.<br><Ref. to FU(H4SO)-38, Engine Control Module (ECM).> |

# Malfunction Indicator Light

ENGINE (DIAGNOSTICS)

## E: MALFUNCTION INDICATOR LIGHT DOES NOT BLINK AT A CYCLE OF 3 Hz.

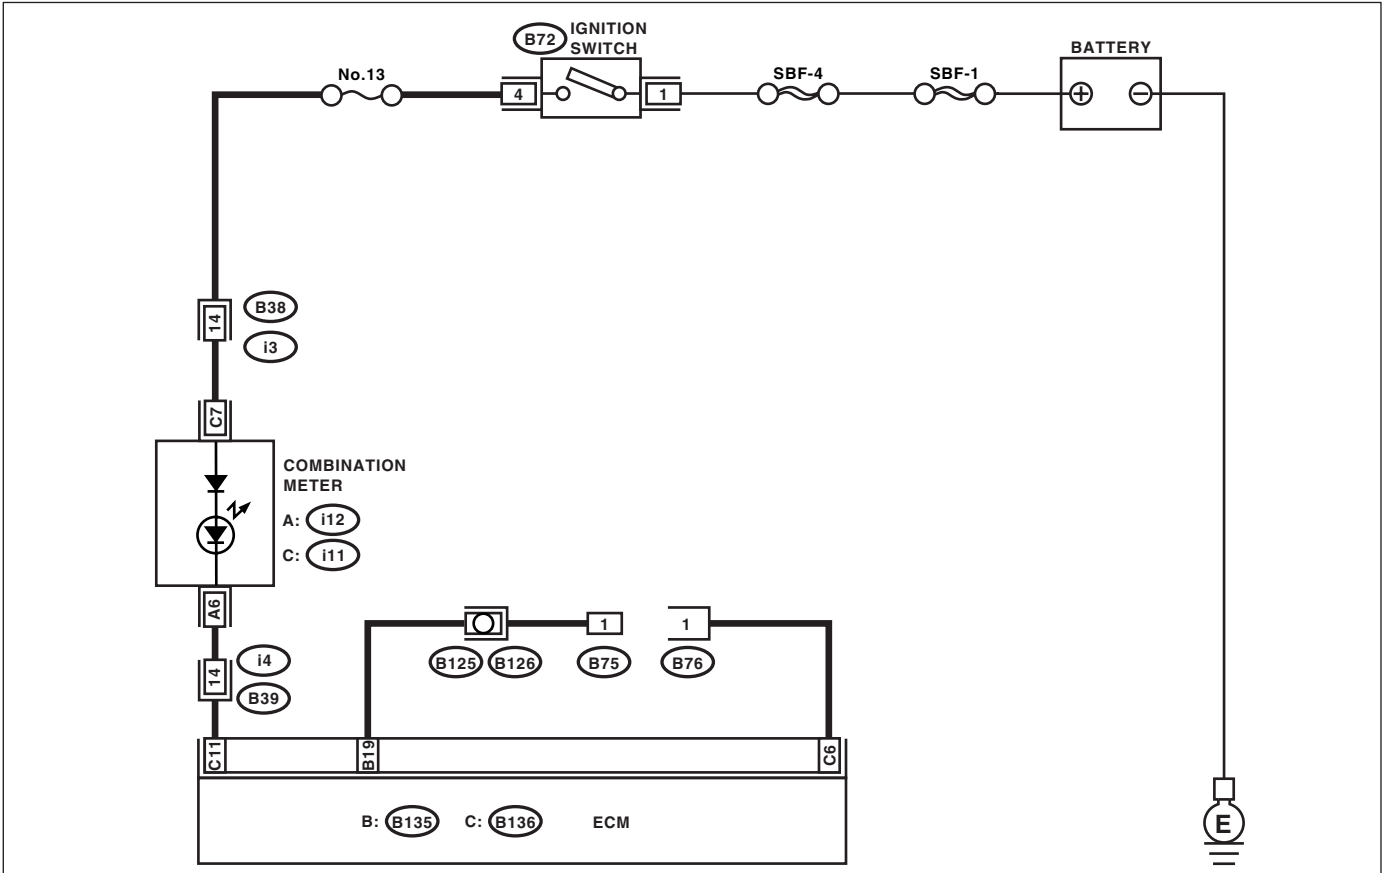

### DIAGNOSIS:

- The malfunction indicator light circuit is open or shorted.
- Test mode connector circuit is in open.

### TROUBLE SYMPTOM:

When in inspection mode, malfunction indicator light does not blink at a cycle of 3 Hz.

### WIRING DIAGRAM:

EN-04660

| P0171 | System too Lean (Bank 1)   | <Ref. to EN(H4SO)(diag)-159, DTC P0171 SYSTEM TOO LEAN (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0172 | System too Rich (Bank 1)   | <Ref. to EN(H4SO)(diag)-160, DTC P0172 SYSTEM TOO RICH (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |

# List of Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| DTC   | Item   | Index  |
|-------|--|--|
| P0181 | Fuel Temperature Sensor "A" Circuit Range/Performance                            | <Ref. to EN(H4SO)(diag)-162, DTC P0181 FUEL TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |
| P0182 | Fuel Temperature Sensor "A" Circuit Low Input                                    | <Ref. to EN(H4SO)(diag)-164, DTC P0182 FUEL TEMPERATURE SENSOR "A" CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                    |
| P0183 | Fuel Temperature Sensor "A" Circuit High Input                                   | <Ref. to EN(H4SO)(diag)-166, DTC P0183 FUEL TEMPERATURE SENSOR "A" CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                   |
| P0196 | Engine Oil Temperature Sensor Circuit Range/Performance                          | <Ref. to EN(H4SO)(diag)-169, DTC P0196 ENGINE OIL TEMPERATURE SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                          |
| P0197 | Engine Oil Temperature Sensor Low  | <Ref. to EN(H4SO)(diag)-171, DTC P0197 ENGINE OIL TEMPERATURE SENSOR LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0198 | Engine Oil Temperature Sensor High   | <Ref. to EN(H4SO)(diag)-173, DTC P0198 ENGINE OIL TEMPERATURE SENSOR HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0222 | Throttle/Pedal Position Sensor/Switch "B" Circuit Low Input                      | <Ref. to EN(H4SO)(diag)-175, DTC P0222 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |
| P0223 | Throttle/Pedal Position Sensor/Switch "B" Circuit High Input                     | <Ref. to EN(H4SO)(diag)-178, DTC P0223 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                     |
| P0301 | Cylinder 1 Misfire Detected  | <Ref. to EN(H4SO)(diag)-181, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0302 | Cylinder 2 Misfire Detected  | <Ref. to EN(H4SO)(diag)-181, DTC P0302 CYLINDER 2 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0303 | Cylinder 3 Misfire Detected  | <Ref. to EN(H4SO)(diag)-181, DTC P0303 CYLINDER 3 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0304 | Cylinder 4 Misfire Detected  | <Ref. to EN(H4SO)(diag)-182, DTC P0304 CYLINDER 4 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0327 | Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)                       | <Ref. to EN(H4SO)(diag)-188, DTC P0327 KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                       |
| P0328 | Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)                      | <Ref. to EN(H4SO)(diag)-190, DTC P0328 KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |
| P0335 | Crankshaft Position Sensor "A" Circuit   | <Ref. to EN(H4SO)(diag)-192, DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0336 | Crankshaft Position Sensor "A" Circuit Range/Performance                         | <Ref. to EN(H4SO)(diag)-194, DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                         |
| P0340 | Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)                   | <Ref. to EN(H4SO)(diag)-196, DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 1 OR SINGLE SENSOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                   |
| P0341 | Camshaft Position Sensor "A" Circuit Range/Performance (Bank 1 or Single Sensor) | <Ref. to EN(H4SO)(diag)-198, DTC P0341 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE (BANK 1 OR SINGLE SENSOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P0400 | Exhaust Gas Recirculation  | <Ref. to EN(H4SO)(diag)-201, DTC P0400 EXHAUST GAS RECIRCULATION FLOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0420 | Catalyst System Efficiency Below Threshold (Bank 1)                              | <Ref. to EN(H4SO)(diag)-203, DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                              |
| P0442 | Evaporative Emission Control System Leak Detected (small leak)                   | <Ref. to EN(H4SO)(diag)-207, DTC P0442 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (SMALL LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                   |

## List of Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| DTC   | Item   | Index  |
|-------|--|--|
| P0447 | Evaporative Emission Control System Vent Control Circuit Open          | <Ref. to EN(H4SO)(diag)-211, DTC P0447 EVAPORATIVE EMISSION CONTROL SYSTEM VENT CONTROL CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>          |
| P0448 | Evaporative Emission Control System Vent Control Circuit Shorted       | <Ref. to EN(H4SO)(diag)-214, DTC P0448 EVAPORATIVE EMISSION CONTROL SYSTEM VENT CONTROL CIRCUIT SHORTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>       |
| P0451 | Evaporative Emission Control System Pressure Sensor Range/Performance  | <Ref. to EN(H4SO)(diag)-216, DTC P0451 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0452 | Evaporative Emission Control System Pressure Sensor Low Input          | <Ref. to EN(H4SO)(diag)-218, DTC P0452 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>          |
| P0453 | Evaporative Emission Control System Pressure Sensor High Input         | <Ref. to EN(H4SO)(diag)-221, DTC P0453 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>         |
| P0456 | Evaporative Emission Control System Leak Detected (very small leak)    | <Ref. to EN(H4SO)(diag)-224, DTC P0456 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (VERY SMALL LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>    |
| P0457 | Evaporative Emission Control System Leak Detected (fuel cap loose/off) | <Ref. to EN(H4SO)(diag)-227, DTC P0457 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (FUEL CAP LOOSE/OFF), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P0458 | Evaporative Emission Control System Purge Control Valve Circuit Low    | <Ref. to EN(H4SO)(diag)-231, DTC P0458 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>    |
| P0459 | Evaporative Emission Control System Purge Control Valve Circuit High   | <Ref. to EN(H4SO)(diag)-233, DTC P0459 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0461 | Fuel Level Sensor Circuit Range/Performance                            | <Ref. to EN(H4SO)(diag)-235, DTC P0461 FUEL LEVEL SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |
| P0462 | Fuel Level Sensor Circuit Low Input                                    | <Ref. to EN(H4SO)(diag)-237, DTC P0462 FUEL LEVEL SENSOR CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                    |
| P0463 | Fuel Level Sensor Circuit High Input                                   | <Ref. to EN(H4SO)(diag)-240, DTC P0463 FUEL LEVEL SENSOR CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                   |
| P0464 | Fuel Level Sensor Circuit Intermittent                                 | <Ref. to EN(H4SO)(diag)-243, DTC P0464 FUEL LEVEL SENSOR CIRCUIT INTERMITTENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                 |
| P0483 | Cooling Fan Rationality Check  | <Ref. to EN(H4SO)(diag)-244, DTC P0483 COOLING FAN RATIONALITY CHECK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0502 | Vehicle Speed Sensor Circuit Low Input                                 | <Ref. to EN(H4SO)(diag)-246, DTC P0502 VEHICLE SPEED SENSOR CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                 |
| P0503 | Vehicle Speed Sensor Intermittent/Erratic/High                         | <Ref. to EN(H4SO)(diag)-247, DTC P0503 VEHICLE SPEED SENSOR INTERMITTENT/ERRATIC/HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                         |
| P0506 | Idle Control System RPM Lower Than Expected                            | <Ref. to EN(H4SO)(diag)-249, DTC P0506 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |
| P0507 | Idle Control System RPM Higher Than Expected                           | <Ref. to EN(H4SO)(diag)-251, DTC P0507 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                           |
| P0512 | Starter Request Circuit  | <Ref. to EN(H4SO)(diag)-253, DTC P0512 STARTER REQUEST CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0513 | Incorrect Immobilizer Key  | <Ref. to IM(diag)-21, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |

# List of Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| DTC   | Item   | Index   |
|-------|--|---|
| P0519 | Idle Control System Malfunction (Fail-Safe)                              | <Ref. to EN(H4SO)(diag)-255, DTC P0519 IDLE CONTROL SYSTEM MALFUNCTION (FAIL-SAFE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0600 | CAN Communication Circuit  | <Ref. to EN(H4SO)(diag)-258, DTC P0600 SERIAL COMMUNICATION LINK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0604 | Internal Control Module Random Access Memory (RAM) Error                 | <Ref. to EN(H4SO)(diag)-260, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0605 | Internal Control Module Read Only Memory (ROM) Error                     | <Ref. to EN(H4SO)(diag)-261, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0607 | Control Module Performance   | <Ref. to EN(H4SO)(diag)-262, DTC P0607 CONTROL MODULE PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0638 | Throttle Actuator Control Range/Performance (Bank 1)                     | <Ref. to EN(H4SO)(diag)-263, DTC P0638 THROTTLE ACTUATOR CONTROL RANGE/PERFORMANCE (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0691 | Cooling Fan 1 Control Circuit Low  | <Ref. to EN(H4SO)(diag)-264, DTC P0691 COOLING FAN 1 CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0692 | Cooling Fan 1 Control Circuit High                                       | <Ref. to EN(H4SO)(diag)-264, DTC P0692 COOLING FAN 1 CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0700 | Request AT Mil ON  | <Ref. to EN(H4SO)(diag)-264, DTC P0700 TRANSMISSION CONTROL SYSTEM (MIL REQUEST), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0851 | Neutral Switch Input Circuit Low   | <Ref. to EN(H4SO)(diag)-265, DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (AT MODEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to EN(H4SO)(diag)-267, DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (MT MODEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0852 | Neutral Switch Input Circuit High  | <Ref. to EN(H4SO)(diag)-269, DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (AT MODEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to EN(H4SO)(diag)-272, DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (MT MODEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P1152 | O <sub>2</sub> Sensor Circuit Range/Performance (Low) (Bank 1 Sensor 1)  | <Ref. to EN(H4SO)(diag)-274, DTC P1152 O <sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (LOW) (BANK 1 SENSOR 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P1153 | O <sub>2</sub> Sensor Circuit Range/Performance (High) (Bank 1 Sensor 1) | <Ref. to EN(H4SO)(diag)-277, DTC P1153 O <sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (HIGH) (BANK 1 SENSOR 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1160 | Return Spring Failure  | <Ref. to EN(H4SO)(diag)-280, DTC P1160 RETURN SPRING FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P1400 | Fuel Tank Pressure Control Solenoid Valve Circuit Low                    | <Ref. to EN(H4SO)(diag)-281, DTC P1400 FUEL TANK PRESSURE CONTROL SOLENOID VALVE CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P1420 | Fuel Tank Pressure Control Solenoid Valve Circuit High                   | <Ref. to EN(H4SO)(diag)-284, DTC P1420 FUEL TANK PRESSURE CONTROL SOL. VALVE CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1443 | Vent Control Solenoid Valve Function Problem                             | <Ref. to EN(H4SO)(diag)-286, DTC P1443 VENT CONTROL SOLENOID VALVE FUNCTION PROBLEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1491 | Positive Crankcase Ventilation (Blow-by) Function Problem                | <Ref. to EN(H4SO)(diag)-288, DTC P1491 POSITIVE CRANKCASE VENTILATION (BLOW-BY) FUNCTION PROBLEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P1492 | EGR Solenoid Valve Signal #1 Circuit Malfunction (Low Input)             | <Ref. to EN(H4SO)(diag)-290, DTC P1492 EGR SOLENOID VALVE SIGNAL #1 CIRCUIT MALFUNCTION (LOW INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |

## List of Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| DTC   | Item  | Index   |
|-------|---|---|
| P1493 | EGR Solenoid Valve Signal #1 Circuit Malfunction (High Input) | <Ref. to EN(H4SO)(diag)-290, DTC P1493 EGR SOLENOID VALVE SIGNAL #1 CIRCUIT MALFUNCTION (HIGH INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P1494 | EGR Solenoid Valve Signal #2 Circuit Malfunction (Low Input)  | <Ref. to EN(H4SO)(diag)-290, DTC P1494 EGR SOLENOID VALVE SIGNAL #2 CIRCUIT MALFUNCTION (LOW INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1495 | EGR Solenoid Valve Signal #2 Circuit Malfunction (High Input) | <Ref. to EN(H4SO)(diag)-290, DTC P1495 EGR SOLENOID VALVE SIGNAL #2 CIRCUIT MALFUNCTION (HIGH INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P1496 | EGR Solenoid Valve Signal #3 Circuit Malfunction (Low Input)  | <Ref. to EN(H4SO)(diag)-290, DTC P1496 EGR SOLENOID VALVE SIGNAL #3 CIRCUIT MALFUNCTION (LOW INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1497 | EGR Solenoid Valve Signal #3 Circuit Malfunction (High Input) | <Ref. to EN(H4SO)(diag)-290, DTC P1497 EGR SOLENOID VALVE SIGNAL #3 CIRCUIT MALFUNCTION (HIGH INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P1498 | EGR Solenoid Valve Signal #4 Circuit Malfunction (Low Input)  | <Ref. to EN(H4SO)(diag)-291, DTC P1498 EGR SOLENOID VALVE SIGNAL #4 CIRCUIT MALFUNCTION (LOW INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1499 | EGR Solenoid Valve Signal #4 Circuit Malfunction (High Input) | <Ref. to EN(H4SO)(diag)-294, DTC P1499 EGR SOLENOID VALVE SIGNAL #4 CIRCUIT MALFUNCTION (HIGH INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P1518 | Starter Switch Circuit Low input                              | <Ref. to EN(H4SO)(diag)-296, DTC P1518 STARTER SWITCH CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                              |
| P1560 | Back-up Voltage Circuit Malfunction                           | <Ref. to EN(H4SO)(diag)-299, DTC P1560 BACK-UP VOLTAGE CIRCUIT MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                           |
| P1570 | Antenna   | <Ref. to IM(diag)-22, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1571 | Reference Code Incompatibility                                | <Ref. to IM(diag)-15, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                       |
| P1574 | Key Communication Failure                                     | <Ref. to IM(diag)-20, DTC P1574 KEY IMMOBILIZER COMMUNICATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

## 18. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### A: DTC P0026 INTAKE VALVE CONTROL SOLENOID CIRCUIT RANGE/PERFORMANCE (BANK 1)

#### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4SO)-8, DTC P0026 INTAKE VALVE CONTROL SOLENOID CIRCUIT RANGE/PERFORMANCE (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>

#### TROUBLE SYMPTOM:

Erroneous idling

#### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)(diag)-46, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)(diag)-36, PROCEDURE, Inspection Mode.>.

#### WIRING DIAGRAM:

## **W: DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH “A” CIRCUIT LOW INPUT**

### **DTC DETECTING CONDITION:**

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4SO)-38, DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH “A” CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### **TROUBLE SYMPTOM:**

- Erroneous idling
- Engine stalls.
- Poor driving performance

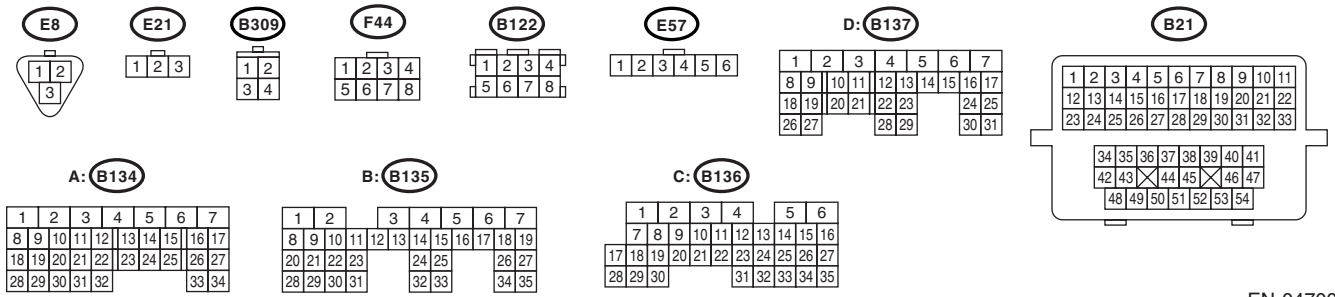

### **CAUTION:**

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)(diag)-46, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)(diag)-36, PROCEDURE, Inspection Mode.>.**

| <b>8 CHECK POOR CONTACT.</b><br>Check poor contact in ECM and EGR solenoid valve connector.   | Is there poor contact in ECM and EGR solenoid valve connector? | Repair poor contact in ECM and EGR solenoid valve connector. | Even if MIL lights up, the circuit has returned to a normal condition at this time.  |

## BE:DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1)

### DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(H4SO)-99, DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

- Engine stalls.
- Idle mixture is out of specifications.

### CAUTION:

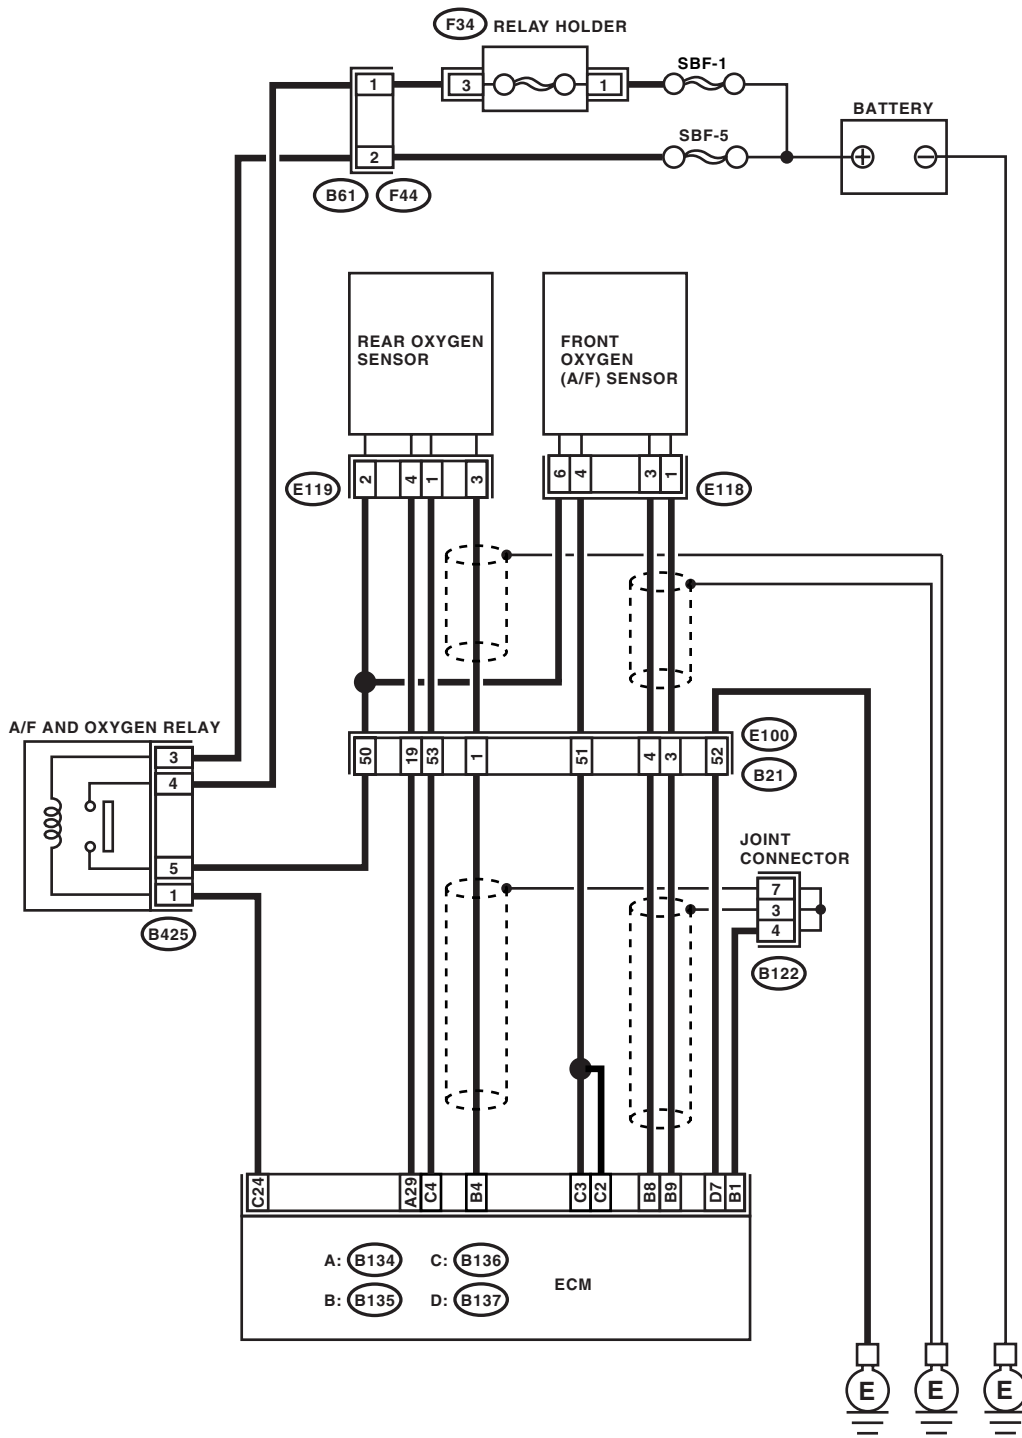

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)(diag)-46, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)(diag)-36, PROCEDURE, Inspection Mode.>.**

## DF:DTC P2101 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT RANGE/ PERFORMANCE

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4SO)-151, DTC P0638 THROTTLE ACTUATOR CONTROL RANGE/PERFORMANCE (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>, <Ref. to GD(H4SO)-164, DTC P1160 RETURN SPRING FAILURE, Diagnostic Trouble Code (DTC) Detecting Criteria.> and <Ref. to GD(H4SO)-187, DTC P2109 THROTTLE ANGLE SENSOR CLOSED POSITION ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

- Erroneous idling
- Poor driving performance
- Engine stalls.

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)(diag)-46, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)(diag)-36, PROCEDURE, Inspection Mode.>.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step   | Check                                      | Yes   | No   |
|--|--|---|--|
| <b>6</b><br><b>CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR.</b><br>1) Connect the ECM connector.<br>2) Measure the resistance between accelerator pedal position sensor and chassis ground.<br><b>Connector &amp; terminal</b><br><i>(B315) No. 2 — Chassis ground:</i><br><i>(B315) No. 5 — Chassis ground:</i>   | Is the measured value less than 5 Ω?       | Go to step 7.   | Repair the poor contact in ECM connector. If problem persists, replace the ECM. <Ref. to FU(H4SO)-38, Engine Control Module (ECM).>                                  |
| <b>7</b><br><b>CHECK POWER SUPPLY TO ACCELERATOR PEDAL POSITION SENSOR.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between accelerator pedal position sensor connector and chassis ground.<br><b>Connector &amp; terminal</b><br><i>(B315) No. 4 (+) — Chassis ground (-):</i><br><i>(B315) No. 1 (+) — Chassis ground (-):</i>   | Is the measured value within 4.5 to 5.5 V? | Go to step 8.   | Repair the poor contact in ECM connector. If problem persists, replace the ECM. <Ref. to FU(H4SO)-38, Engine Control Module (ECM).>                                  |
| <b>8</b><br><b>CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the accelerator pedal position sensor connector.<br>3) Turn the ignition switch to ON.<br>4) Measure the voltage between ECM connector and chassis ground.<br><b>Connector &amp; terminal</b><br><i>(B135) No. 23 (+) — Chassis ground (-):</i><br><i>(B135) No. 31 (+) — Chassis ground (-):</i> | Is the measured value less than 4.8 V?     | Go to step 9.   | Repair the poor contact in accelerator pedal position sensor connector. If problem persists, replace the accelerator pedal. <Ref. to SP(H4SO)-3, Accelerator Pedal.> |
| <b>9</b><br><b>CHECK HARNESS BETWEEN ECM AND ACCELERATOR PEDAL POSITION SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ECM.<br>3) Disconnect the connector from accelerator pedal position sensor.<br>4) Measure the resistance between terminals of accelerator pedal position sensor connector.<br><b>Connector &amp; terminal</b><br><i>(B315) No. 6 — (B315) No. 3:</i>                        | Is the measured value more than 1 MΩ?      | Repair the poor contact in ECM connector. If problem persists, replace the ECM. <Ref. to FU(H4SO)-38, Engine Control Module (ECM).> | Repair the short of harness between ECM connector and accelerator pedal position sensor connector.   |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

## DP:DTC P2227 BAROMETRIC PRESSURE TOO LOW

### DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(H4SO)-197, DTC P2227 BAROMETRIC PRESSURE TOO LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)(diag)-46, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)(diag)-36, PROCEDURE, Inspection Mode.>.

| Step                                 | Check                       | Yes  | No   |
|--------------------------------------|-----------------------------|--|--|
| 1<br>CHECK ANY OTHER DTC ON DISPLAY. | Is any other DTC displayed? | Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)(diag)-73, List of Diagnostic Trouble Code (DTC).> | Replace the ECM. <Ref. to FU(H4SO)-38, Engine Control Module (ECM).> |

## DQ:DTC P2228 ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (LOW INPUT)

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4SO)-198, DTC P2228 ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (LOW INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)(diag)-46, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)(diag)-36, PROCEDURE, Inspection Mode.>.

| Step                                 | Check                       | Yes  | No   |
|--------------------------------------|-----------------------------|--|--|
| 1<br>CHECK ANY OTHER DTC ON DISPLAY. | Is any other DTC displayed? | Check DTC using the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4SO)(diag)-73, List of Diagnostic Trouble Code (DTC).><br><br>NOTE:<br>It is not necessary to inspect DTC P2228. | Replace the ECM. <Ref. to FU(H4SO)-38, Engine Control Module (ECM).> |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

## DR:DTC P2229 ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (HIGH INPUT)

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4SO)-199, DTC P2229 ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (HIGH INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)(diag)-46, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)(diag)-36, PROCEDURE, Inspection Mode.>.

| Step                                 | Check                       | Yes  | No   |
|--------------------------------------|-----------------------------|--|--|
| 1<br>CHECK ANY OTHER DTC ON DISPLAY. | Is any other DTC displayed? | Check DTC using the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4SO)(diag)-73, List of Diagnostic Trouble Code (DTC).><br><br>NOTE:<br>It is not necessary to inspect DTC P2229. | Replace the ECM. <Ref. to FU(H4SO)-38, Engine Control Module (ECM).> |

# General Diagnostic Table

ENGINE (DIAGNOSTICS)

## 19. General Diagnostic Table

### A: INSPECTION

#### 1. ENGINE

NOTE:

Malfunction of parts other than those listed is also possible. <Ref. to ME(H4SO)-91, Engine Trouble in General.>

| Symptom   | Problem parts  |
|---|--|
| 1. Engine stalls during idling.                               | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake air temperature sensor<br>3) Ignition parts (*1)<br>4) Engine coolant temperature sensor (*2)<br>5) Crankshaft position sensor (*3)<br>6) Camshaft position sensor (*3)<br>7) Fuel injection parts (*4)  |
| 2. Rough idling   | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake air temperature sensor<br>3) Engine coolant temperature sensor (*2)<br>4) Ignition parts (*1)<br>5) Air intake system (*5)<br>6) Fuel injection parts (*4)<br>7) Electronic throttle control<br>8) Crankshaft position sensor (*3)<br>9) Camshaft position sensor (*3)<br>10) Oxygen sensor<br>11) Fuel pump and fuel pump relay<br>12) EGR valve  |
| 3. Engine does not return to idle.                            | 1) Engine coolant temperature sensor<br>2) Throttle position sensor<br>3) Manifold absolute pressure sensor<br>4) Mass air flow and intake air temperature sensor<br>5) EGR valve  |
| 4. Poor acceleration  | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake air temperature sensor<br>3) Electronic throttle control<br>4) Fuel injection parts (*4)<br>5) Fuel pump and fuel pump relay<br>6) Engine coolant temperature sensor (*2)<br>7) Crankshaft position sensor (*3)<br>8) Camshaft position sensor (*3)<br>9) A/C switch and A/C cut relay<br>10) Engine torque control signal circuit<br>11) Ignition parts (*1)<br>12) EGR valve<br>13) Tumble generator valve |
| 5. Engine stalls or engine sags or hesitates at acceleration. | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake air temperature sensor<br>3) Engine coolant temperature sensor (*2)<br>4) Crankshaft position sensor (*3)<br>5) Camshaft position sensor (*3)<br>6) Purge control solenoid valve<br>7) Fuel injection parts (*4)<br>8) Electronic throttle control<br>9) Fuel pump and fuel pump relay<br>10) EGR valve<br>11) Tumble generator valve  |

# General Diagnostic Table

ENGINE (DIAGNOSTICS)

| Symptom                            | Problem parts   |
|------------------------------------|---|
| 6. Surge                           | 1) Mass air flow and intake air temperature sensor<br>2) Manifold absolute pressure sensor<br>3) Engine coolant temperature sensor (*2)<br>4) Crankshaft position sensor (*3)<br>5) Camshaft position sensor (*3)<br>6) Fuel injection parts (*4)<br>7) Electronic throttle control<br>8) Fuel pump and fuel pump relay<br>9) EGR valve<br>10) Tumble generator valve |
| 7. Spark knock                     | 1) Mass air flow and intake air temperature sensor<br>2) Manifold absolute pressure sensor<br>3) Engine coolant temperature sensor<br>4) Knock sensor<br>5) Fuel injection parts (*4)<br>6) Fuel pump and fuel pump relay<br>7) EGR valve<br>8) Tumble generator valve  |
| 8. After burning in exhaust system | 1) Mass air flow and intake air temperature sensor<br>2) Manifold absolute pressure sensor<br>3) Engine coolant temperature sensor (*2)<br>4) Fuel injection parts (*4)<br>5) Fuel pump and fuel pump relay   |

- \*1: Check ignition coil and ignitor assembly and spark plug.
- \*2: Indicate the symptom occurring only in cold temperatures.
- \*3: Ensure the secure installation.
- \*4: Check fuel injector, fuel pressure regulator and fuel filter.
- \*5: Inspect air leak in air intake system.

## 2. AUTOMATIC TRANSMISSION

### NOTE:

Check general diagnostics table with non-conformity symptom for automatic transmission. <Ref. to 4AT(D)(diag)-2, Basic Diagnostic Procedure.>

| P0103 | Mass or Volume Air Flow Circuit High Input                               | <Ref. to GD(H4SO)-26, DTC P0103 MASS OR VOLUME AIR FLOW CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                        |
| P0107 | Manifold Absolute Pressure/Barometric Pressure Circuit Low Input         | <Ref. to GD(H4SO)-28, DTC P0107 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0108 | Manifold Absolute Pressure/Barometric Pressure Circuit High Input        | <Ref. to GD(H4SO)-29, DTC P0108 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P0111 | Intake Air Temperature Circuit Range/Performance                         | <Ref. to GD(H4SO)-30, DTC P0111 INTAKE AIR TEMPERATURE CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>                  |
| P0112 | Intake Air Temperature Circuit Low Input                                 | <Ref. to GD(H4SO)-32, DTC P0112 INTAKE AIR TEMPERATURE CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                          |
| P0113 | Intake Air Temperature Circuit High Input                                | <Ref. to GD(H4SO)-33, DTC P0113 INTAKE AIR TEMPERATURE CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                         |
| P0117 | Engine Coolant Temperature Circuit Low Input                             | <Ref. to GD(H4SO)-35, DTC P0117 ENGINE COOLANT TEMPERATURE CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                      |

# List of Diagnostic Trouble Code (DTC)

GENERAL DESCRIPTION

| DTC   | Item   | Index  |
|-------|--|--|
| P0118 | Engine Coolant Temperature Circuit High Input                                    | <Ref. to GD(H4SO)-36, DTC P0118 ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                    |
| P0122 | Throttle/Pedal Position Sensor/Switch "A" Circuit Low Input                      | <Ref. to GD(H4SO)-38, DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                      |
| P0123 | Throttle/Pedal Position Sensor/Switch "A" Circuit High Input                     | <Ref. to GD(H4SO)-39, DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P0125 | Insufficient Coolant Temperature for Closed Loop Fuel Control                    | <Ref. to GD(H4SO)-40, DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL, Diagnostic Trouble Code (DTC) Detecting Criteria.>                    |
| P0126 | Insufficient Coolant Temperature for Stable Operation                            | <Ref. to GD(H4SO)-42, DTC P0126 INSUFFICIENT ENGINE COOLANT TEMPERATURE FOR STABLE OPERATION, Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P0128 | Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature) | <Ref. to GD(H4SO)-44, DTC P0128 COOLANT THERMOSTAT (COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P0131 | O <sub>2</sub> Sensor Circuit Low Voltage (Bank 1 Sensor 1)                      | <Ref. to GD(H4SO)-46, DTC P0131 O <sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                      |
| P0132 | O <sub>2</sub> Sensor Circuit High Voltage (Bank 1 Sensor 1)                     | <Ref. to GD(H4SO)-47, DTC P0132 O <sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P0133 | O <sub>2</sub> Sensor Circuit Slow Response (Bank 1 Sensor 1)                    | <Ref. to GD(H4SO)-49, DTC P0133 O <sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                    |
| P0134 | O <sub>2</sub> Sensor Circuit No Activity Detected (Bank 1 Sensor 1)             | <Ref. to GD(H4SO)-51, DTC P0134 O <sub>2</sub> SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 1 SENSOR 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>             |
| P0137 | O <sub>2</sub> Sensor Circuit Low Voltage (Bank 1 Sensor 2)                      | <Ref. to GD(H4SO)-53, DTC P0137 O <sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>                      |
| P0138 | O <sub>2</sub> Sensor Circuit High Voltage (Bank 1 Sensor 2)                     | <Ref. to GD(H4SO)-56, DTC P0138 O <sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P0139 | O <sub>2</sub> Sensor Circuit Slow Response (Bank 1 Sensor 2)                    | <Ref. to GD(H4SO)-56, DTC P0139 O <sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>                    |
| P0140 | O <sub>2</sub> Sensor Circuit No Activity Detected (Bank1 Sensor 2)              | <Ref. to GD(H4SO)-62, DTC P0140 O <sub>2</sub> SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK1 SENSOR 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>              |
| P0171 | System too Lean (Bank 1)   | <Ref. to GD(H4SO)-63, DTC P0171 SYSTEM TOO LEAN (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P0172 | System too Rich (Bank 1)   | <Ref. to GD(H4SO)-65, DTC P0172 SYSTEM TOO RICH (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P0181 | Fuel Temperature Sensor "A" Circuit Range/Performance                            | <Ref. to GD(H4SO)-67, DTC P0181 FUEL TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0182 | Fuel Temperature Sensor "A" Circuit Low Input                                    | <Ref. to GD(H4SO)-70, DTC P0182 FUEL TEMPERATURE SENSOR "A" CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                    |
| P0183 | Fuel Temperature Sensor "A" Circuit High Input                                   | <Ref. to GD(H4SO)-71, DTC P0183 FUEL TEMPERATURE SENSOR "A" CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                   |
| P0196 | Engine Oil Temperature Sensor Circuit Range/Performance                          | <Ref. to GD(H4SO)-73, DTC P0196 ENGINE OIL TEMPERATURE SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>                          |
| P0197 | Engine Oil Temperature Sensor Low  | <Ref. to GD(H4SO)-74, DTC P0197 ENGINE OIL TEMPERATURE SENSOR CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |

## List of Diagnostic Trouble Code (DTC)

### GENERAL DESCRIPTION

| DTC   | Item   | Index  |
|-------|--|--|
| P0198 | Engine Oil Temperature Sensor High   | <Ref. to GD(H4SO)-75, DTC P0198 ENGINE OIL TEMPERATURE SENSOR CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                       |
| P0222 | Throttle/Pedal Position Sensor/Switch "B" Circuit Low Input                      | <Ref. to GD(H4SO)-76, DTC P0222 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                      |
| P0223 | Throttle/Pedal Position Sensor/Switch "B" Circuit High Input                     | <Ref. to GD(H4SO)-77, DTC P0223 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P0301 | Cylinder 1 misfire detected  | <Ref. to GD(H4SO)-78, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0302 | Cylinder 2 misfire detected  | <Ref. to GD(H4SO)-83, DTC P0302 CYLINDER 2 MISFIRE DETECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |

# List of Diagnostic Trouble Code (DTC)

GENERAL DESCRIPTION

| DTC   | Item   | Index   |
|-------|--|---|
| P0456 | Evaporative Emission Control System Leak Detected (very small leak)    | <Ref. to GD(H4SO)-125, DTC P0456 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (VERY SMALL LEAK), Diagnostic Trouble Code (DTC) Detecting Criteria.>    |
| P0457 | Evaporative Emission Control System Leak Detected (fuel cap loose/off) | <Ref. to GD(H4SO)-125, DTC P0457 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (FUEL CAP LOOSE/OFF), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P0458 | Evaporative Emission Control System Purge Control Valve Circuit Low    | <Ref. to GD(H4SO)-126, DTC P0458 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>    |
| P0459 | Evaporative Emission Control System Purge Control Valve Circuit High   | <Ref. to GD(H4SO)-127, DTC P0459 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P0461 | Fuel Level Sensor Circuit Range/Performance                            | <Ref. to GD(H4SO)-129, DTC P0461 FUEL LEVEL SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0462 | Fuel Level Sensor Circuit Low Input                                    | <Ref. to GD(H4SO)-131, DTC P0462 FUEL LEVEL SENSOR CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                    |
| P0463 | Fuel Level Sensor Circuit High Input                                   | <Ref. to GD(H4SO)-133, DTC P0463 FUEL LEVEL SENSOR CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                   |
| P0464 | Fuel Level Sensor Circuit Intermittent                                 | <Ref. to GD(H4SO)-135, DTC P0464 FUEL LEVEL SENSOR CIRCUIT INTERMITTENT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                 |
| P0483 | Cooling Fan Rationality Check  | <Ref. to GD(H4SO)-138, DTC P0483 COOLING FAN RATIONALITY CHECK, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0502 | Vehicle Speed Sensor Circuit Low Input                                 | <Ref. to GD(H4SO)-139, DTC P0502 VEHICLE SPEED SENSOR CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                 |
| P0503 | Vehicle Speed Sensor Intermittent/Erratic/High                         | <Ref. to GD(H4SO)-140, DTC P0503 VEHICLE SPEED SENSOR INTERMITTENT/ERRATIC/HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>                         |
| P0506 | Idle Control System RPM Lower Than Expected                            | <Ref. to GD(H4SO)-141, DTC P0506 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0507 | Idle Control System RPM Higher Than Expected                           | <Ref. to GD(H4SO)-142, DTC P0507 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>                           |
| P0512 | Starter Request Circuit  | <Ref. to GD(H4SO)-143, DTC P0512 STARTER REQUEST CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0513 | Incorrect Immobilizer Key  | <Ref. to GD(H4SO)-144, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0519 | Idle Control System Malfunction (Fail-Safe)                            | <Ref. to GD(H4SO)-145, DTC P0519 IDLE CONTROL SYSTEM MALFUNCTION (FAIL-SAFE), Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0600 | Serial Communication Link  | <Ref. to GD(H4SO)-146, DTC P0600 SERIAL COMMUNICATION LINK, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0604 | Internal Control Module Random Access Memory (RAM) Error               | <Ref. to GD(H4SO)-147, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>               |
| P0605 | Internal Control Module Read Only Memory (ROM) Error                   | <Ref. to GD(H4SO)-148, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>                   |
| P0607 | Control Module Performance   | <Ref. to GD(H4SO)-149, DTC P0607 CONTROL MODULE PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P0638 | Throttle Actuator Control Range/Performance (Bank 1)                   | <Ref. to GD(H4SO)-151, DTC P0638 THROTTLE ACTUATOR CONTROL RANGE/PERFORMANCE (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                   |
| P0691 | Cooling Fan 1 Control Circuit Low                                      | <Ref. to GD(H4SO)-153, DTC P0691 COOLING FAN 1 CONTROL CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                      |
| P0692 | Cooling Fan 1 Control Circuit High                                     | <Ref. to GD(H4SO)-154, DTC P0692 COOLING FAN 1 CONTROL CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                     |

## List of Diagnostic Trouble Code (DTC)

### GENERAL DESCRIPTION

| DTC   | Item   | Index   |
|-------|--|---|
| P0700 | AT MIL Light up Request  | <Ref. to GD(H4SO)-155, DTC P0700 TRANSMISSION CONTROL SYSTEM (MIL REQUEST), Diagnostic Trouble Code (DTC) Detecting Criteria.>                              |
| P0851 | Neutral Switch Input Circuit Low (AT model)                              | <Ref. to GD(H4SO)-156, DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (AT MODEL), Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0851 | Neutral Switch Input Circuit Low (MT model)                              | <Ref. to GD(H4SO)-157, DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (MT MODEL), Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0852 | Neutral Switch Input Circuit High (AT model)                             | <Ref. to GD(H4SO)-158, DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (AT MODEL), Diagnostic Trouble Code (DTC) Detecting Criteria.>                           |
| P0852 | Neutral Switch Input Circuit High (MT model)                             | <Ref. to GD(H4SO)-159, DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (MT MODEL), Diagnostic Trouble Code (DTC) Detecting Criteria.>                           |
| P1152 | O <sub>2</sub> Sensor Circuit Range/Performance (Low) (Bank 1 Sensor 1)  | <Ref. to GD(H4SO)-160, DTC P1152 O <sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (LOW) (BANK1 SENSOR1), Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P1153 | O <sub>2</sub> Sensor Circuit Range/Performance (High) (Bank 1 Sensor 1) | <Ref. to GD(H4SO)-162, DTC P1153 O <sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (HIGH) (BANK1 SENSOR1), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P1160 | Return Spring Failure  | <Ref. to GD(H4SO)-164, DTC P1160 RETURN SPRING FAILURE, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P1400 | Fuel Tank Pressure Control Solenoid Valve Circuit Low                    | <Ref. to GD(H4SO)-165, DTC P1400 FUEL TANK PRESSURE CONTROL SOLENOID VALVE CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>                  |
| P1420 | Fuel Tank Pressure Control Sol. Valve Circuit High                       | <Ref. to GD(H4SO)-167, DTC P1420 FUEL TANK PRESSURE CONTROL SOL. VALVE CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P1443 | Vent Control Solenoid Valve Function Problem                             | <Ref. to GD(H4SO)-168, DTC P1443 VENT CONTROL SOLENOID VALVE FUNCTION PROBLEM, Diagnostic Trouble Code (DTC) Detecting Criteria.>                           |
| P1491 | Positive Crankcase Ventilation (Blow-by) Function Problem                | <Ref. to GD(H4SO)-170, DTC P1491 POSITIVE CRANKCASE VENTILATION (BLOW-BY) FUNCTION PROBLEM, Diagnostic Trouble Code (DTC) Detecting Criteria.>              |
| P1492 | EGR Solenoid Valve Signal #1 Circuit Malfunction (Low Input)             | <Ref. to GD(H4SO)-172, DTC P1492 EGR SOLENOID VALVE SIGNAL #1 CIRCUIT MALFUNCTION (LOW INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>           |
| P1493 | EGR Solenoid Valve Signal #1 Circuit Malfunction (High Input)            | <Ref. to GD(H4SO)-174, DTC P1493 EGR SOLENOID VALVE SIGNAL #1 CIRCUIT MALFUNCTION (HIGH INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>          |
| P1494 | EGR Solenoid Valve Signal #2 Circuit Malfunction (Low Input)             | <Ref. to GD(H4SO)-175, DTC P1494 EGR SOLENOID VALVE SIGNAL #2 CIRCUIT MALFUNCTION (LOW INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>           |
| P1495 | EGR Solenoid Valve Signal #2 Circuit Malfunction (High Input)            | <Ref. to GD(H4SO)-175, DTC P1495 EGR SOLENOID VALVE SIGNAL #2 CIRCUIT MALFUNCTION (HIGH INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>          |
| P1496 | EGR Solenoid Valve Signal #3 Circuit Malfunction (Low Input)             | <Ref. to GD(H4SO)-175, DTC P1496 EGR SOLENOID VALVE SIGNAL #3 CIRCUIT MALFUNCTION (LOW INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>           |
| P1497 | EGR Solenoid Valve Signal #3 Circuit Malfunction (High Input)            | <Ref. to GD(H4SO)-175, DTC P1497 EGR SOLENOID VALVE SIGNAL #3 CIRCUIT MALFUNCTION (HIGH INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>          |
| P1498 | EGR Solenoid Valve Signal #4 Circuit Malfunction (Low Input)             | <Ref. to GD(H4SO)-176, DTC P1498 EGR SOLENOID VALVE SIGNAL #4 CIRCUIT MALFUNCTION (LOW INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>           |
| P1499 | EGR Solenoid Valve Signal #4 Circuit Malfunction (High Input)            | <Ref. to GD(H4SO)-176, DTC P1499 EGR SOLENOID VALVE SIGNAL #4 CIRCUIT MALFUNCTION (HIGH INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>          |
| P1518 | Starter Switch Circuit Low Input   | <Ref. to GD(H4SO)-176, DTC P1518 STARTER SWITCH CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                       |
| P1560 | Back-Up Voltage Circuit Malfunction                                      | <Ref. to GD(H4SO)-177, DTC P1560 BACK-UP VOLTAGE CIRCUIT MALFUNCTION, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                    |

# List of Diagnostic Trouble Code (DTC)

GENERAL DESCRIPTION

| DTC   | Item  | Index  |
|-------|---|--|
| P1570 | Antenna   | <Ref. to GD(H4SO)-178, DTC P1570 ANTENNA, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P1571 | Reference Code Incompatibility                                    | <Ref. to GD(H4SO)-178, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                      |
| P1572 | IMM Circuit Failure (Except Antenna Circuit)                      | <Ref. to GD(H4SO)-178, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Trouble Code (DTC) Detecting Criteria.>                        |
| P1574 | Key Communication Failure   | <Ref. to GD(H4SO)-178, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P1576 | EGI Control Module EEPROM   | <Ref. to GD(H4SO)-178, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P1577 | IMM Control Module EEPROM   | <Ref. to GD(H4SO)-178, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P2096 | Post Catalyst Fuel Trim System Too Lean Bank 1                    | <Ref. to GD(H4SO)-179, DTC P2096 POST CATALYST FUEL TRIM SYSTEM TOO LEAN BANK 1, Diagnostic Trouble Code (DTC) Detecting Criteria.>                      |
| P2097 | Post Catalyst Fuel Trim System Too Rich Bank 1                    | <Ref. to GD(H4SO)-180, DTC P2097 POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1, Diagnostic Trouble Code (DTC) Detecting Criteria.>                      |
| P2101 | Throttle Actuator Control Motor Circuit Range/Performance         | <Ref. to GD(H4SO)-182, DTC P2101 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>           |
| P2102 | Throttle Actuator Control Motor Circuit Low                       | <Ref. to GD(H4SO)-184, DTC P2102 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>                         |
| P2103 | Throttle Actuator Control Motor Circuit High                      | <Ref. to GD(H4SO)-185, DTC P2103 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>                        |
| P2109 | Throttle/Pedal Position Sensor A Minimum Stop Performance         | <Ref. to GD(H4SO)-187, DTC P2109 THROTTLE ANGLE SENSOR CLOSED POSITION ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>                         |
| P2122 | Throttle/Pedal Position Sensor/Switch "D" Circuit Low Input       | <Ref. to GD(H4SO)-188, DTC P2122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P2123 | Throttle/Pedal Position Sensor/Switch "D" Circuit High Input      | <Ref. to GD(H4SO)-189, DTC P2123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>        |
| P2127 | Throttle/Pedal Position Sensor/Switch "E" Circuit Low Input       | <Ref. to GD(H4SO)-191, DTC P2127 THROTTLE/PEDAL POSITION SENSOR/SWITCH "E" CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P2128 | Throttle/Pedal Position Sensor/Switch "E" Circuit High Input      | <Ref. to GD(H4SO)-192, DTC P2128 THROTTLE/PEDAL POSITION SENSOR/SWITCH "E" CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>        |
| P2135 | Throttle/Pedal Position Sensor/Switch "A"/"B" Voltage Rationality | <Ref. to GD(H4SO)-193, DTC P2135 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" / "B" VOLTAGE RATIONALITY, Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P2138 | Throttle/Pedal Position Sensor/Switch "D"/"E" Voltage Rationality | <Ref. to GD(H4SO)-195, DTC P2138 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" / "E" VOLTAGE RATIONALITY, Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P2227 | Atmospheric Pressure Sensor Circuit Range/Performance             | <Ref. to GD(H4SO)-197, DTC P2227 BAROMETRIC PRESSURE TOO LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P2228 | Atmospheric Pressure Sensor Circuit Malfunction (Low Input)       | <Ref. to GD(H4SO)-198, DTC P2228 ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (LOW INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P2229 | Atmospheric Pressure Sensor Circuit Malfunction (High Input)      | <Ref. to GD(H4SO)-199, DTC P2229 ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (HIGH INPUT), Diagnostic Trouble Code (DTC) Detecting Criteria.>        |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

## 2. Diagnostic Trouble Code (DTC) Detecting Criteria

### A: DTC P0026 INTAKE VALVE CONTROL SOLENOID CIRCUIT RANGE/PERFORMANCE (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect NG from Low NG or High NG.

Variable valve lift diagnosis oil pressure switch is attached for diagnosis, ON or OFF of variable valve lift diagnosis oil pressure switch shows whether intake valve is in High mode (increasing the lift amount) or Low mode (decreasing the lift amount).

#### • Normal condition

| Oil switching solenoid valve duty | Intake valve | Variable valve lift diagnosis oil pressure switch |
|-----------------------------------|--------------|---|
| Large                             | High mode    | OFF   |
| Small                             | Low mode     | ON  |

#### • Low NG

Judge Low NG when variable valve lift diagnosis oil pressure switch remains ON though the intake valve is being shifted to High mode (Oil switching solenoid valve duty: large).

#### • High NG

Judge High NG when variable valve lift diagnosis oil pressure switch remains OFF though the intake valve is being shifted to Low mode (Oil switching solenoid valve duty: small).

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 2. COMPONENT DESCRIPTION

Variable valve lift system optimizes the lift amount of intake valve with switching low lift cam and high lift cam depending on engine speed. Variable valve system changes the lift amount of intake valve with duty controlling oil switching solenoid valve.

EN-03119

(1) Oil switching solenoid valve

(A) Engine low speed

(B) Engine high speed

## 3. ENABLE CONDITION

| Secondary Parameters        | Enable Conditions              |
|-----------------------------|--------------------------------|
| Battery voltage             | $\geq 10.9 \text{ V}$          |
| After engine starting       | $\geq 6 \text{ sec.}$          |
| Engine oil temperature      | $\geq 15^\circ\text{C}$ (59°F) |
| Variable Valve lift control | In operation                   |

## 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after 6 seconds from engine starting with controlling of variable valve lift.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than the specified time.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Low NG<br>Duty ratio<br>Variable valve lift diagnosis oil pressure switch  | ≥ 62%<br>ON     |
| High NG<br>Duty ratio<br>Variable valve lift diagnosis oil pressure switch | < 33%<br>OFF    |

#### Time needed for diagnosis:

0.784 seconds (Low side)

3.0 seconds (High side)

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear NG when the continuous time of completing malfunction criteria becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Low OK<br>Duty ratio<br>Variable valve lift diagnosis oil pressure switch  | ≥ 62%<br>OFF    |
| High OK<br>Duty ratio<br>Variable valve lift diagnosis oil pressure switch | < 33%<br>ON     |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## **B: DTC P0028 INTAKE VALVE CONTROL SOLENOID CIRCUIT RANGE/PERFORMANCE (BANK 2)**

#### NOTE:

For the diagnostic procedure, refer to DTC P0026. <Ref. to GD(H4SO)-8, DTC P0026 INTAKE VALVE CONTROL SOLENOID CIRCUIT RANGE/PERFORMANCE (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>

## C: DTC P0030 HO2S HEATER CONTROL CIRCUIT (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of front oxygen (A/F) sensor heater.

Judge NG when impedance of front oxygen (A/F) sensor is larger than the standard value by referring to the engine condition such as fuel shut-off in deceleration, etc.

### 2. COMPONENT DESCRIPTION

- |                           |                    |                    |
|---------------------------|--------------------|--------------------|
| (1) Element cover (Outer) | (3) Sensor element | (5) Sensor housing |
| (2) Element cover (Inner) | (4) Ceramic heater |                    |

### 3. ENABLE CONDITION

| Secondary Parameters   | Enable Conditions  |
|--|--------------------|
| Continuous time which all the following conditions were filled | 30 seconds or more |
| Battery voltage  | > 10.9 V           |
| After fuel shut-off  | 20 seconds or more |
| Heater current   | In operation       |
| Front oxygen (A/F) sensor duty $\geq$ 35%                      | Experienced        |

### 4. GENERAL DRIVING CYCLE

Perform diagnosis continuously in 50 seconds after starting engine.

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than the time needed for diagnosis (10 seconds). Judge OK and clear NG when the continuous time of not completing the malfunction criteria below becomes more than the time needed for diagnosis (10 seconds).

#### Judgment Value

| Malfunction Criteria                   | Threshold Value |
|--|-----------------|
| Impedance of front oxygen (A/F) sensor | > 50 $\Omega$   |

**Time Needed for Diagnosis:** 10 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor main learning correction: Not allowed to calculate
- Front oxygen (A/F) sensor sub learning correction: Do not calculate.
- Purge control: Not allowed to purge

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## D: DTC P0031 HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of heater.

The heater conducts the duty control. The output terminal voltage at ON becomes 0 V, and the output terminal voltage at OFF becomes battery voltage.

Judge NG when the terminal voltage remains to be Low.

### 2. COMPONENT DESCRIPTION

EN-01792

- |   |                                    |
|---|------------------------------------|
| (A) Battery voltage                                 | (C) 128 milliseconds               |
| (B) Front oxygen (A/F) sensor heater output voltage | (D) Low abnormality output voltage |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | $\geq 10.9$ V     |

### 4. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second (8 cycles).

### Judgment Value

| Malfunction Criteria                          | Threshold Value |
|---|-----------------|
| Output voltage level                          | Low             |
| Front oxygen (A/F) sensor heater control duty | < 87.5%         |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | High            |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Front oxygen (A/F) sensor heater control: Not allowed to turn on the heater.
- A/F main learning: Not allowed to calculate the A/F main learning compensation factor.
- A/F sub learning: Not allowed to calculate the A/F sub learning compensation factor.
- Purge control: Not allowed to purge.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### E: DTC P0032 HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of heater.

The heater conducts the duty control. The output terminal voltage at ON becomes 0 V, and the output terminal voltage at OFF becomes battery voltage.

Judge NG when the terminal voltage remains to be High.

#### 2. COMPONENT DESCRIPTION

EN-01793

- |   |                                     |
|---|-------------------------------------|
| (A) Battery voltage                                 | (C) 128 milliseconds                |
| (B) Front oxygen (A/F) sensor heater output voltage | (D) High abnormality output voltage |

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions     |
|----------------------|-----------------------|
| Battery voltage      | $\geq 10.9 \text{ V}$ |

#### 4. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes 1 second (8 cycles).

##### Judgment Value

| Malfunction Criteria                          | Threshold Value |
|---|-----------------|
| Output voltage level                          | High            |
| Front oxygen (A/F) sensor heater control duty | $\geq 12.5\%$   |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | Low             |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Front oxygen (A/F) sensor heater control: Not allowed to turn on the heater.
- A/F main learning: Not allowed to calculate the A/F main learning compensation factor.
- A/F sub learning: Not allowed to calculate the A/F sub learning compensation factor.
- Purge control: Not allowed to purge.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### F: DTC P0037 HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 2)

#### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of oxygen sensor heater.

Oxygen sensor heater conducted the duty control, and the output terminal voltage at ON is 0 V and the output terminal voltage at OFF is the battery voltage.

Judge NG when the terminal voltage remains to be Low.

#### 2. COMPONENT DESCRIPTION

EN-01792

- |   |                               |
|---|-------------------------------|
| (A) Battery voltage                     | (C) 256 milliseconds (cycles) |
| (B) Oxygen sensor heater output voltage | (D) Low malfunction           |

#### 3. ENABLE CONDITION

| Secondary Parameters               | Enable Conditions |
|------------------------------------|-------------------|
| Battery voltage                    | > 10.9 V          |
| Elapsed time after engine starting | ≥ 1 second        |

#### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after engine starting.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing all the malfunction criteria below becomes more than 2,560 millisecond (10 cycles).

##### Judgment Value

| Malfunction Criteria              | Threshold Value |
|-----------------------------------|-----------------|
| Output voltage level              | Low             |
| Oxygen sensor heater control duty | < 75%           |

**Time Needed for Diagnosis:** 2.56 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | High            |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

Sub feedback control: Not allowed

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## G: DTC P0038 HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 2)

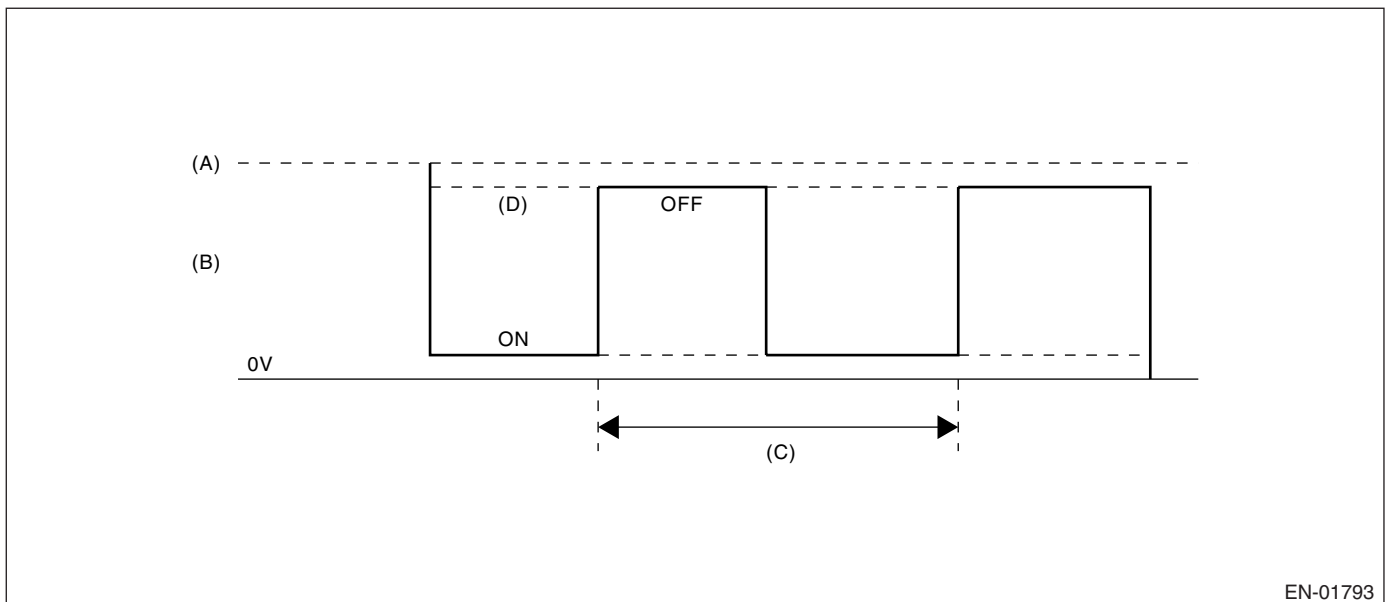

### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of oxygen heater.

Oxygen heater conducted the duty control, and the output terminal voltage at ON is 0 V and the output terminal voltage at OFF is the battery voltage.

Judge NG when the terminal voltage remains to be High.

### 2. COMPONENT DESCRIPTION

EN-01793

- |   |                               |
|---|-------------------------------|
| (A) Battery voltage                     | (C) 256 milliseconds (cycles) |
| (B) Oxygen sensor heater output voltage | (D) High malfunction          |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 3. ENABLE CONDITION

| Secondary Parameters               | Enable Conditions |
|------------------------------------|-------------------|
| Battery voltage                    | > 10.9 V          |
| Elapsed time after engine starting | ≥ 1 second        |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after engine starting.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing all the malfunction criteria below becomes more than 2,560 milliseconds (10 cycles).

#### Judgment Value

| Malfunction Criteria              | Threshold Value |
|-----------------------------------|-----------------|
| Output voltage level              | High            |
| Oxygen sensor heater control duty | ≥ 20%           |

**Time Needed for Diagnosis:** 2.56 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | Low             |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Sub feedback control: Not allowed

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## H: DTC P0068 MANIFOLD PRESSURE SENSOR RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of intake manifold pressure sensor output property. Judge NG when the intake air pressure AD value is Low whereas it seemed to be High from the viewpoint of engine condition, or when it is High whereas it seemed to be Low from the engine condition.

### 2. COMPONENT DESCRIPTION

EN-01765

- |               |                       |
|---------------|-----------------------|
| (1) Connector | (A) Output voltage    |
| (2) Terminal  | (B) Absolute pressure |
| (3) O-ring    |                       |

### 3. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions |
|----------------------------|-------------------|
| Engine coolant temperature | ≥ 75°C (167°F)    |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when either Low side or High side becomes NG. Judge NG when the continuous time of completing the malfunction criteria below becomes more than the predetermined time.

#### Judgment Value

| Malfunction Criteria                  | Threshold Value         |
|---------------------------------------|-------------------------|
| Low side                              |                         |
| Engine speed                          | < 2,500 rpm             |
| Throttle position                     | ≥ 12°                   |
| Intake air amount per engine 0.5 rev. | ≥ 0.55 g (0.019 oz)/rev |
| Output voltage                        | < 1.4 V                 |
| High side                             |                         |
| Engine speed                          | 600 ←→ 900 rpm          |
| Throttle position                     | ≤ 2.44°                 |
| Intake air amount per engine 0.5 rev. | < 0.54 g (0.014 oz)/rev |
| Output voltage                        | ≥ 3.4 V                 |

**Time Needed for Diagnosis:**Low side 3 seconds, high side 7 seconds

**Malfunction Indicator Light Illumination:**Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear the NG when both Low side and High side become OK. Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                  | Threshold Value         |
|---------------------------------------|-------------------------|
| Low side                              |                         |
| Engine speed                          | < 2,500 rpm             |
| Throttle position                     | ≥ 12°                   |
| Intake air amount per engine 0.5 rev. | ≥ 0.55 g (0.019 oz)/rev |
| Output voltage                        | ≥ 1.4 V                 |
| High side                             |                         |
| Engine speed                          | 600 ←→ 900 rpm          |
| Throttle position                     | ≤ 2.44°                 |
| Intake air amount per engine 0.5 rev. | < 0.4 g (0.014 oz)/rev  |
| Output voltage                        | < 3.4 V                 |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Intake manifold pressure sensor process: Estimate the pressure from engine load.
- ISC feedback: Not allowed to calculate the amount of feedback.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## I: DTC P0076 INTAKE VALVE CONTROL CIRCUIT LOW (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the open circuit of oil switching solenoid valve.

Judge open circuit NG when the current is small though output duty is large.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | $\geq 10.9$ V     |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality judgment

Judge NG when the continuous time of completing malfunction criteria below becomes more than 2 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Duty ratio           | $\geq 30\%$     |
| Control current      | $< 0.026$ A     |

**Time needed for diagnosis:** 2 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Oil switching solenoid valve target current value – Oil switching solenoid valve current value | $< 0.08$ A      |
| Control current  | $\geq 0.11$ A   |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Memory Clear" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Memory Clear" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### J: DTC P0077 INTAKE VALVE CONTROL CIRCUIT HIGH (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the short circuit of oil switching solenoid valve.  
Judge short circuit NG when the current is large though output duty is small.

#### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | $\geq 10.9$ V     |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality judgment

Judge NG when the continuous time of completing malfunction criteria below becomes more than 2 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Duty ratio           | $< 7\%$         |
| Control current      | $\geq 0.465$ A  |

**Time needed for diagnosis:** 2 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

##### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

##### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Oil switching solenoid valve target current value – Oil switching solenoid valve current value | $< 0.08$ A      |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Memory Clear” was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Memory Clear” was performed

#### 7. FAIL SAFE

None

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## K: DTC P0082 INTAKE VALVE CONTROL CIRCUIT LOW (BANK 2)

NOTE:

For the detecting criteria, refer to P0076. <Ref. to GD(H4SO)-21, DTC P0076 INTAKE VALVE CONTROL CIRCUIT LOW (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>

## L: DTC P0083 INTAKE VALVE CONTROL CIRCUIT HIGH (BANK 2)

NOTE:

For the detecting criteria, refer to P0077. <Ref. to GD(H4SO)-22, DTC P0077 INTAKE VALVE CONTROL CIRCUIT HIGH (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>

## M: DTC P0101 MASS OR VOLUME AIR FLOW CIRCUIT RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of air flow sensor output property. Judge Low side NG when the air flow voltage indicates low value in spite of the driving condition that the air flow voltage might be high; otherwise, judge High side NG when the air flow voltage indicates high value in spite of the driving condition that the air flow voltage might be low. Judge air flow sensor property NG when the Low side or High side becomes NG.

### 2. COMPONENT DESCRIPTION

EN-01766

- (1) Air flow sensor
- (2) Intake air temperature sensor
- (3) Voltage (V)
- (4) Intake air volume (kg/s)
- (A) Air

### 3. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions                                   |
|----------------------------|---|
| Engine coolant temperature | $\geq 75^{\circ}\text{C}$ ( $167^{\circ}\text{F}$ ) |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than the time needed for diagnosis.

#### Judgment Value

| Malfunction Criteria  | Threshold Value   |
|---|---|
| Low side NG<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure                             | < 1.2 V<br>≥ 2,000 rpm<br>≥ 13°<br>≥ 53.3 kPa (400 mmHg, 15.7 inHg)                               |
| High side NG 1<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure                          | ≥ 2.66 V<br>600 ↔ 900 rpm<br>< 2.44°<br>< 40.0 kPa (300 mmHg, 11.8 inHg)                          |

|-----------|------------|
| Low side  | 3 seconds  |
| High side | 10 seconds |

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK the when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| Low side NG<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure  | ≥ 1.2 V<br>≥ 2,000 rpm<br>≥ 13°<br>≥ 53.3 kPa (400 mmHg, 15.7 inHg)      |
| High side NG<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure | < 2.66 V<br>600 ↔ 900 rpm<br>< 2.44°<br>< 40.0 kPa (300 mmHg, 11.8 inHg) |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## N: DTC P0102 MASS OR VOLUME AIR FLOW CIRCUIT LOW INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of air flow sensor. Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-01766

- (1) Air flow sensor  
(2) Intake air temperature sensor  
(3) Voltage (V)  
(4) Intake air volume (kg/s)  
(A) Air

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds. Judge OK and clear the NG when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\leq 0.2$ V    |

**Time Needed for Diagnosis:**0.5 seconds

**Malfunction Indicator Light Illumination:**Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## O: DTC P0103 MASS OR VOLUME AIR FLOW CIRCUIT HIGH INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of air flow sensor. Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-01766

(1) Air flow sensor

(3) Voltage (V)

(A) Air

(2) Intake air temperature sensor

(4) Intake air volume (kg/s)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

Judge NG when the continuous time until completing the malfunction criteria below becomes more than 0.5 seconds. Judge OK and clear the NG when the malfunction criteria below are not completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\geq 4.985$ V  |

**Time Needed for Diagnosis:**0.5 seconds

**Malfunction Indicator Light Illumination:**Illuminates as soon as the malfunction occurs.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### P: DTC P0107 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of intake manifold pressure sensor. Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

EN-01765

- |               |                       |
|---------------|-----------------------|
| (1) Connector | (A) Output voltage    |
| (2) Terminal  | (B) Absolute pressure |
| (3) O-ring    |                       |

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds. Judge OK and clear the NG when the malfunction criteria below are not completed.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | < 0.568 V       |

**Time Needed for Diagnosis:** 0.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

ISC feedback: Not allowed to calculate the amount of feedback.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## Q: DTC P0108 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT HIGH INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of intake manifold pressure sensor. Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

(1) Connector

(2) Terminal

(3) O-ring

(A) Output voltage

(B) Absolute pressure

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds. Judge OK and clear the NG when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\geq 4.921$ V  |

**Time Needed for Diagnosis:** 0.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

ISC feedback: Not allowed to calculate the amount of feedback.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## R: DTC P0111 INTAKE AIR TEMPERATURE CIRCUIT RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of intake air temperature sensor output property. Judge NG when the intake air temperature is not varied whereas it seemed to be varied from the viewpoint of engine condition.

### 2. COMPONENT DESCRIPTION

EN-01767

(1) Air flow sensor

(3) Resistance value ( $\Omega$ )

(A) Air

(2) Intake air temperature sensor

(4) Intake air temperature °C (°F)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 3. ENABLE CONDITION

| Secondary Parameters   | Enable Conditions   |
|--|---------------------|
| Coolant temp. before engine start                                    | < 30°C (86°F)       |
| Engine coolant temperature   | > 100°C (212°F)     |
| Battery voltage  | ≥ 10.9 V            |
| Continuous time when the vehicle speed is less than 60 km/h (37 MPH) | 600 seconds or more |

## 4. GENERAL DRIVING CYCLE

Perform the diagnosis when the vehicle speed condition is completed after idling from starting the cooled engine.

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second.

### Judgment Value

| Malfunction Criteria                            | Threshold Value  |
|---|--|
| Output voltage difference between Max. and Min. | < 20 mV (It is equal to approx. 0.5°C (0.9°F) around 25°.) |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria                            | Threshold Value |
|---|-----------------|
| Output voltage difference between Max. and Min. | ≥ 20 mV         |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

Intake air temperature sensor process: Intake air temperature is fixed at 20°C (68°F).

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### S: DTC P0112 INTAKE AIR TEMPERATURE CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of intake air temperature sensor. Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

EN-01767

- (1) Air flow sensor
- (2) Intake air temperature sensor
- (3) Resistance value ( $\Omega$ )
- (4) Intake air temperature °C (°F)
- (A) Air

#### 3. ENABLE CONDITION

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

Intake air temperature sensor process: Intake air temperature is fixed at 20°C (68°F).

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## T: DTC P0113 INTAKE AIR TEMPERATURE CIRCUIT HIGH INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of intake air temperature sensor. Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-01767

(1) Air flow sensor

(3) Resistance value ( $\Omega$ )

(A) Air

(2) Intake air temperature sensor

(4) Intake air temperature °C (°F)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\geq 4.716$ V  |
| Ignition switch      | ON              |

**Time Needed for Diagnosis:**0.5 seconds

**Malfunction Indicator Light Illumination:**Illuminates as soon as the malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $< 4.716$ V     |
| Ignition switch      | ON              |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Intake air temperature sensor process: Intake air temperature is fixed at 20°C (68°F).

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## U: DTC P0117 ENGINE COOLANT TEMPERATURE CIRCUIT LOW INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of engine coolant temperature sensor. Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-02917

- (1) Connector
- (2) Thermistor element

- (A) Resistance value (k $\Omega$ )
- (B) Temperature °C (°F)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds. Judge OK and clear the NG when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | < 0.166 V       |

**Time Needed for Diagnosis:**0.5 seconds

**Malfunction Indicator Light Illumination:**Illuminates as soon as the malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 8. FAIL SAFE

- Engine coolant temperature process: Fix the engine coolant temperature at 70°C (158°F).
- ISC feedback: Calculate the target engine speed setting the engine coolant temperature to 70°C (158°F).
- ISC learning: Not allowed to learn.
- Heavy fuel judgment control: Not allowed to carry out the heavy judgment.
- Air conditioner control: Not allowed to turn the air conditioner to ON.
- Radiator fan control: Both main and sub fan turn to ON.
- Tumble generator valve control: Open the tumble generator valve.

### 9. ECM OPERATION AT DTC SETTING

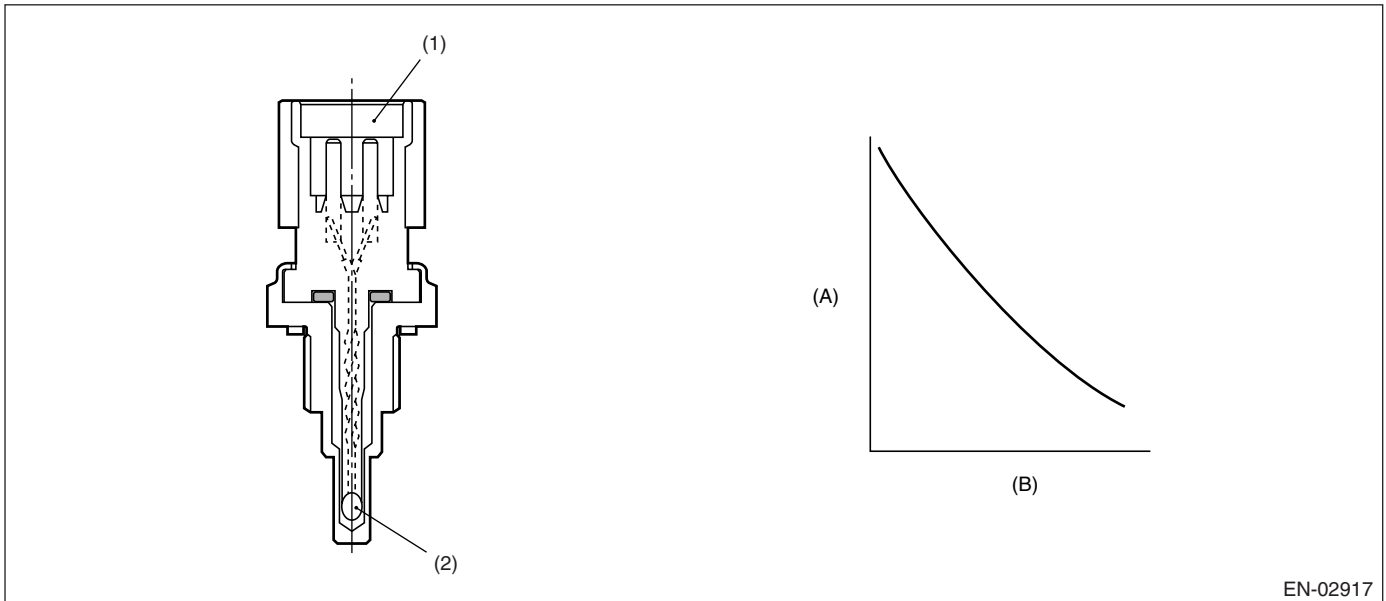

Memorize the freeze frame data. (For test mode \$02)

## V: DTC P0118 ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of engine coolant temperature sensor. Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-02917

- (1) Connector  
(2) Thermistor element

- (A) Resistance value (kΩ)  
(B) Temperature °C (°F)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds. Judge OK and clear the NG when the malfunction criteria below are not completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\geq 4.716$ V  |

**Time Needed for Diagnosis:**0.5 seconds

**Malfunction Indicator Light Illumination:**Illuminates as soon as the malfunction occurs.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Engine coolant temperature process: Fix the engine coolant temperature at 70°C (158°F).
- ISC feedback: Calculate the target engine speed setting the engine coolant temperature to 70°C (158°F).
- ISC learning: Not allowed to learn.
- Air conditioner control: Not allowed to turn the air conditioner to ON.
- Radiator fan control: Both main and sub fan turn to ON.
- Tumble generator valve control: Open the tumble generator valve.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### W: DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 1.  
Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

EN-01859

- (1) Throttle position sensor 1 signal      (3) Throttle position sensor  
(2) Throttle position sensor 2 signal      (4) Engine control module (ECM)

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | $\geq 0.309$ V  |

**Time Needed for Diagnosis:** 24 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

#### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 8. FAIL SAFE

Stop power distribution to electronic throttle control motor. (Throttle opening is fixed to 6°.)

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## X: DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 1.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

- (1) Throttle position sensor 1 signal      (3) Throttle position sensor  
(2) Throttle position sensor 2 signal      (4) Engine control module (ECM)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | $\leq 4.646$ V  |

**Time Needed for Diagnosis:**24 milliseconds

**Malfunction Indicator Light Illumination:**Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 8. FAIL SAFE

Stop power distribution to electronic throttle control motor. (Throttle opening is fixed to 6°.)

### 9. ECM OPERATION AT DTC SETTING

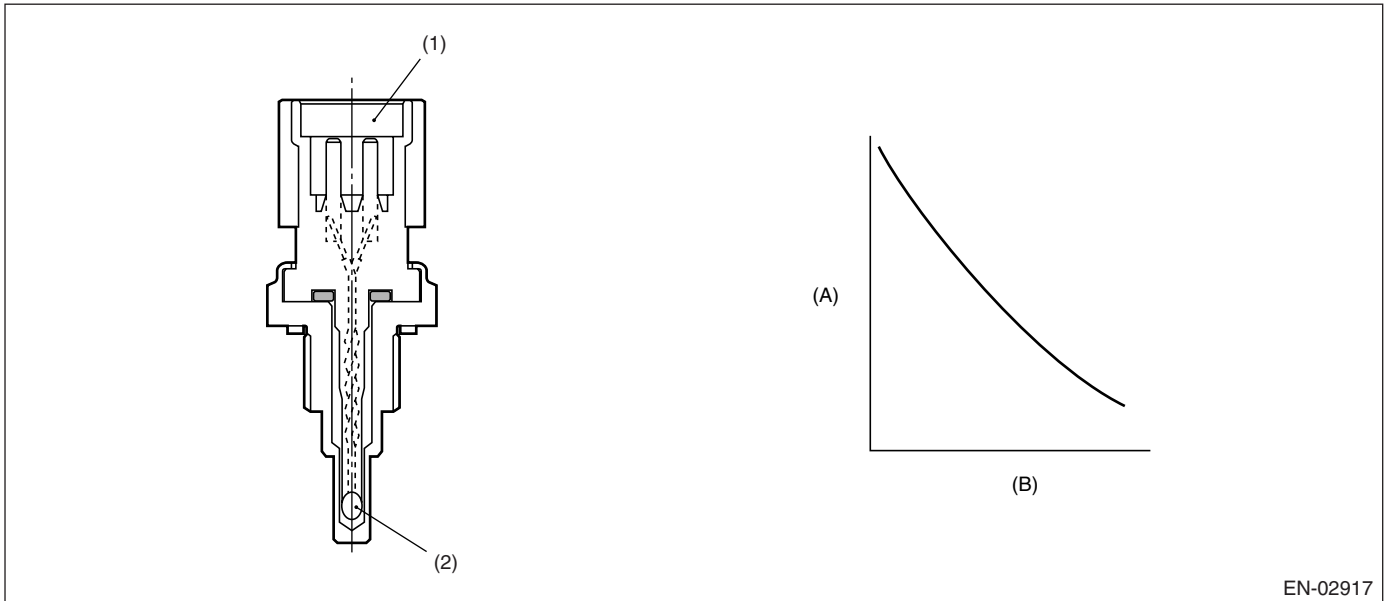

Memorize the freeze frame data. (For test mode \$02)

## Y: DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of engine coolant temperature output property. Judge NG when the engine coolant temperature does not rise whereas it seemed to rise from the viewpoint of the engine condition.

### 2. COMPONENT DESCRIPTION

EN-02917

- (1) Connector  
(2) Thermistor element

- (A) Resistance value (k $\Omega$ )  
(B) Temperature °C (°F)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Engine speed         | $\geq 500$ rpm    |
| Battery voltage      | $> 10.9$ V        |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after engine starting.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                      | Threshold Value                              |
|---|--|
| Engine coolant temperature                | < 20°C (68°F)                                |
| Timer for diagnosis after engine starting | ≥ Timer judgment value after engine starting |

Timer for diagnosis after engine starting

- Timer stop at fuel cut mode.
- During the driving conditions (except a) above), timer count up by 64 milliseconds + TWCNT milliseconds at every 64 milliseconds.

Where, TWCNT is determined as follows,

TWCNT = 0 at idle switch ON,

TWCNT show on the following table at idle switch OFF.

|                        |          | Vehicle speed km/h (MPH) |           |           |           |           |            |            |            |
|------------------------|----------|--------------------------|-----------|-----------|-----------|-----------|------------|------------|------------|
|                        |          | 0 (0)                    | 8 (4.97)  | 16 (9.94) | 24 (14.9) | 32 (19.9) | 40 (24.9)  | 48 (29.8)  | 56 (34.8)  |
| Temperature<br>°C (°F) | -20 (-4) | 0 ms                     | 32.076 ms | 39.977 ms | 47.879 ms | 82.544 ms | 117.209 ms | 154.214 ms | 185.206 ms |
|                        | -10 (14) | 0 ms                     | 25.704 ms | 33.606 ms | 41.508 ms | 68.520 ms | 95.532 ms  | 125.667 ms | 155.802 ms |
|                        | 0 (32)   | 0 ms                     | 17.646 ms | 25.548 ms | 33.450 ms | 53.652 ms | 73.855 ms  | 97.120 ms  | 120.386 ms |
|                        | 10 (50)  | 0 ms                     | 7.901 ms  | 15.802 ms | 23.704 ms | 37.941 ms | 52.177 ms  | 68.573 ms  | 82.538 ms  |

Judgment value of timer after engine starting

$$t = 574 - 33 \times T_i \text{ (Sec.)}$$

$T_i$  is the lowest coolant temperature after starting the engine.

**Time Needed for Diagnosis:** To be determined. (It is varied by the Min. engine coolant temperature and engine conditions such as vehicle speed and engine coolant temperature.)

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria       | Threshold Value |
|----------------------------|-----------------|
| Engine coolant temperature | ≥ 20°C (68°F)   |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Engine coolant temperature process: Fix the engine coolant temperature at 70°C (158°F).
- ISC feedback: Calculate the target engine speed setting the engine coolant temperature to 70°C (158°F).
- ISC learning: Not allowed to learn.
- Air conditioner control: Not allowed to turn the air conditioner to ON.
- Radiator fan control: Both main and sub fan turn to ON.
- Tumble generator valve control: Open the tumble generator valve.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

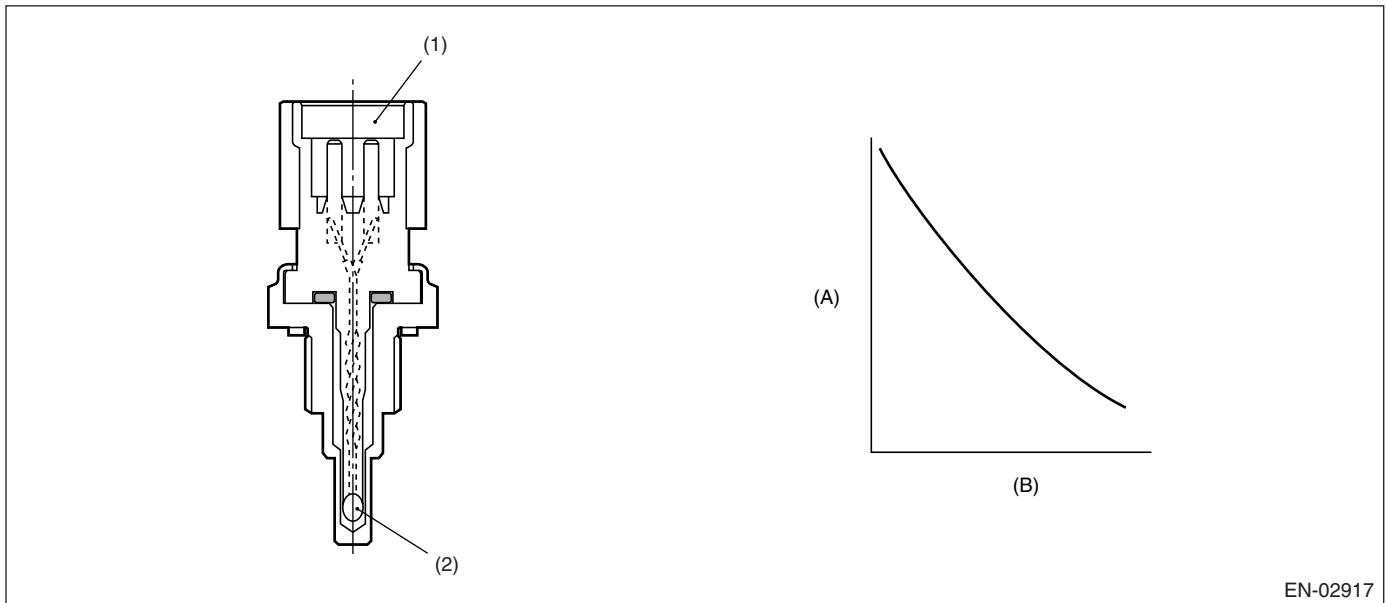

## Z: DTC P0126 INSUFFICIENT ENGINE COOLANT TEMPERATURE FOR STABLE OPERATION

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of engine coolant temperature sensor property.

The engine coolant temperature and fuel temperature are memorized when stopping the engine at the previous time. Judge NG when the engine coolant temperature does not decrease in the case the engine coolant temperature seems to decrease after starting the engine this time.

### 2. COMPONENT DESCRIPTION

EN-02917

- (1) Connector
- (2) Thermistor element

- (A) Resistance value (k $\Omega$ )
- (B) Temperature °C (°F)

### 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions   |
|---|---|
| Battery voltage   | $\geq 10.9$ V   |
| Filling fuel from stopping engine at the previous time to starting it this time | No  |
| Fuel level  | 15 $\ell$   |
| Engine coolant temperature when stopping engine at the previous time            | $\geq 75^{\circ}\text{C}$ (167°F) and $< 100^{\circ}\text{C}$ (212°F) |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis once after starting the engine.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criteria below becomes more than 2.5 seconds.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Engine coolant temperature when stopping engine at the previous time – The lowest engine coolant temperature after starting engine | < 2.5°C (4.5°F) |
| Fuel temperature when stopping engine at the previous time – Fuel temperature  | 5°C (9°F)       |
| Intake air temperature – Fuel temperature  | 2.5°C (4.5°F)   |
| Fuel temperature   | 35°C (95°F)     |

### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Engine coolant temperature when stopping engine at the previous time – The lowest engine coolant temperature after starting engine | ≥ 2.5°C (4.5°F) |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illuminations:** Detect when malfunction occurs in 2 continuous driving cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle is completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### AA:DTC P0128 COOLANT THERMOSTAT (COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of thermostat function. Judge NG when the engine coolant temperature is lower than the estimated engine coolant temperature and the difference between them is large. Judge OK when the engine coolant temperature becomes 70°C (158°F) and the difference is small before judging NG.

#### 2. COMPONENT DESCRIPTION

- |             |                    |                  |
|-------------|--------------------|------------------|
| (1) Valve   | (4) Piston         | (7) Stop ring    |
| (2) Spring  | (5) Guide          | (8) Wax element  |
| (3) Stopper | (6) Rubber packing | (9) Jiggle valve |

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 30 seconds.

### Judgment Value

| Malfunction Criteria                          | Threshold Value                   |
|---|-----------------------------------|
| Battery voltage                               | $\geq 10.9 \text{ V}$             |
| Engine coolant temperature at engine starting | $< 55^{\circ}\text{C}$ (131°F)    |
| Engine coolant temperature                    | $< 75^{\circ}\text{C}$ (167°F)    |
| (Estimated – measured) coolant temperature    | $> 30^{\circ}\text{C}$ (54°F)     |
| Vehicle speed                                 | $\geq 30 \text{ km/h}$ (18.6 MPH) |
| Estimated engine coolant temperature          | $\geq 75^{\circ}\text{C}$ (167°F) |
| Estimated ambient temperature                 | $\geq -7^{\circ}\text{C}$ (19°F)  |

**Time Needed for Diagnosis:** Not fixed.

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria                          | Threshold Value                   |
|---|-----------------------------------|
| Battery voltage                               | $\geq 10.9 \text{ V}$             |
| Engine coolant temperature at engine starting | $< 55^{\circ}\text{C}$ (131°F)    |
| Engine coolant temperature                    | $\geq 75^{\circ}\text{C}$ (167°F) |
| (Estimated – measured) coolant temperature    | $\leq 30^{\circ}\text{C}$ (54°F)  |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### AB:DTC P0131 O<sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of sensor.

Judge NG when the element impressed voltage is out of range, or the element current is out of range.

#### 2. COMPONENT DESCRIPTION

EN-01693

- |                      |                         |
|----------------------|-------------------------|
| (1) Atmosphere       | (A) Electromotive force |
| (2) Exhaust          | (B) Air fuel ratio      |
| (3) ZrO <sub>2</sub> | (C) Lean                |
| (4) Ceramic heater   | (D) Rich                |

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | ≥ 10.9 V          |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing any malfunction criteria below becomes more than 1 second.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Input voltage        | < 1.8 V         |
| Input current        | < -0.005 A      |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Front oxygen (A/F) sensor heater control: Not allowed to turned on the heater.
- A/F main learning: Not allowed to calculate the A/F main learning compensation factor.
- A/F sub learning: Not allowed to calculate the A/F sub learning compensation factor.
- Purge control: Not allowed to purge.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

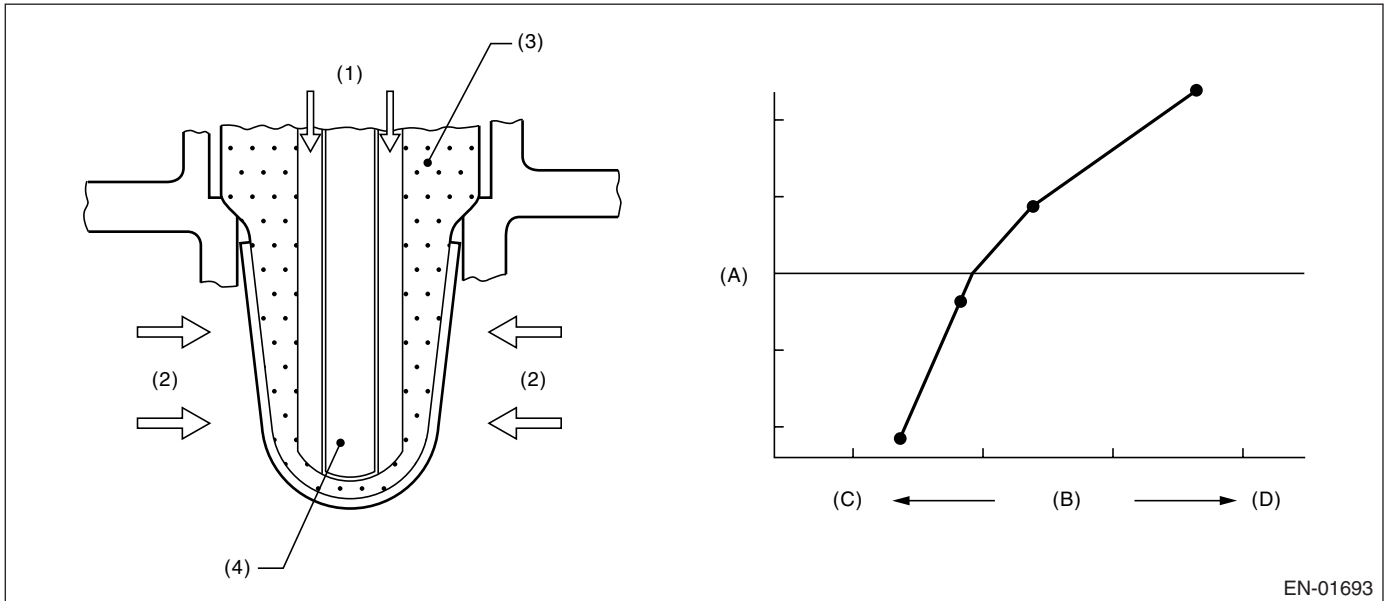

### AC:DTC P0132 O<sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of sensor.

Judge NG when the element impressed voltage is out of range, or the element current is out of range.

#### 2. COMPONENT DESCRIPTION

- |                      |                         |
|----------------------|-------------------------|
| (1) Atmosphere       | (A) Electromotive force |
| (2) Exhaust          | (B) Air fuel ratio      |
| (3) ZrO <sub>2</sub> | (C) Lean                |
| (4) Ceramic heater   | (D) Rich                |

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | ≥ 10.9 V          |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing any malfunction criteria below becomes more than 1 second.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Input voltage        | $\geq 3.8$ V    |
| Input current        | $\geq 0.005$ A  |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor heater control: Not allowed to turned on the heater.
- A/F main learning: Not allowed to calculate the A/F main learning compensation factor.
- A/F sub learning: Not allowed to calculate the A/F sub learning compensation factor.
- Purge control: Not allowed to purge.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AD:DTC P0133 O<sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect time-lag of front oxygen (A/F) sensor response. Front oxygen (A/F) sensor cover has some ventilation holes for exhaust gas. Clogged ventilation holes are diagnosed. When the holes are clogged, the A/F output variation becomes slow comparing with the actual A/F variation because oxygen which reaches the zirconia layer is insufficient. Therefore, if the cover has clogged holes, the rich to lean judgment in ECM is delayed when the change from rich to lean is caused. Judge NG when the actual A/F variation is slow comparing with the ECM control amount.

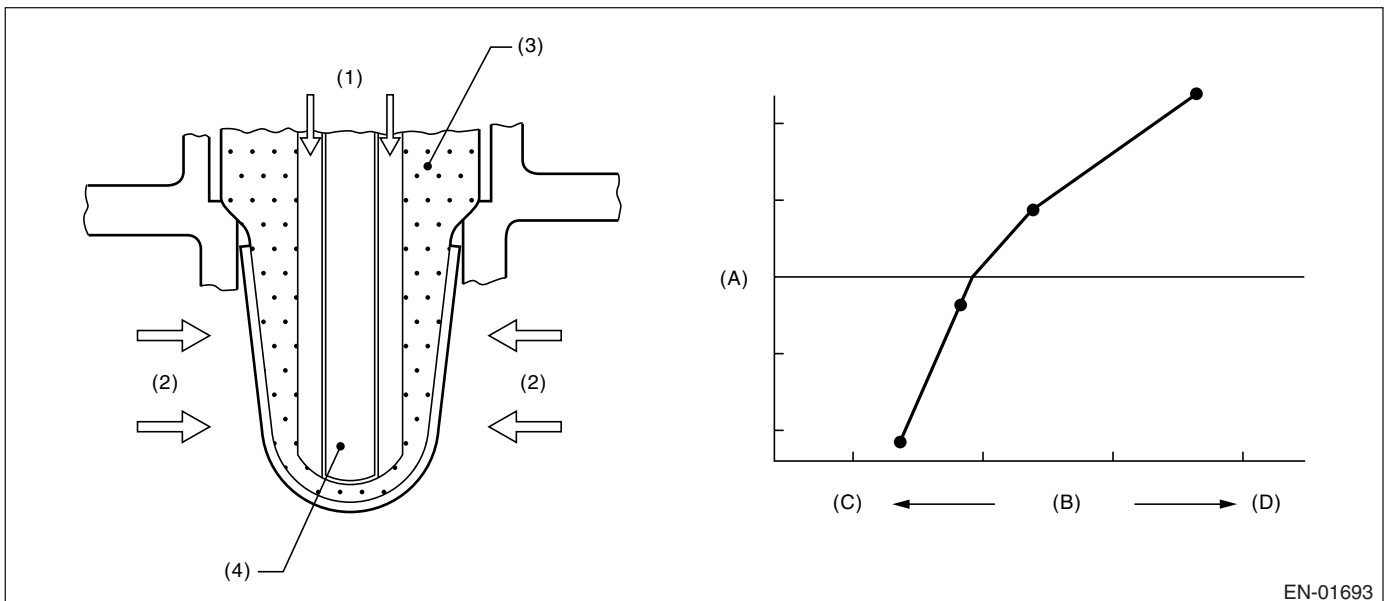

EN-01694

(1) Cover

(2) Zirconia

(3) Clogging

### 2. COMPONENT DESCRIPTION

EN-01693

(1) Atmosphere

(2) Exhaust

(3) ZrO<sub>2</sub>

(4) Ceramic heater

(A) Electromotive force

(B) Air fuel ratio

(C) Lean

(D) Rich

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 3. ENABLE CONDITION

| Secondary Parameters                      | Enable Conditions  |
|---|--|
| All secondary parameter enable conditions | More than 1 second   |
| Battery voltage                           | > 10.9 V   |
| Atmospheric pressure                      | > 75.1 kPa (563 mmHg, 22.2 inHg)   |
| Closed loop control with main feedback    | Operating  |
| Impedance of front oxygen (A/F) sensor    | 0 $\longleftrightarrow$ 50 $\Omega$  |
| After engine starting                     | 120 seconds or more  |
| Engine coolant temperature                | $\geq 75^{\circ}\text{C}$ ( $167^{\circ}\text{F}$ )                        |
| Engine speed                              | 1,000 $\longleftrightarrow$ 3,200 rpm                                      |
| Vehicle speed                             | 10 $\longleftrightarrow$ 120 km/h<br>(6.21 $\longleftrightarrow$ 74.6 MPH) |
| Amount of intake air                      | 10 $\longleftrightarrow$ 40 g (0.35 $\longleftrightarrow$ 1.41 oz)/s       |
| Engine load change during 0.5 engine rev. | $\leq 0.02$ g (0.001 oz)/rev   |
| Learning value of EVAP conc. during purge | $\leq 0.2$   |
| Total time of operating canister purge    | 20 seconds or more   |

### 4. GENERAL DRIVING CYCLE

Perform diagnosis only once at a constant speed of 10 to 120 km/h (6.21 to 74.6 MPH) in 120 seconds after starting the engine.

### 5. DIAGNOSTIC METHOD

Integrate the difference of  $f_{af}$  in every 128 milliseconds and difference of  $\lambda$  value.

After integrate 210 seconds, calculate the diagnosis value.

Judge NG when the malfunction criteria below are completed. Judge OK and clear NG when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| $para_{fca} = td_{2f_{af}}/td_{2l_{md}}$<br>where,<br>$td_{2f_{af}}(N) = td_{2f_{af}}(n-1) +  d_{2f_{af}}(n) $<br>$td_{2l_{md}}(N) = td_{2l_{md}}(n-1) +  d_{2l_{md}}(n) $<br>add up for a total of 210 seconds<br>$d_{2f_{af}}(n) = (f_{af}(n) - f_{af}(n-1)) - (f_{af}(n-1) - f_{af}(n-2))$<br>$d_{2l_{md}}(n) = (l_{md}(n) - l_{md}(n-1)) - (l_{md}(n-1) - l_{md}(n-2))$<br>$f_{af}$ = main feedback compensation coefficient every 128 milliseconds<br>$l_{md}$ = output lambda every 128 milliseconds | $\geq 0.44$     |

**Time Needed for Diagnosis:** 210 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Front oxygen (A/F) sensor main learning correction: Not allowed to calculate.
- A/F sub learning correction: Not allowed to calculate.
- Purge control: Not allowed to purge.

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### AG:DTC P0138 O<sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 2)

#### NOTE:

For the detection criteria, refer to DTC P0137. <Ref. to GD(H4SO)-53, DTC P0137 O<sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### AH:DTC P0139 O<sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 2)

#### 1. OUTLINE OF DIAGNOSIS

Detect the slow response of rear oxygen sensor.

Judge NG when the Rich → Lean response diagnosis or Lean → Rich response diagnosis is NG and judge OK when both response diagnoses are OK.

[Rich → Lean diagnosis response]

(1) When the measured response time is larger than a threshold, since the A/F ratio is rich, the response time of the output change of O<sub>2</sub> sensor when changing from Rich to Lean is measured, and it judges with NG, and when small, it judges with OK.

(2) When O<sub>2</sub> sensor voltage at the time of a fuel shut-off in deceleration return is large (rich), it judges with NG.

[Lean → Rich diagnosis response]

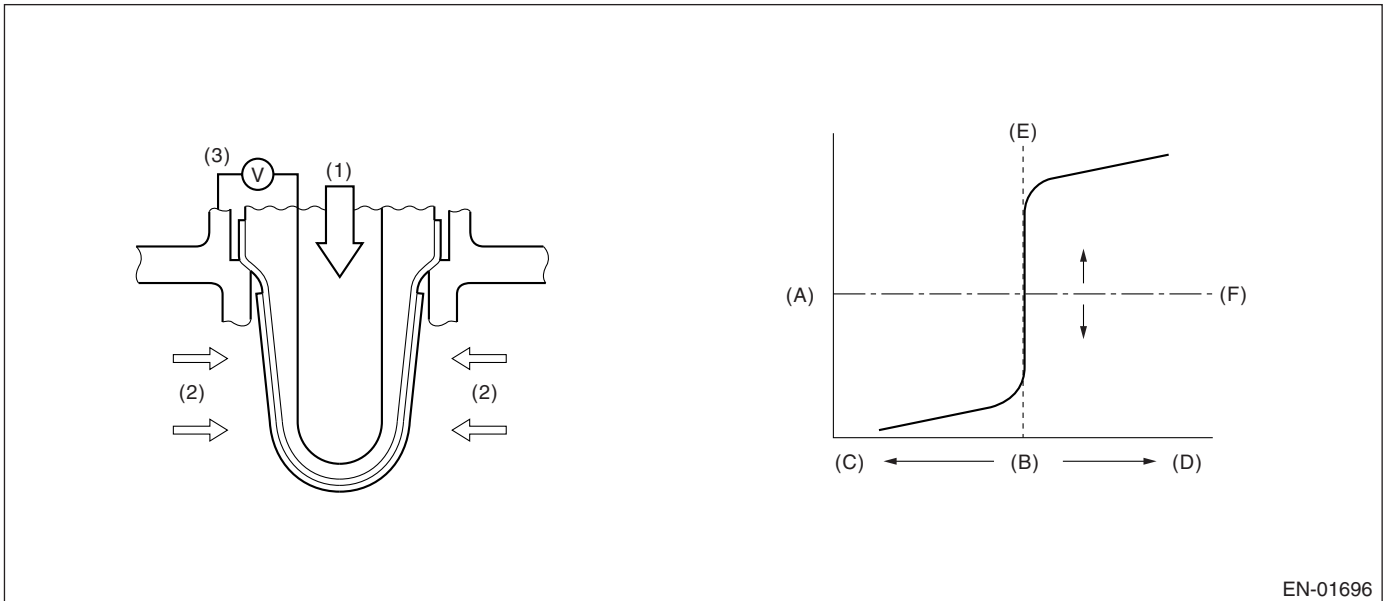

(1) The response time of output change of O<sub>2</sub> sensor when an A/F ratio changes from Lean to Rich is measured, and it is referred to as NG when the measured response time is larger than a threshold.

(2) It is referred to as NG when O<sub>2</sub> sensor voltage after recovery of fuel shut-off in deceleration is small and still small.

#### • Diagnostic Method

Measure the response time of the output change of the oxygen sensor when the A/F ratio changes from rich to lean. And Judge NG when the measured response time is larger than the threshold value.

#### 2. COMPONENT DESCRIPTION

EN-01696

- (1) Atmosphere
- (2) Exhaust
- (3) Electromotive force

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Rich

- (D) Lean
- (E) Theoretical air fuel ratio
- (F) Comparative voltage

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 3. ENABLE CONDITION

- Rich → Lean response diagnosis

| Secondary Parameters                            | Enable Conditions |
|---|-------------------|
| Battery voltage                                 | > 10.9 V          |
| A/F sub feedback control condition              | Completed         |
| 6 seconds or more fuel shut-off indecel. time   | Experienced       |
| After fuel cut                                  | ≥ 2 seconds       |
| Accumulative time of rear oxygen heater current | ≥ 60 seconds      |
| Continuous time of rear oxygen heater current   | ≥ 30 seconds      |
| Catalyst warm-up counter                        | ≥ 9000            |

## 4. GENERAL DRIVING CYCLE

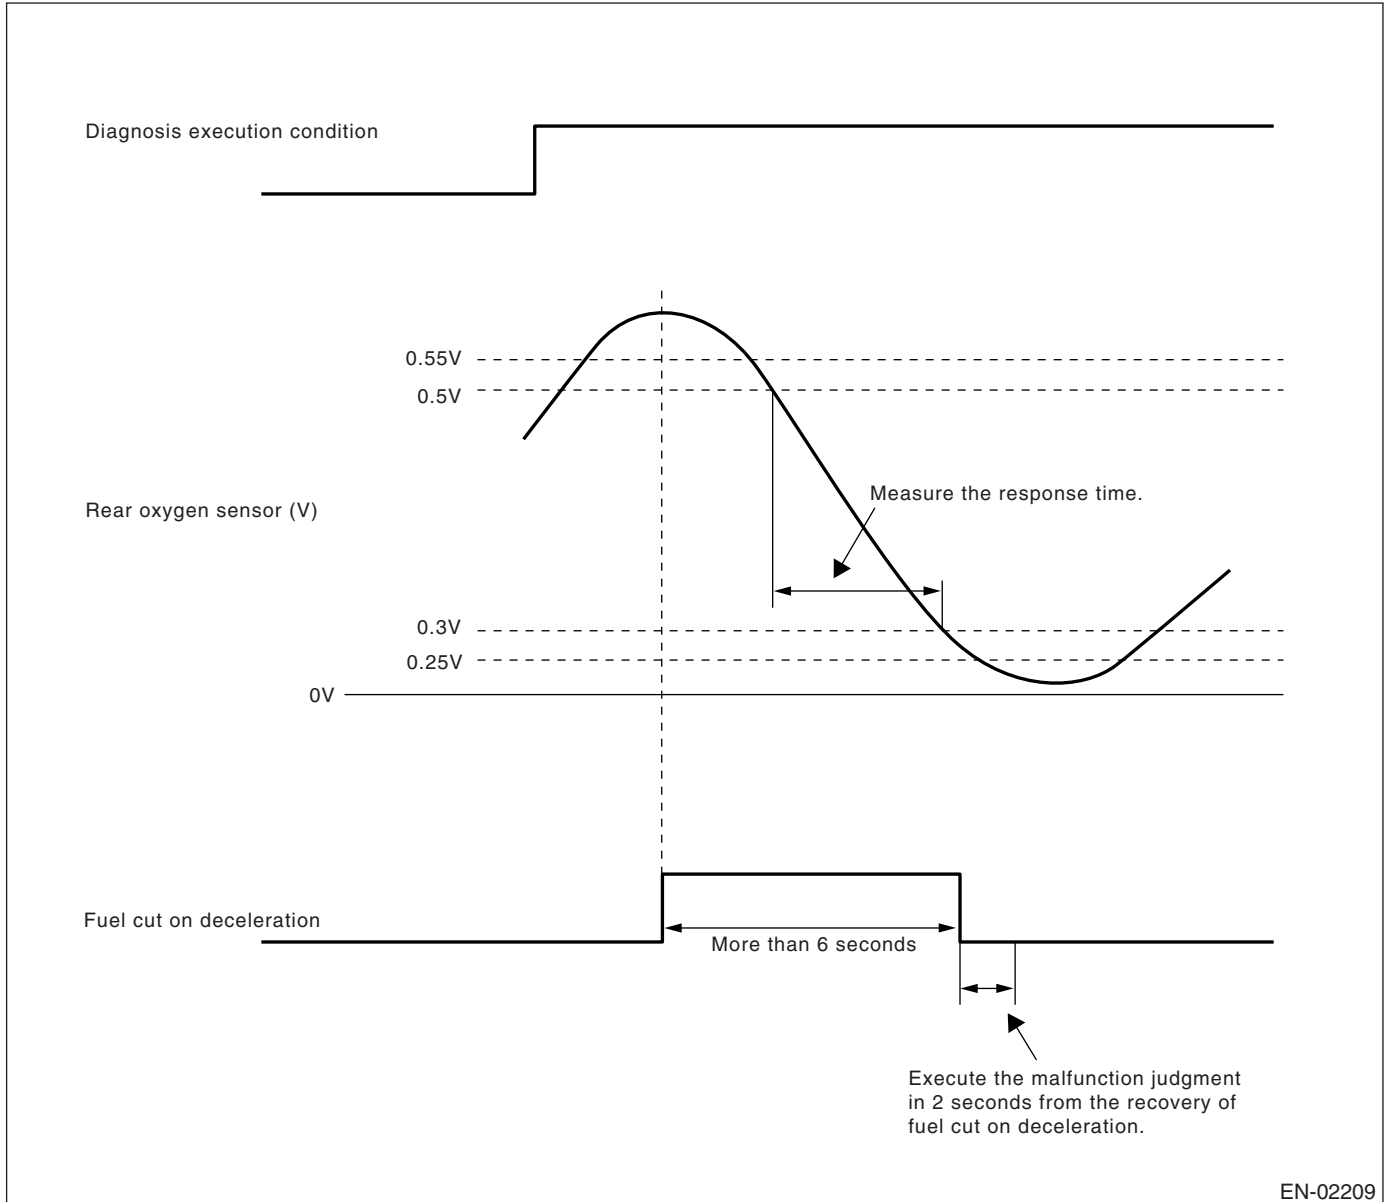

Perform the diagnosis only once when fuel shut-off in deceleration after rapid acceleration. (Pay attention to oxygen sensor voltage for the timing of deceleration.)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 5. DIAGNOSTIC METHOD

When the oxygen sensor output voltage changes from 0.55 V (rich) to 0.25 V (lean), calculate the Min. value of response time regarded as judgment value while the output varies from 0.5 V to 0.3 V.

#### • Abnormality Judgment

(1) Judge NG when the judgment value is larger than the threshold value after fuel shut-off in deceleration. Response time (Diagnosis value) > Threshold value → Abnormal

#### NOTE:

Variation time of rear oxygen sensor output voltage is short during fuel shut-off in deceleration. Carry out the NG judgment only after the fuel shut-off in deceleration. As for OK judgment, without the condition of fuel shut-off in deceleration, judge OK if the value is below the threshold value.

Judge NG when the malfunction criteria below are completed in 2 seconds after the recovery of fuel shut-off in deceleration which requires 6 seconds or more.

(2) Judge NG when the O<sub>2</sub> sensor voltage after recovery of fuel shut-off in deceleration is large. Judge NG when fuel shut-off in deceleration is also long (6 sec. or more), and although carried out the fuel shut-off in deceleration cut return, when O<sub>2</sub> sensor voltage is large (more than 0.55V).

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## Judgment Value

| Malfunction Criteria   | Threshold Value    |
|--|--------------------|
| Shortest time change from rich (500 mV O <sub>2</sub> output) to lean (300 mV) if voltage reduces from 550 mV to 250 mV. | > 327 milliseconds |
| Time when more than 550 mV   | > 2 seconds        |

**Time Needed for Diagnosis:** 1 time

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgement

(1) Judge Normal when the response time (diagnostic value) is smaller than threshold (judgment value) when changing to lean since O<sub>2</sub> sensor voltage.

(2) A normal judging is not carried out.

## Judgment Value

Judge OK when the following standards value are completed.

| Malfunction Criteria   | Threshold Value    |
|--|--------------------|
| Change of the shortest time from rich (500 mV O <sub>2</sub> output), when voltage decreases from 550 mV to 250 mV to lean (300 mV). | ≤ 327 milliseconds |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

Sub feedback control: Not allowed

## 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

## 10. ENABLE CONDITION

- Lean → Rich response diagnosis

| Secondary Parameters                 | Enable Conditions |
|--------------------------------------|-------------------|
| Battery voltage                      | > 10.9 V          |
| A/F main feedback control condition  | Completed         |
| Fuel cut on deceleration ≥ 6 seconds | Experienced       |
| After fuel cut                       | ≥ 2 seconds       |

## 11. GENERAL DRIVING CYCLE

Perform the diagnosis only once when fuel shut-off in deceleration after rapid acceleration. (Pay attention to oxygen sensor voltage for the timing of deceleration.)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 12. DIAGNOSTIC METHOD

When the oxygen sensor output voltage changes from 0.25 V (lean) to 0.55 V (rich), calculate the Min. value of response time regarded as judgment value while the output varies from 0.3 V to 0.5 V.

#### • Abnormality Judgment

(1) Judge NG when the judgment value is larger than the threshold value after recovery of fuel shut-off in deceleration.

Response time (Diagnosis value) > Threshold value → Abnormal

(2) Judge NG when the O<sub>2</sub> sensor voltage after recovery of fuel shut-off in deceleration is small.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Shortest time change from lean (300 mV O <sub>2</sub> output) to rich (500 mV) if voltage reduces from 500 mV to 250 mV. | > 2 seconds     |
| Time when less than 250 mV   | > 120 seconds   |

**Time Needed for Diagnosis:** 1 time

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Normality Judgement

(1) Judge Normal when the response time (diagnostic value) is smaller than threshold (judgment value) when changing to lean since O<sub>2</sub> sensor voltage.

Response Time (diagnosis value) ≤ Threshold value → Normal

(2) A normal judging is not carried out.

## Judgment Value

Judge OK when the following standards value are completed.

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Change of the shortest time from rich (300 mV O <sub>2</sub> output), when voltage decreases from 550 mV to 250 mV to lean (500 mV). | ≤ 2 seconds     |

## 13.DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 14.MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 15.FAIL SAFE

Sub feedback control: Not allowed

## 16.ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### AI: DTC P0140 O<sub>2</sub> SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK1 SENSOR 2)

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of rear oxygen sensor output property.

Judge Low side NG when the rear oxygen sensor voltage indicates low, otherwise, judge High side NG when the rear oxygen sensor voltage indicates high, in spite of the driving condition that the voltage might move, by referring to the driving condition such as amount of intake air, coolant temperature, main feedback control, fuel shut-off in deceleration, etc.

Judge rear oxygen sensor property NG when the Low side or High side becomes NG.

#### 2. ENABLE CONDITION

| Secondary Parameters                              | Enable Conditions           |
|---|-----------------------------|
| Engine coolant temperature                        | ≥ 75°C (167°F)              |
| Target output voltage of rear oxygen sensor       | ≥ 0.6 V                     |
| Amount of intake air                              | 10 g (0.35 oz)/sec. or more |
| Battery voltage                                   | > 10.9 V                    |
| Closed loop with oxygen sensor                    | In operation                |
| Misfire detection during 200 engine revs.         | 5 times or less             |
| Compensation factor for front oxygen (A/F) sensor | Not in limit value          |
| 5 seconds or more fuel shut-off in decel.         | Experienced                 |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis once after warming-up the engine.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when any of the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria                       | Threshold Value |
|--|-----------------|
| Low side diagnosis of max. output voltage  | < 0.55 V        |
| High side diagnosis of min. output voltage | > 0.25 V        |

**Time Needed for Diagnosis:**200 second

**Malfunction Indicator Light Illumination:**Detect when malfunction occurs in 2 continuous driving cycles.

##### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria                       | Threshold Value |
|--|-----------------|
| Low side diagnosis of max. output voltage  | ≥ 0.55 V        |
| High side diagnosis of min. output voltage | ≤ 0.25 V        |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 7. FAIL SAFE

Sub feedback control: Not allowed

## 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## AJ:DTC P0171 SYSTEM TOO LEAN (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the fuel system malfunction by the amount of main feedback control.

#### • Diagnostic Method

Fuel system is diagnosed by comparing the target air fuel ratio calculated by ECM with the actual air fuel ratio measured by sensor.

### 2. ENABLE CONDITION

- Lean side

| Secondary Parameters                     | Enable Conditions                 |
|--|-----------------------------------|
| A/F main learning system                 | In operation                      |
| Engine coolant temperature               | $\geq 75^{\circ}\text{C}$ (167°F) |
| Intake air amount                        | $\geq$ Map 5                      |
| Intake air change during 0.5 engine rev. | $\leq 0.02$ g (0.001 oz)/rev      |

Map 5

| Engine speed (rpm)          | idle | 650               | 1000              | 1500              | 2000              | 2500              | 3000              | 3500             | 4000              | 4500              |
|-----------------------------|------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|------------------|-------------------|-------------------|
| Measured value (g (oz)/rev) | NA   | 0.203<br>(0.0072) | 0.183<br>(0.0065) | 0.155<br>(0.0055) | 0.149<br>(0.0053) | 0.157<br>(0.0055) | 0.162<br>(0.0057) | 0.18<br>(0.0063) | 0.193<br>(0.0068) | 0.205<br>(0.0072) |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at engine idling after warm-up or a constant speed.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge that the fuel system malfunction occurs when the continuous time of completing the malfunction criteria below becomes more than 50 seconds by comparing the diagnosed value (fsobd) with threshold value.

#### Judgment Value

| Malfunction Criteria  | Threshold Value  |
|---|--|
| $\text{fsobd} = (\text{sglmd} - \text{tglm da}) + \text{faf} + \text{flaf}$<br>where,<br>sglmd = measured lambda<br>tglm da = target lambda<br><br>faf = main feedback compensation coefficient every 64 milliseconds<br>flaf = main feedback learning compensation coefficient | $\geq \text{fsobdL1}$<br>See Map 4<br><br>fsobdL1 = lean side threshold value of fsobd |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK when the continuous time of completing the malfunction criteria below becomes more than 10 seconds.

### Judgment Value

| Malfunction Criteria                    | Threshold Value |
|---|-----------------|
| $fsobd = (sglmd - tglmda) + faf + flaf$ | $\geq -20\%$    |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When OK with similar drive in 3 drive cycles.
- When "Clear Memory" was performed

### 7. FAIL SAFE

Purge control solenoid valve control: Not allowed to purge.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AL:DTC P0181 FUEL TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel temperature sensor output property. Perform the diagnosis in two methods; namely, drift diagnosis and stuck diagnosis. Judge NG when either of them results in NG, and judge OK when both of them result in OK.

#### • Drift Diagnosis

Normally fuel temperature is lower than engine coolant temperature. When the fuel temperature becomes higher than the engine coolant temperature, the range is considered to be shifted, and make an NG judgment.

### 2. COMPONENT DESCRIPTION

(A) Resistance value ( $\Omega$ )

(B) Fuel temperature  $^{\circ}\text{C}$  ( $^{\circ}\text{F}$ )

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 120 seconds.

#### Judgment Value

| Malfunction Criteria   | Threshold Value                             |
|--|---|
| Fuel level   | $\geq 9.0 \ell$ (2.38 US gal, 1.98 Imp gal) |
| After engine starting  | 20 seconds or more                          |
| Engine coolant temperature – engine coolant temperature at engine starting | $> 10^{\circ}\text{C}$ (18°F)               |
| Fuel temperature – engine coolant temperature                              | $\geq 10^{\circ}\text{C}$ (18°F)            |
| Battery voltage  | $> 10.9 \text{ V}$                          |

**Time Needed for Diagnosis:** 120 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value                             |
|--|---|
| Fuel level   | $\geq 9.0 \ell$ (2.38 US gal, 1.98 Imp gal) |
| After engine starting  | 20 seconds or more                          |
| Engine coolant temperature – engine coolant temperature at engine starting | $> 10^{\circ}\text{C}$ (18°F)               |
| Fuel temperature – engine coolant temperature                              | $< 10^{\circ}\text{C}$ (18°F)               |
| Engine coolant temperature   | $< 75^{\circ}\text{C}$ (167°F)              |
| Battery voltage  | $> 10.9 \text{ V}$                          |

#### • Stuck Diagnosis

If the fuel temperature which might rise along with the engine idling (the cumulative amount of intake air after engine starting is large) does not increase, the engine is considered to be stuck and make an NG judgment.

### 6. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions  |
|-----------------------|--------------------|
| After engine starting | 20 seconds or more |
| Battery voltage       | $> 10.9 \text{ V}$ |

### 7. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 20 seconds or more after starting the engine.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 8. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                              | Threshold Value     |
|---|---------------------|
| Accumulated amount of intake air                  | ≥ 551 kg (1,215 lb) |
| Fuel temperature difference between Max. and Min. | < 2°C (3.6°F)       |

**Time Needed for Diagnosis:**To be determined.

**Malfunction Indicator Light Illumination:**Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                              | Threshold Value     |
|---|---------------------|
| Accumulated amount of intake air                  | ≥ 551 kg (1,215 lb) |
| Fuel temperature difference between Max. and Min. | ≥ 2°C (3.6°F)       |

## 9. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 10.MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 11.FAIL SAFE

None

## 12.ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### AM:DTC P0182 FUEL TEMPERATURE SENSOR "A" CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of fuel temperature sensor. Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

(A) Resistance value ( $\Omega$ )

(B) Fuel temperature °C (°F)

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | < 0.166 V       |
| Battery voltage      | $\geq 10.9$ V   |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

##### • Normality Judgment

Judge OK when the cumulative time until completing the malfunction criteria below becomes more than 2.5 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\geq 0.166$ V  |
| Battery voltage      | $\geq 10.9$ V   |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AO:DTC P0196 ENGINE OIL TEMPERATURE SENSOR CIRCUIT RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of engine oil temperature sensor output property.

Judge NG when the engine oil temperature does not increase regardless of the driving condition that engine oil temperature may be thought to increase.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | ≥ 10.9 V          |
| Engine speed         | 500 rpm           |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria  | Threshold Value   |
|---|---|
| Engine oil temperature  | < 15°C (59°F)   |
| Timer for diagnosis of oil temperature sensor after engine starting | ≥ Judgment value of timer for diagnosis of oil temperature sensor after engine starting |

Timer for diagnosis of oil temperature sensor after engine starting (Timer for diagnosis)

a) Timer stop at fuel cut mode.

b) During the driving condition (except a) above), timer count up by 64ms + TOILCNT ms at every 64ms.

Where, TOILCNT is determined as follows,

TOILCNT = 0 at idle switch on,

Refer to the following table for TWCNT with idle switch OFF.

|                  |           | Vehicle speed km/h (MPH) |          |          |          |          |          |          |          |
|------------------|-----------|--------------------------|----------|----------|----------|----------|----------|----------|----------|
|                  |           | 0 (0)                    | 8 (5)    | 16 (10)  | 24 (15)  | 32 (20)  | 40 (25)  | 48 (30)  | 56 (35)  |
| Temp.<br>°C (°F) | -30 (-22) | 64 ms                    | 73.2 ms  | 83.9 ms  | 96.3 ms  | 113.2 ms | 133.9 ms | 160.2 ms | 194.6 ms |
|                  | -20 (-4)  | 64 ms                    | 73.3 ms  | 84 ms    | 96.6 ms  | 113.7 ms | 135 ms   | 162 ms   | 197.4 ms |
|                  | -10 (14)  | 64 ms                    | 73.4 ms  | 84.2 ms  | 96.9 ms  | 114.5 ms | 136.4 ms | 164.4 ms | 201.5 ms |
|                  | 0 (32)    | 64 ms                    | 73.5 ms  | 84.5 ms  | 97.4 ms  | 115.6 ms | 138.5 ms | 168 ms   | 207.6 ms |
|                  | 10 (50)   | 102.2 ms                 | 114.8 ms | 129.4 ms | 146.7 ms | 171.7 ms | 203.4 ms | 245.1 ms | 302.1 ms |

Judgment value of Timer for diagnosis of oil temperature sensor after engine starting (t)

$$t = 1,882,940 - 43,302 \times T_i \quad (t \geq 1,882,940)$$

T<sub>i</sub> is a lowest engine coolant temperature after starting the engine.

**Time needed for diagnosis:** To be determined.

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Engine oil temperature | ≥ 15°C (59°F)   |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 8. FAIL SAFE

Stop power distribution to electronic throttle control motor. (Throttle opening is fixed to 6°.)

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## AT:DTC P0301 CYLINDER 1 MISFIRE DETECTED

### 1. OUTLINE OF DIAGNOSIS

Detect whether the misfire occurred or not. (Revolution fluctuation method) Monitoring the misfire which influences exhaust deterioration (1.5 times of FTP) and catalyst damage is made obligatory by the law. Misfire affecting these two has three patterns below.

- Intermittent misfire (The same cylinder misfires in random, or different cylinders misfire in random.): FTP 1.5 times misfire
- Every time misfire (The same cylinder misfires every time.): FTP 1.5 times misfire, Catalyst damage misfire

The following detecting methods are adopted for these detection.

1) Intermittent misfire: FTP 1.5 times misfire

- 180° Interval Difference Method (MT: 1,800 rpm or less; AT: None)
- 360° Interval Difference Method (whole range)
- 720° Interval Difference Method (3,000 rpm or less)

2) Every time misfire: FTP 1.5 times misfire, Catalyst damage misfire

- 360° Interval Difference Method

### 2. ENABLE CONDITION

| Secondary Parameters                                   | Enable Conditions                   |
|--|-------------------------------------|
| All secondary parameter enable conditions              | More than 1 second                  |
| Intake manifold pressure change during 0.5 engine rev. | < 13.3 kPa (100 mmHg, 3.94 inHg)    |
| Throttle position change during 16 milliseconds        | < 21°                               |
| Fuel shut-off function                                 | Not operating                       |
| Atmospheric pressure                                   | ≥ 75.0 kPa (563 mmHg, 22.2 inHg)    |
| Fuel level   | ≥ 9.0 ℓ (2.38 US gal, 1.98 Imp gal) |
| AT torque control                                      | Not in operation                    |
| Evaporative system leak check                          | Not in operation                    |
| Engine speed   | 460 — 6,200 rpm                     |
| Intake manifold pressure                               | > Map 3                             |
| Battery voltage  | ≥ 8 V                               |
| Conclusion of fuel parameter                           | Not supervolatile                   |

## 3. GENERAL DRIVING CYCLE

- Detecting misfire between idling and high revolution.
- Perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 4. DIAGNOSTIC METHOD

When the misfire occurred, the engine speed is decreased and the crankshaft position speed will change. Calculate the interval difference value (diagnostic value) from crankshaft position speed by the following formula, and judge whether the misfire occurs or not comparing the calculated result with judgment value. Counting the number of misfire up, and if the misfire ratio is higher during 1,000 rev. or 200 rev., judge NG for the corresponding cylinder.

Calculate the diagnostic value (from crankshaft position speed)

- Misfire detection every single ignition (Compare diagnostic value with judgment value)
- 180° Interval Difference Method
  - 360° Interval Difference Method
  - 720° Interval Difference Method

- NG judgment (Judge misfire occurrence required by the law) (Compare number of misfire with judgment)
- FTP1.5 times misfire NG judgment
  - Catalyst damage misfire NG judgment

As the following figure, pick out a random cylinder as the standard and name it omg 0. And the former crankshaft position speed is named omg 1, the second former crankshaft position speed is named omg 2, the third is named omg 3, and the following is the same.

EN-01774

(A) Ignition order

(B) Crankshaft position speed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • 180° Interval Difference Method

Diagnosis value  $domg\ 180 = (omg\ -1\ omg\ 0) - (omg\ 5 - omg\ 1)/4$

Judge misfire occurs in the following cases.

- $domg\ 180 >$  judgment value of positive side
- $domg\ 180 \leq$  judgment value of negative side  
(judgment value before 180°CA)

## • 360° Interval Difference Method

Diagnosis value  $domg\ 360 = (omg\ 1 - omg\ 0) - (omg\ 3 - omg\ 2)$

Misfire judgment  $domg\ 360 >$  judgment value  $\rightarrow$  Misfire occurs

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### • 720° Interval Difference Method

Diagnosis value  $domg\ 720 = (omg\ 1 - omg\ 0) - (omg\ 5 - omg\ 4)$

Misfire judgment  $domg\ 720 > \text{judgment value} \rightarrow \text{Misfire occurs}$

### • FTP 1.5 times misfire (Misfire occurrence level affecting exhaust gas)

**Judgment Value (Judge that malfunction occurs when the misfire ratio is high in 1,000 engine revs.)**

| Malfunction Criteria        | Threshold Value       |
|-----------------------------|-----------------------|
| FTP emission judgment value | > 1.0% in 1,000 revs. |

**Time Needed for Diagnosis:** 1,000 engine revs.

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Catalyst damage misfire (Misfire occurrence level damaging catalyst)

**Judgment Value (Judge that malfunction occurs when the misfire ratio is high in 200 engine revs. (400 ignitions))**

| Malfunction Criteria                   | Threshold Value |
|--|-----------------|
| Catalyst damage misfire judgment value | See Map 1       |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## Map 1 Fault criteria threshold for misfire which would result in catalyst damage

| percentage               |      | Intake air (g (oz)/rev.) |                 |                |                 |                 |                 |                 |                |                |                |

|                          | 4000 | 14.25                    | 14.25           | 11             | 7.75            | 6               | 5               | 5               | 5              | 5              | 5              |
|                          | 4500 | 11                       | 11              | 8.25           | 7.75            | 5               | 5               | 5               | 5              | 5              | 5              |
|                          | 5000 | 11                       | 11              | 9.5            | 7.75            | 5               | 5               | 5               | 5              | 5              | 5              |
|                          | 5500 | 9                        | 9               | 7.75           | 6.75            | 5               | 5               | 5               | 5              | 5              | 5              |
|                          | 6000 | 9                        | 5               | 5              | 5               | 5               | 5               | 5               | 5              | 5              | 5              |
| 6400                     | 9    | 5                        | 5               | 5              | 5               | 5               | 5               | 5               | 5              | 5              |                |

These figures mean the misfire ratio (%) in 400 ignitions; for example, 22.5 (%) means 400 (ignition) × 22.5 (%) = 90 (ignition) or more, so this case is judged misfire.

**Time Needed for Diagnosis:** 200 engine revs.

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## AU: DTC P0302 CYLINDER 2 MISFIRE DETECTED

### 1. OUTLINE OF DIAGNOSIS

For the diagnostic procedure, refer to DTC P0301. <Ref. to GD(H4SO)-78, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

For the diagnostic procedure, refer to DTC P0301. <Ref. to GD(H4SO)-78, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### AX:DTC P0327 KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the knock sensor. Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

- (1) Case
- (2) Weight
- (3) Piezoelectric element

- (4) Nut
- (5) Resistance

- (A) To knock sensor harness

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | < 0.238 V       |
| Ignition switch      | ON              |

**Time Needed for Diagnosis:**1 second

**Malfunction Indicator Light Illumination:**Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\geq 0.25$ V   |
| Ignition switch      | ON              |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### AY:DTC P0328 KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the knock sensor. Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

- (1) Case
- (2) Weight
- (3) Piezoelectric element

- (4) Nut
- (5) Resistance

- (A) To knock sensor harness

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\geq 4.714$ V  |
| Ignition switch      | ON              |

**Time Needed for Diagnosis:**1 second

**Malfunction Indicator Light Illumination:**Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | < 4.7 V         |
| Ignition switch      | ON              |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## GENERAL DESCRIPTION

### AZ:DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of crankshaft position sensor. Judge NG when the crankshaft signal does not input regardless of turning the starter.

#### 2. COMPONENT DESCRIPTION

(A) Camshaft signal

(B) Crankshaft signal

(1) Crankshaft position sensor

(2) Crank sprocket

(3) Crankshaft half-turn

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

### Judgment Value

| Malfunction Criteria              | Threshold Value |
|-----------------------------------|-----------------|
| Starter switch                    | ON              |
| Crankshaft position sensor signal | Not detected    |
| Battery voltage                   | $\geq 8$ V      |

**Time Needed for Diagnosis:**3 seconds

**Malfunction Indicator Light Illumination:**Illuminates as soon as the malfunction occurs.

### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria              | Threshold Value |
|-----------------------------------|-----------------|
| Crankshaft position sensor signal | Input exists    |
| Battery voltage                   | $\geq 8$ V      |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

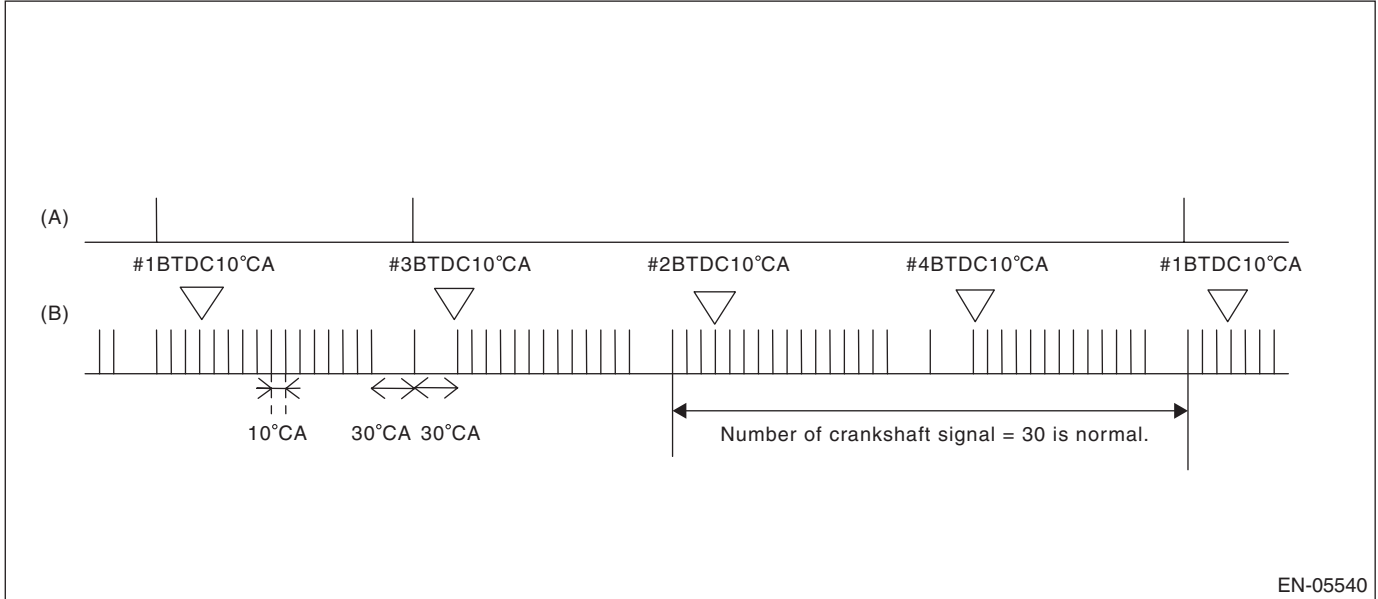

## GENERAL DESCRIPTION

### BA:DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of crankshaft position sensor output property. Judge NG when the number of crankshaft signal every 1 revolution becomes abnormal.

#### 2. COMPONENT DESCRIPTION

(A) Camshaft signal

(B) Crankshaft signal

(1) Crankshaft position sensor

(2) Crank sprocket

(3) Crankshaft half-turn

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions     |
|----------------------|-----------------------|
| Battery voltage      | $\geq 8 \text{ V}$    |
| Engine speed         | $< 4,000 \text{ rpm}$ |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously under 4,000 rpm engine speed.

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when all the malfunction criteria below are completed more than 10 times in a row.

### Judgment Value

| Malfunction Criteria                        | Threshold Value |
|---|-----------------|
| Cylinder number distinction                 | Completed       |
| Amount of crank sensor signal during 1 rev. | Not = 30        |

**Time Needed for Diagnosis:**10 engine revs.

**Malfunction Indicator Light Illumination:**Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria                        | Threshold Value |
|---|-----------------|
| Cylinder number distinction                 | Completed       |
| Amount of crank sensor signal during 1 rev. | = 30            |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

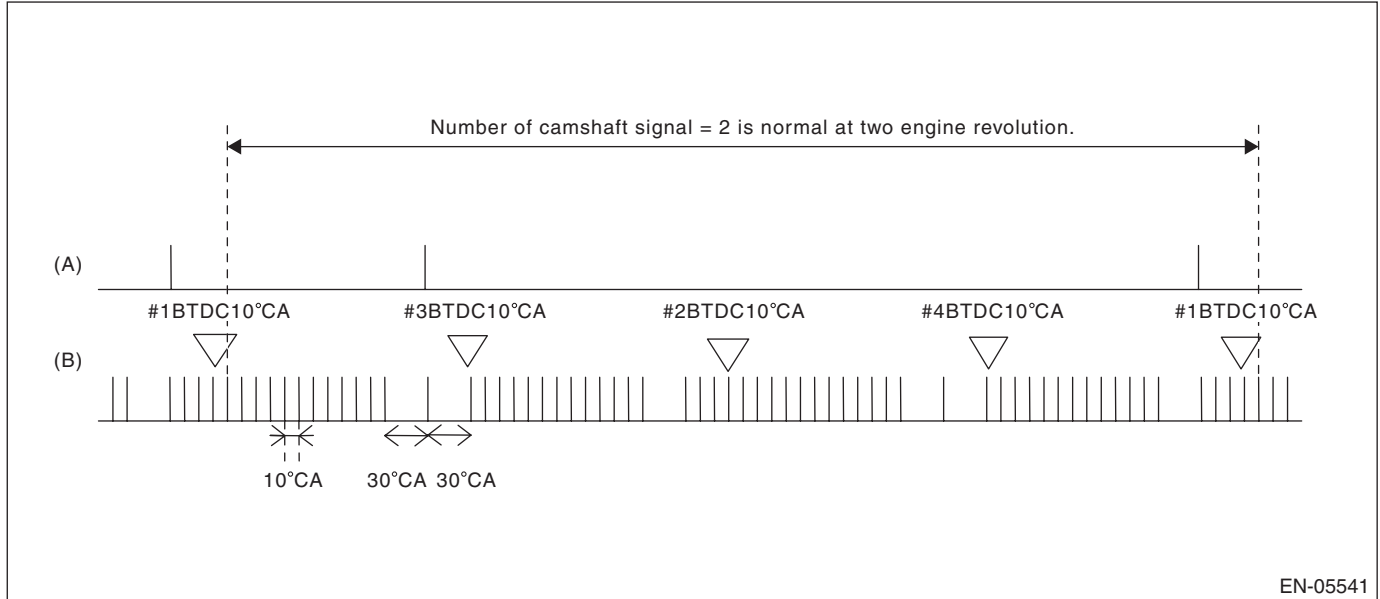

## GENERAL DESCRIPTION

### BB:DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 1 OR SINGLE SENSOR)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of camshaft position sensor. Judge NG when the number of camshaft signal remains to be abnormal.

#### 2. COMPONENT DESCRIPTION

- (A) Camshaft signal
- (B) Crankshaft signal

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the engine speed continues 8 revolutions or more for the malfunction criteria below.

##### Judgment Value

| Malfunction Criteria                                    | Threshold Value |
|---|-----------------|
| Voltage   | ≥ 8 V           |
| Number of camshaft position sensor signal during 2 rev. | Except 2        |

**Time Needed for Diagnosis:** 8 rev.

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria                                    | Threshold Value    |
|---|--------------------|
| Voltage   | $\geq 8 \text{ V}$ |
| Number of camshaft position sensor signal during 2 rev. | 2                  |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

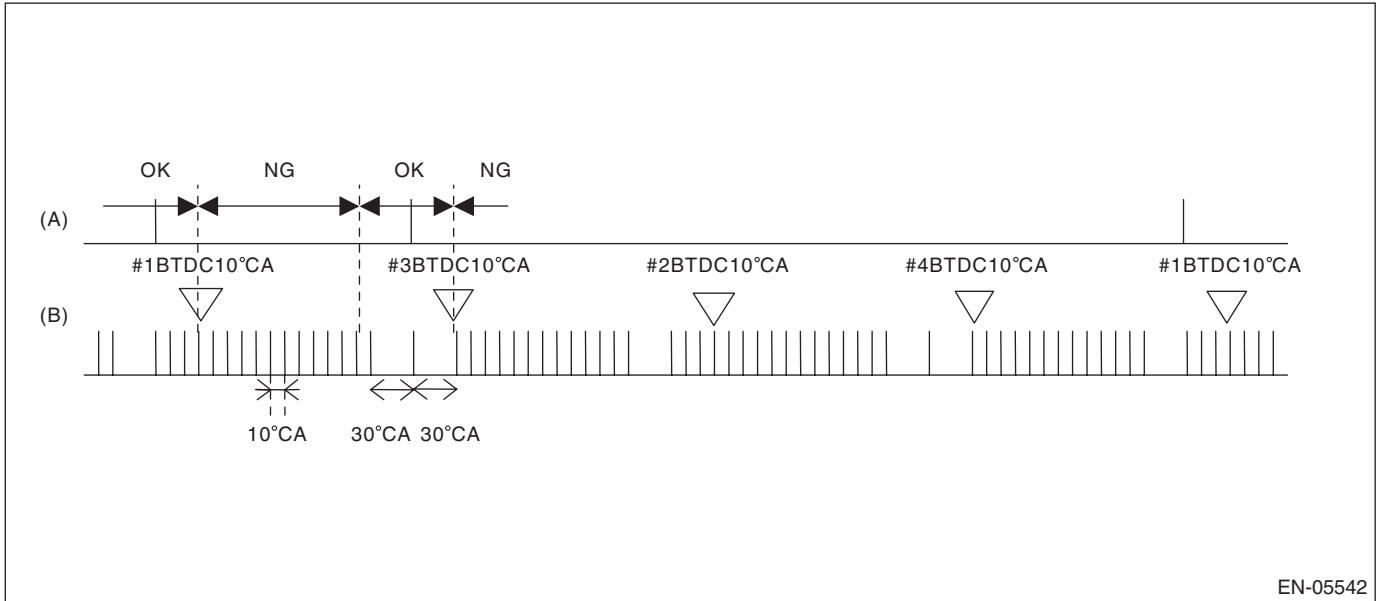

## GENERAL DESCRIPTION

### BC:DTC P0341 CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE (BANK 1 OR SINGLE SENSOR)

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of camshaft position sensor output property. Judge NG when the camshaft line signal input timing is shifted from the crankshaft signal because of timing belt tooth chip, etc.

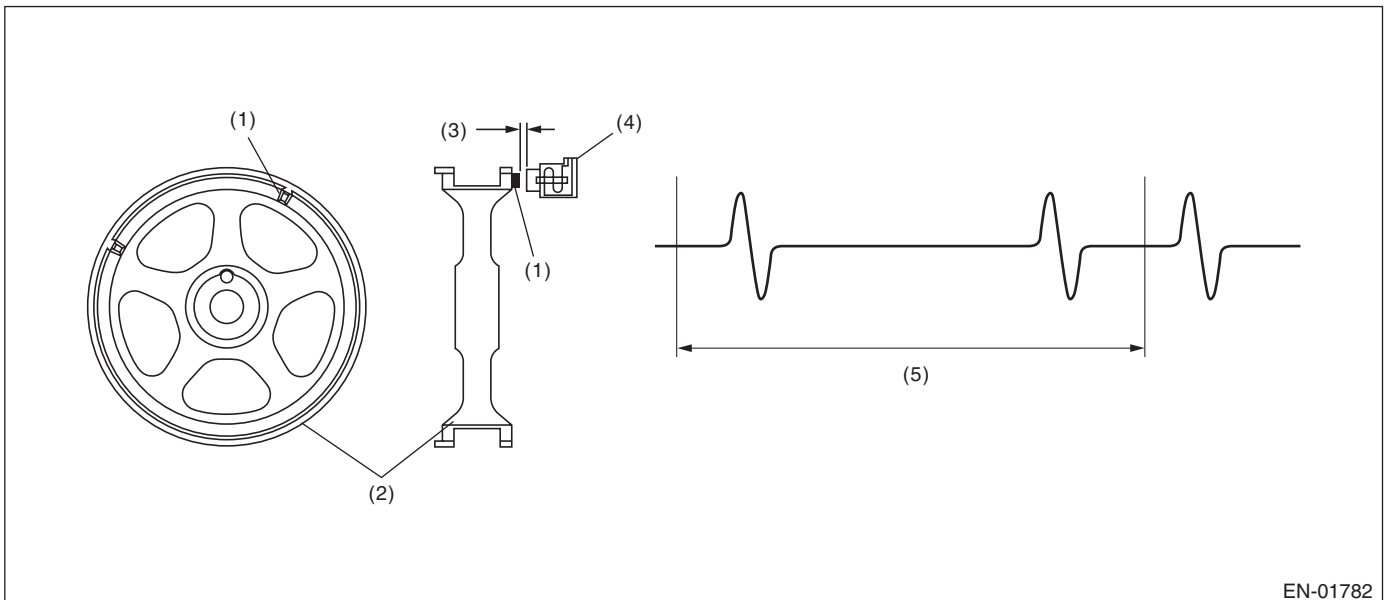

#### 2. COMPONENT DESCRIPTION

EN-05542

(A) Camshaft signal

(B) Crankshaft signal

EN-01782

- (1) Boss
- (2) Cam sprocket

- (3) Air gap
- (4) Camshaft position sensor

- (5) Camshaft one revolution (Engine two revolutions)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 3. ENABLE CONDITION

| Secondary Parameters        | Enable Conditions                   |
|-----------------------------|-------------------------------------|
| Cylinder number distinction | Completed                           |
| Battery voltage             | $\geq 8\text{ V}$                   |
| Engine speed                | 550 $\longleftrightarrow$ 1,000 rpm |
| Engine operation            | In idle                             |
| Misfire                     | Not detect                          |

## 4. GENERAL DRIVING CYCLE

Perform the diagnosis at idling continuously.

## 5. DIAGNOSTIC METHOD

Judge NG when the engine speed continues 4 revolutions for the malfunction criteria below. Judge OK and clear the NG when the malfunction criteria below are not completed.

### Judgment Value

| Malfunction Criteria                        | Threshold Value                             |
|---|---|
| Position of camshaft position sensor signal | Not between BTDC<br>10°CA and BTDC<br>80°CA |

**Time Needed for Diagnosis:**4 revs.

**Malfunction Indicator Light Illumination:**Illuminates when malfunction occurs in 2 continuous driving cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

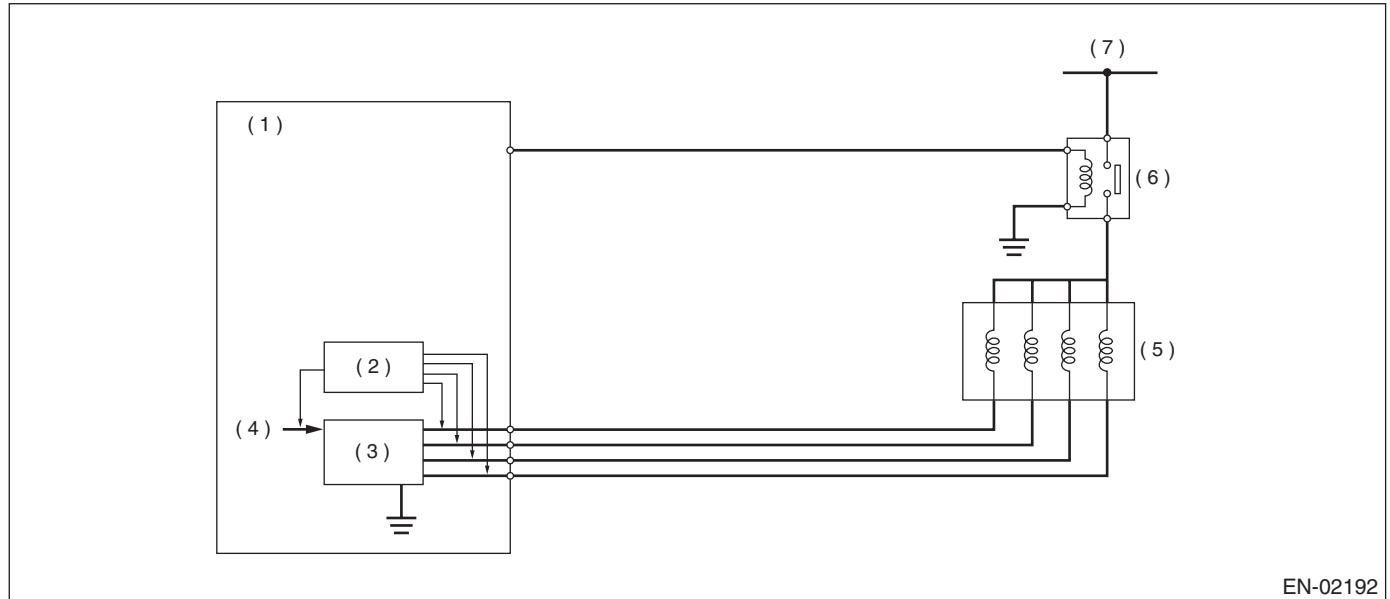

### BD:DTC P0400 EXHAUST GAS RECIRCULATION FLOW

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of EGR system.

Intake manifold pressure (negative pressure) is stable because the throttle valve is fully closed during the fuel shut-off in deceleration. In this case, the intake manifold pressure changes when EGR valve is opened or closed. Judge EGR system is OK or NG according to intake manifold pressure change amount.

#### 2. COMPONENT DESCRIPTION

- |                       |                |                     |

GENERAL DESCRIPTION

## 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                                   |
|---|---|
| After engine starting   | 40 secs. or more                                    |
| Engine coolant temperature  | $\geq 75^{\circ}\text{C}$ ( $167^{\circ}\text{F}$ ) |
| Engine speed  | 1,200 $\longleftrightarrow$ 2,950 rpm               |
| Intake manifold pressure (absolute pressure)  | $< 40.0$ kPa (300 mmHg, 11.81 inHg)                 |
| Estimated ambient temperature   | $\geq 5^{\circ}\text{C}$ ( $41^{\circ}\text{F}$ )   |
| Throttle position   | $< 0.25^{\circ}$                                    |
| Battery voltage   | $> 10.9$ V  |
| Atmospheric pressure  | $\geq 75.0$ kPa (563 mmHg, 22.17 inHg)              |
| Vehicle speed   | $\geq 53$ km/h (33 MPH)                             |
| Fuel shut-off function  | Operation   |
| Neutral switch  | OFF and 1 second after changing from "ON" to "OFF"  |
| Load (air conditioner, power steering, lights, rear defroster, heater fan and radiator fan) | 5 secs. or more no change                           |

## 4. GENERAL DRIVING CYCLE

Perform the diagnosis only once at the fuel shut-off in deceleration in vehicle speed more than 53 km/h (approx. 33 MPH). Pay attention to vehicle speed and engine speed. (The diagnosis is not completed if vehicle speed and engine speed are out of condition due to deceleration.)

## 5. DIAGNOSTIC METHOD

Measure the pressure in the following procedures when the enable conditions are completed, and then diagnosis by calculating the result.

- (1) PMOF1 is equal to the intake manifold pressure at enable condition completed, and EGR target step is set to 50 steps (almost fully opened).
- (2) PMON is equal to the intake manifold pressure in 1 second after EGR target step is set 50 steps (when enable conditions are completed), and EGR target step is set to 0 step.
- (3) PMOF2 is equal to the intake manifold pressure in 1 second after EGR target step is set to 0 step (in 2 seconds after enable conditions are completed).

### • Abnormality Judgment

Judge NG when the malfunction criteria below is completed. Judge OK when not completed.

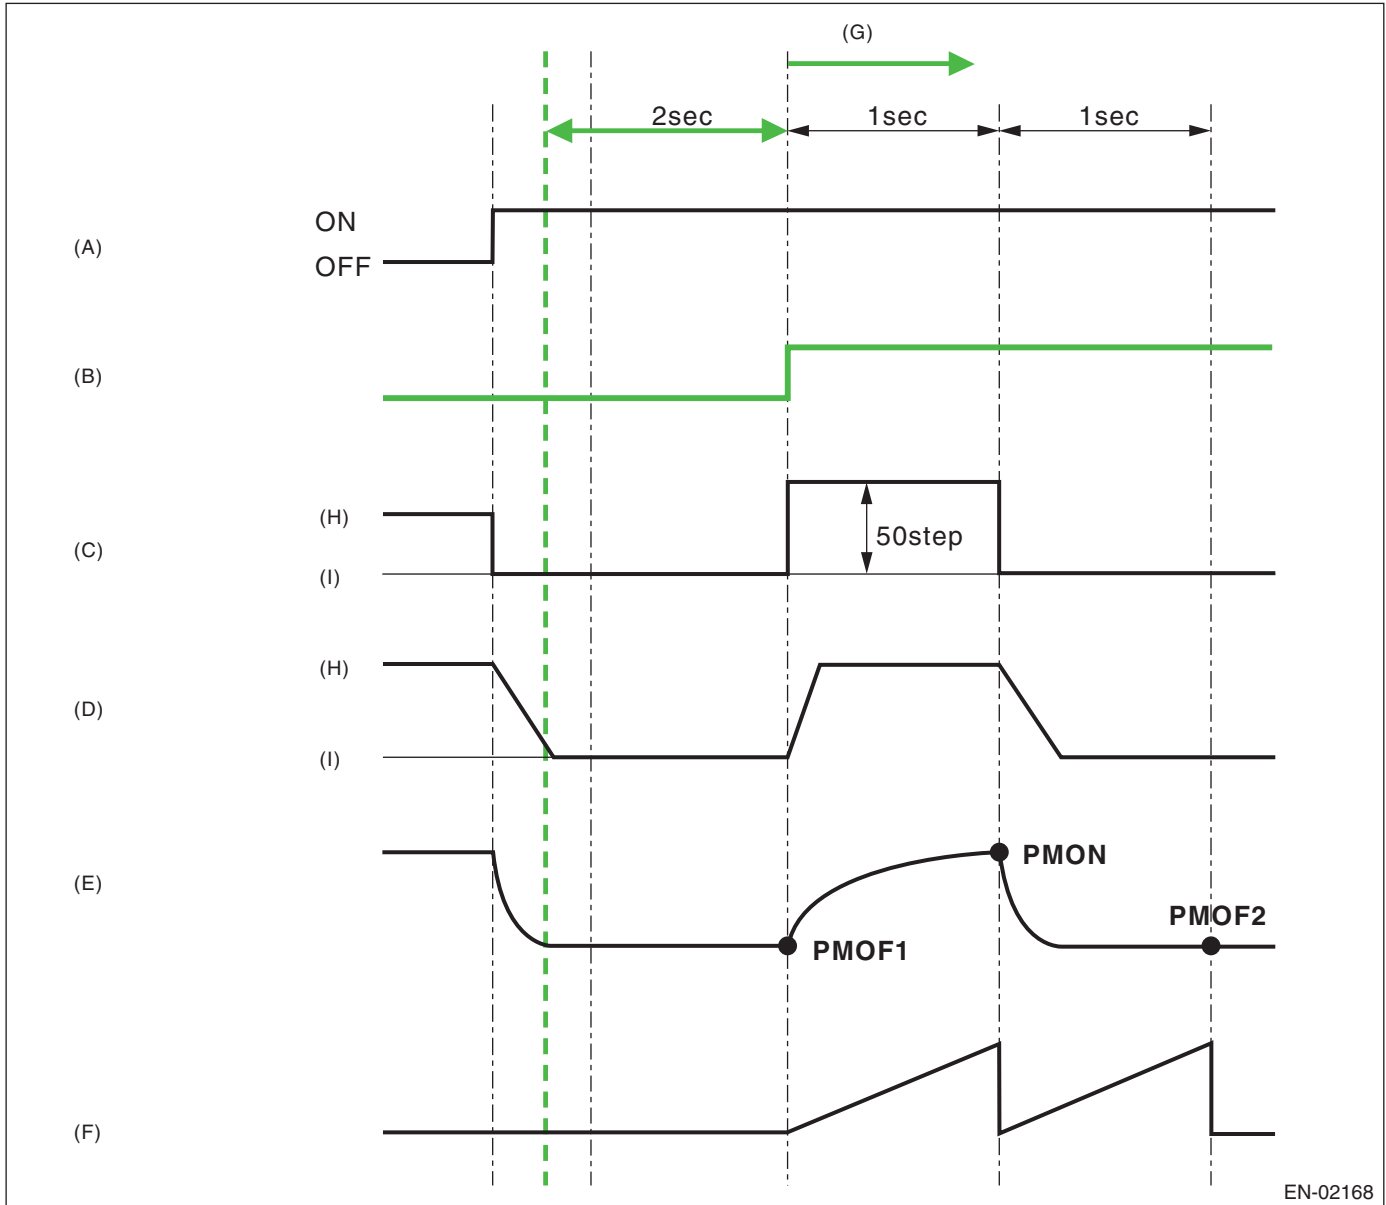

$\text{PMON} - (\text{PMOF1} + \text{PMOF2})/2 < 2.48$  kPa (18.63 mmHg, 0.733 inHg)

**Time Needed for Diagnosis:** Once

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

A/F main learning: Not allowed  
 Knock learning: Not allowed  
 EGR control: Not allowed to operate

## 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnosis value and trouble standard value. (For test mode \$06)

## BE: DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the deterioration of catalyst function.

Though the front oxygen sensor output would change slowly with a new catalyst, the sensor output with a deteriorated catalyst becomes high and the inversion time is shortened. For this reason, the catalyst diagnosis is carried out by monitoring the front oxygen sensor output and comparing it with the front A/F sensor output.

### 2. COMPONENT DESCRIPTION

- (1) Front oxygen (A/F) sensor
- (2) Front oxygen sensor
- (3) Catalyst

- (A) Normal
- (B) Deterioration

- (C) Front oxygen (A/F) sensor waveform
- (D) Front oxygen sensor waveform

| Difference between actual and target time lambda < 0.10     | 1,000 milliseconds or more       |
| Vehicle speed   | > 70 km/h (43.5 MPH)             |
| Amount of intake air  | 10 ↔ 40 g (0.35 ↔ 1.41 oz)/s     |
| Engine load change every 0.5 engine revs.                   | < 0.02 g/rev                     |
| Rear O <sub>2</sub> output change from below 660 mV to over | Experienced after fuel cut       |
| After engine starting                                       | ≥ 205 seconds                    |
| Purge execution cumulative time                             | 5 seconds or more                |

#### • Map 2

Add the following value every 512 milliseconds.

|                                      |       |             |             |             |              |            |              |              |              |              |            |              |
|--------------------------------------|-------|-------------|-------------|-------------|--------------|------------|--------------|--------------|--------------|--------------|------------|--------------|
| Amount of intake air (g (oz)/s)      | 0 (0) | 3.2 (0.113) | 6.4 (0.226) | 9.6 (0.339) | 12.8 (0.451) | 16 (0.564) | 19.2 (0.677) | 22.4 (0.790) | 25.6 (0.903) | 28.8 (1.016) | 32 (1.129) | 35.2 (1.242) |
| Integrated value for warm-up counter | -5    | -5          | 15          | 31          | 46           | 62         | 77           | 92           | 108          | 123          | 127        | 127          |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis once at the constant vehicle speed 70 km/h (43 MPH).

### 5. DIAGNOSTIC METHOD

After the malfunction criteria are completed, calculate cumulative value of front oxygen (A/F) sensor lambda deviation ( $\sum |(\text{sglmd}_n - \text{sglmd}_{n-1})|$ ) every 128 milliseconds and cumulative value of rear oxygen sensor output voltage deviation ( $\sum |(\text{ro2sad}_n - \text{ro2sad}_{n-1})|$ ).

Calculate the diagnosis value when the front oxygen (A/F) sensor output fluctuation value more than specified value.

Judge NG when the malfunction criteria below are completed, and judge OK when they are not completed.

#### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| $\sum  (\text{ro2sad}_n - \text{ro2sad}_{n-1})  / \sum  (\text{sglmd}_n - \text{sglmd}_{n-1}) $ | > 1.0           |

**Time Needed for Diagnosis:** 30 — 55 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

In this system diagnosis, checking for leakage and valve function is conducted by changing the fuel tank pressure, and monitoring the pressure change using the fuel tank pressure sensor. 0.04 inch diagnosis is performed in the order of mode Z, mode A, mode B, mode C and mode D, and 0.02 inch diagnosis is performed in the order of mode A, mode B, mode C, mode D and mode E.

### • 0.04-inch Diagnosis

EN-02872

| Mode  | Mode Description   | Diagnosis Period |
|---|--|------------------|
| Mode Z<br>(CPC abnormal open diagnosis)   | Diagnosis starts when there is a change in fuel tank pressure amount. Purge control solenoid valve open trouble diagnosis begins.  | 3 — 16 seconds   |
| Mode A<br>(Estimated evaporation amount)  | Calculate the tank pressure change amount (P1).  | 10 seconds       |
| Mode B<br>(Sealed negative pressure/large leakage judgment)                       | Introduce the intake manifold pressure to the fuel tank and reduce the tank pressure to the desired value.<br>If the tank pressure cannot be reduced, it is diagnosed as large leak. | 5 — 25 seconds   |
| Mode C<br>(Pressure increase check/advanced OK judgment)                          | Wait until the tank pressure becomes the desired value (detection starting pressure of P2). If the tank pressure does not become the value, make advanced OK judgment.               | 1 — 15 seconds   |
| Mode D<br>(Negative pressure variation measurement/evaporation leakage diagnosis) | Calculate the tank pressure variation (P2), and obtain the diagnostic value using P1 of Mode A. Perform the evaporation leakage diagnosis using the diagnostic value.                | 10 seconds       |

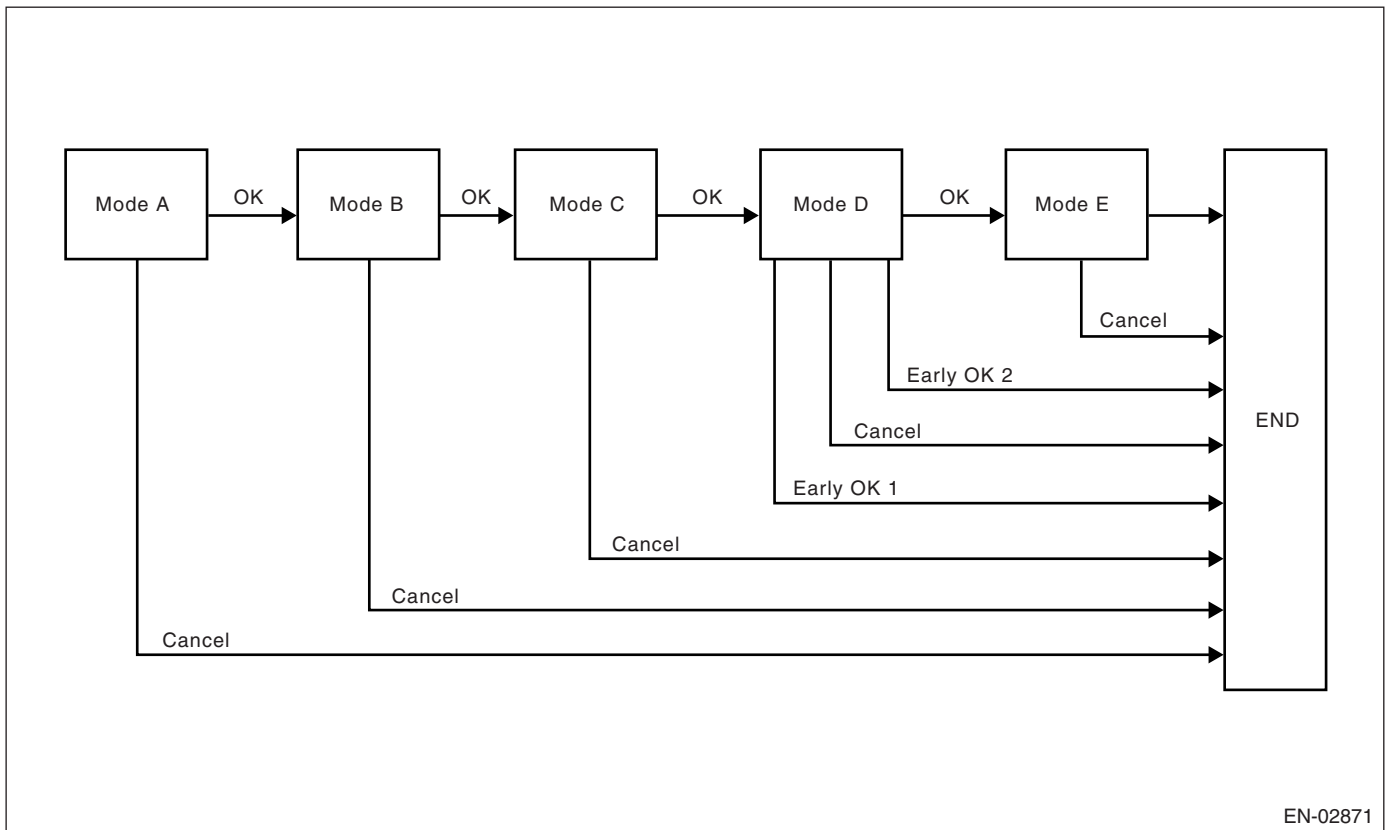

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Mode Table for Evaporative Emission Control System Diagnosis

| Mode   | Behavior of tank internal pressure under normal conditions                          | Diagnostic item  | DTC   |
|--------|---|--|-------|
| Mode Z | Nearly same as atmospheric pressure (equivalent pressure of 0 kPa (0 mmHg, 0 inHg)) | CPC is judged to be stuck open.                              | P0457 |
| Mode A | Pressure is in proportion to amount of evaporative emission.                        |  |       |
| Mode B | Negative pressure is formed due to intake manifold negative pressure                | Large leakage  | P0457 |
| Mode C | Target pressure is reached.   |  | None  |
| Mode D | Pressure change is small.   | EVAP system is judged to have large leak [1.0 mm (0.04 in)]. | P0442 |

## • 0.02-inch Diagnosis

EN-02871

| Mode   | Mode Description  | Diagnosis Period |
|--|---|------------------|
| Mode A<br>(0 point correction)                         | Wait until the tank pressure returns to 0 point (near 0 mm Hg) when tank pressure is high.  | 0 s — 12 s       |
| Mode B<br>(Negative pressure Introduction)             | Introduce the intake manifold pressure into fuel tank to reduce the tank pressure to the desired value.   | 0 s — 27 s       |
| Mode C<br>(Holding negative pressure)                  | Wait until the tank pressure becomes the desired value (detection starting pressure of P2).   | 0 s — 20 s       |
| Mode D<br>(Calculation of negative pressure variation) | Calculate the time that takes the tank pressure to return to detection completing pressure of P2. When the tank pressure does not return to the detection completing pressure of P2, make advanced OK judgment. | 0 s — 200 s      |
| Mode E<br>(Calculation of yielded evaporation amount)  | Calculate the yielded evaporation amount (P1).  | 0 s — 280 s      |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 2. COMPONENT DESCRIPTION

#### • Pressure Control Solenoid Valve

PCV controls the fuel tank pressure to be equal to the atmospheric air pressure.

Normally, the solenoid is set to OFF. And the valve opens and closes mechanically in accordance with the pressure difference between tank and atmospheric air, or tank and canister.

The valve is forcibly opened by setting the solenoid to ON at the time of diagnosis.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Valve Operation and Air Flow

In the figure below, divided by the diaphragm, the part above X is charged with atmospheric air pressure, and the part below X is charged with tank pressure. Also, the part above Y is charged with tank pressure, and the part below Y is charged with canister pressure.

If the atmospheric air pressure port is A, tank pressure port is B, and canister pressure port is C, the air flows according to pressure difference from each port as shown in the table below.

(a) Atmospheric pressure

(b) Fuel tank

(c) Canister

| Condition of pressure  | Flow                  |
|------------------------|-----------------------|
| $A < B$ (solenoid OFF) | $B \rightarrow C$     |
| $B < C$ (solenoid OFF) | $C \rightarrow B$     |
| Solenoid ON            | $B \leftrightarrow C$ |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 4. GENERAL DRIVING CYCLE

### • 0.04-inch Diagnosis

- Perform the diagnosis only once in more than 856 seconds after the engine start at the constant driving speed of 32 km/h (20 MPH) or more.
- Pay attention to the fuel temperature and fuel level.

### • 0.02-inch Diagnosis

- Perform diagnosis in more than 770 seconds after engine start at the constant speed of 68 km/h (42 MPH) or more, and judged OK or NG.
- If not judged OK or NG, repeat the diagnosis.
- Pay attention to the fuel level.

## 5. DIAGNOSTIC METHOD

### • Purge control solenoid valve open malfunction diagnosis

DTC

P0457 Evaporative Emission Control System Leak Detected (fuel cap loose/off)

#### Purpose of Mode Z

When performing the leakage diagnosis of EVAP system, CPC has to operate normally. Therefore, mode Z is used to diagnose the CPC open fixation.

If the CPC open fixation trouble is detected, the EVAP system leakage diagnosis is cancelled.

#### Diagnostic method

CPC functional diagnosis is performed by monitoring the tank pressure in Mode Z.

#### Normality Judgment

Judge OK when the following criteria are satisfied in 3 seconds after Mode Z started, and change to Mode A.

#### Judgment Value

| Malfunction Criteria  | Threshold Value                       | DTC   |
|---|---------------------------------------|-------|
| (Tank pressure when Mode Z started) —<br>(Tank pressure when Mode Z finished) | $\leq 0.4$ kPa (3 mmHg,<br>0.12 inHg) | P0457 |

### • Normal Operation

EN-02869

- |               |                                   |                  |
|---------------|-----------------------------------|------------------|
| (1) Mode Z    | (3) Fuel tank pressure            | (5) OK judgement |
| (2) 3 seconds | (4) 0.4 kPa (3.0 mmHg, 0.12 inHg) |                  |

- $evptez - evptezha \leq 0.4$  kPa (3.0 mmHg, 0.12 inHg)
  - $evptezini - evptezha \leq 0.4$  kPa (3.0 mmHg, 0.12 inHg)
- Judge normal when both calculations are completed.

## Diagnostic Trouble Code (DTC) Detecting Criteria

### GENERAL DESCRIPTION

---

#### Abnormality Judgment

If OK judgment cannot be made, extend Mode Z 16 seconds more, and judge NG when the criteria below are completed in 16 seconds.

#### Judgment Value

| Malfunction Criteria  | Threshold Value                      | DTC   |
|---|--------------------------------------|-------|
| (Tank pressure when Mode Z started) –<br>(Tank pressure when Mode Z finished) | > 0.6 kPa (4.5 mmHg,<br>0.18 inHg)   | P0457 |
| Tank pressure when Mode Z started   | ≤ 1.43 kPa (10.7<br>mmHg, 0.42 inHg) |       |
| Time for no fuel rolling of 2 0 or more                                       | ≥ 40 seconds                         |       |

**Time Needed for Diagnosis:** 16 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

Finish the Evap. diagnosis when making NG judgment for purge control solenoid valve open fixation.

Cancel the Evap. diagnosis when the OK/NG judgment for purge control solenoid valve open fixation cannot be made in Mode Z.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Purge Control Solenoid Valve Open Fixation

EN-02870

- |                     |                                     |  |
|---------------------|-------------------------------------|--|
| (1) Mode Z          | (4) Fuel tank pressure              | (7) No fuel rolling for more than 40 seconds |
| (2) Extended mode Z | (5) 0.87 kPa (6.5 mmHg, 0.26 inHg)  | (8) NG judgement                             |
| (3) 16 seconds      | (6) 1.43 kPa (10.7 mmHg, 0.42 inHg) |  |

- $evptezini, evptez \leq 1.43 \text{ kPa (10.7 mmHg, 0.42 inHg)}$
  - $evptez - evptezha \leq 0.87 \text{ kPa (6.5 mmHg, 0.26 inHg)}$
  - $evptezini - evptezha \leq 0.87 \text{ kPa (6.5 mmHg, 0.26 inHg)}$
  - No fuel rolling of above 2  $\varnothing$  (0.53 US gal, 0.44 Imp gal) for more than 40 seconds.
- Judge normal when all the calculations are completed.

### • Leak Diagnosis

DTC

P0442 Evaporative Emission Control System Leak Detected (small leak)

P0457 Evaporative Emission Control System Leak Detected (fuel cap loose/off)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### • Diagnostic method

- The diagnostic method consists of creating a sealed vacuum in the fuel tank and then determining the presence of leakage from the speed at which the tank internal pressure returns to atmospheric pressure.
- The diagnosis is divided into the following five phases.

#### Mode A: (Estimation of evaporation gas yield)

The amount of change of tank pressure (P1) in Mode A is calculated. After calculating P1, change to Mode B.

#### Mode B: (Seal negative pressure)

Introduce the negative pressure in the intake manifold to the tank.

Approx. 0 → -1.4 kPa (0 → -10.5 mmHg, 0 → -0.41 inHg)

When the pressure above (desired negative pressure) is reached, Mode C is entered.

In this case, if the tank pressure does not become the desired negative pressure, judge that there is a large leakage in the system, finish the Evap. diagnosis when judging large leak (10 or 25 seconds).

### • Abnormality Judgment

Judge NG (large leak) when the criteria below are completed in the specified time.

#### Judgment Value

| Malfunction Criteria  | Threshold Value                   | DTC   |
|---|-----------------------------------|-------|
| Time before reaching desired negative pressure                                    | ≥ 25 seconds                      | P0457 |
| Or time for Mode B  | ≥ 10 seconds                      |       |
| (Min. value of tank pressure during Mode B) – (Tank pressure when Mode B started) | < -0.53 kPa (-4 mmHg, -0.16 inHg) |       |

#### Mode C: (Check increasing pressure)

Stop the introduction of negative pressure. (Wait until the tank pressure returns to the start level of P2 calculation.)

Change to Mode D when the tank pressure returns to the start level of P2 calculation.

Judge immediate OK and change to Mode E when it does not return in spite of spending the specified time.

| Tank pressure when P2 calculation started | Time for immediate OK judgment |
|---|--------------------------------|
| -1.3 kPa (-9.75 mmHg, -0.38 inHg)         | 15 seconds                     |

#### Mode D: (Measurement of negative pressure changes)

Monitor the pressure variation in the tank in Mode Z. In this case, the tank pressure increases, that is, the pressure becomes as high as the atmospheric air pressure, because evaporator is generated. However, if any leakage exists, the pressure increases additionally in proportion to this leakage. The pressure variation of this tank is P2.

After calculating P2, perform following small leak diagnosis.

#### After Mode D

Assigning P1 and P2, which are tank variations measured in Mode A and Mode D, to the formula below, judge the small leakage of the system. If the measured judgment value exceeds the threshold value, it is judged to be malfunction.

### • Abnormality Judgment

Judge NG when the criteria below are completed. Judge OK when not completed and clear the NG.

#### Judgment Value

| Malfunction Criteria  | Threshold Value   | DTC   |
|---|---|-------|
| P2 – 1.5 × P1<br>P2: Change of tank pressure within 10 seconds on Mode D<br>P1: Change of tank pressure within 10 seconds on Mode A | > Value on map 7.<br>*Threshold value: Map (Fuel level vs Tank temperature) | P0442 |

\*1.5: Compensation value of the amount of evaporator occurrence. (Because evaporator increases more when becoming negative pressure.)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

| 40 L (10.6 US gal, 8.8 Imp gal)  | 0.65 kPa<br>(4.88 mmHg,<br>0.192 inHg) | 0.65 kPa<br>(4.90 mmHg,<br>0.193 inHg) | 0.66 kPa<br>(4.98 mmHg,<br>0.196 inHg) | 0.71 kPa<br>(5.32 mmHg,<br>0.209 inHg) | 0.76 kPa<br>(5.73 mmHg,<br>0.226 inHg) |
| 50 L (13.2 US gal, 11.0 Imp gal) | 0.79 kPa<br>(5.90 mmHg,<br>0.232 inHg) | 0.79 kPa<br>(5.90 mmHg,<br>0.232 inHg) | 0.79 kPa<br>(5.90 mmHg,<br>0.232 inHg) | 0.85 kPa<br>(6.38 mmHg,<br>0.251 inHg) | 0.88 kPa<br>(6.60 mmHg,<br>0.260 inHg) |

**Time Needed for Diagnosis:** 30 — 100 Seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous drive cycles.

• **Leak diagnosis**

DTC

P0456 Evaporative Emission Control System Leak Detected (very small leak)

• **Diagnostic method**

- The diagnostic method consists of creating a sealed vacuum in the fuel tank and then determining the presence of leakage from the speed at which the tank internal pressure returns to atmospheric pressure.
- The diagnosis is divided into the following five phases.

**Mode A: (0 point correction)**

Wait until the tank pressure returns to 0 point (near 0 mmHg) when tank pressure is high. Then change to Mode B. If the tank pressure does not return to 0 point in the specified time, cancel the diagnosis.

**Mode B: (Negative pressure introduction)**

Introduce the negative pressure in the intake manifold to the tank.

Approx. 0 → -2.0 kPa (0 → -15 mmHg, 0 → -0.59 inHg)

When the pressure above (desired negative pressure) is reached, Mode C is entered.

In this case, if the tank pressure does not become the desired negative pressure, cancel the diagnosis.

**Mode C: (Holding negative pressure)**

Stop the introduction of negative pressure. (Wait until the tank pressure returns to the start level of P2 calculation.)

Change to Mode D when the tank pressure returns to the start level of P2 calculation, or when spending the specified time.

**Mode D: (Calculation of negative pressure variation)**

By monitoring the tank pressure at Mode D, calculate the pressure variation (P2) and measure the time (evp-dset) it takes the tank pressure to return to the detection completing pressure of P2. Then change to Mode E. When the tank pressure does not return to the detection completing pressure of P2 in the specified time, make advanced OK judgment or cancel the diagnosis according to P2 value.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### • Normality judgment

Judge OK when the following criteria are satisfied.

#### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| Advanced OK judgment 1<br>Mode D holding time<br>Tank pressure | $\geq 30$ seconds<br>$\leq -1.8$ kPa (-13.4 mmHg, -0.53 inHg)                  |
| Advanced OK judgment 2<br>Mode D holding time<br>P2            | $\geq 200$ seconds<br>$\leq 0.9 - 1.3$ kPa<br>(7 - 9.6 mmHg, 0.28 - 0.38 inHg) |

### Mode E (Calculation of yielded evaporation amount)

Calculate the pressure variation (P1) at the time (evpdset), and make NG/OK judgment according to P1 value (ambiguous determination acceptable).

### • Abnormality Judgment

Judge NG when the following criteria are satisfied.

#### Judgment Value

| Malfunction Criteria | Threshold Value   |
|----------------------|---|
| P1                   | < Value from Map 7<br>* Threshold value:<br>Map (Fuel level vs evpdset) |

| (5) End plate   | (12) Housing       | (19) O-ring      |
| (6) Body        | (13) Filter        |                  |
| (7) Yoke        | (14) Retainer      |                  |

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds.

### Judgment Value

| Malfunction Criteria                             | Threshold Value  |
|--|------------------|
| Ignition switch                                  | ON               |
| Battery voltage                                  | $\geq 10.9$ V    |
| After engine starting                            | 1 second or more |
| Terminal output voltage when ECM sends ON signal | High             |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria                             | Threshold Value  |
|--|------------------|
| Ignition switch                                  | ON               |
| Battery voltage                                  | $\geq 10.9$ V    |
| After engine starting                            | 1 second or more |
| Terminal output voltage when ECM sends ON signal | Low              |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

PCV control: Open the PCV solenoid.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### BI: DTC P0451 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR RANGE/PERFORMANCE

#### 1. OUTLINE OF DIAGNOSIS

Detect the tank pressure sensor output property abnormality.

Judge NG when there is no pressure variation, which should exist in the tank, considering the engine status.

#### 2. COMPONENT DESCRIPTION

EN-03875

(1) Connector

(2) Terminal

(A) Output voltage

(B) Input voltage

(C) To fuel tank

#### 3. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions                               |
|---------------------------|---|
| After starting the engine | 60 second or more                               |
| Fuel level                | $\geq 9.0 \ell$ (2.4 US gal, 2.0 Imp gal)       |
| Fuel temperature          | $< 35^{\circ}\text{C}$ ( $95^{\circ}\text{F}$ ) |
| Battery voltage           | $\geq 10.9 \text{ V}$                           |
| Atmospheric pressure      | $> 75.1 \text{ kPa}$ (563 mmHg, 22.2 inHg)      |

#### 4. GENERAL DRIVING CYCLE

- Perform the diagnosis continuously in 60 seconds or more after starting the engine.
- Be sure to check the fuel level and fuel temperature.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value                     |
|--|-------------------------------------|
| Number of times when the difference between the Max. fuel level and the Min. fuel level every 60 seconds is 2 ℓ (0.53 US gal, 0.44Imp gal) or more (with enable condition completed) | ≥ 16 times                          |
| Max. – Min. tank pressure (with enable condition completed)  | < 0.05 kPa (0.375 mmHg, 0.015 inHg) |
| Max. – Min. fuel temperature (with enable condition completed)   | ≥ 7°C (12.6°F)                      |

If the fuel level (Max. – Min.) in every 60 seconds is less than 2 ℓ, extend 60 seconds more and make judgment with the Max. and Min. fuel level in 120 seconds.

If the difference did not appear though the time extended, extend the time (180, 240, 300 seconds) and continue the judgment.

Diagnosis counter will count up when the difference of fuel level (Max. – Min.) is more than 2 ℓ.

**Time Needed for Diagnosis:** 1 minute × 16 times or more

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in two continuous drive cycles.

### • Normality Judgment

Judge OK when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria      | Threshold Value                     |
|---------------------------|-------------------------------------|
| Max. – Min. tank pressure | ≥ 0.05 kPa (0.375 mmHg, 0.015 inHg) |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

Purge control solenoid valve control: Purge fixation mode is prohibited.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### BJ:DTC P0452 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the fuel tank pressure sensor.  
Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

EN-03875

(1) Connector

(A) Output voltage

(C) To fuel tank

(2) Terminal

(B) Input voltage

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | $\geq 10.9$ V     |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 15 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value                                 |
|----------------------|---|
| Fuel tank pressure   | $\leq -7.48$ kPa ( $-56.15$ mmHg, $-2.21$ inHg) |

**Time Needed for Diagnosis:** 15 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Normality Judgment

Judge OK when the malfunction criteria below is completed.

### Judgment Value

| Malfunction Criteria | Threshold Value                       |
|----------------------|---------------------------------------|
| Fuel tank pressure   | > -7.48 kPa (-56.15 mmHg, -2.21 inHg) |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

Purge control solenoid valve control: Purge fixation mode is prohibited.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### BK:DTC P0453 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR HIGH INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the breaking/shortage of the fuel tank pressure sensor.  
Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

EN-03875

(1) Connector

(A) Output voltage

(C) To fuel tank

(2) Terminal

(B) Input voltage

#### 3. ENABLE CONDITION

| Secondary Parameters                   | Enable Conditions        |
|--|--------------------------|
| Vehicle speed                          | $\geq 2$ km/h (1.24 MPH) |
| All conditions of EVAP canister purge  | Complete                 |
| Evaporation gas density learning value | $\leq 0.08$              |
| Main feedback compensation coefficient | $\geq 0.9$               |
| Battery voltage                        | $\geq 10.9$ V            |

#### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when purging.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time until completing the malfunction criteria below becomes more than 15 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value                                 |
|----------------------|---|
| Fuel tank pressure   | $> 7.98$ kPa (59.86 mmHg, 2.36 inHg)            |
| Fuel temperature     | $< 35^{\circ}\text{C}$ (95 $^{\circ}\text{F}$ ) |
| Atmospheric pressure | $\geq 75.1$ kPa (563 mmHg, 22.2 inHg)           |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

**Time Needed for Diagnosis:** 15 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

• **Normality Judgment**

Judge OK when the malfunction criteria below is completed.

**Judgment Value**

| Malfunction Criteria | Threshold Value                    |
|----------------------|------------------------------------|
| Fuel tank pressure   | ≤ 7.98 kPa (59.86 mmHg, 2.36 inHg) |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

Purge control solenoid valve control: Purge fixation mode is prohibited.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## **BL:DTC P0456 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (VERY SMALL LEAK)**

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BS:DTC P0464 FUEL LEVEL SENSOR CIRCUIT INTERMITTENT

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of unstable output from fuel level sensor caused by noise.

Judge NG when the max. value and cumulative value of output voltage variation of fuel level sensor is larger than the threshold value.

### 2. ENABLE CONDITION

| Secondary Parameters           | Enable Conditions                                       |
|--------------------------------|---|
| Engine speed                   | ≥ 500 rpm   |
| After engine starting          | 1 second or more  |
| Ignition switch                | ON  |
| Battery voltage                | > 10.9 V  |
| Idle switch                    | ON  |
| Fuel level                     | 9.0 ↔ 51 ℓ (2.38<br>↔ 13.5 US gal, 2<br>↔ 11.2 Imp gal) |
| Vehicle speed = 0 km/h (0 MPH) | 10 seconds or more                                      |

### 3. GENERAL DRIVING CYCLE

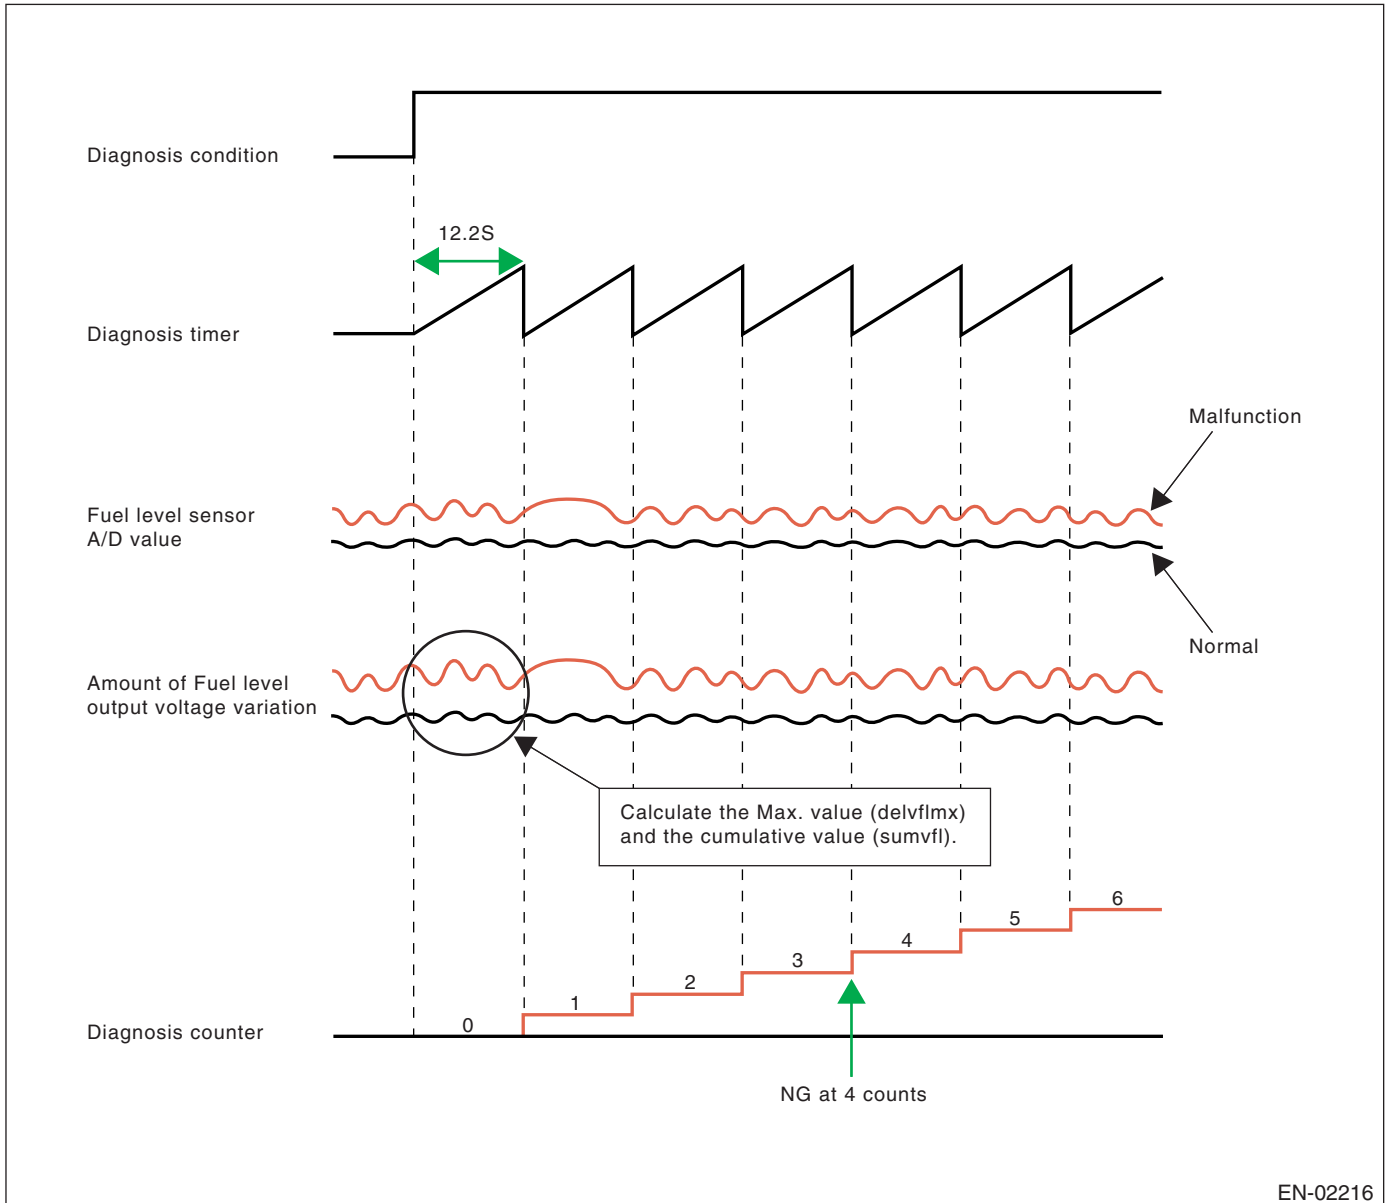

- Perform the diagnosis continuously in idling condition.
- Pay attention to the fuel level.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 4. DIAGNOSTIC METHOD

Calculate the Max. value (delflmax) and cumulative value (sumfl) of output voltage variation of fuel level sensor during 12.2 seconds. Judge it normal when both max. and cumulative values are not over the threshold value. Otherwise, when either of them is over the threshold value, count the diagnosis counter up. And judge NG if the counter indicated 4 counts.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Integrated times of the condition reaching follows,<br>DELFLMAX $\geq 0.2 \leftrightarrow 0.26$ V or SUMFL $\geq 16$ V<br>where,<br>DELFLMAX is Max. deviation of sensor output during 12.2 seconds.<br>SUMFL is integrated value of sensor output deviation during 12.2 seconds. | $\geq 4$ times  |

Do not count the diagnosis counter up when the following conditions are completed during 12.2 seconds.

|  |  |
|--|--|
| Max – Min of tank pressure during 12.2 seconds   | $\geq 0.05$ kPa (0.375 mmHg, 0.015 inHg) |
| Max – Min of battery voltage during 12.2 seconds | $\geq 1.65$ V                            |

**Time Needed for Diagnosis:** 12.2 seconds  $\times$  4 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria  | Threshold Value                            |
|---|--|
| DELFLMAX<br>SUMFL<br>Where, DELFLMAX is Max. deviation of sensor output during 12.2 seconds.<br>SUMFL is integrated value of sensor output deviation during 12.2 seconds. | $< 0.2 \leftrightarrow 0.26$ V<br>$< 16$ V |

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 7. FAIL SAFE

None

## 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### BT:DTC P0483 COOLING FAN RATIONALITY CHECK

#### 1. OUTLINE OF DIAGNOSIS

Detect the function abnormality of the radiator fan.

Judge NG when the engine coolant temperature slowly decreases even when the radiator fan is rotating.

#### 2. ENABLE CONDITION

Diagnostic enable condition is completed if the radiator fan changes from OFF to ON when all of the conditions below are completed. When one of the conditions below is not completed, the diagnostic enable condition is not completed.

| Secondary Parameters | Enable Conditions  |
|----------------------|--------------------|
| Engine Speed         | 560 — 900 rpm      |
| Idle switch          | ON                 |
| Vehicle speed        | < 2 km/h (1.2 MPH) |
| Battery voltage      | ≥ 10.9 V           |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the radiator fan changes from OFF to ON when idling.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 5 minutes.

##### Judgment Value

| Malfunction Criteria        | Threshold Value |
|-----------------------------|-----------------|
| Engine coolant temperature  | ≥ 100°C (212°F) |
| Radiator fan signal changes | OFF to ON       |
| Engine coolant temperature  | Not reducing    |

**Time Needed for Diagnosis:** 5 minutes

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

##### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria        | Threshold Value |
|-----------------------------|-----------------|
| Radiator fan signal changes | OFF to ON       |
| Engine coolant temperature  | Reducing        |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

None

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BU:DTC P0502 VEHICLE SPEED SENSOR CIRCUIT LOW INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of vehicle speed sensor.

Judge NG when low vehicle speed (0 km/h (0 MPH)) remains whereas it seemed to be in a usual driving speed.

### 2. ENABLE CONDITION (USED WITH ABNORMAL JUDGEMENT)

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Engine speed         | < 4,000 rpm       |
| Fuel cut in decel.   | Operating         |
| Battery voltage      | ≥ 10.9 V          |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during fuel cut in deceleration.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 4 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Vehicle speed        | < 1             |

**Time Needed for Diagnosis:** 4 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when all malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria               | Threshold Value |
|------------------------------------|-----------------|
| Vehicle speed                      | ≥ 1             |
| Starter switch                     | OFF             |
| Time after starter switch ON → OFF | ≥ 3 seconds     |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

- Vehicle speed sensor signal process: Vehicle speed = 10 km/h (6 MPH)
- ISC control: Set the open loop compensation to specified value (1 g (0.04 oz)/s). Not allowed ISC feedback volume calculation.
- Radiator fan control: ON both main/sub.
- Tumble generator valve control: Open the tumble generator valve.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### BV:DTC P0503 VEHICLE SPEED SENSOR INTERMITTENT/ERRATIC/HIGH

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of vehicle speed sensor.

Judge NG when high vehicle speed (240 km/h (149.1 MPH) or more) remains whereas it seemed to be in a usual driving speed.

#### 2. ENABLE CONDITION (USED WITH ABNORMAL JUDGEMENT)

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Engine speed         | < 4,000 rpm       |
| Fuel cut in decel.   | Operating         |
| Battery voltage      | ≥ 10.9 V          |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during fuel cut in deceleration.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criteria below becomes more than 4 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Vehicle speed        | ≥ 240           |

**Time Needed for Diagnosis:** 4 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when all malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria               | Threshold Value |
|------------------------------------|-----------------|
| Vehicle speed                      | < 240           |
| Starter switch                     | OFF             |
| Time after starter switch ON → OFF | ≥ 3 seconds     |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

- Vehicle speed sensor signal process: Vehicle speed = 10 km/h (6 MPH)
- ISC control: Set the open loop compensation to specified value (1 g (0.04 oz)/s). Not allowed ISC feedback volume calculation.
- Radiator fan control: ON both main/sub.
- Tumble generator valve control: Open the tumble generator valve.

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BW:DTC P0506 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling.  
Judge NG when actual engine speed is not close to target engine speed during idling.

### 2. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                 |
|---|-----------------------------------|
| Engine coolant temperature  | ≥ 75°C (167°F)                    |
| Battery voltage   | ≥ 10.9 V                          |
| Atmospheric pressure  | > 75.1 kPa (563 mmHg, 22.2 inHg)  |
| Fuel level  | ≥ 9 ℓ (2.38 US gal, 1.98 Imp gal) |
| After engine starting   | ≥ 10.5 seconds                    |
| Feedback in ISC   | In operation                      |
| Measured lambda   | 0.81 ←→ 1.1                       |
| After air condition switching ON-OFF, OFF-ON                          | > 5.1 seconds                     |
| After in-manifold pressure change more than 4 kPa (30 mmHg, 1.2 inHg) | > 5.1 seconds                     |
| After neutral switch ON-OFF event                                     | > 5.1 seconds                     |
| Vehicle speed   | 0 km/h (0 MPH)                    |

### 3. GENERAL DRIVING CYCLE

Always perform diagnosis during idling after engine warmed.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds × 3 times).

#### Judgment Value

| Malfunction Criteria                                    | Threshold Value |
|---|-----------------|
| Actual – target engine speed                            | < –100 rpm      |
| Feedback correction for idle air control solenoid valve | Max.            |

**Time Needed for Diagnosis:** 10 seconds × 3 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds).

#### Judgment Value

| Malfunction Criteria         | Threshold Value |
|------------------------------|-----------------|
| Actual – target engine speed | ≥ –100 rpm      |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## **BX:DTC P0507 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED**

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling.  
Judge NG when actual engine speed is not close to target engine speed during idling.

### 2. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                 |
|---|-----------------------------------|
| Engine coolant temperature  | ≥ 75°C (167°F)                    |
| Battery voltage   | ≥ 10.9 V                          |
| Atmospheric pressure  | > 75.1 kPa (563 mmHg, 22.2 inHg)  |
| Fuel level  | ≥ 9 ℓ (2.38 US gal, 1.98 Imp gal) |
| After engine starting   | ≥ 10.5 seconds                    |
| Feedback in ISC   | In operation                      |
| Lambda  | 0.81 ↔ 1.1                        |
| After air condition switching ON-OFF, OFF-ON                          | > 5.1 seconds                     |
| After in-manifold pressure change more than 4 kPa (30 mmHg, 1.2 inHg) | > 5.1 seconds                     |
| After neutral switch ON-OFF event                                     | > 5.1 seconds                     |
| Vehicle speed   | 0 km/h (0 MPH)                    |

### 3. GENERAL DRIVING CYCLE

Always perform diagnosis during idling after engine warmed.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds × 3 times).

#### Judgment Value

| Malfunction Criteria                                    | Threshold Value |
|---|-----------------|
| Actual – target eng. speed                              | ≥ 200 rpm       |
| Feedback correction for idle air control solenoid valve | Min.            |

**Time Needed for Diagnosis:** 10 seconds × 3 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds).

#### Judgment Value

| Malfunction Criteria       | Threshold Value |
|----------------------------|-----------------|
| Actual – target eng. speed | < 200 rpm       |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 7. FAIL SAFE

None

## 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## BY:DTC P0512 STARTER REQUEST CIRCUIT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of starter SW.

Judge ON NG when the starter SW signal remains on.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 minutes.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Engine speed         | > 500 rpm       |
| Starter OFF signal   | Not detect      |
| Battery voltage      | > 8 V           |

**Time Needed for Diagnosis:** 180 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge ON OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Starter OFF signal   | Detect          |
| Battery voltage      | > 8 V           |

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

---

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## **BZ:DTC P0513 INCORRECT IMMOBILIZER KEY**

### 1. OUTLINE OF DIAGNOSIS

| DTC   | ITEM   | OUTLINE OF DIAGNOSIS   |
|-------|--|--|
| P0513 | Incorrect Immobilizer Key                    | Incorrect immobilizer key (Use of key not registered in body integrated module)                          |
| P1570 | Antenna                                      | Improper antenna   |
| P1571 | Reference Code Incompatibility               | Unmatched reference code between body integrated module and ECM  |
| P1572 | IMM Circuit Failure (Except Antenna Circuit) | Communication malfunction between body integrated module and ECM   |
| P1574 | Key Communication Failure                    | Malfunction of body integrated module that check the key (transponder) ID or Malfunction of transponder. |
| P1576 | EGI Control Module EEPROM                    | Abnormality of ECM   |
| P1577 | IMM Control Module EEPROM                    | Malfunction of body integrated module.   |

### 2. ENABLE CONDITION

When the engine started.

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis only when engine started.

### 4. DIAGNOSTIC METHOD

Judge NG when conditions of the above outline of diagnosis are completed.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CA:DTC P0519 IDLE CONTROL SYSTEM MALFUNCTION (FAIL-SAFE)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction that engine speed increases more than that in normal condition during idling.

### 2. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions     |
|-----------------------|-----------------------|
| Battery voltage       | $\geq 10.9$ V         |
| Feedback in ISC       | In operation          |
| Vehicle speed         | $< 4$ km/h (2.49 MPH) |
| After engine starting | 1 seconds or more     |

### 3. GENERAL DRIVING CYCLE

Always perform diagnosis at less than 4 km/h (2.49 MPH) of vehicle speed.

### 4. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

#### Judgment Value

| Malfunction Criteria                             | Threshold Value |
|--|-----------------|
| Engine speed – target eng. speed                 | $> 2,000$ rpm   |
| Feedback value for ISC                           | $\leq 0$        |
| Engine speed change every 180 degree engine rev. | $\geq -5$ rpm   |

**Time Needed for Diagnosis:** 2 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criteria below becomes more than 5 seconds.

#### Judgment Value

| Malfunction Criteria             | Threshold Value |
|----------------------------------|-----------------|
| Engine speed – target eng. speed | $< 200$ rpm     |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 7. FAIL SAFE

Fuel shut-off: Shut-off fuel for only #1 and #2 cylinder, or for all cylinder in accordance with vehicle speed, engine speed, throttle position

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### CB:DTC P0600 SERIAL COMMUNICATION LINK

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of CAN communication.

It judges as NG when CAN communication becomes impossible, the CAN communication with AT becomes impossible, and the data from AT is not normal.

#### 2. COMPONENT DESCRIPTION

CAN connects between ECM and TCM with high speed.

*(Common Specification)*

*CAN PROTOCOL 2.0B (active)*

*Frame format: 11 bit ID Frame (Standard frame)*

*(High Speed CAN)*

*ISO 11898 compliance*

*Communication Speed: 500 kbps*

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery Voltages     | ≥ 10.9 V          |
| Starter switch       | OFF               |
| Engine               | Run               |

#### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

#### 5. DIAGNOSTIC METHOD

##### • JUDGMENT OF MALFUNCTION

Judge NG when any of the malfunction criteria below are completed. Judge OK and clear the NG when the continuous time of not completing the malfunction criteria below becomes more than 1 second.

##### Judgement Value

| Malfunction Criteria           | Threshold Value    |
|--------------------------------|--------------------|
| Buss off flag or warning flag  | Set                |
| ID cannot be received from TCM | = 500 milliseconds |

**Time needed for Diagnosis:** 1 time

**Malfunction Indicator Light Illumination:** Illuminates simultaneously when malfunction is detected.

#### 6. DTC CLEAR CONDITION

When the OK driving cycle was completed 40 consecutive times.

When "Clear Memory" was performed.

#### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 consecutive times.
- When "Clear Memory" was performed.

#### 8. FAIL-SAFE

None

#### 9. ECM OPERATION AT DTC SETTING

Store the freeze frame data. (For test mode \$02)

## CC:DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

### 1. OUTLINE OF DIAGNOSIS

Detect the function abnormality of the micro-computer (RAM).

Judge NG when either the main CPU normal RAM or sub CPU normal RAM is abnormal. Judge OK when both of them are normal.

At initial routine, write the data to all area of RAM. Judge OK when same data can be read out, and judge NG when same data cannot be read out.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

Perform the diagnosis in the initial routine.

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis immediately after IG key SW is turned ON.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| Main CPU normal RAM abnormality<br>Write 5AA5A55A, and read out. (All area of RAM)<br>Or write A55A5AA5, and read out. (All area of RAM) | Cannot be read out 5AA5A55A.<br>Cannot be read out A55A5AA5. |
| Sub CPU normal RAM abnormality.<br>Write 5AA5, and read out. (All area of RAM)<br>Or write A55A, and read out. (All area of RAM)         | Cannot be read out 5AA5.<br>Cannot be read out A55A.         |

**Time Needed for Diagnosis:** To be determined.

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| Main CPU normal RAM abnormality<br>Write 5AA5A55A, and read out. (All area of RAM)<br>Or write A55A5AA5, and read out. (All area of RAM) | Can be read out 5AA5A55A.<br>Can be read out A55A5AA5. |
| Sub CPU normal RAM abnormality.<br>Write 5AA5, and read out. (All area of RAM)<br>Or write A55A, and read out. (All area of RAM)         | Can be read out 5AA5.<br>Can be read out A55A.         |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CD:DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR

### 1. OUTLINE OF DIAGNOSIS

Judge NG when SUM value of ROM is out of the standard value.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| SUM value of ROM     | Standard value  |

**Time Needed for Diagnosis:** To be determined

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only at engine stop)

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

Stop the current to electronic throttle control motor. (Fix the throttle opening angle to 6°.)

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CE:DTC P0607 CONTROL MODULE PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Judge NG when either the following is completed.

- When the read value of throttle position sensor 1 signal is mismatched between main CPU and sub CPU.
- When the read value of accelerator pedal position sensor 1 signal is mismatched between main CPU and sub CPU.
- When the sub CPU operates abnormally.
- When the communication between main CPU and sub CPU is abnormal.
- When the input amplifier circuit of throttle position sensor 1 is abnormal.
- When the cruise control cannot be canceled correctly.
- When the signal of brake SW1 and 2 is mismatched.
- When the directed angle from main CPU is abnormal.

### 2. COMPONENT DESCRIPTION

EN-01862

- |   |   |                                  |
|---|---|----------------------------------|
| (1) Throttle position sensor            | (6) Accelerator pedal position sensor 2 | (11) Amplifier circuit           |
| (2) Throttle position sensor 1          | (7) Battery                             | (12) Engine control module (ECM) |
| (3) Throttle position sensor 2          | (8) Stop light                          | (13) Sub CPU                     |
| (4) Accelerator pedal position sensor   | (9) Brake switch                        | (14) Main CPU                    |
| (5) Accelerator pedal position sensor 1 | (10) I/F circuit                        |                                  |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 3. ENABLE CONDITION

| Secondary Parameters               | Enable Conditions |
|------------------------------------|-------------------|
| (1) Ignition switch                | ON                |
| (2) Ignition switch                | ON                |
| (3) None                           | —                 |
| (4) None                           | —                 |
| (5) Throttle opening angle         |                   |
| (6) Brake SW (with cruise control) | ON                |
| (7) None                           | —                 |
| (8) Cruise control                 | OFF               |

### 4. GENERAL DRIVING CYCLE

- (1) — (4): Always perform the diagnosis continuously.  
(5): Always perform the diagnosis continuously on idling.  
(6): Perform the diagnosis when the brake pedal is depressed.  
(7): Always perform the diagnosis continuously.  
(8): Always perform the diagnosis continuously when the cruise control pedal is not operating.

### 5. DIAGNOSTIC METHOD

Judge OK and clear NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value                 |
|--|---------------------------------|
| (1) Difference of CPU on reading value of throttle position sensor signal  | 0.0858 V                        |
| (2) Difference of CPU on reading value of accelerator pedal position sensor signal                                   | 0.038 V                         |
| (3) WD pulse from sub CPU  | WD pulse occur                  |
| (4) Communication between CPU  | Possible to communicate         |
| (5) Throttle position sensor 1 opening angle – (Throttle position sensor 1 opening angle after amplifier passed) 1/4 | < 3°                            |
| (6) Cruise control cancel signal at brake ON   | Cruise control cancel signal ON |
| (7) Brake switch 1, 2 signal   | SW 1 and 2 are matched          |

#### Time Needed for Diagnosis:

- (1) 250 milliseconds  
(2) 250 milliseconds  
(3) 200 milliseconds  
(4) 200 milliseconds  
(5) 24 milliseconds  
(6) 250 milliseconds  
(7) 200 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 8. FAIL SAFE

Stop the current to electronic throttle control motor. (Fix the throttle opening angle to 6°.)

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CF:DTC P0638 THROTTLE ACTUATOR CONTROL RANGE/PERFORMANCE (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Judge NG when the target opening angle and actual opening angle is mismatched or the current to motor is more than specified duty for specified time continuously.

### 2. COMPONENT DESCRIPTION

EN-01863

- (1) Motor  
(2) Throttle position sensor  
(3) Engine control module (ECM)  
(4) Drive circuit

### 3. ENABLE CONDITION

| Secondary Parameters                            | Enable Conditions |
|---|-------------------|
| Ignition switch                                 | ON                |
| Normal operation of electronic throttle control | ON                |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously when the electronic throttle control is operating.

### 5. DIAGNOSTIC METHOD

Judge OK and clear NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Difference between target opening angle and actual opening angle | Less than 3.5°  |
| Output duty to drive circuit                                     | Less than 95%   |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### Time Needed for Diagnosis:

Target opening angle and actual opening angle: 250 milliseconds (For NG) 2,000 milliseconds (For OK)

Output duty to drive circuit: 2,000 milliseconds

### Details of Judgment

EN-03129

- (1) Difference between target opening angle and actual opening angle (°)      (2) Target throttle opening angle (°)  
 (3) NG area

### Details of Judgment (Always 1,000 milliseconds when the actual opening angle $\leq$ target opening angle)

EN-01865

- (1) Judgment time (milliseconds)      (2) Throttle position sensor 1 opening angle      (3) NG area

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only engine stopped)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only engine stopped)

## 8. FAIL SAFE

Stop the current to electronic throttle control motor. (Fix the throttle opening angle to 6°.)

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CG:DTC P0691 COOLING FAN 1 CONTROL CIRCUIT LOW

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the radiator fan circuit.

Judge NG when the ECM output level differs from the actual terminal level.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criteria below becomes more than 2.5 seconds.

#### Judgment Value

| Malfunction Criteria                                 | Threshold Value   |
|--|-------------------|
| After starting the engine                            | 1 seconds or more |
| Engine speed   | ≥ 500 rpm         |
| Ignition switch                                      | ON                |
| Battery voltage                                      | ≥ 10.9 V          |
| Terminal voltage level when ECM transmits OFF signal | Low level         |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                                 | Threshold Value   |
|--|-------------------|
| After starting the engine                            | 1 seconds or more |
| Engine speed   | ≥ 500 rpm         |
| Ignition switch                                      | ON                |
| Battery voltage                                      | ≥ 10.9 V          |
| Terminal voltage level when ECM transmits OFF signal | High level        |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CH:DTC P0692 COOLING FAN 1 CONTROL CIRCUIT HIGH

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the radiator fan circuit.

Judge NG when the ECM output level differs from the actual terminal level.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criteria below becomes more than 2.5 seconds.

#### Judgment Value

| Malfunction Criteria                                | Threshold Value   |
|---|-------------------|
| After starting the engine                           | 1 seconds or more |
| Engine speed  | ≥ 500 rpm         |
| Ignition switch                                     | ON                |
| Battery voltage                                     | ≥ 10.9 V          |
| Terminal voltage level when ECM transmits ON signal | High level        |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                                | Threshold Value   |
|---|-------------------|
| After starting the engine                           | 1 seconds or more |
| Engine speed  | ≥ 500 rpm         |
| Ignition switch                                     | ON                |
| Battery voltage                                     | ≥ 10.9 V          |
| Terminal voltage level when ECM transmits ON signal | Low level         |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 7. FAIL SAFE

None

## 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CI: DTC P0700 TRANSMISSION CONTROL SYSTEM (MIL REQUEST)

### 1. OUTLINE OF DIAGNOSIS

AT C/U performs CAN communication. It judges as NG if malfunction is detected.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery Voltage      | $\geq 10.9$ V     |

### 3. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

### 4. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds. Judge OK and clear the NG when the malfunction criteria below are not completed.

#### Judgement Value

| Malfunction Criteria          | Threshold Value |
|-------------------------------|-----------------|
| MIL light up request from TCM | Set             |

**Time needed for diagnosis:**2.5 seconds

**Malfunction Indicator Light Illumination:**Illuminates simultaneously when malfunction is detected.

### 5. DTC CLEAR CONDITION

- When the OK driving cycle was completed 40 consecutive times.
- When "Clear Memory" was performed.

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 consecutive times.
- When "Clear Memory" was performed.

## 7. FAIL-SAFE

None

## 8. ECM OPERATING AT DTC SETTING

Store the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### CJ:DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (AT MODEL)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the neutral SW.

Judge NG when the ECM neutral terminal input differs from the reception data from TCM.

#### 2. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions     |
|---------------------------|-----------------------|
| Ignition switch           | ON                    |
| Battery voltage           | $\geq 10.9 \text{ V}$ |
| After starting the engine | 2 seconds or more     |
| Starter switch            | OFF                   |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds or more after starting the engine.

#### 4. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.56 seconds. Judge OK and clear NG when the malfunction criteria below are not completed.

##### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Neutral switch signal when park/neutral = "OFF" & any other switches = "ON" on AT | LOW (ON)        |

**Time Needed for Diagnosis:** 2.56 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

Cruise control: Not allowed to command cruise control.

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CK:DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (MT MODEL)

### 1. OUTLINE OF DIAGNOSIS

Judge the open or short circuit of the neutral SW.

Judge NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

### 2. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions |
|---------------------------|-------------------|
| Ignition switch           | ON                |
| Battery voltage           | $\geq 10.9$ V     |
| After starting the engine | 2 seconds or more |
| Starter switch            | OFF               |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds or more after starting the engine.

### 4. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed 3 time or more after the neutral SW change.

Judge OK and clear NG if there is change in the neutral SW.

#### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Neutral switch signal (while changing from a to b below)                  | LOW (ON)        |
| Driving condition change  | a) to b)        |
| a) Vehicle speed = 0 km/h (0 MPH) & engine speed 600 — 900 rpm            |                 |
| b) Vehicle speed $\geq 64$ km/h (40 MPH) & engine speed 1,600 — 2,550 rpm |                 |

**Time Needed for Diagnosis:** 3 monitoring

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

Cruise control: Not allowed to command cruise control.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### CL:DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (AT MODEL)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the neutral SW.

Judge NG when the ECM neutral terminal input differs from the reception data from TCM.

#### 2. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions     |
|---------------------------|-----------------------|
| Ignition switch           | ON                    |
| Battery voltage           | $\geq 10.9 \text{ V}$ |
| After starting the engine | 2 seconds or more     |
| Starter switch            | OFF                   |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds or more after starting the engine.

#### 4. DIAGNOSTIC METHOD

Judge NG when the continuous time until completing the malfunction criteria below becomes more than 2.56 seconds. Judge OK and clear NG when the malfunction criteria below are not completed.

##### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Neutral switch signal when park/neutral = "ON" & any other switches = "OFF" on AT | HIGH (OFF)      |

**Time Needed for Diagnosis:** 2.56 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

Cruise control: Not allowed to command cruise control.

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CM:DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (MT MODEL)

### 1. OUTLINE OF DIAGNOSIS

Judge the open or short circuit of the neutral SW.

Judge NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

### 2. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions     |
|---------------------------|-----------------------|
| Ignition switch           | ON                    |
| Battery voltage           | $\geq 10.9 \text{ V}$ |
| After starting the engine | 2 seconds or more     |
| Starter switch            | OFF                   |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds or more after starting the engine.

### 4. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed 3 time or more after the neutral SW change.

Judge OK and clear NG if there is change in the neutral SW.

#### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Neutral switch signal (while changing from a to b below)                          | HIGH (OFF)      |
| Driving condition change  | a) to b)        |
| a) Vehicle speed = 0 km/h (0 MPH) & engine speed 600 — 900 rpm                    |                 |
| b) Vehicle speed $\geq 64 \text{ km/h}$ (40 MPH) & engine speed 1,600 — 2,550 rpm |                 |

**Time Needed for Diagnosis:** 3 monitoring

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

Cruise control: Not allowed to command cruise control.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### CN:DTC P1152 O<sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (LOW) (BANK1 SENSOR1)

#### 1. OUTLINE OF DIAGNOSIS

Detect that lambda value remains Low.

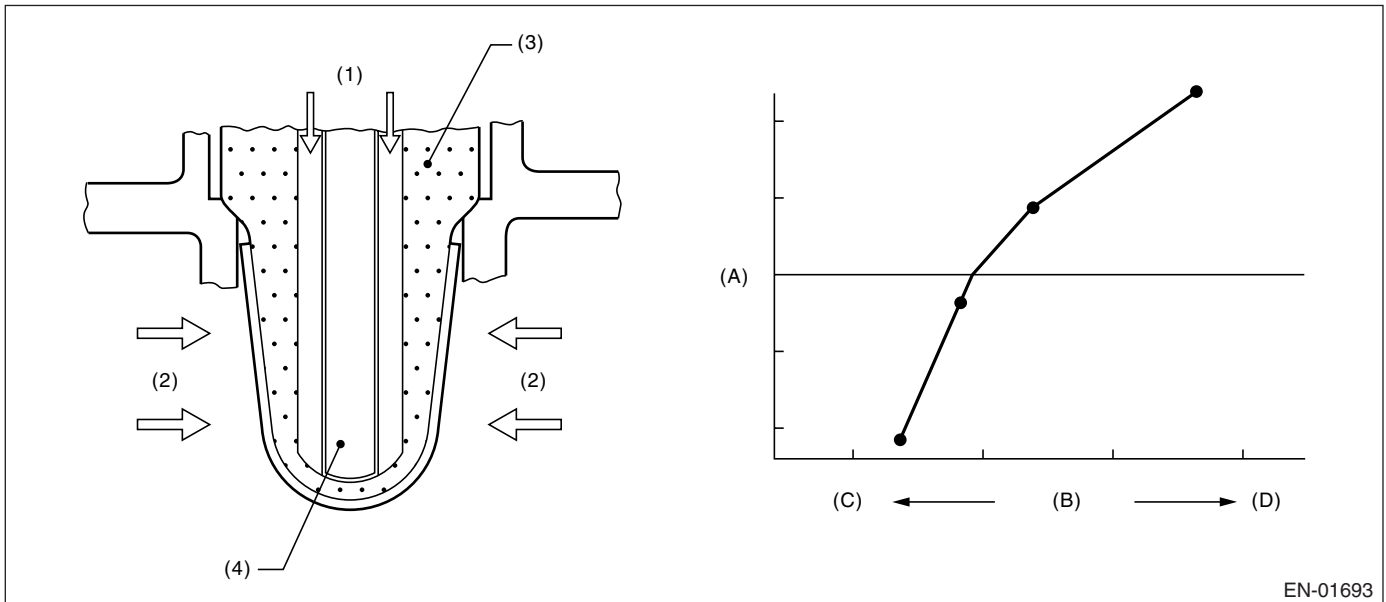

Judge NG when lambda value is abnormal in accordance with lambda value of front oxygen (A/F) sensor and running condition that is vehicle speed, amount of intake air engine coolant temperature, sub feedback control, etc.

**Lambda value = Actual air fuel ratio/Theoretical air fuel ratio**

Lambda > 1: Lean

Lambda < 1: Rich

#### 2. COMPONENT DESCRIPTION

- (1) Atmosphere
- (2) Exhaust
- (3) ZrO<sub>2</sub>
- (4) Ceramic heater

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Lean
- (D) Rich

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                |
|---|----------------------------------|
| All secondary parameters to be in enable conditions         | 4 seconds or more                |
| Battery voltage   | > 10.9 V                         |
| Atmospheric pressure  | > 75.1 kPa (563 mmHg, 22.2 inHg) |
| Rear oxygen sensor sub feedback                             | Operating                        |
| Rear oxygen sensor output voltage – feedback target voltage | –0.2 V ↔ 0.1 V                   |
| or rear oxygen sensor sub feedback compensation coefficient | On Min.                          |
| or rear oxygen sensor sub feedback compensation coefficient | On Max.                          |
| After engine starting                                       | 60 seconds or more               |
| Engine coolant temperature                                  | ≥ 75°C (167°F)                   |
| Vehicle speed   | ≥ 20 km/h (12 MPH)               |
| Amount of intake air  | ≥ 6 g (0.21 oz)/s                |
| Load change during 0.5 engine rev.                          | ≤ 0.02 g (0.001 oz)/rev          |
| Impedance of front oxygen (A/F) sensor                      | 0 ↔ 50 Ω                         |
| Learning value of evaporation gas density                   | ≤ 0.2                            |
| Total time of operating canister purge                      | 20 seconds or more               |
| Target lambda load compensation coefficient                 | –0.03 ↔ 0                        |

## 4. GENERAL DRIVING CYCLE

Perform diagnosis continuously at a constant speed of 20 km/h (12 MPH) or more since 60 seconds after starting the engine.

## 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 10 seconds. Judge OK and clear NG when the malfunction criteria below are not completed.

### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Output lambda when rear oxygen sensor sub feedback compensation coefficient being at not high limit | ≤ 0.85          |

**Time Needed for Diagnosis:** 10 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

- Front oxygen (A/F) sensor main learning compensation: Not allowed to calculate
- Front oxygen (A/F) sensor sub learning compensation: Not allowed to calculate
- Purge control: Not allowed to purge

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CO:DTC P1153 O<sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (HIGH) (BANK1 SENSOR1)

### 1. OUTLINE OF DIAGNOSIS

Detect that lambda value remains High.

Judge NG when lambda value is abnormal in accordance with lambda value of front oxygen (A/F) sensor and running condition that is vehicle speed, amount of intake air engine coolant temperature, sub feedback control, etc.

**Lambda value = Actual air fuel ratio/Theoretical air fuel ratio**

Lambda > 1: Lean

Lambda < 1: Rich

### 2. COMPONENT DESCRIPTION

EN-01693

- (1) Atmosphere
- (2) Exhaust
- (3) ZrO<sub>2</sub>
- (4) Ceramic heater

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Lean
- (D) Rich

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                |
|---|----------------------------------|
| All secondary parameters to be in enable conditions         | 4 seconds or more                |
| Battery voltage   | > 10.9 V                         |
| Atmospheric pressure  | > 75.1 kPa (563 mmHg, 22.2 inHg) |
| Rear oxygen sensor sub feedback                             | Operating                        |
| Rear oxygen sensor output voltage – feedback target voltage | –0.2 V ↔ 0.1 V                   |
| or rear oxygen sensor sub feedback compensation coefficient | On Min.                          |
| or rear oxygen sensor sub feedback compensation coefficient | On Max.                          |
| After engine starting                                       | 60 seconds or more               |
| Engine coolant temperature                                  | ≥ 75°C (167°F)                   |
| Vehicle speed   | ≥ 20 km/h (12 MPH)               |
| Amount of intake air  | ≥ 6 g (0.21 oz)/s                |
| Load change during 0.5 engine rev.                          | ≤ 0.02 g (0.001 oz)/rev          |
| Impedance of front oxygen (A/F) sensor                      | 0 ↔ 50 Ω                         |
| Learning value of evaporation gas density                   | ≤ 0.2                            |
| Total time of operating canister purge                      | 20 seconds or more               |
| Target lambda load compensation coefficient                 | –0.03 ↔ 0                        |

## 4. GENERAL DRIVING CYCLE

Perform diagnosis continuously at a constant speed of 20 km/h (12 MPH) or more since 60 seconds after starting the engine.

## 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 10 seconds. Judge OK and clear NG when the malfunction criteria below are not completed.

### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Output lambda when rear O <sub>2</sub> sensor sub feedback compensation coefficient value being at not low limit | ≥ 1.15          |

**Time Needed for Diagnosis:** 10 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

- Front oxygen (A/F) sensor main learning compensation: Not allowed to calculate
- Front oxygen (A/F) sensor sub learning compensation: Not allowed to calculate.
- Purge control: Not allowed to purge

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

### CP:DTC P1160 RETURN SPRING FAILURE

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when the valve does not move to the close direction with the motor power stopped and the valve open more than the default opening.

#### 2. COMPONENT DESCRIPTION

EN-01866

- |                          |                         |                                  |
|--------------------------|-------------------------|----------------------------------|
| (1) Opener spring        | (4) Full closed stopper | (7) DC motor                     |
| (2) Return spring        | (5) Throttle valve      | (8) Main and sub throttle sensor |
| (3) Intermediate stopper | (6) Gear                |                                  |

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Throttle opening     | OFF               |
| Motor continuity     | OFF               |

#### 4. GENERAL DRIVING CYCLE

- Ignition switch ON → OFF
- Ignition switch OFF → ON (After clear memory only)

#### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria                             | Threshold Value |
|--|-----------------|
| Opening variation after continuity is set to OFF | $\geq 2^\circ$  |

**Time Needed for Diagnosis:** 1,880 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

## 8. FAIL SAFE

Fix the throttle opening to 6°.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CQ:DTC P1400 FUEL TANK PRESSURE CONTROL SOLENOID VALVE CIRCUIT LOW

### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of pressure control solenoid valve. Judge NG when ECM output level is different from actual terminal level.

### 2. COMPONENT DESCRIPTION

EN-01759

- |                        |               |                          |
|------------------------|---------------|--------------------------|
| (1) Filter             | (4) Diaphragm | (A) Atmospheric pressure |
| (2) Coil               | (5) Valve     | (B) Shut off valve       |
| (3) Connector terminal |               | (C) To fuel tank         |

### 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions |
|-----------------------|-------------------|
| Ignition switch       | ON                |
| Battery voltage       | ≥ 10.9 V          |
| After engine starting | 1 second or more  |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis after starting the engine.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds. Judge OK and clear the NG when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria                         | Threshold Value |
|--|-----------------|
| Terminal voltage when ECM outputs off signal | Low             |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in two continuous drive cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CR:DTC P1420 FUEL TANK PRESSURE CONTROL SOL. VALVE CIRCUIT HIGH

### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of pressure control solenoid valve.  
 Judge NG when ECM output level is different from actual terminal level.

### 2. COMPONENT DESCRIPTION

EN-01759

- |                        |               |                          |
|------------------------|---------------|--------------------------|
| (1) Filter             | (4) Diaphragm | (A) Atmospheric pressure |
| (2) Coil               | (5) Valve     | (B) Shut off valve       |
| (3) Connector terminal |               | (C) To fuel tank         |

### 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions |
|-----------------------|-------------------|
| Ignition switch       | ON                |
| Battery voltage       | ≥ 10.9 V          |
| After engine starting | 1 second or more  |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis after starting the engine.

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds. Judge OK and clear the NG when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria                         | Threshold Value |
|--|-----------------|
| Terminal voltage when ECM outputs off signal | High            |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in two continuous drive cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

| (3) Diode       | (10) Plate         | (17) Spring       |
| (4) Stator core | (11) Valve         | (18) Cover        |
| (5) End plate   | (12) Housing       | (19) O-ring       |
| (6) Body        | (13) Filter        |                   |
| (7) Yoke        | (14) Retainer      |                   |

### 3. ENABLE CONDITION

| Secondary Parameter                 | Enable Condition  |
|-------------------------------------|---|
| Drain valve                         | Open  |
| Battery voltage                     | $\geq 10.9 \text{ V}$   |
| Atmospheric pressure                | $\geq 75.0 \text{ kPa}$ (563 mmHg, 22.17 inHg)  |
| Tank pressure when starter ON → OFF | $-0.7 \leftrightarrow 1.4 \text{ kPa}$ ( $-5 \leftrightarrow 10.7 \text{ mmHg}$ , $-0.20 \leftrightarrow 0.42 \text{ inHg}$ ) |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

### Judgment Value

| Malfunction Criteria | Threshold Value                             |
|----------------------|---|
| Tank pressure        | $\leq -4.0$ kPa ( $-30$ mmHg, $-1.18$ inHg) |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria  | Threshold Value   |
|---|---|
| Tank pressure   | $> -4.0$ kPa ( $-30$ mmHg, $-1.18$ inHg)  |
| Cumulative time when the malfunction criteria below are completed | $\geq 30$ seconds   |
| Duty ratio of purge control solenoid valve                        | Except 0  |
| Fuel temperature  | $-10 \leftrightarrow 45^\circ\text{C}$ ( $14 \leftrightarrow 113^\circ\text{F}$ ) |
| Relative ratio of intake manifold                                 | $\leq -26.7$ kPa ( $-200$ mmHg, $-7.87$ inHg)                                     |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

PCV control: Open the PCV solenoid.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

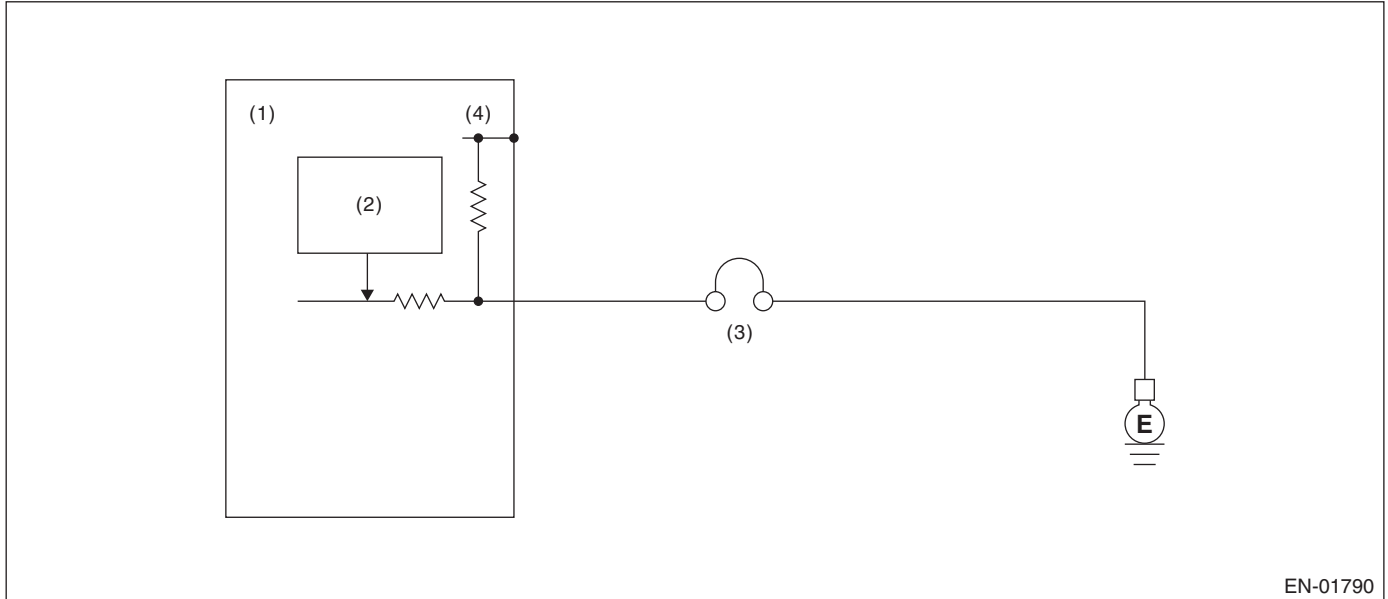

## GENERAL DESCRIPTION

### CT:DTC P1491 POSITIVE CRANKCASE VENTILATION (BLOW-BY) FUNCTION PROBLEM

#### 1. OUTLINE OF DIAGNOSIS

Detect the blow-by hose release abnormality.  
Judge NG when the diagnosis terminal voltage is high.

#### 2. COMPONENT DESCRIPTION

- (1) Engine control module (ECM)
- (2) Detecting circuit
- (3) PCV diagnosis connector
- (4) 5 V

#### 3. ENABLE CONDITION

| Secondary Parameter | Enable Condition |
|---------------------|------------------|
| None                |                  |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSIS METHOD

##### • Abnormality Judgment

Judge NG when the continuous time until completing the malfunction criteria below becomes more than 2.5 second.

##### Judgment Value

| Malfunction Criteria                                      | Threshold Value |
|---|-----------------|
| Battery voltage   | > 10.9 V        |
| Positive crankcase ventilation diagnosis terminal voltage | High            |
| Engine speed  | ≥ 500 rpm       |

**Time Needed for Diagnosis:** 2.5 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Normality Judgment

Judge OK and clear NG when the malfunction criteria below is completed.

### Judgment Value

| Malfunction Criteria                                      | Threshold Value |
|---|-----------------|
| Battery voltage   | > 10.9 V        |
| Positive crankcase ventilation diagnosis terminal voltage | Low             |
| Engine speed  | ≥ 500 rpm       |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### DC:DTC P1518 STARTER SWITCH CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of starter SW.

Judge OFF NG when it turns to “after engine starting” while the starter has never been set to ON.

#### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge OFF NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria   | Threshold Value     |
|--|---------------------|
| Vehicle speed  | < 1 km/h (0.62 MPH) |
| Starter ON signal  | Not detected        |
| Engine speed after the engine speed of less than 500 rpm continues 0.8 seconds or more | ≥ 500 rpm           |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

##### • Normality Judgment

Judge OFF OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Starter ON           | Experienced     |
| Battery voltage      | > 8 V           |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 7. FAIL SAFE

None

## 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## DD:DTC P1560 BACK-UP VOLTAGE CIRCUIT MALFUNCTION

### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the back-up voltage circuit.

Judge NG when the back-up voltage becomes smaller than the battery voltage.

### 2. ENABLE CONDITION

| Secondary Parameter | Enable Condition |
|---------------------|------------------|
| None                |                  |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds.

#### Judgment Value

| Malfunction Criteria     | Threshold Value |
|--------------------------|-----------------|
| Voltage of back-up power | Low             |
| Battery voltage          | $\geq 10.9$ V   |
| Engine speed             | $\geq 500$ rpm  |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria            | Threshold Value |
|---------------------------------|-----------------|
| Voltage of back-up power supply | High            |
| Battery voltage                 | $\geq 10.9$ V   |
| Engine speed                    | $\geq 500$ rpm  |

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 7. FAIL SAFE

None

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## DK:DTC P2096 POST CATALYST FUEL TRIM SYSTEM TOO LEAN BANK 1

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the amount of sub feedback control.

Judge NG when the sub feedback learning value sticks to lean sides during sub feedback learning control.

### 2. COMPONENT DESCRIPTION

EN-01696

- (1) Atmosphere
- (2) Exhaust gas
- (3) Electromotive force

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Rich

- (D) Lean
- (E) Theoretical air fuel ratio
- (F) Comparative voltage

### 3. ENABLE CONDITION

| Secondary Parameters                          | Enable Conditions |
|---|-------------------|
| Continuous time of completing condition below | 1 second or more  |
| Sub feedback leaning enable condition         | Complete          |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at a constant speed of 50 to 100 km/h (31 to 62 MPH).

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 5 seconds. Judge OK when it becomes less than 5 seconds.

#### Judgment Value

| Malfunction Criteria        | Threshold Value |
|-----------------------------|-----------------|
| Sub feedback learning value | $\leq -0.02$    |

**Time Needed for Diagnosis:** 5 seconds  $\times$  1 time

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When OK with similar drive in 3 drive cycles
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## DL:DTC P2097 POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the amount of sub feedback control.

Judge NG when the sub feedback learning value sticks to rich sides during sub feedback learning control.

### 2. COMPONENT DESCRIPTION

EN-01696

- (1) Atmosphere
- (2) Exhaust gas
- (3) Electromotive force

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Rich

- (D) Lean
- (E) Theoretical air fuel ratio
- (F) Comparative voltage

### 3. ENABLE CONDITION

| Secondary Parameters                          | Enable Conditions |
|---|-------------------|
| Continuous time of completing condition below | 1 second or more  |
| Sub feedback leaning enable condition         | Complete          |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at a constant speed 50 to 100 km/h (31 to 62 MPH).

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 5 seconds. Judge OK when it becomes less than 5 seconds.

### Judgment Value

| Malfunction Criteria        | Threshold Value |
|-----------------------------|-----------------|
| Sub feedback learning value | $\geq 0.038$    |

**Time Needed for Diagnosis:** 5 seconds  $\times$  1 time

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous drive cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When OK with similar drive in 3 drive cycles.
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

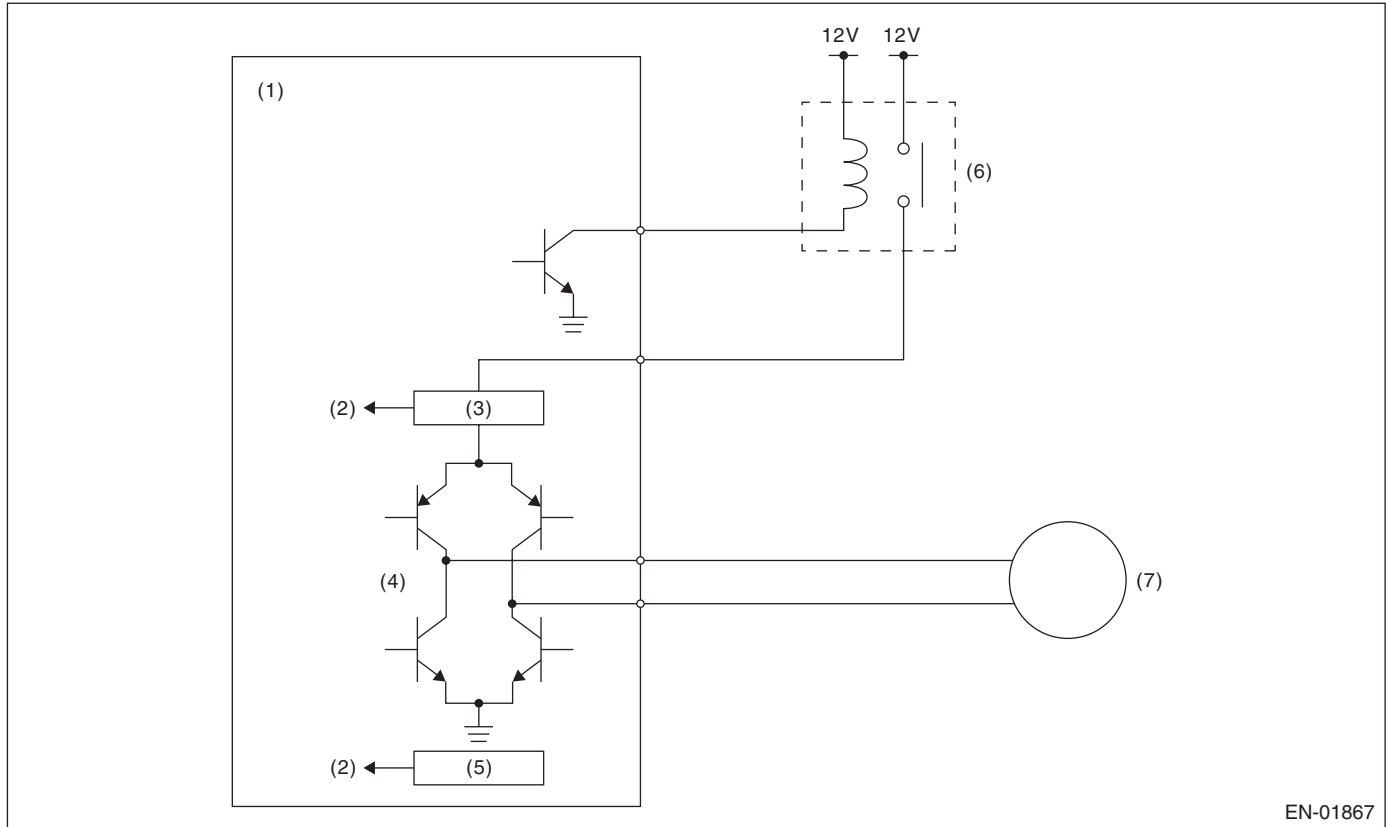

## GENERAL DESCRIPTION

### DM:DTC P2101 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT RANGE/ PERFORMANCE

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when the motor current becomes large or drive circuit is heated.

#### 2. COMPONENT DESCRIPTION

EN-01867

- |                                   |                                       |           |
|-----------------------------------|---------------------------------------|-----------|
| (1) Engine control unit (ECM)     | (4) Drive circuit                     | (7) Motor |
| (2) Detection circuit             | (5) Temperature detection circuit     |           |
| (3) Overcurrent detection circuit | (6) Electronic control throttle relay |           |

#### 3. ENABLE CONDITION

| Secondary Parameters                         | Enable Conditions |
|--|-------------------|
| Under control of electronic control throttle | ON                |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria            | Threshold Value                    |
|---------------------------------|------------------------------------|
| Motor current                   | $\leq 8$ A                         |
| Drive circuit inner temperature | $\leq 175^{\circ}\text{C}$ (347°F) |

### Time Needed for Diagnosis:

- 500 milliseconds (NG judgment)
- 2,000 milliseconds (OK judgment)

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

## 8. FAIL SAFE

Stop the continuity to the electronic control throttle motor. (Fix the throttle opening angle to 6°.)

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

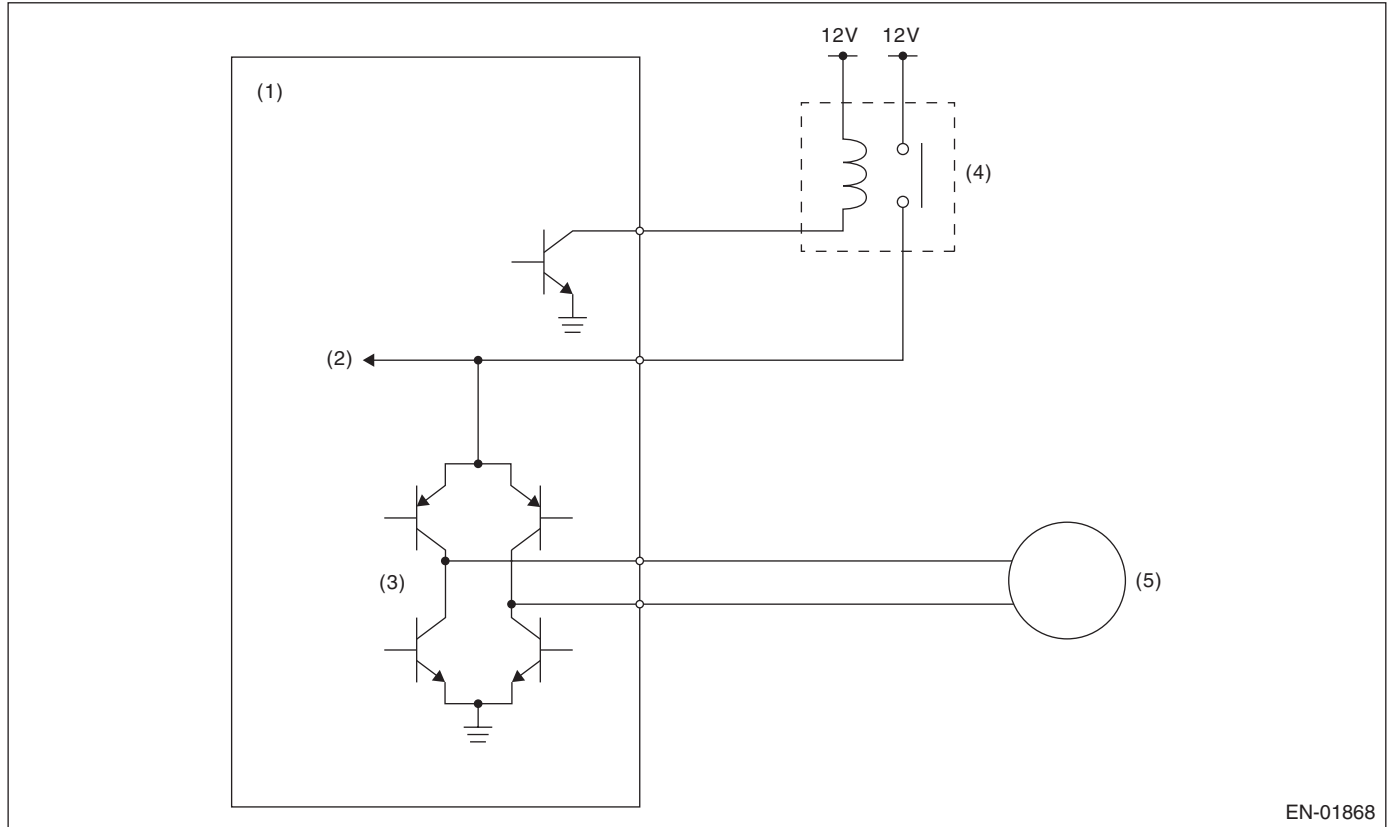

## GENERAL DESCRIPTION

### DN:DTC P2102 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT LOW

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when the electronic control throttle power is not supplied even when ECM sets the electronic throttle control relay to ON.

#### 2. COMPONENT DESCRIPTION

EN-01868

- (1) Engine control module (ECM)      (3) Drive circuit      (5) Motor  
 (2) Voltage detection circuit      (4) Electronic control throttle relay

#### 3. ENABLE CONDITION

| Secondary Parameters                     | Enable Conditions |
|--|-------------------|
| Electronic control throttle relay output | ON                |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Motor power voltage  | $\geq 5$ V      |

##### Time Needed for Diagnosis:

- 400 milliseconds (For NG)
- 2,000 milliseconds (For OK)

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

## 8. FAIL SAFE

Stop the continuity to the electronic control throttle motor. (Fix the throttle opening angle to 6°.)

## 9. ECM OPERATION AT DTC SETTING

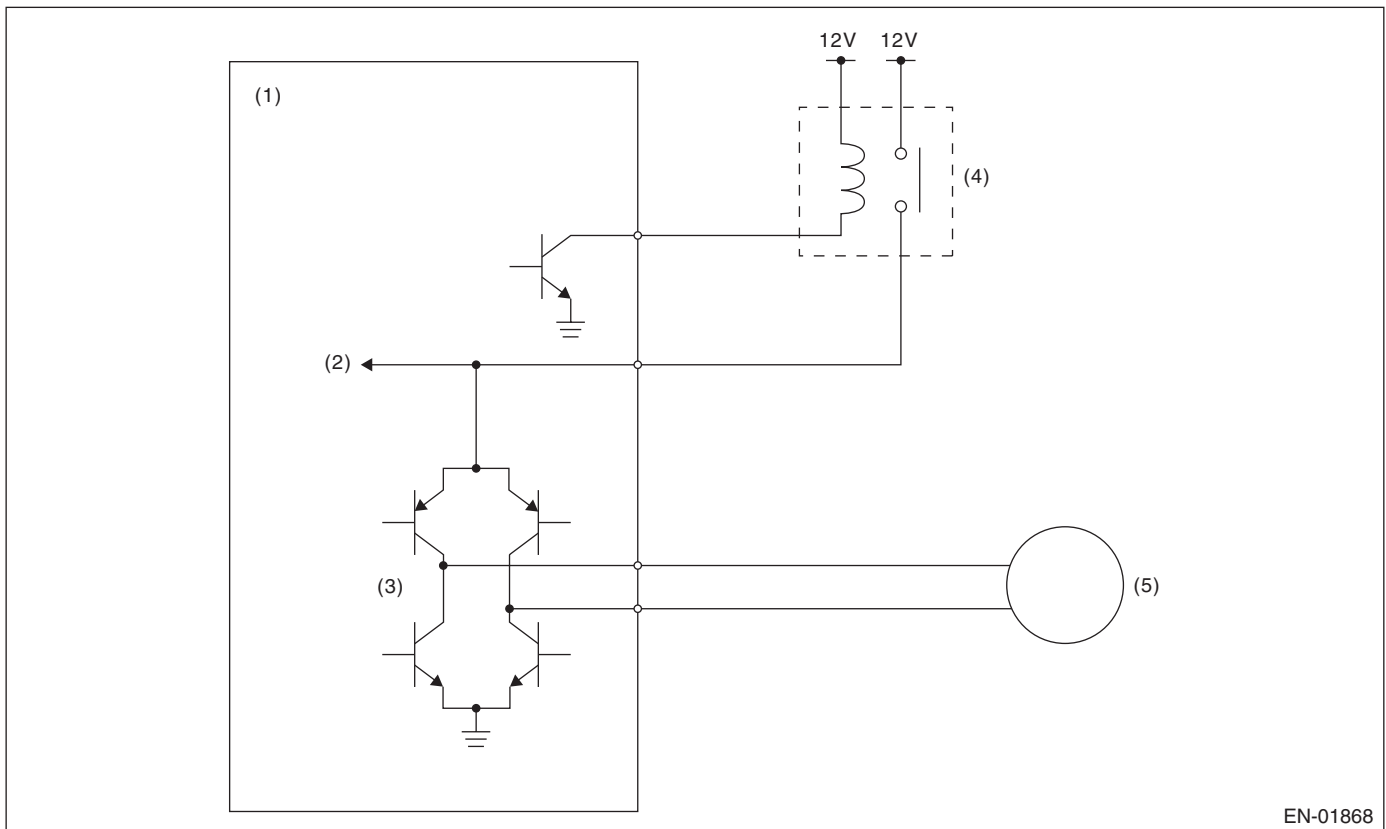

Memorize the freeze frame data. (For test mode \$02)

## DO:DTC P2103 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT HIGH

### 1. OUTLINE OF DIAGNOSIS

Judge NG when the electronic control throttle power is not supplied even when ECM sets the electronic throttle control relay to OFF.

### 2. COMPONENT DESCRIPTION

EN-01868

- |                                 |                                       |           |
|---------------------------------|---------------------------------------|-----------|
| (1) Engine control module (ECM) | (3) Drive circuit                     | (5) Motor |
| (2) Voltage detection circuit   | (4) Electronic control throttle relay |           |

### 3. ENABLE CONDITION

| Secondary Parameters                     | Enable Conditions |
|--|-------------------|
| Electronic control throttle relay output | OFF               |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 4. GENERAL DRIVING CYCLE

- Ignition switch ON → OFF
- Ignition switch OFF → ON (After clear memory only)

### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Motor power voltage  | ≤ 5 V           |

#### Time Needed for Diagnosis:

- 600 milliseconds (For NG)
- 400 milliseconds (For OK)

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

### 8. FAIL SAFE

Stop the continuity to the electronic control throttle motor. (Fix the throttle opening angle to 6°.)

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## DP:DTC P2109 THROTTLE ANGLE SENSOR CLOSED POSITION ERROR

### 1. OUTLINE OF DIAGNOSIS

Judge NG when all close point learning cannot conducted or abnormal value is detected.

### 2. COMPONENT DESCRIPTION

EN-01869

- (1) Engine control module (ECM)
- (2) Drive circuit
- (3) Motor
- (4) Throttle position sensor

### 3. ENABLE CONDITION

| Secondary Parameters                      | Enable Conditions |
|---|-------------------|
| Ignition switch                           | ON → OFF          |
| Ignition switch (after clear memory only) | OFF → ON          |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis at all close point learning.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value                     |
|--|-------------------------------------|
| Throttle sensor opening angle at all close point learning                    | 10.127° or more,<br>19.872° or less |
| Throttle opening angle when ignition switch ON – Throttle min. stop position | ≥ 1.683°                            |

**Time Needed for Diagnosis:** 8 — 80 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 8. FAIL SAFE

Stop the continuity to the electronic control throttle motor. (Fix the throttle opening angle to 6°.)

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## DQ:DTC P2122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" CIRCUIT LOW INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 1.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

- |  |  |
|--|--|
| (1) Engine control module (ECM)                | (3) Accelerator pedal position sensor 2 signal |
| (2) Accelerator pedal position sensor 1 signal | (4) Accelerator pedal position sensor          |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | ≥ 0.308 V       |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

**Time Needed for Diagnosis:** 100 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

## 8. FAIL SAFE

- Single malfunction: Control with normal sensor
- Multi malfunction: Fix the throttle opening angle to 6°.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## DR:DTC P2123 THROTTLE/PEDAL POSITION SENSOR/SWITCH “D” CIRCUIT HIGH INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 1.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-01861

- |  |  |
|--|--|
| (1) Engine control module (ECM)                | (3) Accelerator pedal position sensor 2 signal |
| (2) Accelerator pedal position sensor 1 signal | (4) Accelerator pedal position sensor          |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | $\leq 4.865$ V  |

**Time Needed for Diagnosis:** 100 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 8. FAIL SAFE

- Single malfunction: Control with normal sensor
- Multi malfunction: Fix the throttle opening angle to 6°.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## DS:DTC P2127 THROTTLE/PEDAL POSITION SENSOR/SWITCH “E” CIRCUIT LOW INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 2.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

- |  |  |
|--|--|
| (1) Engine control module (ECM)                | (3) Accelerator pedal position sensor 2 signal |
| (2) Accelerator pedal position sensor 1 signal | (4) Accelerator pedal position sensor          |

| (1) Throttle position sensor 1 signal | (3) Throttle position sensor    |
| (2) Throttle position sensor 2 signal | (4) Engine control module (ECM) |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                  | Threshold Value  |
|---------------------------------------|------------------|
| Signal difference between two sensors | $\leq 4.5^\circ$ |

#### Details of Judgment Value

EN-04014

(1) Sensor output difference (°)

(2) Throttle position sensor 1 opening angle (°)

(3) NG area

**Time Needed for Diagnosis:** 24 milliseconds (NG judgment), 24 milliseconds (OK judgment)

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 8. FAIL SAFE

Stop the continuity to electronic control throttle motor. (Fix the throttle opening angle to 6°.)

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## DV:DTC P2138 THROTTLE/PEDAL POSITION SENSOR/SWITCH “D” / “E” VOLTAGE RATIONALITY

### 1. OUTLINE OF DIAGNOSIS

Judge NG when the signal level of throttle position sensor 1 is different from the throttle position sensor 2.

### 2. COMPONENT DESCRIPTION

EN-01861

- |  |  |
|--|--|
| (1) Engine control module (ECM)                | (3) Accelerator pedal position sensor 2 signal |
| (2) Accelerator pedal position sensor 1 signal | (4) Accelerator pedal position sensor          |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |
| Battery voltage      | $\geq 6\text{ V}$ |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                  | Threshold Value    |
|---------------------------------------|--------------------|
| Signal difference between two sensors | $\leq 1.465^\circ$ |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### Details of Judgment Value

EN-04015

(1) Sensor output difference (°)

(2) Accelerator pedal position sensor  
2 opening angle (°)

(3) NG area

### Time Needed for Diagnosis:

- 116 milliseconds (For NG)
- 1,000 milliseconds (For OK)

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Fix the throttle opening angle to 6°.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## DW:DTC P2227 BAROMETRIC PRESSURE TOO LOW

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of atmospheric pressure sensor output property. Judge NG when the atmospheric pressure sensor output is largely different from the intake manifold pressure at engine starting.

### 2. COMPONENT DESCRIPTION

Atmospheric pressure sensor is built in ECM.

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions   |
|----------------------|---------------------|
| Engine speed         | < 300 rpm           |
| Vehicle speed        | < 1 km/h (0.62 MPH) |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis before engine starting with the ignition switch ON.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.3 seconds.

#### Judgment Value

| Malfunction Criteria   | Threshold Value                  |
|--|----------------------------------|
| IAtmospheric – manifold absolute pressureI                                 | ≥ 26.7 kPa (200 mmHg, 7.88 inHg) |
| IIntake manifold pressure at engine starting – manifold absolute pressureI | < 1.33 kPa (10 mmHg, 0.39 inHg)  |

**Time Needed for Diagnosis:**0.3 seconds

**Malfunction Indicator Light Illumination:**Detect when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear the NG when the continuous time of completing the malfunction criteria below becomes more than 0.3 seconds.

#### Judgment Value

| Malfunction Criteria                     | Threshold Value                  |
|--|----------------------------------|
| Atmospheric – manifold absolute pressure | < 26.7 kPa (200 mmHg, 7.88 inHg) |

### 6. DTC CLEAR CONDITION n

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 8. FAIL SAFE

Atmospheric pressure sensor process: Fix the atmospheric pressure to 101 kPa (760 mmHg, 29.8 inHg).

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### DX:DTC P2228 ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (LOW INPUT)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of atmospheric pressure sensor.  
Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

Atmospheric pressure sensor is built in ECM.

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | < 0.118 V       |

**Time Needed for Diagnosis:** 0.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | ≥ 0.118 V       |

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 8. FAIL SAFE

Atmospheric pressure sensor process: Fix the atmospheric pressure to 101 kPa (760 mmHg, 29.8 inHg).

#### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## DY:DTC P2229 ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (HIGH INPUT)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of atmospheric pressure sensor.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

Atmospheric pressure sensor is built in ECM.

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | $\geq 4.936$ V  |

**Time Needed for Diagnosis:** 0.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | $< 4.936$ V     |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Atmospheric pressure sensor process: Fix the atmospheric pressure to 101 kPa (760 mmHg, 29.8 inHg).

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

**ENGINE SECTION 2**

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

## General Description

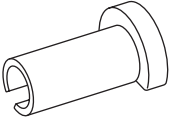

### FUEL INJECTION (FUEL SYSTEMS)

#### C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.

- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

#### D: PREPARATION TOOL

| ILLUSTRATION  | TOOL NUMBER | DESCRIPTION       | REMARKS  |
|---|-------------|-------------------|--|
| <br><br>ST42099AE000 | 42099AE000  | CONNECTOR REMOVER | Used for removing quick connector in engine compartment. |

## 2. Throttle Body

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 3) Disconnect the connector from the throttle position sensor (A) and manifold absolute pressure sensor (B).

- 4) Disconnect the engine coolant hoses from the throttle body.

- 5) Remove the bolts which secure the throttle body to intake manifold.

### B: INSTALLATION

- 1) Install in the reverse order of removal.

NOTE:

Always use a new gasket.

**Tightening torque:**

**8 N·m (0.8 kgf·m, 5.8 ft·lb)**

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

### 3. Intake Manifold

#### A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.
- 3) Open the fuel filler flap lid and remove the fuel filler cap.
- 4) Lift up the vehicle.
- 5) Remove the under cover.
- 6) Drain the engine coolant about 3.0 ℓ (3.2 US qt, 2.6 Imp qt).

- 7) Remove the air cleaner upper cover and air intake boot. <Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>
- 8) Remove the air cleaner element.
- 9) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 10) Remove the coolant filler tank. <Ref. to CO(H4DOTC)-33, REMOVAL, Coolant Filler Tank.>
- 11) Remove the power steering pump.
  - (1) Remove the front side V-belt. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>
  - (2) Disconnect the power steering switch connector.

- (3) Remove the bolts which secure the power steering pipe brackets to the intake manifold.

#### NOTE:

Do not disconnect the power steering hose.

- (4) Remove the bolts which secure the power steering pump bracket.

- (5) Remove the power steering tank from the bracket by pulling it upward.

- (6) Place the power steering pump on the right side wheel apron.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

12) Disconnect the emission hose (A) and connector (B) from the PCV hose assembly.

16) Disconnect the engine harness connectors from the bulkhead harness connectors.

13) Disconnect the engine coolant hoses from the throttle body.

17) Remove the engine harness connector from front harness connector.

14) Disconnect the brake booster vacuum hose.

18) Disconnect the connectors from the engine coolant temperature sensor (A), oil pressure switch (B) and crankshaft position sensor (C).

15) Disconnect the pressure hose from the intake duct.

19) Disconnect the knock sensor connector.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

20) Disconnect the connector from the camshaft position sensor.

21) Disconnect the connector from the ignition coil and ignitor assembly.

- RH side

- LH side

22) Disconnect the engine harness fixed by clip (A) from the rocker cover.

- RH side

- LH side

23) Using ST, disconnect fuel hoses from fuel pipes. <Ref. to FU(H4DOTC)-65, REMOVAL, Fuel Delivery, Return and Evaporation lines.>

### CAUTION:

- Be careful not to spill fuel.
- Catch fuel from hoses using a container or cloth.

ST 42099AE000 CONNECTOR REMOVER

- (A) Fuel delivery hose
- (B) Return hose
- (C) Evaporation hose

24) Remove the bolts which secure the intake manifold to the cylinder heads.

25) Remove the intake manifold.

## B: INSTALLATION

1) Install the intake manifold onto cylinder heads.

NOTE:

Always use new gaskets.

**Tightening torque:**

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

2) Connect the fuel delivery hose, return hose and evaporation hose.

3) Connect the connector to the oil pressure switch (B), crankshaft position sensor (A) and engine coolant temperature sensor (A).

4) Connect the connector to the knock sensor.

5) Connect the connector to the camshaft position sensor.

6) Connect the connector to the ignition coil and ignitor assembly.

- RH side

- LH side

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

7) Connect the engine harness with clip (A) to the rocker cover.

- RH side

- LH side

8) Connect the engine harness connector to front harness connector.

9) Connect the engine harness connector to the bulkhead harness connectors.

10) Connect the brake booster vacuum hose.

11) Connect the engine coolant hoses to the throttle body.

12) Connect the emission hose (A) and connector (B) to the PCV hose assembly.

13) Connect the pressure hose to the intake duct.

# Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

14) Install the power steering pump.

(1) Install the power steering tank on the bracket.

(2) Connect the connector to the power steering pump switch.

(3) Install the power steering pump, and tighten the bolts.

**Tightening torque:**

**22 N·m (2.2 kgf·m, 15.9 ft·lb)**

(4) Install the power steering pipe brackets on the intake manifold RH.

(5) Install the front side V-belt. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>

15) Install the coolant filler tank. <Ref. to CO(H4DOTC)-33, INSTALLATION, Coolant Filler Tank.>

16) Install the intercooler. <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

17) Install the air cleaner element.

18) Install the air cleaner upper cover and air intake duct as a unit. <Ref. to IN(H4DOTC)-8, INSTALLATION, Air Cleaner Case.>

19) Connect the connector to the fuel pump relay.

20) Connect the battery ground cable to battery.

21) Lift up the vehicle.

22) Install the under cover.

23) Fill the engine coolant. <Ref. to CO(H4DOTC)-17, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

## C: DISASSEMBLY

1) Remove the fuel pipe protector RH.

2) Remove the fuel pipe protector LH.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

3) Remove the engine ground terminal from the intake manifold.

4) Disconnect the connector from the throttle position sensor (A) and manifold absolute pressure sensor (B).

5) Remove the throttle body from the intake manifold.

6) Disconnect the connector from the fuel injector.

7) Disconnect the connector from the tumble generator valve actuator.

8) Disconnect the connector from the tumble generator valve sensor.

9) Disconnect the connector from the purge control solenoid valve.

10) Remove the purge control solenoid valve.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

11) Disconnect the evaporation hose and purge valve from the intake manifold.

12) Remove the two bolts which hold the fuel pipes on the left side of intake manifold.

13) Remove the bolt which hold the fuel injector pipe onto intake manifold.

• LH side

• RH side

14) Remove the fuel injector.

15) Remove the harness bracket which holds the engine harness onto intake manifold.

16) Remove the engine harness from the intake manifold.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

17) Loosen the clamp which holds the front left side fuel hose to fuel injector pipe and remove the pipe from clamp.

18) Loosen the clamp which hold RH side fuel hose to fuel injector pipe, and remove the fuel injector pipe from clamp.

19) Remove the bolts which install the fuel pipe assembly on intake manifold.

20) Remove the fuel pipe assembly and pressure regulator, from the intake manifold.

21) Remove the intake duct from the intake manifold.

22) Remove the tumble generator valve assembly from the intake manifold.

## D: ASSEMBLY

### NOTE:

Replace the gasket with a new one.

1) Install the tumble generator valve assembly to the intake manifold.

### Tightening torque:

**8.25 N·m (0.84 kgf-m, 6.1 ft-lb)**

2) Install the air intake duct to the intake manifold.

### Tightening torque:

**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

# Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

3) Install the fuel pipe assembly and pressure regulator to the intake manifold.

**Tightening torque:**  
**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

4) Install the fuel injector pipe LH.  
5) Connect the left side fuel hose LH to fuel injector pipe, and tighten the clamp screw.

**Tightening torque:**  
**1.25 N·m (0.13 kgf-m, 0.94 ft-lb)**

6) Install the fuel injector pipe RH.  
7) Connect the fuel hose RH to fuel injector pipe, and tighten the clamp screw.

**Tightening torque:**  
**1.25 N·m (0.13 kgf-m, 0.94 ft-lb)**

8) Install the engine harness to the intake manifold.  
9) Install the harness bracket which holds the engine harness onto intake manifold.

**Tightening torque:**  
**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

10) Install the fuel injector.

11) Tighten the bolts which install the fuel injector pipe onto intake manifold.

**Tightening torque:**  
**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

- LH side

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

- RH side

12) Tighten the two bolts which install the fuel injector pipes on the left side of intake manifold.

**Tightening torque:**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

13) Connect the evaporation hoses to the purge valve.

**NOTE:**

Connect the evaporation hoses as shown in the figure.

- (A) To intake duct
- (B) To intake manifold
- (C) To purge control solenoid valve
- (D) To fuel pipe ASSY

14) Connect the evaporation hose and purge valve to the intake manifold.

15) Install the purge control solenoid valve.

**Tightening torque:**

**16 N·m (1.6 kgf-m, 11.6 ft-lb)**

16) Connect the hoses to the purge control solenoid valve.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

**NOTE:**  
Connect the evaporation hoses as shown in the figure.

- (A) To purge valve
- (B) To intake manifold

17) Connect the connector to the purge control solenoid valve.

18) Connect the connector to the tumble generator valve sensor.

19) Connect the connector to the tumble generator valve actuator.

20) Connect the connector to the fuel injector.

21) Install the throttle body to the intake manifold.

**NOTE:**  
Replace the gasket with a new one.

**Tightening torque:**  
**8 N·m (0.8 kgf·m, 5.8 ft·lb)**

22) Connect the connector to the throttle position sensor (A) and manifold absolute pressure sensor (B).

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

23) Install the engine ground terminal to the intake manifold.

**Tightening torque:**

**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

FU-01041

FU-01042

24) Install the fuel pipe protector RH.

**Tightening torque:**

**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

FU-02755

25) Install the fuel pipe protector LH.

**Tightening torque:**

**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

FU-02756

## E: INSPECTION

Make sure the fuel pipe and fuel hoses are not cracked and the connections are tightened.

## 4. Engine Coolant Temperature Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the generator. <Ref. to SC(H4SO)-14, REMOVAL, Generator.>
- 3) Drain the engine coolant. <Ref. to CO(H4DOTC)-17, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 4) Disconnect the connector from the engine coolant temperature sensor.

- 5) Remove the engine coolant temperature sensor.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

**Tightening torque:**

**18 N·m (1.8 kgf·m, 13.3 ft·lb)**

# Crankshaft Position Sensor

FUEL INJECTION (FUEL SYSTEMS)

---

## 5. Crankshaft Position Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the bolt which installs the crankshaft position sensor to cylinder block.

- 3) Remove the crankshaft position sensor, and disconnect the connector from it.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

***T: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)***

## 6. Camshaft Position Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from the camshaft position sensor RH.
- 3) Remove the camshaft position sensor RH from the rear side of cylinder head.

- 4) Remove the camshaft position sensor LH in the same procedure as RH side.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

# Knock Sensor

FUEL INJECTION (FUEL SYSTEMS)

## 7. Knock Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 3) Disconnect the knock sensor connector.

- 4) Remove the knock sensor from the cylinder block.

### B: INSTALLATION

- 1) Install the knock sensor to the cylinder block.

#### **Tightening torque:**

**24 N·m (2.4 kgf·m, 17.4 ft·lb)**

#### **NOTE:**

Extraction area of the knock sensor cord must be positioned at a 60° angle relative to the engine rear.

(A) Front side

- 2) Connect the knock sensor connector.

- 3) Install the intercooler. <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>
- 4) Connect the battery ground cable to battery.

## 8. Mass Air Flow and Intake Air Temperature Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from mass air flow and intake air temperature sensor.
- 3) Remove the mass air flow and intake air temperature sensor.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**1.7 N·m (0.17 kgf-m, 1.3 ft-lb)**

# Manifold Absolute Pressure Sensor

FUEL INJECTION (FUEL SYSTEMS)

---

## 9. Manifold Absolute Pressure Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connectors from manifold absolute pressure sensor.

- 3) Remove the manifold absolute pressure sensor from the throttle body.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Replace the O-rings for the manifold absolute pressure sensor with new ones.

**Tightening torque:**

**1.6 N·m (0.16 kgf-m, 1.2 ft-lb)**

## 10. Fuel Injector

### A: REMOVAL

#### 1. RH SIDE

- 1) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.
- 3) Open the fuel filler flap lid and remove the fuel filler cap.
- 4) Remove the air cleaner upper cover and air intake boot. <Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>
- 5) Remove the air cleaner element.
- 6) Remove the coolant filler tank. <Ref. to CO(H4DOTC)-33, REMOVAL, Coolant Filler Tank.>
- 7) Remove the power steering pump.
  - (1) Remove the front side V-belt. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>
  - (2) Disconnect the power steering switch connector.

- (3) Remove the bolts which secure the power steering pipe brackets to the intake manifold.

**NOTE:**

Do not disconnect the power steering hose.

- (4) Remove the bolts which secure the power steering pump bracket.

- (5) Remove the power steering tank from the bracket by pulling it upward.

- (6) Place the power steering pump on the right side wheel apron.

- 8) Remove the fuel pipe protector RH.

# Fuel Injector

## FUEL INJECTION (FUEL SYSTEMS)

9) Disconnect the connector from the fuel injector.

10) Remove the bolts which hold the injector pipe to intake manifold.

11) Remove the fuel injector while lifting up the fuel injector pipe.

3) Open the fuel filler flap lid and remove the fuel filler cap.

4) Remove the intake manifold. <Ref. to FU(H4DOTC)-14, REMOVAL, Intake Manifold.>

5) Remove the fuel pipe protector LH.

6) Disconnect the connector from the fuel injector.

7) Disconnect the connector from purge control solenoid valve.

8) Remove the purge control solenoid valve.

9) Remove the two bolts which hold the fuel injector pipe to the left side of intake manifold.

## 2. LH SIDE

1) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Disconnect the ground cable from battery.

10) Remove the bolt which secure fuel injector pipe to intake manifold.

11) Remove the fuel injector while lifting up the fuel injector pipe.

## B: INSTALLATION

### 1. RH SIDE

Install in the reverse order of removal.

#### NOTE:

Replace the O-ring and insulators with new ones.

- (A) Insulator
- (B) Fuel injector

#### Tightening torque:

**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

#### Tightening torque:

## 11. Tumble Generator Valve Assembly

### A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.
- 3) Open the fuel filler flap lid and remove the fuel filler cap.
- 4) Remove the intake manifold. <Ref. to FU(H4DOTC)-14, REMOVAL, Intake Manifold.>
- 5) Disconnect the connector from the tumble generator valve sensor.

- 6) Disconnect the connector from the tumble generator valve actuator.

- 7) Remove the fuel injector. <Ref. to FU(H4DOTC)-33, REMOVAL, Fuel Injector.>
- 8) Remove the tumble generator valve body from the intake manifold.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Always use new gaskets.

#### Tightening torque:

**8.25 N·m (0.84 kgf-m, 6.1 ft-lb)**

### 12. Tumble Generator Valve Position Sensor

#### A: SPECIFICATION

Do not remove the tumble generator valve position sensor from tumble generator valve assembly, since it cannot be adjusted during installation.

Refer to "Tumble Generator Valve Assembly" for removal and installation procedures. <Ref. to FU(H4DOTC)-37, REMOVAL, Tumble Generator Valve Assembly.> <Ref. to FU(H4DOTC)-37, INSTALLATION, Tumble Generator Valve Assembly.>

## 13. Tumble Generator Valve Actuator

### A: REMOVAL

#### 1. RH SIDE

- 1) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.
- 3) Open the fuel filler flap lid and remove the fuel filler cap.
- 4) Remove the intake manifold. <Ref. to FU(H4DOTC)-14, REMOVAL, Intake Manifold.>
- 5) Disconnect the connector from tumble generator valve actuator RH.
- 6) Remove the tumble generator valve actuator RH.

#### 2. LH SIDE

- 1) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.
- 3) Open the fuel filler flap lid and remove the fuel filler cap.
- 4) Remove the secondary air pump. <Ref. to EC(H4DOTC)-9, REMOVAL, Secondary Air Pump.>
- 5) Disconnect the connector from tumble generator valve actuator LH.
- 6) Remove the tumble generator valve actuator LH.

### B: INSTALLATION

#### 1. RH SIDE

Install in the reverse order of removal.

#### 2. LH SIDE

Install in the reverse order of removal.

# Wastegate Control Solenoid Valve

FUEL INJECTION (FUEL SYSTEMS)

## 14. Wastegate Control Solenoid Valve

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the engine harness connector (A) from bracket.
- 3) Disconnect the connector (B) from wastegate control solenoid valve.
- 4) Remove the bracket from body.

- 5) Disconnect the pressure hoses (C) from wastegate control solenoid valve.

- 6) Remove the wastegate control solenoid valve from bracket.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

# Front Oxygen (A/F) Sensor

FUEL INJECTION (FUEL SYSTEMS)

## 15. Front Oxygen (A/F) Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from the front oxygen (A/F) sensor.

- 3) Disconnect the engine harness fixed by clip (A) from the bracket (B).

- 4) Remove the front right side wheel.
- 5) Lift-up the vehicle.
- 6) Remove the service hole cover.

- 7) Apply spray type lubricant to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.
- 8) Remove the front oxygen (A/F) sensor.

### CAUTION:

When removing the front oxygen (A/F) sensor, wait until exhaust pipe cools, otherwise it will damage exhaust pipe.

### B: INSTALLATION

- 1) Before installing front oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

#### Anti-seize compound:

**NEVER-SEEZ NS-165 or equivalent**

### CAUTION:

Never apply anti-seize compound to protector of front oxygen (A/F) sensor.

- 2) Install the front oxygen (A/F) sensor.

#### Tightening torque:

**30 N·m (3.1 kgf-m, 22.1 ft-lb)**

- 3) Install the service hole cover.

- 4) Lower the vehicle.
- 5) Install the front right side wheel.

## Front Oxygen (A/F) Sensor

### FUEL INJECTION (FUEL SYSTEMS)

---

6) Connect the engine harness to the bracket (B) using clips (A).

7) Connect the connector of front oxygen (A/F) sensor.

8) Connect the battery ground cable to battery.

## 16.Rear Oxygen Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Disconnect the connector from the rear oxygen sensor.

- 4) Remove the clip by pulling out from the upper side of crossmember.

- 5) Apply spray type lubricant to the threaded portion of rear oxygen sensor, and leave it for one minute or more.
- 6) Remove the rear oxygen sensor.

### CAUTION:

**When removing the rear oxygen sensor, wait until exhaust pipe cools, otherwise it will damage exhaust pipe.**

### B: INSTALLATION

- 1) Before installing rear oxygen sensor, apply anti-seize compound only to the threaded portion of rear oxygen sensor to make the next removal easier.

### CAUTION:

**Never apply anti-seize compound to protector of rear oxygen sensor.**

### Anti-seize compound:

**NEVER-SEEZ NS-165 or equivalent**

- 2) Install the rear oxygen sensor.

### Tightening torque:

**21 N·m (2.1 kgf-m, 15.2 ft-lb)**

- AT model

- MT model

## Rear Oxygen Sensor

### FUEL INJECTION (FUEL SYSTEMS)

---

- 3) Connect the connector to the rear oxygen sensor.

- 4) Connect the clip to the crossmember.

- 5) Lower the vehicle.  
6) Connect the battery ground cable to battery.

## 17.Engine Control Module (ECM)

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lower inner trim of the passenger side. <Ref. to EI-51, REMOVAL, Lower Inner Trim.>
- 3) Detach the floor mat of the front passenger seat.
- 4) Remove the protect cover.

- 5) Remove the nuts (A) which hold ECM to the bracket.
- 6) Remove the clip (B) from the bracket.

- 7) Disconnect the ECM connectors and take out the ECM.

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

- When replacing ECM, use of wrong spec. ECM may lead to damage to the fuel injection system.
- When replacing ECM, do not damage the harnesses and connectors.

#### Tightening torque:

**5 N·m (0.5 kgf·m, 3.7 ft·lb)**

## 18.Main Relay

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the passenger's side front side sill cover.
- 3) Remove the bolt which holds the relay bracket on the body.
- 4) Disconnect the connectors from the main relay.

- 5) Remove the main relay from the mounting bracket.

### B: INSTALLATION

Install in the reverse order of removal.

## 19. Fuel Pump Relay

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the passenger's side front side sill cover.
- 3) Remove the bolt which holds relay bracket on the body.
- 4) Disconnect the connector from the fuel pump relay.

- 5) Remove the fuel pump relay from the mounting bracket.

### B: INSTALLATION

Install in the reverse order of removal.

# Electronic Throttle Control Relay

FUEL INJECTION (FUEL SYSTEMS)

---

## 20. Electronic Throttle Control Relay

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the passenger's side front side sill cover.
- 3) Remove the bolt which holds relay bracket on the body.
- 4) Disconnect the connector from electronic throttle control relay.

- 5) Remove the electronic throttle control relay from the mounting bracket.

### B: INSTALLATION

Install in the reverse order of removal.

## 21. Fuel Pump Control Unit

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear quarter trim. <Ref. to EI-52, REMOVAL, Rear Quarter Trim.>
- 3) Disconnect the connector from the fuel pump control unit.

- 4) Remove the fuel pump control unit.

### B: INSTALLATION

Install in the reverse order of removal.

### 22. Fuel

#### A: PROCEDURE

##### 1. RELEASING OF FUEL PRESSURE

**WARNING:**

Place “NO FIRE” signs near the working area.

**CAUTION:**

Be careful not to spill the fuel.

- 1) Disconnect the connector from the fuel pump relay.

- 2) Start and run the engine until it stalls.
- 3) After the engine stalls, crank it for five more seconds.
- 4) Turn the ignition switch to OFF.

##### 2. DRAINING FUEL

• Model with fuel drain plug

**WARNING:**

Place “NO FIRE” signs near the working area.

**CAUTION:**

Be careful not to spill the fuel.

- 1) Set the vehicle on the lift.
- 2) Disconnect the ground cable from battery.
- 3) Open the fuel filler flap lid and remove the fuel filler cap.
- 4) Lift-up the vehicle.
- 5) Drain the fuel from the fuel tank. Set a container under the vehicle and remove drain plug from the fuel tank.

- 6) Tighten the fuel drain plug.

**NOTE:**

Use a new gasket.

**Tightening torque:**

**26 N·m (2.65 kgf-m, 19.2 ft-lb)**

• Model without fuel drain plug

**WARNING:**

Place “NO FIRE” signs near the working area.

**CAUTION:**

Be careful not to spill the fuel.

- 1) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.
- 3) Remove the fuel pump. <Ref. to FU(H4DOTC)-58, REMOVAL, Fuel Pump.>
- 4) Drain fuel from the fuel pump installing part using a pump etc.

**CAUTION:**

Use a pump resistant to gasoline.

- 5) Install the fuel pump. <Ref. to FU(H4DOTC)-58, INSTALLATION, Fuel Pump.>

## 23. Fuel Tank

### A: REMOVAL

**WARNING:**

- Place “NO FIRE” signs near the working area.
- Be careful not to spill the fuel.

- 1) Set the vehicle on the lift.
- 2) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 3) Drain the fuel from the fuel tank. <Ref. to FU(H4DOTC)-50, DRAINING FUEL, PROCEDURE, Fuel.>
- 4) Remove the rear seat.
- 5) Disconnect the connector (A) of rear harness from fuel tank cord.
- 6) Push the grommet (B) which holds the fuel tank cord on floor panel into under the body.

- 7) Remove the rear crossmember. <Ref. to RS-17, REMOVAL, Rear Crossmember.>
- 8) Remove the canister. <Ref. to EC(H4DOTC)-7, REMOVAL, Canister.>
- 9) Disconnect the connector from the pressure control solenoid valve.

- 10) Loosen the clamp, and disconnect the fuel filler hose (A) and evaporation hose (B) from fuel filler pipe.

- 11) Move the clips, and disconnect the quick connector. <Ref. to FU(H4DOTC)-65, REMOVAL, Fuel Delivery, Return and Evaporation lines.>
- 12) Disconnect the fuel hoses.

- 13) Support the fuel tank with transmission jack, remove the bolts from bands and dismount the fuel tank from vehicle.

# Fuel Tank

## FUEL INJECTION (FUEL SYSTEMS)

### WARNING:

- A helper is required to perform this work.
- Fuel may be left in the side, which has no drain plug, of the fuel tank. In this case, the tank is imbalanced between right and left sides. Be careful not to drop it when removing.

### B: INSTALLATION

- 1) Support the fuel tank with transmission jack and push the fuel tank harness into the access hole with grommet.
- 2) Set the fuel tank and temporarily tighten the bolts of fuel tank bands.

### WARNING:

A helper is required to perform this work.

- 3) Insert the fuel filler hose (A) approx. 35 to 40 mm (1.38 to 1.57 in) over the lower end of fuel filler pipe and tighten the clamp.
- 4) Insert the evaporation hose (B) to the lower end of evaporation pipe, and hold the clamp and clip.

### CAUTION:

Do not allow clips to touch hose (A) and rear suspension crossmember.

- 5) Connect the fuel hoses, and hold them with clips and quick connector. <Ref. to FU(H4DOTC)-66, INSTALLATION, Fuel Delivery, Return and Evaporation lines.>

- 6) Connect the connector to the pressure control solenoid valve.
- 7) Install the canister. <Ref. to EC(H4DOTC)-7, INSTALLATION, Canister.>
- 8) Tighten the band mounting bolts.

### Tightening torque:

**33 N·m (3.4 kgf-m, 25 ft-lb)**

- 9) Install the rear crossmember. <Ref. to RS-17, INSTALLATION, Rear Crossmember.>

- 10) Connect the connector (A) to the fuel tank cord and plug the service hole with grommet (B).

- 11) Set the rear seat and floor mat.
- 12) Connect the connector to the fuel pump relay.

### **C: INSPECTION**

- 1) Make sure there are no cracks, holes, or other damage on the fuel tank.
- 2) Make sure that the fuel hoses and fuel pipes are not cracked and the connections are tightened firmly.

# Fuel Filler Pipe

FUEL INJECTION (FUEL SYSTEMS)

## 24. Fuel Filler Pipe

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Disconnect the ground cable from battery.
- 2) Open the fuel filler flap lid and remove the filler cap.
- 3) Remove the screws holding packing in place.

- 4) Lift up the vehicle.
- 5) Remove the rear right side wheel nuts.
- 6) Remove the rear right side wheel.

- 7) Drain the fuel from the fuel tank. <Ref. to FU(H4DOTC)-50, DRAINING FUEL, PROCEDURE, Fuel.>
- 8) Remove the fuel filler pipe protector.

- 9) Separate the evaporation hoses from the clip of fuel filler pipe.

- 10) Disconnect the evaporation hoses from fuel pipes.

- 11) Remove the bolts which hold the fuel filler pipe bracket on the body.

- 12) Loosen the clamp and separate the fuel filler hose (A) from the fuel filler pipe.

- 13) Move the clip and separate the evaporation hose (B).

- 14) Remove the fuel filler pipe to under side of the vehicle.

# Fuel Filler Pipe

FUEL INJECTION (FUEL SYSTEMS)

15) Remove the evaporation pipe together with clip from the body.

## B: INSTALLATION

- 1) Open the fuel filler flap lid.
- 2) Set the fuel saucer (A) with rubber packing (C) and insert the fuel filler pipe into hole from the inner side of apron.
- 3) Align the holes in fuel filler pipe neck and set the cup (B), and tighten the screws.

### NOTE:

If the edges of rubber packing are folded toward the inside, straighten it with a screwdriver.

4) Install the evaporation pipe.

5) Connect the evaporation hoses to fuel pipes.

6) Insert the fuel filler hose (A) approximately 35 to 40 mm (1.38 to 1.57 in) over the lower end of fuel filler pipe and tighten the clamp.

7) Insert the evaporation hose (B) approximately 25 to 30 mm (0.98 to 1.18 in) into the lower end of evaporation pipe and hold the clip.

### CAUTION:

Do not allow clips to touch evaporation hose (B) and rear suspension crossmember.

$L = 27.5 \pm 2.5 \text{ mm (1.083} \pm 0.098 \text{ in)}$

- (1) Hose
- (2) Clip
- (3) Pipe

8) Tighten the bolt which holds the fuel filler pipe bracket on the body.

# Fuel Filler Pipe

## FUEL INJECTION (FUEL SYSTEMS)

### Tightening torque:

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

9) Secure the evaporation hose to clip of fuel filler pipe.

10) Install the fuel filler pipe protector.

11) Install the rear right wheel.

12) Lower the vehicle.

13) Tighten the wheel nuts.

14) Connect the battery ground cable to battery.

### C: DISASSEMBLY

1) Move the clamp, and disconnect the evaporation hose from the joint pipe.

2) Remove the bolt which installs the joint pipe on the fuel filler pipe.

3) Disconnect the evaporation hose from the fuel filler pipe.

4) Remove the shut valve from the fuel filler pipe.  
<Ref. to EC(H4DOTC)-19, REMOVAL, Shut Valve.>

## D: ASSEMBLY

- 1) Install the shut valve on the fuel filler pipe. <Ref. to EC(H4DOTC)-7, INSTALLATION, Canister.>
- 2) Connect the evaporation hose to the fuel filler pipe.

- 3) Connect the evaporation hose to the evaporation pipe.

- 4) Install the evaporation pipe to the fuel filler pipe.

# Fuel Pump

FUEL INJECTION (FUEL SYSTEMS)

## 25. Fuel Pump

### A: REMOVAL

#### WARNING:

Place "NO FIRE" signs near the working area.

#### CAUTION:

Be careful not to spill the fuel.

#### NOTE:

The fuel pump assembly consists of a fuel pump and a fuel level sensor.

- 1) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.
- 3) Open the fuel filler flap lid and remove the fuel filler cap.
- 4) Remove the luggage floor mat. <Ref. to EI-61, REMOVAL, Luggage Floor Mat.>
- 5) Remove the service hole cover.

- 6) Disconnect the connector from fuel pump.

- 7) Disconnect the quick connector and then disconnect the fuel delivery hose and return hose. <Ref. to FU(H4DOTC)-65, REMOVAL, Fuel Delivery, Return and Evaporation lines.>

- 8) Move the clip and then disconnect the jet pump hose (A).

- 9) Remove the nuts which install the fuel pump assembly onto the fuel tank.

- 10) Take off the fuel pump assembly from the fuel tank.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Use a new gasket and retainer.

- (1) Ensure the sealing portion is free from fuel or foreign particles before installation.
- (2) Tighten the nuts in alphabetical sequence shown in figure to specified torque.

#### Tightening torque:

**4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

## C: INSPECTION

Connect the lead harness to the connector terminal of fuel pump and apply the battery power supply to check whether the pump operates.

### WARNING:

- Wipe off the fuel completely.
- Keep battery as far apart from fuel pump as possible.
- Be sure to turn the battery supply ON and OFF on the battery side.
- Do not run fuel pump for a long time under non-load condition.

## 26. Fuel Level Sensor

### A: REMOVAL

**WARNING:**

- Place “NO FIRE” signs near the working area.
- Be careful not to spill the fuel.

**NOTE:**

Fuel level sensor is built in fuel pump assembly.

- 1) Remove the fuel pump assembly. <Ref. to FU(H4DOTC)-58, REMOVAL, Fuel Pump.>
- 2) Disconnect the connector from the fuel pump bracket.

- 3) Remove the fuel temperature sensor.

- 4) Remove the bolt which installs the fuel level sensor on mounting bracket.

### B: INSTALLATION

Install in the reverse order of removal.

## 27. Fuel Sub Level Sensor

### A: REMOVAL

**WARNING:**

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Disconnect the ground cable from battery.
- 2) Lift up the vehicle.
- 3) Drain the fuel from the fuel tank. <Ref. to FU(H4DOTC)-50, DRAINING FUEL, PROCEDURE, Fuel.>
- 4) Remove the luggage floor mat. <Ref. to EI-61, REMOVAL, Luggage Floor Mat.>
- 5) Remove the service hole cover.

- 6) Disconnect the connector from the fuel sub level sensor.
- 7) Disconnect the fuel jet pump hose.

- 8) Remove the bolts which install the fuel sub level sensor on the fuel tank.

- 9) Remove the fuel sub level sensor.

### B: INSTALLATION

Install in the reverse order of removal.

**NOTE:**

Use a new gasket.

- (1) Ensure the sealing portion is free from fuel or foreign particles before installation.
- (2) Tighten the nuts and bolts to specified torque in the order as shown in the figure.

**Tightening torque:**

**4.4 N·m (0.45 kgf·m, 3.3 ft·lb)**

# Fuel Filter

## FUEL INJECTION (FUEL SYSTEMS)

### 28. Fuel Filter

#### A: REMOVAL

##### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill the fuel.

##### NOTE:

Fuel filter is built into the fuel pump assembly.

- 1) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Remove the fuel pump assembly. <Ref. to FU(H4DOTC)-58, REMOVAL, Fuel Pump.>
- 3) Remove the fuel pump. <Ref. to FU(H4DOTC)-58, REMOVAL, Fuel Pump.>
- 4) Separate the fuel filter from fuel pump.

- (A) Fuel filter  
(B) Fuel pump

- 5) Turn the filter holder around to the arrow direction, and then remove the filter.

#### B: INSTALLATION

##### CAUTION:

- If fuel hoses are damaged at the connecting portion, replace them with new ones.
- If clamps are badly damaged, replace them with new ones.

Install in the reverse order of removal.

#### C: INSPECTION

- 1) Check the inside of fuel filter for dirt and water sediment.
- 2) If it is clogged, or if replacement interval has been reached, replace it.

## 29. Fuel Cut Valve

### A: REMOVAL

- 1) Remove the fuel tank. <Ref. to FU(H4DOTC)-51, REMOVAL, Fuel Tank.>
- 2) Remove the protect cover.

- 3) Move the clip and disconnect the evaporation hose from fuel cut valve.

- 4) Remove the bolts which install the fuel cut valve.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

**Tightening torque:**

**4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

## 30. Fuel Damper Valve

### A: REMOVAL

1) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Remove the fuel damper valve from the fuel delivery line (A) and fuel return line (B).

### WARNING:

- Be careful not to spill fuel.
- Catch the fuel from hoses using a container or cloth.

### B: INSTALLATION

Install in the reverse order of removal.

### *Tightening torque:*

***1.25 N·m (0.13 kgf-m, 0.94 ft-lb)***

## 31. Fuel Delivery, Return and Evaporation lines

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 3) Open the fuel filler flap lid and remove the fuel filler cap.
- 4) Remove the floor mat. <Ref. to EI-60, REMOVAL, Floor Mat.>
- 5) Disconnect the fuel delivery pipes and hoses, and disconnect the fuel return pipes and hoses, evaporation pipes and hoses.

6) In engine compartment, detach the fuel delivery hoses, return hoses and evaporation hose.

- (1) Disconnect the quick connectors of fuel delivery line and return line by pushing the ST to the direction of arrow.

ST 42099AE000 CONNECTOR REMOVER

- (2) Remove the clip, and disconnect the evaporation hose from pipe.

### WARNING:

- Be careful not to spill fuel.
- Catch the fuel from hoses using a container or cloth.

- (A) Fuel delivery hose
- (B) Return hose
- (C) Evaporation hose

7) Lift up the vehicle.

# Fuel Delivery, Return and Evaporation lines

## FUEL INJECTION (FUEL SYSTEMS)

8) Disconnect the quick connector on fuel line.

- (1) Clean the pipe and connector, if they are covered with dust.
- (2) To prevent from damaging or entering foreign matter, wrap the pipes and connectors with plastic bag, etc.

- (3) Hold the connector (A) and push retainer (B) down.
- (4) Pull out the connector (A) from retainer (B).

- (A) Connector
- (B) Retainer
- (C) Pipe

### B: INSTALLATION

1) Connect the quick connector on fuel line.

#### CAUTION:

- Use a new retainer except for use of engine compartment.

- Make sure that the connected portion is not damaged or has dust. If necessary, clean seal surface of pipe.

- (A) Seal surface
- (B) Pipe

- (1) Set the new retainer (B) to connector (A).
- (2) Push the pipe into the connector completely.

#### NOTE:

At this time, two clicking sounds are heard.

- (A) Connector
- (B) Retainer
- (C) Pipe

#### CAUTION:

- Pull the connector to ensure it is connected securely.
- Ensure the two retainer pawls are engaged in their mating positions in the connector.

# Fuel Delivery, Return and Evaporation lines

FUEL INJECTION (FUEL SYSTEMS)

- Be sure to inspect hoses and their connections for any leakage of fuel.

- (A) Connector
- (B) Retainer
- (C) Pipe

2) Connect the fuel delivery hose and return hose by inserting them into the pipe for 20 to 25 mm (0.79 to 0.98 in) in length.

Type A: When the fitting length is specified.

Type B: When the fitting length is not specified.

$\varnothing : 2.5 \pm 1.5 \text{ mm } (0.098 \pm 0.059 \text{ in})$

$L : 22.5 \pm 2.5 \text{ mm } (0.886 \pm 0.098 \text{ in})$

### CAUTION:

Be sure to inspect hoses and their connections for any leakage of fuel.

- (1) Type A
- (2) Type B
- (3) Pipe
- (4) Clamp
- (5) Hose

3) Connect the evaporation hose by inserting it into the pipe for 15 to 20 mm (0.59 to 0.79 in) in length.

$L = 17.5 \pm 2.5 \text{ mm } (0.689 \pm 0.098 \text{ in})$

- (1) Hose
- (2) Clip
- (3) Pipe

### C: INSPECTION

1) Make sure that there are no cracks on the fuel pipes and fuel hoses.

2) Make sure that the fuel pipe and fuel hose connections are tight.

# Fuel System Trouble in General

FUEL INJECTION (FUEL SYSTEMS)

## 32. Fuel System Trouble in General

### A: INSPECTION

| Trouble and possible cause                     |  | Corrective action   |
|--|--|---|
| <b>1. Insufficient fuel supply to injector</b> |  |   |
| 1)   | Fuel pump does not operate.  |   |
|  | ○ Defective terminal contact.  | Inspect contact, especially ground, and tighten it securely.  |
|  | ○ Trouble in electromagnetic or electronic circuit parts.              | Replace the faulty parts.                                     |
| 2)   | Lowering of fuel pump function.  | Replace the fuel pump.  |
| 3)   | Clogged dust or water in the fuel filter.                              | Replace fuel filter, clean or replace fuel tank.              |
| 4)   | Clogged or bent fuel pipe or hose.                                     | Clean, correct or replace the fuel pipe or hose.              |
| 5)   | Air is mixed in the fuel system.                                       | Inspect or retighten each connection part.                    |
| 6)   | Clogged or bent air breather tube or pipe.                             | Clean, correct or replace air breather tube or pipe.          |
| 7)   | Damaged diaphragm of pressure regulator.                               | Replace.  |
| <b>2. Leakage or blow out of fuel</b>          |  |   |
| 1)   | Loosened joints of the fuel pipe.                                      | Retightening.   |
| 2)   | Cracked fuel pipe, hose and fuel tank.                                 | Replace.  |
| 3)   | Defective welding part on the fuel tank.                               | Replace.  |
| 4)   | Defective drain packing of the fuel tank.                              | Replace.  |
| 5)   | Clogged air breather tube or air vent tube.                            | Clean, correct or replace air breather tube or air vent tube. |
| <b>3. Gasoline smell inside of compartment</b> |  |   |
| 1)   | Loose joints at air breather tube, air vent tube and fuel filler pipe. | Retightening.   |
| 2)   | Defective packing air tightness on the fuel saucer.                    | Correct or replace the packing.                               |
| 3)   | Inoperative fuel pump modulator or circuit.                            | Replace.  |
| <b>4. Defective fuel meter indicator</b>       |  |   |
| 1)   | Defective operation of fuel level sensor.                              | Replace.  |
| 2)   | Defective operation of fuel meter.                                     | Replace.  |
| <b>5. Noise</b>                                |  |   |
| 1)   | Large operation noise or vibration of fuel pump.                       | Replace.  |

#### NOTE:

- When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. Fill fuel fully to prevent those problem. And also drain the water condensation from fuel filter.
- In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop below 0°C (32°F) throughout the winter season, use water removing agent in the fuel system to prevent freezing fuel system and accumulating water. Fill the water removing agent at the time when the fuel reduced at half to maintain the advantage.
- When water condensation is noticed in the fuel filter, drain the water from both the fuel filter and fuel tank or use water removing agent in the fuel tank.
- Before using a water removing agent, follow the cautions that noted on the bottle.

# General Description

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 1. General Description

### A: COMPONENT

#### 1. SECONDARY AIR PUMP

(1) Secondary air pump

**Tightening torque: N·m (kgf-m, ft-lb)**  
**T: 5 (0.5, 3.7)**

# General Description

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 2. SECONDARY AIR COMBI VALVE

- |                                  |                                  |
|----------------------------------|----------------------------------|
| (1) Gasket                       | (6) Clamp                        |
| (2) Secondary air combi valve LH | (7) Secondary air combi valve RH |
| (3) Gasket                       | (8) Gasket                       |
| (4) Pipe LH                      | (9) Pipe RH                      |
| (5) Air duct                     | (10) Gasket                      |

**Tightening torque: N-m (kgf-m, ft-lb)**

**T1: 9 (0.9, 6.6)**

**T2: 19 (1.9, 13.7)**

### B: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

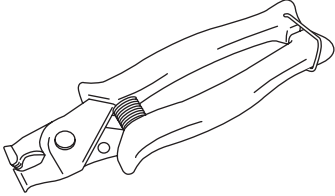

## General Description

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

### C: PREPARATION TOOL

#### 1. SPECIAL TOOL

| ILLUSTRATION  | TOOL NUMBER | DESCRIPTION  | REMARKS  |
|---|-------------|--------------|--|
| <br><br>ST18353AA000 | 18353AA000  | CLAMP PLIERS | <ul style="list-style-type: none"><li>• Used for removing and installing PCV hose.</li><li>• This tool is a general tool that is made by CAILLAU in France. (Code: 54.0.000.205)</li></ul> Tool number is fixed as special tool in order to obtain it as easily as SUBARU genuine parts. |

# Front Catalytic Converter

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 2. Front Catalytic Converter

### A: REMOVAL

- 1) Remove the center exhaust pipe.  
<Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>
- 2) Separate the front catalytic converter (A) from rear catalytic converter (B).

### B: INSTALLATION

NOTE:

- Replace the gaskets with new ones.
- Install in the reverse order of removal.

### C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

# Rear Catalytic Converter

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

## 3. Rear Catalytic Converter

### A: REMOVAL

- 1) Remove the center exhaust pipe.  
<Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>
- 2) Separate the rear catalytic converter (B) from front catalytic converter (A).

### B: INSTALLATION

NOTE:

- Replace the gaskets with new ones.
- Install in the reverse order of removal.

### C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

# Canister

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 4. Canister

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift up the vehicle.
- 3) Disconnect connector (A) from drain valve.
- 4) Disconnect evaporation hoses (B) and (C) from canister.

- 5) Disconnect quick connector (A) from canister.
- 6) Disconnect drain hoses (B) from canister.

- 7) Remove the canister from vehicle.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Replace the retainer of quick connector with new one.

**Tightening torque:**

**23 N·m (2.3 kgf-m, 17 ft-lb)**

### C: INSPECTION

Make sure the canister and canister hoses are not cracked or loose.

# Purge Control Solenoid Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 5. Purge Control Solenoid Valve

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector and hoses from purge control solenoid valve.
- 3) Remove the bolt which installs the purge control solenoid valve onto intake manifold.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**16 N·m (1.6 kgf·m, 11.6 ft·lb)**

#### NOTE:

Connect the evaporation hoses as shown in the figure.

- (A) To purge valve
- (B) To intake manifold

### C: INSPECTION

Make sure the hoses are not cracked or loose.

# Secondary Air Pump

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 6. Secondary Air Pump

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector (A) from secondary air pump.
- 3) Disconnect the hose (B) from secondary air pump.
- 4) Remove the bolt (C) which secures the secondary air pump to the vehicle.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

*5 N·m (0.5 kgf-m, 3.7 ft-lb)*

### C: INSPECTION

Make sure the hoses are not cracked or loose.

# Secondary Air Combi Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 7. Secondary Air Combi Valve

### A: REMOVAL

#### 1. SECONDARY AIR COMBI VALVE LH

- 1) Disconnect the ground cable from battery.
- 2) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 3) Disconnect the connector from secondary air combi valve LH.
- 4) Disconnect the air duct.
- 5) Disconnect the pipe LH.
- 6) Remove the secondary air combi valve LH.

- (A) Secondary air combi valve LH
- (B) Clamp
- (C) Air duct
- (D) Gasket
- (E) Pipe LH
- (F) Gasket

#### 2. SECONDARY AIR COMBI VALVE RH

- 1) Disconnect the ground cable from battery.
- 2) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 3) Remove the secondary air combi valve LH. <Ref. to EC(H4DOTC)-10, SECONDARY AIR COMBI VALVE LH, REMOVAL, Secondary Air Combi Valve.>
- 4) Remove the intake manifold. <Ref. to FU(H4DOTC)-14, REMOVAL, Intake Manifold.>
- 5) Disconnect the connector from secondary air combi valve RH.
- 6) Disconnect the pipe RH.

- 7) Remove the secondary air combi valve RH.

- (A) Secondary air combi valve RH
- (B) Clamp
- (C) Air duct
- (D) Gasket
- (E) Pipe RH

### B: INSTALLATION

#### 1. SECONDARY AIR COMBI VALVE LH

Install in the reverse order of removal.

#### NOTE:

Use a new gasket.

#### Tightening torque:

**T1: 9 N·m (0.9 kgf-m, 6.6 ft-lb)**

**T2: 19 N·m (1.9 kgf-m, 13.7 ft-lb)**

- (A) Secondary air combi valve LH
- (B) Clamp
- (C) Air duct
- (D) Gasket
- (E) Pipe LH
- (F) Gasket

## Secondary Air Combi Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

### 2. SECONDARY AIR COMBI VALVE RH

Install in the reverse order of removal.

NOTE:

Use a new gasket.

**Tightening torque:**

**T1: 9 N·m (0.9 kgf-m, 6.6 ft-lb)**

**T2: 19 N·m (1.9 kgf-m, 13.7 ft-lb)**

- (A) Secondary air combi valve RH
- (B) Clamp
- (C) Air duct
- (D) Gasket
- (E) Pipe RH

### C: INSPECTION

Make sure the hoses are not cracked or loose.

## Fuel Level Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### 8. Fuel Level Sensor

#### A: REMOVAL

For removal procedure, refer to FU(H4DOTC) section. <Ref. to FU(H4DOTC)-60, REMOVAL, Fuel Level Sensor.>

#### B: INSTALLATION

For installation procedure, refer to FU(H4DOTC) section. <Ref. to FU(H4DOTC)-60, INSTALLATION, Fuel Level Sensor.>

## 9. Fuel Temperature Sensor

### A: REMOVAL

Fuel temperature sensor and fuel level sensor are integrated into one unit; therefore, the removal procedure is the same as that for fuel level sensor. <Ref. to FU(H4DOTC)-60, REMOVAL, Fuel Level Sensor.>

### B: INSTALLATION

Fuel temperature sensor and fuel level sensor are integrated into one unit; therefore, the installation procedure is the same as that for fuel level sensor. <Ref. to FU(H4DOTC)-60, INSTALLATION, Fuel Level Sensor.>

## Fuel Sub Level Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### 10. Fuel Sub Level Sensor

#### **A: REMOVAL**

For removal procedure, refer to FU(H4DOTC) section. <Ref. to FU(H4DOTC)-61, REMOVAL, Fuel Sub Level Sensor.>

#### **B: INSTALLATION**

For installation procedure, refer to FU(H4DOTC) section. <Ref. to FU(H4DOTC)-61, INSTALLATION, Fuel Sub Level Sensor.>

# Fuel Tank Pressure Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 11. Fuel Tank Pressure Sensor

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel.

- 1) Remove the fuel tank. <Ref. to FU(H4DOTC)-51, REMOVAL, Fuel Tank.>
- 2) Remove the protector cover.

- 3) Disconnect the connector from fuel tank pressure sensor.
- 4) Release the clips which hold fuel pipes onto fuel tank.

- 5) Remove the bolt and nut which hold the fuel tank pressure sensor onto the bracket.

- 6) Disconnect the pressure hose from fuel tank pressure sensor.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**7.4 N·m (0.75 kgf-m, 5.4 ft-lb)**

#### Tightening torque:

**T: 4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

# Pressure Control Solenoid Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 12. Pressure Control Solenoid Valve

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Lift up the vehicle.
- 4) Remove the canister. <Ref. to EC(H4DOTC)-7, REMOVAL, Canister.>
- 5) Remove the bolt which installs the pressure control solenoid valve holding bracket on body.

- 6) Remove the pressure control solenoid valve with bracket.
- 7) Disconnect the connector from pressure control solenoid valve.

- 8) Disconnect the two evaporation hoses from pressure control solenoid valve.

- 9) Remove the pressure control solenoid valve from bracket.

- 10) Disconnect the pressure control valve hose from pressure control solenoid valve.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**  
**25 N·m (2.6 kgf·m, 18.8 ft·lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

## **Drain Filter**

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### **13.Drain Filter**

#### **A: SPECIFICATION**

Drain filter is built in the canister, and it is a part which cannot be disassembled.

# Vent Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 14. Vent Valve

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel.

- 1) Remove the fuel tank. <Ref. to FU(H4DOTC)-51, REMOVAL, Fuel Tank.>
- 2) Remove the protector cover.

- 3) Remove the clips, and disconnect the hoses from vent valve.

- 4) Remove the nuts and then remove the vent valve.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Replace the gasket with a new one.

#### Tightening torque:

**T: 4.4 N·m (0.45 kgf·m, 3.3 ft·lb)**

(A) Gasket

#### Tightening torque:

**T: 4.4 N·m (0.45 kgf·m, 3.3 ft·lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

# Shut Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 15. Shut Valve

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel.

1) Remove the fuel filler pipe.

<Ref. to FU(H4DOTC)-54, REMOVAL, Fuel Filler Pipe.>

2) Disconnect the evaporation hoses from shut valve.

3) Remove the shut valve from fuel filler pipe.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**4.5 N·m (0.46 kgf-m, 3.3 ft-lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

## Drain Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### 16.Drain Valve

#### A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Disconnect the ground cable from battery.
- 3) Lift up the vehicle.
- 4) Remove the canister. <Ref. to EC(H4DOTC)-7, REMOVAL, Canister.>
- 5) Remove clip (A), and then remove drain valve (B) from canister.
- 6) Remove the filter from drain valve (B).

#### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

- Assemble the drain valve filter without any clearance.
- Make sure the packing in the groove before assembling drain valve to canister.
- Replace the clip with a new one.

#### C: INSPECTION

- 1) Make sure that all hoses are installed securely.
- 2) Make sure that hoses are not cracked or loose.

## 17.PCV Hose Assembly

### A: REMOVAL

#### CAUTION:

Removal is not allowed except for the damage of PCV hose, diagnosis connector and PCV valve.

- 1) Remove the intake manifold.  
<Ref. to FU(H4DOTC)-14, REMOVAL, Intake Manifold.>
- 2) Clip the protrusion of clamp after aligning the concave portion of ST with protrusion of clamp, and then unlock the lock.
- 3) Remove the PCV hose assembly.  
ST 18353AA000 CLAMP PLIERS

### B: INSTALLATION

#### NOTE:

Replace the clamp with a new one.

- 1) Install the PCV hose assembly, and then lock the clamp with protrusion of clamp clipped by pliers.  
ST 18353AA000 CLAMP PLIERS

- 2) Install the intake manifold.  
<Ref. to FU(H4DOTC)-17, INSTALLATION, Intake Manifold.>

# PCV Hose Assembly

**T2: 4.9 (0.50, 3.6)**

**T3: 16 (1.6, 11.6)**

**T4: 33 (3.4, 24.6)**

**T5: 29 (3.0, 21.7)**

## General Description

### INTAKE (INDUCTION)

---

#### **B: CAUTION**

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensor or units, be sure to disconnect the ground cable from battery.

## 2. Air Cleaner Element

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from mass air flow and intake air temperature sensor.

- 3) Loosen the clamp (A) which connects the air intake boot and intake duct.
- 4) Remove the clip (B) from air cleaner upper cover.

- 5) Remove the air cleaner upper cover.
- 6) Remove the air cleaner element.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Before installing the air cleaner upper cover, align the holes with protruding portions of air cleaner lower case, then secure the upper cover to the lower case.

### C: INSPECTION

Replace it if excessively damaged or dirty.

# Air Cleaner Case

INTAKE (INDUCTION)

## 3. Air Cleaner Case

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from mass air flow and intake air temperature sensor.

- 3) Loosen the clamp (A) which connects the air intake boot and intake duct.
- 4) Remove the clip (B) from air cleaner upper cover.

- 5) Remove the air cleaner upper cover.
- 6) Remove the air cleaner element.
- 7) Remove the air cleaner lower case.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**33 N·m (3.4 kgf-m, 24.6 ft-lb)**

#### NOTE:

Before installing the air cleaner upper cover, align the holes with protruding portions of air cleaner lower case, then secure the upper cover to the lower case.

### C: INSPECTION

Inspect for cracks and loose connections.

## 4. Air Intake Duct

### A: REMOVAL

Remove the bolts which install the air intake duct on front side of body.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**7.5 N·m (0.76 kgf-m, 55 ft-lb)**

### C: INSPECTION

- 1) Inspect for cracks and loose connections.
- 2) Inspect that no foreign objects are mixed in air intake duct.

## 5. Intake Duct

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the intake manifold. <Ref. to FU(H4DOTC)-14, REMOVAL, Intake Manifold.>
- 3) Remove the sensor, engine harness and fuel pipe attached to intake manifold. <Ref. to FU(H4DOTC)-19, DISASSEMBLY, Intake Manifold.>
- 4) Remove the intake duct from intake manifold.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**19 N·m (1.9 kgf·m, 13.7 ft·lb)**

## 6. Intercooler

### A: REMOVAL

1) Disconnect the PCV hoses from PCV pipe.

2) Remove the air by-pass valve from intercooler.

3) Remove the bolts which secure the intercooler to bracket.

4) Loosen the clamp (A) which connects the turbocharger to intercooler ducts.

5) Loosen the clamp (B) which connects the throttle body to intercooler.

6) Remove the intercooler air duct from turbocharger.

7) Remove the intercooler from throttle body.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**16 N·m (1.6 kgf-m, 11.6 ft-lb)**

# Intercooler

INTAKE (INDUCTION)

## C: DISASSEMBLY

1) Remove the intercooler ducts from intercooler.

2) Separate the intercooler ducts.

## D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

Do not let the O-ring bite.

**Tightening torque:**

**16 N·m (1.6 kgf·m, 11.6 ft·lb)**

## 7. Turbocharger

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Remove the center exhaust pipe. <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>
- 4) Lower the vehicle.
- 5) Disconnect the turbocharger joint pipe from turbo-charger.

- 6) Disconnect the engine coolant hose which is connected to coolant filler tank.

- 7) Loosen the clamp which secures the turbocharger to intake duct.

- 8) Remove the bolt which secures the bracket of oil inlet pipe to turbocharger.

- 9) Remove the oil inlet pipe from turbocharger.

- (A) Oil inlet pipe  
(B) Metal gasket

- 10) Disconnect the engine coolant hose.
- 11) Remove the turbocharger bracket.

- 12) Disconnect the oil outlet hose from pipe.

- 13) Take out the turbocharger from engine compartment.

# Turbocharger

## INTAKE (INDUCTION)

### B: INSTALLATION

#### CAUTION:

When replacing the turbocharger, check the filter part of union screw for clogging. <Ref. to LU(H4DOTC)-20, INSPECTING UNION SCREW WITH FILTER, INSPECTION, Oil Pipe.>

1) Connect the oil outlet hose to outlet pipe.

2) Install the turbocharger to intake duct.

#### Tightening torque:

**3 N·m (0.3 kgf-m, 2.2 ft-lb)**

3) Install the oil inlet pipe to turbocharger.

#### NOTE:

Replace the gasket with new one.

#### Tightening torque:

**T1: 16 N·m (1.6 kgf-m, 11.6 ft-lb)**

**T2: 29 N·m (3.0 kgf-m, 21.7 ft-lb)**

**T3: 4.9 N·m (0.50 kgf-m, 3.6 ft-lb)**

- (A) Oil inlet pipe
- (B) Metal gasket

4) Install the joint pipe to turbocharger.

#### NOTE:

Replace the gasket with a new one.

#### Tightening torque:

**35 N·m (3.6 kgf-m, 25.8 ft-lb)**

5) Connect the engine coolant hose.

6) Install the turbocharger bracket.

#### Tightening torque:

**33 N·m (3.4 kgf-m, 24.6 ft-lb)**

7) Connect the engine coolant hose which is connected to coolant filler tank.

8) Lift-up the vehicle.

9) Install the center exhaust pipe. <Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.>

## 8. Air By-pass Valve

### A: REMOVAL

1) Remove the air by-pass valve from intercooler.

2) Disconnect the air by-pass hoses from air by-pass valve.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Do not let the O-ring bite.

**Tightening torque:**

**16 N·m (1.6 kgf·m, 11.6 ft·lb)**

# Resonator Chamber

INTAKE (INDUCTION)

## 9. Resonator Chamber

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>
- 3) Remove the air cleaner lower case. <Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>
- 4) Remove the resonator chamber mounting nut on right side of engine compartment.

- 5) Remove the front wheel RH, and lift up the vehicle.
- 6) Remove the front mud guard RH.
- 7) Remove the resonator chamber from the inside front fender.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

### C: INSPECTION

- 1) Inspect for cracks and loose connections.
- 2) Inspect that no foreign objects are mixed in resonator chamber.

| (8) Piston                   | (16) Woodruff key           |                                |

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 52 (5.3, 38.4)**

**T2: 72 (7.3, 52.8)**

## 6. ENGINE MOUNTING

ME-00706

- (1) Heat shield cover
- (2) Front cushion rubber

- (3) Front engine mounting bracket

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 35 (3.6, 25.8)**

**T2: 42 (4.3, 30.9)**

**T3: 85 (8.7, 62.7)**

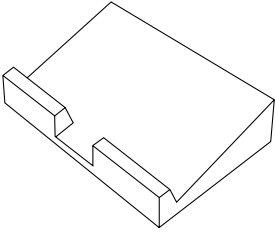

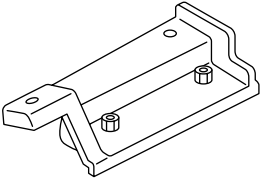

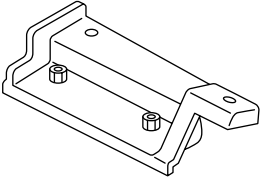

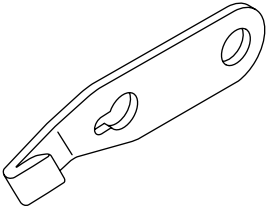

## **C: CAUTION**

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- All parts should be thoroughly cleaned, paying special attention to the engine oil passages, pistons and bearings.
- Rotating parts and sliding parts such as piston, bearing and gear should be coated with oil prior to assembly.
- Be careful not to let oil, grease or coolant contact the timing belt, clutch disc and flywheel.
- All removed parts, if to be reused, should be reinstalled in the original positions and directions.
- Bolts, nuts and washers should be replaced with new ones as required.
- Even if necessary inspections have been made in advance, proceed with assembly work while making rechecks.
- Remove or install the engine in an area where chain hoists, lifting devices, etc. are available for ready use.
- Be sure not to damage coated surfaces of body panels with tools or stain seats and windows with coolant or oil. Place a cover over fenders, as required, for protection.
- Prior to starting work, prepare the following:  
Service tools, clean cloth, containers to catch coolant and oil, wire ropes, chain hoist, transmission jacks, etc.
- Lift-up or lower the vehicle when necessary. Make sure to support the correct positions.

## 2. GENERAL TOOL

| TOOL NAME         | REMARKS                         |
|-------------------|---------------------------------|
| Compression gauge | Used for measuring compression. |

## E: PROCEDURE

It is possible to conduct the following service procedures with engine on the vehicle, however, the procedures described in this section are based on the condition that the engine is removed from the vehicle.

- V-belt
- Timing Belt
- Camshaft
- Cylinder Head

## 2. Compression

### A: INSPECTION

**CAUTION:**

**After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.**

- 1) After warming-up the engine, turn the ignition switch to OFF.
- 2) Make sure that the battery is fully charged.
- 3) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 4) Remove all the spark plugs. <Ref. to IG(H4DOTC)-4, REMOVAL, Spark Plug.>
- 5) Fully open the throttle valve.
- 6) Check the starter motor for satisfactory performance and operation.
- 7) Fix the compression gauge securely against spark plug hole.

**NOTE:**

The screw of screw-in type compression gauge (put into cylinder head spark plug hole) should be less than 18 mm (0.71 in) long.

- 8) Crank the engine by means of starter motor, and then read the maximum value on the gauge when the gauge needle is steady.

- 9) Perform at least two measurements per cylinder, and make sure that the values are correct.

**Compression (at 200 — 300 rpm):**

**Standard:**

**981 — 1,177 kPa (10 — 12 kgf/cm<sup>2</sup>, 142 — 171 psi)**

**Difference between cylinders**

**Less than 49 kPa (0.5 kgf/cm<sup>2</sup>, 7 psi)**

# Idle Speed

MECHANICAL

## 3. Idle Speed

### A: INSPECTION

1) Before checking the idle speed, check the following:

(1) Ensure the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and that the hoses are connected properly.

(2) Ensure the malfunction indicator light does not illuminate.

2) Warm-up the engine.

3) Stop the engine, and then turn the ignition switch to OFF.

4) Insert the cartridge to Subaru Select Monitor.

5) Connect the Subaru Select Monitor to data link connector.

6) Turn the ignition switch to ON, and Subaru Select Monitor power switch to ON.

7) Select the {2. Each System Check} in Main Menu.

8) Select the {Engine Control System} in Selection Menu.

9) Select the {1. Current Data Display & Save} in Engine Control System Diagnosis.

10) Select the {1. 12 Data Display} in Data Display Menu.

11) Start the engine, and then read the engine idle speed.

12) Check the idle speed when unloaded. (With headlights, heater fan, rear defroster, radiator fan, air conditioning, etc. OFF)

**Idle speed [No load and gears in neutral]:**

**700±100 rpm**

13) Check the idle speed when loaded. (Turn the air conditioning switch to “ON” and operate the compressor for at least 1 minute before measurement.)

**Idle speed [A/C “ON”, no load and gears in neutral]:**

**When the A/C refrigerant pressure is low**

**MT: 725±100 rpm**

**AT: 750±100 rpm**

**When the A/C refrigerant pressure is high**

**MT: 800±100 rpm**

**AT: 825±100 rpm**

**NOTE:**

As idle speed is controlled by the automatic adjustment type, it can not be adjusted manually. If the idle speed is out of specifications, refer to General On-board Diagnosis Table under “Engine Control System”. <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.>

## 4. Ignition Timing

### A: INSPECTION

**CAUTION:**

**After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.**

- 1) Before checking the ignition timing speed, check the following:
  - (1) Ensure the air cleaner element is free from clogging, spark plugs are in good condition, and that hoses are connected properly.
  - (2) Ensure the malfunction indicator light does not illuminate.
- 2) Warm-up the engine.
- 3) Stop the engine, and then turn the ignition switch to OFF.
- 4) Insert the cartridge to Subaru Select Monitor.
- 5) Connect the Subaru Select Monitor to data link connector.

- 6) Turn the ignition switch to ON, and Subaru Select Monitor power switch to ON.
- 7) Select the {2. Each System Check} in Main Menu.
- 8) Select the {Engine Control System} in Selection Menu.
- 9) Select the {1. Current Data Display & Save} in Engine Control System Diagnosis.
- 10) Select the {1. 12 Data Display} in Data Display Menu.
- 11) Start the engine and check the ignition timing at idle speed.

**Ignition timing [BTDC/rpm]:**

**$17^{\circ} \pm 10^{\circ} / 700$**

If the timing is not correct, check the ignition control system. Refer to Engine Control System. <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.>

# Intake Manifold Vacuum

MECHANICAL

## 5. Intake Manifold Vacuum

### A: INSPECTION

- 1) Warm-up the engine.
- 2) Disconnect the brake vacuum hose from the intake manifold, and then install the vacuum gauge.
- 3) Keep the engine at the idle speed, and then read the vacuum gauge indication.

By observing the gauge needle movement, the internal condition of engine can be diagnosed as described below.

**Vacuum pressure (at idling, A/C "OFF"):**  
**Less than -60.0 kPa (-450 mmHg, -17.72 inHg)**

| Diagnosis of engine condition by measurement of intake manifold vacuum  |   |
|---|---|
| Vacuum gauge indication   | Possible engine condition   |
| 1. Needle is steady but lower than normal position. This tendency becomes more evident as engine temperature rises.                                     | Leakage around intake manifold gasket or disconnection or damaged vacuum hose |
| 2. Needle intermittently drops to position lower than normal position.  | Leakage around cylinder   |
| 3. Needle drops suddenly and intermittently from normal position.   | Sticky valves   |
| 4. When engine speed is gradually increased, needle begins to vibrate rapidly at certain speed, and then vibration increases as engine speed increases. | Weak or broken valve springs  |
| 5. Needle vibrates above and below normal position in narrow range.   | Defective ignition system or throttle chamber idle adjustment                 |

## 6. Engine Oil Pressure

### A: INSPECTION

- 1) Remove the oil pressure switch. <Ref. to LU(H4DOTC)-18, REMOVAL, Oil Pressure Switch.>
- 2) Connect the oil pressure gauge hose to cylinder block.
- 3) Connect the battery ground cable to battery.
- 4) Start the engine, and then measure the oil pressure.

#### **Oil pressure:**

**98 kPa (1.0 kgf/cm<sup>2</sup>, 14 psi) or more at 600 rpm**

**294 kPa (3.0 kgf/cm<sup>2</sup>, 43 psi) or more at 5,000 rpm**

#### **CAUTION:**

- If the oil pressure is out of specification, check oil pump, oil filter and lubrication line. <Ref. to LU(H4DOTC)-24, INSPECTION, Engine Lubrication System Trouble in General.>
- If the oil pressure warning light is turned ON and oil pressure is in specification, replace the oil pressure switch. <Ref. to LU(H4DOTC)-24, INSPECTION, Engine Lubrication System Trouble in General.>

#### **NOTE:**

The specified data is based on an engine oil temperature of 80°C (176°F).

- 5) After measuring the oil pressure, install the oil pressure switch. <Ref. to LU(H4DOTC)-18, INSTALLATION, Oil Pressure Switch.>

#### **Tightening torque:**

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

## 7. Fuel Pressure

### A: INSPECTION

#### WARNING:

Before removing the fuel pressure gauge, release the fuel pressure.

#### NOTE:

If out of specification, check or replace the pressure regulator and pressure regulator vacuum hose.

1) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Disconnect the fuel delivery hoses from fuel damper, and then connect the fuel pressure gauge.

3) Connect the connector of fuel pump relay.

4) Start the engine.

5) Measure the fuel pressure while disconnecting the pressure regulator vacuum hose from intake manifold.

#### **Fuel pressure:**

**Standard: 284 — 314 kPa (2.9 — 3.2 kgf/cm<sup>2</sup>, 41 — 46 psi)**

6) After connecting the pressure regulator vacuum hose, measure the fuel pressure.

#### **Fuel pressure:**

**Standard: 230 — 260 kPa (2.35 — 2.65 kgf/cm<sup>2</sup>, 33 — 38 psi)**

#### NOTE:

The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kgf/cm<sup>2</sup>, 1 to 3 psi) higher than standard values during high-altitude operations.

## 8. Valve Clearance

### A: INSPECTION

Inspection and adjustment of the valve clearance should be performed while engine is cold.

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>
- 4) Remove the bolts which secure the timing belt cover (RH).
- 5) Lift-up the vehicle.
- 6) Remove the under cover.
- 7) Loosen the remaining bolts which secure the timing belt cover (RH), and then remove the timing belt cover.
- 8) Lower the vehicle.
- 9) When inspecting the #1 and #3 cylinders:
  - (1) Pull out the engine harness connector with bracket from air cleaner upper cover.

- (2) Remove the air cleaner case. <Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>
- (3) Disconnect the ignition coil connector.
- (4) Remove the ignition coil.
- (5) Place a suitable container under the vehicle.
- (6) Disconnect the PCV hose from rocker cover (RH).
- (7) Remove the bolts, and then remove the rocker cover (RH).
- 10) When inspecting the #2 and #4 cylinders:
  - (1) Disconnect the battery cable, and then remove the battery and battery carrier.
  - (2) Remove the secondary air pump. <Ref. to EC(H4DOTC)-9, REMOVAL, Secondary Air Pump.>
  - (3) Disconnect the ignition coil connector.
  - (4) Remove the ignition coil.
  - (5) Place a suitable container under the vehicle.
  - (6) Disconnect the PCV hose from rocker cover (LH).
  - (7) Remove the bolts, and then remove the rocker cover (LH).

- 11) Turn the crank pulley clockwise until arrow mark on the cam sprocket is set to position shown in the figure.

**NOTE:**

Turn the crankshaft using socket wrench.

- 12) Measure the #1 cylinder intake valve and #3 cylinder exhaust valve clearance by using thickness gauge (A).

**NOTE:**

- Insert the thickness gauge (A) in as horizontal a direction as possible with respect to the shim.
- Measure the exhaust valve clearances while lifting-up the vehicle.

**Valve clearance:**

**STD**

**Intake:  $0.20 \pm 0.02$  mm ( $0.0079 \pm 0.0008$  in)**

**Exhaust:  $0.35 \pm 0.02$  mm ( $0.0138 \pm 0.0008$  in)**

**NOTE:**

If the measured value is not within specification, take notes of the value in order to adjust the valve clearance later on.

- 13) If necessary, adjust the valve clearance. <Ref. to ME(H4DOTC)-30, ADJUSTMENT, Valve Clearance.>

# Valve Clearance

## MECHANICAL

14) Further turn the crank pulley clockwise. Using the same procedures described previously, and then measure the valve clearances again.

(1) Set the arrow mark on cam sprocket to position shown in the figure, and then measure the #2 cylinder exhaust valve and #3 cylinder intake valve clearances.

(2) Set the arrow mark on cam sprocket to position shown in the figure, and then measure the #2 cylinder intake valve and #4 cylinder exhaust valve clearances.

(3) Set the arrow mark on cam sprocket to position shown in the figure, and then measure the #1 cylinder exhaust valve and #4 cylinder intake valve clearances.

15) After inspection, install the related parts in the reverse order of removal.

**Tightening torque:**  
**33 N·m (3.4 kgf-m, 25 ft-lb)**

## B: ADJUSTMENT

### CAUTION:

**Adjustment of the valve clearance should be performed while engine is cold.**

1) Measure all valve clearances.

<Ref. to ME(H4DOTC)-29, INSPECTION, Valve Clearance.>

### NOTE:

Record each valve clearance after it has been measured.

2) Remove the camshaft. <Ref. to ME(H4DOTC)-55, REMOVAL, Camshaft.>

3) Remove the valve lifter.

4) Measure the thickness of valve lifter with a micrometer.

5) Select a shim of suitable thickness using measured valve clearance and valve lifter thickness, by referring to the following table.

# Valve Clearance

MECHANICAL

|                                       |
|---------------------------------------|
| Unit: mm                              |
| Intake valve: $S = (V + T) - 0.20$    |
| Exhaust valve: $S = (V + T) - 0.35$   |
| S: Required thickness of valve lifter |
| V: Measured valve clearance           |
| T: Used valve lifter thickness        |

## Valve Clearance

### MECHANICAL

---

- 6) Inspect all valves for clearance again at this stage. If the valve clearance is not correct, repeat the procedure over again from the first step.
- 7) After inspection, install the related parts in the reverse order of removal.

## 9. Engine Assembly

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Open the front hood fully, and then support with the hood stay.
- 3) Collect the refrigerant from A/C system. <Ref. to AC-20, Refrigerant Recovery Procedure.>
- 4) Release the fuel pressure. <Ref. to FU(H4DOTC)-50, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

- (1) Disconnect the fuel pump relay connector.

- (2) Start the engine, and run until stalls.
- (3) After the engine stalls, crank it for 5 seconds more.
- (4) Turn the ignition switch to OFF.

- 5) Remove the fuel filler cap.
- 6) Disconnect the ground cable from battery.
- 7) Remove the radiator from vehicle. <Ref. to CO(H4DOTC)-23, REMOVAL, Radiator.>
- 8) Remove the coolant filler tank. <Ref. to CO(H4DOTC)-33, REMOVAL, Coolant Filler Tank.>
- 9) Remove the secondary air pump. <Ref. to EC(H4DOTC)-9, REMOVAL, Secondary Air Pump.>
- 10) Disconnect the A/C pressure hoses from A/C compressor.

- 11) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>

- 12) Disconnect the following connectors and cable.
  - (1) Engine harness connector

- (2) Engine ground terminal

- (3) Engine harness connector

- (4) Generator connector, terminal and A/C compressor connectors

- (A) A/C compressor connector
- (B) Generator connector and terminal

# Engine Assembly

MECHANICAL

(5) Power steering switch connector

(4) Remove the reservoir tank from bracket by pulling it upward.

13) Disconnect the following hoses.

(1) Brake booster vacuum hose

(2) Heater inlet and outlet hose

14) Remove the power steering pump.

(1) Remove the front side V-belt. <Ref. to ME(H4DOTC)-41, FRONT SIDE BELT, REMOVAL, V-belt.>

(2) Remove the power steering pipe with bracket from fuel pipe protector RH.

(3) Remove the power steering pump.

(5) Place the power steering pump on right side wheel apron.

15) Lift-up the vehicle.

16) Remove the ATF cooler pipe from frame. (AT model)

17) Remove the center exhaust pipe.

<Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>

18) Remove the nuts which hold the lower side of transmission to engine.

19) Remove the nuts which install the front cushion rubber onto front crossmember.

20) Separate the clutch release fork from release bearing. (MT model) <Ref. to CL-18, REMOVAL, Release Bearing and Lever.>

21) Separate the torque converter clutch from drive plate. (AT model)

- (1) Lower the vehicle.
- (2) Remove the service hole plug.
- (3) Remove the bolts which hold the torque converter clutch to drive plate.
- (4) While rotating the crank pulley in the direction of engine rotation little by little using a socket wrench, remove all the bolts.

22) Remove the pitching stopper.

23) Using ST, disconnect fuel hoses from fuel pipes. <Ref. to FU(H4DOTC)-65, REMOVAL, Fuel Delivery, Return and Evaporation lines.>

**CAUTION:**

- Be careful not to spill fuel.
- Catch fuel from hoses using a container or cloth.

ST 42099AE000 CONNECTOR REMOVER

- (A) Fuel delivery hose
- (B) Return hose
- (C) Evaporation hose

24) Support the engine with a lifting device and wire ropes.

25) Support the transmission with a garage jack.

**CAUTION:**

Before moving the engine away from transmission, check to be sure no work has been overlooked. Doing this is very important in order to facilitate re-installation and because transmission lowers under its own weight.

26) Separation of the engine and transmission

- (1) Remove the starter. <Ref. to SC(H4SO)-8, REMOVAL, Starter.>
- (2) Install the ST to torque converter clutch case. (AT model)

# Engine Assembly

MECHANICAL

ST 498277200 STOPPER SET

(3) Remove the bolts which hold the right upper side of transmission to engine.

- 27) Remove the engine from vehicle.
- (1) Slightly raise the engine.
  - (2) Raise the transmission with garage jack.
  - (3) Move the engine horizontally until the mainshaft is withdrawn from clutch cover.
  - (4) Slowly move the engine away from engine compartment.

### NOTE:

Be careful not to damage adjacent parts or body panels with crank pulley, oil pressure gauge, etc.

28) Remove the front cushion rubbers.

## B: INSTALLATION

- 1) Install the clutch release fork and bearing to transmission. (MT model) <Ref. to CL-18, INSTALLATION, Release Bearing and Lever.>
- 2) Install the front cushion rubbers to engine.

### Tightening torque:

**35 N·m (3.6 kgf-m, 25.8 ft-lb)**

- 3) Install the engine onto transmission.
  - (1) Position the engine in engine compartment, and then align it with the transmission.

### NOTE:

Be careful not to damage the adjacent parts or body panels with crank pulley, oil pressure gauge, etc.

- (2) Apply a small amount of grease to the splines of mainshaft. (MT model)

- 4) Tighten the bolts which hold the right upper side of transmission to engine.

### Tightening torque:

**50 N·m (5.1 kgf-m, 37 ft-lb)**

- 5) Remove the lifting device and wire ropes.

- 6) Remove the garage jack.
- 7) Install the pitching stopper.

### Tightening torque:

**T1: 50 N·m (5.1 kgf-m, 37 ft-lb)**

**T2: 58 N·m (5.9 kgf-m, 43 ft-lb)**

- 8) Remove the ST from torque converter clutch case. (AT model)

### NOTE:

Be careful not to drop the ST into torque converter clutch case when removing ST.

ST 498277200 STOPPER SET

- 9) Install the starter. <Ref. to SC(H4SO)-8, INSTALLATION, Starter.>

10) Install the torque converter clutch onto drive plate. (AT model)

- (1) Tighten the bolts which hold the torque converter clutch to drive plate.
- (2) While rotating the crank pulley in the direction of engine rotation little by little using a socket wrench, remove all the bolts.

**CAUTION:**

Be careful not to drop bolts into the torque converter clutch housing.

**Tightening torque:**

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

(3) Install the service hole plug.

11) Install the power steering pump on bracket.

- (1) Install the power steering tank on bracket.

(2) Install the power steering pump.

**Tightening torque:**

**20.1 N·m (2.05 kgf·m, 14.8 ft·lb)**

(3) Install the power steering pipe bracket on intake manifold RH.

(4) Install the front side V-belt, and adjust it. <Ref. to ME(H4DOTC)-41, FRONT SIDE BELT, INSTALLATION, V-belt.>

12) Lift-up the vehicle.

13) Tighten the nuts which hold the lower side of transmission to engine.

**Tightening torque:**

**50 N·m (5.1 kgf·m, 37 ft·lb)**

14) Tighten the nuts which install the front cushion rubber onto crossmember.

**Tightening torque:**

**85 N·m (8.7 kgf·m, 62.7 ft·lb)**

**NOTE:**

Make sure the front cushion rubber mounting bolts (A) and locator (B) are securely installed.

15) Install the ATF cooler pipe to frame. (AT model)

16) Install the center exhaust pipe.

<Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.>

# Engine Assembly

## MECHANICAL

- 17) Lower the vehicle.
- 18) Connect the following hoses:
  - (1) Fuel delivery hose, return hose and evaporation hose
  - (2) Heater inlet and outlet hoses
  - (3) Brake booster vacuum hose
- 19) Connect the following connectors and terminals:
  - (1) Engine ground terminal
  - (2) Engine harness connectors
  - (3) Generator connector and terminal
  - (4) A/C compressor connectors
  - (5) Power steering switch connector
- 20) After connecting each cable, adjust them.
- 21) Install the air intake system.
  - (1) Install the intercooler.  
<Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>
  - (2) Install the air cleaner element and air cleaner upper cover.
  - (3) Install the engine harness connector bracket.
  - (4) Install the filler hose to air cleaner case.
- 22) Install the A/C pressure hoses.

### NOTE:

Use new O-rings.

### **Tightening torque:**

**15 N·m (1.5 kgf·m, 10.8 ft·lb)**

- 23) Install the radiator. <Ref. to CO(H4DOTC)-24, INSTALLATION, Radiator.>
- 24) Install the coolant filler tank.  
<Ref. to CO(H4DOTC)-33, INSTALLATION, Coolant Filler Tank.>
- 25) Install the secondary air pump. <Ref. to EC(H4DOTC)-9, INSTALLATION, Secondary Air Pump.>
- 26) Install the battery in the vehicle, and then connect the cables.
- 27) Fill engine coolant.  
<Ref. to CO(H4DOTC)-17, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 28) Charge the A/C system with refrigerant.  
<Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

## 10.Engine Mounting

### A: REMOVAL

- 1) Remove the engine assembly. <Ref. to ME(H4DOTC)-33, REMOVAL, Engine Assembly.>
- 2) Remove the engine mounting from engine assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

##### *Engine mounting*

*35 N·m (3.6 kgf-m, 25.8 ft-lb)*

### C: INSPECTION

Make sure there are no cracks or other damage.

## 11. Preparation for Overhaul

### A: PROCEDURE

1) After removing the engine from body, secure it in the ST shown below.

|     |           |                            |
|-----|-----------|----------------------------|
| ST1 | 498457000 | ENGINE STAND ADAPTER<br>RH |
| ST2 | 498457100 | ENGINE STAND ADAPTER<br>LH |
| ST3 | 499817100 | ENGINE STAND               |

2) In this section the procedures described under each index are all connected and stated in order. It will be the complete procedure for overhauling of the engine itself when you go through all steps in the process.

Therefore, in this section, to conduct the particular procedure within the flow of a section, you need to go back and conduct the procedure described previously in order to do that particular procedure.

## 12.V-belt

### A: REMOVAL

#### NOTE:

Perform the following procedures with the engine installed to the body.

#### 1. FRONT SIDE BELT

- 1) Loosen the lock bolt (A).
- 2) Loosen the slider bolt (B).
- 3) Remove the front side belt (C).

#### 2. REAR SIDE BELT

- 1) Loosen the lock nut (A).
- 2) Loosen the slider bolt (B).

- 3) Remove the A/C belt.
- 4) Remove the A/C belt tensioner.

### B: INSTALLATION

#### 1. FRONT SIDE BELT

#### NOTE:

Wipe off any oil or water on the belt and pulley.

- 1) Install the V-belt (C), and tighten the slider bolt so as to obtain the specified belt tension. <Ref. to ME(H4DOTC)-41, INSPECTION, V-belt.>
- 2) Tighten the lock bolt (A).
- 3) Tighten the slider bolt (B).

#### Tightening torque:

##### Lock bolt through bolt

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

##### Slider bolt:

**8 N·m (0.8 kgf-m, 5.9 ft-lb)**

#### 2. REAR SIDE BELT

- 1) Install the belt, and tighten the slider bolt (B) so as to obtain the specified belt tension. <Ref. to ME(H4DOTC)-41, INSPECTION, V-belt.>
- 2) Tighten the lock nut (A).

#### Tightening torque:

##### Lock nut (A)

**23 N·m (2.3 kgf-m, 17.0 ft-lb)**

### C: INSPECTION

- 1) Replace the belts, if cracks, fraying or wear is found.
- 2) Check the V-belt tension and adjust it if necessary by changing generator installing position and idler pulley installing position.

# V-belt

## MECHANICAL

### Belt tension (with belt tension gauge)

(A)

**When installing new parts:**

640 — 780 N (65 — 80 kgf, 144 — 175 lbf)

**At inspection:**

490 — 640 N (50 — 65 kgf, 110 — 144 lbf)

(B)

**When installing new parts:**

740 — 880 N (75 — 90 kgf, 166 — 198 lbf)

**At inspection:**

350 — 450 N (36 — 46 kgf, 79 — 101 lbf)

(A) Front side belt

(B) Rear side belt

C/P Crank pulley

GEN Generator

P/S Power steering oil pump pulley

A/C A/C compressor pulley

C/P Crank pulley

GEN Generator

P/S Power steering oil pump pulley

A/C Air conditioning compressor pulley

I/P Idler pulley

## 13.Crank Pulley

### A: REMOVAL

1) Remove the V-belt. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>

2) Remove the crank pulley bolt. To lock the crankshaft, use ST.

ST 499977100 CRANK PULLEY WRENCH

3) Remove the crank pulley.

### B: INSTALLATION

1) Install the crank pulley.

2) Install the pulley bolt.

To lock the crankshaft, use ST.

ST 499977100 CRANK PULLEY WRENCH

(1) Clean the crank pulley thread using compressed air.

(2) Apply engine oil to the crank pulley bolt seat and thread.

(3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft-lb).

(4) Tighten the crank pulley bolts.

#### Tightening torque:

**180 N·m (18.4 kgf·m, 132.8 ft-lb)**

3) Confirm that the tightening angle of crank pulley bolt is 65 degrees or more. If the tightening angle of crank pulley bolt is less than 65 degrees, conduct the following procedures.

#### CAUTION:

**If the tightening angle of crank pulley bolt is less than 65 degrees, the bolt should be damaged. In this case, the bolt must be replaced.**

(1) Replace the crank pulley bolts and clean them.

#### Crank pulley bolt: 12369AA011

(2) Clean the crankshaft thread using compressed air.

(3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft-lb).

(4) Tighten the crank pulley bolts keeping them in an angle between 65 degrees and 75 degrees.

#### NOTE:

Conduct the tightening procedures by confirming the turning angle of crank pulley bolt referring to the gauge indicated on timing belt cover.

4) Install the A/C belt tensioner.

5) Install the V-belt. <Ref. to ME(H4DOTC)-41, INSTALLATION, V-belt.>

### C: INSPECTION

1) Make sure the V-belt is not worn or otherwise damaged.

2) Check the tension of the belt. <Ref. to ME(H4DOTC)-41, INSPECTION, V-belt.>

## 14. Timing Belt Cover

### A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4DOTC)-43, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover (LH) (A).
- 4) Remove the timing belt cover (RH) (B).
- 5) Remove the front timing belt cover (C).

### B: INSTALLATION

- 1) Install the front timing belt cover (C).

**Tightening torque:**

**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

- 2) Install the timing belt cover (RH) (B).

**Tightening torque:**

**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

- 3) Install the timing belt cover (LH) (A).

**Tightening torque:**

**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

- 4) Install the crank pulley. <Ref. to ME(H4DOTC)-43, INSTALLATION, Crank Pulley.>
- 5) Install the V-belt. <Ref. to ME(H4DOTC)-41, INSTALLATION, V-belt.>

### C: INSPECTION

Make sure the cover is not damaged.

## 15. Timing Belt

### A: REMOVAL

#### 1. TIMING BELT

- 1) Remove the V-belt. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4DOTC)-43, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(H4DOTC)-44, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt guides. (MT model)

5) If the alignment mark and/or arrow mark (which indicates rotation direction) on timing belt fade away, put new marks before removing the timing belt as follows:

- (1) Turn the crankshaft using ST, and align the alignment marks on crank sprocket, intake cam sprocket (LH), exhaust cam sprocket (LH), intake cam sprocket (RH) and exhaust cam sprocket (RH) with notches of timing belt cover and cylinder block.

ST 499987500 CRANKSHAFT SOCKET

# Timing Belt

## MECHANICAL

(2) Using white paint, put alignment and/or arrow marks on the timing belts in relation to the sprockets.

**Z<sub>1</sub>: 54.5 tooth length**

**Z<sub>2</sub>: 51 tooth length**

**Z<sub>3</sub>: 28 tooth length**

6) Remove the belt idler (A).

7) Remove the timing belt.

### CAUTION:

After the timing belt has been removed, never rotate the intake and exhaust, cam sprocket. If

the cam sprocket is rotated, the intake and exhaust valve heads strike together and valve stems are bent.

## 2. BELT IDLER AND AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY

1) Remove the belt idler (B) and (C).

2) Remove the belt idler No. 2.

3) Remove the automatic belt tension adjuster assembly.

## B: INSTALLATION

### 1. AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER

1) Preparation for installation of automatic belt tension adjuster assembly:

#### CAUTION:

- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.

- Press-in the push adjuster rod gradually taking more than 3 minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lbf).
- Press the adjuster rod as far as the end surface of cylinder. Do not press the adjuster rod into the cylinder. Doing so may damage the cylinder.
- Do not release the press pressure until stopper pin is completely inserted.

(1) Attach the automatic belt tension adjuster assembly to the vertical pressing tool.

(2) Slowly move the adjuster rod down with a pressure of 165 N (16.8 kgf, 37.1 lbf) or more until the adjuster rod is aligned with the stopper pin hole in the cylinder.

(3) With a 2 mm (0.08 in) dia. stopper pin or a 2 mm (nominal) dia. hex bar wrench inserted into the stopper pin hole in the cylinder, secure the adjuster rod.

2) Install the automatic belt tension adjuster assembly.

**Tightening torque:**  
**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

3) Install the belt idler No. 2.

**Tightening torque:**  
**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

4) Install the belt idlers.

**Tightening torque:**  
**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

## 2. TIMING BELT

1) Preparation for installation of automatic belt tension adjuster assembly. <Ref. to ME(H4DOTC)-46, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt.>

# Timing Belt

## MECHANICAL

### 2) Crankshaft and cam sprocket alignment

(1) Align mark (A) on the crank sprocket with mark on the oil pump cover at cylinder block.

(2) Align single line mark (A) on the exhaust cam sprocket (RH) with notch (B) on timing belt cover.

(3) Align single line mark (A) on the intake cam sprocket (RH) with notch (B) on timing belt cover.

(Make sure double lines (C) on intake camshaft and exhaust cam sprockets are aligned.)

(4) Align single line mark (A) on exhaust cam sprocket (LH) with notch (B) on timing belt cover by turning the sprocket counterclockwise (as viewed from front of engine).

(5) Align the single line mark (A) on intake cam sprocket (LH) with notch (B) on timing belt cover by turning the sprocket clockwise (as viewed from front of engine).

(Ensure the double lines (C) on intake and exhaust cam sprockets are aligned.)

(6) Ensure the camshaft and crank sprockets are positioned properly.

**CAUTION:**

• Intake and exhaust camshafts for this DOHC engine can be independently rotated with the timing belts removed. As can be seen from the figure, if the intake and exhaust valves are lifted simultaneously, their heads will interfere with each other, resulting in bent valves.

(A) Intake camshaft  
(B) Exhaust camshaft

- When the timing belts are not installed, four camshafts are held at the “zero-lift” position, where all cams on camshafts do not push the intake and exhaust valves down. (Under this condition, all valves remain unlifted.)
- When the camshafts are rotated to install the timing belts, #2 intake and #4 exhaust cam of camshafts (LH) are held to push their corresponding valves down. (Under this condition, these valves are held lifted.) Camshafts (RH) are held so that their cams do not push valves down.
- Camshafts (LH) must be rotated from the “zero-lift” position to the position where the timing belt is to be installed at as small an angle as possible, in order to prevent mutual interference of intake and exhaust valve heads.

- Do not allow the camshafts to rotate in the direction shown by the upper illustration in the figure as this causes both intake and exhaust valves to lift simultaneously, resulting in interference with their heads.

(A) Rotating direction  
(B) Timing belt installation position

**3) Installation of timing belt**

Align the alignment mark on timing belt with marks on sprockets in alphabetical order shown in the figure. While aligning marks, position the timing belt properly.

**CAUTION:**

- Disengagement of more than three timing belt teeth may result in interference between the valve and piston.
- Ensure the belt’s rotating direction is correct.

# Timing Belt

MECHANICAL

- |                     |                       |                           |
|---------------------|-----------------------|---------------------------|
| (1) Arrow mark      | (4) 54.5 tooth length | (7) Install it in the end |
| (2) Timing belt     | (5) 51 tooth length   |                           |
| (3) 28 tooth length | (6) 28 tooth length   |                           |

4) Install the belt idler.

### **Tightening torque:**

**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

### **NOTE:**

Make sure that the marks on the timing belt and sprockets are aligned.

5) After ensuring that the marks on the timing belt and sprockets are aligned, remove the stopper pin from tensioner adjuster.

6) Install the timing belt guide. (MT model)

### **CAUTION:**

- Before installing the bolts, clean the threaded portion of timing belt cover.
- Apply liquid gasket to the threaded portion of bolts. (Cam sprocket side only)

### **Liquid gasket:**

**THREE BOND 1324 (Part No. 004403042) or equivalent**

- (1) Temporarily tighten the bolts.

# Timing Belt

MECHANICAL

(2) Check and adjust the clearance between timing belt and timing belt guide.

**Clearance:**

**$1.0 \pm 0.5$  mm ( $0.039 \pm 0.020$  in)**

(3) Tighten the bolts.

**Tightening torque:**

**$9.75$  N·m ( $1.0$  kgf·m,  $7.2$  ft·lb)**

**Tightening torque:**

**$6.4$  N·m ( $0.65$  kgf·m,  $4.7$  ft·lb)**

**Tightening torque:**

**$6.4$  N·m ( $0.65$  kgf·m,  $4.7$  ft·lb)**

**Tightening torque:**

**$6.4$  N·m ( $0.65$  kgf·m,  $4.7$  ft·lb)**

# Timing Belt

## MECHANICAL

- 7) Install the timing belt cover.  
<Ref. to ME(H4DOTC)-44, INSTALLATION, Timing Belt Cover.>
- 8) Install the crank pulley.  
<Ref. to ME(H4DOTC)-43, INSTALLATION, Crank Pulley.>
- 9) Install the V-belt. <Ref. to ME(H4DOTC)-41, INSTALLATION, V-belt.>

## C: INSPECTION

### 1. TIMING BELT

- 1) Check the timing belt teeth for breaks, cracks, and wear. If any fault is found, replace the belt.
- 2) Check the condition of back side of timing belt; if any crack is found, replace the timing belt.

#### CAUTION:

- Be careful not to let oil, grease or coolant contact the timing belt. Remove quickly and thoroughly if this happens.
- Do not bend the timing belt sharply.

#### Bending diameter h:

60 mm (2.36 in) or more

### 2. AUTOMATIC BELT TENSION ADJUST-ER

- 1) Visually check the oil seals for leaks, and rod ends for abnormal wear or scratches. If necessary, replace the automatic belt tension adjuster assembly.

#### NOTE:

Slight traces of oil at rod's oil seal does not indicate a problem.

- 2) Check that the adjuster rod does not move when a pressure of 165 N (16.8 kgf, 37.1 lbf) is applied to it. This is to check adjuster rod stiffness.
- 3) If the adjuster rod is not stiff and moves freely when applying 165 N (16.8 kgf, 37.1 lbf), check it using the following procedures:

- (1) Slowly press the adjuster rod down to the end surface of the cylinder. Repeat this motion 2 or 3 times.

- (2) With the adjuster rod moved all the way up, apply a pressure of 165 N (16.8 kgf, 37.1 lbf) to it. Check the adjuster rod stiffness.
- (3) If the adjuster rod is not stiff and moves down, replace the automatic belt tension adjuster assembly with a new one.

#### CAUTION:

- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.
- Press-in the push adjuster rod gradually taking more than 3 minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lbf).
- Press the adjuster rod as far as the end surface of the cylinder. Do not press the adjuster rod into the cylinder. Doing so may damage the cylinder.

- 4) Measure the extension of rod beyond the body. If it is not within specifications, replace with a new one.

#### Rod extension H:

5.7±0.5 mm (0.224±0.020 in)

### 3. BELT TENSION PULLEY

- 1) Check the mating surfaces of timing belt and contact point of adjuster rod for abnormal wear or scratches. Replace the belt tension pulley if faulty.
- 2) Check the belt tension pulley for smooth rotation. Replace if noise or excessive play is noted.
- 3) Check the belt tension pulley for grease leakage.

### 4. BELT IDLER

- 1) Check the belt idler for smooth rotation. Replace if noise or excessive play is noted.
- 2) Check the outer contacting surfaces of idler pulley for abnormal wear and scratches.
- 3) Check the belt idler for grease leakage.

## 16. Cam Sprocket

### A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4DOTC)-43, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(H4DOTC)-44, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(H4DOTC)-45, REMOVAL, Timing Belt.>
- 5) Remove the cam sprockets. To lock the camshaft, use ST.

ST 499207400 CAM SPROCKET WRENCH

ST 499977500 CAM SPROCKET WRENCH

### B: INSTALLATION

- 1) Install the cam sprocket. To lock the camshaft, use ST.

ST 499207400 CAM SPROCKET WRENCH

#### **Tightening torque:**

**Tighten to 30 N·m (3.1 kgf·m, 22.1 ft·lb), then further tighten by 45°.**

#### NOTE:

Do not confuse the cam sprockets (RH) and (LH) intake side during installation.

ST 499977500 CAM SPROCKET WRENCH

#### **Tightening torque:**

**Tighten to 30 N·m (3.1 kgf·m, 22.1 ft·lb), then further tighten by 45°.**

- 2) Install the timing belt. <Ref. to ME(H4DOTC)-46, INSTALLATION, Timing Belt.>

- 3) Install the timing belt cover. <Ref. to ME(H4DOTC)-44, INSTALLATION, Timing Belt Cover.>

- 4) Install the crank pulley. <Ref. to ME(H4DOTC)-43, INSTALLATION, Crank Pulley.>

- 5) Install the V-belt. <Ref. to ME(H4DOTC)-41, INSTALLATION, V-belt.>

### C: INSPECTION

- 1) Check the cam sprocket teeth for abnormal wear and scratches.

- 2) Make sure there is no free play between cam sprocket and key.

## 17. Crank Sprocket

### A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4DOTC)-43, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(H4DOTC)-44, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(H4DOTC)-45, REMOVAL, Timing Belt.>
- 5) Remove the crank sprocket.

### B: INSTALLATION

- 1) Install the crank sprocket.

- 2) Install the timing belt. <Ref. to ME(H4DOTC)-46, INSTALLATION, Timing Belt.>
- 3) Install the timing belt cover. <Ref. to ME(H4DOTC)-44, INSTALLATION, Timing Belt Cover.>
- 4) Install the crank pulley. <Ref. to ME(H4DOTC)-43, INSTALLATION, Crank Pulley.>
- 5) Install the V-belt. <Ref. to ME(H4DOTC)-41, INSTALLATION, V-belt.>

### C: INSPECTION

- 1) Check the crank sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between crank sprocket and key.

- 3) Check the crank sprocket notch used for sensor for damage and contamination of foreign matter.

## 18. Camshaft

### A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4DOTC)-43, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(H4DOTC)-44, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(H4DOTC)-45, REMOVAL, Timing Belt.>
- 5) Remove the cam sprocket. <Ref. to ME(H4DOTC)-53, REMOVAL, Cam Sprocket.>
- 6) Disconnect the oil flow control solenoid valve assembly connector.

- 7) Remove the tensioner bracket.

- 8) Remove the timing belt cover No. 2 (LH).

- 9) Remove the timing belt cover No. 2 (RH).

- 10) Remove the spark plug cord.
- 11) Remove the oil level gauge guide. (LH side)
- 12) Remove the rocker cover and gasket.
- 13) Remove the oil pipe.

- (A) Union screw with filter (with protrusion)
- (B) Union screw without filter (without protrusion)
- (C) Oil pipe

- 14) Loosen the oil flow control solenoid valve assembly and intake camshaft cap bolts equally, a little at a time in alphabetical sequence shown in the figure.

# Camshaft

## MECHANICAL

15) Loosen the exhaust camshaft cap bolts equally, a little at a time in alphabetical sequence shown in the figure.

16) Remove the oil flow control solenoid valve assembly, intake camshaft cap, and camshaft.  
17) Remove the exhaust camshaft cap and camshaft.

### NOTE:

Arrange the camshaft caps in order so that they can be installed in their original positions.

18) Similarly, remove the camshafts (RH) and related parts.

## B: INSTALLATION

### 1) Camshaft installation

Apply engine oil to the cylinder head at camshaft bearing installing location before installing the camshaft. Install the camshaft so that each valve is close to or in contact with “base circle” of cam lobe.

### NOTE:

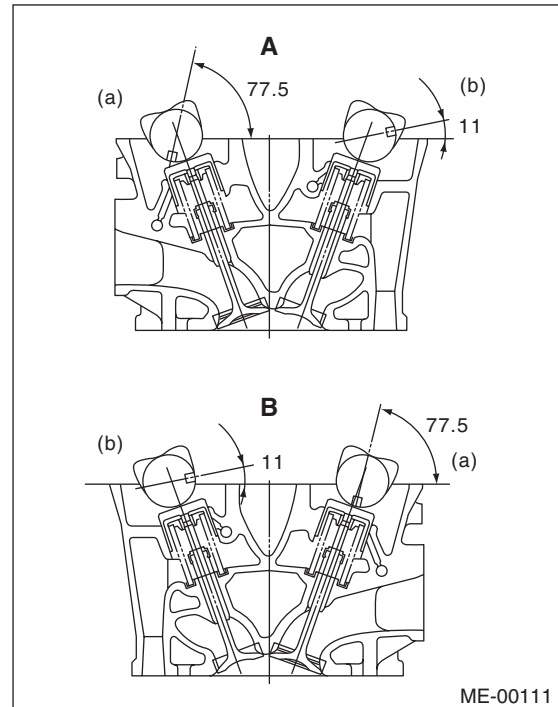

- When the camshafts are positioned as shown in the figure, camshaft (LH) needs to be rotated at a minimum to align with the timing belt during installation.
- Camshaft (RH) need not be rotated when set at the position shown in the figure.

Intake camshaft (LH):

Rotate 80° clockwise.

Exhaust camshaft (LH):

Rotate 45° counterclockwise.

A Cylinder head (LH)

B Cylinder head (RH)

(a) Intake camshaft

(b) Exhaust camshaft

### 2) Camshaft cap and oil flow control solenoid valve assembly installation

- (1) Apply small amount of liquid gasket to the cap mating surface.

### NOTE:

Do not apply liquid gasket excessively. Otherwise, the excessive liquid gasket may come out and flow toward oil seal, resulting in oil leaks.

### Liquid gasket:

**THREE BOND 1215 (Part No. 004403007) or equivalent**

(2) Apply engine oil to the cap bearing surface, and install the cap on camshaft as shown by identification mark.

(3) Gradually tighten the camshaft cap and oil control valve assembly in at least two stages in alphabetical sequence shown in the figure, and then tighten to specified torque.

**Tightening torque:**

**T1: 9.75 N·m (1.0 kgf·m, 7.2 ft·lb)**

**T2: 20 N·m (2.0 kgf·m, 14.8 ft·lb)**

(4) After tightening the camshaft cap, ensure the camshaft rotates only slightly while holding it at “base” circle.

3) Apply engine oil to the outer perimeter and lips of oil seal, and install the oil seal on camshaft using ST1 and ST2.

**NOTE:**

Use a new oil seal.

ST1 499587600 OIL SEAL GUIDE

ST2 499597200 OIL SEAL GUIDE

**4) Rocker cover installation**

(1) Install the gasket on rocker cover. Install the peripheral gasket and ignition coil gasket.

(2) Apply liquid gasket to the designated point of cylinder head.

**NOTE:**

Apply liquid gasket to the half moon plug portion with sticking out more than 5 mm (0.2 in).

**Liquid gasket:**

**THREE BOND 1215 (Part No. 004403007) or equivalent**

(3) Install the rocker cover on cylinder head. Ensure the gasket is properly positioned during installation.

**CAUTION:**

**Use a new rocker cover gasket.**

(4) Tighten the rocker cover tightening bolts in alphabetical sequence shown in the figure, and then tighten to specified torque.

**Tightening torque:**

**6.4 N·m (0.65 kgf·m, 4.7 ft·lb)**

5) Install the oil pipe.

**NOTE:**

Installing location of the union screw varies depending on with or without filter. Be careful of this.

# Camshaft

MECHANICAL

**Tightening torque:**  
**29 N·m (3.0 kgf·m, 21.4 ft·lb)**

- (A) Union screw with filter (with protrusion)
- (B) Union screw without filter (without protrusion)
- (C) Oil pipe

6) Connect the oil flow control solenoid valve connector.

7) Similarly, install the parts on RH side.  
8) Install the timing belt cover No. 2 (RH).

**Tightening torque:**  
**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

9) Install the timing belt cover No. 2 (LH).

**Tightening torque:**  
**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

10) Install the tensioner bracket.

**Tightening torque:**  
**24.5 N·m (2.5 kgf·m, 18.1 ft·lb)**

- 11) Install the cam sprocket.  
<Ref. to ME(H4DOTC)-53, INSTALLATION, Cam Sprocket.>
- 12) Install the timing belt. <Ref. to ME(H4DOTC)-46, INSTALLATION, Timing Belt.>
- 13) Install the timing belt cover.  
<Ref. to ME(H4DOTC)-44, INSTALLATION, Timing Belt Cover.>
- 14) Install the crank pulley.  
<Ref. to ME(H4DOTC)-43, INSTALLATION, Crank Pulley.>
- 15) Install the V-belt. <Ref. to ME(H4DOTC)-41, INSTALLATION, V-belt.>

## C: INSPECTION

1) Measure the bend, and repair or replace if necessary.

**Limit:**

**0.020 mm (0.00079 in)**

2) Check the journal for damage and wear. Replace if faulty.

3) Measure the outside diameter of camshaft journal. If the journal diameter is not within standard, check the oil clearance.

|                     | Camshaft journal                     |                                      |
|---------------------|--------------------------------------|--------------------------------------|
|                     | Front                                | Center, rear                         |
| Standard<br>mm (in) | 37.946 — 37.963<br>(1.4939 — 1.4946) | 29.946 — 29.963<br>(1.1790 — 1.1796) |

4) Measurement of the camshaft journal oil clearance

- (1) Clean the bearing caps and camshaft journals.
- (2) Place the camshafts on cylinder head. (Without installing the valve rocker.)
- (3) Place a plastigauge across each of the camshaft journals.
- (4) Gradually tighten the cap in at least two stages in alphabetical sequence shown in the figure, and then tighten to specified torque. Do not turn the camshaft.

**Tightening torque:**

**T1: 9.75 N·m (1.0 kgf·m, 7.2 ft·lb)**

**T2: 20 N·m (2.0 kgf·m, 14.8 ft·lb)**

(5) Remove the bearing caps.

(6) Measure the widest point of the plastigauge on each journal. If the oil clearance exceeds the limit, replace the camshaft. If necessary, replace the camshaft caps and cylinder head as a set.

**Standard:**

**0.037 — 0.072 mm (0.0015 — 0.0028 in)**

**Limit:**

**0.10 mm (0.0039 in)**

- (7) Completely remove the plastigauge.
- 5) Check the cam face condition, and remove the minor faults by grinding with oil stone. Measure the cam height H. If it exceeds the limit or offset wear occurs, replace the camshaft.

**Cam height H:**

**Standard**

**Intake**

**46.55 — 46.65 mm (1.833 — 1.837 in)**

**Exhaust**

**46.75 — 46.85 mm (1.841 — 1.844 in)**

**Limit**

**Intake**

**46.45 mm (1.829 in)**

**Exhaust**

**46.65 mm (1.837 in)**

**Cam base circle diameter A:**

**37.0 mm (1.457 in)**

6) Measure the thrust clearance of camshaft with dial gauge. If the thrust clearance exceeds the limit or offset wear occurs, replace the caps and cylinder head as a set. If necessary, replace the camshaft.

# Camshaft

MECHANICAL

---

**Standard:**

**0.068 — 0.116 mm (0.0027 — 0.0046 in)**

**Limit:**

**0.14 mm (0.0055 in)**

## 19. Cylinder Head

### A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(H4DOTC)-43, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(H4DOTC)-44, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(H4DOTC)-45, REMOVAL, Timing Belt.>
- 5) Remove the cam sprockets. <Ref. to ME(H4DOTC)-53, REMOVAL, Cam Sprocket.>
- 6) Remove the intake manifold. <Ref. to FU(H4DOTC)-14, REMOVAL, Intake Manifold.>
- 7) Remove the bolt which installs the A/C compressor bracket on cylinder head.
- 8) Remove the camshaft. <Ref. to ME(H4DOTC)-55, REMOVAL, Camshaft.>
- 9) Remove the cylinder head bolts in alphabetical sequence shown in the figure.  
Leave bolts (A) and (D) engaged by three or four threads to prevent the cylinder head from falling.

- 10) While tapping the cylinder head with a plastic hammer, separate it from cylinder block. Remove the bolts (A) and (D) to remove cylinder head.

- 11) Remove the cylinder head gasket.

### CAUTION:

Be careful not to scratch the mating surface of cylinder head and cylinder block.

- 12) Similarly, remove the cylinder head (RH).

### B: INSTALLATION

- 1) Install the cylinder head and gaskets on cylinder block.

### CAUTION:

- Use new cylinder head gaskets.
- Be careful not to scratch the mating surface of cylinder head and cylinder block.

- 2) Tighten the cylinder head bolts.
  - (1) Apply a coat of engine oil to the washers and bolt threads.
  - (2) Tighten all bolts to 29 N·m (3.0 kgf·m, 22 ft·lb) in alphabetical sequence.
  - (3) Tighten all bolts to 69 N·m (7.0 kgf·m, 51 ft·lb) in alphabetical sequence again.
  - (4) Back off all bolts by 180° first; back them off by 180° again in reverse order of installation.
  - (5) Tighten all bolts to 49 N·m (5.0 kgf·m, 36 ft·lb) in alphabetical sequence.
  - (6) Tighten all bolts 80 to 90° in alphabetical sequence.
  - (7) Tighten all bolts by 40 to 45° in alphabetical sequence again.

### CAUTION:

Do not tighten the bolts by more than 45°.

- (8) Further tighten all bolts (A) and (B) by 40 to 45°.

### CAUTION:

Ensure that the total “re-tightening angle” in the previous two steps do not exceed 90°.

- 3) Install the camshaft. <Ref. to ME(H4DOTC)-56, INSTALLATION, Camshaft.>
- 4) Install the A/C compressor bracket on cylinder head.
- 5) Install the intake manifold. <Ref. to FU(H4DOTC)-17, INSTALLATION, Intake Manifold.>

# Cylinder Head

## MECHANICAL

---

6) Install the cam sprocket.

<Ref. to ME(H4DOTC)-53, INSTALLATION, Cam Sprocket.>

7) Install the timing belt.

<Ref. to ME(H4DOTC)-46, INSTALLATION, Timing Belt.>

8) Install the timing belt cover.

<Ref. to ME(H4DOTC)-44, INSTALLATION, Timing Belt Cover.>

9) Install the crank pulley.

<Ref. to ME(H4DOTC)-43, INSTALLATION, Crank Pulley.>

10) Install the V-belt. <Ref. to ME(H4DOTC)-41, INSTALLATION, V-belt.>

## C: DISASSEMBLY

1) Remove the valve lifters.

2) Compress the valve spring and remove the valve spring retainer key. Remove each valve and valve spring.

ST1 498267600 CYLINDER HEAD TABLE

ST2 499718000 VALVE SPRING REMOVER

### NOTE:

Keep the removed parts in order for re-installing in their original positions.

### CAUTION:

- Mark each valve to prevent confusion.
- Use extreme care not to damage the lips of the intake valve oil seals and exhaust valve oil seals.

## D: ASSEMBLY

ME-02832

- |                       |                           |                             |
|-----------------------|---------------------------|-----------------------------|
| (1) Exhaust valve     | (5) Intake valve oil seal | (9) Valve lifter            |
| (2) Intake valve      | (6) Valve spring          | (10) Exhaust valve oil seal |
| (3) Cylinder head     | (7) Retainer              | (11) Intake valve guide     |
| (4) Valve spring seat | (8) Retainer key          | (12) Exhaust valve guide    |

### 1) Installation of valve spring and valve:

- (1) Coat the stem of each valve with engine oil and insert the valve into valve guide.

#### NOTE:

When inserting the valve into valve guide, use special care not to damage the oil seal lip.

- (2) Set the cylinder head on ST1.  
 (3) Install the valve spring and retainer using ST2.

ST1 498267600 CYLINDER HEAD TABLE  
 ST2 499718000 VALVE SPRING REMOVER

# Cylinder Head

## MECHANICAL

### NOTE:

Be sure to install the valve springs with their close-coiled end facing the seat on cylinder head.

(4) Compress the valve spring, and then fit the valve spring retainer key.

(5) After installing, tap the valve spring retainers lightly with wooden hammer for better seating.

2) Apply oil to the surface of the valve lifter.

3) Install the valve lifter.

## E: INSPECTION

### 1. CYLINDER HEAD

1) Make sure that no crack or other damage exists. In addition to visual inspection, inspect the important areas by means of liquid penetrant tester.

2) Measure the warping of the cylinder head surface that mates with crankcase by using a straight edge (A) and thickness gauge (B).

If the warping exceeds 0.035 mm (0.0014 in), re-grind the surface with a surface grinder.

#### **Warping limit:**

**0.035 mm (0.0014 in)**

#### **Grinding limit:**

**0.3 mm (0.012 in)**

#### **Standard height of cylinder head:**

**127.5 mm (5.02 in)**

### NOTE:

Uneven torque for the cylinder head nuts can cause warping. When reassembling, pay special attention to the torque so as to tighten evenly.

### 2. VALVE SEAT

Inspect the intake and exhaust valve seats, and then correct the contact surfaces with valve seat cutter if they are defective or when valve guides are replaced.

#### **Valve seat contact width W:**

##### **Intake**

**Standard 0.6 — 1.4 mm (0.024 — 0.055 in)**

**Limit 1.7 mm (0.067 in)**

##### **Exhaust**

**Standard 1.2 — 1.8 mm (0.047 — 0.071 in)**

**Limit 2.2 mm (0.087 in)**

### 3. VALVE GUIDE

1) Check the clearance between valve guide and stem. The clearance can be checked by measuring the outside diameter of valve stem and the inside diameter of valve guide with outside and inside micrometers respectively.

#### **Clearance between the valve guide and valve stem:**

##### **Standard**

###### **Intake**

**0.030 — 0.057 mm (0.0012 — 0.0022 in)**

###### **Exhaust**

**0.040 — 0.067 mm (0.0016 — 0.0026 in)**

##### **Limit**

**0.15 mm (0.0059 in)**

2) If the clearance between valve guide and stem exceeds the standard value, replace the valve guide or valve itself whichever shows greater amount of wear. See the following procedure for valve guide replacement.

#### **Valve guide inner diameter:**

**6.000 — 6.012 mm (0.2362 — 0.2367 in)**

#### **Valve stem outer diameters:**

##### **Intake**

**5.955 — 5.970 mm (0.2344 — 0.2350 in)**

##### **Exhaust**

**5.945 — 5.960 mm (0.2341 — 0.2346 in)**

- (1) Place the cylinder head on ST1 with the combustion chamber upward so that valve guides enter the holes in ST1.
- (2) Insert the ST2 into valve guide and press it down to remove the valve guide.

ST1 498267600 CYLINDER HEAD TABLE  
 ST2 499767200 VALVE GUIDE REMOVER

- (3) Turn the cylinder head upside down and place ST as shown in the figure.

ST 18251AA020 VALVE GUIDE ADJUSTER

- (4) Before installing a new valve guide, make sure that neither scratches nor damages exist on the inside surface of the valve guide holes in cylinder head.
- (5) Put a new valve guide, coated with sufficient oil, in cylinder, and insert ST1 into valve guide. Press in until the valve guide upper end is flush with the upper surface of ST2.

ST1 499767200 VALVE GUIDE REMOVER  
 ST2 18251AA020 VALVE GUIDE ADJUSTER

- (6) Check the valve guide protrusion.

### Valve guide protrusion L:

**15.8 — 16.2 mm (0.622 — 0.638 in)**

- (7) Ream the inside of valve guide with ST. Gently rotate the reamer clockwise while pressing it lightly into the valve guide, and return it also rotating clockwise. After reaming, clean the valve guide to remove chips.

ST 499767400 VALVE GUIDE REAMER

### NOTE:

- Apply engine oil to the reamer when reaming.
- If the inner surface of the valve guide is torn, the edge of the reamer should be slightly ground with an oil stone.
- If the inner surface of the valve guide becomes lustrous and the reamer does not chip, use a new reamer or remedy the reamer.

- (8) Recheck the contact condition between valve and valve seat after replacing the valve guide.

## 4. INTAKE AND EXHAUST VALVE

- 1) Inspect the flange and stem of valve, and replace if damaged, worn, or deformed, or if "H" exceeds the standard value.

### H:

#### Intake (A)

**Standard 1.0 — 1.4 mm (0.039 — 0.055 in)**

**Limit 0.8 mm (0.031 in)**

#### Exhaust (B)

**Standard 1.3 — 1.7 mm (0.051 — 0.067 in)**

**Limit 0.8 mm (0.031 in)**

# Cylinder Head

## MECHANICAL

2) Put a small amount of grinding compound on the seat surface and lap the valve and seat surface. Install a new intake valve oil seal after lapping.

### NOTE:

- Replace the valve oil seal with new one after lapping.
- Intake valve and exhaust valve can be identified by their overall length.

### Valve overall length:

#### Intake (A)

104.4 mm (4.110 in)

#### Exhaust (B)

104.65 mm (4.120 in)

## 5. VALVE SPRINGS

1) Check the valve springs for damage, free length, and tension. Replace the valve spring if it is not within specifications presented in the table.

2) To measure the squareness of valve spring, stand the spring on a surface plate and measure its deflection at the top using a try square.

|                       |      | Valve spring  |
|-----------------------|------|---|
| Free length           |      | 47.32 mm (1.863 in)   |
| Tension/spring height | Set  | 205 — 235 N (20.9 — 24.0 kgf, 46.1 — 52.8 lbf)/36.0 mm (1.417 in) |
|                       | Lift | 426 — 490 N (43.4 — 50.0 kgf, 95.8 — 110 lbf)/26.50 mm (1.043 in) |
| Squareness            |      | 2.5°, 2.1 mm (0.083 in) or less                                   |

## 6. INTAKE AND EXHAUST VALVE OIL SEAL

In the following case, pinch and remove the oil seal from valve using pliers, and then replace it with a new one.

- When the lip is damaged.
- When the spring is out of the specified position.
- When readjusting the surfaces of intake valve and valve sheet.
- When replacing the intake valve guide.

- 1) Place the cylinder head on ST1.
- 2) Using ST2, press-fit the oil seal.

### CAUTION:

- Apply engine oil to oil seal before press-fitting.
- When press-fitting the oil seal, do not use a hammer or strike in.
- Differentiate between the intake valve oil seal and exhaust valve oil seal by noting their difference in color.

ST1 498267600 CYLINDER HEAD TABLE

ST2 498857100 VALVE OIL SEAL GUIDE

### Color of rubber part:

Intake [Gray] Exhaust [Green]

## 7. VALVE LIFTER

- 1) Visually check the valve lifter.
- 2) Measure the outer diameter of valve lifter.

### Outer diameter:

34.959 — 34.975 mm (1.3763 — 1.3770 in)

- 3) Measure the inner diameter of valve lifter mating part on cylinder head.

**Inner diameter:**

**34.994 — 35.016 mm (1.3777 — 1.3786 in)**

**NOTE:**

If difference between outer diameter of valve lifter and inner diameter of valve lifter mating part is over the standard, replace the cylinder head.

**Standard:**

**0.019 — 0.057 mm (0.0007 — 0.0022 in)**

**Limit:**

**0.100 mm (0.0039 in)**

**F: DISPOSAL**

**CAUTION:**

- Metallic sodium is enclosed in the exhaust valve. Metallic sodium is extremely alkaline and may produce severe chemical reactions. Full consideration must therefore be given to the following points when handling or disposing of the valve.
- Since metallic sodium may cause blindness if contacted with the eyes, burns if contacted with the skin, and fire, do not deliberately take the valve apart.

If the valve is damaged, remove the valve and neutralize it by immersing it in water, and dispose of it in the same way that general steel materials are disposed of. The disposal method is described in the following.

- 1) Wearing rubber gloves, remove the damaged valve from the cylinder head.
- 2) Prepare a large receptacle (bucket or other container) in a well ventilated location, and fill the receptacle with water (at least 10 liters).
- 3) Immerse the damaged valve in the receptacle.

**CAUTION:**

**A severe reaction may occur, so stand at least 2 — 3 m from the receptacle. Because the reaction will produce hydrogen gas, moreover, keep the receptacle away from sparks or flames.**

4) Once the reaction is completed (about 4 — 5 hours have elapsed), carefully remove the valve using large pincers so that the reaction liquid does not contact your skin, and dispose of it with other parts that are being disposed of.

5) The reaction liquid is a strong alkaline solution, so it must be disposed of in accordance with local regulations.

**CAUTION:**

**Make sure the reaction liquid does not contact your skin. If contact with skin occurs, immediately wash the affected area with large quantities of water.**

## 20. Cylinder Block

### A: REMOVAL

#### NOTE:

Before conducting this procedure, drain the engine oil completely if applicable.

- 1) Remove the intake manifold.  
<Ref. to FU(H4DOTC)-14, REMOVAL, Intake Manifold.>
  - 2) Remove the V-belt. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>
  - 3) Remove the crank pulley.  
<Ref. to ME(H4DOTC)-43, REMOVAL, Crank Pulley.>
  - 4) Remove the timing belt cover.  
<Ref. to ME(H4DOTC)-44, REMOVAL, Timing Belt Cover.>
  - 5) Remove the timing belt.  
<Ref. to ME(H4DOTC)-45, REMOVAL, Timing Belt.>
  - 6) Remove the cam sprockets.  
<Ref. to ME(H4DOTC)-53, REMOVAL, Cam Sprocket.>
  - 7) Remove the crank sprocket.  
<Ref. to ME(H4DOTC)-54, REMOVAL, Crank Sprocket.>
  - 8) Remove the generator and A/C compressor with their brackets.
  - 9) Remove the cylinder head.  
<Ref. to ME(H4DOTC)-61, REMOVAL, Cylinder Head.>
  - 10) Remove the clutch disc and cover. (MT model)  
<Ref. to CL-14, REMOVAL, Clutch Disc and Cover.>
  - 11) Remove the flywheel. (MT model)  
<Ref. to CL-17, REMOVAL, Flywheel.>
- ST 498497100 CRANKSHAFT STOPPER

- 12) Remove the oil separator cover.
- 13) Remove the water by-pass pipe for heater.
- 14) Remove the oil filter.  
ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))  
ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))

- 15) Remove the oil cooler.

- (A) Adapter A
- (B) Adapter connector
- (C) Adapter B
- (D) Oil cooler
- (E) Oil cooler connector
- (F) Plug
- (G) Gasket
- (H) O-ring

- 16) Remove the water pump.
- 17) Remove the oil pump from cylinder block.

#### NOTE:

- If disassembling or inspecting the oil pump, loosen the plug of relief valve before removing the oil pump.
- Remove the oil pump from cylinder block. Use a flat tip screwdriver when removing the oil pump.

#### CAUTION:

**Be careful not to scratch the mating surface of cylinder block and oil pump.**

# Cylinder Block

MECHANICAL

## 18) Removal of oil pan:

- (1) Turn the cylinder block with #2 and #4 piston sides facing upward.
- (2) Remove the bolts which secure oil pan to cylinder block.
- (3) Insert an oil pan cutter blade between cylinder block-to-oil pan clearance, and then remove the oil pan.

## CAUTION:

**Do not use a screwdriver or similar tool in place of oil pan cutter.**

- 19) Remove the oil strainer stay.
- 20) Remove the oil strainer.
- 21) Remove the baffle plate.
- 22) Remove the water pipes.

- |                       |                        |                 |
|-----------------------|------------------------|-----------------|
| (1) Service hole plug | (4) Piston pin         | (7) Washer      |
| (2) Gasket            | (5) Service hole cover | (8) Seal washer |
| (3) Snap ring         | (6) O-ring             |                 |

## 23) Remove the service hole cover and service hole plugs using hexagon wrench [14 mm].

## 24) Rotate the crankshaft to bring #1 and #2 pistons to bottom dead center position, and then remove the piston snap ring through service hole of #1 and #2 cylinders.

## 25) Draw out the piston pin from #1 and #2 pistons using ST.

ST 499097700 PISTON PIN REMOVER

# Cylinder Block

## MECHANICAL

### NOTE:

Be careful not to confuse the original combination of piston, piston pin and cylinder.

26) Similarly remove the piston pins from #3 and #4 pistons.

27) Remove the bolts which connect the cylinder block on the side of #2 and #4 cylinders.

28) Back off the bolts which connect the cylinder block on the side of #1 and #3 cylinders two or three turns.

29) Set up the cylinder block so that #1 and #3 cylinders are on the upper side, then remove the cylinder block connecting bolts.

30) Separate the cylinder blocks (LH) and (RH).

### NOTE:

When separating the cylinder block, do not allow the connecting rod to fall and damage the cylinder block.

(1) Cylinder block

(2) Rear oil seal

(3) Crankshaft

(4) Crankshaft bearing

(5) Piston

(6) Seal washer

(7) Washer

31) Remove the rear oil seal.

32) Remove the crankshaft together with connecting rod.

33) Remove the crankshaft bearings from cylinder block using a hammer handle.

### NOTE:

Do not confuse the combination of crankshaft bearings. Press the bearing at the end opposite to locking lip.

34) Draw out each piston from cylinder block using a hammer handle.

### NOTE:

Do not confuse the combination of piston and cylinder.

## B: INSTALLATION

ME-02882

- |                        |                   |            |
|------------------------|-------------------|------------|
| (1) Crankshaft bearing | (4) Rear oil seal | (7) Washer |
| (2) Crankshaft         | (5) O-ring        |            |
| (3) Cylinder block     | (6) Seal washer   |            |

- 1) Remove oil in the mating surface of bearing and cylinder block before installation. Also apply engine oil to crankshaft pins.
- 2) Install the crankshaft bearing to cylinder block, apply engine oil to crankshaft bearing, and position the crankshaft and O-ring on #1 and #3 cylinder block.
- 3) Apply liquid gasket to the mating surface of #1 and #3 cylinder block, and position #2 and #4 cylinder block.

**Liquid gasket:**  
**Part No. 004403007**  
**THREE BOND 1215 or equivalent**

**NOTE:**  
 Do not allow liquid gasket to jut into O-ring grooves, oil passages, bearing grooves, etc.

- 4) Apply engine oil to washers and thread of bolts.
- 5) Tighten the 10 mm cylinder block connecting bolts in alphabetical sequence shown in the figure. (LH side)

# Cylinder Block

MECHANICAL

**Tightening torque:**  
**10 N·m (1.0 kgf·m, 7.4 ft·lb)**

6) Tighten the 10 mm cylinder block connecting bolts in alphabetical sequence shown in the figure. (RH side)

**Tightening torque:**  
**10 N·m (1.0 kgf·m, 7.4 ft·lb)**

7) Tighten the LH side bolts (A — D) in alphabetical sequence.

**Tightening torque:**  
**18 N·m (1.8 kgf·m, 13.3 ft·lb)**

8) Tighten the RH side bolts (E — J) in alphabetical sequence.

**Tightening torque:**  
**18 N·m (1.8 kgf·m, 13.3 ft·lb)**

9) Further tighten the LH side bolts (A — D) in alphabetical sequence, by 90° for (A) and (C), and to 40 N·m (4.1 kgf·m, 29.5 ft·lb) for (B) and (D).

10) Further tighten the RH side bolts (E — J) to 90° in alphabetical sequence.

11) Tighten the 8 mm and 6 mm cylinder block connecting bolts in alphabetical sequence shown in the figure.

**Tightening torque:**

(A)— (G): 25 N·m (2.5 kgf·m, 18.4 ft·lb)

(H): 6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

12) Apply engine oil to the outer perimeter of rear oil seal, and install the rear oil seal using ST1 and ST2.

**NOTE:**

Use a new rear oil seal.

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

- 28) Install the flywheel.  
 <Ref. to CL-17, INSTALLATION, Flywheel.>  
 29) Install the clutch disc and cover. <Ref. to CL-14, INSTALLATION, Clutch Disc and Cover.>  
 30) Installation of oil pump:

- (1) Discard the front oil seal after removal. Replace with a new one using the ST.  
**ST 499587100 OIL SEAL INSTALLER**

- (2) Apply liquid gasket to the matching surface of oil pump.

**Liquid gasket:**  
**Part No. 004403007 THREE BOND 1215 or equivalent**

(A) O-ring

- (3) Apply a coat of engine oil to the inside of the oil seal.

- (4) Install the oil pump on cylinder block. Be careful not to damage the oil seal during installation.  
 (5) Apply liquid gasket to the threaded portion of three bolts.

**CAUTION:**

- Do not forget to install the O-ring and seal when installing the oil pump.
- Align the flat surface of oil pump's inner rotor with crankshaft before installation.

**Liquid gasket:**  
**THREE BOND 1324 (Part No. 004403042) or equivalent**

**Tightening torque:**  
**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

- 31) Install the water pump and gasket.

**Tightening torque:**  
**First: 12 N·m (1.2 kgf-m, 8.7 ft-lb)**  
**Second: 12 N·m (1.2 kgf-m, 8.7 ft-lb)**

**CAUTION:**

- Be sure to use a new gasket.

# Cylinder Block

## MECHANICAL

- When installing the water pump, tighten the bolts in two stages in alphabetical sequence as shown in the figure.

- 32) Install the water by-pass pipe for heater.  
33) Install the oil cooler.

### CAUTION:

Use a new O-ring.

### Tightening torque:

- T1: 45 N·m (4.6 kgf-m, 33 ft-lb)**  
**T2: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

 (C) Adapter B  
 (D) Oil cooler  
 (E) Oil cooler connector  
 (F) Plug  
 (G) Gasket  
 (H) O-ring

- 34) Install the oil filter using ST.

- ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))  
 ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))

- 35) Install the oil filter by turning it by hand, being careful not to damage the seal rubber.

- Tighten the oil filter 68 mm (2.68 in) in diameter by approx. 1 rotation more after the seal rubber of oil filter comes in contact with oil cooler. If using a torque wrench, tighten it to 14 N·m (1.4 kgf-m, 10.3 ft-lb).

- Tighten the oil filter 65 mm (2.56 in) in diameter by approx. 2/3 — 3/4 rotation more after the seal rubber of oil filter comes in contact with oil cooler. If using a torque wrench, tighten it to 12 N·m (1.2 kgf-m, 8.8 ft-lb).

### CAUTION:

- Do not tighten excessively, or oil may leak.
- Be careful not to use the oil filter 80 mm (3.15 in) in diameter to Turbo model.

- 36) Install the water by-pass pipe between oil cooler and water pump.

- 37) Install the water pipe.

### NOTE:

Always use a new O-ring.

- 38) Install the cylinder head.

<Ref. to ME(H4DOTC)-61, INSTALLATION, Cylinder Head.>

- 39) Install the oil level gauge guide and tighten the attaching bolt (LH side).

- 40) Install the rocker cover and rocker cover gasket.

### NOTE:

Use a new rocker cover gasket.

- 41) Install the crank sprocket.

<Ref. to ME(H4DOTC)-54, INSTALLATION, Crank Sprocket.>

- 42) Install the cam sprocket.

<Ref. to ME(H4DOTC)-53, INSTALLATION, Cam Sprocket.>

- 43) Install the timing belt.

<Ref. to ME(H4DOTC)-46, INSTALLATION, Timing Belt.>

- 44) Install the timing belt cover.

<Ref. to ME(H4DOTC)-44, INSTALLATION, Timing Belt Cover.>

- 45) Install the crank pulley.

<Ref. to ME(H4DOTC)-43, INSTALLATION, Crank Pulley.>

- 46) Install the generator and A/C compressor brackets on cylinder head.

- 47) Install the V-belt. <Ref. to ME(H4DOTC)-41, INSTALLATION, V-belt.>

48) Install the intake manifold.  
 <Ref. to FU(H4DOTC)-14, REMOVAL, Intake Manifold.>

## C: DISASSEMBLY

ME-02741

- |                            |                 |               |
|----------------------------|-----------------|---------------|
| (1) Connecting rod cap     | (3) Top ring    | (5) Oil ring  |
| (2) Connecting rod bearing | (4) Second ring | (6) Snap ring |

- 1) Remove the connecting rod cap.
- 2) Remove the connecting rod bearing.

**NOTE:**

Arrange the removed connecting rod, connecting rod cap and bearing in order to prevent confusion.

- 3) Remove the piston rings using the piston ring expander.
- 4) Remove the oil ring by hand.

**NOTE:**

Arrange the removed piston rings in proper order to prevent confusion.

- 5) Remove the snap ring.

# Cylinder Block

MECHANICAL

## D: ASSEMBLY

- |                            |                 |
|----------------------------|-----------------|
| (1) Connecting rod bearing | (5) Second ring |
| (2) Connecting rod         | (6) Top ring    |
| (3) Connecting rod cap     | (7) Snap ring   |
| (4) Oil ring               |                 |

**Tightening torque: N·m (kgf·m, ft·lb)**

**T: 52 (5.3, 38.4)**

- 1) Apply oil to the surfaces of the connecting rod bearings. Install the connecting rod bearings on connecting rods and connecting rod caps.
- 2) Install the connecting rod on crankshaft.

### NOTE:

Position each connecting rod with the side marked facing forward.

3) Tighten the connecting rod cap with connecting rod bolt.

Ensure the arrow on connecting rod cap faces the front during installation.

### Tightening torque:

**52 N·m (5.3 kgf·m, 38.4 ft·lb)**

### CAUTION:

- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching number.
  - When tightening the connecting rod bolts, apply oil on the threads.
- 4) Install the oil ring upper rail, expander and lower rail in this order by hand. Then install the second ring and top ring using a piston ring expander.

## E: INSPECTION

### 1. CYLINDER BLOCK

- 1) Visually check for cracks and damage. Especially, inspect the important parts by means of liquid penetrant tester.
- 2) Check the oil passages for clogging.
- 3) Inspect the crankcase surface that mates with cylinder head for warping by using a straight edge, and correct by grinding if necessary.

### Warping limit:

**0.025 mm (0.00098 in)**

### Grinding limit:

**0.1 mm (0.004 in)**

### Standard height of cylinder block:

**201.0 mm (7.91 in)**

### 2. CYLINDER AND PISTON

- 1) The cylinder bore size is stamped on cylinder block's front upper surface.

### NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).
- Standard sized pistons are classified into two grades, "A" and "B". These grades should be used as a guide line in selecting a standard piston.

# Cylinder Block

MECHANICAL

## Standard diameter:

**A: 99.505 — 99.515 mm (3.9175 — 3.9179 in)**

**B: 99.495 — 99.505 mm (3.9171 — 3.9175 in)**

ME-00170

- (A) Main journal size mark
- (B) Cylinder block (RH)–(LH) combination mark
- (C) #1 cylinder bore size mark
- (D) #2 cylinder bore size mark
- (E) #3 cylinder bore size mark
- (F) #4 cylinder bore size mark

## 2) How to measure the inner diameter of each cylinder

Measure the inner diameter of each cylinder in both the thrust and piston pin directions at the heights shown in the figure, using a cylinder bore gauge.

### NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

## Taper:

### Standard

**0.015 mm (0.0006 in)**

### Limit

**0.050 mm (0.0020 in)**

## Out-of-roundness:

### Standard

**0.010 mm (0.0004 in)**

### Limit

**0.050 mm (0.0020 in)**

ME-00171

- (A) Piston pin direction
- (B) Thrust direction
- H1: 10 mm (0.39 in)
- H2: 45 mm (1.77 in)
- H3: 80 mm (3.15 in)
- H4: 115 mm (4.53 in)

3) When the piston is to be replaced due to general or cylinder wear, determine a suitable sized piston by measuring the piston clearance.

4) How to measure the outer diameter of each piston:

Measure the outer diameter of each piston at the height shown in the figure. (Thrust direction)

### NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

### Piston grade point H:

**38.2 mm (1.50 in)**

# Cylinder Block

MECHANICAL

## Piston outer diameter:

### Standard

A: 99.505 — 99.515 mm (3.9175 — 3.9179 in)

B: 99.495 — 99.505 mm (3.9171 — 3.9175 in)

### 0.25 mm (0.0098 in) oversize

99.745 — 99.765 mm (3.9270 — 3.9278 in)

### 0.50 mm (0.0197 in) oversize

99.995 — 100.015 mm (3.9368 — 3.9376 in)

5) Calculate the clearance between cylinder and piston.

### NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

## Cylinder to piston clearance at 20°C (68°F):

### Standard

-0.010 — 0.010 mm (-0.0004 — 0.0004 in)

### Limit

0.030 mm (0.0012 in)

6) Boring and honing

- (1) If the value of taper, out-of-roundness, or cylinder-to-piston clearance measured exceeds the limit or if there is any damage on the cylinder wall, reboring it to use an oversize piston.

### CAUTION:

- When any of the cylinders needs reboring, all other cylinders must be bored at the same time, and use oversize pistons.
- Do not perform boring on one cylinder only, nor use an oversize piston for one cylinder only.

- (2) If the cylinder inner diameter exceeds the limit after boring and honing, replace the crankcase.

### NOTE:

Immediately after reboring, the cylinder diameter may differ from its real diameter due to temperature rise. Thus, pay attention to this when measuring the cylinder diameter.

## Cylinder enlarging (boring) limit (dia.):

To 100.005 mm (3.937 in)

## 3. PISTON AND PISTON PIN

1) Check the pistons and piston pins for damage, cracks, and wear and the piston ring grooves for wear and damage. Replace if defective.

2) Measure the piston-to-cylinder clearance at each cylinder. <Ref. to ME(H4DOTC)-80, CYLINDER AND PISTON, INSPECTION, Cylinder Block.>

If any of the clearances is not within specification, replace the piston or bore the cylinder to use an oversize piston.

3) Make sure that the piston pin can be inserted into the piston pin hole with a thumb at 20°C (68°F). Replace if defective.

## Standard clearance between piston pin and hole in piston:

### Standard

0.004 — 0.008 mm (0.0002 — 0.0003 in)

### Limit

0.020 mm (0.0008 in)

4) Check the snap ring installation groove (A) on piston for burr. If necessary, remove the burr from groove so that the piston pin can lightly move.

5) Check the piston pin snap ring for distortion, cracks and wear.

## 4. PISTON RING

1) If the piston ring is broken, damaged, or worn, or if its tension is insufficient, or when the piston is replaced, replace the piston ring with a new one of the same size as the piston.

### CAUTION:

- Marks are shown on the end of top and second rings. When installing the rings to piston, face this mark upward.
- Oil ring consists of upper rail, expander and lower rail. When installing on piston, be careful of each rail's direction.

- (A) Upper rail
- (B) Expander
- (C) Lower rail

2) Squarely place the piston ring and oil ring in cylinder, and then measure the piston ring closed gap with a thickness gauge.

|                        |               | Unit: mm (in)                    |             |
|------------------------|---------------|----------------------------------|-------------|
|                        |               | Standard                         | Limit       |
| Piston ring closed gap | Top ring      | 0.20 — 0.25<br>(0.0079 — 0.0098) | 1.0 (0.039) |
|                        | Second ring   | 0.37 — 0.52<br>(0.015 — 0.020)   | 1.0 (0.039) |
|                        | Oil ring rail | 0.20 — 0.50<br>(0.0079 — 0.0197) | 1.5 (0.059) |

3) Measure the clearance between piston ring and piston ring groove with a thickness gauge.

### NOTE:

Before measuring the clearance, clean the piston ring groove and piston ring.

|  |             | Unit: mm (in)                      |                  |
|--|-------------|------------------------------------|------------------|
|  |             | Standard                           | Limit            |
| Clearance between piston ring and piston ring groove | Top ring    | 0.040 — 0.080<br>(0.0016 — 0.0031) | 0.15<br>(0.0059) |
|  | Second ring | 0.030 — 0.070<br>(0.0012 — 0.0028) | 0.15<br>(0.0059) |

# Cylinder Block

MECHANICAL

## 5. CONNECTING ROD

- 1) Replace the connecting rod, if the large or small end thrust surface is damaged.
- 2) Check for bend or twist using a connecting rod aligner. Replace the connecting rod if the bend or twist exceeds the limit.

**Limit of bend or twist per 100 mm (3.94 in) in length:**  
**0.10 mm (0.0039 in)**

- (A) Thickness gauge  
 (B) Connecting rod

- 3) Install the connecting rod fitted with bearing to crankshaft, and then measure the side clearance (thrust clearance). Replace the connecting rod if the side clearance exceeds the specified limit.

**Connecting rod side clearance:**

**Standard**

**0.070 — 0.330 mm (0.0028 — 0.0130 in)**

**Limit**

**0.4 mm (0.016 in)**

- 4) Inspect the connecting rod bearing for scar, peeling, seizure, melting, wear, etc.

- 5) Measure the oil clearance on individual connecting rod bearings by means of plastigauge. If any oil clearance is not within the specification, replace the defective bearing with a new one of standard size or undersize as necessary. (See the table below.)

**Connecting rod oil clearance:**

**Standard**

**0.017 — 0.045 mm (0.0007 — 0.0018 in)**

**Limit**

**0.05 mm (0.0020 in)**

| Unit: mm (in)                 |                                       |                                      |
|-------------------------------|---------------------------------------|--------------------------------------|
| Bearing                       | Bearing size<br>(Thickness at center) | Outer diameter of<br>crank pin       |
| Standard                      | 1.490 — 1.502<br>(0.0587 — 0.0591)    | 51.984 — 52.000<br>(2.0466 — 2.0472) |
| 0.03<br>(0.0012)<br>undersize | 1.504 — 1.512<br>(0.0592 — 0.0595)    | 51.954 — 51.970<br>(2.0454 — 2.0461) |
| 0.05<br>(0.0020)<br>undersize | 1.514 — 1.522<br>(0.0596 — 0.0599)    | 51.934 — 51.950<br>(2.0447 — 2.0453) |
| 0.25<br>(0.0098)<br>undersize | 1.614 — 1.622<br>(0.0635 — 0.0639)    | 51.734 — 51.750<br>(2.0368 — 2.0374) |

- 6) Inspect the bushing at connecting rod small end, and replace if worn or damaged. Also measure the piston pin clearance at connecting rod small end.

## Clearance between piston pin and bushing:

### Standard

0 — 0.022 mm (0 — 0.0009 in)

### Limit

0.030 mm (0.0012 in)

7) Replacement procedure is as follows.

(1) Remove the bushing from connecting rod with ST and press.

(2) Press the bushing with ST after applying oil on the periphery of bushing.

ST 499037100 CONNECTING ROD BUSHING REMOVER AND INSTALLER

(3) Make two 3 mm (0.12 in) holes in bushing. Ream the inside of bushing.

(4) After the completion of reaming, clean the bushing to remove chips.

## 6. CRANKSHAFT AND CRANKSHAFT BEARING

1) Clean the crankshaft completely and check for cracks by means of liquid penetrant tester etc., and replace if defective.

2) Measure the crankshaft bend, and correct or replace if it exceeds the limit.

### NOTE:

If a suitable V-block is not available, install the #1 and #5 crankshaft bearing on cylinder block, position the crankshaft on these bearings and measure the crankshaft bend using a dial gauge.

### Crankshaft bend limit:

0.035 mm (0.0014 in)

3) Inspect the crank journal and crank pin for wear. If they are not within the specifications, replace the bearing with a suitable (undersize) one, and then replace or recondition the crankshaft as necessary. When grinding the crank journal or crank pin, finish them to specified dimensions according to the undersize bearing to be used.

### Crank pin:

#### Out-of-roundness

0.003 mm (0.0001 in)

#### Cylindricity

0.004 mm (0.0002 in)

#### Grinding limit

To 51.750 mm (2.0374 in) dia.

### Crank journal:

#### Out-of-roundness

0.005 mm (0.0002 in)

#### Cylindricity

0.006 mm (0.0002 in)

#### Grinding limit

To 59.750 mm (2.3524 in) dia.

O.D.: Outer Diameter

4) Measure the side clearance of crankshaft at center bearing. If the clearance exceeds the limit, replace the bearing.

**Crankshaft side clearance:**

**Standard**

**0.030 — 0.115 mm (0.0012 — 0.0045 in)**

**Limit**

**0.25 mm (0.0098 in)**

5) Inspect individual crankshaft bearings for signs of flaking, seizure, melting, and wear.

6) Measure the oil clearance on each crankshaft bearing by means of plastigauge. If the measurement is not within the specification, replace the defective bearing with an undersize one, and replace or recondition the crankshaft as necessary.

**Crankshaft oil clearance:**

**Standard**

**0.010 — 0.030 mm (0.0004 — 0.0012 in)**

**Limit**

**0.040 mm (0.0016 in)**

## 21. Intake and Exhaust Valve

### A: SPECIFICATION

For operations related to intake and exhaust valve, refer to "Cylinder Head".

<Ref. to ME(H4DOTC)-61, REMOVAL, Cylinder Head.> <Ref. to ME(H4DOTC)-61, INSTALLATION, Cylinder Head.>

## 22.Piston

### A: SPECIFICATION

For operations related to piston, refer to “Cylinder Block”.

## 24.Crankshaft

### A: SPECIFICATION

For operations related to crankshaft, refer to “Cylinder Block”.

<Ref. to ME(H4DOTC)-68, REMOVAL, Cylinder Block.> <Ref. to ME(H4DOTC)-71, INSTALLATION, Cylinder Block.>

## 25.Engine Trouble in General

### A: INSPECTION

NOTE:

“RANK” shown in the chart refers to the possibility of reason for the trouble in order (“Very often” to “Rarely”)

A — Very often

B — Sometimes

C — Rarely

| TROUBLE                               | PROBLEM PARTS, ETC.   | POSSIBLE CAUSE                                   | RANK |
|---------------------------------------|---|--|------|
| 1. Engine will not start.             |   |  |      |
| 1) Starter does not turn.             | Starter   | Defective battery-to-starter harness             | B    |
|                                       |   | Defective starter switch                         | C    |
|                                       |   | Defective inhibitor switch or neutral switch     | C    |
|                                       |   | Defective starter                                | B    |
|                                       | Battery   | Poor terminal connection                         | A    |
|                                       |   | Run-down battery                                 | A    |
|                                       |   | Defective charging system                        | B    |
|                                       | Friction  | Seizure of crankshaft and connecting rod bearing | C    |
|                                       |   | Seized camshaft                                  | C    |
| Seized or stuck piston and cylinder   |   | C  |      |
| 2) Initial combustion does not occur. | Starter   | Defective starter                                | C    |
|                                       | Engine control system <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.> |  | A    |
|                                       | Fuel line   | Defective fuel pump and relay                    | A    |
|                                       |   | Lack of or insufficient fuel                     | B    |
|                                       | Belt  | Defective  | B    |
|                                       |   | Defective timing                                 | B    |
|                                       | Compression   | Incorrect valve clearance                        | C    |
|                                       |   | Loosened spark plug or defective gasket          | C    |
|                                       |   | Loosened cylinder head bolt or defective gasket  | C    |
|                                       |   | Improper valve sealing                           | C    |
|                                       |   | Defective valve stem                             | C    |
|                                       |   | Worn or broken valve spring                      | B    |
|                                       |   | Worn or stuck piston rings, cylinder and piston  | C    |
|                                       |   | Incorrect valve timing                           | B    |
|                                       | Improper engine oil (low viscosity)   | B  |      |
| 3) Initial combustion occurs.         | Engine control system <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.> |  | A    |
|                                       | Intake system   | Defective intake manifold gasket                 | B    |
|                                       |   | Defective throttle body gasket                   | B    |
|                                       | Fuel line   | Defective fuel pump and relay                    | C    |
|                                       |   | Clogged fuel line                                | C    |
|                                       |   | Lack of or insufficient fuel                     | B    |
|                                       | Belt  | Defective  | B    |
|                                       |   | Defective timing                                 | B    |
|                                       | Compression   | Incorrect valve clearance                        | C    |
|                                       |   | Loosened spark plug or defective gasket          | C    |
|                                       |   | Loosened cylinder head bolt or defective gasket  | C    |

# Engine Noise

MECHANICAL

## 26.Engine Noise

### A: INSPECTION

| Type of sound   | Condition  | Possible cause   |
|---|--|--|
| Regular clicking sound  | Sound increases as engine speed increases.                                       | <ul style="list-style-type: none"> <li>Valve mechanism is defective.</li> <li>Incorrect valve clearance</li> <li>Worn camshaft</li> <li>Broken valve spring</li> </ul>                       |
| Heavy and dull clank  | Oil pressure is low.   | <ul style="list-style-type: none"> <li>Worn crankshaft main bearing</li> <li>Worn connecting rod bearing (big end)</li> </ul>  |
|   | Oil pressure is normal.  | <ul style="list-style-type: none"> <li>Loose flywheel mounting bolts</li> <li>Damaged engine mounting</li> </ul>   |
| High-pitched clank (Spark knock)  | Sound is noticeable when accelerating with an overload.                          | <ul style="list-style-type: none"> <li>Ignition timing advanced</li> <li>Accumulation of carbon inside combustion chamber</li> <li>Wrong spark plug</li> <li>Improper gasoline</li> </ul>    |
| Clank when engine speed is medium (1,000 to 2,000 rpm).                       | Sound is reduced when fuel injector connector of noisy cylinder is disconnected. | <ul style="list-style-type: none"> <li>Worn crankshaft main bearing</li> <li>Worn bearing of connecting rod (Large end)</li> </ul>   |
| Knocking sound when engine is operating under idling speed and engine is warm | Sound is reduced when fuel injector connector of noisy cylinder is disconnected. | <ul style="list-style-type: none"> <li>Worn cylinder liner and piston ring</li> <li>Broken or stuck piston ring</li> <li>Worn piston pin and hole at piston end of connecting rod</li> </ul> |
|   | Sound is not reduced if each fuel injector connector is disconnected in turn.    | <ul style="list-style-type: none"> <li>Unusually worn valve lifter</li> <li>Worn cam sprocket</li> <li>Worn camshaft journal in cylinder head assembly</li> </ul>                            |
| Squeaky sound   | —  | <ul style="list-style-type: none"> <li>Insufficient generator lubrication</li> </ul>   |
| Rubbing sound   | —  | <ul style="list-style-type: none"> <li>Defective generator brush and rotor contact</li> </ul>  |
| Gear scream when starting engine  | —  | <ul style="list-style-type: none"> <li>Defective ignition starter switch</li> <li>Worn gear and starter pinion</li> </ul>  |
| Sound like polishing glass with a dry cloth                                   | —  | <ul style="list-style-type: none"> <li>Loose drive belt</li> <li>Defective water pump shaft</li> </ul>   |
| Hissing sound   | —  | <ul style="list-style-type: none"> <li>Loss of compression</li> <li>Air leakage in air intake system, hoses, connections or manifolds</li> </ul>   |
| Timing belt noise   | —  | <ul style="list-style-type: none"> <li>Loose timing belt</li> <li>Belt contacting case or adjacent part</li> </ul>   |
| Valve noise   | —  | <ul style="list-style-type: none"> <li>Incorrect valve clearance</li> </ul>  |

**NOTE\*)**

When disconnecting the fuel injector connector, the malfunction indicator light illuminates and DTC is stored in ECM memory. Therefore, carry out the clear memory mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and inspection mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.> after connecting the fuel injector connector.

### **B: CAUTION**

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

# Front Exhaust Pipe

EXHAUST

## 2. Front Exhaust Pipe

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front oxygen (A/F) sensor. <Ref. to FU(H4DOTC)-41, REMOVAL, Front Oxygen (A/F) Sensor.>
- 3) Remove the under cover.
- 4) Remove the lower exhaust manifold cover (RH).
- 5) Remove the lower and upper exhaust manifold covers (LH).

- 6) Remove the bolts and nuts which hold the front exhaust pipe assembly to turbocharger joint pipe.
- 7) While holding the front exhaust pipe assembly with one hand, remove the nuts which hold the front exhaust pipe assembly to cylinder head exhaust port.

- 8) Remove the front exhaust pipe assembly.
- 9) Remove the covers from exhaust manifold and front exhaust pipe.
- 10) Separate the front exhaust pipe from exhaust manifolds.

- Turbo model

- STI model

### B: INSTALLATION

#### NOTE:

Replace the gaskets with new ones.

- 1) Assemble the front exhaust pipe and exhaust manifolds.

#### Tightening torque:

**35 N·m (3.6 kgf-m, 26 ft-lb)**

- Turbo model

- STI model

- 2) Install the front exhaust pipe covers.

#### Tightening torque:

**Turbo model**

**7.5 N·m (0.8 kgf-m, 5.5 ft-lb)**

**STI model**

**25 N·m (2.5 kgf-m, 18.1 ft-lb)**

3) Install the upper exhaust manifold cover (RH).

**Tightening torque:**

*Turbo model*

**7.5 N·m (0.8 kgf-m, 5.5 ft-lb)**

*STI model*

**19 N·m (1.9 kgf-m, 13.7 ft-lb)**

4) Install the front exhaust pipe assembly.

**Tightening torque:**

**35 N·m (3.6 kgf-m, 26 ft-lb)**

5) Connect the exhaust manifold (RH) to turbo-charger joint pipe.

- Turbo model

**Tightening torque:**

**T1: 35 N·m (3.6 kgf-m, 26 ft-lb)**

**T2: 40 N·m (4 kgf-m, 28.9 ft-lb)**

- STI model

**Tightening torque:**

**35 N·m (3.6 kgf-m, 26 ft-lb)**

6) Install the upper and lower exhaust manifold covers (LH).

**Tightening torque:**

*Turbo model*

**7.5 N·m (0.8 kgf-m, 5.5 ft-lb)**

*STI model*

**19 N·m (1.9 kgf-m, 13.7 ft-lb)**

7) Install the lower exhaust manifold cover (RH).

**Tightening torque:**

*Turbo model*

**7.5 N·m (0.8 kgf-m, 5.5 ft-lb)**

*STI model*

**19 N·m (1.9 kgf-m, 13.7 ft-lb)**

8) Install the front oxygen (A/F) sensor. <Ref. to FU(H4DOTC)-41, INSTALLATION, Front Oxygen (A/F) Sensor.>

9) Install the under cover.

10) Connect the battery ground cable to battery.

# Center Exhaust Pipe

EXHAUST

## 3. Center Exhaust Pipe

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 4) Remove the intercooler bracket.

- 5) Lift-up the vehicle.
- 6) Remove the under cover.
- 7) Remove the bolts which install the under side of turbocharger lower cover.

**CAUTION:**  
Be careful, the turbocharger and exhaust pipe are hot.

- 8) Lower the vehicle.
- 9) Remove the turbocharger upper cover.

- 10) Remove the bolts which install the upper side of turbocharger lower cover, and remove it.

- 11) Separate the center exhaust pipe from turbocharger.

- 12) Lift-up the vehicle.
- 13) Disconnect the connector from rear oxygen sensor.

- 14) Vertically draw out the clip from crossmember.

15) Separate the center exhaust pipe from rear exhaust pipe.

16) Remove the bolt which holds the center exhaust pipe bracket to transmission.

17) Remove the intercooler bracket.

18) Remove the bolt which holds the center exhaust pipe to hanger bracket.

**CAUTION:**  
Be careful not to pull down the center exhaust pipe.

19) Remove the center exhaust pipe.

## B: INSTALLATION

**NOTE:**

Replace the gaskets with new ones.

1) Install the center exhaust pipe and temporarily tighten the bolt which holds the center exhaust pipe to hanger bracket.

2) Temporarily tighten the bolt which holds the center pipe to transmission.

3) Connect the center exhaust pipe to turbocharger.

**Tightening torque:**

**35 N·m (3.6 kgf-m, 26 ft-lb)**

4) Install the center exhaust pipe to rear exhaust pipe.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13 ft-lb)**

5) Connect the connector to rear oxygen sensor.

# Center Exhaust Pipe

## EXHAUST

6) Secure the clip on crossmember.

7) Tighten the bolt which holds the center exhaust pipe bracket to transmission.

**Tightening torque:**  
**30 N·m (3.1 kgf-m, 22.4 ft-lb)**

8) Tighten the bolt which holds the center exhaust pipe to hanger bracket.

**Tightening torque:**  
**35 N·m (3.6 kgf-m, 26 ft-lb)**

9) Lower the vehicle.

10) Place the turbocharger lower cover, and tighten the bolts which install the upper side of lower cover.

**Tightening torque:**  
**7.5 N·m (0.8 kgf-m, 5.5 ft-lb)**

11) Place the turbocharger upper cover, and tighten the bolts which install the upper side of upper cover.

**Tightening torque:**  
**7.5 N·m (0.8 kgf-m, 5.5 ft-lb)**

12) Lift-up the vehicle.

13) Tighten the bolts which install the under side of turbocharger lower cover.

**Tightening torque:**  
**7.5 N·m (0.8 kgf-m, 5.5 ft-lb)**

14) Install the under cover.

15) Lower the vehicle.

16) Install the intercooler bracket.

17) Install the intercooler. <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

## 4. Joint Pipe

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the front oxygen (A/F) sensor. <Ref. to FU(H4DOTC)-41, REMOVAL, Front Oxygen (A/F) Sensor.>
- 3) Remove the under cover.
- 4) Remove the exhaust manifold lower cover (RH).

- 5) Remove the nuts which hold the front exhaust manifold to joint pipe.

- 6) Remove the center exhaust pipe. <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>
- 7) Remove the turbocharger. <Ref. to IN(H4DOTC)-13, REMOVAL, Turbocharger.>
- 8) Take off the joint pipe in the upward direction.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

***T: 35 N·m (3.6 kgf-m, 26 ft-lb)***

## 5. Rear Exhaust Pipe

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Separate the rear exhaust pipe from center exhaust pipe.

**CAUTION:**

Be careful, the exhaust pipe is hot.

- 4) Separate the rear exhaust pipe from muffler.

**CAUTION:**

Be careful not to pull down the rear exhaust pipe.

- 5) Remove the rear exhaust pipe.

### B: INSTALLATION

**NOTE:**

Replace the gaskets and self-locking nut with new ones.

- 1) Install the rear exhaust pipe to muffler.

**Tightening torque:**

**48 N·m (4.9 kgf-m, 35.4 ft-lb)**

- 2) Install the rear exhaust pipe to center exhaust pipe.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13 ft-lb)**

- 3) Lower the vehicle.
- 4) Connect the battery ground cable to battery.

### C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.
- 3) Make sure the cushion rubber is not worn or cracked.

# Muffler

## EXHAUST

### 6. Muffler

#### A: REMOVAL

1) Separate the muffler from rear exhaust pipe.

#### CAUTION:

Be careful, the exhaust pipe is hot.

2) Remove the rubber cushions, and detach the muffler.

#### CAUTION:

Be careful not to drop the muffler during removal.

#### NOTE:

To facilitate removal, apply a coat of spray type lubricant to the mating area of rubber cushions in advance.

#### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Replace the gasket and self-locking nut with a new one.

#### Tightening torque:

48 N·m (4.9 kgf-m, 35.4 ft-lb)

#### C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.
- 3) Make sure the cushion rubber is not worn or cracked.
