## C: CAUTION

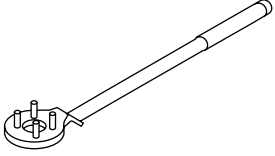

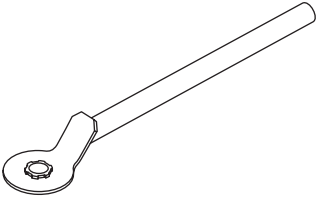

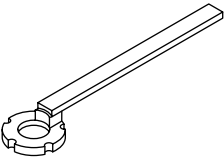

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

Repair the trouble cause. <Ref. to EN(H4DOTC)(diag)-39, Read Diagnostic Trouble Code (DTC).> |

## 4. Engine Coolant

### A: REPLACEMENT

#### 1. DRAINING OF ENGINE COOLANT

- 1) Lift-up the vehicle.
- 2) Remove the under cover.
- 3) Remove the drain cock to drain engine coolant into container.

**NOTE:**

- Remove the coolant filler tank cap so that engine coolant will drain faster.
- If engine coolant adheres to the exhaust pipe, wipe it off completely.

- 4) Install the drain cock.

#### 2. FILLING OF ENGINE COOLANT

- 1) Pour cooling system conditioner through the filter neck.

**Cooling system protective agent:**

**COOLING SYSTEM CONDITIONER (Part No. SOA635071)**

- 2) Fill engine coolant into the coolant filler tank up to filler neck position.

**Coolant capacity (fill up to "FULL" level):**

**AT model**

**Approx. 7.6 ℓ (8.0 US qt, 6.7 Imp qt)**

**MT model**

**Approx. 7.7 ℓ (8.1 US qt, 6.8 Imp qt)**

**CAUTION:**

**Do not mix up the coolant filler tank side cap with radiator side cap.**

**NOTE:**

- Do not remove the radiator side cap when filling engine coolant.
- The SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crank-case. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.

- 3) Fill engine coolant into the reservoir tank up to "FULL" level.

- 4) Close the coolant filler tank cap, start the engine and race 5 to 6 times at less than 3,000 rpm, then stop the engine. (Complete this operation within 40 seconds.)

- 5) Wait for one minute after the engine stops, open the coolant filler tank cap. If the engine coolant level drops, add engine coolant to the filler neck position of radiator.

- 6) Perform the procedures 4) and 5) again.

- 7) Attach the coolant filler tank cap and reservoir tank cap properly.

- 8) Start the engine and operate the heater at maximum hot position and the blower speed setting to "LO".

- 9) Run the engine at 2,000 rpm or less until radiator fan starts and stops.

**NOTE:**

- Be careful with the engine coolant temperature gauge to prevent overheating.
- If the radiator hose becomes to harden by the pressure of engine coolant, air bleeding operation seems to be almost completed.

- 10) Stop the engine and wait until engine coolant temperature lowers to 30°C (86°F) or less.

- 11) Open the coolant filler tank cap. If the engine coolant level drops, add engine coolant into the coolant filler tank up to the filler neck position and the reservoir tank to "FULL" level.

- 12) Attach the coolant filler tank cap and reservoir tank cap properly.

- 13) Operate the heater at maximum hot position and the blower speed setting to "LO" and start the engine. Race at less than 3,000 rpm. If the flowing sound is heard from heater core, repeat the procedures from step 9).

- 14) Install the collector cover.

## B: INSPECTION

### 1. RELATIONSHIP OF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

The concentration and safe operating temperature of the SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.

[Example]

If the coolant temperature is 25°C (77°F) and its specific gravity is 1.054 and the concentration is 35% (point A), the safe operating temperature is -14°C (7°F) (point B), and the freezing temperature is -20°C (-4°F) (point C).

### 2. PROCEDURE TO ADJUST THE CONCENTRATION OF THE COOLANT

To adjust the concentration of the coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50%).

The amount of coolant that should be replaced can be determined using the diagram.

[Example]

Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 ℓ (2.2 US qt, 1.8 Imp qt). Drain 2.1 ℓ (2.2 US qt, 1.8 Imp qt) of coolant from the cooling system and add 2.1 ℓ (2.2 US qt, 1.8 Imp qt) of the undiluted solution of SUBARU coolant.

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.

## 5. Water Pump

### A: REMOVAL

- 1) Remove the radiator. <Ref. to CO(H4DOTC)-23, REMOVAL, Radiator.>
- 2) Remove the V-belts. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>
- 3) Remove the timing belt. <Ref. to ME(H4DOTC)-45, REMOVAL, Timing Belt.>
- 4) Remove the automatic belt tension adjuster (A).
- 5) Remove the belt idler (B).
- 6) Remove the belt idler No. 2 (C).

- 7) Remove the camshaft position sensor. <Ref. to FU(H4DOTC)-29, REMOVAL, Camshaft Position Sensor.>
- 8) Remove the cam sprockets (LH) by using ST. <Ref. to ME(H4DOTC)-53, REMOVAL, Cam Sprocket.>
- 9) Remove the belt cover No. 2 (LH).

- 10) Remove the tensioner bracket.

- 11) Disconnect the hose from water pump.

- 12) Remove the water pump.

### B: INSTALLATION

- 1) Install the water pump onto cylinder block (LH).

#### NOTE:

- Replace the gasket with a new one.
- When installing the water pump, tighten bolts in two stages in alphabetical sequence as shown in the figure.

#### Tightening torque:

##### First:

**12 N·m (1.2 kgf-m, 8.7 ft-lb)**

##### Second:

**12 N·m (1.2 kgf-m, 8.7 ft-lb)**

- 2) Connect the hose to water pump.
- 3) Install the tensioner bracket.

#### Tightening torque:

**24.5 N·m (2.5 kgf-m, 18.1 ft-lb)**

# Water Pump

## COOLING

4) Install the belt cover No. 2 (LH).

**Tightening torque:**

**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

**Clearance between impeller and pump case:**

**Standard**

**0.5 — 1.5 mm (0.020 — 0.059 in)**

5) Install the cam sprockets (LH) by using ST. <Ref. to ME(H4DOTC)-53, INSTALLATION, Cam Sprocket.>

6) Install the camshaft position sensor. <Ref. to FU(H4DOTC)-29, INSTALLATION, Camshaft Position Sensor.>

7) Install the belt idler No. 2 (C).

8) Install the belt idler (B).

9) Install the automatic belt tension adjuster (A) which has tension rod held by pin. <Ref. to ME(H4DOTC)-46, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt.>

**Tightening torque:**

**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

10) Install the timing belt. <Ref. to ME(H4DOTC)-47, TIMING BELT, INSTALLATION, Timing Belt.>

11) Install the V-belts. <Ref. to ME(H4DOTC)-41, INSTALLATION, V-belt.>

12) Install the radiator. <Ref. to CO(H4DOTC)-24, INSTALLATION, Radiator.>

## C: INSPECTION

1) Check the water pump bearing for smooth rotation.

2) Check the water pump pulley for abnormalities.

3) Make sure the impeller is not deformed or damaged.

4) Check the clearance between impeller and pump case.

## 6. Thermostat

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Lift-up the vehicle.
- 3) Remove the under cover.
- 4) Drain the engine coolant completely. <Ref. to CO(H4DOTC)-17, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

- 5) Disconnect the radiator outlet hose.

- 6) Remove the thermostat cover, and then remove the gasket and thermostat.

- (A) Thermostat cover
- (B) Gasket
- (C) Thermostat

### B: INSTALLATION

- 1) Install the gasket to thermostat, and install the thermostat and gasket to water pump as a unit.

#### NOTE:

- When reinstalling the thermostat, use a new gasket.
- The thermostat must be installed with the jiggle pin (D) facing upward.

# Thermostat

## COOLING

**Tightening torque:**  
**12 N·m (1.2 kgf·m, 8.7 ft·lb)**

- (A) Thermostat cover
- (B) Gasket
- (C) Thermostat
- (D) Jiggle pin

**Starts to open:**  
**76 — 80°C (169 — 176°F)**

**Fully opens:**  
**91°C (196°F)**

**Valve lift:**  
**9.0 mm (0.35 in) or more**

- (A) Thermometer
- (B) Thermostat

2) Fill engine coolant. <Ref. to CO(H4DOTC)-17, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

## C: INSPECTION

Replace the thermostat if the valve does not close completely at an ambient temperature or if the following test shows unsatisfactory results.

Immerse the thermostat and thermometer in water. Raise water temperature gradually, and measure the temperature and valve lift when the valve begins to open and when the valve is fully opened. During the test, agitate the water for even temperature distribution. The measurement should be to the specification.

### NOTE:

- Leave the thermostat in a boiled water for more than five minutes before measuring the valve lift.
- Hold the thermostat with a wire or the like to avoid contacting with the bottom of container.

## 7. Radiator

### A: REMOVAL

**WARNING:**

The radiator is pressurized. Wait until the engine cools down before working on the radiator.

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Lift-up the vehicle.
- 4) Remove the under cover.
- 5) Drain the engine coolant completely. <Ref. to CO(H4DOTC)-17, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 6) Disconnect the connectors of radiator main fan motor (A) and sub fan motor (B).

- 7) Disconnect the ATF cooler hose from ATF pipe. (AT model) Plug the openings in the hose and radiator with caps in order to prevent ATF from leaking.

- 8) Disconnect the radiator outlet hose from thermostat cover.

- 9) Lower the vehicle.
- 10) Remove the air intake duct.

- 11) Remove the V-belt covers.

- 12) Disconnect the overflow hose.
- 13) Remove the reservoir tank. <Ref. to CO(H4DOTC)-32, REMOVAL, Reservoir Tank.>

# Radiator

## COOLING

- 14) Disconnect the radiator inlet hose (A) and water tank hose (B) from radiator.

- 15) Remove the radiator upper brackets.

- 16) While lifting the radiator up, slide it to the left.  
17) Lift-up the radiator, and then remove it from vehicle.

## B: INSTALLATION

- 1) Attach the radiator mounting cushions to the holes on vehicle.

- 2) Install the radiator to vehicle.

### NOTE:

Fit the pins on lower side of radiator into the cushions on body side.

- 3) Install the radiator brackets, and then tighten the bolts.

### Tightening torque:

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- 4) Connect the radiator inlet hose (A) and water tank hose (B).

- 5) Install the reservoir tank. <Ref. to CO(H4DOTC)-32, INSTALLATION, Reservoir Tank.>

- 6) Connect the overflow hose.

7) Install the V-belt cover.

8) Install the air intake duct.

<Ref. to IN(H4DOTC)-9, INSTALLATION, Air Intake Duct.>

9) Lift-up the vehicle.

10) Connect the ATF cooler hoses. (AT model).

11) Connect the radiator outlet hose.

12) Connect the connectors to radiator main fan motor (A) and sub fan motor (B).

13) Install the under cover.

14) Lower the vehicle.

15) Connect the battery ground cable to battery.

16) Fill engine coolant. <Ref. to CO(H4DOTC)-17, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

17) Check the ATF level. <Ref. to 4AT-30, INSPECTION, Automatic Transmission Fluid.>

## C: INSPECTION

1) Remove the coolant filler tank cap, top off coolant filler tank, and then attach the tester to coolant filler tank in place of cap.

2) Apply a pressure of 122 kPa (1.2 kgf/cm<sup>2</sup>, 18 psi) to the coolant filler tank to check if:

- (1) Engine coolant leaks at/around radiator.
- (2) Engine coolant leaks at/around hoses or connections.

**CAUTION:**

- Inspection must be carried out at the side of coolant filler tank, not at the side of radiator.
- Engine should be turned off.
- Wipe engine coolant from check points in advance.
- If engine coolant adheres to the exhaust pipe, wipe it off completely.
- Be careful to prevent engine coolant from spurting out when removing the tester.
- Be careful also not to deform the filler neck of coolant filler tank when installing or removing tester.

## 8. Radiator Cap

### A: INSPECTION

1) Attach the radiator cap to tester.

2) Increase the pressure until tester gauge pointer stops. Radiator cap is functioning properly if it holds the service limit pressure for 5 to 6 seconds.

#### **Coolant filler tank side**

##### **Standard pressure:**

**93 — 123 kPa (0.95 — 1.25 kgf/cm<sup>2</sup>, 14 — 18 psi)**

##### **Service limit pressure:**

**83 kPa (0.85 kgf/cm<sup>2</sup>, 12 psi)**

#### **Radiator side**

##### **Standard pressure:**

**122 — 152 kPa (1.24 — 1.55 kgf/cm<sup>2</sup>, 18 — 22 psi)**

##### **Service limit pressure:**

**112 kPa (1.14 kgf/cm<sup>2</sup>, 16 psi)**

#### **CAUTION:**

- Be sure to remove foreign matter and rust from the cap in advance. Otherwise, results of pressure test will be incorrect.
- Do not mix up the coolant filler tank side cap with radiator side cap.

# Radiator Main Fan and Fan Motor

COOLING

## 9. Radiator Main Fan and Fan Motor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Remove the under cover.
- 4) Disconnect the connector of main fan motor (A).

- 5) Lower the vehicle.
- 6) Remove the air intake duct.

- 7) Disconnect the overflow hose.
- 8) Remove the overflow pipe.
- 9) Remove the reservoir tank. <Ref. to CO(H4DOTC)-32, REMOVAL, Reservoir Tank.>
- 10) Remove the radiator main fan motor assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

When the main fan motor assembly cannot be installed as is, loosen the sub fan motor assembly securing bolts to install it.

#### Tightening torque:

**4.9 N·m (0.50 kgf-m, 3.6 ft-lb)**

### C: DISASSEMBLY

- 1) Remove the nut which holds the fan onto fan motor and shroud assembly.

- 2) Remove the bolts which install the fan motor onto shroud.

## D: ASSEMBLY

Assemble in the reverse order of disassembly.

### *Tightening torque:*

**4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

### *Tightening torque:*

**3.4 N·m (0.35 kgf-m, 2.5 ft-lb)**

# Radiator Sub Fan and Fan Motor

COOLING

## 10. Radiator Sub Fan and Fan Motor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Remove the under cover.
- 4) Disconnect the connector of sub fan motor (B).

- 5) Lower the vehicle.
- 6) Remove the air intake duct.

- 7) Remove the bolts which hold the sub fan shroud to radiator.
- 8) Remove the overflow pipe.
- 9) Remove the radiator sub fan shroud through the under side of vehicle.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**4.9 N·m (0.50 kgf·m, 3.6 ft·lb)**

### C: DISASSEMBLY

- 1) Remove the clip which holds the motor harness onto shroud.

- 2) Remove the nut which holds the fan onto fan motor and shroud assembly.

- 3) Remove the bolts which install the fan motor onto shroud.

## D: ASSEMBLY

Assemble in the reverse order of disassembly.

### *Tightening torque:*

**4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

### *Tightening torque:*

**3.4 N·m (0.35 kgf-m, 2.5 ft-lb)**

## 11. Reservoir Tank

### A: REMOVAL

- 1) Disconnect the overflow hose from the radiator filler neck position.
- 2) Pull out the reservoir tank to the direction of arrow while pushing the pawl (A).

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Refer to COMPONENT for tightening torque. <Ref. to CO(H4DOTC)-3, COMPONENT, General Description.>

### C: INSPECTION

Make sure the engine coolant level is between "FULL" and "LOW".

## 12. Coolant Filler Tank

### A: REMOVAL

#### WARNING:

The radiator is pressurized. Wait until the engine cools down before working on the radiator.

1) Drain the coolant about 3.0 ℓ (3.2 US qt, 2.6 Imp qt). <Ref. to CO(H4DOTC)-17, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

2) Remove the air cleaner upper cover and air intake boot. <Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>

3) Remove the air cleaner element.

4) Disconnect the engine coolant hoses from coolant filler tank.

5) Remove the bolts and nut which install the coolant filler tank.

6) Disconnect the engine coolant hose which connects the under side of coolant filler tank.

7) Remove the coolant filler tank.

### B: INSTALLATION

1) Install in the reverse order of removal.

#### Tightening torque:

**T1: 16 N·m (1.6 kgf-m, 11.8 ft-lb)**

**T2: 13 N·m (1.3 kgf-m, 9.6 ft-lb)**

2) Fill engine coolant. <Ref. to CO(H4DOTC)-17, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

## Engine Cooling System Trouble in General

COOLING

### 13.Engine Cooling System Trouble in General

#### A: INSPECTION

| Trouble                        | Possible cause  | Corrective action   |
|--------------------------------|---|---|
| Over-heating                   | a. Insufficient engine coolant  | Replenish the engine coolant, inspect for leakage, and repair.  |
|                                | b. Loose timing belt  | Repair or replace the timing belt tensioner.  |
|                                | c. Oil on timing belt   | Replace.  |
|                                | d. Malfunction of thermostat  | Replace.  |
|                                | e. Malfunction of water pump  | Replace.  |
|                                | f. Clogged engine coolant passage   | Clean.  |
|                                | g. Improper ignition timing   | Inspect and repair the ignition control system.<br><Ref. to EN(H4DOTC)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> |
|                                | h. Clogged or leaking radiator  | Clean or repair, or replace.  |
|                                | i. Improper engine oil in engine coolant  | Replace the engine coolant.   |
|                                | j. Air/fuel mixture ratio too lean  | Inspect and repair the fuel injection system.<br><Ref. to EN(H4DOTC)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>   |
|                                | k. Excessive back pressure in exhaust system  | Clean or replace.   |
|                                | l. Insufficient clearance between piston and cylinder   | Adjust or replace.  |
|                                | m. Slipping clutch  | Repair or replace.  |
| n. Dragging brake              | Adjust.   |   |
| o. Malfunction of radiator fan | Inspect the radiator fan relay, engine coolant temperature sensor or radiator motor and replace them. |   |
| Over-cooling                   | a. Atmospheric temperature extremely low  | Partly cover the radiator front area.   |
|                                | b. Defective thermostat   | Replace.  |
| Engine coolant leaks           | a. Loosened or damaged connecting units on hoses  | Repair or replace.  |
|                                | b. Leakage from water pump  | Replace.  |
|                                | c. Leakage from water pipe  | Repair or replace.  |
|                                | d. Leakage around cylinder head gasket  | Retighten the cylinder head bolts or replace gasket.  |
|                                | e. Damaged or cracked cylinder head and cylinder block  | Repair or replace.  |
|                                | f. Damaged or cracked thermostat case   | Repair or replace.  |
|                                | g. Leakage from radiator  | Repair or replace.  |
| Noise                          | a. Defective timing belt  | Replace.  |
|                                | b. Defective radiator fan   | Replace.  |
|                                | c. Defective water pump bearing   | Replace the water pump.   |
|                                | d. Defective water pump mechanical seal   | Replace the water pump.   |

|                                  | Working voltage — wattage                        |                          | 12 V — 3.4 W or less                                 |
|                                  | Warning light activation pressure                |                          | 14.7 kPa (0.15 kgf/cm <sup>2</sup> , 2.1 psi)        |
|                                  | Proof pressure                                   |                          | More than 981 kPa (10 kgf/cm <sup>2</sup> , 142 psi) |
| Engine oil                       | Capacity (at overhaul)                           |                          | 5.0 ℓ (5.3 US qt, 4.4 Imp qt)                        |
|                                  | When replacing engine oil and oil filter         |                          | 4.3 ℓ (4.5 US qt, 3.8 Imp qt)                        |
|                                  | When replacing engine oil only                   |                          | 4.0 ℓ (4.2 US qt, 3.5 Imp qt)                        |

**Recommended oil:**

**API standard SM with the “Energy Conserving” logo is printed.**

**ILSAC standard, GF4 “Star burst mark” label is on the container.**

- (1) SAE viscosity No. and applicable temperature
- (2) Recommended

The proper viscosity helps vehicle get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.

**CAUTION:**

**When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the API standard and SAE viscosity No. designated by SUBARU.**

**NOTE:**

If the vehicle is used in areas with very high temperatures or for other heavy duty applications, the following viscosity oils may be used: API standard:

SM or SL

SAE Viscosity No.: 30, 40, 10W-50, 20W-40, 20W-50.

### **C: CAUTION**

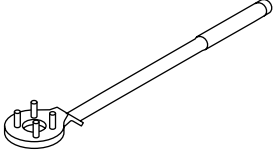

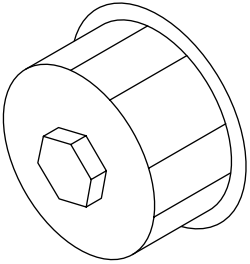

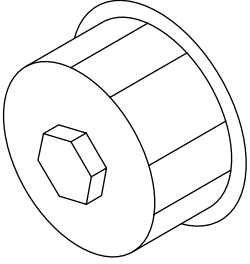

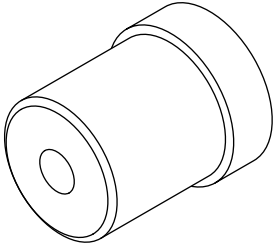

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

|--|---|--|---|
| <b>1 CHECK COMBINATION METER.</b><br>1) Turn the ignition switch to ON. (engine OFF)<br>2) Check other warning lights.   | Does the warning lights go on?            | Go to step 2.  | Repair or replace the combination meter. <Ref. to IDI-3, INSPECTION, Combination Meter System.> |
| <b>2 CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND OIL PRESSURE SWITCH.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from oil pressure switch.<br>3) Turn the ignition switch ON.<br>4) Measure the voltage of harness between the combination meter connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(E11) No. 1 (+) — Chassis ground (-):</b> | Is the voltage more than 10 V?            | Replace the oil pressure switch.   | Go to step 3.   |
| <b>3 CHECK COMBINATION METER.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the combination meter.<br>3) Measure the resistance of combination meter.<br><b>Terminals</b><br><b>(i11) No. 7 — (i10) No. 2:</b>   | Is the resistance less than 10 $\Omega$ ? | Replace the harness connector between combination meter and oil pressure switch. | Repair or replace the combination meter. <Ref. to IDI-3, INSPECTION, Combination Meter System.> |

## 3. Engine Oil

### A: INSPECTION

- 1) Park the vehicle on a level surface.
- 2) After turning off the engine, wait a few minutes for oil to drain back into the oil pan before checking the level.
- 3) Just after driving or while the engine is warm, engine oil level may show in the range between the "F" line and notch mark. This is caused by thermal expansion of engine oil.
- 4) Remove the oil level gauge and wipe it clean.
- 5) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in proper orientation.
- 6) Remove it again and note the reading. If the engine oil level is below the "L" line, add oil to bring the level up to "F" line.

#### NOTE:

To prevent overfilling the engine oil, do not add oil above "F" line when the engine is cold.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. 1.0 ℓ (1.1 US qt, 0.9 Imp qt)

### B: REPLACEMENT

- 1) Open the engine oil filler cap for quick draining of engine oil.
- 2) Drain the engine oil by loosening the engine oil drain plug.

- 3) Replace the drain plug gasket.

- 4) Tighten the engine oil drain plug after draining engine oil.

#### Tightening torque:

**44 N·m (4.5 kgf-m, 32.5 ft-lb)**

- 5) Install the service hole cover.
- 6) Use the engine oil of proper quality and viscosity, fill engine oil through the oil filler duct up to upper level on level gauge. Make sure that the vehicle is placed level when checking oil level.

#### Recommended oil:

**API standard SM with the "Energy Conserving" logo is printed.**

**ILSAC standard, GF4 "Star burst mark" label is on the container.**

#### Engine oil capacity:

##### Upper level

**4.0 ℓ (4.2 US qt, 3.5 Imp qt)**

##### Lower level

**3.0 ℓ (3.2 US qt, 2.6 Imp qt)**

| SAE (1) |     |                |     |    |    |    |     |
|---------|-----|----------------|-----|----|----|----|-----|
| (°C)    | -30 | -20            | -15 | 0  | 15 | 30 | 40  |
| (°F)    | -22 | -4             | 5   | 32 | 59 | 86 | 104 |
|         |     | 10W-30, 10W-50 |     |    |    |    |     |
|         |     | 5W-30 (2)      |     |    |    |    |     |

LU-02250

- (1) SAE viscosity No. and applicable temperature
- (2) Recommended

The proper viscosity helps vehicle get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.

#### CAUTION:

**When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the API standard and SAE viscosity No. designated by SUBARU.**

# Engine Oil

## LUBRICATION

---

### NOTE:

If the vehicle is used in areas with very high temperatures or for other heavy duty applications, the following viscosity oils may be used: API standard: SM or SL

SAE Viscosity No.: 30, 40, 10W-50, 20W-40, 20W-50.

7) Close the engine oil filler cap.

8) Start the engine and warm it up for a time.

9) After the engine stops, recheck the oil level. If necessary, add engine oil up to the upper level on level gauge.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. 1.0 ℓ (1.1 US qt, 0.9 Imp qt)

## 4. Oil Pump

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Remove the under cover.
- 4) Remove the bolts which install the water pipe of oil cooler to oil pump.

- 5) Remove the water pipe and hoses between oil cooler and water pump.

- 6) Remove the radiator. <Ref. to CO(H4DOTC)-23, REMOVAL, Radiator.>
- 7) Remove the crank position sensor.

- 8) Remove the V-belts. <Ref. to ME(H4DOTC)-41, REMOVAL, V-belt.>

- 9) Remove the rear side V-belt tensioner.

- 10) Remove the crank pulley by using ST. ST 499977100 CRANK PULLEY WRENCH

- 11) Remove the timing belt. <Ref. to ME(H4DOTC)-45, REMOVAL, Timing Belt.>
- 12) Remove the timing belt guide. (MT model)

- 13) Remove the water pump. <Ref. to CO(H4DOTC)-19, REMOVAL, Water Pump.>
- 14) Remove the crank sprocket.

# Oil Pump

## LUBRICATION

15) Remove the bolts which install the oil pump onto cylinder block.

16) Remove the oil pump using the flat tip screwdriver.

### CAUTION:

**Be careful not to scratch the mating surfaces of cylinder block and oil pump.**

## B: INSTALLATION

Install in the reverse order of removal.

Do the following:

1) Apply liquid gasket to the matching surfaces of oil pump.

### Liquid gasket:

**THREE BOND 1215 (Part No. 004403007) or equivalent**

2) Replace the O-ring (A) with a new one.

3) Apply a coat of engine oil to the inside of oil seal.

4) Be careful not to scratch the oil seal when installing the oil pump on cylinder block.

5) Position the oil pump, aligning the notched area with crankshaft, and push the oil pump straight.

### CAUTION:

**Make sure the oil seal lip is not folded.**

6) Install the oil pump.

7) Apply liquid gasket to the threaded portion of three bolts.

### Liquid gasket:

**THREE BOND 1324 (Part No. 004403042) or equivalent**

### Tightening torque:

**6.4 N·m (0.65 kgf·m, 4.7 ft·lb)**

## C: DISASSEMBLY

Remove the screws which secure the oil pump cover and disassemble oil pump. Inscribe alignment marks on the inner and outer rotors so that they can be replaced in their original positions during reassembly.

**CAUTION:**  
Before disassembling the oil pump, remove the relief valve.

- (A) Oil seal
- (B) Pump case
- (C) Inner rotor
- (D) Outer rotor
- (E) Pump cover
- (F) Relief valve
- (G) Relief valve spring
- (H) Plug
- (I) Gasket

## D: ASSEMBLY

1) Install the front oil seal by using ST.  
ST 499587100 OIL SEAL INSTALLER

**NOTE:**  
Use a new oil seal.

2) Apply a coat of engine oil to the inner and outer rotors.

3) Install the inner and outer rotors in their original positions.  
4) Install the oil relief valve, relief valve spring and plug.

**NOTE:**  
Use a new gasket.  
5) Install the oil pump cover.

**Tightening torque:**  
**T1: 5.4 N·m (0.55 kgf-m, 4.0 ft-lb)**  
**T2: 44 N·m (4.5 kgf-m, 32.5 ft-lb)**

## E: INSPECTION

### 1. TIP CLEARANCE

Measure the tip clearance of rotors. If clearance exceeds the limit, replace the rotors as a matched set.

**Tip clearance:**  
**Standard**  
**0.04 — 0.14 mm (0.0016 — 0.0055 in)**  
**Limit**  
**0.18 mm (0.0071 in)**

# Oil Pump

## LUBRICATION

### 2. CASE CLEARANCE

Measure the clearance between outer rotor and oil pump rotor housing. If clearance exceeds the limit, replace the rotor.

**Case clearance:**

**Standard**

**0.10 — 0.175 mm (0.0039 — 0.0069 in)**

**Limit**

**0.20 mm (0.0079 in)**

### 3. SIDE CLEARANCE

Measure the clearance between the oil pump inner rotor and pump cover. If clearance exceeds the limit, replace the rotor or pump body.

**Side clearance:**

**Standard**

**0.02 — 0.07 mm (0.0008 — 0.0028 in)**

**Limit**

**0.12 mm (0.0047 in)**

### 4. OIL RELIEF VALVE

Check the valve for fitting condition and damage, and the relief valve spring for damage and deterioration. Replace the parts if defective.

**Relief valve spring:**

**Free length**

**73.7 mm (2.902 in)**

**Installed length**

**54.7 mm (2.154 in)**

**Load when installed**

**93.1 N (9.49 kgf, 20.88 lbf)**

### 5. OIL PUMP CASE

Check the oil pump case for worn shaft hole, clogged oil passage, worn rotor chamber, cracks, and other faults.

### 6. OIL SEAL

Check the oil seal lips for deformation, hardening, wear, etc. and replace if defective.

## 5. Oil Pan and Strainer

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Remove the front wheels.
- 3) Disconnect the ground cable from battery.
- 4) Disconnect the connector from mass air flow and intake air temperature sensor.

- 5) Remove the air intake boot and air cleaner upper cover.

- 6) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 7) Remove the pitching stopper.

- 8) Remove the radiator upper brackets.

- 9) Support the engine with a lifting device and wire ropes.

- 10) Lift-up the vehicle.

### CAUTION:

**When lifting up the vehicle, rise up the wire rope together.**

- 11) Remove the under cover.
- 12) Drain the engine oil. <Ref. to LU(H4DOTC)-9, REPLACEMENT, Engine Oil.>
- 13) Remove the front exhaust pipe assembly. <Ref. to EX(H4DOTC)-8, REMOVAL, Front Exhaust Pipe.>
- 14) Remove the nuts which install the front cushion rubber onto front crossmember.

- 15) Remove the bolts which install the oil pan on cylinder block while raising up engine.
- 16) Insert the oil pan cutter blade between cylinder block-to-oil pan clearance.

### CAUTION:

**Do not use a screwdriver or similar tool in place of oil pan cutter.**

# Oil Pan and Strainer

## LUBRICATION

- 17) Remove the oil strainer.
- 18) Remove the baffle plate.

- (A) Oil pan
- (B) Oil strainer
- (C) Baffle plate
- (D) Cylinder block

## B: INSTALLATION

### CAUTION:

**Before installing the oil pan, clean sealant from oil pan and engine block.**

- 1) Check the seal (A) is securely installed in baffle plate in the direction as shown in the figure.

- 2) Install the baffle plate.

### Tightening torque:

**6.4 N·m (0.65 kgf·m, 4.7 ft·lb)**

- 3) Install the oil strainer onto baffle plate.

### NOTE:

Replace the O-ring with a new one.

### Tightening torque:

**10 N·m (1.0 kgf·m, 7.2 ft·lb)**

- 4) Apply liquid gasket to the mating surfaces, and then install the oil pan.

### Liquid gasket:

**THREE BOND 1207C (Part No. 004403012) or equivalent**

- 5) Tighten the bolts which install the oil pan onto engine block.

### Tightening torque:

**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

- (A) Oil pan
- (B) Oil strainer
- (C) Baffle plate
- (D) Cylinder block

- 6) Lower the engine onto front crossmember.

- 7) Tighten the nuts which install the front cushion rubber onto front crossmember.

**Tightening torque:**

**83 N·m (8.5 kgf·m, 61 ft·lb)**

8) Install the front exhaust pipe assembly. <Ref. to EX(H4DOTC)-8, INSTALLATION, Front Exhaust Pipe.>

9) Install the under cover.

10) Lower the vehicle.

**CAUTION:**

**When lowering the vehicle, lower the lifting device and wire rope together.**

11) Remove the lifting device and steel cables.

12) Install the pitching stopper.

**Tightening torque:**

**T1: 50 N·m (5.1 kgf·m, 36.9 ft·lb)**

**T2: 58 N·m (5.9 kgf·m, 42.8 ft·lb)**

13) Install the radiator upper brackets.

14) Install the intercooler. <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

15) Install the air intake boot and air cleaner upper cover.

16) Connect the connector to mass air flow and intake air temperature sensor.

17) Install the front wheels.

18) Connect the battery ground cable to battery.

19) Fill engine oil. <Ref. to LU(H4DOTC)-9, INSPECTION, Engine Oil.>

**C: INSPECTION**

By visual check, make sure the oil pan, oil strainer, oil strainer stay and baffle plate are not damaged.

# Oil Pressure Switch

LUBRICATION

## 6. Oil Pressure Switch

### A: REMOVAL

- 1) Remove the generator from bracket. <Ref. to SC(H4SO)-14, REMOVAL, Generator.>
- 2) Disconnect the terminal from oil pressure switch.

- 3) Remove the oil pressure switch.

### B: INSTALLATION

- 1) Apply liquid gasket to the oil pressure switch threads.

#### Liquid gasket:

**THREE BOND 1324 (Part No. 004403042) or equivalent**

- 2) Install the oil pressure switch onto engine block.

#### Tightening torque:

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

- 3) Connect the terminal of oil pressure switch.

- 4) Install the generator on bracket. <Ref. to SC(H4SO)-14, INSTALLATION, Generator.>

### C: INSPECTION

Make sure oil does not leak or seep from where the oil pressure switch is installed.

## 7. Oil Pipe

### A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 3) Remove the intercooler bracket RH.
- 4) Remove the oil inlet pipe from the turbocharger.

### B: INSTALLATION

- 1) Inspect the union screw with filter. <Ref. to LU(H4DOTC)-20, INSPECTING UNION SCREW WITH FILTER, INSPECTION, Oil Pipe.>
- 2) Temporarily tighten the oil pipe.

#### NOTE:

- Make sure not to mix up the union screws with filter and without filter as their installation positions are different.
- Use a new gasket.

- (A) Union screw without filter (without protrusion)
- (B) Gasket
- (C) Oil inlet pipe
- (D) Union screw with filter (with protrusion)

- 3) Tighten the union screws of oil inlet pipe.

#### Tightening torque:

**T1: 16 N·m (1.6 kgf-m, 11.6 ft-lb)**

**T2: 29 N·m (3.0 kgf-m, 21.7 ft-lb)**

# Oil Pipe

## LUBRICATION

4) Tighten the bolts which hold the oil inlet pipe stay to the turbocharger.

**Tightening torque:**

**4.9 N·m (0.50 kgf-m, 3.6 ft-lb)**

5) Install the intercooler bracket RH.

6) Install the intercooler. <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

7) Connect the ground cable to battery.

## C: INSPECTION

### 1. INSPECTING UNION SCREW WITH FILTER

Check the filter part of union screw for clogging or damage, and if defective, replace the union screw with filter with a new part.

- (A) Union screw without filter (without protrusion)
- (B) Gasket
- (C) Oil inlet pipe
- (D) Union screw with filter (with protrusion)

### 2. OTHER INSPECTIONS

- 1) Check that the oil pipe and union screw have no deformation, cracks and other damages.
- 2) Check that there are no oil leaks or oil oozing from the oil pipe attachment section.

## 8. Engine Oil Cooler

### A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove the under cover.
- 3) Drain the engine oil.
- 4) Drain the engine coolant.
- 5) Remove the water by-pass pipe between oil cooler and water pump.

- 6) Remove the engine oil filter. <Ref. to LU(H4DOTC)-23, REMOVAL, Engine Oil Filter.>
- 7) Remove the connector, and then remove the oil cooler.

- (A) Adapter A
- (B) Adapter connector
- (C) Adapter B
- (D) Oil cooler
- (E) Oil cooler connector
- (F) Plug
- (G) Gasket
- (H) O-ring

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Contact the knock pin (A) of adapter A to cylinder block rib (B) to install adapter A.

- 3) Install the adapter B.
- 4) Contact the engine oil cooler stopper (A) to adapter B rib (B) to install engine oil cooler.

- 5) Apply liquid gasket to the plug thread when installing it.

#### Liquid gasket:

**THREE BOND 1215 (Part No. 004403007) or equivalent**

#### Tightening torque:

**T1: 45 N·m (4.6 kgf-m, 33.2 ft-lb)**

**T2: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

**T3: 54 N·m (5.5 kgf-m, 40 ft-lb)**

**T4: 69 N·m (7.0 kgf-m, 50.9 ft-lb)**

# Engine Oil Cooler

## LUBRICATION

### NOTE:

Always use new gasket and O-ring.

- (A) Adapter A
- (B) Adapter connector
- (C) Adapter B
- (D) Oil cooler
- (E) Oil cooler connector
- (F) Plug
- (G) Gasket
- (H) O-ring

### C: INSPECTION

- 1) Check the coolant passages are not clogged using air blow method.
- 2) Check the mating surfaces of cylinder block, O-ring groove and oil filter for damage.

## 9. Engine Oil Filter

### A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove the under cover.
- 3) Remove the oil filter with ST.

ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))

ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))

#### NOTE:

Standard oil filter is outer diameter of 68 mm (2.68 in). However, SUBARU genuine oil filter having outer diameter of 65 mm (2.56 in) can also be used.

### B: INSTALLATION

- 1) Get a new oil filter and apply a thin coat of engine oil to seal rubber.
- 2) Install the oil filter by turning it by hand, being careful not to damage seal rubber.
  - Tighten the oil filter 68 mm (2.68 in) in diameter by approx. 1 rotation more after the seal rubber of oil filter comes in contact with cylinder block or oil cooler. If using a torque wrench, tighten it to 14 N·m (1.4 kgf·m, 10.3 ft·lb).
  - Tighten the oil filter 65 mm (2.56 in) in diameter by approx. 2/3 — 3/4 rotation more after the seal rubber of oil filter comes in contact with cylinder block or oil cooler. If using a torque wrench, tighten it to 12 N·m (1.2 kgf·m, 8.7 ft·lb).

#### CAUTION:

**Do not tighten excessively, or oil may leak.**

### C: INSPECTION

- 1) After installing the oil filter, run the engine and make sure that no oil is leaking around seal rubber.

#### NOTE:

The filter element and filter case are permanently jointed; therefore, interior cleaning is not necessary.

- 2) Check the engine oil level. <Ref. to LU(H4DOTC)-9, INSPECTION, Engine Oil.>

# Engine Lubrication System Trouble in General

LUBRICATION

## 10.Engine Lubrication System Trouble in General

### A: INSPECTION

Before performing diagnostics, make sure that the engine oil level is correct and no oil leakage exists.

| Symptom                                | Possible cause                           |   | Corrective action  |
|--|--|---|--|
| 1. Warning light remains on.           | 1) Oil pressure switch failure           | Cracked diaphragm or oil leakage within switch                        | Replace.   |
|  |  | Broken spring or seized contacts                                      | Replace.   |
|  | 2) Low oil pressure                      | Clogged oil filter  | Replace.   |
|  |  | Malfunition of oil by-pass valve of oil filter                        | Clean or replace.  |
|  |  | Malfunition of oil relief valve of oil pump                           | Clean or replace.  |
|  |  | Clogged oil passage   | Clean.   |
|  |  | Excessive tip clearance and side clearance of oil pump rotor and gear | Replace.   |
|  |  | Clogged oil strainer or broken pipe                                   | Clean or replace.  |
|  | 3) No oil pressure                       | Shortage of engine oil  | Replenish.   |
|  |  | Broken pipe of oil strainer   | Replace.   |
| Stuck oil pump rotor                   |  | Replace.  |  |
| 2. Warning light does not go on.       | 1) Malfunition of combination meter      |   | Replace.   |
|  | 2) Poor contact of switch contact points |   | Replace.   |
|  | 3) Disconnection of wiring               |   | Repair.  |
| 3. Warning light flickers momentarily. | 1) Poor contact at terminals             |   | Repair.  |
|  | 2) Defective wiring harness              |   | Repair.  |
|  | 3) Low oil pressure                      |   | Check for the same possible causes as listed in 1. — 2). |

|                                    | Electrode                                | Iridium                   |

### B: COMPONENT

IG-00001

- (1) Spark plug
- (2) Ignition coil and ignitor ASSY

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 21 (2.1, 15.2)**

**T2: 16 (1.6, 11.7)**

### **C: CAUTION**

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

# Spark Plug

IGNITION

## 2. Spark Plug

### A: REMOVAL

#### CAUTION:

All spark plugs installed on an engine, must be of the same heat range.

*Spark plug:*

**NGK: ILFR6B**

#### 1. RH SIDE

- 1) Disconnect the ground cable from battery.
- 2) Remove the air cleaner lower case. <Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>
- 3) Disconnect the connector from ignition coil and ignitor assembly.

- 4) Remove the ignition coil and ignitor assembly.

- 5) Remove the spark plugs with the spark plug sockets.

#### 2. LH SIDE

- 1) Remove the battery and battery carrier. <Ref. to SC(H4SO)-20, REMOVAL, Battery.>
- 2) Remove the secondary air pump. <Ref. to EC(H4DOTC)-9, REMOVAL, Secondary Air Pump.>
- 3) Disconnect the connector from ignition coil and ignitor assembly.

- 4) Remove the ignition coil and ignitor assembly.

- 5) Remove the spark plugs with the spark plug sockets.

### B: INSTALLATION

#### 1. RH SIDE

Install in the reverse order of removal.

**Tightening torque (Spark plug):**  
**21 N·m (2.1 kgf-m, 15.2 ft-lb)**

**Tightening torque (Ignition coil and ignitor assembly):**  
**16 N·m (1.6 kgf-m, 11.7 ft-lb)**

**NOTE:**

The above torque should be only applied to new spark plugs without oil on their threads.

In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.

**2. LH SIDE**

Install in the reverse order of removal.

**Tightening torque (Spark plug):**

**21 N·m (2.1 kgf·m, 15.2 ft·lb)**

**Tightening torque (Ignition coil and ignitor assembly):**

**16 N·m (1.6 kgf·m, 11.7 ft·lb)**

**NOTE:**

The above torque should be only applied to new spark plugs without oil on their threads.

In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.

**C: INSPECTION**

Check the electrodes and inner and outer ceramic insulator of plugs, noting the type of deposits and the degree of electrode erosion.

- (A) Spark plug gap
- (B) Carbon accumulation or wear
- (C) Cracks
- (D) Damage
- (E) Damaged gasket

**1) Normal:**

Brown to grayish-tan deposits and slight electrode wear indicates correct spark plug heat range.

**2) Carbon fouled:**

Dry fluffy carbon deposits on insulator and electrode are mostly caused by slow speed driving in city, weak ignition, too rich fuel mixture and dirty air cleaner, etc.

**3) Oil fouled:**

Wet black deposits show oil entrance into combustion chamber through worn rings and pistons or excessive clearance between valve guides and stems.

# Spark Plug

## IGNITION

---

### 4) Overheating:

White or light gray insulator with black or brown spots and bluish burnt electrodes indicates engine overheating. Moreover, the appearance results from incorrect ignition timing, loose spark plugs, wrong selection of fuel, hotter range plug, etc.

## D: ADJUSTMENT

Clean the spark plugs with a wire brush. Clean and remove the carbon or oxide deposits, but do not wear away ceramic insulator.

If deposits are too stubborn, replace the plugs.

After cleaning the spark plugs, correct the spark plug gap using a gap gauge.

### NOTE:

Do not use spark plug cleaners, because the spark plugs are applied with iridium tips.

### **Spark plug gap L:**

**0.7 — 0.8 mm (0.028 — 0.031 in)**

## 3. Ignition Coil and Ignitor Assembly

### A: REMOVAL

Direct ignition type has been adopted. Refer to the "Spark Plug Removal" for removal procedure. <Ref. to IG(H4DOTC)-4, REMOVAL, Spark Plug.>

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**16 N·m (1.6 kgf-m, 11.7 ft-lb)**

### C: INSPECTION

For inspection, refer to the following. <Ref. to EN(H4DOTC)(diag)-68, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>

# Basic Diagnostic Procedure

ENGINE (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

#### 1. ENGINE

| Step   | Check   | Yes   | No  |
|--|---|---|---|
| <b>1 CHECK ENGINE START FAILURE.</b><br>1) Ask the customer when and how trouble occurred using the interview check list. <Ref. to EN(H4DOTC)(diag)-3, CHECK, Check List for Interview.><br>2) Start the engine.   | Does the engine start?  | Go to step 2.   | Inspection using "Diagnostics for Engine Start Failure". <Ref. to EN(H4DOTC)(diag)-62, Diagnostics for Engine Start-ing Failure.>   |
| <b>2 CHECK ILLUMINATION OF MALFUNCTION INDICATOR LIGHT.</b>  | Does the malfunction indicator light illuminate?                  | Go to step 3.   | Inspection using "General Diagnostics Table". <Ref. to EN(H4DOTC)(diag)-394, General Diagnostic Table.>   |
| <b>3 CHECK INDICATION OF DTC ON DISPLAY.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the Subaru Select Monitor or general scan tool to data link connector.<br>3) Turn the ignition switch to ON and the Subaru Select Monitor or general scan tool power switch to ON.<br>4) Read the DTC on Subaru Select Monitor or general scan tool. | Does the Subaru Select Monitor or general scan tool indicate DTC? | Record the DTC code. Repair the trouble cause. <Ref. to EN(H4DOTC)(diag)-74, List of Diagnostic Trouble Code (DTC).> Go to step 4.                                | Repair the related parts.<br>NOTE:<br>If a DTC is not shown on display although malfunction indicator light illuminates, perform diagnostics of malfunction indicator light circuit or combination meter. <Ref. to EN(H4DOTC)(diag)-53, Malfunction Indicator Light.> |
| <b>4 PERFORM THE DIAGNOSIS.</b><br>1) Perform the clear memory mode. <Ref. to EN(H4DOTC)(diag)-50, Clear Memory Mode.><br>2) Perform the inspection mode. <Ref. to EN(H4DOTC)(diag)-40, Inspection Mode.>  | Does the Subaru Select Monitor or general scan tool indicate DTC? | Inspect using "Diagnostics Procedure with Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DOTC)(diag)-82, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> | Complete the diagnosis.   |

# Check List for Interview

ENGINE (DIAGNOSTICS)

## 2. Check List for Interview

### A: CHECK

#### 1. CHECK LIST No. 1

Check the following items when problem has occurred.

NOTE:

Use copies of this page for interviewing customers.

|                     |   |                  |  |
|---------------------|---|------------------|--|
| Customer's name     |   | Engine No.       |  |
| Date of sale        |   | Fuel brand       |  |
| Date of repair      |   | Odometer reading | km   |
| VIN                 |   |                  | miles  |

# Check List for Interview

ENGINE (DIAGNOSTICS)

---

## 2. CHECK LIST No. 2

Check the following items about the vehicle's state when malfunction indicator light turns on.

NOTE:

Use copies of this page for interviewing customers.

|  |
|--|
| a) Other warning lights or indicators turn on. <input type="checkbox"/> Yes / <input type="checkbox"/> No  |
| <input type="checkbox"/> Low fuel warning light<br><input type="checkbox"/> Charge indicator light<br><input type="checkbox"/> AT diagnostics indicator light<br><input type="checkbox"/> ABS warning light<br><input type="checkbox"/> Engine oil pressure warning light  |
| b) Fuel level  |
| <ul style="list-style-type: none"><li>• Lack of gasoline: <input type="checkbox"/> Yes / <input type="checkbox"/> No</li><li>• Indicator position of fuel gauge:</li><li>• Experienced running out of fuel: <input type="checkbox"/> Yes / <input type="checkbox"/> No</li></ul>   |
| c) Intentional connecting or disconnecting of harness connectors or spark plug cords: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| <ul style="list-style-type: none"><li>• What:</li></ul>  |
| d) Intentional connecting or disconnecting of hoses: <input type="checkbox"/> Yes / <input type="checkbox"/> No  |
| <ul style="list-style-type: none"><li>• What:</li></ul>  |
| e) Installing of parts other than genuine parts: <input type="checkbox"/> Yes / <input type="checkbox"/> No  |
| <ul style="list-style-type: none"><li>• What:</li><li>• Where:</li></ul>   |
| f) Occurrence of noise: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| <ul style="list-style-type: none"><li>• From where:</li><li>• What kind:</li></ul>   |
| g) Occurrence of smell: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| <ul style="list-style-type: none"><li>• From where:</li><li>• What kind:</li></ul>   |
| h) Intrusion of water into engine compartment or passenger compartment: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| i) Troubles occurred   |
| <input type="checkbox"/> Engine does not start.<br><input type="checkbox"/> Engine stalls during idling.<br><input type="checkbox"/> Engine stalls while driving.<br><input type="checkbox"/> Engine speed decreases.<br><input type="checkbox"/> Engine speed does not decrease.<br><input type="checkbox"/> Rough idling<br><input type="checkbox"/> Poor acceleration<br><input type="checkbox"/> Back fire<br><input type="checkbox"/> After fire<br><input type="checkbox"/> No shift<br><input type="checkbox"/> Excessive shift shock |

## 3. General Description

### A: CAUTION

1) Airbag system wiring harness is routed near the ECM, main relay and fuel pump relay.

#### CAUTION:

- Airbag system connectors are colored yellow. Do not use the electrical test equipment on these circuit.
- Be careful not to damage the airbag system wiring harness when servicing the ECM, TCM, main relay and fuel pump relay.

2) Never connect the battery in reverse polarity.

- The ECM will be destroyed instantly.
- The fuel injector and other part will be damaged in just a few minutes more.

3) Do not disconnect the battery cables while the engine is running.

A large counter electromotive force will be generated in the alternator, and this voltage may damage electronic parts such as ECM, etc.

4) Before disconnecting the connectors of each sensor and the ECM, be sure to turn the ignition switch to OFF.

5) Poor contact has been identified as a primary cause of this problem. To measure the voltage and/or resistance of individual sensors or all electrical control modules at the harness side connector, use a tapered pin with a diameter of less than 0.64 mm (0.025 in). Do not insert the pin more than 5 mm (0.20 in) into the part.

6) Before removing the ECM from located position, disconnect two cables on battery.

Otherwise, the ECM may be damaged.

#### CAUTION:

**When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage on the fuel injection system.**

7) The connectors to each sensor in the engine compartment and the harness connectors on the engine side and body side are all designed to be waterproof. However, it is still necessary to take care not to allow water to get into the connectors when washing the vehicle, or when servicing the vehicle on a rainy day.

8) Use the ECM mounting stud bolt at the body head grounding points when measuring voltage and resistance inside the passenger compartment.

(A) Stud bolt

9) Use the engine grounding terminal or engine proper as the grounding point to the body, when measuring voltage and resistance in the engine compartment.

10) Every MFI-related part is a precision part. Do not drop them.

11) Observe the following cautions when installing a radio in MFI equipped models.

#### CAUTION:

- The antenna must be kept as far apart as possible from the control unit.

(The ECM is located under the steering column, inside of the instrument panel lower trim panel.)

- The antenna feeder must be placed as far as possible from ECM and MFI harness.
- Carefully adjust the antenna for correct matching.
- When mounting a large power type radio, pay special attention to the three items above mentioned.
- Incorrect installation of the radio may affect the operation of ECM.

12) Before disconnecting the fuel hose, disconnect the fuel pump connector and crank the engine for more than 5 seconds to release pressure in the fuel system. If the engine starts during this operation, run it until it stops.

# General Description

## ENGINE (DIAGNOSTICS)

13) On model with ABS, when performing driving test in jacked-up or lifted-up position, sometimes the warning light may be lit, but this is not a malfunction of the system. The reason for this is the speed difference between front and rear wheels. After diagnosis of engine control system, perform the ABS memory clearance procedure of self-diagnosis system.

### B: INSPECTION

Before performing diagnostics, check the following items which might affect engine problems:

#### 1. BATTERY

1) Measure the battery voltage and specific gravity of electrolyte.

**Standard voltage: 12 V**

**Specific gravity: Above 1.260**

2) Check the condition of main and other fuses, and harnesses and connectors. Also check for proper grounding.

#### 2. ENGINE GROUNDING

Make sure the engine grounding terminal is properly connected to engine.

### C: NOTE

#### 1. DESCRIPTION

- The on-board diagnostics (OBD) system detects and indicates a fault in various inputs and outputs of the complex electronic control. Malfunction indicator light in the combination meter indicates occurrence of a fault or trouble.
- Further, against such a failure or sensors as may disable the drive, the fail-safe function is provided to ensure the minimal driveability.
- The OBD system incorporated with the vehicles within this engine family complies with OBD-II Regulations. The OBD system monitors the components and the system malfunction listed in Engine Section which affects on emissions.
- When the system decides that a malfunction occurs, malfunction indicator light illuminates. At the same time of the malfunction indicator light illumi-

nation or blinking, a DTC and a freeze frame engine conditions are stored into on-board computer.

- The OBD system stores freeze frame engine condition data (engine load, engine coolant temperature, fuel trim, engine speed and vehicle speed, etc.) into on-board computer when it detects a malfunction first.
- If the OBD system detects the various malfunctions including the fault of fuel trim or misfire, the OBD system first stores freeze frame engine conditions about the fuel trim or misfire.
- When the malfunction does not occur again for three consecutive driving cycles, malfunction indicator light is turned off, but DTC remains at on-board computer.
- When troubleshooting the vehicle which complies with OBD-II Regulations, connect the Subaru Select Monitor or general scan tool to the vehicle.

#### 2. ENGINE AND EMISSION CONTROL SYSTEM

- The Multipoint Fuel Injection (MFI) system is a system that supplies the optimum air-fuel mixture to the engine for all the various operating conditions through the use of the latest electronic technology.

With this system fuel, which is pressurized at a constant pressure, is injected into the intake air passage of the cylinder head. The injection quantity of fuel is controlled by an intermittent injection system where the electro-magnetic injection valve (fuel injector) opens only for a short period of time, depending on the quantity of air required for one cycle of operation. In actual operation, the injection quantity is determined by the duration of an electric pulse applied to the fuel injector and this permits simple, yet highly precise metering of the fuel.

- Further, all the operating conditions of the engine are converted into electric signals, and this results in additional features of the system, such as large improved adaptability, easier addition of compensating element, etc.

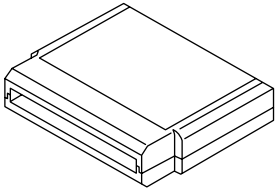

The MFI system also has the following features:

- Reduced emission of harmful exhaust gases.
- Reduced in fuel consumption.
- Increased engine output.
- Superior acceleration and deceleration.
- Superior startability and warm-up performance in cold weather since compensation is made for coolant and intake air temperature.

# Engine Control Module (ECM) I/O Signal

ENGINE (DIAGNOSTICS)

| Input/Output          | Measuring condition  | Waveform   |
|-----------------------|--|--|
| 1. Rear oxygen sensor | 5 minutes after driving at a constant speed of 80 — 113 km/h (50 — 70 MPH) |  <p>The top graph shows a stable signal around 1.0V, marked with a circle. The bottom graph shows a noisy signal, marked with an X.</p> <p style="text-align: right;">EN-04680</p>               |
| 2. Rear oxygen sensor | While idling (Oxygen sensor in active status)                              |  <p>The top graph shows a stable signal around 1.0V, marked with a circle. The bottom graph shows a signal with sharp spikes, marked with an X.</p> <p style="text-align: right;">EN-04681</p> |

# Engine Condition Data

ENGINE (DIAGNOSTICS)

---

## 6. Engine Condition Data

### A: ELECTRICAL SPECIFICATION

| Content     | Specified data                     |
|-------------|------------------------------------|
| Engine load | 17.6 — 35.64 (%): Idling           |
|             | 13.2 — 26.73 (%): 2,500 rpm racing |

Measuring condition:

- After warm-up the engine.
- Gear position is in neutral position.
- A/C is turned to OFF.
- All accessory switches are turned to OFF.

## 7. Data Link Connector

### A: NOTE

This connector is used both for the general scan tools and Subaru Select Monitor.

### CAUTION:

**Do not connect any scan tools other than the general scan tools and Subaru Select Monitor, because the circuit for Subaru Select Monitor may be damaged.**

# General Scan Tool

ENGINE (DIAGNOSTICS)

## 8. General Scan Tool

### A: OPERATION

#### 1. HOW TO USE GENERAL SCAN TOOL

- 1) Prepare a general scan tool required by SAE J1978.
- 2) Open the cover and connect the general scan tool to data link connector located in the lower portion of instrument panel (on the driver's side).

- 3) Using the general scan tool, call up DTC and freeze frame data.

#### 2. MODE \$01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refers to data denoting the current operating condition of analog input/output, digital input/output and/or the powertrain system.

A list of the support data and PID (Parameter Identification) codes are shown in the following table.

| PID | Data   | Unit of measure |
|-----|--|-----------------|
| 01  | Number of emission-related powertrain DTC and malfunction indicator light status and diagnosis support information | —               |
| 03  | Fuel system control status   | —               |
| 04  | Calculated engine load value   | %               |
| 05  | Engine coolant temperature   | °C              |
| 06  | Short term fuel trim   | %               |
| 07  | Long term fuel trim  | %               |
| 0B  | Intake manifold absolute pressure  | kPa             |
| 0C  | Engine revolution  | rpm             |
| 0D  | Vehicle speed  | km/h            |
| 0E  | Ignition timing advance  | °               |
| 0F  | Intake air temperature   | °C              |
| 10  | Air flow rate from mass air flow sensor  | g/sec           |
| 11  | Throttle valve absolute opening angle  | %               |
| 12  | Secondary air control condition  | —               |
| 13  | Check whether oxygen sensor is installed   | —               |
| 15  | Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor                                | V and %         |
| 1C  | Supporting OBD system  | —               |
| 24  | A/F value and A/F sensor output voltage  | — and V         |
| 34  | A/F value and A/F sensor current   | — and mA        |

NOTE:

Refer to general scan tool manufacturer's instruction manual to access generic OBD-II PIDs (MODE \$01).

General scan tool functions consist of:

- (1) MODE \$01: Current powertrain diagnostic data
- (2) MODE \$02: Powertrain freeze frame data
- (3) MODE \$03: Emission-related powertrain DTC
- (4) MODE \$04: Clear/Reset emission-related diagnostic information
- (5) MODE \$06: Request on-board monitoring test results for non-continuously monitored systems
- (6) MODE \$07: Request on-board monitoring test results for continuously monitored systems
- (7) MODE \$09: Request vehicle information

Read out the data according to repair procedures. (For detailed operation procedures, refer to the General Scan Tool Operation Manual.)

NOTE:

For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4DOTC)(diag)-74, List of Diagnostic Trouble Code (DTC).>

### 3. MODE \$02 (POWERTRAIN FREEZE FRAME DATA)

Refers to data denoting the operating condition when trouble is sensed by the on-board diagnosis system. A list of the support data and PID (Parameter Identification) codes are shown in the following table.

| PID | Data  | Unit of measure |
|-----|---|-----------------|
| 02  | DTC that caused CARB required freeze frame data storage                             | —               |
| 03  | Fuel system control status  | —               |
| 04  | Calculated engine load value  | %               |
| 05  | Engine coolant temperature  | °C              |
| 06  | Short term fuel trim  | %               |
| 07  | Long term fuel trim   | %               |
| 0B  | Intake manifold absolute pressure   | kPa             |
| 0C  | Engine revolution   | rpm             |
| 0D  | Vehicle speed   | km/h            |
| 0E  | Ignition timing advance   | °               |
| 0F  | Intake air temperature  | °C              |
| 10  | Air flow rate from mass air flow sensor   | g/sec           |
| 11  | Throttle valve opening angle  | %               |
| 15  | Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor | V and %         |
| 1C  | Supporting OBD system   | —               |

**NOTE:**

Refer to general scan tool manufacturer's instruction manual to access freeze frame data (MODE \$02).

### 4. MODE \$03 (EMISSION-RELATED POWERTRAIN DIAGNOSTIC TROUBLE CODE (DTC))

Refer to Read Diagnostic Trouble Code (DTC) for information about data denoting emission-related powertrain DTC. <Ref. to EN(H4DOTC)(diag)-39, Read Diagnostic Trouble Code (DTC).>

### 5. MODE \$04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refers to the mode used to clear or reset emission-related diagnostic information (OBD-II trouble diagnostic information).

**NOTE:**

Refer to general scan tool manufacturer's instruction manual to clear or reset emission-related diagnostic information (MODE \$04).

# General Scan Tool

## ENGINE (DIAGNOSTICS)

---

### 6. MODE \$06

Refer to test value of troubleshooting and data of test limit on support data bit sequence table. List of support data is shown in the following table.

| TID  | CID  | Test value & Test limit  |
|------|------|--|
| \$41 | \$81 | Rear O <sub>2</sub> sensor circuit (Bank 1 Sensor 2)                           |
|      | \$02 | Rear O <sub>2</sub> sensor circuit (Bank 1 Sensor 2)                           |
| \$81 | \$01 | Catalyst system efficiency   |
| \$83 | \$01 | Evaporative emission control system (0.04 inch leak)                           |
|      | \$02 | Evaporative emission control system (0.04 inch leak)                           |
|      | \$03 | Evaporative emission control system (0.04 inch leak)                           |
|      | \$04 | Evaporative emission control system (0.04 inch leak)                           |
|      | \$05 | Evaporative emission control system (0.02 inch leak)                           |
|      | \$86 | Evaporative emission control system (0.02 inch leak)                           |
| \$84 | \$01 | Front oxygen (A/F) sensor circuit slow response (Bank 1 Sensor 1)              |
| \$85 | \$01 | Rear O <sub>2</sub> sensor circuit slow response (Bank 1 Sensor 2) Rich → Lean |
|      | \$02 | Rear O <sub>2</sub> sensor circuit slow response (Bank 1 Sensor 2) Lean → Rich |
| \$89 | \$81 | Secondary air system   |
|      | \$82 |  |
|      | \$83 |  |
|      | \$04 |  |
|      | \$05 |  |

### 7. MODE \$07

Refer to data of DTC (pending code) for troubleshooting result about emission in first time.

### 8. MODE \$09

Refer to data of vehicle specification (VIN, calibration ID, etc.).

## 9. Subaru Select Monitor

### A: OPERATION

#### 1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

5) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor power switch to ON.

(A) Power switch

6) Using the Subaru Select Monitor, call up the DTC and various data, and then record them.

#### 2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE. (NORMAL MODE)

Refer to Read Diagnostic Trouble Code (DTC) for information about how to indicate DTC. <Ref. to EN(H4DOTC)(diag)-39, Read Diagnostic Trouble Code (DTC).>

#### 3. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE. (OBD MODE)

Refer to Read Diagnostic Trouble Code (DTC) for information about how to indicate DTC. <Ref. to EN(H4DOTC)(diag)-39, Read Diagnostic Trouble Code (DTC).>

### CAUTION:

Do not connect the scan tools except for Subaru Select Monitor and general scan tool.

# Subaru Select Monitor

## ENGINE (DIAGNOSTICS)

### 4. READ CURRENT DATA FOR ENGINE. (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
  - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
  - 3) Press the [YES] key after the information of engine type is displayed.
  - 4) On the «Engine Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
  - 5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
  - 6) Using the scroll key, move the display screen up or down until desired data is shown.
- A list of the support data is shown in the following table.

| Remarks  | Display                 | Unit of measure         | Note (at idling)   |
|--|-------------------------|-------------------------|--|
| Engine load                                    | Engine Load             | %                       | 21.0%  |
| Engine coolant temperature signal              | Coolant Temp.           | °C or °F                | 80 — 100°C or 176 — 212°F                                      |
| A/F correction 1                               | A/F Correction #1       | %                       | -10 — +10%   |
| A/F learning 1                                 | A/F Learning #1         | %                       | -15 — +15%   |
| Intake manifold absolute pressure              | Mani. Absolute Pressure | mmHg, kPa, inHg or psig | 220 — 275 mmHg, 29.5 — 37 kPa, 8.7 — 10 inHg or 4.2 — 5.3 psig |
| Engine speed signal                            | Engine Speed            | rpm                     | 700 rpm (Agree with the tachometer indication)                 |
| Vehicle speed signal                           | Vehicle Speed           | km/h or MPH             | 0 km/h or 0 MPH (at parking)                                   |
| Ignition timing signal                         | Ignition Timing         | deg                     | +17.0 deg  |
| Intake air temperature signal                  | Intake Air Temp.        | °C or °F                | 20 — 50°C or 68 — 122°F  |
| Amount of intake air                           | Mass Air Flow           | g/s or lb/m             | 3.6 g/s or 0.48 lb/m   |
| Throttle opening angle signal                  | Throttle Opening Angle  | %                       | 3.0 — 3.2%   |
| Rear oxygen sensor voltage                     | Rear O2 Sensor          | V                       | 0 — 1.0 V  |
| Battery voltage                                | Battery Voltage         | V                       | 12 — 15 V  |
| Mass air flow voltage                          | Air Flow Sensor Voltage | V                       | 1.0 — 1.7 V  |
| Injection 1 pulse width                        | Fuel Injection #1 Pulse | ms                      | 1.2 — 2.2 ms   |
| Knock sensor correction                        | Knocking Correction     | deg                     | 0.0 deg  |
| Atmospheric pressure signal                    | Atmosphere Pressure     | mmHg, kPa, inHg or psig | (Atmosphere pressure)  |
| Intake manifold relative pressure              | Mani. Relative Pressure | mmHg, kPa, inHg or psig | (Mani. Absolute Pressure – Atmosphere pressure)                |
| Fuel tank pressure signal                      | Fuel Tank Pressure      | mmHg, kPa, inHg or psig | +8.8 mmHg, +1.2 kPa, +0.4 inHg or +0.2 psig                    |
| Acceleration opening angle signal              | Accel. Opening Angle    | %                       | 0.0%   |
| Fuel temperature signal                        | Fuel Temp               | °C or °F                | +21°C or +70°F   |
| Fuel level signal                              | Fuel Level              | V                       | 0 — 5 V  |
| Primary supercharged pressure control signal   | Primary Control         | %                       | 0.0%   |
| Purge control solenoid duty ratio              | CPC Valve Duty Ratio    | %                       | 0 — 25%  |
| Tumble generator valve RH opening angle signal | TGV Position Sensor R   | V                       | 0.44 V   |
| Tumble generator valve LH opening angle signal | TGV Position Sensor L   | V                       | 0.48 V   |
| Fuel pump duty ratio                           | Fuel Pump Duty          | %                       | 33%  |
| AVCS advance angle amount RH                   | VVT Adv. Ang. Amount R  | deg                     | 0 deg  |
| AVCS advance angle amount LH                   | VVT Adv. Ang. Amount L  | deg                     | 0 deg  |
| Oil flow control solenoid valve duty RH        | OSV Duty R              | %                       | 9.4%   |

| PCV hose ASSY diagnosis signal                 | Blow-by Leak Connector   | —                       | ON  |
| Pressure control solenoid valve signal         | PCV Solenoid             | —                       | OFF output (At OFF)                       |
| Tumble generator valve output signal           | TGV Output               | —                       | OFF                                       |
| Tumble generator valve drive signal            | TGV Drive                | —                       | Open                                      |
| Drain valve signal                             | Vent Control Solenoid    | —                       | OFF output (At OFF)                       |
| AT coordinate retard angle demand signal       | Retard Signal from AT    | —                       | OFF                                       |
| AT coordinate fuel cut demand signal           | Fuel Cut Signal from AT  | —                       | OFF                                       |
| AT coordinate permission demand                | Torque Permission Signal | —                       | ON  |
| Electronic throttle control motor relay signal | ETC Motor Relay          | —                       | ON  |
| Clutch switch signal                           | Clutch Switch            | —                       | OFF (At OFF)                              |

# Subaru Select Monitor

## ENGINE (DIAGNOSTICS)

| Remarks                                  | Display                  | Unit of measure | Note (at idling) |
|--|--------------------------|-----------------|------------------|
| Stop light switch signal                 | Stop Light Switch        | —               | OFF (At OFF)     |
| SET/COAST switch signal                  | SET/COAST Switch         | —               | OFF (At OFF)     |
| RES/ACC switch signal                    | RESUME/ACCEL Switch      | —               | OFF (At OFF)     |
| Brake switch signal                      | Brake Switch             | —               | OFF (At OFF)     |
| Main switch signal                       | Main Switch              | —               | OFF (At OFF)     |
| Secondary air combi valve relay 2 signal | Sec. Air Combi V Relay 2 | —               | OFF (At OFF)     |
| Secondary air pump relay signal          | Sec. Air Pump Relay      | —               | OFF (At OFF)     |
| Secondary air combi valve relay 1 signal | Sec. Air Combi V Relay 1 | —               | OFF (At OFF)     |

**NOTE:**

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

## 5. READ CURRENT DATA FOR ENGINE. (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
  - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
  - 3) Press the [YES] key after the information of engine type is displayed.
  - 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
  - 5) On the «OBD Menu» display screen, select the {Current Data Display & Save} and press the [YES] key.
  - 6) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
  - 7) Using the scroll key, move the display screen up or down until desired data is shown.
- A list of the support data is shown in the following table.

| Contents  | Display                         | Unit of measure         | Note (at idling)                          |
|---|---------------------------------|-------------------------|---|
| Number of DTC                                     | Number of DTC                   | —                       | —   |
| Malfunction indicator light status                | MI (MIL)                        | —                       | ON or OFF                                 |
| Monitoring test of misfire                        | Misfire monitoring              | —                       | Complete or incomplete                    |
| Monitoring test of fuel system                    | Fuel system monitoring          | —                       | Complete or incomplete                    |
| Monitoring test of comprehensive component        | Component monitoring            | —                       | Complete or incomplete                    |
| Test of catalyst                                  | Catalyst Diagnosis              | —                       | Complete or incomplete                    |
| Test of heated catalyst                           | Heated catalyst                 | —                       | No support                                |
| Test of evaporative emission purge control system | Evaporative purge system        | —                       | Complete or incomplete                    |
| Test of secondary air system                      | Secondary air system            | —                       | Complete or incomplete                    |
| Test of air conditioning system refrigerant       | A/C system refrigerant          | —                       | No support                                |
| Test of oxygen sensor                             | Oxygen sensor                   | —                       | Complete or incomplete                    |
| Test of oxygen sensor heater                      | O <sub>2</sub> Heater Diagnosis | —                       | Complete or incomplete                    |
| Test of EGR system                                | EGR system                      | —                       | No support                                |
| Air fuel ratio control system for bank 1          | Fuel System for Bank 1          | —                       | Close normal                              |
| Engine load data                                  | Calculated load value           | %                       | 21.0%                                     |

**NOTE:**

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

# Subaru Select Monitor

## ENGINE (DIAGNOSTICS)

### 6. READ FREEZE FRAME DATA FOR ENGINE. (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
  - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
  - 3) Press the [YES] key after the information of engine type has been displayed.
  - 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
  - 5) On the «OBD Menu» display screen, select the {Freeze Frame Data} and press the [YES] key.
- A list of support data is shown in the following table.

| Contents  | Display                  | Unit of measure         | Note (at idling)             |
|---|--------------------------|-------------------------|------------------------------|
| DTC for freeze frame data                         | Freeze frame data        | —                       | DTC                          |
| Air fuel ratio control system for bank 1          | Fuel system for Bank1    | —                       | CLOSE normal or OPEN initial |
| Oxygen sensor output voltage                      | Oxygen Sensor #12        | V                       | —                            |
| Air fuel ratio correction by rear oxygen sensor   | Short term fuel trim #12 | %                       | —                            |
| Engine load data                                  | Calculated load value    | %                       | —                            |
| Engine coolant temperature signal                 | Coolant Temp.            | °C or °F                | —                            |
| Short term fuel trim by front oxygen (A/F) sensor | Short term fuel trim B1  | %                       | —                            |
| Long term fuel trim by front oxygen (A/F) sensor  | Long term fuel trim B1   | %                       | —                            |
| Intake manifold absolute pressure signal          | Mani. Absolute Pressure  | mmHg, kPa, inHg or psig | —                            |
| Engine speed signal                               | Engine Speed             | rpm                     | —                            |
| Vehicle speed signal                              | Vehicle Speed            | km/h or MPH             | —                            |
| Ignition timing signal                            | Ignition Timing          | °                       | —                            |
| Intake air temperature signal                     | Intake Air Temp          | °C or °F                | —                            |
| Intake air volume                                 | Mass Air Flow            | g/s                     | —                            |
| Throttle position signal                          | Throttle Opening Angle   | %                       | —                            |
| Secondary air system                              | Sec. Air system          | —                       | —                            |

| Oxygen sensor #12                                 | Oxygen sensor #12        | —                       | Support                      |

**NOTE:**

For detailed operation procedure, refer to SUBARU SELECT MONITOR OPERATION MANUAL.

## 7. LED OPERATION MODE FOR ENGINE

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On the «Engine Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
- 5) On the «Data Display Menu» display screen, select the {Data & LED Display} and press the [YES] key.
- 6) Using the scroll key, move the display screen up or down until the desired data is shown.
  - A list of the support data is shown in the following table.

| Remarks  | Display                    | Message              | LED "ON" requirements  |
|--|----------------------------|----------------------|--|
| AT/MT identification signal                    | AT Vehicle ID Signal       | ON or OFF            | Illuminate (AT model)  |
| Test mode signal                               | Test Mode Signal           | ON or OFF            | D check  |
| Neutral position switch signal                 | Neutral Position Switch    | ON or OFF            | When neutral position signal is entered.                     |
| Idle switch signal                             | Idle Switch Signal         | ON or OFF            | When idle switch signal is entered.                          |
| Ignition switch signal                         | Ignition Switch            | ON or OFF            | When ignition switch is turned to ON.                        |
| Power steering switch signal                   | P/S Switch                 | ON or OFF            | When power steering switch is entered.                       |
| Air conditioning switch signal                 | A/C Switch                 | ON or OFF            | When air conditioning switch is input.                       |
| Starter switch signal                          | Starter Switch             | ON or OFF            | When starter switch is input.                                |
| Rear oxygen sensor rich signal                 | Rear O2 Rich Signal        | Lean or Rich         | When rear oxygen sensor mixture ratio is rich.               |
| Knocking signal                                | Knocking Signal            | Provided or None     | When knocking signal is input.                               |
| Crankshaft position sensor signal              | Crankshaft Position Signal | Provided or None     | When crankshaft position sensor signal is input.             |
| Camshaft position sensor signal                | Camshaft Position Signal   | Provided or None     | When camshaft position sensor signal is input.               |
| Rear defogger switch signal                    | Rear Defogger Switch       | ON or OFF            | When rear defogger switch is turned to ON.                   |
| Blower fan switch signal                       | Blower Fan Switch          | ON or OFF            | When blower fan switch is turned to ON.                      |
| Small light switch signal                      | Light Switch               | ON or OFF            | When small light switch is turned to ON.                     |
| Air conditioning relay signal                  | A/C Compressor Signal      | ON or OFF            | When air conditioning relay is in function.                  |
| Radiator fan relay 1 signal                    | Radiator Fan Relay #1      | ON or OFF            | When radiator fan relay 1 is in function.                    |
| Radiator fan relay 2 signal                    | Radiator Fan Relay #2      | ON or OFF            | When radiator fan relay 2 is in function.                    |
| PCV hose assembly diagnosis signal             | Blow-by leak Connector     | Connect or Unconnect | When PCV hose assembly is connected.                         |
| Pressure control solenoid valve signal         | PCV Solenoid               | ON or OFF            | When pressure control solenoid valve is ON.                  |
| Tumble generator valve signal                  | TGV Output                 | Provided or None     | When tumble generator valve signal is input.                 |
| Tumble generator valve drive signal            | TGV Drive                  | Open or Close        | When tumble generator valve is open.                         |
| Drain valve signal                             | Vent Control Solenoid      | ON or OFF            | When drain valve is ON.                                      |
| AT retard angle demand signal                  | Retard Signal              | Provided or None     | When AT retard angle demand signal is input.                 |
| AT fuel cut signal                             | Fuel Cut                   | Provided or None     | When AT fuel cut signal is input.                            |
| AT coordinate permission signal                | Torque Control Permission  | Provided or None     | When AT coordinate permission signal is input.               |
| Electronic throttle control motor relay signal | ETC Motor Relay            | ON or OFF            | When electronic throttle control motor relay is in function. |
| Clutch switch signal                           | Clutch Switch              | ON or OFF            | When clutch switch is turned to ON.                          |
| Stop light switch signal                       | Stop Light Switch          | ON or OFF            | When stop switch is turned to ON.                            |

# Subaru Select Monitor

## ENGINE (DIAGNOSTICS)

| Remarks                            | Display             | Message   | LED "ON" requirements                  |
|------------------------------------|---------------------|-----------|--|
| SET/COAST switch signal            | SET/COAST Switch    | ON or OFF | When SET/COAST switch is turned to ON. |
| RES/ACC switch signal              | RESUME/ACCEL Switch | ON or OFF | When RES/ACC switch is turned to ON.   |
| Brake switch signal                | Brake Switch        | ON or OFF | When brake switch is turned to ON.     |
| Main switch signal                 | Main Switch         | ON or OFF | When main switch is turned to ON.      |
| Secondary air combi valve 2 signal | Combi valve 2       | ON or OFF | Secondary air combi valve 2 is ON.     |
| Secondary air pump relay signal    | Air pump relay      | ON or OFF | Secondary air pump relay functions.    |
| Secondary air combi valve 1 signal | Combi valve 1       | ON or OFF | Secondary air combi valve 1 is ON.     |

**NOTE:**

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

### 8. VIN REGISTRATION

- 1) On «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On «Engine Diagnosis» display screen, select the {VIN Registration}, and then press the [YES] key.
- 5) Perform the procedure shown on the display.

**NOTE:**

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

## 10. Read Diagnostic Trouble Code (DTC)

### A: OPERATION

#### 1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On the «Engine Diagnosis» display screen, select the {DTC Display} and press the [YES] key.
- 5) On the «DTC Display» display screen, select the {Current DTC} or {History DTC} and press the [YES] key.

#### NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4DOTC)(diag)-74, List of Diagnostic Trouble Code (DTC).>

#### 2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
- 5) On the «OBD Menu» display screen, select the {DTC Display} and press the [YES] key.
- 6) Make sure that a DTC is shown on the display screen.

#### NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4DOTC)(diag)-74, List of Diagnostic Trouble Code (DTC).>

### 3. GENERAL SCAN TOOL

Refers to data denoting emission-related powertrain DTC.

For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4DOTC)(diag)-74, List of Diagnostic Trouble Code (DTC).>

#### NOTE:

Refer to general scan tool manufacturer's instruction manual to access emission-related powertrain DTC (MODE \$03).

# Inspection Mode

ENGINE (DIAGNOSTICS)

## 11. Inspection Mode

### A: PROCEDURE

Carry out trouble diagnosis shown in the following DTC table.

When performing trouble diagnosis which is not shown in the DTC table, refer to the next item Drive cycle.

<Ref. to EN(H4DOTC)(diag)-46, Drive Cycle.>

| DTC   | Item   | Condition |
|-------|--|-----------|
| P0011 | Intake Camshaft Position - Timing Over-advanced or System Performance (Bank 1) | —         |
| P0016 | Crankshaft Position - Camshaft Position Correlation (Bank 1)                   | —         |
| P0018 | Crankshaft Position - Camshaft Position Correlation (Bank 2)                   | —         |
| P0021 | Intake Camshaft Position - Timing Over-advanced or System Performance (Bank 2) | —         |
| P0031 | HO2S Heater Control Circuit Low (Bank 1 Sensor 1)                              | —         |
| P0032 | HO2S Heater Control Circuit High (Bank 1 Sensor 1)                             | —         |
| P0037 | HO2S Heater Control Circuit Low (Bank 1 Sensor 2)                              | —         |
| P0038 | HO2S Heater Control Circuit High (Bank 1 Sensor 2)                             | —         |
| P0102 | Mass or Volume Air Flow Circuit Low Input                                      | —         |
| P0103 | Mass or Volume Air Flow Circuit High Input                                     | —         |
| P0107 | Manifold Absolute Pressure/Barometric Pressure Circuit Low Input               | —         |
| P0108 | Manifold Absolute Pressure/Barometric Pressure Circuit High Input              | —         |
| P0112 | Intake Air Temperature Circuit Low Input                                       | —         |
| P0113 | Intake Air Temperature Circuit High Input                                      | —         |
| P0117 | Engine Coolant Temperature Circuit Low Input                                   | —         |
| P0118 | Engine Coolant Temperature Circuit High Input                                  | —         |
| P0122 | Throttle/Pedal Position Sensor/Switch "A" Circuit Low Input                    | —         |
| P0123 | Throttle/Pedal Position Sensor/Switch "A" Circuit High Input                   | —         |
| P0131 | O <sub>2</sub> Sensor Circuit Low Voltage (Bank 1 Sensor 1)                    | —         |
| P0132 | O <sub>2</sub> Sensor Circuit High Voltage (Bank 1 Sensor 1)                   | —         |
| P0137 | O <sub>2</sub> Sensor Circuit Low Voltage (Bank 1 Sensor 2)                    | —         |
| P0138 | O <sub>2</sub> Sensor Circuit High Voltage (Bank 1 Sensor 2)                   | —         |
| P0140 | O <sub>2</sub> Sensor Circuit No Activity Detected (Bank 1 Sensor 2)           | —         |
| P0182 | Fuel Temperature Sensor "A" Circuit Low Input                                  | —         |
| P0183 | Fuel Temperature Sensor "A" Circuit High Input                                 | —         |
| P0222 | Throttle/Pedal Position Sensor/Switch "B" Circuit Low                          | —         |
| P0223 | Throttle/Pedal Position Sensor/Switch "B" Circuit High                         | —         |
| P0230 | Fuel Pump Primary Circuit  | —         |
| P0245 | Turbo/Super Charger Wastegate Solenoid "A" Low                                 | —         |
| P0327 | Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)                     | —         |
| P0328 | Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)                    | —         |
| P0335 | Crankshaft Position Sensor "A" Circuit   | —         |
| P0336 | Crankshaft Position Sensor "A" Circuit Range/Performance                       | —         |
| P0340 | Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)                 | —         |
| P0345 | Camshaft Position Sensor "A" Circuit (Bank 2)                                  | —         |
| P0413 | Secondary Air Injection System Switching Valve "A" Circuit Open                | —         |
| P0416 | Secondary Air Injection System Switching Valve "B" Circuit Open                | —         |
| P0418 | Secondary Air Injection System Control "A" Circuit Open                        | —         |
| P0447 | Evaporative Emission Control System Vent Control Circuit Open                  | —         |
| P0448 | Evaporative Emission Control System Vent Control Circuit Shorted               | —         |
| P0452 | Evaporative Emission Control System Pressure Sensor Low Input                  | —         |
| P0453 | Evaporative Emission Control System Pressure Sensor High Input                 | —         |

# Inspection Mode

ENGINE (DIAGNOSTICS)

| P2227 | Barometric Pressure Circuit Range/Performance                                      | —         |
| P2228 | Barometric Pressure Circuit Low  | —         |
| P2229 | Barometric Pressure Circuit High   | —         |
| P2431 | Secondary Air Injection System Air Flow /Pressure Sensor Circuit Range/Performance | —         |
| P2432 | Secondary Air Injection System Air Flow /Pressure Sensor Circuit Low               | —         |
| P2433 | Secondary Air Injection System Air Flow /Pressure Sensor Circuit High              | —         |
| P2444 | Secondary Air Injection System Pump Stuck On                                       | —         |

## 1. PREPARATION FOR THE INSPECTION MODE

- 1) Make sure that the fuel remains approx. half amount [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)] and the battery voltage is 12 V or more.
- 2) Raise the vehicle using a garage jack and place on rigid racks or drive the vehicle onto free rollers.

### WARNING:

- Before raising the vehicle, ensure the parking brake is applied.
- Do not use a pantograph jack in place of a rigid rack.
- Secure a rope or wire to the front and rear towing or tie-down hooks to prevent the lateral runout of front wheels.
- Do not abruptly depress/release the clutch pedal or accelerator pedal during works even when engine is operating at low speeds since this may cause vehicle to jump off free rollers.
- In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the rigid racks and the vehicle.
- Since the rear wheels will also rotate, do not place anything near them. Also, make sure that nobody goes in front of the vehicle.

- (A) Rigid rack  
(B) Free rollers

## 2. SUBARU SELECT MONITOR

- 1) Warm up the engine.
- 2) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>

EN-00038

- 3) Connect the diagnosis cable to Subaru Select Monitor.
- 4) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>

EN-00039

- 5) Connect the test mode connector (A) at the lower portion of instrument panel (on the driver's side).

PI-00261

- (A) Test mode connector

# Inspection Mode

## ENGINE (DIAGNOSTICS)

6) Connect the Subaru Select Monitor to data link connector located in the lower portion of the instrument panel (on the driver's side).

### CAUTION:

**Do not connect the scan tools except for Subaru Select Monitor and general scan tool.**

7) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor power switch to ON.

(A) Power switch

8) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.

9) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.

10) Press the [YES] key after the information of engine type is displayed.

11) On the «Engine Diagnosis» display screen, select the {Dealer Check Mode Procedure} and press the [YES] key.

12) When the “Perform Inspection (Dealer Check Mode)?” is shown on the display screen, press the [YES] key.

13) Perform subsequent procedures as instructed on the display screen.

- If trouble still remains in the memory, the corresponding DTC appears on the display screen.

### NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

- For detailed concerning the DTC, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(H4DOTC)(diag)-74, List of Diagnostic Trouble Code (DTC).>

- Release the parking brake.

- The speed difference between front and rear wheels may light either the ABS warning light, but this indicates no malfunctions. When the engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

### 3. GENERAL SCAN TOOL

1) Warm up the engine.

2) Connect the test mode connector (A) at the lower side of instrument panel (on the driver's side).

3) Connect the general scan tool to its data link connector in the lower portion of instrument panel (on the driver's side).

### CAUTION:

**Do not connect the scan tools except for Subaru Select Monitor and general scan tool.**

4) Start the engine.

### NOTE:

- Ensure the select lever is placed in “P” range before starting. (AT model)

- Depress the clutch pedal when starting engine. (MT model)

5) Using the select lever or shift lever, turn the “P” position switch and “N” position switch to ON.

6) Depress the brake pedal to turn brake switch ON. (AT model)

7) Keep the engine speed in 2,500 — 3,000 rpm range for 40 seconds.

8) Place the select lever or shift lever in “D” range (AT model) or “1st” gear (MT model) and drive the vehicle at 5 to 10 km/h (3 to 6 MPH).

**NOTE:**

- On AWD model, release the parking brake.
- The speed difference between front and rear wheels may light ABS warning light, but this indicates no malfunctions. When the engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

9) Using the general scan tool, check for DTC and record the result(s).

**NOTE:**

- For detailed operation procedures, refer to the General Scan Tool Instruction Manual.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(H4DOTC)(diag)-74, List of Diagnostic Trouble Code (DTC).>

# Drive Cycle

## ENGINE (DIAGNOSTICS)

### 12. Drive Cycle

#### A: PROCEDURE

There are seven drive patterns of drive cycles A — G for the trouble diagnosis. Performing the specified drive pattern allows to diagnose malfunctioning items listed below. After the malfunctioning items listed below are repaired, always check if they correctly resume their functions by performing the required drive pattern.

#### 1. PREPARATION FOR THE DRIVE CYCLE

- 1) Make sure that the fuel remains approx. half amount [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)], and battery voltage is 12 V or more.
- 2) Disconnect the test mode connector.

#### NOTE:

- Except for the engine coolant temperature specified items at starting, the diagnosis is carried out after engine warm up.
- Carry out the diagnosis which is marked\* on DTC twice, then, after finishing first diagnosis, stop the engine and do second time at the same condition.

#### 2. DRIVE CYCLE A (AFTER RUNNING 20 MINUTES AT 80 KM/H (50 MPH), IDLE ENGINE FOR 1 MINUTE.)

| DTC    | Item   | Condition   |
|--------|--|---|
| *P0125 | Insufficient Coolant Temperature for Closed Loop Fuel Control          | Engine coolant temperature is less than 20°C (68°F) at engine start.  |
| *P0128 | Coolant Thermostat   | Engine coolant temperature is less than 55°C (131°F) at engine start. |
| *P0133 | O <sub>2</sub> Sensor Circuit Slow Response (Bank 1 Sensor 1)          | —   |
| *P0171 | System Too Lean (Bank 1)   | Diagnosis completes in drive cycle B or C as well.                    |
| *P0172 | System Too Rich (Bank 1)   | Diagnosis completes in drive cycle B or C as well.                    |
| P0301  | Cylinder 1 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.                    |
| P0302  | Cylinder 2 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.                    |
| P0303  | Cylinder 3 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.                    |
| P0304  | Cylinder 4 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.                    |
| *P0420 | Catalyst System Efficiency Below Threshold (Bank 1)                    | —   |
| *P0442 | Evaporative Emission Control System Leak Detected (small leak)         | Engine coolant temperature is less than 25°C (77°F) at engine start.  |
| *P0451 | Evaporative Emission Control System Pressure Sensor Range/Performance  | —   |
| *P0456 | Evaporative Emission Control System Leak Detected (very small leak)    | Engine coolant temperature is less than 25°C (77°F) at engine start.  |
| *P0457 | Evaporative Emission Control System Leak Detected (fuel cap loose/off) | Engine coolant temperature is less than 25°C (77°F) at engine start.  |
| *P0459 | Evaporative Emission Control System Purge Control Valve Circuit High   | —   |
| *P0692 | Cooling Fan 1 Control Circuit High                                     | —   |
| P1443  | Vent Control Solenoid Valve Function Problem                           | —   |
| *P2096 | Post Catalyst Fuel Trim System Too Lean Bank 1                         | Diagnosis completes in drive cycle B or C as well.                    |
| *P2097 | Post Catalyst Fuel Trim System Too Rich Bank 1                         | Diagnosis completes in drive cycle B or C as well.                    |

### 3. DRIVE CYCLE B (IDLE FOR 10 MINUTES)

**NOTE:**

Before the diagnosis, drive the vehicle at 10 km/h (6 MPH) or more.

| DTC    | Item   | Condition  |
|--------|--|--|
| *P0126 | Insufficient Engine Coolant Temperature for Stable Operation | —  |
| *P0171 | System too Lean (Bank 1)                                     | Diagnosis completes in drive cycle A or C as well. |
| *P0172 | System too Rich (Bank 1)                                     | Diagnosis completes in drive cycle A or C as well. |
| P0301  | Cylinder 1 Misfire Detected                                  | Diagnosis completes in drive cycle A or C as well. |
| P0302  | Cylinder 2 Misfire Detected                                  | Diagnosis completes in drive cycle A or C as well. |
| P0303  | Cylinder 3 Misfire Detected                                  | Diagnosis completes in drive cycle A or C as well. |
| P0304  | Cylinder 4 Misfire Detected                                  | Diagnosis completes in drive cycle A or C as well. |
| *P0464 | Fuel Level Sensor Circuit Intermittent                       | —  |
| *P0483 | Cooling Fan Rationality Check                                | —  |
| *P0506 | Idle Control System RPM Lower Than Expected                  | —  |
| *P0507 | Idle Control System RPM Higher Than Expected                 | —  |
| *P2096 | Post Catalyst Fuel Trim System Too Lean Bank 1               | Diagnosis completes in drive cycle A or C as well. |
| *P2097 | Post Catalyst Fuel Trim System Too Rich Bank 1               | Diagnosis completes in drive cycle A or C as well. |

### 4. DRIVE CYCLE C (DRIVE ACCORDING TO THE FOLLOWING DRIVE PATTERN)

- |  |   |  |
|--|---|--|
| <p>(A) Idle engine for 10 seconds or more.</p> <p>(B) Accelerate to 97 km/h (60 MPH) within 20 seconds.</p> <p>(C) Drive vehicle at 97 km/h (60 MPH) for 20 seconds.</p> | <p>(D) Decelerate with fully closed throttle to 64 km/h (40 MPH).</p> <p>(E) Drive vehicle at 64 km/h (40 MPH) for 20 seconds.</p> <p>(F) Accelerate to 97 km/h (60 MPH) within 10 seconds.</p> | <p>(G) Stop vehicle with throttle fully closed.</p> <p>(H) Vehicle speed km/h (MPH)</p> <p>(I) Seconds</p> |
|--|---|--|

## 5. DRIVE CYCLE D

### • DRIFT DIAGNOSIS

- 1) Make sure that the engine coolant temperature at engine starting is less than 30°C (86°F).
- 2) Make sure that fuel of more than 10 ℓ (2.6 US gal, 2.2 Imp gal) remains and the battery voltage is more than 10.9 V.
- 3) Make sure that the engine coolant temperature rises for more than 10°C (18°F) from the level of engine starting and is also more than 75°C (167°F).
- 4) Idle the engine for more than 120 seconds in the condition of step 3.

### • STUCK DIAGNOSIS

- 1) Make sure that the battery voltage is more than 10.9 V.
- 2) Perform the clear memory mode. <Ref. to EN(H4DOTC)(diag)-50, Clear Memory Mode.>
- 3) Drive the vehicle for the distance equal to fuel of 50 ℓ (13.2 US gal, 11 Imp gal).

#### NOTE:

- It is possible to drive intermittently.
- Do not disconnect the terminal of battery during diagnosis. (If disconnecting the terminal of battery, the data will be cleared.)

| DTC   | Item  | Condition |
|-------|---|-----------|
| P0181 | Fuel Temperature Sensor "A" Circuit Range/Performance | —         |

## 6. DRIVE CYCLE E

- 1) Make sure that the battery voltage is more than 10.9 V.
- 2) Perform the clear memory mode. <Ref. to EN(H4DOTC)(diag)-50, Clear Memory Mode.>
- 3) Drive the vehicle for the distance equal to fuel of 30 ℓ (7.9 US gal, 6.6 Imp gal).

**NOTE:**

- It is possible to drive intermittently.
- Do not disconnect the terminal of battery during diagnosis. (If disconnecting the terminal of battery, the data will be cleared.)

| DTC   | Item  | Condition |
|-------|---|-----------|
| P0461 | Fuel Level Sensor Circuit Range/Performance | —         |

## 7. DRIVE CYCLE F

- 1) Make sure that the engine coolant temperature at engine starting is less than 30°C (86°F).
- 2) Warm-up the engine until the engine coolant temperature is more than 95°C (203°F) from engine starting.
- 3) Idle the engine for more than 10 minutes in the condition of step 2).

**NOTE:**

Do not disconnect the terminal of battery during diagnosis. (If disconnecting the terminal of battery, the data will be cleared.)

| DTC   | Item   | Condition |
|-------|--|-----------|
| P0111 | Intake Air Temperature Circuit Range/Performance | —         |

## 8. DRIVE CYCLE G

- 1) Disconnect the ground cable from battery. Wait for 10 seconds and then reconnect it.
- 2) Start the engine and idle it until engine coolant temperature becomes 80°C (176°F).
- 3) Turn the engine OFF, and wait until coolant temperature goes down to 40°C (104°F).

**NOTE:**

Do not let the engine coolant temperature go down below 5°C (41°F).

- 4) Repeat the steps 2) and 3) again.

**NOTE:**

Do not let the engine coolant temperature go down below than 5°C (41°F).

- 5) Start and idle the engine.

| DTC    | Item   | Condition |
|--------|--|-----------|
| *P0410 | Secondary Air Injection System                                       | —         |
| *P0411 | Secondary Air Injection System Incorrect Flow Detected               | —         |
| P0414  | Secondary Air Injection System Switching Valve "A" Circuit Shorted   | —         |
| P0417  | Secondary Air Injection System Switching Valve "B" Circuit Shorted   | —         |
| P1418  | Secondary Air Injection System Control "A" Circuit Shorted           | —         |
| *P2440 | Secondary Air Injection System Switching Valve Stuck Open (Bank 1)   | —         |
| *P2441 | Secondary Air Injection System Switching Valve Stuck Closed (Bank 1) | —         |
| *P2442 | Secondary Air Injection System Switching Valve Stuck Open (Bank 2)   | —         |
| *P2443 | Secondary Air Injection System Switching Valve Stuck Closed (Bank 2) | —         |

## 13. Clear Memory Mode

### A: OPERATION

#### 1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On the «Engine Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.
- 5) When the 'Done' and 'Turn Ignition Switch OFF' are shown on the display screen, turn the ignition switch to OFF, and then turn the Subaru Select Monitor power switch to OFF.

**NOTE:**

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

#### 2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
- 5) On the «OBD Menu» display screen, select the {4. Diagnosis Code(s) Cleared} and press the [YES] key.
- 6) When the 'Clear Diagnostic Code?' is shown on the display screen, press the [YES] key.
- 7) Turn the ignition switch to OFF, and then turn the Subaru Select Monitor power switch to OFF.

**NOTE:**

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

#### 3. GENERAL SCAN TOOL

For clear memory procedures using the general scan tool, refer to the General Scan Tool Instruction Manual.

## 14. Compulsory Valve Operation Check Mode

### A: OPERATION

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(H4DOTC)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the test mode connector (A) at the lower portion of instrument panel (on the driver's side).

5) Connect the Subaru Select Monitor to data link connector located in the lower portion of instrument panel (on the driver's side).

### CAUTION:

**Do not connect scan tools except for the Subaru Select Monitor and general scan tool.**

6) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor power switch to ON.

(A) Power switch

7) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.

8) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.

9) Press the [YES] key after the information of engine type is displayed.

10) On the «Engine Diagnosis» display screen, select the {System Operation Check Mode} and press the [YES] key.

11) On the «System Operation Check Mode» display screen, select the {Actuator ON/OFF Operation} and press the [YES] key.

12) Select the desired compulsory actuator on the «Actuator ON/OFF Operation» display screen and press the [YES] key.

13) Pressing the [NO] key completes the compulsory operation check mode. The display will then return to the «Actuator ON/OFF Operation» screen.

- A list of support data is shown in the following table.

# Compulsory Valve Operation Check Mode

## ENGINE (DIAGNOSTICS)

| Contents   | Display                         |
|--|---------------------------------|
| Compulsory fuel pump relay operation check                 | Fuel Pump Relay                 |
| Compulsory radiator fan relay operation check              | Radiator Fan Relay              |
| Compulsory air conditioning relay operation check          | A/C Compressor Relay            |
| Compulsory purge control solenoid valve operation check    | CPC Solenoid Valve              |
| Compulsory pressure control solenoid valve operation check | PCV Solenoid Valve              |
| Compulsory drain valve operation check                     | Vent. Solenoid Valve            |
| Compulsory turbocharger wastegate solenoid operation check | Turbocharger Wastegate Solenoid |
| Compulsory secondary air combi valve 1 operation check     | Secondary Air Combi Valve 1     |
| Compulsory secondary air combi valve 2 operation check     | Secondary Air Combi Valve 2     |
| Compulsory air pump relay operation check                  | Secondary Air Pump Relay        |

### NOTE:

- The following parts will be displayed but not functional because they are not installed on the vehicle.

| Display                               |
|---------------------------------------|
| EGR Solenoid Valve                    |
| ASV Solenoid Valve                    |
| FICD Solenoid                         |
| Pressure Switching Sol. 1             |
| Pressure Switching Sol. 2             |
| AAI Solenoid Valve                    |
| Tank Sensor Cntl Valve                |
| Emission-bypass valve permission flag |

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

## 15. Malfunction Indicator Light

### A: PROCEDURE

|  |
|--|
| 1. Activation of check malfunction indicator light. <Ref. to EN(H4DOTC)(diag)-53, ACTIVATION OF MALFUNCTION INDICATOR LIGHT, Malfunction Indicator Light.>   |
| ↓  |
| 2. Check that the malfunction indicator light does not come on. <Ref. to EN(H4DOTC)(diag)-55, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>  |
| ↓  |
| 3. Check that the malfunction indicator light does not go off. <Ref. to EN(H4DOTC)(diag)-57, MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF., Malfunction Indicator Light.>   |
| ↓  |
| 4. Check that the malfunction indicator light does not blink at a cycle of 3 Hz. <Ref. to EN(H4DOTC)(diag)-58, MALFUNCTION INDICATOR LIGHT DOES NOT BLINK AT A CYCLE OF 3 HZ., Malfunction Indicator Light.>     |
| ↓  |
| 5. Check that the malfunction indicator light remains blinking at a cycle of 3 Hz. <Ref. to EN(H4DOTC)(diag)-60, MALFUNCTION INDICATOR LIGHT REMAINS BLINKING AT A CYCLE OF 3 HZ., Malfunction Indicator Light.> |

### B: ACTIVATION OF MALFUNCTION INDICATOR LIGHT

1) When the ignition switch is turned to ON (engine off), the malfunction indicator light in the combination meter illuminates.

**NOTE:**

If the malfunction indicator light does not illuminate, perform diagnostics of the malfunction indicator light circuit or the combination meter circuit. <Ref. to EN(H4DOTC)(diag)-55, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON, Malfunction Indicator Light.>

2) After starting the engine, the malfunction indicator light goes out. If it does not, either the engine or the emission control system is malfunctioning.

- (1) No trouble
- (2) Trouble occurs
- (3) ON
- (4) OFF
- (5) Ignition switch ON
- (6) Engine start

# Malfunction Indicator Light

## ENGINE (DIAGNOSTICS)

---

3) If the diagnosis system senses a misfire which could damage the catalyzer, the malfunction indicator light will blink at a cycle of 1 Hz.

- (1) ON
- (2) OFF
- (3) Ignition switch ON
- (4) Engine start
- (5) Misfire start
- (6) 1 second

4) When the ignition switch is turned to ON (engine off) or to START with the test mode connector connected, the malfunction indicator light blinks at a cycle of 3 Hz.

- (1) ON
- (2) OFF
- (3) Ignition switch ON
- (4) 1 second

# Malfunction Indicator Light

ENGINE (DIAGNOSTICS)

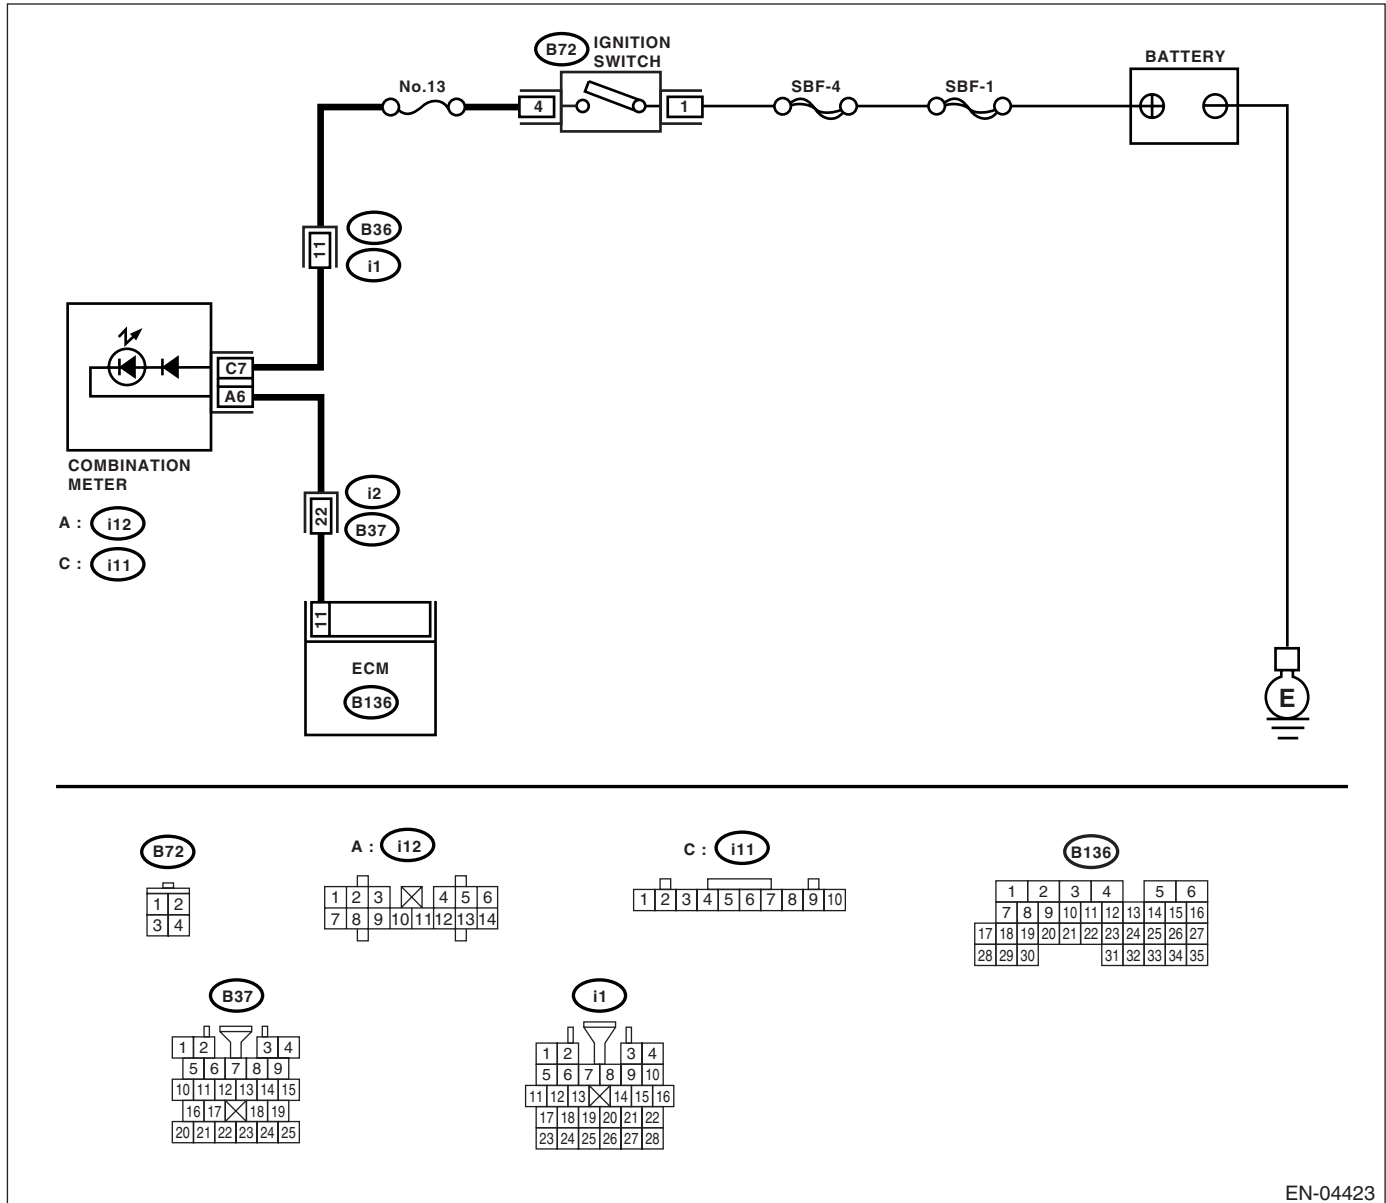

## C: MALFUNCTION INDICATOR LIGHT DOES NOT COME ON DIAGNOSIS:

The malfunction indicator light circuit is shorted.

### TROUBLE SYMPTOM:

When the ignition switch is turned to ON (engine OFF), malfunction indicator light does not come on.

### WIRING DIAGRAM:

EN-04423

| P0411 | Secondary Air Injection System Incorrect Flow Detected             | <Ref. to EN(H4DOTC)(diag)-198, DTC P0411 SECONDARY AIR INJECTION SYSTEM INCORRECT FLOW DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>             |
| P0413 | Secondary Air Injection System Switching Valve "A" Circuit Open    | <Ref. to EN(H4DOTC)(diag)-200, DTC P0413 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE "A" CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>    |
| P0414 | Secondary Air Injection System Switching Valve "A" Circuit Shorted | <Ref. to EN(H4DOTC)(diag)-202, DTC P0414 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE "A" CIRCUIT SHORTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |

# List of Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| DTC   | Item   | Index  |
|-------|--|--|
| P0416 | Secondary Air Injection System Switching Valve "B" Circuit Open        | <Ref. to EN(H4DOTC)(diag)-204, DTC P0416 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE "B" CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>        |
| P0417 | Secondary Air Injection System Switching Valve "B" Circuit Shorted     | <Ref. to EN(H4DOTC)(diag)-206, DTC P0417 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE "B" CIRCUIT SHORTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>     |
| P0418 | Secondary Air Injection System Control "A" Circuit Open                | <Ref. to EN(H4DOTC)(diag)-208, DTC P0418 SECONDARY AIR INJECTION SYSTEM CONTROL "A" CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                |
| P0420 | Catalyst System Efficiency Below Threshold (Bank 1)                    | <Ref. to EN(H4DOTC)(diag)-211, DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                    |
| P0442 | Evaporative Emission Control System Leak Detected (small leak)         | <Ref. to EN(H4DOTC)(diag)-214, DTC P0442 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (SMALL LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>         |
| P0447 | Evaporative Emission Control System Vent Control Circuit Open          | <Ref. to EN(H4DOTC)(diag)-218, DTC P0447 EVAPORATIVE EMISSION CONTROL SYSTEM VENT CONTROL CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>          |
| P0448 | Evaporative Emission Control System Vent Control Circuit Shorted       | <Ref. to EN(H4DOTC)(diag)-221, DTC P0448 EVAPORATIVE EMISSION CONTROL SYSTEM VENT CONTROL CIRCUIT SHORTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>       |
| P0451 | Evaporative Emission Control System Pressure Sensor Range/Performance  | <Ref. to EN(H4DOTC)(diag)-222, DTC P0451 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0452 | Evaporative Emission Control System Pressure Sensor Low Input          | <Ref. to EN(H4DOTC)(diag)-225, DTC P0452 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>          |
| P0453 | Evaporative Emission Control System Pressure Sensor High Input         | <Ref. to EN(H4DOTC)(diag)-228, DTC P0453 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>         |
| P0456 | Evaporative Emission Control System Leak Detected (very small leak)    | <Ref. to EN(H4DOTC)(diag)-231, DTC P0456 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (VERY SMALL LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>    |
| P0457 | Evaporative Emission Control System Leak Detected (fuel cap loose/off) | <Ref. to EN(H4DOTC)(diag)-234, DTC P0457 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (FUEL CAP LOOSE/OFF), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P0458 | Evaporative Emission Control System Purge Control Valve Circuit Low    | <Ref. to EN(H4DOTC)(diag)-238, DTC P0458 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>    |
| P0459 | Evaporative Emission Control System Purge Control Valve Circuit High   | <Ref. to EN(H4DOTC)(diag)-240, DTC P0459 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0461 | Fuel Level Sensor Circuit Range/Performance                            | <Ref. to EN(H4DOTC)(diag)-241, DTC P0461 FUEL LEVEL SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |
| P0462 | Fuel Level Sensor Circuit Low Input                                    | <Ref. to EN(H4DOTC)(diag)-243, DTC P0462 FUEL LEVEL SENSOR CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                    |
| P0463 | Fuel Level Sensor Circuit High Input                                   | <Ref. to EN(H4DOTC)(diag)-247, DTC P0463 FUEL LEVEL SENSOR CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                   |
| P0464 | Fuel Level Sensor Circuit Intermittent                                 | <Ref. to EN(H4DOTC)(diag)-250, DTC P0464 FUEL LEVEL SENSOR CIRCUIT INTERMITTENT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                 |
| P0483 | Cooling Fan Rationality Check  | <Ref. to EN(H4DOTC)(diag)-252, DTC P0483 COOLING FAN RATIONALITY CHECK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |

## List of Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| DTC   | Item   | Index  |
|-------|--|--|
| P0502 | Vehicle Speed Sensor Circuit Low Input                                   | <Ref. to EN(H4DOTC)(diag)-255, DTC P0502 VEHICLE SPEED SENSOR CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0503 | Vehicle Speed Sensor Intermittent/Erratic/High                           | <Ref. to EN(H4DOTC)(diag)-257, DTC P0503 VEHICLE SPEED SENSOR INTERMITTENT/ERRATIC/HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0506 | Idle Control System RPM Lower Than Expected                              | <Ref. to EN(H4DOTC)(diag)-258, DTC P0506 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0507 | Idle Control System RPM Higher Than Expected                             | <Ref. to EN(H4DOTC)(diag)-260, DTC P0507 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0512 | Starter Request Circuit  | <Ref. to EN(H4DOTC)(diag)-262, DTC P0512 STARTER REQUEST CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0513 | Incorrect Immobilizer Key  | <Ref. to EN(H4DOTC)(diag)-264, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0519 | Idle Control System Malfunction (Fail-Safe)                              | <Ref. to EN(H4DOTC)(diag)-264, DTC P0519 IDLE CONTROL SYSTEM MALFUNCTION (FAIL-SAFE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0600 | Serial Communication Link  | <Ref. to EN(H4DOTC)(diag)-267, DTC P0600 SERIAL COMMUNICATION LINK, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0604 | Internal Control Module Random Access Memory (RAM) Error                 | <Ref. to EN(H4DOTC)(diag)-268, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0605 | Internal Control Module Read Only Memory (ROM) Error                     | <Ref. to EN(H4DOTC)(diag)-270, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0607 | Control Module Performance   | <Ref. to EN(H4DOTC)(diag)-271, DTC P0607 CONTROL MODULE PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0638 | Throttle Actuator Control Range/Performance (Bank 1)                     | <Ref. to EN(H4DOTC)(diag)-272, DTC P0638 THROTTLE ACTUATOR CONTROL RANGE/PERFORMANCE (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0691 | Cooling Fan 1 Control Circuit Low  | <Ref. to EN(H4DOTC)(diag)-272, DTC P0691 COOLING FAN 1 CONTROL CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0692 | Cooling Fan 1 Control Circuit High                                       | <Ref. to EN(H4DOTC)(diag)-274, DTC P0692 COOLING FAN 1 CONTROL CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0700 | Transmission Control System (MIL Request)                                | <Ref. to EN(H4DOTC)(diag)-276, DTC P0700 TRANSMISSION CONTROL SYSTEM (MIL REQUEST), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0851 | Neutral Switch Input Circuit Low   | <Ref. to EN(H4DOTC)(diag)-277, DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (AT MODEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> or <Ref. to EN(H4DOTC)(diag)-279, DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (MT MODEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0852 | Neutral Switch Input Circuit High  | <Ref. to EN(H4DOTC)(diag)-281, DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (AT MODEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> or <Ref. to EN(H4DOTC)(diag)-284, DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (MT MODEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P1152 | O <sub>2</sub> Sensor Circuit Range/Performance (Low) (Bank 1 Sensor 1)  | <Ref. to EN(H4DOTC)(diag)-286, DTC P1152 O <sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (LOW) (BANK 1 SENSOR 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1153 | O <sub>2</sub> Sensor Circuit Range/Performance (High) (Bank 1 Sensor 1) | <Ref. to EN(H4DOTC)(diag)-288, DTC P1153 O <sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (HIGH) (BANK 1 SENSOR 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |

# List of Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| DTC   | Item   | Index  |
|-------|--|--|
| P1160 | Return Spring Failure                                      | <Ref. to EN(H4DOTC)(diag)-290, DTC P1160 RETURN SPRING FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                      |
| P1400 | Fuel Tank Pressure Control Solenoid Valve Circuit Low      | <Ref. to EN(H4DOTC)(diag)-291, DTC P1400 FUEL TANK PRESSURE CONTROL SOLENOID VALVE CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>      |
| P1410 | Secondary Air Injection System Switching Valve Stuck Open  | <Ref. to EN(H4DOTC)(diag)-293, DTC P1410 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE STUCK OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1418 | Secondary Air Injection System Control "A" Circuit Shorted | <Ref. to EN(H4DOTC)(diag)-295, DTC P1418 SECONDARY AIR INJECTION SYSTEM CONTROL "A" CIRCUIT SHORTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P1420 | Fuel Tank Pressure Control Sol. Valve Circuit High         | <Ref. to EN(H4DOTC)(diag)-298, DTC P1420 FUEL TANK PRESSURE CONTROL SOL. VALVE CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>         |
| P1443 | Vent Control Solenoid Valve Function Problem               | <Ref. to EN(H4DOTC)(diag)-300, DTC P1443 VENT CONTROL SOLENOID VALVE FUNCTION PROBLEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>               |
| P1491 | Positive Crankcase Ventilation (Blow-by) Function Problem  | <Ref. to EN(H4DOTC)(diag)-302, DTC P1491 POSITIVE CRANKCASE VENTILATION (BLOW-BY) FUNCTION PROBLEM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1518 | Starter Switch Circuit Low Input                           | <Ref. to EN(H4DOTC)(diag)-303, DTC P1518 STARTER SWITCH CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                           |
| P1560 | Back-Up Voltage Circuit Malfunction                        | <Ref. to EN(H4DOTC)(diag)-305, DTC P1560 BACK-UP VOLTAGE CIRCUIT MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                        |
| P1570 | Antenna  | <Ref. to EN(H4DOTC)(diag)-308, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P1571 | Reference Code Incompatibility                             | <Ref. to EN(H4DOTC)(diag)-308, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                             |
| P1572 | IMM Circuit Failure (Except Antenna Circuit)               | <Ref. to EN(H4DOTC)(diag)-308, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>               |
| P1574 | Key Communication Failure                                  | <Ref. to EN(H4DOTC)(diag)-308, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                  |
| P1576 | EGI Control Module EEPROM                                  | <Ref. to EN(H4DOTC)(diag)-308, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                  |
| P1577 | IMM Control Module EEPROM                                  | <Ref. to EN(H4DOTC)(diag)-308, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                  |
| P2004 | Intake Manifold Runner Control Stuck Open (Bank 1)         | <Ref. to EN(H4DOTC)(diag)-309, DTC P2004 INTAKE MANIFOLD RUNNER CONTROL STUCK OPEN (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>         |
| P2005 | Intake Manifold Runner Control Stuck Open (Bank 2)         | <Ref. to EN(H4DOTC)(diag)-310, DTC P2005 INTAKE MANIFOLD RUNNER CONTROL STUCK OPEN (BANK 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>         |
| P2006 | Intake Manifold Runner Control Stuck Closed (Bank 1)       | <Ref. to EN(H4DOTC)(diag)-311, DTC P2006 INTAKE MANIFOLD RUNNER CONTROL STUCK CLOSED (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>       |
| P2007 | Intake Manifold Runner Control Stuck Closed (Bank 2)       | <Ref. to EN(H4DOTC)(diag)-312, DTC P2007 INTAKE MANIFOLD RUNNER CONTROL STUCK CLOSED (BANK 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>       |
| P2008 | Intake Manifold Runner Control Circuit / Open (Bank 1)     | <Ref. to EN(H4DOTC)(diag)-313, DTC P2008 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT / OPEN (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>     |
| P2009 | Intake Manifold Runner Control Circuit Low (Bank 1)        | <Ref. to EN(H4DOTC)(diag)-315, DTC P2009 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT LOW (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>        |

## List of Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| DTC   | Item  | Index   |
|-------|---|---|
| P2011 | Intake Manifold Runner Control Circuit / Open (Bank 2)                | <Ref. to EN(H4DOTC)(diag)-317, DTC P2011 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT / OPEN (BANK 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                |
| P2012 | Intake Manifold Runner Control Circuit Low (Bank 2)                   | <Ref. to EN(H4DOTC)(diag)-319, DTC P2012 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT LOW (BANK 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                   |
| P2016 | Intake Manifold Runner Position Sensor / Switch Circuit Low (Bank 1)  | <Ref. to EN(H4DOTC)(diag)-321, DTC P2016 INTAKE MANIFOLD RUNNER POSITION SENSOR / SWITCH CIRCUIT LOW (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P2017 | Intake Manifold Runner Position Sensor / Switch Circuit High (Bank 1) | <Ref. to EN(H4DOTC)(diag)-324, DTC P2017 INTAKE MANIFOLD RUNNER POSITION SENSOR / SWITCH CIRCUIT HIGH (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P2021 | Intake Manifold Runner Position Sensor / Switch Circuit Low (Bank 2)  | <Ref. to EN(H4DOTC)(diag)-326, DTC P2021 INTAKE MANIFOLD RUNNER POSITION SENSOR / SWITCH CIRCUIT LOW (BANK 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P2022 | Intake Manifold Runner Position Sensor / Switch Circuit High (Bank 2) | <Ref. to EN(H4DOTC)(diag)-329, DTC P2022 INTAKE MANIFOLD RUNNER POSITION SENSOR / SWITCH CIRCUIT HIGH (BANK 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P2088 | OCV Solenoid Valve Signal A Circuit Open (Bank 1)                     | <Ref. to EN(H4DOTC)(diag)-331, DTC P2088 OCV SOLENOID VALVE SIGNAL A CIRCUIT OPEN (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                     |
| P2089 | OCV Solenoid Valve Signal A Circuit Short (Bank 1)                    | <Ref. to EN(H4DOTC)(diag)-333, DTC P2089 OCV SOLENOID VALVE SIGNAL A CIRCUIT SHORT (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                    |
| P2092 | OCV Solenoid Valve Signal A Circuit Open (Bank 2)                     | <Ref. to EN(H4DOTC)(diag)-335, DTC P2092 OCV SOLENOID VALVE SIGNAL A CIRCUIT OPEN (BANK 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                     |
| P2093 | Intake Camshaft Position Actuator Control Circuit High (Bank 2)       | <Ref. to EN(H4DOTC)(diag)-337, DTC P2093 INTAKE CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT HIGH (BANK 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>       |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

### 18. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### A: DTC P0011 INTAKE CAMSHAFT POSITION-TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 1)

##### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-10, DTC P0011 INTAKE CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>

##### TROUBLE SYMPTOM:

- Engine stalls.
- Erroneous idling

##### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.

| Step  | Check   | Yes   | No   |
|---|---|---|--|
| <b>1</b><br><b>CHECK ANY OTHER DTC ON DISPLAY.</b>  | Is any other DTC displayed?   | Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DOTC)(diag)-74, List of Diagnostic Trouble Code (DTC).>   | Go to step 2.  |
| <b>2</b><br><b>CHECK CURRENT DATA.</b><br>1) Start the engine and let it idle.<br>2) Inspect the AVCS advance timing and oil flow control solenoid valve duty output using Subaru Select Monitor or general scan tool.<br>NOTE:<br><ul style="list-style-type: none"> <li>• Subaru Select Monitor</li> </ul> For detailed operation procedure, refer to the READ CURRENT DATA SHOWN ON DISPLAY FOR ENGINE. <Ref. to EN(H4DOTC)(diag)-31, Subaru Select Monitor.><br><ul style="list-style-type: none"> <li>• General scan tool</li> </ul> For detailed operation procedures, refer to the General Scan Tool Instruction Manual. | Is the AVCS advance timing more than approx. 0°C and the oil flow control solenoid valve duty output more than approx. 10%? | Inspect the following items and repair or replace if necessary. <ul style="list-style-type: none"> <li>• Oil pipe (clog)</li> <li>• Oil flow control solenoid valve (clog or contamination in oil passage, settling at spring, stuck at valve)</li> <li>• Intake camshaft (sludge, damage at camshaft)</li> <li>• Timing belt (timing mark aligning)</li> </ul> | A temporary malfunction. Conduct the following to clean the oil passage. Replace the engine oil and idle the engine for 5 minutes, then replace the oil filter and engine oil. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

## B: DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION (BANK 1)

### DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-12, DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

- Engine stalls.
- Erroneous idling

### CAUTION:

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.**

| Step   | Check   | Yes  | No   |
|--|---|--|--|
| <b>1</b><br><b>CHECK FOR ANY OTHER DTC ON DISPLAY.</b>   | Is any other DTC displayed?   | Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DOTC)(diag)-74, List of Diagnostic Trouble Code (DTC).>  | Go to step 2.  |
| <b>2</b><br><b>CHECK CURRENT DATA.</b><br>1) Start the engine and let it idle.<br>2) Inspect the AVCS timing advance and oil flow control solenoid valve duty output using Subaru Select Monitor or general scan tool.<br><br>NOTE:<br>• Subaru Select Monitor<br>For detailed operation procedures, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4DOTC)(diag)-31, Subaru Select Monitor.><br>• General scan tool<br>For detailed operation procedure, refer to the General Scan Tool Instruction Manual. | Is the AVCS timing advance more than approx. 0 degree?<br>Also, is the oil flow control solenoid valve duty output more than approx. 10%? | Inspect the following items and repair or replace if necessary. <ul style="list-style-type: none"> <li>• Oil pipe (clog)</li> <li>• Oil flow control solenoid valve (clog or contamination in oil passage, setting of spring, stuck at valve)</li> <li>• Intake camshaft (sludge, damage at camshaft)</li> <li>• Timing belt (timing mark aligning)</li> </ul> | A temporary malfunction. Conduct the following to clean the oil passage. Replace the engine oil and idle the engine for 5 minutes, then replace the oil filter and engine oil. |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

### C: DTC P0018 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION (BANK 2)

#### DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-12, DTC P0018 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>

#### TROUBLE SYMPTOM:

- Engine stalls.
- Erroneous idling

#### CAUTION:

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.**

If problem persists, replace the electronic throttle control. <Ref. to FU(H4DOTC)-13, Throttle Body.> | Repair the poor contact in ECM connector.<br>Replace the ECM if defective. <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

---

### **V: DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH “A” CIRCUIT HIGH INPUT**

#### **DTC DETECTING CONDITION:**

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-47, DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH “A” CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

#### **TROUBLE SYMPTOM:**

- Erroneous idling
- Engine stalls.
- Poor driving performance

#### **CAUTION:**

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.**

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

## WIRING DIAGRAM:

EN-04706

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## ENGINE (DIAGNOSTICS)

| Step   | Check   | Yes  | No  |
|--|---|--|---|
| <b>1 CHECK SENSOR OUTPUT.</b><br>1) Turn the ignition switch to ON.<br>2) Read the data of main throttle sensor signal using Subaru Select Monitor.<br>3) Shake the ECM harness and connector, engine harness connectors, electronic throttle control connector harness while monitoring value of voltage meter.   | Is the voltage less than 4.63 V?  | Go to step 2.  | Go to step 3.   |
| <b>2 CHECK POOR CONTACT.</b><br>Check the poor contact in connector between ECM and electronic throttle control.   | Is there poor contact in connector between ECM and electronic throttle control? | Repair the poor contact.   | Temporary poor contact occurred, but it is normal at present.   |
| <b>3 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ECM.<br>3) Disconnect the connectors from the electronic throttle control control.<br>4) Measure the resistance between ECM connector and electronic throttle control connector.<br><b>Connector &amp; terminal</b><br>(B134) No. 18 — (E57) No. 6:<br>(B134) No. 29 — (E57) No. 3: | Is the resistance less than 1 $\Omega$ ?  | Go to step 4.  | Repair the open circuit of harness connector.   |
| <b>4 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.</b><br>1) Connect the ECM connector.<br>2) Measure the resistance between electronic throttle control connector and engine ground.<br><b>Connector &amp; terminal</b><br>(E57) No. 3 — Engine ground:  | Is the resistance less than 5 $\Omega$ ?  | Go to step 5.  | Repair the poor contact in ECM connector. If problem persists, replace the ECM. <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> |
| <b>5 CHECK SENSOR OUTPUT POWER SUPPLY.</b><br>Measure the voltage between selectronic throttle control connector and engine ground.<br><b>Connector &amp; terminal</b><br>(E57) No. 6 (+) — Engine ground (-):   | Is the voltage more than 10 V?  | Replace the electronic throttle control. <Ref. to FU(H4DOTC)-13, Throttle Body.> | Repair battery short circuit in harness between ECM connector and electronic throttle control connector.                              |

## W: DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL

### DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-49, DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

Engine will not return to idling.

### CAUTION:

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.**

### WIRING DIAGRAM:

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| Step   | Check                                      | Yes   | No   |
|--|--|---|--|
| <b>1</b><br><b>CHECK ANY OTHER DTC ON DISPLAY.</b>   | Is any other DTC displayed?                | Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DOTC)(diag)-74, List of Diagnostic Trouble Code (DTC).><br><br>NOTE:<br>In this case, it is not necessary to inspect DTC P0125. | Go to step 2.  |
| <b>2</b><br><b>CHECK ENGINE COOLING SYSTEM.</b><br><br>NOTE:<br>Check the following items. <ul style="list-style-type: none"> <li>• Thermostat open stuck</li> <li>• Coolant level</li> <li>• Coolant freeze</li> <li>• Tire diameter</li> </ul> | Is there a fault in engine cooling system? | Replace the thermostat. <Ref. to CO(H4DOTC)-21, Thermostat.>  | Replace the engine coolant temperature sensor. <Ref. to FU(H4DOTC)-27, Engine Coolant Temperature Sensor.> |

## X: DTC P0126 INSUFFICIENT COOLANT TEMPERATURE FOR STABLE OPERATION

### DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-51, DTC P0126 INSUFFICIENT COOLANT TEMPERATURE FOR STABLE OPERATION, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

Engine would not return to idling.

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.

### WIRING DIAGRAM:

| <b>4</b><br><b>CHECK HARNESS BETWEEN FUEL INJECTOR AND ECM CONNECTOR.</b><br>Measure the resistance of harness connector between ECM connector and fuel injector connector on faulty cylinders.<br><b>Connector &amp; terminal</b><br><b>#1 (B137) No. 8 — (E5) No. 1:</b><br><b>#2 (B137) No. 9 — (E16) No. 1:</b><br><b>#3 (B137) No. 10 — (E6) No. 1:</b><br><b>#4 (B137) No. 11 — (E17) No. 1:</b>  | Is the resistance less than 1 $\Omega$ ?   | Go to step 5.   | Repair the harness and connector.<br><br><b>NOTE:</b><br>In this case, repair the following:<br>• Open circuit in harness between ECM connector and fuel injector connector<br>• Poor contact in coupling connector |
| <b>5</b><br><b>CHECK FUEL INJECTOR.</b><br>Measure the resistance between fuel injector terminals on faulty cylinder.<br><b>Terminals</b><br><b>No. 1 — No. 2:</b>  | Is the resistance 5 — 20 $\Omega$ ?        | Go to step 6.   | Replace the faulty fuel injector. <Ref. to FU(H4DOTC)-33, Fuel Injector.>   |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step   | Check  | Yes   | No   |
|--|--|---|--|
| <p><b>6</b></p> <p><b>CHECK POWER SUPPLY LINE.</b><br/>                     1) Turn the ignition switch to ON.<br/>                     2) Measure the voltage between fuel injector connector and engine ground on faulty cylinders.</p> <p><b>Connector &amp; terminal</b><br/>                     #1 (E5) No. 2 (+) — Engine ground (-):<br/>                     #2 (E16) No. 2 (+) — Engine ground (-):<br/>                     #3 (E6) No. 2 (+) — Engine ground (-):<br/>                     #4 (E17) No. 2 (+) — Engine ground (-):</p>   | Is the voltage more than 10 V?   | Repair the poor contact in all connectors in fuel injector circuit.   | Repair the harness and connector.<br>NOTE:<br>In this case, repair the following:<br><ul style="list-style-type: none"> <li>• Open circuit in harness between main relay and fuel injector connector on faulty cylinders</li> <li>• Poor contact in coupling connector</li> <li>• Poor contact in main relay connector</li> <li>• Poor contact in fuel injector connector on faulty cylinders</li> </ul> |
| <p><b>7</b></p> <p><b>CHECK HARNESS BETWEEN FUEL INJECTOR AND ECM CONNECTOR.</b><br/>                     1) Turn the ignition switch to OFF.<br/>                     2) Disconnect the connector from fuel injector on faulty cylinder.<br/>                     3) Turn the ignition switch to ON.<br/>                     4) Measure the voltage between ECM connector and chassis ground on faulty cylinders.</p> <p><b>Connector &amp; terminal</b><br/>                     #1 (B137) No. 8 (+) — Chassis ground (-):<br/>                     #2 (B137) No. 9 (+) — Chassis ground (-):<br/>                     #3 (B137) No. 10 (+) — Chassis ground (-):<br/>                     #4 (B137) No. 11 (+) — Chassis ground (-):</p> | Is the voltage more than 10 V?   | Repair the battery short circuit in harness between ECM and fuel injector. After repair, replace the ECM. <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> | Go to step 8.  |
| <p><b>8</b></p> <p><b>CHECK FUEL INJECTOR.</b><br/>                     1) Turn the ignition switch to OFF.<br/>                     2) Measure the resistance between fuel injector terminals on faulty cylinder.</p> <p><b>Terminals</b><br/>                     No. 1 — No. 2:</p>   | Is the resistance less than 1 $\Omega$ ?   | Replace the faulty fuel injector <Ref. to FU(H4DOTC)-33, Fuel Injector.> and ECM <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).>                          | Go to step 9.  |
| <p><b>9</b></p> <p><b>CHECK INSTALLATION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.</b></p>   | Is the camshaft position sensor or crankshaft position sensor loosely installed? | Tighten the camshaft position sensor or crankshaft position sensor.   | Go to step 10.   |
| <p><b>10</b></p> <p><b>CHECK CRANK SPROCKET.</b><br/>                     Remove the timing belt cover.</p>  | Is the crank sprocket rusted or does it have broken teeth?                       | Replace the crank sprocket. <Ref. to ME(H4DOTC)-54, Crank Sprocket.>  | Go to step 11.   |
| <p><b>11</b></p> <p><b>CHECK INSTALLATION CONDITION OF TIMING BELT.</b><br/>                     Turn the crankshaft, and align alignment mark on crank sprocket with alignment mark on cylinder block.</p>  | Is the timing belt dislocated from its proper position?                          | Repair the installation condition of timing belt. <Ref. to ME(H4DOTC)-45, Timing Belt.>   | Go to step 12.   |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| Step   | Check  | Yes  | No   |
|--|--|--|--|
| <b>12</b> <b>CHECK FUEL LEVEL.</b>   | Is the fuel meter indication higher than the "Lower" level?    | Go to step <b>13</b> .   | Replenish the fuel so fuel meter indication is higher than the "Lower" level. After replenishing fuel; Go to step <b>13</b> .  |
| <b>13</b> <b>CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.</b><br>1) Clear the memory using Subaru Select Monitor.<br><Ref. to EN(H4DOTC)(diag)-50, Clear Memory Mode.><br>2) Start the engine, and drive the vehicle more than 10 minutes. | Is the malfunction indicator light coming on or blinking?      | Go to step <b>15</b> .   | Go to step <b>14</b> .   |
| <b>14</b> <b>CHECK CAUSE OF MISFIRE DIAGNOSED.</b>   | Was the cause of misfire diagnosed when the engine is running? | Finish the diagnostics operation, if the engine has no abnormality.  | Repair the poor contact.<br><b>NOTE:</b><br>In this case, repair the following:<br>• Poor contact in ignition coil connector<br>• Poor contact in fuel injector connector on faulty cylinders<br>• Poor contact in ECM connector<br>• Poor contact in coupling connector |
| <b>15</b> <b>CHECK AIR INTAKE SYSTEM.</b>  | Is there a fault in air intake system?                         | Repair the air intake system.<br><b>NOTE:</b><br>Check the following items:<br>• Are there air leaks or air suction caused by loose or dislocated nuts and bolts?<br>• Are there cracks or any disconnection of hoses? | Go to step <b>16</b> .   |
| <b>16</b> <b>CHECK CYLINDER.</b>   | Is there a fault in that cylinder?                             | Repair or replace the faulty parts.<br><b>NOTE:</b><br>Check the following items.<br>• Spark plug<br>• Fuel injector<br>• Compression pressure   | Go to DTC P0171 and P0172. <Ref. to EN(H4DOTC)(diag)-152, DTC P0171 SYSTEM TOO LEAN (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |

## AW:DTC P0327 KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR)

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-101, DTC P0327 KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

- Poor driving performance
- Knocking occurs.

### CAUTION:

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.**

### WIRING DIAGRAM:

EN-04218

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step   | Check   | Yes  | No  |
|--|---|--|---|
| <b>1</b><br><b>CHECK HARNESS BETWEEN KNOCK SENSOR AND ECM CONNECTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ECM.<br>3) Measure the resistance between ECM harness connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B134) No. 15 — Chassis ground:</b> | Is the resistance more than 700 k $\Omega$ ?              | Go to step 2.  | Repair the harness and connector.<br><b>NOTE:</b><br>In this case, repair the following: <ul style="list-style-type: none"> <li>• Open circuit in harness between knock sensor and ECM connector</li> <li>• Poor contact in knock sensor connector</li> <li>• Poor contact in coupling connector</li> </ul> |
| <b>2</b><br><b>CHECK KNOCK SENSOR.</b><br>1) Disconnect the connector from knock sensor.<br>2) Measure the resistance between knock sensor connector terminal and engine ground.<br><b>Terminals</b><br><b>No. 1 — Engine ground:</b>  | Is the resistance more than 700 k $\Omega$ ?              | Go to step 3.  | Repair the harness and connector.<br><b>NOTE:</b><br>In this case, repair the following: <ul style="list-style-type: none"> <li>• Poor contact in knock sensor connector</li> <li>• Poor contact in coupling connector</li> </ul>   |
| <b>3</b><br><b>CHECK CONDITION OF KNOCK SENSOR INSTALLATION.</b>   | Is the knock sensor installation bolt tightened securely? | Replace the knock sensor. <Ref. to FU(H4DOTC)-30, Knock Sensor.> | Tighten the knock sensor installation bolt securely.  |

## AX:DTC P0328 KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR)

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-103, DTC P0328 KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

- Poor driving performance
- Knocking occurs.

### CAUTION:

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.**

### WIRING DIAGRAM:

EN-04218

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step  | Check  | Yes  | No  |
|---|--|--|---|
| <b>1</b><br><b>CHECK HARNESS BETWEEN KNOCK SENSOR AND ECM CONNECTOR.</b><br>Measure the resistance of harness between ECM connector and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B134) No. 15 — Chassis ground:</b></i>  | Is the resistance less than 400 k $\Omega$ ? | Go to step 2.  | Go to step 3.   |
| <b>2</b><br><b>CHECK KNOCK SENSOR.</b><br>1) Disconnect the connector from knock sensor.<br>2) Measure the resistance between knock sensor connector terminal and engine ground.<br><i><b>Terminals</b></i><br><i><b>No. 1 — Engine ground:</b></i>   | Is the resistance less than 400 k $\Omega$ ? | Replace the knock sensor. <Ref. to FU(H4DOTC)-30, Knock Sensor.>   | Repair the ground short circuit in harness between knock sensor connector and ECM connector.<br><br>NOTE:<br>The harness between both connectors is shielded. Repair the short circuit of harness together with shield. |
| <b>3</b><br><b>CHECK INPUT SIGNAL FOR ECM.</b><br>1) Connect the connectors to ECM and knock sensor.<br>2) Turn the ignition switch to ON.<br>3) Measure the voltage between ECM and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B134) No. 15 (+) — Chassis ground (-):</b></i> | Is the voltage more than 2 V?                | Even if malfunction indicator light lights up, the circuit has returned to a normal condition at this time. (However, the possibility of poor contact still remains.)<br><br>NOTE:<br>In this case, repair the following:<br><ul style="list-style-type: none"> <li>• Poor contact in knock sensor connector</li> <li>• Poor contact in ECM connector</li> <li>• Poor contact in coupling connector</li> </ul> | Repair the poor contact in ECM connector.   |

## BY:DTC P0483 COOLING FAN RATIONALITY CHECK

### DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-161, DTC P0483 COOLING FAN RATIONALITY CHECK, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

- Occurrence of noise
- Overheating

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.

### NOTE:

If the vehicle, with the engine idling, is placed very close to a wall or another vehicle, preventing normal cooling function, the OBD system may detect malfunction.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

## DT:DTC P2021 INTAKE MANIFOLD RUNNER POSITION SENSOR / SWITCH CIRCUIT LOW (BANK 2)

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-221, DTC P2021 INTAKE MANIFOLD RUNNER POSITION SENSOR / SWITCH CIRCUIT LOW (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

- Erroneous idling
- Engine stalls.
- Poor driving performance

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| Step   | Check                                     | Yes   | No  |
|--|---|---|---|
| <b>1 CHECK ELECTRONIC THROTTLE CONTROL RELAY.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the electronic throttle control relay.<br>3) Connect the battery to electronic throttle control relay terminal No. 1 and No. 3.<br>4) Measure the resistance between electronic throttle control relay terminals.<br><i>Terminals</i><br><i>No. 2 — No. 4:</i>   | Is the resistance less than 1 $\Omega$ ?  | Go to step 2.   | Replace the electronic throttle control relay.  |
| <b>2 CHECK POWER SUPPLY TO ELECTRONIC THROTTLE CONTROL RELAY.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between electronic throttle control relay connector and engine ground.<br><i>Connector &amp; terminal</i><br><i>(B309) No. 1 (+) — Engine ground (-):</i><br><i>(B309) No. 2 (+) — Engine ground (-):</i>  | Is the voltage more than 10 V?            | Go to step 3.   | Repair the open power supply circuit or ground short.                                 |
| <b>3 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ECM.<br>3) Turn the ignition switch to ON.<br>4) Measure the voltage between electronic throttle control relay connector and engine ground.<br><i>Connector &amp; terminal</i><br><i>(B309) No. 3 (+) — Engine ground (-):</i>  | Is the voltage less than 5 V?             | Repair the ground short of harness between ECM and electronic throttle control. | Go to step 4.   |
| <b>4 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between electronic throttle control relay connector and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B309) No. 3 — Engine ground:</i><br><i>(B309) No. 4 — Engine ground:</i>   | Is the resistance more than 1 $M\Omega$ ? | Go to step 5.   | Repair the ground short of harness between ECM and electronic throttle control relay. |
| <b>5 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between electronic throttle control connector and electronic throttle control relay connector.<br><i>Connector &amp; terminal</i><br><i>(B136) No. 1 — (B309) No. 4:</i><br><i>(B136) No. 21 — (B309) No. 3:</i>   | Is the resistance less than 1 $\Omega$ ?  | Go to step 6.   | Repair the open circuit of harness between ECM and electronic throttle control relay. |
| <b>6 CHECK OUTPUT VOLTAGE OF SENSOR.</b><br>1) Connect all the connectors.<br>2) Turn the ignition switch to ON.<br>3) Measure the voltage between ECM connector terminals.<br><i>Connector &amp; terminal</i><br><i>(B134) No. 18 (+) — (B134) No. 29 (-):</i><br>4) Shake the ECM harness and connector, engine harness connectors (B134, F61), electronic throttle control connector harness while monitoring value of voltage meter. | Is the voltage more than 0.4 V?           | Go to step 7.   | Go to step 9.   |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step   | Check  | Yes                      | No  |
|--|--|--------------------------|---|
| <b>7 CHECK OUTPUT VOLTAGE OF SENSOR.</b><br>1) Connect all the connectors.<br>2) Turn the ignition switch to ON.<br>3) Measure the voltage between ECM connector terminals.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B134) No. 28 (+) — (B134) No. 29 (-):</b></i><br>4) Shake the ECM harness and connector, engine harness connectors, electronic throttle control connector harness while monitoring value of voltage meter. | Is the voltage more than 0.8 V?  | Go to step 8.            | Go to step 9.   |
| <b>8 CHECK POOR CONTACT.</b><br>Check poor contact between ECM connector and electronic throttle control connector.  | Is there poor contact between ECM connector and electronic throttle control connector? | Repair the poor contact. | Go to step 13.  |
| <b>9 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ECM.<br>3) Disconnect the connector from electronic throttle control.<br>4) Measure the resistance between ECM connector and electronic throttle control connector.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B134) No. 19 — (E57) No. 5:</b></i>                                 | Is the resistance less than 1 $\Omega$ ?   | Go to step 10.           | Repair the open harness connector.  |
| <b>10 CHECK THE HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.</b><br>Measure the resistance between ECM connector and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B134) No. 19 — Chassis ground:</b></i><br><i><b>(B134) No. 18 — Chassis ground:</b></i><br><i><b>(B134) No. 28 — Chassis ground:</b></i>  | Is the resistance more than 1 M $\Omega$ ?   | Go to step 11.           | Repair the ground short of harness.   |
| <b>11 CHECK POWER SUPPLY TO SENSOR.</b><br>1) Connect the ECM connector.<br>2) Turn the ignition switch to ON.<br>3) Measure the resistance between electronic throttle control connector and engine ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(E57) No. 5 (+) — Engine ground (-):</b></i><br>4) Shake the ECM harness and connector, engine harness connectors, while monitoring value of voltage meter.                | Is the voltage 4.5 — 5.5 V?  | Go to step 12.           | Repair the poor contact in ECM connector. If problem persists, replace the ECM. <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> |
| <b>12 CHECK SHORT OF ECM.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between electronic throttle control connector and engine ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(E57) No. 4 — Engine ground:</b></i><br><i><b>(E57) No. 6 — Engine ground:</b></i>   | Is the resistance more than 10 $\Omega$ ?  | Go to step 13.           | Repair the poor contact in ECM connector. If problem persists, replace the ECM. <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| Step  | Check  | Yes                                    | No  |
|---|--|--|---|
| <b>13 CHECK OUTPUT VOLTAGE OF SENSOR.</b><br>1) Connect all the connectors.<br>2) Turn the ignition switch to ON.<br>3) Read the data of main throttle sensor signal, using the Subaru Select Monitor.<br>4) Shake the ECM harness and connector, engine harness connectors, electronic throttle control connector harness while monitoring value of voltage meter.   | Is the voltage 4.63 V?   | Go to step 14.                         | Go to step 16.  |
| <b>14 CHECK OUTPUT VOLTAGE OF SENSOR.</b><br>1) Read the data of sub throttle sensor signal, using the Subaru Select Monitor.<br>2) Shake the ECM harness and connector, engine harness connectors, electronic throttle control connector harness while monitoring value of voltage meter.  | Is the voltage 4.73 V?   | Go to step 15.                         | Go to step 16.  |
| <b>15 CHECK POOR CONTACT IN CONNECTORS.</b><br>Check poor contact in connectors between ECM and electronic throttle control?  | Is there poor contact in connectors between ECM and electronic throttle control? | Repair the poor contact in connectors. | Go to step 21.  |
| <b>16 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ECM.<br>3) Disconnect the connector from electronic throttle control.<br>4) Measure the resistance between ECM connector and electronic throttle control connector.<br><b>Connector &amp; terminal</b><br><b>(B134) No. 18 — (E57) No. 6:</b><br><b>(B134) No. 28 — (E57) No. 4:</b><br><b>(B134) No. 29 — (E57) No. 3:</b> | Is the resistance less than 1 $\Omega$ ?   | Go to step 17.                         | Repair the open harness connector.  |
| <b>17 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.</b><br>1) Connect the ECM connector.<br>2) Measure the resistance between electronic throttle control connector and engine ground.<br><b>Connector &amp; terminal</b><br><b>(E57) No. 3 — Engine ground:</b>   | Is the resistance less than 5 $\Omega$ ?   | Go to step 18.                         | Repair the poor contact in ECM connector. If problem persists, replace the ECM. <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> |
| <b>18 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between electronic throttle control connector and engine ground.<br><b>Connector &amp; terminal</b><br><b>(E57) No. 5 (+) — Engine ground (-):</b><br>3) Shake the ECM harness and connector, engine harness connectors, while monitoring value of voltage meter.  | Is the voltage less than 10 V?   | Go to step 19.                         | Repair the battery short of harness between ECM connector and electronic throttle control connector.                                  |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step   | Check                                      | Yes  | No  |
|--|--|--|---|
| <b>1 CHECK ELECTRONIC THROTTLE CONTROL RELAY.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the electronic throttle control relay.<br>3) Measure the resistance between electronic throttle control relay terminals.<br><i>Terminals</i><br><i>No. 2 — No. 4:</i>                                  | Is the resistance more than 1 M $\Omega$ ? | Go to step 2.  | Replace the electronic throttle control relay.  |
| <b>2 CHECK SHORT OF ELECTRONIC THROTTLE CONTROL RELAY POWER SUPPLY CIRCUIT.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between electronic throttle control relay connector and engine ground.<br><i>Connector &amp; terminal</i><br><i>(B309) No. 4 (+) — Engine ground (-):</i>    | Is the voltage more than 5 V?              | Repair the short of power supply to harness between ECM and electronic throttle control relay.   | Go to step 3.   |
| <b>3 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL RELAY.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from ECM.<br>3) Measure the resistance between ECM connector and engine ground.<br><i>Connector &amp; terminal</i><br><i>(B136) No. 21 — Engine ground:</i> | Is the resistance more than 1 M $\Omega$ ? | Repair the poor contact in ECM connector. If problem persists, replace the ECM.<br><Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> | Repair the ground short of harness between ECM and electronic throttle control relay. |

## EE:DTC P2109 THROTTLE/PEDAL POSITION SENSOR “A” MINIMUM STOP PERFORMANCE

**NOTE:**

For the diagnostic procedure, refer to DTC P2101. <Ref. to GD(H4DOTC)-237, DTC P2101 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

## EF:DTC P2122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" CIRCUIT LOW INPUT

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-244, DTC P2122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "D" CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

- Erroneous idling
- Poor driving performance

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.

### WIRING DIAGRAM:

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

## EK:DTC P2138 THROTTLE/PEDAL POSITION SENSOR/SWITCH “D”/“E” VOLTAGE CORRELATION

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(H4DOTC)-252, DTC P2138 THROTTLE/PEDAL POSITION SENSOR/SWITCH “D”/“E” VOLTAGE CORRELATION, Diagnostic Trouble Code (DTC) Detecting Criteria.>

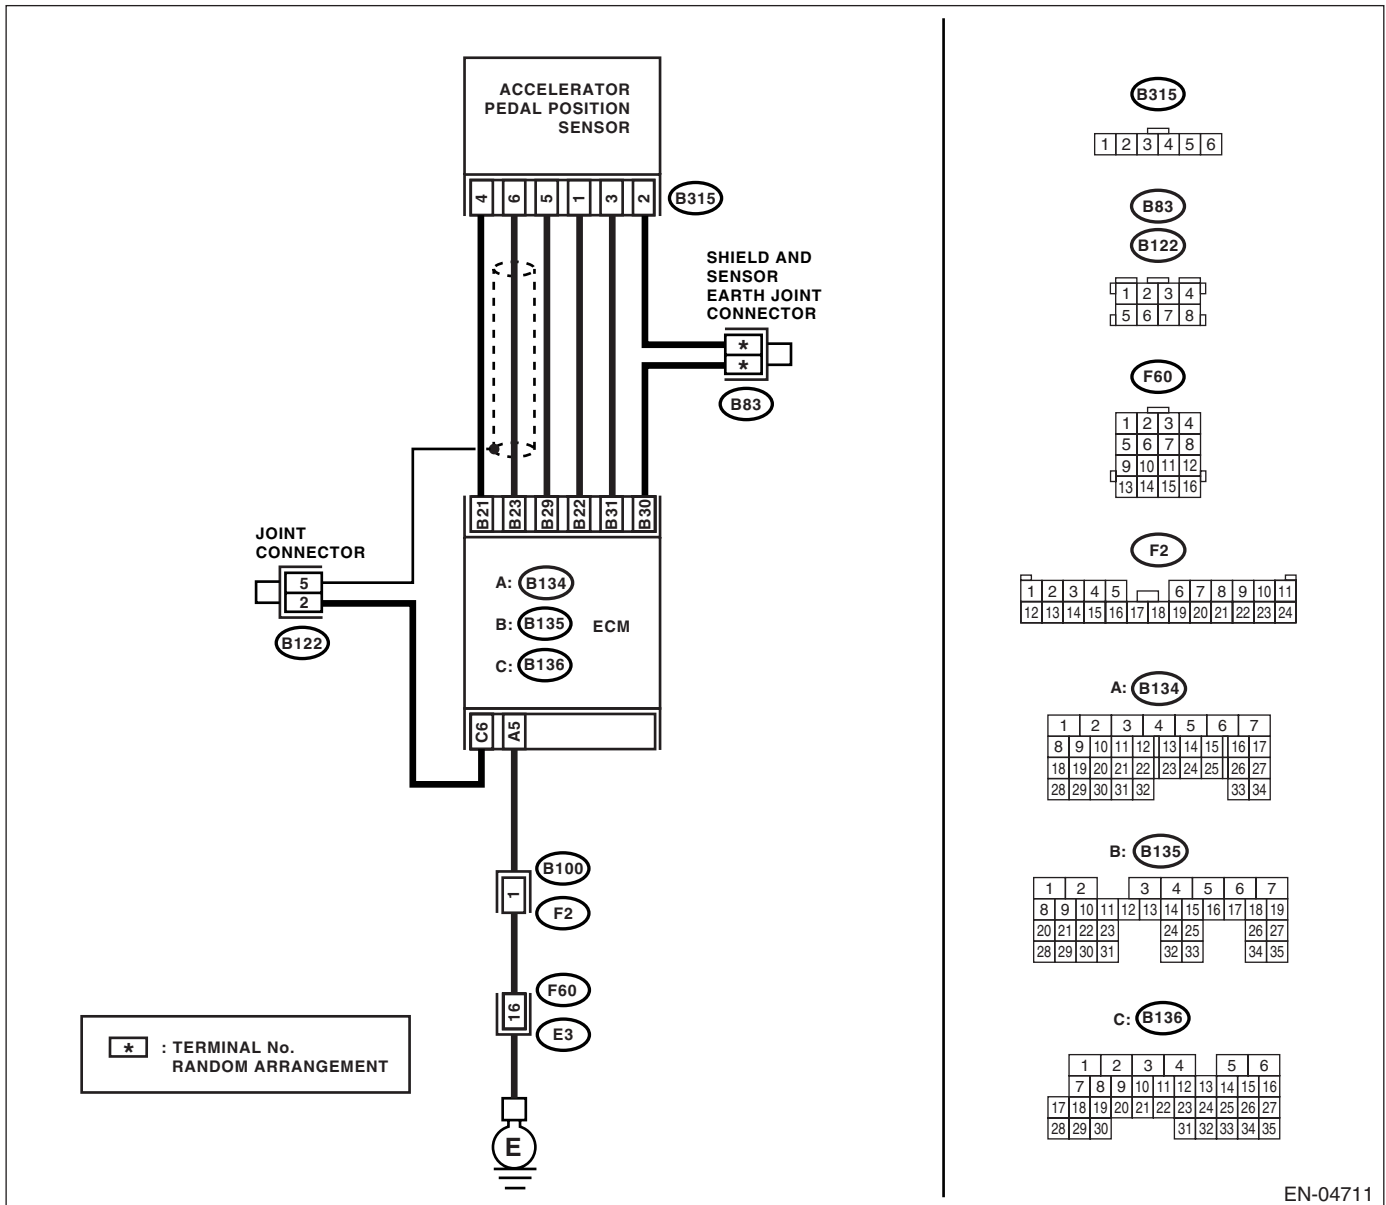

### TROUBLE SYMPTOM:

- Erroneous idling
- Poor driving performance

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOTC)(diag)-50, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOTC)(diag)-40, PROCEDURE, Inspection Mode.>.

### WIRING DIAGRAM:

## 19. General Diagnostic Table

### A: INSPECTION

#### 1. ENGINE

NOTE:

Malfunction of parts other than those listed is also possible. <Ref. to ME(H4DOTC)-96, Engine Noise.>

| Symptom   | Problem parts  |
|---|--|
| 1. Engine stalls during idling.                               | 1) Electronic throttle control<br>2) Manifold absolute pressure sensor<br>3) Mass air flow and intake temperature sensor<br>4) Ignition parts (*1)<br>5) Engine coolant temperature sensor (*2)<br>6) Crankshaft position sensor (*3)<br>7) Camshaft position sensor (*3)<br>8) Fuel injection parts (*4)  |
| 2. Rough idling   | 1) Electronic throttle control<br>2) Manifold absolute pressure sensor<br>3) Mass air flow and intake temperature sensor<br>4) Engine coolant temperature sensor (*2)<br>5) Ignition parts (*1)<br>6) Air intake system (*5)<br>7) Fuel injection parts (*4)<br>8) Crankshaft position sensor (*3)<br>9) Camshaft position sensor (*3)<br>10) Oxygen sensor<br>11) Fuel pump and fuel pump relay |
| 3. Engine does not return to idle.                            | 1) Electronic throttle control<br>2) Engine coolant temperature sensor<br>3) Manifold absolute pressure sensor<br>4) Mass air flow sensor  |
| 4. Poor acceleration  | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake temperature sensor<br>3) Electronic throttle control<br>5) Fuel pump and fuel pump relay<br>6) Engine coolant temperature sensor (*2)<br>7) Crankshaft position sensor (*3)<br>8) Camshaft position sensor (*3)<br>9) A/C switch and A/C cut relay<br>10) Engine torque control signal circuit<br>11) Ignition parts (*1)    |
| 5. Engine stalls or engine sags or hesitates at acceleration. | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake temperature sensor<br>3) Engine coolant temperature sensor (*2)<br>4) Crankshaft position sensor (*3)<br>5) Camshaft position sensor (*3)<br>6) Purge control solenoid valve<br>7) Fuel injection parts (*4)<br>8) Fuel pump and fuel pump relay   |
| 6. Surge  | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake temperature sensor<br>3) Engine coolant temperature sensor (*2)<br>4) Crankshaft position sensor (*3)<br>5) Camshaft position sensor (*3)<br>6) Fuel injection parts (*4)<br>7) Throttle position sensor<br>8) Fuel pump and fuel pump relay   |

# General Diagnostic Table

ENGINE (DIAGNOSTICS)

| Symptom                            | Problem parts   |
|------------------------------------|---|
| 7. Spark knock                     | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake temperature sensor<br>3) Engine coolant temperature sensor<br>4) Knock sensor<br>5) Fuel injection parts (*4)<br>6) Fuel pump and fuel pump relay |
| 8. After-burning in exhaust system | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake temperature sensor<br>3) Engine coolant temperature sensor (*2)<br>4) Fuel injection parts (*4)<br>5) Fuel pump and fuel pump relay               |

\*1: Check ignition coil and ignitor assembly and spark plug.

\*2: Indicate the symptom occurring only in cold temperatures.

\*3: Ensure the secure installation.

\*4: Check fuel injector, fuel pressure regulator and fuel filter.

\*5: Inspect air leak in air intake system.

| P0304 | Cylinder 4 Misfire Detected  | <Ref. to GD(H4DOTC)-100, DTC P0304 CYLINDER 4 MISFIRE DETECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0327 | Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)         | <Ref. to GD(H4DOTC)-101, DTC P0327 KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P0328 | Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)        | <Ref. to GD(H4DOTC)-103, DTC P0328 KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>        |
| P0335 | Crankshaft Position Sensor "A" Circuit                             | <Ref. to GD(H4DOTC)-105, DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                             |
| P0336 | Crankshaft Position Sensor "A" Circuit Range/Performance           | <Ref. to GD(H4DOTC)-107, DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>           |
| P0340 | Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)     | <Ref. to GD(H4DOTC)-109, DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>     |
| P0345 | Camshaft Position Sensor "A" Circuit (Bank 2)                      | <Ref. to GD(H4DOTC)-110, DTC P0345 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>                      |
| P0410 | Secondary Air Injection System                                     | <Ref. to GD(H4DOTC)-111, DTC P0410 SECONDARY AIR INJECTION SYSTEM, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                     |
| P0411 | Secondary Air Injection System Incorrect Flow Detected             | <Ref. to GD(H4DOTC)-115, DTC P0411 SECONDARY AIR INJECTION SYSTEM INCORRECT FLOW DETECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>             |
| P0413 | Secondary Air Injection System Switching Valve "A" Circuit Open    | <Ref. to GD(H4DOTC)-116, DTC P0413 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE "A" CIRCUIT OPEN, Diagnostic Trouble Code (DTC) Detecting Criteria.>    |
| P0414 | Secondary Air Injection System Switching Valve "A" Circuit Shorted | <Ref. to GD(H4DOTC)-117, DTC P0414 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE "A" CIRCUIT SHORTED, Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P0416 | Secondary Air Injection System Switching Valve "B" Circuit Open    | <Ref. to GD(H4DOTC)-118, DTC P0416 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE "B" CIRCUIT OPEN, Diagnostic Trouble Code (DTC) Detecting Criteria.>    |

# List of Diagnostic Trouble Code (DTC)

GENERAL DESCRIPTION

| DTC   | Description  | Index   |
|-------|--|---|
| P0417 | Secondary Air Injection System Switching Valve "B" Circuit Shorted     | <Ref. to GD(H4DOTC)-118, DTC P0417 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE "B" CIRCUIT SHORTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>     |
| P0418 | Secondary Air Injection System Control "A" Circuit Open                | <Ref. to GD(H4DOTC)-119, DTC P0418 SECONDARY AIR INJECTION SYSTEM CONTROL "A" CIRCUIT OPEN, Diagnostic Trouble Code (DTC) Detecting Criteria.>                |
| P0420 | Catalyst System Efficiency Below Threshold (Bank 1)                    | <Ref. to GD(H4DOTC)-120, DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                    |
| P0442 | Evaporative Emission Control System Leak Detected (Small Leak)         | <Ref. to GD(H4DOTC)-123, DTC P0442 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (SMALL LEAK), Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P0447 | Evaporative Emission Control System Vent Control Circuit Open          | <Ref. to GD(H4DOTC)-139, DTC P0447 EVAPORATIVE EMISSION CONTROL SYSTEM VENT CONTROL CIRCUIT OPEN, Diagnostic Trouble Code (DTC) Detecting Criteria.>          |
| P0448 | Evaporative Emission Control System Vent Control Circuit Shorted       | <Ref. to GD(H4DOTC)-141, DTC P0448 EVAPORATIVE EMISSION CONTROL SYSTEM VENT CONTROL CIRCUIT SHORTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>       |
| P0451 | Evaporative Emission Control System Pressure Sensor Range/Performance  | <Ref. to GD(H4DOTC)-143, DTC P0451 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0452 | Evaporative Emission Control System Pressure Sensor Low Input          | <Ref. to GD(H4DOTC)-145, DTC P0452 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>          |
| P0453 | Evaporative Emission Control System Pressure Sensor High Input         | <Ref. to GD(H4DOTC)-147, DTC P0453 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P0456 | Evaporative Emission Control System Leak Detected (Very Small Leak)    | <Ref. to GD(H4DOTC)-148, DTC P0456 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (VERY SMALL LEAK), Diagnostic Trouble Code (DTC) Detecting Criteria.>    |
| P0457 | Evaporative Emission Control System Leak Detected (Fuel Cap Loose/Off) | <Ref. to GD(H4DOTC)-148, DTC P0457 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (FUEL CAP LOOSE/OFF), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P0458 | Evaporative Emission Control System Purge Control Valve Circuit Low    | <Ref. to GD(H4DOTC)-149, DTC P0458 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>    |
| P0459 | Evaporative Emission Control System Purge Control Valve Circuit High   | <Ref. to GD(H4DOTC)-151, DTC P0459 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P0461 | Fuel Level Sensor Circuit Range/Performance                            | <Ref. to GD(H4DOTC)-153, DTC P0461 FUEL LEVEL SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0462 | Fuel Level Sensor Circuit Low Input                                    | <Ref. to GD(H4DOTC)-155, DTC P0462 FUEL LEVEL SENSOR CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                    |
| P0463 | Fuel Level Sensor Circuit High Input                                   | <Ref. to GD(H4DOTC)-157, DTC P0463 FUEL LEVEL SENSOR CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                   |
| P0464 | Fuel Level Sensor Circuit Intermittent                                 | <Ref. to GD(H4DOTC)-158, DTC P0464 FUEL LEVEL SENSOR CIRCUIT INTERMITTENT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                 |
| P0483 | Cooling Fan Rationality Check  | <Ref. to GD(H4DOTC)-161, DTC P0483 COOLING FAN RATIONALITY CHECK, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0502 | Vehicle Speed Sensor Circuit Low Input                                 | <Ref. to GD(H4DOTC)-162, DTC P0502 VEHICLE SPEED SENSOR CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                 |
| P0503 | Vehicle Speed Sensor Intermittent/Erratic/High                         | <Ref. to GD(H4DOTC)-163, DTC P0503 VEHICLE SPEED SENSOR INTERMITTENT/ERRATIC/HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>                         |

## List of Diagnostic Trouble Code (DTC)

### GENERAL DESCRIPTION

| DTC   | Description  | Index   |
|-------|--|---|
| P0506 | Idle Control System RPM Lower Than Expected                              | <Ref. to GD(H4DOTC)-165, DTC P0506 IDLE AIR CONTROL SYSTEM RPM LOWER THAN EXPECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>                        |
| P0507 | Idle Control System RPM Higher Than Expected                             | <Ref. to GD(H4DOTC)-167, DTC P0507 IDLE AIR CONTROL SYSTEM RPM HIGHER THAN EXPECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>                       |
| P0512 | Starter Request Circuit  | <Ref. to GD(H4DOTC)-169, DTC P0512 STARTER REQUEST CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0513 | Incorrect Immobilizer Key  | <Ref. to GD(H4DOTC)-170, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0519 | Idle Control System Malfunction (Fail-Safe)                              | <Ref. to GD(H4DOTC)-171, DTC P0519 IDLE CONTROL SYSTEM MALFUNCTION (FAIL-SAFE), Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0600 | Serial Communication Link  | <Ref. to GD(H4DOTC)-172, DTC P0600 SERIAL COMMUNICATION LINK, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0604 | Internal Control Module Random Access Memory (RAM) Error                 | <Ref. to GD(H4DOTC)-173, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>               |
| P0605 | Internal Control Module Read Only Memory (ROM) Error                     | <Ref. to GD(H4DOTC)-174, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>                   |
| P0607 | Control Module Performance   | <Ref. to GD(H4DOTC)-175, DTC P0607 CONTROL MODULE PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P0638 | Throttle Actuator Control Range/Performance (Bank 1)                     | <Ref. to GD(H4DOTC)-177, DTC P0638 THROTTLE ACTUATOR CONTROL RANGE/PERFORMANCE (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                   |
| P0691 | Cooling Fan 1 Control Circuit Low  | <Ref. to GD(H4DOTC)-179, DTC P0691 COOLING FAN 1 CONTROL CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                      |
| P0692 | Cooling Fan 1 Control Circuit High                                       | <Ref. to GD(H4DOTC)-180, DTC P0692 COOLING FAN 1 CONTROL CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                     |
| P0700 | Transmission Control System (MIL Request)                                | <Ref. to GD(H4DOTC)-181, DTC P0700 TRANSMISSION CONTROL SYSTEM (MIL REQUEST), Diagnostic Trouble Code (DTC) Detecting Criteria.>                              |
| P0851 | Neutral Switch Input Circuit Low (AT Model)                              | <Ref. to GD(H4DOTC)-182, DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (AT MODEL), Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0851 | Neutral Switch Input Circuit Low (MT Model)                              | <Ref. to GD(H4DOTC)-183, DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (MT MODEL), Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0852 | Neutral Switch Input Circuit High (AT Model)                             | <Ref. to GD(H4DOTC)-184, DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (AT MODEL), Diagnostic Trouble Code (DTC) Detecting Criteria.>                           |
| P0852 | Neutral Switch Input Circuit High (MT Model)                             | <Ref. to GD(H4DOTC)-185, DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (MT MODEL), Diagnostic Trouble Code (DTC) Detecting Criteria.>                           |
| P1152 | O <sub>2</sub> Sensor Circuit Range/Performance (Low) (Bank 1 Sensor 1)  | <Ref. to GD(H4DOTC)-186, DTC P1152 O <sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (LOW) (BANK1 SENSOR1), Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P1153 | O <sub>2</sub> Sensor Circuit Range/Performance (High) (Bank 1 Sensor 1) | <Ref. to GD(H4DOTC)-188, DTC P1153 O <sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (HIGH) (BANK1 SENSOR1), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P1160 | Return Spring Failure  | <Ref. to GD(H4DOTC)-190, DTC P1160 RETURN SPRING FAILURE, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P1400 | Fuel Tank Pressure Control Solenoid Valve Circuit Low                    | <Ref. to GD(H4DOTC)-192, DTC P1400 FUEL TANK PRESSURE CONTROL SOLENOID VALVE CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>                  |

# List of Diagnostic Trouble Code (DTC)

GENERAL DESCRIPTION

| DTC   | Description  | Index   |
|-------|--|---|
| P1410 | Secondary Air Injection System Switching Valve Stuck Open  | <Ref. to GD(H4DOTC)-194, DTC P1410 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE STUCK OPEN, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P1418 | Secondary Air Injection System Control "A" Circuit Shorted | <Ref. to GD(H4DOTC)-195, DTC P1418 SECONDARY AIR INJECTION SYSTEM CONTROL "A" CIRCUIT SHORTED, Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P1420 | Fuel Tank Pressure Control Sol. Valve Circuit High         | <Ref. to GD(H4DOTC)-196, DTC P1420 FUEL TANK PRESSURE CONTROL SOL. VALVE CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P1443 | Vent Control Solenoid Valve Function Problem               | <Ref. to GD(H4DOTC)-198, DTC P1443 VENT CONTROL SOLENOID VALVE FUNCTION PROBLEM, Diagnostic Trouble Code (DTC) Detecting Criteria.>               |
| P1491 | Positive Crankcase Ventilation (Blow-By) Function Problem  | <Ref. to GD(H4DOTC)-200, DTC P1491 POSITIVE CRANKCASE VENTILATION (BLOW-BY) FUNCTION PROBLEM, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P1518 | Starter Switch Circuit Low Input                           | <Ref. to GD(H4DOTC)-202, DTC P1518 STARTER SWITCH CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                           |
| P1560 | Back-Up Voltage Circuit Malfunction                        | <Ref. to GD(H4DOTC)-203, DTC P1560 BACK-UP VOLTAGE CIRCUIT MALFUNCTION, Diagnostic Trouble Code (DTC) Detecting Criteria.>                        |
| P1570 | Antenna  | <Ref. to GD(H4DOTC)-204, DTC P1570 ANTENNA, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P1571 | Reference Code Incompatibility                             | <Ref. to GD(H4DOTC)-204, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Trouble Code (DTC) Detecting Criteria.>                             |
| P1572 | IMM Circuit Failure (Except Antenna Circuit)               | <Ref. to GD(H4DOTC)-204, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Trouble Code (DTC) Detecting Criteria.>               |
| P1574 | Key Communication Failure                                  | <Ref. to GD(H4DOTC)-204, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                  |
| P1576 | EGI Control Module EEPROM                                  | <Ref. to GD(H4DOTC)-204, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                  |
| P1577 | IMM Control Module EEPROM                                  | <Ref. to GD(H4DOTC)-204, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                  |
| P2004 | Intake Manifold Runner Control Stuck Open (Bank 1)         | <Ref. to GD(H4DOTC)-205, DTC P2004 INTAKE MANIFOLD RUNNER CONTROL STUCK OPEN (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P2005 | Intake Manifold Runner Control Stuck Open (Bank 2)         | <Ref. to GD(H4DOTC)-206, DTC P2005 INTAKE MANIFOLD RUNNER CONTROL STUCK OPEN (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P2006 | Intake Manifold Runner Control Stuck Closed (Bank 1)       | <Ref. to GD(H4DOTC)-207, DTC P2006 INTAKE MANIFOLD RUNNER CONTROL STUCK CLOSED (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>       |
| P2007 | Intake Manifold Runner Control Stuck Closed (Bank 2)       | <Ref. to GD(H4DOTC)-208, DTC P2007 INTAKE MANIFOLD RUNNER CONTROL STUCK CLOSED (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>       |
| P2008 | Intake Manifold Runner Control Circuit / Open (Bank 1)     | <Ref. to GD(H4DOTC)-209, DTC P2008 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT / OPEN (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>     |
| P2009 | Intake Manifold Runner Control Circuit Low (Bank 1)        | <Ref. to GD(H4DOTC)-211, DTC P2009 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT LOW (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>        |
| P2011 | Intake Manifold Runner Control Circuit / Open (Bank 2)     | <Ref. to GD(H4DOTC)-213, DTC P2011 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT / OPEN (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>     |
| P2012 | Intake Manifold Runner Control Circuit Low (Bank 2)        | <Ref. to GD(H4DOTC)-215, DTC P2012 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT LOW (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>        |

## List of Diagnostic Trouble Code (DTC)

### GENERAL DESCRIPTION

| DTC   | Description   | Index  |
|-------|---|--|
| P2016 | Intake Manifold Runner Position Sensor / Switch Circuit Low (Bank 1)  | <Ref. to GD(H4DOTC)-217, DTC P2016 INTAKE MANIFOLD RUNNER POSITION SENSOR / SWITCH CIRCUIT LOW (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P2017 | Intake Manifold Runner Position Sensor / Switch Circuit High (Bank 1) | <Ref. to GD(H4DOTC)-219, DTC P2017 INTAKE MANIFOLD RUNNER POSITION SENSOR / SWITCH CIRCUIT HIGH (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P2021 | Intake Manifold Runner Position Sensor / Switch Circuit Low (Bank 2)  | <Ref. to GD(H4DOTC)-221, DTC P2021 INTAKE MANIFOLD RUNNER POSITION SENSOR / SWITCH CIRCUIT LOW (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P2022 | Intake Manifold Runner Position Sensor / Switch Circuit High (Bank 2) | <Ref. to GD(H4DOTC)-223, DTC P2022 INTAKE MANIFOLD RUNNER POSITION SENSOR / SWITCH CIRCUIT HIGH (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P2088 | OCV Solenoid Valve Signal A Circuit Open (Bank 1)                     | <Ref. to GD(H4DOTC)-225, DTC P2088 OCV SOLENOID VALVE SIGNAL A CIRCUIT OPEN (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P2089 | OCV Solenoid Valve Signal A Circuit Short (Bank 1)                    | <Ref. to GD(H4DOTC)-227, DTC P2089 OCV SOLENOID VALVE SIGNAL A CIRCUIT SHORT (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                    |
| P2092 | OCV Solenoid Valve Signal A Circuit Open (Bank 2)                     | <Ref. to GD(H4DOTC)-229, DTC P2092 OCV SOLENOID VALVE SIGNAL A CIRCUIT OPEN (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P2093 | Intake Camshaft Position Actuator Control Circuit High (Bank 2)       | <Ref. to GD(H4DOTC)-231, DTC P2093 INTAKE CAMSHAFT POSITION ACTUATOR CONTROL CIRCUIT HIGH (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>       |
| P2096 | Post Catalyst Fuel Trim System Too Lean Bank 1                        | <Ref. to GD(H4DOTC)-233, DTC P2096 POST CATALYST FUEL TRIM SYSTEM TOO LEAN BANK 1, Diagnostic Trouble Code (DTC) Detecting Criteria.>                        |
| P2097 | Post Catalyst Fuel Trim System Too Rich Bank 1                        | <Ref. to GD(H4DOTC)-235, DTC P2097 POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1, Diagnostic Trouble Code (DTC) Detecting Criteria.>                        |
| P2101 | Throttle Actuator Control Motor Circuit Range/Performance             | <Ref. to GD(H4DOTC)-237, DTC P2101 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>             |
| P2102 | Throttle Actuator Control Motor Circuit Low                           | <Ref. to GD(H4DOTC)-239, DTC P2102 THROTTLE ACTUATOR CONTROL MOTOR CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>                           |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

## 2. Diagnostic Trouble Code (DTC) Detecting Criteria

### A: DTC P0011 INTAKE CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of AVCS system.

There are two types of diagnosis; crankshaft and camshaft position diagnosis and slow response diagnosis. Perform one of two according to operation status.

#### 2. COMPONENT DESCRIPTION

EN-01852

- (1) AVCS timing controller
- (2) Vane
- (3) Engine control module (ECM)
- (4) Oil flow control solenoid valve
- (5) Oil pressure

#### 3. ENABLE CONDITION

##### (1) Crankshaft and camshaft position diagnosis

| Secondary Parameters            | Enable Conditions                                |
|---------------------------------|--|
| Battery voltage                 | $\geq 10.9$ V                                    |
| Engine coolant temperature      | $> 60^{\circ}\text{C}$ ( $140^{\circ}\text{F}$ ) |
| Amount of target timing advance | $= 0^{\circ}\text{CA}$                           |
| Engine speed                    | $\geq 500$ rpm                                   |
| AVCS                            | Not in operation                                 |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## (2) Slow response diagnosis

| Secondary Parameters                           | Enable Conditions                                |
|--|--|
| All the secondary parameters can be performed. | More than 1 second                               |
| Battery voltage                                | $\geq 10.9 \text{ V}$                            |
| Engine coolant temperature                     | $> 60^{\circ}\text{C}$ ( $140^{\circ}\text{F}$ ) |
| Amount of AVCS target timing advance           | $\neq 0^{\circ}\text{CA}$                        |
| Engine speed                                   | $\geq 1,300 \text{ rpm}$                         |
| AVCS   | In operation                                     |
| Variable amount of target timing advance       | $< 1.07^{\circ}\text{CA}$                        |

## 4. GENERAL DRIVING CYCLE

### (1) Crankshaft and camshaft position diagnosis

Always perform the diagnosis continuously after starting the engine while the AVCS is not operated.

### (2) Slow response diagnosis

Always perform the diagnosis continuously after starting the engine while the AVCS is operated.

## 5. DIAGNOSTIC METHOD

### (1) Crankshaft and camshaft position diagnosis

Judge NG when standard amount of timing advance is outside of normal range, and judge OK when it is within normal range.

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 20 seconds, and judge OK and clear the NG when the continuous time of not completing the malfunction criteria below becomes more than 1 second.

#### Judgment Value

| Malfunction Criteria              | Threshold Value   |
|-----------------------------------|---|
| Standard amount of timing advance | $< -13^{\circ}\text{CA}$<br>or<br>$> 25^{\circ}\text{CA}$ |

**Time Needed for Diagnosis:** 20 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### (2) Slow response diagnosis

Accumulate the AVCS deviation amount in positive and negative while AVCS is operated. Judge NG when cumulative value is large at interval of certain time (30 seconds).

#### • Abnormality Judgment

Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                        | Threshold Value  |
|---|--|
| AVCS target position                        | $\geq 0^{\circ}\text{CA}$  |
| Cumulative value of AVCS positive deviation | $< 8000^{\circ}\text{CA}$ (R bank)<br>$< 8000^{\circ}\text{CA}$ (L bank)   |
| or  |  |
| Cumulative value of AVCS negative deviation | $< -8000^{\circ}\text{CA}$ (R bank)<br>$< -8000^{\circ}\text{CA}$ (L bank) |

**Time Needed for Diagnosis:** 30 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria                        | Threshold Value  |
|---|--|
| AVCS target position                        | $\geq 0^{\circ}\text{CA}$  |
| Cumulative value of AVCS positive deviation | $\leq 8000^{\circ}\text{CA}$ (R bank)<br>$\leq 8000^{\circ}\text{CA}$ (L bank)   |
| or  |  |
| Cumulative value of AVCS negative deviation | $\geq -8000^{\circ}\text{CA}$ (R bank)<br>$\geq -8000^{\circ}\text{CA}$ (L bank) |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

### **B: DTC P0016 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION (BANK 1)**

NOTE:

For the diagnostic procedure, refer to DTC P0011. <Ref. to GD(H4DOTC)-10, DTC P0011 INTAKE CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### **C: DTC P0018 CRANKSHAFT POSITION - CAMSHAFT POSITION CORRELATION (BANK 2)**

NOTE:

For the diagnostic procedure, refer to DTC P0011. <Ref. to GD(H4DOTC)-10, DTC P0011 INTAKE CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### **D: DTC P0021 INTAKE CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 2)**

NOTE:

For the diagnostic procedure, refer to DTC P0011. <Ref. to GD(H4DOTC)-10, DTC P0011 INTAKE CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>

## E: DTC P0030 HO2S HEATER CONTROL CIRCUIT (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of front oxygen (A/F) sensor heater.

Judge NG when impedance of front oxygen (A/F) sensor is larger than the standard value by referring to the engine condition such as fuel shut-off in deceleration, etc.

### 2. COMPONENT DESCRIPTION

EN-01763

- (1) Protection tube
- (2) Gasket
- (3) Sensor housing
- (4) Ceramic heater

### 3. ENABLE CONDITION

| Secondary Parameters   | Enable Conditions  |
|--|--------------------|
| Continuous time which all the following conditions were filled | 30 seconds or more |
| Battery voltage  | > 10.9 V           |
| After fuel shut-off  | 10 seconds or more |
| Front oxygen (A/F) sensor heater control duty $\geq$ 35%       | Experienced        |
| Heater current   | Permit             |

### 4. GENERAL DRIVING CYCLE

Perform diagnosis continuously in 30 seconds after starting engine.

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than the time needed for diagnosis (10 seconds). Judge OK and clear NG when the continuous time of not completing the malfunction criteria below becomes more than the time needed for diagnosis (10 seconds).

#### Judgment Value

| Malfunction Criteria                   | Threshold Value |
|--|-----------------|
| Impedance of front oxygen (A/F) sensor | > 50 $\Omega$   |

**Time Needed for Diagnosis:** 10 seconds

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor main learning correction: Not allowed to calculate
- Correction when re-starting at high temperature: Normally minimum value 0.3 → 0
- Purge control: Not allowed to purge

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## F: DTC P0031 HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of front oxygen (A/F) sensor heater.

The front oxygen (A/F) sensor heater conducts the duty control. The output terminal voltage at ON becomes 0 V, and the output terminal voltage at OFF becomes battery voltage.

Judge NG when the terminal voltage remains to be Low.

### 2. COMPONENT DESCRIPTION

- |   |                                    |
|---|------------------------------------|
| (A) Battery voltage                                 | (C) 128 milliseconds               |
| (B) Front oxygen (A/F) sensor heater output voltage | (D) Low abnormality output voltage |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | ≥ 10.9 V          |

### 4. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second (8 cycles).

#### Judgment Value

| Malfunction Criteria                          | Threshold Value |
|---|-----------------|
| Output voltage level                          | Low             |
| Front oxygen (A/F) sensor heater control duty | < 87.5%         |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | High            |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor activation judgment: Front oxygen (A/F) sensor full activation is not complete, or front oxygen (A/F) sensor half activation is not complete.
- Front oxygen sensor main learning correction: Not allowed to calculate.
- Compensation when starting the engine at high temperature: Make the MIN value to be 0 from 0.3 normally.
- Purge control: Not allowed to purge.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## G: DTC P0032 HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of front oxygen (A/F) sensor heater.

The front oxygen (A/F) sensor heater conducts the duty control. The output terminal voltage at ON becomes 0 V, and the output terminal voltage at OFF becomes battery voltage.

Judge NG when the terminal voltage remains to be High.

### 2. COMPONENT DESCRIPTION

EN-01793

- |   |                                     |
|---|-------------------------------------|
| (A) Battery voltage                                 | (C) 128 milliseconds                |
| (B) Front oxygen (A/F) sensor heater output voltage | (D) High abnormality output voltage |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions     |
|----------------------|-----------------------|
| Battery voltage      | $\geq 10.9 \text{ V}$ |

### 4. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes 1 second (8 cycles).

#### Judgment Value

| Malfunction Criteria                          | Threshold Value |
|---|-----------------|
| Output voltage level                          | High            |
| Front oxygen (A/F) sensor heater control duty | $\geq 12.5\%$   |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | Low             |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor activation judgment: Front oxygen (A/F) sensor full activation is not complete, or front oxygen (A/F) sensor half activation is not complete.
- Front oxygen sensor main learning correction: Not allowed to calculate.
- Compensation when starting the engine at high temperature: Make the MIN value to be 0 from 0.3 normally.
- Purge control: Not allowed to purge.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## H: DTC P0037 HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 2)

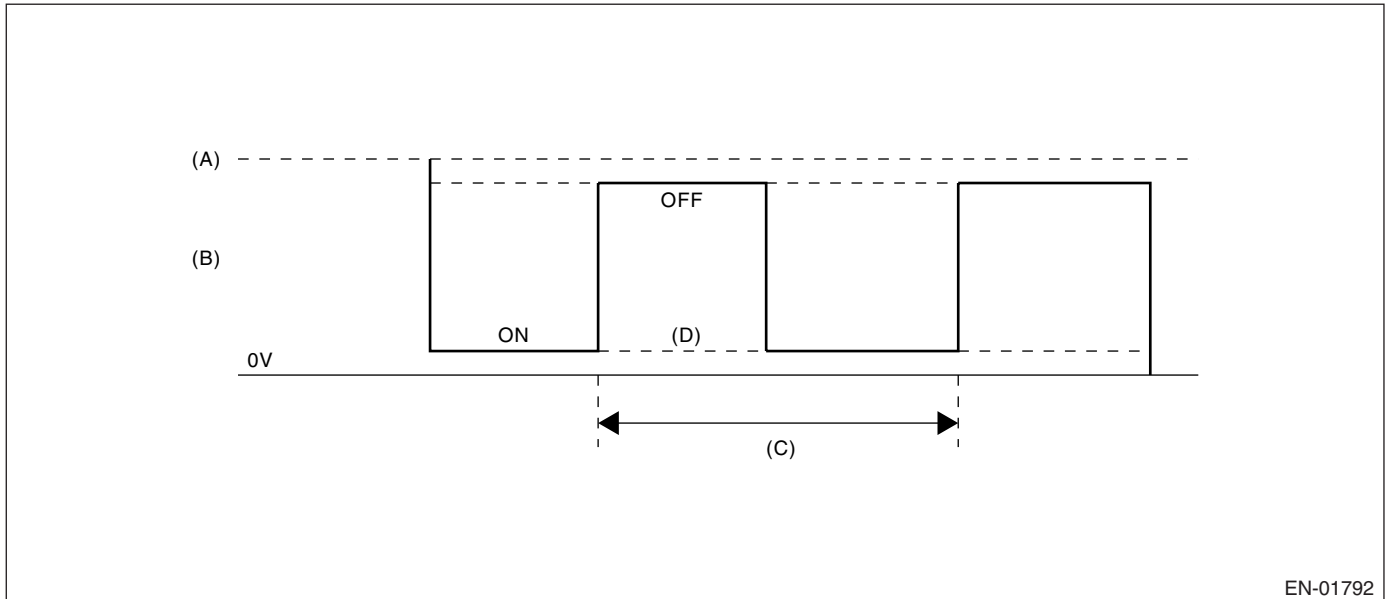

### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of rear oxygen sensor heater.

Rear oxygen sensor heater conducted the duty control, and the output terminal voltage at ON is 0 V and the output terminal voltage at OFF is the battery voltage.

Judge NG when the terminal voltage remains to be Low.

### 2. COMPONENT DESCRIPTION

EN-01792

- |   |                               |
|---|-------------------------------|
| (A) Battery voltage                     | (C) 256 milliseconds (cycles) |
| (B) Oxygen sensor heater output voltage | (D) Low malfunction           |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | > 10.9 V          |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after engine starting.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing all the malfunction criteria below becomes more than 2,560 millisecond (10 cycles).

#### Judgment Value

| Malfunction Criteria                   | Threshold Value |
|--|-----------------|
| Output voltage level                   | Low             |
| Rear oxygen sensor heater control duty | < 75%           |

**Time Needed for Diagnosis:** 2.56 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | High            |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Sub feedback control: Not allowed

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## I: DTC P0038 HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 2)

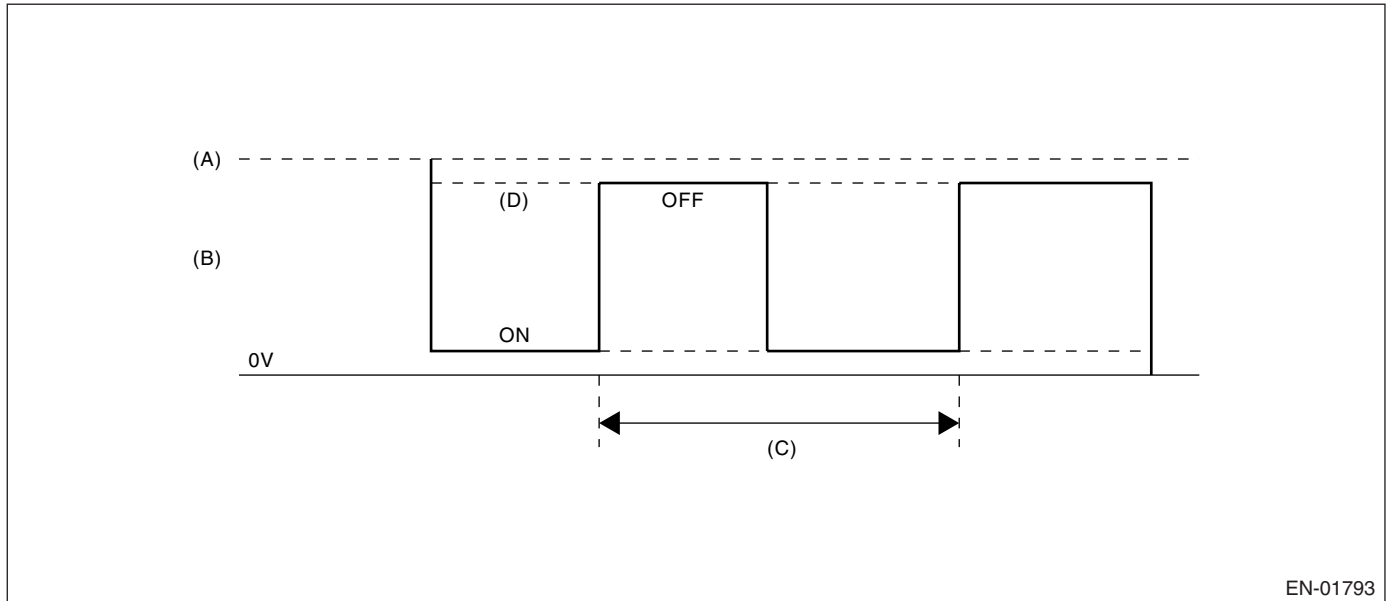

### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of rear oxygen heater.

Rear oxygen heater conducted the duty control, and the output terminal voltage at ON is 0 V and the output terminal voltage at OFF is the battery voltage.

Judge NG when the terminal voltage remains to be High.

### 2. COMPONENT DESCRIPTION

EN-01793

- |   |                               |
|---|-------------------------------|
| (A) Battery voltage                     | (C) 256 milliseconds (cycles) |
| (B) Oxygen sensor heater output voltage | (D) High malfunction          |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | > 10.9 V          |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after engine starting.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing all the malfunction criteria below becomes more than 2,560 milliseconds (10 cycles).

#### Judgment Value

| Malfunction Criteria                   | Threshold Value |
|--|-----------------|
| Output voltage level                   | High            |
| Rear oxygen sensor heater control duty | ≥ 25%           |

**Time Needed for Diagnosis:** 2.56 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | Low             |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Sub feedback control: Not allowed

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## J: DTC P0068 MANIFOLD PRESSURE SENSOR RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of intake manifold pressure sensor output property. Judge NG when the intake air pressure AD value is Low whereas it seemed to be High from the viewpoint of engine condition, or when it is High whereas it seemed to be Low from the engine condition.

### 2. COMPONENT DESCRIPTION

- (1) Connector
- (2) Terminal
- (3) O-ring

- (A) Output voltage
- (B) Absolute pressure

### 3. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions                 |
|----------------------------|-----------------------------------|
| Engine coolant temperature | $\geq 70^{\circ}\text{C}$ (158°F) |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when either Low side or High side becomes NG. Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria                  | Threshold Value |
|---------------------------------------|-----------------|
| Low side                              |                 |
| Engine speed                          | < 2,500 rpm     |
| Throttle position                     | ≥ 10°           |
| Intake air amount per engine 0.5 rev. | > 1.356 g/rev   |
| Output voltage                        | < 1.0 V         |
| High side                             |                 |
| Engine speed                          | 600 ←→ 900 rpm  |
| Throttle position                     | < 1.3°          |
| Intake air amount per engine 0.5 rev. | > 0.4 g/rev     |
| Output voltage                        | ≥ 2.36 V        |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear the NG when both Low side and High side become OK. Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Low side             |                 |
| Engine speed         | < 2,500 rpm     |
| Throttle position    | ≥ 10°           |
| Output voltage       | ≥ 1.0 V         |
| High side            |                 |
| Engine speed         | 600 ←→ 900 rpm  |
| Throttle position    | < 1.3°          |
| Output voltage       | < 2.36 V        |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Intake manifold pressure sensor process: Estimate the pressure from engine load.
- ISC feedback: Not allowed to calculate the amount of feedback.
- Heavy fuel judgment: Not allowed to carry out the heavy judgment.
- Fuel cut control: Not allowed to cut the over pressure charged fuel.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## K: DTC P0101 MASS OR VOLUME AIR FLOW CIRCUIT RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of air flow sensor output property. Judge Low side NG when the air flow voltage indicates low value in spite of the driving condition that the air flow voltage might be high; otherwise, judge High side NG when the air flow voltage indicates high value in spite of the driving condition that the air flow voltage might be low. Judge air flow sensor property NG when the Low side or High side becomes NG.

### 2. COMPONENT DESCRIPTION

EN-01766

- (1) Air flow sensor
  - (2) Intake air temperature sensor
  - (3) Voltage (V)
  - (4) Intake air volume (kg/s)
- (A) Air

### 3. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions                 |
|----------------------------|-----------------------------------|
| Engine coolant temperature | $\geq 70^{\circ}\text{C}$ (158°F) |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than the time needed for diagnosis.

#### Judgment Value

| Malfunction Criteria  | Threshold Value  |
|---|--|
| Low side NG<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure                                 | < 1.5 V<br>≥ 2,500 rpm<br>≥ 15°<br>≥ 53.3 kPa (400 mmHg, 15.7 inHg)                              |
| High side NG 1<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure                              | ≥ 1.95 V<br>600 ←→ 900 rpm<br>< 4.1°<br>< 52.7 kPa (395 mmHg, 15.6 inHg)                         |
| High side NG 2<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure<br>Diagnosis for fuel system | ≥ 1.7 V<br>600 ←→ 900 rpm<br>< 4.1°<br>< 52.7 kPa (395 mmHg, 15.6 inHg)<br>Rich side malfunction |

#### Time Needed for Diagnosis:

|           |            |
|-----------|------------|
| Low side  | 3 seconds  |
| High side | 10 seconds |

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK the when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| Low side NG<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure  | ≥ 1.5 V<br>≥ 2,500 rpm<br>≥ 15°<br>≥ 53.3 kPa (400 mmHg, 15.7 inHg)      |
| High side NG<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure | < 1.95 V<br>600 ←→ 900 rpm<br>< 4.1°<br>< 52.7 kPa (395 mmHg, 15.6 inHg) |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Air flow meter: Engine load is normally calculated by manifold pressure and engine speed; however, calculated only by manifold pressure.
- EVAP conc. learning (fuel): Not allowed to learn.
- Knock compensation:
  - Knock compensation final timing advance and retard value = knock compensation + whole learning compensation value + partial learning compensation value.
  - At normal: knock compensation = 0°CA is fixed.
  - At trouble: knock compensation ≠ 0°CA is fixed. (Retard max. 12°CA at knock.)
  - Not allowed to update the whole learning compensation factor.
  - Not allowed to calculate the partial learning zone compensation value.
- ISC control: Make the open loop compensation to be the given value (1 g/s). Stop calculating the throttle sensor temperature compensation. (Hold the previous value.)
- Purge control: Not allowed to purge.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### L: DTC P0102 MASS OR VOLUME AIR FLOW CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of air flow sensor. Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

- (1) Air flow sensor
  - (2) Intake air temperature sensor
  - (3) Voltage (V)
  - (4) Intake air volume (kg/s)
- (A) Air

EN-01766

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds. Judge OK and clear the NG when the malfunction criteria below are not completed.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\leq 0.2$ V    |

**Time Needed for Diagnosis:** 0.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

## 8. FAIL SAFE

- Air flow meter: Engine load is normally calculated by manifold pressure and engine speed; however, calculated only by manifold pressure.
- EVAP conc. learning (fuel): Not allowed to learn.

## GENERAL DESCRIPTION

### P: DTC P0111 INTAKE AIR TEMPERATURE CIRCUIT RANGE/PERFORMANCE

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of intake air temperature sensor output property. Judge NG when the intake air temperature is not varied whereas it seemed to be varied from the viewpoint of engine condition.

#### 2. COMPONENT DESCRIPTION

- (1) Air flow sensor
  - (2) Intake air temperature sensor
  - (3) Resistance value ( $\Omega$ )
  - (4) Intake air temperature  $^{\circ}\text{C}$  ( $^{\circ}\text{F}$ )
- (A) Air

#### 3. ENABLE CONDITION

| Secondary Parameters   | Enable Conditions   |
|--|---------------------|
| Coolant temp. before engine start                                    | < 30°C (86°F)       |
| Engine coolant temperature   | > 95°C (203°F)      |
| Battery voltage  | $\geq$ 10.9 V       |
| Continuous time when the vehicle speed is less than 50 km/h (31 MPH) | 600 seconds or more |

#### 4. GENERAL DRIVING CYCLE

Perform the diagnosis when the vehicle speed condition is completed after idling from starting the cooled engine.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second.

##### Judgment Value

| Malfunction Criteria                            | Threshold Value   |
|---|---|
| Output voltage difference between Max. and Min. | < 20 mV (It is equal to approx. 0.5°C (0.9°F) around 25° (77°F).) |

**Time Needed for Diagnosis:** 1 second

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

## Judgment Value

| Malfunction Criteria                            | Threshold Value |
|---|-----------------|
| Output voltage difference between Max. and Min. | $\geq 20$ mV    |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

Intake air temperature sensor process: Intake air temperature is fixed at 20°C (68°F).

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### Q: DTC P0112 INTAKE AIR TEMPERATURE CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of intake air temperature sensor. Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

EN-01767

- (1) Air flow sensor
  - (2) Intake air temperature sensor
  - (3) Resistance value ( $\Omega$ )
  - (4) Intake air temperature  $^{\circ}\text{C}$  ( $^{\circ}\text{F}$ )
- (A) Air

## GENERAL DESCRIPTION

### S: DTC P0117 ENGINE COOLANT TEMPERATURE CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of engine coolant temperature sensor. Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

- (1) Connector
- (2) Thermistor element

- (A) Resistance value (kΩ)
- (B) Temperature °C (°F)

EN-01690

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds. Judge OK and clear the NG when the malfunction criteria below are not completed.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | < 0.165 V       |

**Time Needed for Diagnosis:** 0.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

## 8. FAIL SAFE

- Engine coolant temperature process: Fix the engine coolant temperature at 70°C (158°F).
- ISC feedback: Calculate the target engine speed setting the engine coolant temperature to 70°C (158°F).
- ISC learning: Not allowed to learn.
- Heavy fuel judgment control: Not allowed to carry out the heavy judgment.
- Air conditioner control: Not allowed to turn the air conditioner to ON.
- Radiator fan control: Both main and sub fan are in High driving.
- Increase compensation factor at high engine coolant temperature: Increase normally occurs with high temperature and other conditions; however, occurs with other conditions except engine coolant temperature condition.
- AVCS control: Make the oil flow control valve driving output to be Duty=0%.
- Tumble generator valve control: Open the tumble generator valve.

- Air conditioner control: Not allowed to turn the air conditioner to ON.
- Radiator fan control: Both main and sub fan are in High driving.
- Increase compensation factor at high engine coolant temperature: Increase normally occurs with high temperature and other conditions; however, occurs with other conditions except engine coolant temperature condition.
- AVCS control: Make the oil flow control valve driving output to be Duty=0%.
- Tumble generator valve control: Open the tumble generator valve.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### U: DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH “A” CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 1.  
Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

EN-01859

- |                                       |                                 |
|---------------------------------------|---------------------------------|
| (1) Throttle position sensor 1 signal | (3) Throttle position sensor    |
| (2) Throttle position sensor 2 signal | (4) Engine control module (ECM) |

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | $\leq 0.224$ V  |

**Time Needed for Diagnosis:** 24 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

#### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 8. FAIL SAFE

Stop power distribution to electronic throttle control motor. (Throttle opening is fixed to 6°.)

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## V: DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 1.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-01859

- (1) Throttle position sensor 1 signal      (3) Throttle position sensor  
(2) Throttle position sensor 2 signal      (4) Engine control module (ECM)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | $\leq 4.851$ V  |

**Time Needed for Diagnosis:**24 milliseconds

**Malfunction Indicator Light Illumination:**Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 8. FAIL SAFE

Stop power distribution to electronic throttle control motor. (Throttle opening is fixed to 6°.)

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## W: DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of engine coolant temperature output property. Judge NG when the engine coolant temperature does not rise whereas it seemed to rise from the viewpoint of the engine condition.

### 2. COMPONENT DESCRIPTION

EN-01690

- (1) Connector
- (2) Thermistor element

- (A) Resistance value (kΩ)
- (B) Temperature °C (°F)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Engine speed         | ≥ 500 rpm         |
| Battery voltage      | > 10.9 V          |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after engine starting.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                      | Threshold Value                              |
|---|--|
| Engine coolant temperature                | < 20°C (68°F)                                |
| Timer for diagnosis after engine starting | ≥ Timer judgment value after engine starting |

Timer for diagnosis after engine starting

- a) Timer stop at fuel cut mode.
- b) During the driving conditions (except a) above), timer count up by 64 milliseconds + TWCNT milliseconds at every 64 milliseconds.

Where, TWCNT is determined as follows,

TWCNT = 0 at idle switch ON,

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

TWCNT show on the following table at idle switch OFF.

| Temperature<br>°C (°F) | Vehicle speed km/h (MPH) |          |           |           |           |           |           |           |
|------------------------|--------------------------|----------|-----------|-----------|-----------|-----------|-----------|-----------|
|                        | 0 (0)                    | 8 (4.97) | 16 (9.94) | 24 (14.9) | 32 (19.9) | 40 (24.9) | 48 (29.8) | 56 (34.8) |
| -20 (-4)               | 0 ms                     | 37.14 ms | 74.27 ms  | 111.41 ms | 126.66 ms | 141.91 ms | 163.59 ms | 185.26 ms |
| -10 (14)               | 0 ms                     | 27.39 ms | 54.78 ms  | 82.17 ms  | 99.65 ms  | 117.13 ms | 135.96 ms | 154.80 ms |
| 0 (32)                 | 0 ms                     | 17.65 ms | 35.29 ms  | 52.94 ms  | 72.64 ms  | 92.34 ms  | 108.34 ms | 124.33 ms |
| 10 (50)                | 0 ms                     | 7.90 ms  | 15.80 ms  | 23.70 ms  | 45.63 ms  | 67.56 ms  | 80.71 ms  | 93.87 ms  |
| 20 (68)                | 0 ms                     | 7.90 ms  | 15.80 ms  | 23.70 ms  | 45.63 ms  | 67.56 ms  | 80.71 ms  | 93.87 ms  |

Judgment value of timer after engine starting

$$t = 451.1 - 25.9 \times T_i$$

$T_i$  is the lowest engine coolant temperature after starting the engine.

**Time Needed for Diagnosis:** To be determined. (It is varied by the Min. engine coolant temperature and engine conditions such as vehicle speed and engine coolant temperature.)

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria       | Threshold Value                |
|----------------------------|--------------------------------|
| Engine coolant temperature | $\geq 20^\circ\text{C}$ (68°F) |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Engine coolant temperature process: Fix the engine coolant temperature at 70°C (158°F).
- ISC feedback: Calculate the target engine speed setting the engine coolant temperature to 70°C (158°F).
- ISC learning: Not allowed to learn.
- Heavy fuel judgment control: Not allowed to carry out the heavy judgment.
- Air conditioner control: Not allowed to turn the air conditioner to ON.
- Radiator fan control: Both main and sub fan are in High driving.
- Increase compensation factor at high engine coolant temperature: Increase normally occurs with high temperature and other conditions; however, occurs with other conditions except engine coolant temperature condition.
- AVCS control: Make the oil flow control valve driving output to be Duty=0%.
- Tumble generator valve control: Open the tumble generator valve.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## X: DTC P0126 INSUFFICIENT COOLANT TEMPERATURE FOR STABLE OPERATION

### 1. OUTLINE OF DIAGNOSIS

Judge NG when the engine coolant temperature sensor output does not change.

Judge NG when the engine coolant temperature sensor output does not change though the vehicle is operated in a manner which is expected to affect the engine coolant temperature.

### 2. COMPONENT DESCRIPTION

EN-02917

- (1) Connector
- (2) Thermistor element

- (A) Resistance value (k $\Omega$ )
- (B) Temperature  $^{\circ}\text{C}$  ( $^{\circ}\text{F}$ )

### 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions  |
|---|--|
| Battery voltage   | $\geq 10.9 \text{ V}$  |
| Filling fuel from stopping engine at the previous time to starting it this time | No   |
| Fuel level  | $\geq 15 \text{ l}$ (3.96 US gal, 3.3 Imp gal)   |
| Engine coolant temperature when stopping engine at the previous time            | $\geq 70^{\circ}\text{C}$ ( $158^{\circ}\text{F}$ ) and $< 95^{\circ}\text{C}$ ( $203^{\circ}\text{F}$ ) |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis once after starting the engine.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criteria below becomes more than 2.5 seconds.

#### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|------------------|
| Engine coolant temperature when stopping engine at the previous time – The lowest engine coolant temperature after starting engine | < 2.5°C (36.5°F) |
| Fuel temperature when stopping engine at the previous time – Fuel temperature  | ≥ 5°C (41°F)     |
| Intake air temperature – Fuel temperature  | < 2.5°C (36.5°F) |
| Fuel temperature   | < 35°C (95°F)    |

#### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|------------------|
| Engine coolant temperature when stopping engine at the previous time – The lowest engine coolant temperature after starting engine | ≥ 2.5°C (36.5°F) |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illuminations:** Detect when malfunction occurs in 2 continuous driving cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle is completed 40 times in a row
- When “Clear Memory” was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## Y: DTC P0128 COOLANT THERMOSTAT (COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of thermostat function. Judge NG when the engine coolant temperature is lower than the estimated engine coolant temperature and the difference between them is large. Judge OK when the engine coolant temperature becomes 75°C (167°F) and the difference is small before judging NG.

### 2. COMPONENT DESCRIPTION

- |             |                    |
|-------------|--------------------|
| (1) Valve   | (6) Rubber packing |
| (2) Spring  | (7) Stop ring      |
| (3) Stopper | (8) Wax element    |
| (4) Piston  | (9) Jiggle valve   |
| (5) Guide   |                    |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 30 seconds.

#### Judgment Value

| Malfunction Criteria                              | Threshold Value                   |
|---|-----------------------------------|
| Battery voltage                                   | $\geq 10.9$ V                     |
| Estimated ambient air temperature                 | $\geq -7^{\circ}\text{C}$ (19°F)  |
| Engine coolant temperature at engine starting     | $< 55^{\circ}\text{C}$ (131°F)    |
| Estimated engine coolant temperature              | $\geq 70^{\circ}\text{C}$ (158°F) |
| Engine coolant temperature                        | $< 70^{\circ}\text{C}$ (158°F)    |
| (Estimated – measured) engine coolant temperature | $> 30^{\circ}\text{C}$ (86°F)     |
| Vehicle speed                                     | $\geq 30$ km/h                    |

**Time Needed for Diagnosis:** 30 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                              | Threshold Value                   |
|---|-----------------------------------|
| Battery voltage                                   | $\geq 10.9$ V                     |
| Estimated ambient air temperature                 | $\geq -7^{\circ}\text{C}$ (19°F)  |
| Thermostat malfunction diagnosis                  | Not finished                      |
| Engine coolant temperature at engine starting     | $< 55^{\circ}\text{C}$ (131°F)    |
| Engine coolant temperature                        | $\geq 70^{\circ}\text{C}$ (158°F) |
| (Estimated – measured) engine coolant temperature | $\leq 30^{\circ}\text{C}$ (68°F)  |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## Z: DTC P0131 O<sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of sensor.

Judge NG when the element impressed voltage is out of range, or the element current is out of range.

### 2. COMPONENT DESCRIPTION

EN-01693

- |                      |                         |
|----------------------|-------------------------|
| (1) Atmosphere       | (A) Electromotive force |
| (2) Exhaust          | (B) Air fuel ratio      |
| (3) ZrO <sub>2</sub> | (C) Lean                |
| (4) Ceramic heater   | (D) Rich                |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Voltage              | ≥ 10.9 V          |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing any malfunction criteria below becomes more than 1 second.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Input voltage        | < 1.8 V         |
| Input current        | < -0.01 A       |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor activation judgment: Front oxygen (A/F) sensor full activation is not complete, or front oxygen (A/F) sensor half activation is not complete.
- A/F main learning: Not allowed to calculate the A/F main learning compensation factor.
- Compensation when starting the engine at high temperature: Make the MIN value to be 0 from 0.3 normally.
- Purge control: Not allowed to purge.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

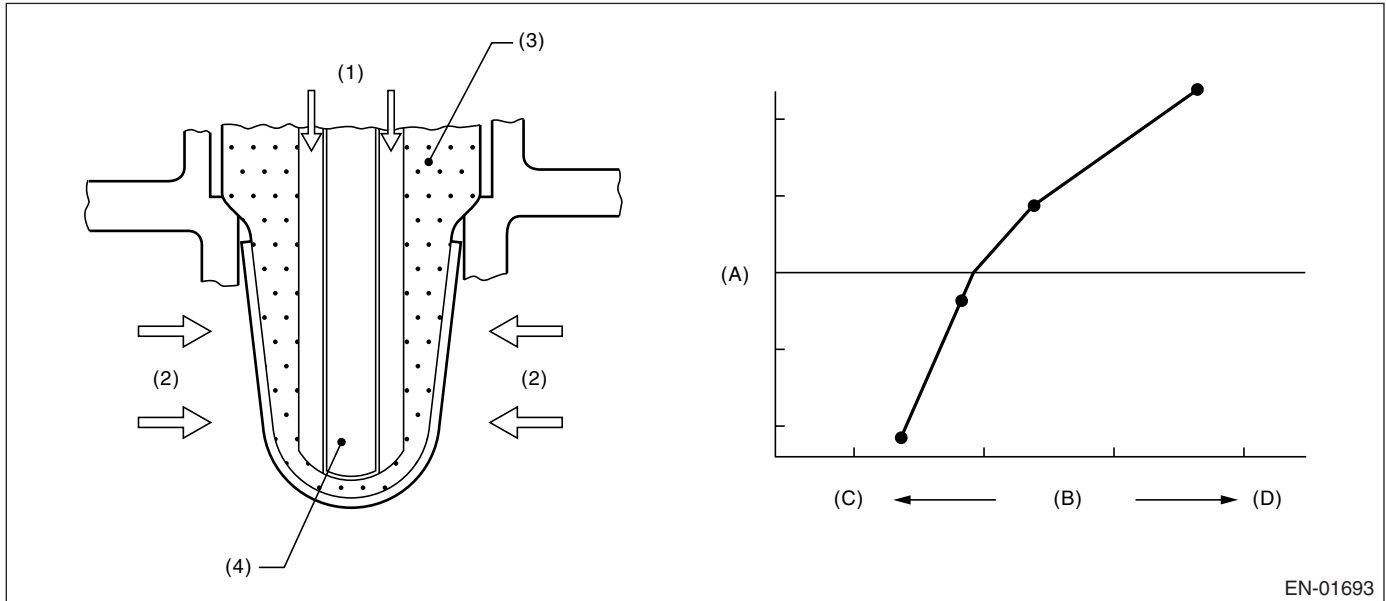

## AA:DTC P0132 O<sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of sensor.

Judge NG when the element impressed voltage is out of range, or the element current is out of range.

### 2. COMPONENT DESCRIPTION

EN-01693

- |                      |                         |
|----------------------|-------------------------|

| (2) Exhaust          | (B) Air fuel ratio      |
| (3) ZrO <sub>2</sub> | (C) Lean                |
| (4) Ceramic heater   | (D) Rich                |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Voltage              | ≥ 10.9 V          |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing any malfunction criteria below becomes more than 1 second.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Input voltage        | ≥ 3.8 V         |
| Input current        | ≥ 0.01 A        |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor activation judgment: Front oxygen (A/F) sensor full activation is not complete, or front oxygen (A/F) sensor half activation is not complete.
- A/F main learning: Not allowed to calculate the A/F main learning compensation factor.
- Compensation when starting the engine at high temperature: Make the MIN value to be 0 from 0.3 normally.
- Purge control: Not allowed to purge.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## AB:DTC P0133 O<sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect time-lag of front oxygen (A/F) sensor response. Front oxygen (A/F) sensor cover has some ventilation holes for exhaust gas. Clogged ventilation holes are diagnosed. When the holes are clogged, the A/F output variation becomes slow comparing with the actual A/F variation because oxygen which reaches the zirconia layer is insufficient. Therefore, if the cover has clogged holes, the rich to lean judgment in ECM is delayed when the change from rich to lean is caused. Judge NG when the actual A/F variation is slow comparing with the ECM control amount.

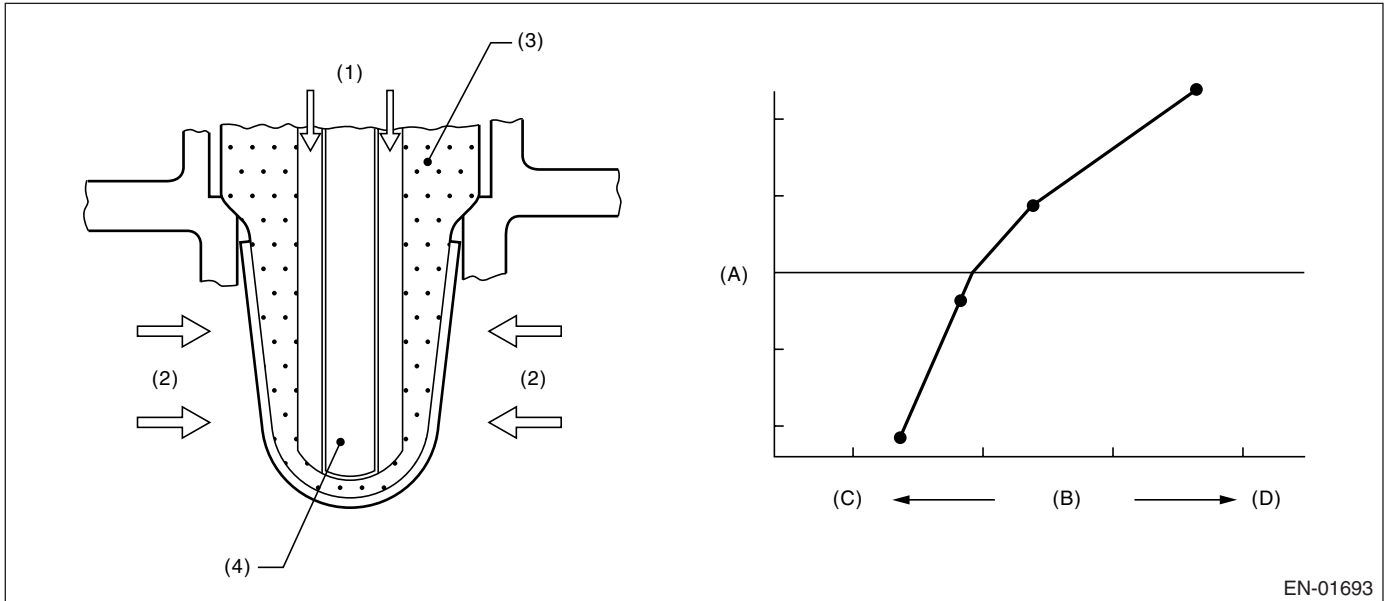

- (1) Cover
- (2) Zirconia
- (3) Clogging

# Diagnostic Trouble Code (DTC) Detecting Criteria

## 2. COMPONENT DESCRIPTION

- (1) Atmosphere
- (2) Exhaust
- (3) ZrO<sub>2</sub>
- (4) Ceramic heater

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Lean
- (D) Rich

## 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                |
|---|----------------------------------|
| Time needed for all secondary parameters in enable conditions | ≥ 1 second                       |
| Battery voltage   | > 10.9 V                         |
| Atmospheric pressure  | > 75.0 kPa (563 mmHg, 22.2 inHg) |
| Closed loop control with main feedback                        | operating                        |
| Impedance of front oxygen (A/F) sensor                        | 0 ↔ 50 Ω                         |
| After engine starting   | 120 seconds or more              |
| Engine coolant temperature                                    | ≥ 70°C (158°F)                   |
| Engine speed  | 1,000 ↔ 3,200 rpm                |
| Vehicle speed   | 10 ↔ 120 km/h (6 ↔ 75 MPH)       |
| Amount of intake air  | 10 ↔ 31 g/s                      |
| Engine load change during 0.5 engine rev.                     | ≤ 0.02 g/rev                     |
| Learning value of EVAP conc. during purge                     | ≤ 0.2                            |
| Accumulated time of operating canister purge                  | 20 seconds or more               |

## 4. GENERAL DRIVING CYCLE

Perform diagnosis only once at a constant speed of 10 to 120 km/h (6 to 75 MPH) in 120 seconds after starting the engine.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 5. DIAGNOSTIC METHOD

Integrate the difference of  $faf$  in every 128 milliseconds and difference of  $\lambda$  value.

After integrate 1,640 times (210 seconds), calculate the diagnosis value.

Judge NG when the malfunction criteria below are completed. Judge OK and clear NG when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| $para_{fca} = td2_{faf}/td2_{lmd}$<br>where,<br>$td2_{faf}(N) = td2_{faf}(n-1) +  d2_{faf}(n) $<br>$td2_{lmd}(N) = td2_{lmd}(n-1) +  d2_{lmd}(n) $<br>add up for a total of 210 seconds<br>$d2_{faf}(n) = (faf(n) - faf(n-1)) - (faf(n-1) - faf(n-2))$<br>$d2_{lmd}(n) = (lmd(n) - lmd(n-1)) - (lmd(n-1) - lmd(n-2))$<br>$faf$ = main feedback compensation coefficient every 128 milliseconds<br>$lmd$ = output lambda every 128 milliseconds | $\geq 0.392$    |

**Time Needed for Diagnosis:** 210 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor main learning correction: Not allowed to calculate.
- Correction when re-starting at high temperature: Normally minimum value 0.3  $\rightarrow$  0.
- Purge control: Not allowed to purge.

### 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

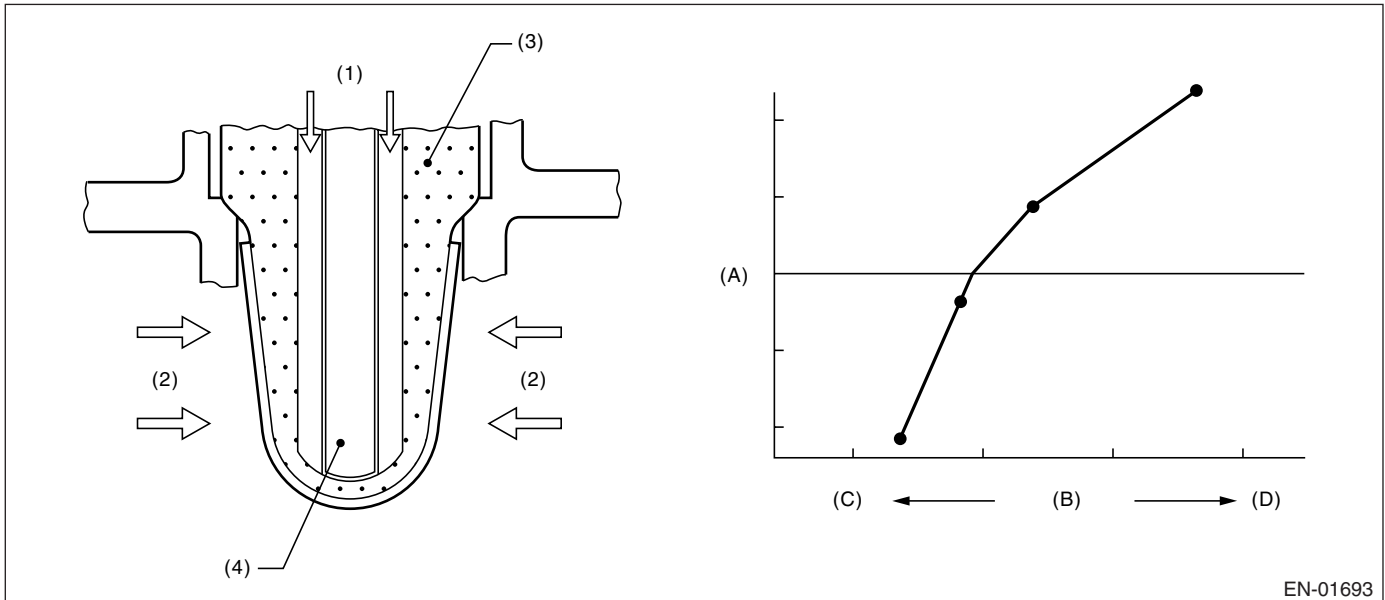

## AC:DTC P0134 O<sub>2</sub> SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the open circuit of sensor.

Judge NG when the element impedance is large.

### 2. COMPONENT DESCRIPTION

- (1) Atmosphere
- (2) Exhaust
- (3) ZrO<sub>2</sub>
- (4) Ceramic heater

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Lean
- (D) Rich

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 5 seconds.

#### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Voltage   | ≥ 10.9 V        |
| Time after engine starting  | ≥ 50 seconds    |
| Cumulative amount of Front oxygen (A/F) sensor heater control duty every 128 milliseconds | ≥ 28,000%       |
| Front lambda sensor impedance   | ≥ 500 Ω         |

**Time Needed for Diagnosis:** 5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor activation judgment: Front oxygen (A/F) sensor full activation is not complete, or front oxygen (A/F) sensor half activation is not complete.
- Front oxygen sensor main learning correction: Not allowed to calculate.
- Compensation when starting the engine at high temperature: Make the MIN value to be 0 from 0.3 normally.
- Purge control: Not allowed to purge

### 9. ECM OPERATION AT DTC SETTING

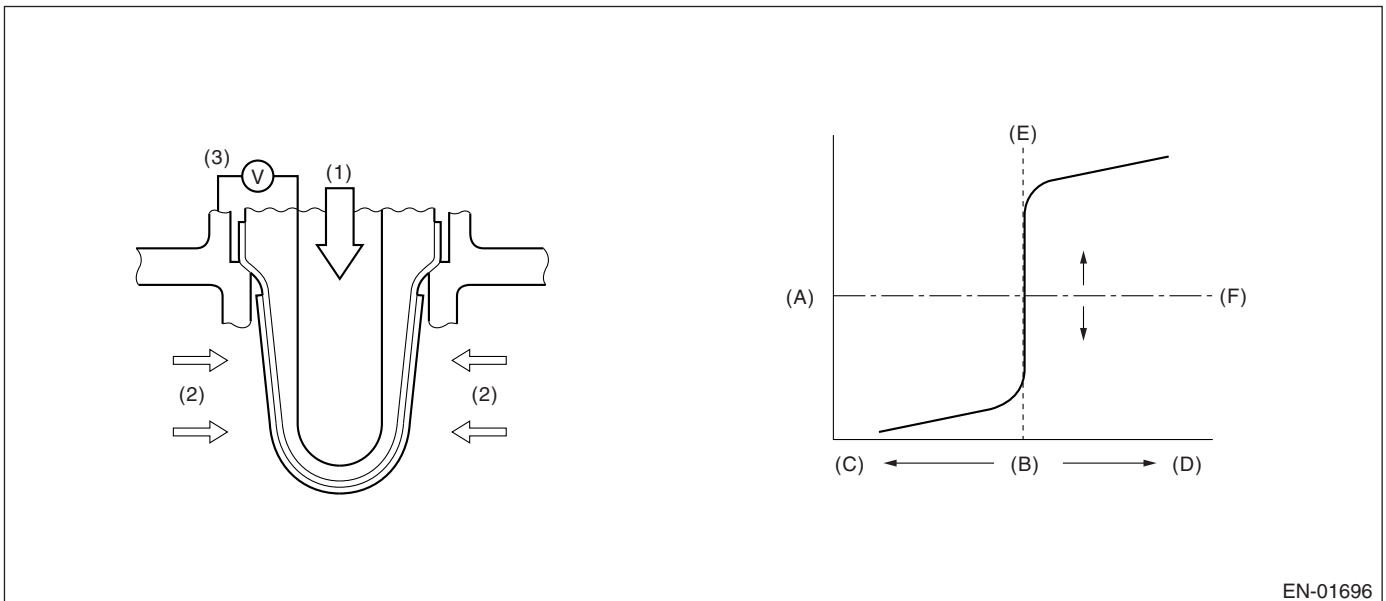

Memorize the freeze frame data. (For test mode \$02)

## AD:DTC P0137 O<sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 2)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of oxygen sensor power distribution NG. Judge NG when the oxygen sensor voltage is abnormal with considering the operating conditions.

### 2. COMPONENT DESCRIPTION

- (1) Atmosphere
- (2) Exhaust
- (3) Electromotive force

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Rich
- (D) Lean
- (E) Theoretical air fuel ratio
- (F) Comparative voltage

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 3. ENABLE CONDITION (USED ONLY FOR MALFUNCTION JUDGMENT)

### Abnormality Judgement

| Secondary Parameters                              | Enable Conditions  |
|---|--------------------|
| High side   |                    |
| Secondary air system                              | Not in operation   |
| Closed loop control of oxygen sensor              | In operation       |
| Misfire detection during 200 engine revs.         | < 5 times          |
| Compensation factor for front oxygen (A/F) sensor | Not in limit value |
| Battery voltage                                   | > 10.9 V           |
| Low side 1  |                    |
| Secondary air system                              | Not in operation   |
| Closed loop control of oxygen sensor              | In operation       |
| Misfire detection during 200 engine revs.         | < 5 times          |
| Compensation factor for front oxygen (A/F) sensor | Not in limit value |
| Battery voltage                                   | > 10.9 V           |
| Amount of intake air                              | ≥ 10 g (0.35 oz)/s |
| Low side 2  |                    |
| Secondary air system                              | Not in operation   |
| Closed loop control of oxygen sensor              | In operation       |
| Misfire detection during 200 engine revs.         | < 5 times          |
| Compensation factor for front oxygen (A/F) sensor | Not in limit value |
| Battery voltage                                   | > 10.9 V           |
| Amount of intake air                              | < 10 g (0.35 oz)/s |
| Continuous time of rear oxygen heater current     | 25 seconds or more |
| Low side 3  |                    |
| Secondary air system                              | Not in operation   |
| Closed loop control of oxygen sensor              | In operation       |
| Misfire detection during 200 engine revs.         | < 5 times          |
| Compensation factor for front oxygen (A/F) sensor | Not in limit value |
| Battery voltage                                   | > 10.9 V           |
| Amount of intake air                              | < 10 g (0.35 oz)/s |
| Continuous time of rear oxygen heater current     | 25 seconds or more |
| Fuel cut  | Experienced        |

### Normality Judgement

| Secondary Parameters                              | Enable conditions  |
|---|--------------------|
| Secondary air system                              | No operation       |
| Closed loop control of oxygen sensor              | In operation       |
| Misfire detection during 200 engine revs.         | < 5 times          |
| Compensation factor for front oxygen (A/F) sensor | Not in limit value |
| Battery voltage                                   | > 10.9 V           |

## 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine at engine steady operation condition.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than the time needed for diagnosis. Judge OK when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria                                | Threshold Value | DTC   |
|---|-----------------|-------|
| High side<br>Max. output voltage without continuity | ≥ 1,200 mV      | P0138 |
| Low side<br>Min. output voltage without continuity  | < 30 mV         | P0137 |

#### Time Needed for Diagnosis:

High side: 2.5 seconds

Low side 1: 20 seconds

Low side 2: 40 seconds

Low side 3: Value of Map

#### Map

| Fuel shut-off time (sec.) | Time Needed for Diagnosis (sec.) |
|---------------------------|----------------------------------|
| 0                         | 40                               |
| 2                         | 40                               |
| 10                        | 60                               |

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Sub feedback control: Not allowed

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## AE:DTC P0138 O<sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 2)

#### NOTE:

For the detecting criteria, refer to DTC P0137. <Ref. to GD(H4DOTC)-62, DTC P0137 O<sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>

## AF:DTC P0139 O<sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 2)

### 1. OUTLINE OF DIAGNOSIS

Detect the slow response of rear oxygen sensor.

Judge NG when the Rich → Lean response diagnosis or Lean → Rich response diagnosis is NG and judge OK when both response diagnoses are OK.

[Rich → Lean diagnosis response]

(1) When the measured response time is larger than a threshold, since the A/F ratio is rich, the response time of the output change of O<sub>2</sub> sensor when changing from Rich to Lean is measured, and it judges with NG, and when small, it judges with OK.

(2) When O<sub>2</sub> sensor voltage at the time of a fuel shut-off in deceleration return is large (rich), it judges with NG.

[Lean → Rich diagnosis response]

(1) The response time of output change of O<sub>2</sub> sensor when an A/F ratio changes from Lean to Rich is measured, and it is referred to as NG when the measured response time is larger than a threshold.

(2) It is referred to as NG when O<sub>2</sub> sensor voltage after recovery of fuel shut-off in deceleration is small and still small.

#### Diagnostic Method

Measure the response time of the output change of the oxygen sensor when the A/F ratio changes from rich to lean. And Judge NG when the measured response time is larger than the threshold value.

### 2. COMPONENT DESCRIPTION

EN-01696

- (1) Atmosphere
- (2) Exhaust
- (3) Electromotive force

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Rich
- (D) Lean
- (E) Theoretical air fuel ratio
- (F) Comparative voltage

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions |
|---|-------------------|
| Battery voltage   | > 10.9 V          |
| A/F sub feedback control condition                          | Completed         |
| 5 seconds or more fuel shut-off in deceleration             | Experienced       |
| After fuel cut  | ≥ 2 seconds       |
| Cumulative time for current conducted in rear oxygen sensor | ≥ 60 s            |
| Continuous time for current conducted in rear oxygen sensor | ≥ 30 s            |
| Catalyst warm-up counter                                    | ≥ 7,000 times     |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when fuel shut-off in deceleration after rapid acceleration in order to calculate the diagnostic value. (Pay attention to oxygen sensor voltage for the timing of deceleration.)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

When the rear oxygen sensor output voltage changes from 0.55 V (rich) to 0.25 V (lean), calculate the Min. value of response time regarded as judgment value while the output varies from 0.5 V to 0.3 V.

### • Abnormality Judgment

(1) Judge NG when the judgment value is larger than the threshold value after fuel shut-off in deceleration. Response time (Diagnosis value) > Threshold value → Abnormal

#### NOTE:

Variation time of rear oxygen sensor output voltage is short during fuel shut-off in deceleration. Carry out the NG judgment only after the fuel shut-off in deceleration. As for OK judgment, without the condition of fuel shut-off in deceleration, judge OK if the value is below the threshold value.

Judge NG when the malfunction criteria below are completed in 2 seconds after the recovery of fuel shut-off in deceleration which requires 6 seconds or more.

(2) Judge NG when the O<sub>2</sub> sensor voltage after recovery of fuel shut-off in deceleration is large. Judge NG when fuel shut-off in deceleration is also long (6 sec. or more), and although carried out the fuel shut-off in deceleration cut return, when O<sub>2</sub> sensor voltage is large (more than 0.55V).

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Shortest time change from rich (500 mV O <sub>2</sub> output) to lean (300 mV) if voltage reduces from 550 mV to 250 mV. | > 0.327 seconds |
| Time when more than 550 mV   | > 2 seconds     |

**Time Needed for Diagnosis:** Once

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgement

(1) Judge Normal when the response time (diagnostic value) is smaller than threshold (judgment value) when changing to lean since O<sub>2</sub> sensor voltage.

(2) A normal judging is not carried out.

Judge OK when the following standards value are completed.

### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Change of the shortest time from rich (500 mV O <sub>2</sub> output), when voltage decreases from 550 mV to 250 mV to lean (300 mV). | ≤ 0.327 seconds |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

Sub feedback control: Not allowed

## 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

## 10.ENABLE CONDITION

- Lean → Rich response diagnosis

| Secondary Parameters  | Enable Conditions |
|---|-------------------|
| Battery voltage   | > 10.9 V          |
| A/F main feedback control condition                         | Completed         |
| Fuel cut on deceleration ≥ 5 seconds                        | Experienced       |
| After fuel cut  | ≥ 2 seconds       |
| Accumulative time of rear oxygen sensor heater energization | ≥ 60 seconds      |
| Continuous time of rear oxygen sensor heater energization   | ≥ 30 seconds      |

## 11.GENERAL DRIVING CYCLE

Perform the diagnosis only once when fuel shut-off in deceleration after rapid acceleration. (Pay attention to oxygen sensor voltage for the timing of deceleration.)

## 12. DIAGNOSTIC METHOD

When the oxygen sensor output voltage changes from 0.25 V (lean) to 0.55 V (rich), calculate the Min. value of response time regarded as judgment value while the output varies from 0.3 V to 0.5 V.

### • Abnormality Judgment

(1) Judge NG when the judgment value is larger than the threshold value after recovery of fuel shut-off in deceleration.

Response time (Diagnosis value) > Threshold value → Abnormal

(2) Judge NG when the O<sub>2</sub> sensor voltage after recovery of fuel shut-off in deceleration is small.

### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Shortest time change from lean (300 mV O <sub>2</sub> output) to rich (500 mV) if voltage reduces from 500 mV to 250 mV. | > 2 seconds     |
| Or longest time to change to 250 mV  | > 120 seconds   |

**Time Needed for Diagnosis:** Once

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgement

(1) Judge Normal when the response time (diagnostic value) is smaller than threshold (judgment value) when changing to lean since O<sub>2</sub> sensor voltage.

Response Time (diagnosis value) ≤ Threshold value → Normal

(2) A normal judging is not carried out.

### Judgment Value

Judge OK when the following standards value are completed.

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Change of the shortest time from rich (300 mV O <sub>2</sub> output), when voltage decreases from 550 mV to 250 mV to lean (500 mV). | ≤ 2 seconds     |

### 13.DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 14.MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 15.FAIL SAFE

Sub feedback control: Not allowed

### 16.ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AG:DTC P0140 O<sub>2</sub> SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 1 SENSOR 2)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of rear oxygen sensor output property.

Judge Low side NG when the rear oxygen sensor voltage indicates low, otherwise, judge High side NG when the rear oxygen sensor voltage indicates high, in spite of the driving condition that the voltage might move, by referring to the driving condition such as amount of intake air, coolant temperature, main feedback control, fuel shut-off in deceleration, etc.

Judge rear oxygen sensor property NG when the Low side or High side becomes NG.

### 2. ENABLE CONDITION

| Secondary Parameters                              | Enable Conditions           |
|---|-----------------------------|
| Engine coolant temperature                        | ≥ 70°C (158°F)              |
| Target output voltage of rear oxygen sensor       | ≥ 0.6 V                     |
| Amount of intake air                              | 10 g (0.35 oz)/sec. or more |
| Battery voltage                                   | > 10.9 V                    |
| Closed loop with oxygen sensor                    | In operation                |
| Misfire detection during 200 engine revs.         | 5 times or less             |
| Compensation factor for front oxygen (A/F) sensor | Not in limit value          |
| 5 seconds or more fuel shut-off in decel.         | Experienced                 |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis once after warming-up the engine.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria             | Threshold Value |
|----------------------------------|-----------------|
| Low side of max. output voltage  | < 550 mV        |
| High side of min. output voltage | > 250 mV        |

**Time Needed for Diagnosis:** 200 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria             | Threshold Value |
|----------------------------------|-----------------|
| Low side of max. output voltage  | ≥ 550 mV        |
| High side of min. output voltage | ≤ 250 mV        |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

## AH:DTC P0171 SYSTEM TOO LEAN (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the fuel system malfunction by the amount of main feedback control.

EN-03873

- |                                     |                              |                                |

## 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at engine idle or constant vehicle speed after warm-up.

## 4. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge that the fuel system malfunction occurs when the time during completing the malfunction criteria below continues 50 seconds or more by comparing the diagnosed value (fsobd) with threshold value.

### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| $fsobd = (sglmd - tglmda) + faf + flaf$<br>where,<br>sglmd = measured lambda<br>tglmda = target lambda<br><br>faf = main feedback compensation coefficient every 64 milliseconds<br>flaf = main feedback learning compensation coefficient | ≥ fsobdL1<br>See Map 4<br><br>fsobdL1 = lean side threshold value of fsobd |

### Map 4 Threshold value for fuel system malfunction criteria

| Amount of air (g (oz)/s) | 0  | 2.4<br>(0.085) | 4.7<br>(0.166) | 7<br>(0.247) | 9.4<br>(0.332) | 11.7<br>(0.413) | 14.1<br>(0.497) |
|--------------------------|----|----------------|----------------|--------------|----------------|-----------------|-----------------|
| fsobdL1 (%)              | 40 | 40             | 36.9           | 32.0         | 27.0           | 26.5            | 26.5            |

**Time Needed for Diagnosis:** 10 seconds × 5 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK when the malfunction criteria below are continued for 10 seconds.

### Judgment Value

| Malfunction Criteria                    | Threshold Value |
|---|-----------------|
| $fsobd = (sglmd - tglmda) + faf + flaf$ | < 19%           |

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When OK with similar drive in 3 driving cycles.
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 7. FAIL SAFE

Rich side malfunction

- Purge control solenoid valve control: Not allowed to purge.
- Heavy fuel judgment control: Not allowed to carry out the heavy judgment.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## AI: DTC P0172 SYSTEM TOO RICH (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the fuel system malfunction by the amount of main feedback control.

EN-03873

- |                                     |                              |                                |

## 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at engine idle or constant vehicle speed after warm-up.

## 4. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge that the fuel system malfunction occurs when the time during completing the malfunction criteria below continues 50 seconds or more by comparing the diagnosed value (fsobd) with threshold value.

### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| $\text{fsobd} = (\text{sglmd} - \text{tglm da}) + \text{faf} + \text{flaf}$ where,<br>sglmd = measured lambda<br><br>tglm da = target lambda<br>faf = main feedback compensation coefficient every 64 milliseconds<br>flaf = main feedback learning compensation coefficient | $\leq \text{fsobdR1}$<br>See Map 4<br>fsobdR1 = rich side threshold value of fsobd |

### Map 4 Threshold value for fuel system malfunction criteria

| Amount of air (g (oz)/s) | 0   | 2.4<br>(0.085) | 4.7<br>(0.166) | 7<br>(0.247) | 9.4<br>(0.332) | 11.7<br>(0.413) | 14.1<br>(0.497) |
|--------------------------|-----|----------------|----------------|--------------|----------------|-----------------|-----------------|
| fsobdR1 (%)              | -40 | -40            | -36.9          | -32.0        | -27.0          | -27.0           | -27.0           |

**Time Needed for Diagnosis:** 10 seconds  $\times$  5 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK when the malfunction criteria below are continued for 10 seconds.

### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| $\text{fsobd} = (\text{sglmd} - \text{tglm da}) + \text{faf} + \text{flaf}$ | $\geq -20\%$    |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When OK with similar drive in 3 drive cycles.
- When "Clear Memory" was performed

### 7. FAIL SAFE

Rich side malfunction

- Purge control solenoid valve control: Not allowed to purge.
- Heavy fuel judgment control: Not allowed to carry out the heavy judgment.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## AJ:DTC P0181 FUEL TEMPERATURE SENSOR “A” CIRCUIT RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel temperature sensor output property. Perform the diagnosis in two methods; namely, drift diagnosis and stuck diagnosis. Judge NG when either of them results in NG, and judge OK when both of them result in OK.

#### • Drift Diagnosis

Normally fuel temperature is lower than engine coolant temperature. When the fuel temperature becomes higher than the engine coolant temperature, the range is considered to be shifted, and make an NG judgment.

### 2. COMPONENT DESCRIPTION

EN-01700

- (A) Resistance value (Ω)
- (B) Fuel temperature °C (°F)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 120 seconds.

#### Judgment Value

| Malfunction Criteria   | Threshold Value                                |
|--|--|
| Fuel level   | $\geq 9 \text{ l}$ (2.38 US gal, 1.98 Imp gal) |
| After engine starting  | 20 seconds or more                             |
| Engine coolant temperature – engine coolant temperature at engine starting | $\geq 10^{\circ}\text{C}$ (18°F)               |
| Fuel temperature – engine coolant temperature                              | $\geq 10^{\circ}\text{C}$ (18°F)               |
| Battery voltage  | $> 10.9 \text{ V}$                             |

**Time Needed for Diagnosis:** 120 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value                                |
|--|--|
| Fuel level   | $\geq 9 \text{ l}$ (2.38 US gal, 1.98 Imp gal) |
| After engine starting  | 20 seconds or more                             |
| Engine coolant temperature – engine coolant temperature at engine starting | $\geq 10^{\circ}\text{C}$ (18°F)               |
| Fuel temperature – engine coolant temperature                              | $< 10^{\circ}\text{C}$ (18°F)                  |
| Battery voltage  | $> 10.9 \text{ V}$                             |
| Engine coolant temperature   | $< 70^{\circ}\text{C}$ (158°F)                 |

#### • Stuck Diagnosis

If the fuel temperature which might rise along with the engine idling (the cumulative amount of intake air after engine starting is large) does not increase, the engine is considered to be stuck and make an NG judgment.

### 6. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions  |
|-----------------------|--------------------|
| After engine starting | 20 seconds or more |
| Battery voltage       | $> 10.9 \text{ V}$ |

### 7. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

### 8. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                              | Threshold Value                    |
|---|------------------------------------|
| Accumulated amount of intake air                  | $\geq 550 \text{ kg}$ (1,212.8 lb) |
| Fuel temperature difference between Max. and Min. | $< 3^{\circ}\text{C}$ (5.4°F)      |

**Time Needed for Diagnosis:** To be determined.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## • Normality Judgment

Judge OK when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria                              | Threshold Value                                    |
|---|--|
| Accumulated amount of intake air                  | $\geq 550$ kg (1,212.8 lb)                         |
| Fuel temperature difference between Max. and Min. | $\geq 3^{\circ}\text{C}$ (5.4 $^{\circ}\text{F}$ ) |

## 9. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 10.MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 11.FAIL SAFE

None

## 12.ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### AK:DTC P0182 FUEL TEMPERATURE SENSOR “A” CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of fuel temperature sensor. Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

(A) Resistance value ( $\Omega$ )

(B) Fuel temperature  $^{\circ}\text{C}$  ( $^{\circ}\text{F}$ )

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second.

#### Judgment Value

| Malfunction Criteria     | Threshold Value |
|--------------------------|-----------------|
| Intake manifold pressure | ≥ Map 10        |

#### Map 10

|   |                     |                     |                     |                     |                     |                     |
|---|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|
| Atmospheric pressure (kPa (mmHg, inHg)) | 58.7 (440, 17.3)    | 67.2 (504, 19.8)    | 75.7 (568, 22.4)    | 84.2 (632, 24.9)    | 92.8 (696, 27.4)    | 101.3 (760, 29.9)   |
| NG pressure (kPa (mmHg, inHg))          | 142.4 (1,068, 42.1) | 156.2 (1,172, 46.1) | 170.2 (1,277, 50.3) | 184.1 (1,381, 54.4) | 198.0 (1,485, 58.5) | 207.9 (1,560, 61.4) |
| OK pressure (kPa (mmHg, inHg))          | 120.0 (900, 35.4)   | 113.8 (1,004, 33.6) | 147.8 (1,109, 43.7) | 161.7 (1,213, 47.8) | 175.6 (1,317, 51.9) | 185.6 (1,392, 54.8) |

Time Needed for Diagnosis: 1 second

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

• **Normality Judgment**

Judge OK and clear the NG when the malfunction criteria below are completed.

**Judgment Value**

| Malfunction Criteria     | Threshold Value |
|--------------------------|-----------------|
| Intake manifold pressure | < Map 10        |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

GENERAL DESCRIPTION

## AQ:DTC P0245 TURBO/SUPER CHARGER WASTEGATE SOLENOID "A" LOW

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of wastegate control solenoid valve. Judge NG when the terminal output voltage remains Low during outputting the duty signal.

### 2. COMPONENT DESCRIPTION

(1) Coil

### 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions |
|-----------------------|-------------------|
| Battery voltage       | > 10.9 V          |
| After engine starting | 1 second or more  |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after engine starts.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time until completing the malfunction criteria below becomes more than 655 milliseconds.

#### Judgment Value

| Malfunction Criteria                         | Threshold Value |
|--|-----------------|
| Terminal output voltage                      | Low             |
| Duty ratio for turbocharged pressure control | < 75%           |

**Time Needed for Diagnosis:** 655 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria    | Threshold Value |
|-------------------------|-----------------|
| Terminal output voltage | High            |

# Diagnostic Trouble Code (DTC) Detecting Criteria

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AS:DTC P0301 CYLINDER 1 MISFIRE DETECTED

### 1. OUTLINE OF DIAGNOSIS

Detect whether the misfire occurred or not. (Revolution fluctuation method) Monitoring the misfire which influences exhaust deterioration (1.5 times of FTP) and catalyst damage is made obligatory by the law. Misfire affecting these two has three patterns below.

- Intermittent misfire (The same cylinder misfires in random, or different cylinders misfire in random.): FTP 1.5 times misfire
- Every time misfire (The same cylinder misfires every time.): FTP 1.5 times misfire, Catalyst damage misfire

The following detecting methods are adopted for these detection.

1) Intermittent misfire: FTP 1.5 times misfire

- 180° Interval Difference Method (MT: 1,800 rpm or less; AT: None)
- 360° Interval Difference Method (whole range)
- 720° Interval Difference Method (3,000 rpm or less)

2) Every time misfire: FTP 1.5 times misfire, Catalyst damage misfire

- 360° Interval Difference Method

### 2. ENABLE CONDITION

| Secondary Parameters                                    | Enable Conditions   |
|---|---|
| Continuous time for completing all secondary parameters | ≥ 1 second  |
| Intake manifold pressure change during 0.5 engine rev.  | < 13.3 kPa (100 mmHg, 3.93 inHg)<br>(MT)<br>< 13.3 kPa (100 mmHg, 3.93 inHg) (AT) |
| Engine speed change                                     | < 1,000 rpm/32 milliseconds   |
| Throttle position change during 16 milliseconds         | < 14°   |
| Fuel shut-off function                                  | Not in operation  |
| Atmospheric pressure                                    | ≥ 75.0 kPa (563 mmHg, 22.2 inHg)  |
| Fuel level  | ≥ 9 ℓ (2.38 US gal, 1.98 Imp gal)   |
| Evaporative system leak check                           | Not in operation  |
| Engine speed  | 500 — 6,500 rpm   |
| Intake manifold pressure                                | > Value of Map 3  |
| Battery voltage   | ≥ 8 V   |

#### Map3

### 3. GENERAL DRIVING CYCLE

- Detecting misfire is able to be carried out in the condition between idling and high revolution.
- Perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

- (A) Engine control module (ECM)
- (B) Diagnosis circuit
- (C) Crankshaft position sensor

When the misfire occurred, the engine speed is decreased and the crankshaft position speed will change. Calculate the interval difference value (diagnostic value) from crankshaft position speed by the following formula, and judge whether the misfire occurs or not comparing the calculated result with judgment value. Counting the number of misfire up, and if the misfire ratio is higher during 1,000 rev. or 200 rev., judge NG for the corresponding cylinder.

|   |   |   |
|---|---|---|
| Calculate the diagnostic value (from crankshaft position speed) | → Misfire detection every single ignition (Compare diagnostic value with judgment value)  | → NG judgment (Judge misfire occurrence required by the law) (Compare number of misfire with judgment)                              |
|   | <ul style="list-style-type: none"> <li>• 180° Interval Difference Method</li> <li>• 360° Interval Difference Method</li> <li>• 720° Interval Difference Method</li> </ul> | <ul style="list-style-type: none"> <li>• FTP1.5 times misfire NG judgment</li> <li>• Catalyst damage misfire NG judgment</li> </ul> |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

As the following figure, pick out a random cylinder as the standard and name it omg 0. And the former crankshaft position speed is named omg 1, the second former crankshaft position speed is named omg 2, the third is named omg 3, and the following is the same.

EN-01774

- (A) Ignition order
- (B) Crankshaft position speed

## • 180° Interval Difference Method

Diagnosis value  $domg180 = (omg_{-1} - omg_0) - (omg_7 - omg_1)/6$

Judge misfire occurs in the following cases.

- $domg180 >$  judgment value of positive side
- $domg180 \leq$  judgment value of negative side

(judgment value before 180°CA)

EN-01775

- (A) Threshold value (Judgment value of positive side)
- (B) Threshold value (Judgment value of negative side)
- (C) Judged as misfire

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### • 360° Interval Difference Method

|                  |   |
|------------------|---|
| Diagnosis value  | $\text{domg 360} = (\text{omg 1} - \text{omg 0}) - (\text{omg 4} - \text{omg 3})$ |
| Misfire judgment | $\text{domg 360} > \text{judgment value} \rightarrow \text{Misfire occurs}$       |

- (A) Threshold value
- (B) Judged as misfire

### • 720° Interval Difference Method

|                  |   |
|------------------|---|
| Diagnosis value  | $\text{domg 720} = (\text{omg 1} - \text{omg 0}) - (\text{omg 7} - \text{omg 6})$ |
| Misfire judgment | $\text{domg 720} > \text{judgment value} \rightarrow \text{Misfire occurs}$       |

- (A) Threshold value
- (B) Judged as misfire

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

- FTP 1.5 times misfire (Misfire occurrence level affecting exhaust gas)

**Judgment Value (Judge that malfunction occurs when the misfire ratio is high in 1,000 engine revs.)**

| Malfunction Criteria        | Threshold Value       |
|-----------------------------|-----------------------|
| FTP emission judgment value | > 1.0% in 1,000 revs. |

**Time Needed for Diagnosis:** 1,000 engine revs.

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

- Catalyst damage misfire (Misfire occurrence level damaging catalyst)

**Judgment Value (Judge that malfunction occurs when the misfire ratio is high in 200 engine revs. (400 ignitions))**

| Malfunction Criteria                   | Threshold Value |
|--|-----------------|
| Catalyst damage misfire judgment value | See Map 1       |

**Map 1 Fault criteria threshold for misfire which would result in catalyst damage**

| %                  | AIR INTAKE (g/rev.) |      |      |      |      |      |      |      |      |     |     |

| 6700               | -                   | 12.3 | 7.3  | 5.0  | 5.0  | 5.0  | 5.0  | 5.0  | -    | -   |     |

EN-02282

These figures mean the misfire ratio (%) in 400 ignitions; for example, 22.5 (%) means 400 (ignition) × 22.5 (%) = 90 (ignition) or more, so this case is judged misfire.

**Time Needed for Diagnosis:** 200 engine revs.

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 7. FAIL SAFE

None

GENERAL DESCRIPTION

## AW:DTC P0327 KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the knock sensor. Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

- (1) Case
- (2) Weight
- (3) Piezoelectric element
- (4) Nut
- (5) Resistance

(A) To knock sensor harness

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | < 0.238 V       |
| Ignition switch      | ON              |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\geq 0.238$ V  |
| Ignition switch      | ON              |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Knock compensation:

- Knock compensation final timing advance and retard value = knock compensation + whole learning compensation value + partial learning compensation value.
- At normal: knock compensation =  $0^{\circ}\text{CA}$  is fixed.
- At trouble: knock compensation =  $-5^{\circ}\text{CA}$ . (Retard  $5^{\circ}\text{CA}$ .)
- Not allowed to update the whole learning compensation factor.
- Not allowed to calculate the partial learning zone compensation value.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AX:DTC P0328 KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the knock sensor. Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

- (1) Case
- (2) Weight
- (3) Piezoelectric element
- (4) Nut
- (5) Resistance

(A) To knock sensor harness

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\geq 4.714$ V  |
| Ignition switch      | ON              |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | < 4.714 V       |
| Ignition switch      | ON              |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Knock compensation:

- Knock compensation final timing advance and retard value = knock compensation + whole learning compensation value + partial learning compensation value.
- At normal: knock compensation = 0°CA is fixed.
- At trouble: knock compensation = -5°CA. (Retard 5°CA.)
- Not allowed to update the whole learning compensation factor.
- Not allowed to calculate the partial learning zone compensation value.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

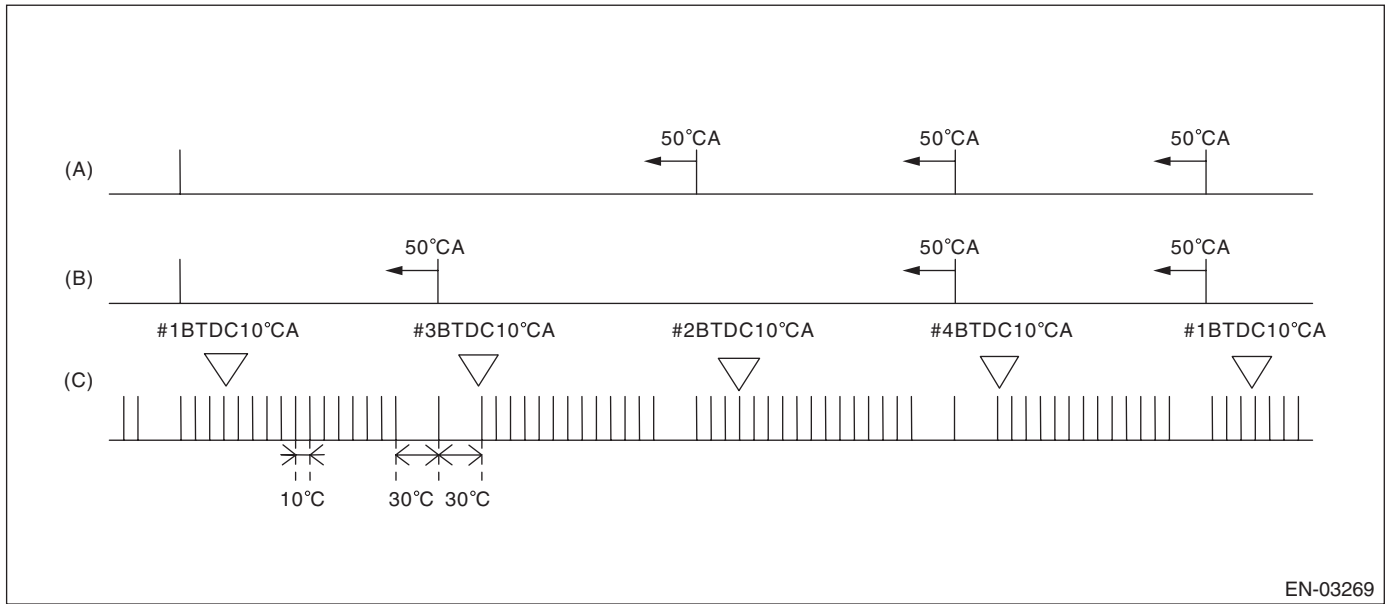

GENERAL DESCRIPTION

## AY:DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of crankshaft position sensor. Judge NG when the crankshaft signal does not input regardless of turning the starter.

### 2. COMPONENT DESCRIPTION

- (A) Camshaft signal RH
- (B) Camshaft signal LH
- (C) Crankshaft signal

- (1) Crankshaft position sensor
- (2) Crank sprocket
- (3) Crankshaft half-turn

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria              | Threshold Value   |
|-----------------------------------|-------------------|
| Starter switch                    | ON                |
| Crankshaft position sensor signal | Not detected      |
| Battery voltage                   | $\geq 8\text{ V}$ |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### • Normality Judgment

Judge OK when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria              | Threshold Value   |
|-----------------------------------|-------------------|
| Crankshaft position sensor signal | Input exists      |
| Battery voltage                   | $\geq 8\text{ V}$ |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

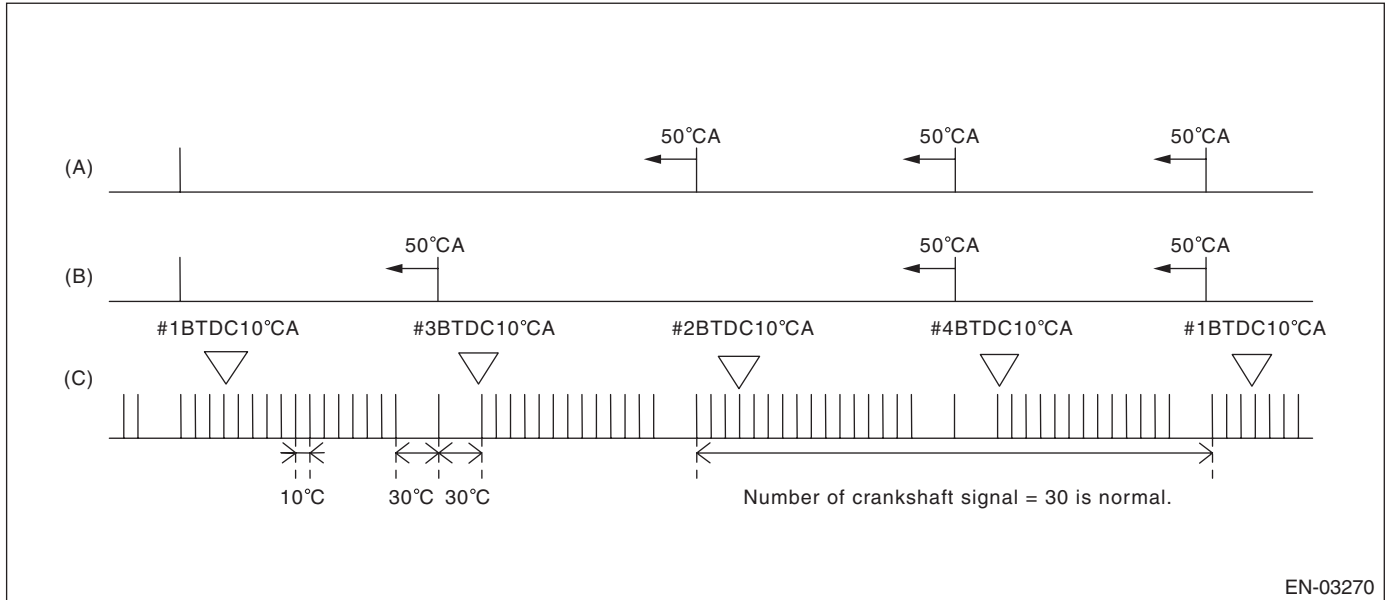

Memorize the freeze frame data. (For test mode \$02)

## AZ:DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of crankshaft position sensor output property. Judge NG when the number of crankshaft signal every 1 revolution becomes abnormal.

### 2. COMPONENT DESCRIPTION

- (A) Camshaft signal RH
- (B) Camshaft signal LH
- (C) Crankshaft signal

- (1) Crankshaft position sensor
- (2) Crank sprocket
- (3) Crankshaft half-turn

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions     |
|----------------------|-----------------------|
| Battery voltage      | $\geq 8 \text{ V}$    |
| Engine speed         | $< 3,000 \text{ rpm}$ |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously under 3,000 rpm engine speed.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when all the malfunction criteria below are completed more than 10 times in a row.

#### Judgment Value

| Malfunction Criteria                        | Threshold Value |
|---|-----------------|
| Cylinder number distinction                 | Completed       |
| Amount of crank sensor signal during 1 rev. | Not = 30        |

**Time Needed for Diagnosis:** 10 engine revs.

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                        | Threshold Value |
|---|-----------------|
| Cylinder number distinction                 | Completed       |
| Amount of crank sensor signal during 1 rev. | = 30            |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

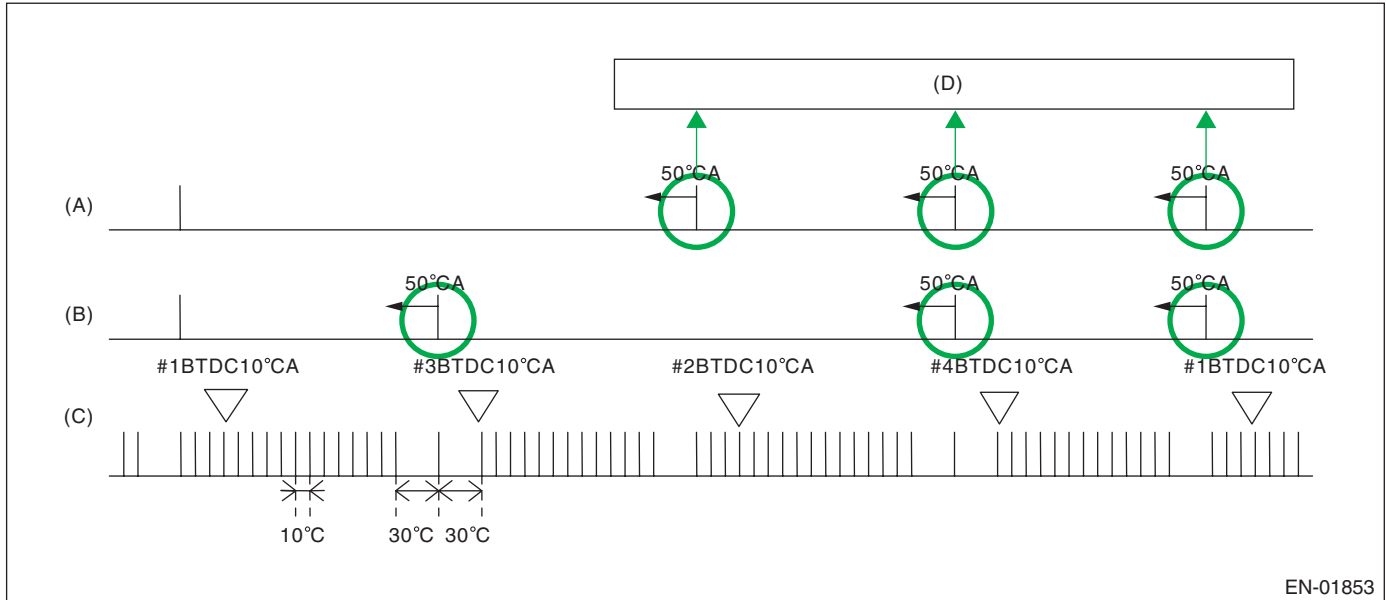

GENERAL DESCRIPTION

## BA:DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 1 OR SINGLE SENSOR)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of camshaft position sensor. Judge NG when the number of camshaft signal remains to be abnormal.

### 2. COMPONENT DESCRIPTION

EN-01853

- (A) Camshaft signal RH
- (B) Camshaft signal LH
- (C) Crankshaft signal

- (D) Number of camshaft position signals = Receive camshaft position signal 3 times per tow engine revolutions.

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Voltage              | ≥ 8 V             |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

The camshaft signal normally enters three times by two rev. of engine speed; however, judge NG when the camshaft signal does not enter three times continuously.

Judge NG when the malfunction criteria below are completed more than 100 rev. of engine speed. Judge OK and clear NG when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria                           | Threshold Value |
|--|-----------------|
| Number of camshaft sensor signal during 2 rev. | Except 3        |
| Engine speed                                   | ≥ 600 rpm       |

**Time Needed for Diagnosis:** 100 rev.

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                          | Threshold Value |
|---|-----------------|
| Number of camshaft angle signal during 2 rev. | 3               |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 8. FAIL SAFE

- Ignition timing whole learning compensation:
  - Enter the initial value (whole learning compensation factor = 0.5, Variable amount of whole learning compensation factor = 0.25) to the whole learning compensation factor and variable amount of whole learning compensation factor when IG OFF, and then make the whole learning incomplete.
  - Enter the initial value (whole learning compensation factor = 0.5, Variable amount of whole learning compensation factor = 0.25) to the whole learning compensation factor and variable amount of whole learning compensation factor when making a normality judgment from abnormality judgment, and then make the whole learning incomplete.
- Ignition timing partial learning compensation:
  - Enter the initial value (0°C A) to the compensation value of partial learning zone when IG OFF.
  - Enter the initial value (0°C A) to the compensation value of partial learning zone when making a normality judgment from abnormality judgment.
- AVCS control:
  - Most timing retard learning is not complete or most timing retard learning completion is not experienced.
  - ISC feedback compensation: Do not perform the AVCS actual timing advance compensation.
  - Make the OCV driving Duty to be the given value (9.36%).

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## **BB:DTC P0345 CAMSHAFT POSITION SENSOR “A” CIRCUIT (BANK 2)**

#### NOTE:

For diagnostic procedure, refer to DTC P0340. <Ref. to GD(H4DOTC)-109, DTC P0340 CAMSHAFT POSITION SENSOR “A” CIRCUIT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>

## BC:DTC P0410 SECONDARY AIR INJECTION SYSTEM

### 1. OUTLINE OF DIAGNOSIS

Detect leakage or blocking of secondary air injection system.

When the secondary air injection system is operated (pump is ON, right and left combi valves are open), close right and left combi valves, and detect NG by the secondary air supply pipe pressure and flow amount of secondary air pipe.

### 2. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions  |
|---|--|
| Presumed ambient temperature  | 4.4°C (40°F)   |
| Battery voltage   | 10.9 V   |
| After secondary air injection system is operated  | 0.6 seconds  |
| Battery voltage   | 7 V  |
| Atmospheric pressure  | 563 mmHg   |
| Engine  | In operation   |
| (Pressure measuring condition)  |  |
| Electric load change - after change<br>(Air conditioning, power steering, lights, rear defroster, heater fan, radiator fan, neutral switch) | More than 5 seconds  |
| Intake air amount   | 2 g (0.07 oz)/sec. or more<br>and<br>15 g (0.53 oz)/sec. or less |
| Engine speed  | ≥ 800 rpm<br>and<br>≤ 3,800 rpm                                  |
| Vehicle speed   | ≤ 0 km/h   |
| Canister purge duty   | ≥ 0%   |
| Variable amount of engine speed at every 128 milliseconds   | < 40rpm  |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis when the secondary air pump is operated.

### 4. DIAGNOSTIC METHOD

When the secondary air injection system is operated (pump is operated, right and left combi valves are open), close right and left combi valves respectively as following, and measure the secondary air supply pipe pressure and flow amount of secondary air pipe. Detect NG by 2 methods of pump supply pressure check and flow amount check.

#### Pump supply pressure check

Judge NG for the pump supply pressure when secondary air supply pipe pressure is lower than ambient pressure and judge OK when it is higher, when the secondary air pump is ON.

#### Flow amount check

When the secondary air injection system is operated (pump is operated, right and left combi valves are open), close right combi valve → close left combi valve → open right combi valve → open left combi valve, measure each secondary air supply pipe pressure (PSL, P0, PSR) and calculate the flow amount of secondary air pipe by these measurements. Detect NG according to flow amount of secondary air pipe.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

EN-03865

- |                                    |   |                                    |

**Time Needed for Diagnosis:** 7 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

## **BD:DTC P0411 SECONDARY AIR INJECTION SYSTEM INCORRECT FLOW DETECTED**

#### NOTE:

For the diagnostic procedure, refer to DTC P0410. <Ref. to GD(H4DOTC)-111, DTC P0410 SECONDARY AIR INJECTION SYSTEM, Diagnostic Trouble Code (DTC) Detecting Criteria.>

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### BE:DTC P0413 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE "A" CIRCUIT OPEN

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when the ECM output level is different from the actual terminal level.

#### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| OFF                  |                   |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds.

##### Judgment Value

| Malfunction Criteria                           | Threshold Value |
|--|-----------------|
| Battery voltage                                | $\geq 10.9$ V   |
| Ignition                                       | ON              |
| Terminal voltage when ECM transmits OFF signal | Low             |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria                           | Threshold Value |
|--|-----------------|
| Battery voltage                                | $\geq 10.9$ V   |
| Ignition                                       | ON              |
| Terminal voltage when ECM transmits OFF signal | High            |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

None

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BF:DTC P0414 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE "A" CIRCUIT SHORTED

### 1. OUTLINE OF DIAGNOSIS

Judge NG when the ECM output level is different from the actual terminal level.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| OFF                  |                   |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds.

#### Judgment Value

| Malfunction Criteria                          | Threshold Value |
|---|-----------------|
| Battery voltage                               | $\geq 10.9$ V   |
| Ignition                                      | ON              |
| Terminal voltage when ECM transmits ON signal | High            |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                          | Threshold Value |
|---|-----------------|
| Battery voltage                               | $\geq 10.9$ V   |
| Ignition                                      | ON              |
| Terminal voltage when ECM transmits ON signal | Low             |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### BJ:DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the deterioration of catalyst function.

Though the rear oxygen sensor output would change slowly with a new catalyst, the sensor output with a deteriorated catalyst becomes high and the inversion time is shortened. For this reason, the catalyst diagnosis is carried out by monitoring the rear oxygen sensor output and comparing it with the front A/F sensor output.

#### 2. COMPONENT DESCRIPTION

EN-01713

- (1) Front oxygen (A/F) sensor
- (2) Rear oxygen sensor
- (3) Catalyst

- (A) Normal
- (B) Deterioration
- (C) Front oxygen (A/F) sensor waveform
- (D) Rear oxygen sensor waveform

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                |
|---|----------------------------------|
| Battery voltage   | > 10.9 V                         |
| Atmospheric pressure  | > 75.0 kPa (563 mmHg, 22.2 inHg) |
| Engine coolant temperature                                  | ≥ 70°C (158°F)                   |
| Catalyst warm-up counter on Map 2                           | ≥ 8,000                          |
| Misfire detection during 200 engine revs.                   | < 5 times                        |
| Learning value of evaporation gas density                   | < 0.20                           |
| Sub feedback  | Operating                        |
| Evaporative system diagnostic                               | Not in operation                 |
| Difference between actual and target time lambda < 0.10     | 1,000 milliseconds or more       |
| Vehicle speed   | ≥ 70 km/h (47 MPH)               |
| Amount of intake air  | 12 ←→ 40 g/s                     |
| Engine load change every 0.5 engine revs.                   | < 0.02 g/rev                     |
| Rear O <sub>2</sub> output change from below 660 mV to over | Experienced after fuel cut       |
| After engine starting                                       | ≥ 235 seconds                    |
| Purge execution cumulative time after engine starting       | ≥ 19.9 seconds                   |

## 4. GENERAL DRIVING CYCLE

Perform the diagnosis once at the constant vehicle speed of 75 km/h (47 MPH) or more after warming up the engine.

## 5. DIAGNOSTIC METHOD

After the malfunction criteria are completed, calculate the output fluctuation value of front oxygen (A/F) sensor and output fluctuation value of rear oxygen sensor.

Calculate the diagnosis value when the front oxygen (A/F) sensor output fluctuation value more than specified value.

Regard the A/F response properties and diagnosis value as parameters for judgment value.

Judge NG when the malfunction criteria below are completed, and judge OK when they are not completed.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Accumulated variation of output voltage of rear oxygen sensor per 32 milliseconds divided by accumulated variation of lambda of front oxygen (A/F) sensor per 32 milliseconds | $\geq 12.6$     |

**Time Needed for Diagnosis:** 33 — 55 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

## BK:DTC P0442 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (SMALL LEAK)

### 1. OUTLINE OF DIAGNOSIS

Perform the diagnosis of leakage of fuels system and valve functions.

EN-03873

- |                                     |                              |                                |

| (7) Engine control module (ECM)     | (16) Fuel pump               | (A) Fuel line                  |
| (8) Canister                        | (17) Jet pump                | (B) Evaporation fuel line      |
| (9) Pressure control solenoid valve | (18) Fuel cut valve          |                                |

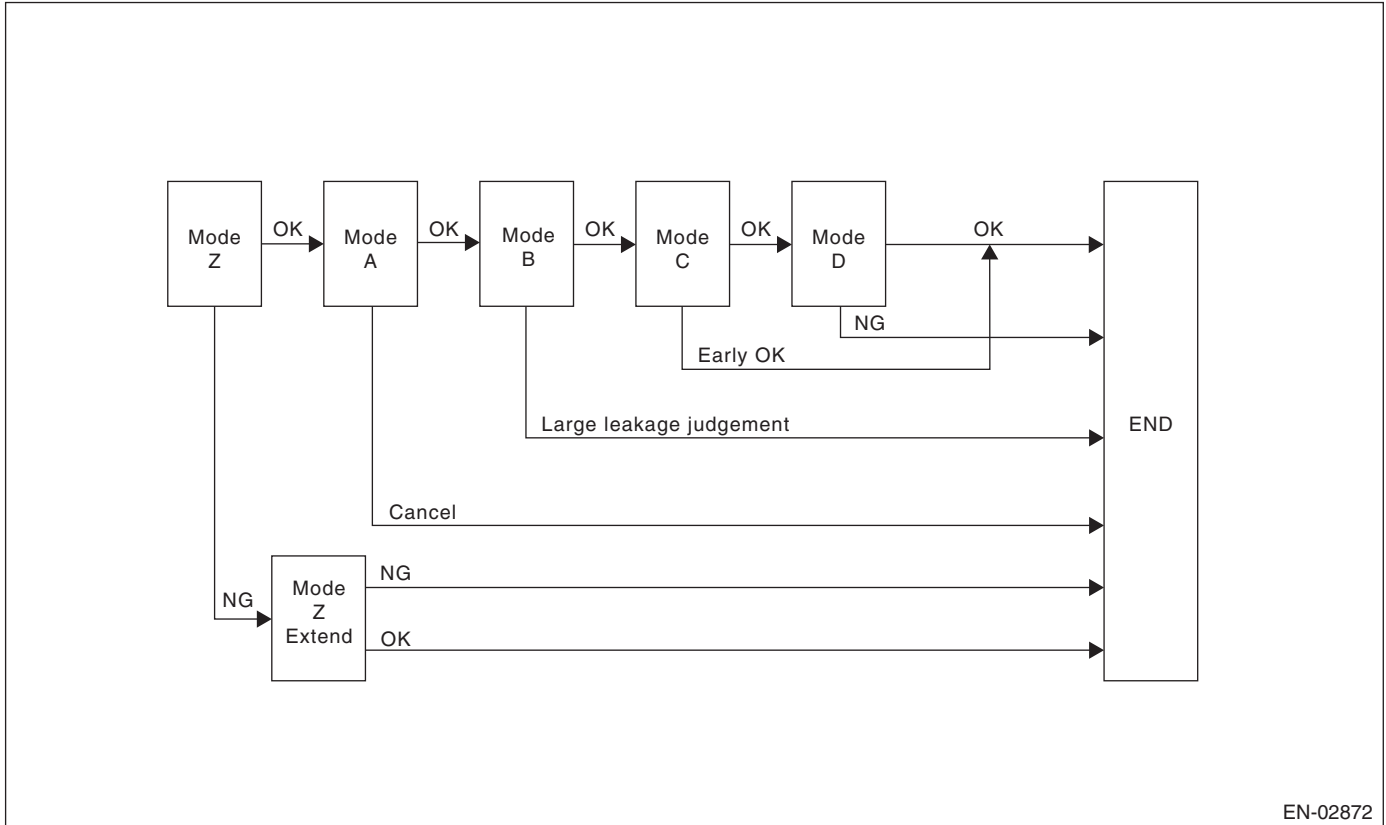

In this system diagnosis, filter tank pressure is changed. And leakage and normality & abnormality of valve operation are judged by monitoring the pressure change status using the fuel tank pressure sensor. The diagnosis is performed for 0.04-inch diagnosis in the order of Mode A, Mode B, Mode C and Mode D. For 0.02-inch diagnosis, perform in the order of Mode Y, Mode A, Mode B, Mode C and Mode D.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 0.04-inch Diagnosis

EN-02872

| Mode  | Mode Description  | Diagnosis Period |
|---|---|------------------|
| Mode Z<br>(Purge control solenoid valve open fail diagnosis)                    | Perform the diagnosis of purge control solenoid valve open fail depending on the magnitude of the tank pressure change after diagnosis started.                               | 3 — 16 seconds   |
| Mode A<br>(Evaluation of EVAP. generation amount)                               | Calculate the tank pressure change amount (P1).   | 10 seconds       |
| Mode B<br>(Negative pressure sealed/large leak judgment)                        | Introduce the intake manifold pressure into the fuel tank. If the tank pressure cannot be reduced, diagnose that there is large leakage.                                      | 5 — 25 seconds   |
| Mode C<br>(Pressure increase check/premature OK judgment)                       | Wait until the tank pressure returns to the target value (Tank pressure when P2 calculation started). If the pressure does not return, perform the premature OK judgment.     | 1 — 15 seconds   |
| Mode D<br>(Negative pressure change amount measurement/EVAP. leakage diagnosis) | Calculate the tank pressure change amount (P2), and measure the diagnosis value using P1 calculated in Mode A. Perform the EVAP. leakage diagnosis using the diagnosis value. | 10 seconds       |

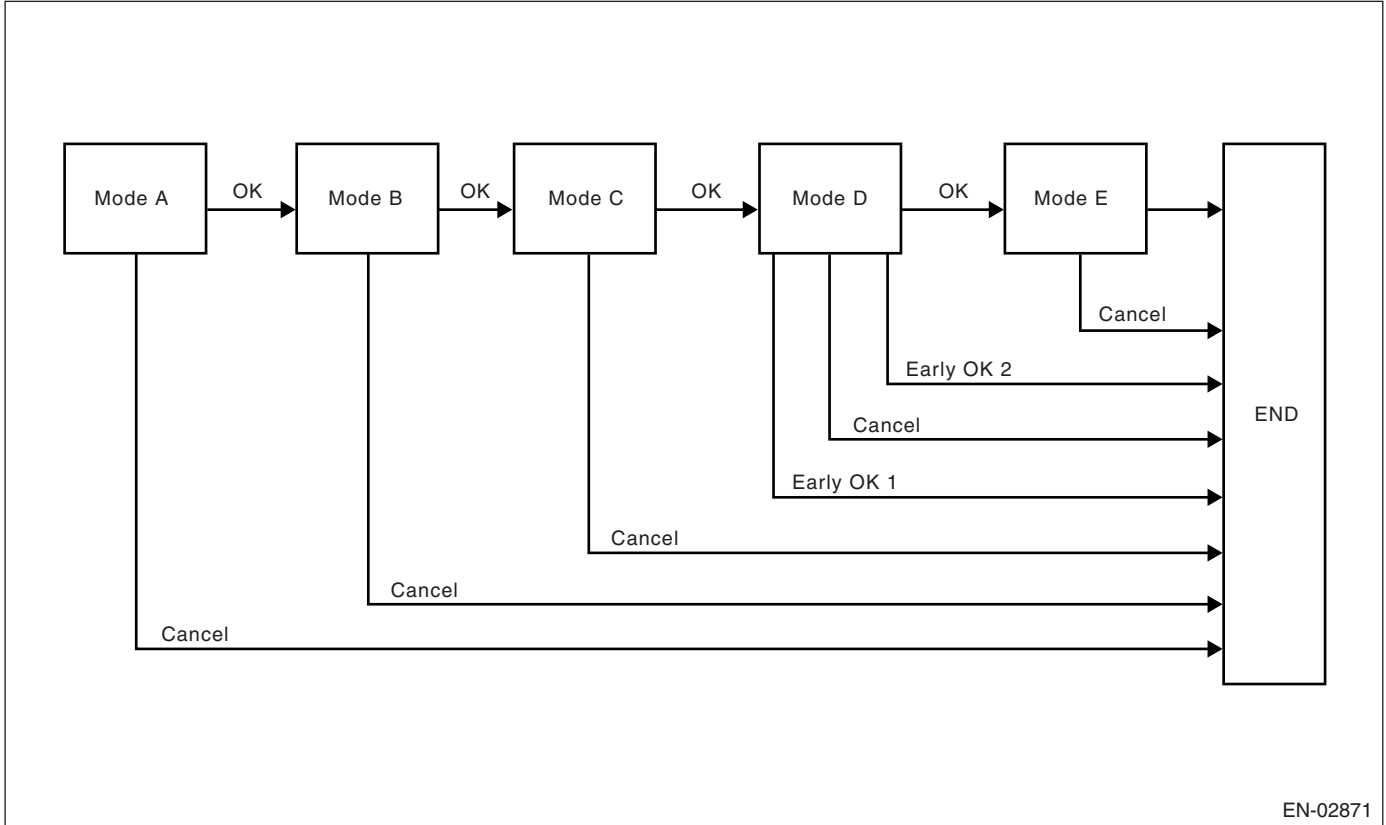

### Mode table for Evaporative Emission Control System diagnosis

| Mode   | Normal conditions   | Diagnostic item  | DTC   |
|--------|---|--|-------|
| Mode Z | Nearly same as atmospheric pressure (equivalent pressure of 0 kPa (0 mmHg, 0 inHg)) | Purge control solenoid valve is judged to be open.           | P0457 |
| Mode A | Pressure is in proportion to amount of evaporative emission.                        | —  | —     |
| Mode B | Negative pressure is formed due to intake manifold negative pressure                | Large leak   | P0457 |
| Mode C | Target pressure is reached.   | —  | —     |
| Mode D | Pressure change is small.   | EVAP system is judged to have large leak [1.0 mm (0.04 in)]. | P0442 |

| Mode   | Mode Description   | Diagnosis Period |
|--|--|------------------|
| Mode A<br>(0 point correction)                         | Wait until the tank pressure returns to 0 point (around 0 mmHg) when tank pressure is high.  | 0 — 12 seconds   |
| Mode B<br>(Introduce negative pressure)                | Introduce the intake manifold pressure to the fuel tank and reduce the tank pressure to the desired value.   | 0 — 27 seconds   |
| Mode C<br>(Maintain negative pressure)                 | Wait until the tank pressure returns to target pressure (start pressure of P2 calculation).  | 0 — 20 seconds   |
| Mode D<br>(Calculation of negative pressure variation) | Calculate the time until the tank pressure returns the end pressure of P2 calculation.<br>Make advanced OK judgment when the tank pressure does not return the end pressure of P2 calculation. | 0 — 200 seconds  |
| Mode E<br>(Calculation of Evaporative gas yield)       | Calculate the amount of evaporative gas yield (P1).  | 0 — 280 seconds  |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 2. COMPONENT DESCRIPTION

#### • Pressure Control Solenoid Valve

Pressure control solenoid valve maintains the fuel tank pressure equal to the atmospheric air pressure. Normally, the solenoid is set to OFF, and the valve mechanically opens and closes in accordance with the difference between the tank pressure and atmospheric air pressure, and the tank pressure and canister pressure.

The solenoid which is set to ON forces to open the valve.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 4. GENERAL DRIVING CYCLE

#### 0.04-inch Diagnosis

- Perform the diagnosis only once in more than 856 seconds after the engine start at the constant driving speed of 32 km/h (19.9 MPH) or more.
- Pay attention to the fuel temperature and fuel level.

#### 0.02-inch Diagnosis

- Perform diagnosis in more than 770 seconds after engine start at the constant speed of 68 km/h (42 MPH) or more, and judged OK or NG.
- If not judged OK or NG, repeat the diagnosis.
- Pay attention to the fuel level.

### 5. DIAGNOSTIC METHOD

#### • Diagnosing Function of Purge Control Solenoid Valve

#### DTC

P0457 Evaporative Emission Control System Leak Detected (Fuel Cap Loose/Off)

#### Purpose of Mode Z

When performing the leakage diagnosis of EVAP system, purge control solenoid valve have to operate normally. Therefore, mode Z is used to diagnose the purge control solenoid valve open fixation.

If purge control solenoid valve open fixation trouble is detected, the evaporation system leakage diagnosis is cancelled.

#### • Diagnosing function of purge control solenoid valve [P0457]

Purge control solenoid valve functional diagnosis is performed by monitoring the tank pressure in Mode Z.

#### Normality Judgment

Judge OK when the following criteria are satisfied in 3 seconds after Mode Z started, and change to Mode A.

#### Judgment Value

| Malfunction Criteria  | Threshold Value                       | DTC   |
|---|---------------------------------------|-------|
| (Tank pressure when Mode Z started) —<br>(Tank pressure when Mode Z finished) | $\leq 0.4$ kPa (3 mmHg,<br>0.12 inHg) | P0457 |

#### • Normal

EN-02869

- |               |                                   |                  |
|---------------|-----------------------------------|------------------|
| (1) Mode Z    | (3) Fuel tank pressure            | (5) OK judgement |
| (2) 3 seconds | (4) 0.4 kPa (3.0 mmHg, 0.12 inHg) |                  |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

Judge normal when the following conditions are completed at once.

- $evptez - evptezha \leq 0.4 \text{ kPa}$  (3.0 mmHg, 0.12 inHg)
- $evptezini - evptezha \leq 0.71 \text{ kPa}$  (5.3 mmHg, 0.21 inHg)

## Abnormality Judgment

If OK judgment cannot be made, extend Mode Z 16 seconds more, and judge NG when all the criteria below are completed in 16 seconds.

## Judgment Value

| Malfunction Criteria   | Threshold Value                                | DTC   |
|--|--|-------|
| (Tank pressure 1 second after Mode Z started) – (Tank pressure when Mode Z finished) | $> 0.6 \text{ kPa}$ (4.5 mmHg, 0.18 inHg)      | P0457 |
| Tank pressure when Mode Z started  | $\leq 1.43 \text{ kPa}$ (10.7 mmHg, 0.42 inHg) |       |
| Time for no fuel rolling of 2 $\varnothing$ or more                                  | $\geq 40 \text{ seconds}$                      |       |

**Time Needed for Diagnosis:** 16 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

Finish the Evap. diagnosis when making NG judgment for purge control solenoid valve open fixation.

Cancel the Evap. diagnosis when the OK/NG judgment for purge control solenoid valve open fixation cannot be made in Mode Z.

# Diagnostic Trouble Code (DTC) Detecting Criteria

  - $evptezini - evptezha \leq 0.87 \text{ kPa (6.5 mmHg, 0.26 inHg)}$
  - No fuel rolling of above 2  $\varnothing$  (0.53 US gal, 0.44 Imp gal) for more than 40 seconds.
- Judge normal when all the calculations are completed.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Leak Diagnosis

### DTC

P0442 Evaporative Emission Control System Leak Detected (small leak)

P0457 Evaporative Emission Control System Leak Detected (fuel cap loose/off)

### Diagnostic method

- The diagnostic method consists of creating a sealed vacuum in the fuel tank and then determining the presence of leakage from the speed at which the tank internal pressure returns to atmospheric pressure.
- This diagnostic method consists of 5 steps.

### Mode A: (Estimation of evaporation gas yield)

The amount of change of tank pressure (P1) in Mode A is calculated. After calculating P1, change to Mode B.

### Mode B: (Seal negative pressure)

Introduce the negative pressure in the intake manifold to the tank.

Approx. 0 → -1.4 kPa (0 → -10.5 mmHg, 0 → -0.41 inHg)

When the pressure above (desired negative pressure) is reached, Mode C is entered.

In this case, if the tank pressure does not become the desired negative pressure, judge that there is a large leakage in the system and judge as large leak (10 or 25 seconds).

### Abnormality Judgment

Judge NG (large leak) when the criteria below are completed in the specified time.

### Judgment Value

| Malfunction Criteria  | Threshold Value                  | DTC   |
|---|----------------------------------|-------|
| Time before reaching desired negative pressure                                    | ≥ 25 seconds                     | P0457 |
| Or time for Mode B  | ≥ 10 seconds                     |       |
| (Min. value of tank pressure during Mode B) – (Tank pressure when Mode B started) | < -0.5 kPa (-4 mmHg, -0.16 inHg) |       |

### Mode C: (Check increasing pressure)

Stop the introduction of negative pressure. (Wait until the tank pressure returns to the start level of P2 calculation.)

Change to Mode D when the tank pressure returns to the start level of P2 calculation.

Judge immediate OK and change to Mode E when it does not return in spite of spending the specified time.

|   |                                |
|---|--------------------------------|
| Tank pressure when P2 calculation started | Time for immediate OK judgment |
| -1.3 kPa (-9.75 mmHg, -0.38 inHg)         | 15 seconds                     |

### Mode D: (Measurement of negative pressure changes)

Monitor the pressure variation in the tank in Mode Z. In this case, the tank pressure increases, that is, the pressure becomes as high as the atmospheric air pressure, because evaporator is generated. However, if any leakage exists, the pressure increases additionally in proportion to this leakage. The pressure variation of this tank is P2.

After calculating P2, perform following small leak diagnosis.

### • After Mode D

Assigning P1 and P2, which are tank variations measured in Mode A and Mode B, to the formula below, judge the small leakage of the system. If the measured judgment value exceeds the threshold value, it is judged to be malfunction.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### Abnormality Judgment

Judge NG when the criteria below are completed and judge OK and clear the NG when not completed.

### Judgment Value

| Malfunction Criteria  | Threshold Value   | DTC   |
|---|---|-------|
| P2 – 1.5 × P1<br>P2: Change of tank pressure within 16 seconds on Mode D<br>P1: Change of tank pressure within 16 seconds on Mode A | > Value on Map 7.<br>* Threshold value: Figure (Fuel level vs Tank temperature) | P0442 |

\*1.5: Compensation value of the amount of evaporator occurrence. (Because evaporator increases more when becoming negative pressure.)

### Map 7 Limit of malfunction criteria as Evap. diagnosis.

| Fuel temperature & Fuel level     | 5°C (41°F)                              | 15°C (59°F)                             | 25°C (77°F)                             | 35°C (95°F)                           | 45°C (113°F)                          |
|-----------------------------------|---|---|---|---------------------------------------|---------------------------------------|
| 0 L (0 US gal, 0 Imp gal)         | 0.49 kPa<br>(3.68 mmHg,<br>0.14 inHg)   | 0.49 kPa<br>(3.68 mmHg,<br>0.14 inHg)   | 0.53 kPa<br>(3.95 mmHg,<br>0.16 inHg)   | 0.54 kPa<br>(4.07 mmHg,<br>0.16 inHg) | 0.56 kPa<br>(4.17 mmHg,<br>0.16 inHg) |
| 10 L (2.64 US gal, 2.2 Imp gal)   | 0.49 kPa<br>(3.68 mmHg,<br>0.14 inHg)   | 0.49 kPa<br>(3.68 mmHg,<br>0.14 inHg)   | 0.53 kPa<br>(3.95 mmHg,<br>0.16 inHg)   | 0.54 kPa<br>(4.07 mmHg,<br>0.16 inHg) | 0.56 kPa<br>(4.17 mmHg,<br>0.16 inHg) |
| 20 L (5.28 US gal, 4.4 Imp gal)   | 0.50 kPa<br>(3.77 mmHg,<br>0.15 inHg)   | 0.51 kPa<br>(3.79 mmHg,<br>0.15 inHg)   | 0.53 kPa<br>(4.01 mmHg,<br>0.16 inHg)   | 0.56 kPa<br>(4.17 mmHg,<br>0.16 inHg) | 0.57 kPa<br>(4.27 mmHg,<br>0.17 inHg) |
| 30 L (7.93 US gal, 6.6 Imp gal)   | 0.51 kPa<br>(3.85 mmHg,<br>0.15 inHg)   | 0.52 kPa<br>(3.9 mmHg,<br>0.15 inHg)    | 0.54 kPa<br>(4.06 mmHg,<br>0.16 inHg)   | 0.57 kPa<br>(4.27 mmHg,<br>0.17 inHg) | 0.60 kPa<br>(4.48 mmHg,<br>0.18 inHg) |
| 40 L (10.57 US gal, 8.8 Imp gal)  | 0.65 kPa<br>(4.88 mmHg,<br>0.19 inHg)   | 0.65 kPa<br>(4.9 mmHg,<br>0.19 inHg)    | 0.66 kPa<br>(4.98 mmHg,<br>0.20 inHg)   | 0.71 kPa<br>(5.32 mmHg,<br>0.21 inHg) | 0.76 kPa<br>(5.73 mmHg,<br>0.23 inHg) |
| 50 L (13.21 US gal, 11.0 Imp gal) | 0.794 kPa<br>(5.96 mmHg,<br>0.235 inHg) | 0.794 kPa<br>(5.96 mmHg,<br>0.235 inHg) | 0.794 kPa<br>(5.96 mmHg,<br>0.235 inHg) | 0.85 kPa<br>(6.38 mmHg,<br>0.25 inHg) | 0.88 kPa<br>(6.6 mmHg,<br>0.26 inHg)  |
| 60 L (15.85 US gal, 13.2 Imp gal) | 0.794 kPa<br>(5.96 mmHg,<br>0.235 inHg) | 0.794 kPa<br>(5.96 mmHg,<br>0.235 inHg) | 0.794 kPa<br>(5.96 mmHg,<br>0.235 inHg) | 0.85 kPa<br>(6.38 mmHg,<br>0.25 inHg) | 0.88 kPa<br>(6.6 mmHg,<br>0.26 inHg)  |

**Time Needed for Diagnosis:** 30 — 100 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous drive cycles.

### Leak diagnosis

#### DTC

P0456 Evaporative Emission Control System (Very Small Leak)

#### • Diagnostic method

- The diagnostic method consists of creating a sealed vacuum in the fuel tank and then determining the presence of leakage from the speed at which the tank internal pressure returns to atmospheric pressure.
- This diagnostic method consists of 5 steps.

#### Mode A: (0 point correction)

Wait until the tank pressure returns to 0 point (around 0 mmHg) when the tank pressure is high. Change to Mode B when the tank pressure becomes 0. Cancel the diagnosis when the tank pressure does not return to 0 point in spite of spending the specified time.

#### Mode B: (Introduce negative pressure)

Introduce the intake manifold negative pressure to fuel tank.

About 0 → -2.0 kPa (0 mmHg → -15 mmHg, 0 → -0.59 inHg)

Change to Mode C when the tank pressure becomes the pressure (desired negative pressure) above. Cancel the diagnosis when the tank pressure does not become the value above.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## Mode C: (Hold negative pressure)

Stop introducing the negative pressure and wait the tank pressure returns to the start level of P2 calculation. Change to Mode D when the tank pressure returns to the start level of P2 calculation or when spending the specified time.

## Mode D: (Calculation of negative pressure variation)

Monitor the tank pressure on Mode D, and calculate the tank pressure variation (P2) and time until it returns to the end level of P2 (evpdset). When it returns, change to Mode E. Make advanced OK judgment or cancel depending on the P2 level, when it doesn't return in spite of spending the specified time.

### Normality Judgment

Judge OK when the criteria below are completed.

### Judgment Value

| Malfunction Criteria    | Threshold Value                                  |
|-------------------------|--|
| Advanced OK judgment #1 |  |
| Mode D time             | ≥ 30 s   |
| Tank pressure           | ≤ -1.8 kPa (-13.4 mmHg, -0.53 inHg)              |
| Advanced OK judgment #2 |  |
| Mode D time             | ≥ 200 s  |
| P2                      | ≤ 0.9 — 1.3 kPa (7 — 9.6 mmHg, 0.28 — 0.38 inHg) |

## Mode E: (Calculation of evaporation gas yield)

Calculate the tank pressure variation P1 in time evpdset, judge NG/OK from P1 value. (Gray judgment possible)

### Abnormal judgment

Judge NG when the criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value  |
|----------------------|--|
| P1                   | < Map 7 value<br>* Threshold value:<br>map (fuel level vs evpdset) |

## Map 7 Limit of malfunction criteria as Evap. diagnosis

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria  | Threshold Value                    |
|---|------------------------------------|
| Number of times when the difference between the Max. fuel level and the Min. fuel level every 60 seconds is 2 ℓ (0.53 US gal, 0.44 Imp gal) or more (with enable condition completed) | ≥ 16 times                         |
| Max. – Min. tank pressure (with enable condition completed)   | < 0.05 kPa (0.375 mmHg, 0.02 inHg) |
| Max. – Min. fuel temperature (with enable condition completed)  | ≥ 7°C (13°F)                       |

If the fuel level (Max. – Min.) in every 60 seconds is less than 2 ℓ, extend 60 seconds more and make judgment with the Max. and Min. fuel level in 120 seconds.

If the difference did not appear though the time extended, extend the time (180, 240, 300 seconds) and continue the judgment.

Diagnosis counter will count up when the difference of fuel level (Max. – Min.) is more than 5 ℓ.

**Time Needed for Diagnosis:** 1 minute × 16 times or more

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in two continuous drive cycles.

#### • Normality Judgment

Judge OK when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria      | Threshold Value                    |
|---------------------------|------------------------------------|
| Max. – Min. tank pressure | ≥ 0.05 kPa (0.375 mmHg, 0.02 inHg) |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 8. FAIL SAFE

Purge control solenoid valve control: Purge fixation mode is prohibited.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## BO:DTC P0452 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR LOW INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the fuel tank pressure sensor.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

- (1) Connector
- (2) Terminal

- (A) Output voltage
- (B) Input voltage
- (C) To fuel tank

EN-03875

### 3. ENABLE CONDITION (USED WITH HIGH SIDE NORMAL/ABNORMAL JUDGMENT)

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | $\geq 10.9$       |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 15 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value                              |
|----------------------|--|
| Fuel tank pressure   | $< -6.82$ kPa ( $-56.15$ mmHg, $-2.01$ inHg) |

**Time Needed for Diagnosis:** 15 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria        | Threshold Value                                 |
|-----------------------------|---|
| Fuel tank pressure          | $\geq -6.82$ kPa ( $-56.15$ mmHg, $-2.01$ inHg) |
| Feedback lambda coefficient | $\geq 0.9$                                      |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Purge control solenoid valve control: Purge fixation mode is prohibited.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BP:DTC P0453 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR HIGH INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the breaking/shortage of the fuel tank pressure sensor.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

- (1) Connector
- (2) Terminal

- (A) Output voltage
- (B) Input voltage
- (C) To fuel tank

### 3. ENABLE CONDITION

| Secondary Parameters                   | Enable Conditions        |
|--|--------------------------|
| Vehicle speed                          | $\geq 2$ km/h (1.24 MPH) |
| All conditions of EVAP canister purge  | Complete                 |
| Evaporation gas density learning value | $\leq 0.08$              |
| Main feedback compensation coefficient | $\geq 0.9$               |
| Battery voltage                        | $\geq 10.9$ V            |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when purging.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time until completing the malfunction criteria below becomes more than 15 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value                         |
|----------------------|---|
| Fuel tank pressure   | $\geq 7.98$ kPa (59.85 mmHg, 2.36 inHg) |
| Fuel temperature     | $< 35^\circ\text{C}$ (95°F)             |
| Atmospheric pressure | $\geq 75.0$ kPa (563 mmHg, 22.2 inHg)   |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## **BX:DTC P0464 FUEL LEVEL SENSOR CIRCUIT INTERMITTENT**

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of unstable output from fuel level sensor caused by noise.

Judge NG when the max. value and cumulative value of output voltage variation of fuel level sensor is larger than the threshold value.

### 2. ENABLE CONDITION

| Secondary Parameters           | Enable Conditions   |
|--------------------------------|---|
| Engine speed                   | $\geq 500$ rpm  |
| After engine starting          | 1 second or more  |
| Ignition switch                | ON  |
| Battery voltage                | $> 10.9$ V  |
| Idle switch                    | ON  |
| Fuel level                     | 9 $\leftrightarrow$ 51 $\emptyset$ (2.4 $\leftrightarrow$ 13.4 US gal, 1.98 $\leftrightarrow$ 11.2 Imp gal) |
| Vehicle speed = 0 km/h (0 MPH) | 10 seconds or more  |

### 3. GENERAL DRIVING CYCLE

- Perform the diagnosis continuously in idling condition.
- Pay attention to the fuel level.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 4. DIAGNOSTIC METHOD

Calculate the Max. value (delflmax) and cumulative value (sumfl) of output voltage variation of fuel level sensor during 12.8 seconds. Judge it normal when both max. and cumulative values are not over the threshold value. Otherwise, when either of them is over the threshold value, count the diagnosis counter up. And judge NG if the counter indicated 4 counts.

EN-01736

(A) Diagnosis condition

(B) Diagnosis time

(C) Fuel level sensor A/D value

(D) Fuel level output voltage

(E) Diagnosis counter

(F) Malfunction

(G) Normal

(H) Judge value of DVFLMAX and SUMVFL as maximum

(I) NG at 4 counts

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Integrated times of the condition reaching follows,<br>DELFLMAX $\geq$ 0.228 V or SUMVFL $\geq$ 21.8 V<br>where,<br>DELFLMAX is Max. deviation of sensor output during 12.8 seconds.<br>SUMVFL is integrated value of sensor output deviation during 12.8 seconds. | $\geq$ 4 times  |

Do not count the diagnosis counter up when the following conditions are completed during 12.8 seconds.

|  |   |
|--|---|
| Max – Min of tank pressure during 12.8 seconds   | $\geq$ 0.05 kPa (0.375 mmHg, 0.01 inHg) |
| Max – Min of battery voltage during 12.8 seconds | $\geq$ 0.465 V                          |

**Time Needed for Diagnosis:** 12.8 seconds  $\times$  4 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria  | Threshold Value       |
|---|-----------------------|
| DELFLMAX<br>SUMVFL<br>Where, DELFLMAX is Max. deviation of sensor output during 12.8 seconds.<br>SUMVFL is integrated value of sensor output deviation during 12.8 seconds. | < 0.228 V<br>< 21.8 V |

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 7. FAIL SAFE

None

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BY:DTC P0483 COOLING FAN RATIONALITY CHECK

### 1. OUTLINE OF DIAGNOSIS

Detect the function abnormality of the radiator fan.

Judge NG when the engine coolant temperature slowly decreases even when the radiator fan is rotating.

### 2. ENABLE CONDITION

Diagnostic enable condition is completed if the radiator fan changes from OFF to ON when all of the conditions below are completed. When one of the conditions below is not completed, the diagnostic enable condition is not completed.

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Engine Speed         | 550 — 950 rpm     |
| Idle switch          | ON                |
| Vehicle speed        | 0 km/h (0 MPH)    |
| Battery voltage      | ≥ 10.9 V          |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when idling.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 5 minutes.

#### Judgment Value

| Malfunction Criteria       | Threshold Value |
|----------------------------|-----------------|
| Engine coolant temperature | ≥ 95°C (203°F)  |
| Radiator fan signal change | OFF to ON       |
| Engine coolant temperature | Not decrease    |

**Time Needed for Diagnosis:** 5 minutes

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria       | Threshold Value |
|----------------------------|-----------------|
| Radiator fan signal change | OFF to ON       |
| Engine coolant temperature | Decrease        |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### BZ:DTC P0502 VEHICLE SPEED SENSOR CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of vehicle speed sensor.

Judge NG when low vehicle speed (0 km/h (0 MPH)) remains whereas it seemed to be in a usual driving speed.

#### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Engine speed         | < 4,000 rpm       |
| Fuel cut in decel.   | Operating         |
| Battery voltage      | ≥ 10.9 V          |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during fuel cut in deceleration at less than 4,000 rpm in engine speed.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 4 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Vehicle speed        | < 1             |

**Time Needed for Diagnosis:** 4 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when all malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria               | Threshold Value |
|------------------------------------|-----------------|
| Vehicle speed                      | ≥ 1             |
| Starter switch                     | OFF             |
| Time after starter switch ON → OFF | ≥ 3 seconds     |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

- Accelerator sensor signal process: All closed points learning / Not allowed to increase.
- Vehicle speed sensor signal process: Vehicle speed = 10 km/h (6.21 MPH)
- Fuel cut control: Not allowed vehicle speed 0 km/h (0 MPH) fuel cut. Normally the high vehicle speed fuel cut performs on "and" of vehicle speed condition and engine speed, but perform the fuel cut only on engine speed condition (4,800 rpm or more).
- ISC control: Set the open loop compensation to specified value (1 g/s). Not allowed ISC feedback volume calculation.
- Air conditioner control: Not allowed air conditioner cut at accelerating.
- Radiator fan control: Hi driven both main/sub.
- Judge gear ratio: Control as gear fixed on 6th.
- Tumble generator valve control: Open the tumble generator valve.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

### CA:DTC P0503 VEHICLE SPEED SENSOR INTERMITTENT/ERRATIC/HIGH

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of vehicle speed sensor.

Judge NG when high vehicle speed (300 km/h (186.4 MPH) or more) remains whereas it seemed to be in a usual driving speed.

#### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Engine speed         | < 4,000 rpm       |
| Fuel cut in decel.   | Operating         |
| Battery voltage      | ≥ 10.9 V          |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during fuel cut in deceleration at less than 4,000 rpm in engine speed.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criteria below becomes more than 4 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Vehicle speed        | ≥ 300           |

**Time Needed for Diagnosis:** 4 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when all malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria               | Threshold Value        |
|------------------------------------|------------------------|
| Vehicle speed                      | < 300 km/h (186.4 MPH) |
| Starter switch                     | OFF                    |
| Time after starter switch ON → OFF | ≥ 3 seconds            |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 7. FAIL SAFE

- Vehicle speed sensor signal process: Vehicle speed = 10 km/h (6.21 MPH)
- Fuel cut control: Not allowed vehicle speed 0 km/h (0 MPH) fuel cut. Normally the high vehicle speed fuel cut performs on “and” of vehicle speed condition and engine speed, but perform the fuel cut only on engine speed condition (4,800 rpm or more).
- ISC control: Set the open loop compensation to specified value (1 g/s). Not allowed ISC feedback volume calculation.
- Air conditioner control: Not allowed air conditioner cut at accelerating.
- Radiator fan control: Hi driven both main/sub.
- Judge gear ratio: Control as gear fixed on 6th.
- Tumble generator valve control: Open the tumble generator valve.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CB:DTC P0506 IDLE AIR CONTROL SYSTEM RPM LOWER THAN EXPECTED

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling.  
Judge NG when actual engine speed is not close to target engine speed during idling.

### 2. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                 |
|---|-----------------------------------|
| Engine coolant temperature  | ≥ 70°C (158°F)                    |
| Battery voltage   | ≥ 10.9 V                          |
| Atmospheric pressure  | > 75.0 kPa (563 mmHg, 22.2 inHg)  |
| Fuel level  | ≥ 9 ℓ (2.38 US gal, 1.98 Imp gal) |
| After starting engine   | 10 seconds or more                |
| Feedback in ISC   | In operation                      |
| Measured lambda   | 0.90 ←→ 1.1                       |
| After air condition switching ON-OFF, OFF-ON                          | 5 seconds or more                 |
| After in-manifold pressure change more than 4 kPa (30 mmHg, 1.2 inHg) | > 5 seconds                       |
| After neutral switch ON-OFF event                                     | > 5 seconds                       |
| Vehicle speed   | 0 km/h (0 MPH)                    |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during idling.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds × 3 times).

#### Judgment Value

| Malfunction Criteria                                    | Threshold Value |
|---|-----------------|
| Actual – target engine speed                            | < –100 rpm      |
| Feedback correction for idle air control solenoid valve | Max.            |

**Time Needed for Diagnosis:** 10 seconds × 3 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds).

#### Judgment Value

| Malfunction Criteria         | Threshold Value |
|------------------------------|-----------------|
| Actual – target engine speed | ≥ –100 rpm      |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 7. FAIL SAFE

- Heavy fuel judgment: Not allowed to carry out the heavy judgment
- Knock compensation:
  - Knock compensation final timing advance and retard value = knock compensation + whole learning compensation value + partial learning compensation value.
  - At normal: knock compensation = 0°CA is fixed.
  - At trouble: knock compensation ≠ 0°CA is fixed. (Retard max. 12°CA at knock.)
  - Not allowed to update the whole learning compensation factor.
  - Not allowed to calculate the partial learning zone compensation value.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CC:DTC P0507 IDLE AIR CONTROL SYSTEM RPM HIGHER THAN EXPECTED

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling.  
Judge NG when actual engine speed is not close to target engine speed during idling.

### 2. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                 |
|---|-----------------------------------|
| Engine coolant temperature  | ≥ 70°C (158°F)                    |
| Battery voltage   | ≥ 10.9 V                          |
| Atmospheric pressure  | > 75.0 kPa (563 mmHg, 22.2 inHg)  |
| Fuel level  | ≥ 9 ℓ (2.38 US gal, 1.98 Imp gal) |
| After starting engine   | 10 seconds or more                |
| Feedback in ISC   | In operation                      |
| Lambda  | 0.90 ←→ 1.1                       |
| After air condition switching ON-OFF, OFF-ON                          | 5 seconds or more                 |
| After in-manifold pressure change more than 4 kPa (30 mmHg, 1.2 inHg) | > 5 seconds                       |
| After neutral switch ON-OFF event                                     | > 5 seconds                       |
| Vehicle speed   | 0 km/h (0 MPH)                    |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously 10 seconds after starting and at idling after warm-up.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds × 3 times).

#### Judgment Value

| Malfunction Criteria                                    | Threshold Value |
|---|-----------------|
| Actual – target eng. speed                              | ≥ 200 rpm       |
| Feedback correction for idle air control solenoid valve | Min.            |

**Time Needed for Diagnosis:** 10 seconds × 3 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds).

#### Judgment Value

| Malfunction Criteria       | Threshold Value |
|----------------------------|-----------------|
| Actual – target eng. speed | < 200 rpm       |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 7. FAIL SAFE

- Heavy fuel judgment: Not allowed to carry out the heavy judgment
- Knock compensation:
  - Knock compensation final timing advance and retard value = knock compensation + whole learning compensation value + partial learning compensation value.
  - At normal: knock compensation = 0°CA is fixed.
  - At trouble: knock compensation ≠ 0°CA is fixed. (Retard max. 12°CA at knock.)
  - Not allowed to update the whole learning compensation factor.
  - Not allowed to calculate the partial learning zone compensation value.

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CD:DTC P0512 STARTER REQUEST CIRCUIT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of starter SW.

Judge ON NG when the starter SW signal remains on.

Judge OFF NG when the engine starts without starter experience.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 minutes.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Engine speed         | > 500 rpm       |
| Starter OFF signal   | Not detected    |
| Battery voltage      | > 8 V           |

**Time Needed for Diagnosis:** 180 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge ON OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Starter SW           | OFF             |
| Battery voltage      | > 8 V           |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

### CE:DTC P0513 INCORRECT IMMOBILIZER KEY

#### 1. OUTLINE OF DIAGNOSIS

| DTC   | ITEM   | OUTLINE OF DIAGNOSIS  |
|-------|--|---|
| P0513 | Incorrect Immobilizer Key                    | Incorrect immobilizer key (Use of key not registered in body integrated module)                   |
| P1570 | Antenna                                      | Improper antenna  |
| P1571 | Reference Code Incompatibility               | Unmatched reference code between body integrated module and ECM                                   |
| P1572 | IMM Circuit Failure (Except Antenna Circuit) | Communication malfunction between body integrated module and ECM                                  |
| P1574 | Key Communication Failure                    | Malfunction of body integrated module that check the key (transponder) ID or transponder failure. |
| P1576 | EGI Control Module EEPROM                    | Abnormality of ECM  |
| P1577 | IMM Control Module EEPROM                    | Malfunction of body integrated module.  |
| P1578 | Meter Failure                                | Unmatched reference code between body integrated module and combination meter.                    |

#### 2. ENABLE CONDITION

When the engine is started.

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis only when the engine is started.

#### 4. DIAGNOSTIC METHOD

Jude NG when the outline diagnosis above was completed.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CF:DTC P0519 IDLE CONTROL SYSTEM MALFUNCTION (FAIL-SAFE)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction that engine speed increases more than that in normal condition during idling.

### 2. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions   |
|-----------------------|---------------------|
| Battery voltage       | ≥ 10.9 V            |
| Feedback in ISC       | In operation        |
| Vehicle speed         | < 4 km/h (2.49 MPH) |
| After engine starting | 1 seconds or more   |

### 3. GENERAL DRIVING CYCLE

Always perform diagnosis at less than 4 km/h (2.49 MPH) of vehicle speed.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time until completing the all malfunction criteria below becomes more than the time needed for diagnosis (2 seconds).

#### Judgment Value

| Malfunction Criteria                             | Threshold Value |
|--|-----------------|
| Engine speed – target eng. speed                 | ≥ 1,500 rpm     |
| Feedback value for ISC                           | ≤ 0%            |
| Engine speed change every 180 degree engine rev. | ≥ -5 rpm        |

**Time Needed for Diagnosis:** 2 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear NG when the continuous time until completing the malfunction criteria below becomes more than the time needed for diagnosis (5 seconds).

#### Judgment Value

| Malfunction Criteria             | Threshold Value |
|----------------------------------|-----------------|
| Engine speed – target eng. speed | < 200 rpm       |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 7. FAIL SAFE

Fuel shut-off: Shut-off fuel for only #1 and #2 cylinder, or for all cylinder in accordance with vehicle speed, engine speed, throttle position

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### CG:DTC P0600 SERIAL COMMUNICATION LINK

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of CAN communication.

Judge NG when CAN communication becomes impossible, the CAN communication with AT becomes impossible, and the data from AT is not normal.

#### 2. COMPONENT DESCRIPTION

CAN connects between ECM and TCM with high speed.

*(Common Specification)*

*CAN PROTOCOL 2.0B (active)*

*Frame format: 11 bit ID Frame (Standard frame)*

*(High Speed CAN)*

*ISO 11898 compliance*

*Communication Speed: 500 kbps*

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery Voltages     | ≥ 10.9 V          |
| Starter switch       | OFF               |
| Engine               | Run               |

#### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after starting the engine.

#### 5. DIAGNOSTIC METHOD

##### • JUDGMENT OF MALFUNCTION

Judge NG when any of the malfunction criteria below are completed. Judge OK and clear the NG when the continuous time of not completing all the malfunction criteria below becomes more than the time needed for diagnosis (1 second).

##### Judgement Value

| Malfunction Criteria           | Threshold Value    |
|--------------------------------|--------------------|
| Buss off flag or warning flag  | Set                |
| ID cannot be received from TCM | = 500 milliseconds |

**Time needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates simultaneously when malfunction is detected.

#### 6. DTC CLEAR CONDITION

When the OK driving cycle was completed 40 consecutive times.

When "Clear Memory" was performed.

#### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 consecutive times.
- When "Clear Memory" was performed.

#### 8. FAIL-SAFE

The angle operation of accelerator position sensor demand target throttle opening calculation

#### 9. ECM OPERATION AT DTC SETTING

Store the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CH:DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR

### 1. OUTLINE OF DIAGNOSIS

Detect the function abnormality of the micro-computer (RAM).

Normally, zero-clear all the RAM area in the initial routine. And judge NG when the total of all the RAM after the clear is not \$0000.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | OFF → ON          |

Perform the diagnosis in the initial routine.

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis immediately after IG key SW is turned ON.

### 4. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed. Judge OK and clear NG when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria                                   | Threshold Value |
|--|-----------------|
| Result of RAM data addition, after zero initialization | Cannot read     |

**Time Needed for Diagnosis:** Undecided

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### CI: DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when SUM value of ROM is out of the standard value.

#### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| SUM value of ROM     | Standard value  |

**Time Needed for Diagnosis:** To be determined.

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only at engine stop)

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

Stop the current to electronic throttle control motor. (Fix the throttle opening angle to 6°.)

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CJ:DTC P0607 CONTROL MODULE PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Judge NG when either the following is completed.

- When the read value of throttle position sensor 1 signal is mismatched between main CPU and sub CPU.
- When the read value of accelerator pedal position sensor 1 signal is mismatched between main CPU and sub CPU.
- When the sub CPU operates abnormally.
- When the communication between main CPU and sub CPU is abnormal.
- When the input amplifier circuit of throttle position sensor 1 is abnormal.
- When the cruise control cannot be canceled correctly.
- When the signal of brake SW1 and 2 is mismatched.
- When the directed angle from main CPU is abnormal.

### 2. COMPONENT DESCRIPTION

- |   |                                       |                                  |
|---|---------------------------------------|----------------------------------|
| (1) Throttle position sensor            | (6) Accelerator pedal position sensor | (11) Amplifier circuit           |
| (2) Throttle position sensor 1          | 2                                     | (12) Engine control module (ECM) |
| (3) Throttle position sensor 2          | (7) Battery                           | (13) Sub CPU                     |
| (4) Accelerator pedal position sensor   | (8) Stop light                        | (14) Main CPU                    |
| (5) Accelerator pedal position sensor 1 | (9) Brake switch                      |                                  |
|   | (10) I/F circuit                      |                                  |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 3. ENABLE CONDITION

| Secondary Parameters               | Enable Conditions |
|------------------------------------|-------------------|
| (1) Ignition switch                | ON                |
| (2) Ignition switch                | ON                |
| (3) None                           | —                 |
| (4) None                           | —                 |
| (5) Throttle opening angle         |                   |
| (6) Brake SW (with cruise control) | ON                |
| (7) None                           | —                 |

### 4. GENERAL DRIVING CYCLE

- (1) — (4): Always perform the diagnosis continuously.  
(5): Always perform the diagnosis continuously on idling.  
(6): Perform the diagnosis when the brake pedal is depressed.  
(7): Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge OK and clear NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value                 |
|--|---------------------------------|
| (1) Difference of CPU on reading value of throttle position sensor signal    | Within 0.858 V                  |
| (2) Difference of CPU on reading value of accelerator position sensor signal | Within 0.042 V                  |
| (3) WD pulse from sub CPU  | WD pulse occur                  |
| (4) Communication between CPU  | Possible to communicate         |
| (5) Difference of signal on connection of amplifier                          | Within $\times 4\pm 3^\circ$    |
| (6) Cruise control cancel signal at brake ON                                 | Cruise control cancel signal ON |
| (7) Brake switch 1, 2 signal   | SW 1 and 2 are matched          |

#### Time Needed for Diagnosis:

- (1) 250 milliseconds  
(2) 250 milliseconds  
(3) 200 milliseconds  
(4) 200 milliseconds  
(5) 24 milliseconds  
(6) 250 milliseconds  
(7) 200 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Stop the current to electronic throttle control motor. (Fix the throttle opening angle to  $6^\circ$ .)

## 9. ECM OPERATION AT DTC SETTING

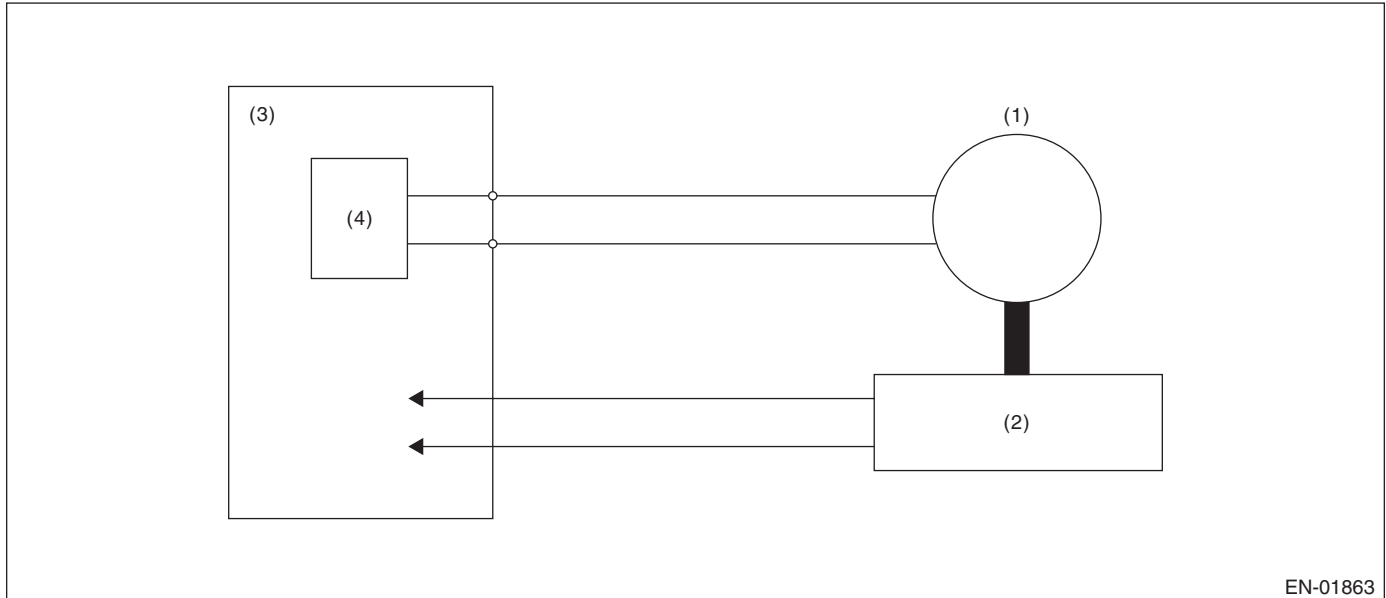

Memorize the freeze frame data. (For test mode \$02)

### CK:DTC P0638 THROTTLE ACTUATOR CONTROL RANGE/PERFORMANCE (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when the target opening angle and actual opening angle is mismatched or the current to motor is more than specified duty for specified time continuously.

#### 2. COMPONENT DESCRIPTION

- |                              |                                 |
|------------------------------|---------------------------------|
| (1) Motor                    | (3) Engine control module (ECM) |
| (2) Throttle position sensor | (4) Drive circuit               |

#### 3. ENABLE CONDITION

| Secondary Parameters                            | Enable Conditions |
|---|-------------------|
| Ignition switch                                 | ON                |
| Normal operation of electronic throttle control | ON                |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously when the electronic throttle control is operating.

#### 5. DIAGNOSTIC METHOD

Judge OK and clear NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Difference between target opening angle and actual opening angle | Less than 3.5°  |
| Output duty to drive circuit                                     | Less than 95%   |

##### Time Needed for Diagnosis:

Target opening angle and actual opening angle: 250 milliseconds (For NG) 2,000 milliseconds (For OK)  
 Output duty to drive circuit: 2,000 milliseconds

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### Details of Judgment

EN-03129

- (1) Difference between target opening angle and actual opening angle (°)      (2) Target throttle opening angle (°)  
 (3) NG area

### Details of Judgment (Always 1,000 milliseconds when the actual opening angle ≤ target opening angle)

EN-01865

- (1) Judgment time (milliseconds)      (3) NG area  
 (2) Throttle position sensor 1 opening angle

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 8. FAIL SAFE

Stop the current to electronic throttle control motor. (Fix the throttle opening angle to 6°.)

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CL:DTC P0691 COOLING FAN 1 CONTROL CIRCUIT LOW

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the radiator fan circuit.

Judge NG when the ECM output level differs from the actual terminal level.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criteria below becomes more than 2.5 seconds.

#### Judgment Value

| Malfunction Criteria                                 | Threshold Value   |
|--|-------------------|
| After starting the engine                            | 1 seconds or more |
| Engine speed   | ≥ 500 rpm         |
| Ignition switch                                      | ON                |
| Battery voltage                                      | ≥ 10.9 V          |
| Terminal voltage level when ECM transmits OFF signal | Low level         |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                                 | Threshold Value   |
|--|-------------------|
| After starting the engine                            | 1 seconds or more |
| Engine speed   | ≥ 500 rpm         |
| Ignition switch                                      | ON                |
| Battery voltage                                      | ≥ 10.9 V          |
| Terminal voltage level when ECM transmits OFF signal | High level        |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CM:DTC P0692 COOLING FAN 1 CONTROL CIRCUIT HIGH

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the radiator fan circuit.

Judge NG when the ECM output level differs from the actual terminal level.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criteria below becomes more than 2.5 seconds.

#### Judgment Value

| Malfunction Criteria                                | Threshold Value   |
|---|-------------------|
| After starting the engine                           | 1 seconds or more |
| Engine speed  | ≥ 500 rpm         |
| Ignition switch                                     | ON                |
| Battery voltage                                     | ≥ 10.9 V          |
| Terminal voltage level when ECM transmits ON signal | High level        |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                                | Threshold Value   |
|---|-------------------|
| After starting the engine                           | 1 seconds or more |
| Engine speed  | ≥ 500 rpm         |
| Ignition switch                                     | ON                |
| Battery voltage                                     | ≥ 10.9 V          |
| Terminal voltage level when ECM transmits ON signal | Low level         |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

GENERAL DESCRIPTION

## 7. FAIL SAFE

None

## 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CN:DTC P0700 TRANSMISSION CONTROL SYSTEM (MIL REQUEST)

### 1. OUTLINE OF DIAGNOSIS

AT C/U performs CAN communication. It judges as NG if malfunction is detected.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery Voltage      | $\geq 10.9$ V     |

### 3. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

### 4. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds.

Judge OK and clear the NG when the malfunction criteria below are not completed.

#### Judgement Value

| Malfunction Criteria          | Threshold Value |
|-------------------------------|-----------------|
| MIL light up request from TCM | Set             |

**Time needed for diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates simultaneously when malfunction is detected.

### 5. DTC CLEAR CONDITION

- When the OK driving cycle was completed 40 consecutive times.
- When "Clear Memory" was performed.

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 consecutive times.
- When "Clear Memory" was performed.

## 7. FAIL-SAFE

None

## 8. ECM OPERATION AT DTC SETTING

Store the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

### CO:DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (AT MODEL)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the neutral SW.

Judge NG when the ECM neutral terminal input differs from the reception data from TCM.

#### 2. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions     |
|---------------------------|-----------------------|
| Ignition switch           | ON                    |
| Battery voltage           | $\geq 10.9 \text{ V}$ |
| After starting the engine | 2 seconds or more     |
| Starter switch            | OFF                   |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds or more after starting the engine.

#### 4. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 6.5 seconds. Judge OK and clear NG when the malfunction criteria below are not completed.

##### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Neutral switch signal when park/neutral = "OFF" & any other switches = "ON" on AT | Low (ON)        |

**Time Needed for Diagnosis:** 6.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

None

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CP:DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW (MT MODEL)

### 1. OUTLINE OF DIAGNOSIS

Judge the open or short circuit of the neutral SW.

Judge NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

### 2. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions |
|---------------------------|-------------------|
| Ignition switch           | ON                |
| Battery voltage           | $\geq 10.9$ V     |
| After starting the engine | 2 seconds or more |
| Starter switch            | OFF               |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds or more after starting the engine.

### 4. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed 3 time or more after the neutral SW change. And clear NG if there is change in the neutral SW.

#### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Neutral switch signal (while changing from a to b below)                  | Low continues   |
| Driving condition change  | a) to b)        |
| a) Vehicle speed = 0 km/h (0 MPH) & engine speed 600 — 900 rpm            |                 |
| b) Vehicle speed $\geq 64$ km/h (40 MPH) & engine speed 1,600 — 2,550 rpm |                 |

**Time Needed for Diagnosis:** 3 monitoring

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 7. FAIL SAFE

Cruise control: Not allowed to command cruise control.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### CQ:DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (AT MODEL)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the neutral SW.

Judge NG when the ECM neutral terminal input differs from the reception data from TCM.

#### 2. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions     |
|---------------------------|-----------------------|
| Ignition switch           | ON                    |
| Battery voltage           | $\geq 10.9 \text{ V}$ |
| After starting the engine | 2 seconds or more     |
| Starter switch            | OFF                   |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds or more after starting the engine.

#### 4. DIAGNOSTIC METHOD

Judge NG when the continuous time until completing the malfunction criteria below becomes more than 6.5 seconds. Judge OK and clear NG when the malfunction criteria below are not completed.

##### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Neutral switch signal when park/neutral = "ON" & any other switches = "OFF" on AT | High (OFF)      |

**Time Needed for Diagnosis:** 6.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

None

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CR:DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH (MT MODEL)

### 1. OUTLINE OF DIAGNOSIS

Judge the open or short circuit of the neutral SW.

Judge NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

### 2. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions     |
|---------------------------|-----------------------|
| Ignition switch           | ON                    |
| Battery voltage           | $\geq 10.9 \text{ V}$ |
| After starting the engine | 2 seconds or more     |
| Starter switch            | OFF                   |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds or more after starting the engine.

### 4. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed 3 time or more after the neutral SW change. And clear NG if there is change in the neutral SW.

#### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Neutral switch signal (while changing from a to b below)                            | High continues  |
| Driving condition change  | a) to b)        |
| a) Vehicle speed = 0 km/h (0 MPH) & engine speed 600 — 900 rpm                      |                 |
| b) Vehicle speed $\geq 64 \text{ km/h}$ (39.8 MPH) & engine speed 1,600 — 2,550 rpm |                 |

**Time Needed for Diagnosis:** 3 monitoring

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### CS:DTC P1152 O<sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (LOW) (BANK1 SENSOR1)

#### 1. OUTLINE OF DIAGNOSIS

Detect that lambda value remains Low.

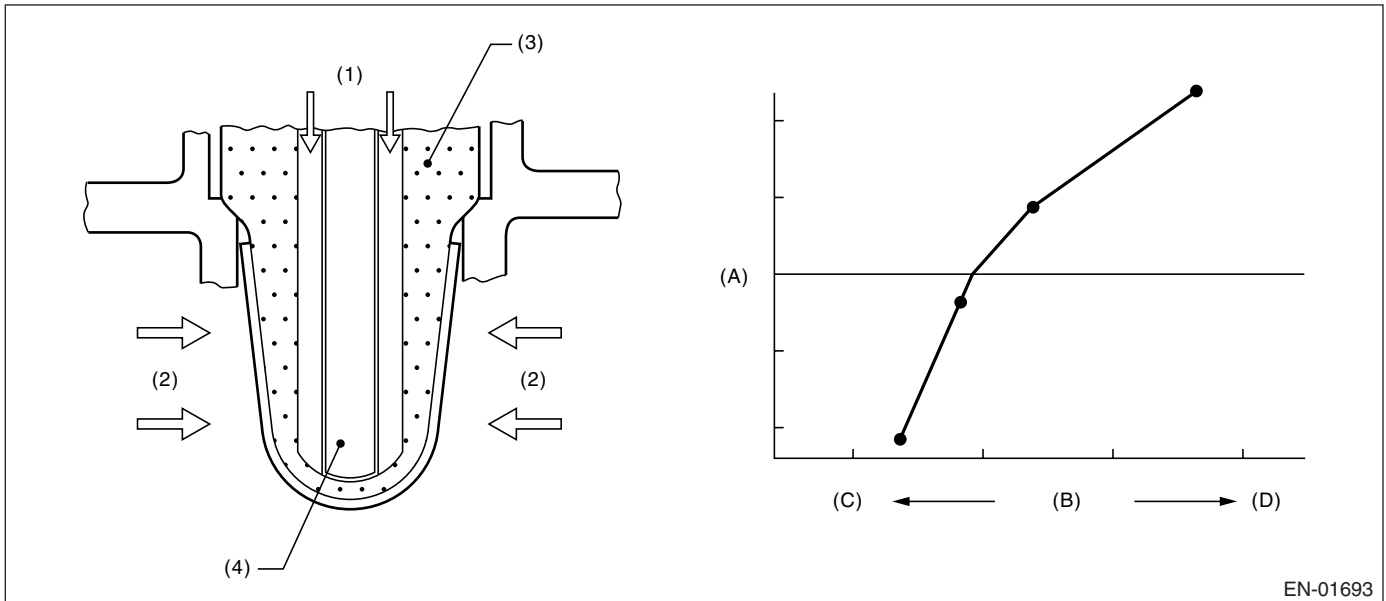

Judge NG when lambda value is abnormal in accordance with lambda value of front oxygen (A/F) sensor and running condition that is vehicle speed, amount of intake air engine coolant temperature, sub feedback control, etc.

***Lambda value = Actual air fuel ratio/Theoretical air fuel ratio***

Lambda > 1: Lean

Lambda < 1: Rich

#### 2. COMPONENT DESCRIPTION

EN-01693

- (1) Atmosphere
- (2) Exhaust
- (3) ZrO<sub>2</sub>
- (4) Ceramic heater

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Lean
- (D) Rich

GENERAL DESCRIPTION

## 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                |
|---|----------------------------------|
| All secondary parameters to be in enable conditions         | 4 seconds or more                |
| Battery voltage   | > 10.9 V                         |
| Atmospheric pressure  | > 75.0 kPa (563 mmHg, 22.2 inHg) |
| Rear oxygen sensor sub feedback                             | Operating                        |
| Rear oxygen sensor output voltage – feedback target voltage | –0.2 V ↔ 0.1 V                   |
| or rear oxygen sensor sub feedback compensation coefficient | On Min.                          |
| or rear oxygen sensor sub feedback compensation coefficient | On Max.                          |
| After engine starting                                       | 60 seconds or more               |
| Engine coolant temperature                                  | ≥ 70°C (158°F)                   |
| Vehicle speed   | ≥ 20 km/h (12 MPH)               |
| Amount of intake air  | ≥ 6 g/s                          |
| Load change during 0.5 engine rev.                          | ≤ 0.01 g/rev                     |
| Impedance of front oxygen (A/F) sensor                      | 0 ↔ 50 Ω                         |
| Learning value of evaporation gas density                   | ≤ 0.2                            |
| Accumulated time of operating canister purge                | 20 seconds or more               |

## 4. GENERAL DRIVING CYCLE

Perform diagnosis continuously at a constant speed of 20 km/h (12 MPH) or more since 60 seconds after starting the engine.

## 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than the time needed for diagnosis (10 seconds). Judge OK and clear NG when the malfunction criteria below are not completed.

### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Output lambda when rear oxygen sensor sub feedback compensation coefficient being at not high limit | ≤ 0.85          |

**Time Needed for Diagnosis:** 10 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

- Front oxygen (A/F) sensor main learning correction: Not allowed to calculate
- Correction when re-starting at high temperature: Normally minimum value 0.3 → 0
- Purge control: Not allowed to purge

| Learning value of evaporation gas density                   | ≤ 0.2                            |
| Accumulated time of operating canister purge                | 20 seconds or more               |

## 4. GENERAL DRIVING CYCLE

Perform diagnosis continuously at a constant speed of 20 km/h (12 MPH) or more since 60 seconds after starting the engine.

## 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than the time needed for diagnosis (10 seconds). Judge OK and clear NG when the malfunction criteria below are not completed.

### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Output lambda when rear O <sub>2</sub> sensor sub feedback compensation coefficient value being at not low limit | ≥ 1.15          |

**Time Needed for Diagnosis:** 10 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

- Front oxygen (A/F) sensor main learning correction: Not allowed to calculate
- Correction when re-starting at high temperature: Normally minimum value 0.3 → 0
- Purge control: Not allowed to purge

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

### CU:DTC P1160 RETURN SPRING FAILURE

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when the valve does not move to the close direction with the motor power stopped and the valve open more than the default opening.

#### 2. COMPONENT DESCRIPTION

EN-01866

- |                          |                         |                                  |
|--------------------------|-------------------------|----------------------------------|
| (1) Opener spring        | (4) Full closed stopper | (7) DC motor                     |
| (2) Return spring        | (5) Throttle valve      | (8) Main and sub throttle sensor |
| (3) Intermediate stopper | (6) Gear                |                                  |

#### 3. ENABLE CONDITION

| Secondary Parameters   | Enable Conditions |
|------------------------|-------------------|
| Throttle opening angle | OFF               |
| Motor continuity       | OFF               |

#### 4. GENERAL DRIVING CYCLE

- Ignition switch ON → OFF
- Ignition switch OFF → ON (After clear memory only)

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.6 seconds.

##### Judgment Value

| Malfunction Criteria                             | Threshold Value |
|--|-----------------|
| Opening variation after continuity is set to OFF | < 2°            |

**Time Needed for Diagnosis:** 600 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

## 8. FAIL SAFE

Fix the throttle opening to 6°.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### CV:DTC P1400 FUEL TANK PRESSURE CONTROL SOLENOID VALVE CIRCUIT LOW

#### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of pressure control solenoid valve. Judge NG when ECM output level is different from actual terminal level.

#### 2. COMPONENT DESCRIPTION

- |                        |                          |
|------------------------|--------------------------|
| (1) Filter             | (A) Atmospheric pressure |
| (2) Coil               | (B) Shut off valve       |
| (3) Connector terminal | (C) To fuel tank         |
| (4) Diaphragm          |                          |
| (5) Valve              |                          |

#### 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions     |
|-----------------------|-----------------------|
| Ignition switch       | ON                    |
| Battery voltage       | $\geq 10.9 \text{ V}$ |
| After engine starting | 1 second or more      |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis after starting the engine.

#### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than time needed for diagnosis (2.5 seconds). Judge OK and clear the NG when the malfunction criteria below are not completed.

##### Judgment Value

| Malfunction Criteria                         | Threshold Value |
|--|-----------------|
| Terminal voltage when ECM outputs off signal | Low             |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in two continuous drive cycles.

- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### CW:DTC P1410 SECONDARY AIR INJECTION SYSTEM SWITCHING VALVE STUCK OPEN

#### 1. OUTLINE OF DIAGNOSIS

Always detect the open malfunction of both electromagnetic valve and reed valve of combi valve. Calculate maximum and minimum values of secondary air supply pipe pressure sensor output voltage during certain period of time after engine starting, and cumulative deviation of output voltage. Judge NG when the difference between max. and min. values, and cumulative deviation are large.

#### 2. ENABLE CONDITION

| Secondary Parameters                            | Enable Conditions  |
|---|--|
| Engine speed                                    | < 500 rpm  |
| After engine starting                           | 9 seconds or more  |
| After secondary air injection system is stopped | 9 seconds or more  |
| Intake air amount                               | 2 g (0.07 oz)/sec. or more and less than 400 g (14.11 oz)/sec. |
| Battery voltage                                 | ≥ 10.9 V   |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when amount of air flow is large while secondary air pump is not operated after engine starting.

#### 4. DIAGNOSTIC METHOD

Pulsation occurs in secondary air supply pipe pressure sensor output when both electromagnetic valve and reed valve of combi valve have open malfunction. Find this pulsation in the following method, and detect the malfunction.

Calculate maximum (max) and minimum (min) values of secondary air supply pipe pressure sensor output voltage, and cumulative deviation (sum) of output voltage during kCOTIM sec. Compare the difference value between maximum and minimum values with threshold value, and also cumulative value with threshold value. Count up the number of times when both values exceed threshold value. Judge NG when the number of times becomes kCOCOT. Judge OK when both of values do not exceed threshold value or only one of them does.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Difference value between maximum and minimum values of internal pressure in pipe | ≥ 0.048 V       |
| Cumulative variation value of internal pressure in pipe at every 4 milliseconds  | ≥ 24 V          |
| Variation value in ambient pressure  | < 4 mmHg        |

**Time Needed for Diagnosis:** 10 seconds × 2 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs.

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

None

GENERAL DESCRIPTION

## DJ:DTC P2004 INTAKE MANIFOLD RUNNER CONTROL STUCK OPEN (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.

Judge open fixing malfunction when the opening degree is large even after finishing the tumble generator valve open driving.

### 2. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions                                 |
|----------------------------|---|
| Battery voltage            | $\geq 10.9$ V                                     |
| Engine coolant temperature | $\geq 0^{\circ}\text{C}$ ( $32^{\circ}\text{F}$ ) |
| Ambient temperature        | $\geq 0^{\circ}\text{C}$ ( $32^{\circ}\text{F}$ ) |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria                         | Threshold Value     |
|--|---------------------|
| Tumble generator valve angle                 | $\geq 67.4^{\circ}$ |
| Tumble generator valve "close" signal output | 2.2 seconds or more |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                         | Threshold Value     |
|--|---------------------|
| Tumble generator valve angle                 | $< 67.4^{\circ}$    |
| Tumble generator valve "close" signal output | 2.2 seconds or more |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

Tumble generator valve opening

- For tumble generator valve all closing points learning, not allowed to update to the closing side.
- For tumble generator valve all opening points learning, not allowed to update to the opening side.

Tumble generator valve control

- Output the open signal.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### DK:DTC P2005 INTAKE MANIFOLD RUNNER CONTROL STUCK OPEN (BANK 2)

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.

Judge open fixing malfunction when the opening degree is large even after finishing the tumble generator valve closing driving.

#### 2. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions             |
|----------------------------|-------------------------------|
| Battery voltage            | $\geq 10.9 \text{ V}$         |
| Engine coolant temperature | $\geq 0^\circ\text{C}$ (32°F) |
| Ambient temperature        | $\geq 0^\circ\text{C}$ (32°F) |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

##### Judgment Value

| Malfunction Criteria                         | Threshold Value     |
|--|---------------------|
| Tumble generator valve angle                 | $\geq 67.4^\circ$   |
| Tumble generator valve "close" signal output | 2.2 seconds or more |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria                         | Threshold Value     |
|--|---------------------|
| Tumble generator valve angle                 | $< 67.4^\circ$      |
| Tumble generator valve "close" signal output | 2.2 seconds or more |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

Tumble generator valve opening

- For tumble generator valve all closing points learning, not allowed to update to the closing side.
- For tumble generator valve all opening points learning, not allowed to update to the opening side.

Tumble generator valve control

- Output the open signal.

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## DL:DTC P2006 INTAKE MANIFOLD RUNNER CONTROL STUCK CLOSED (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.

Judge close fixing malfunction when the opening degree is small even after finishing the tumble generator valve open driving.

### 2. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions             |
|----------------------------|-------------------------------|
| Battery voltage            | $\geq 10.9 \text{ V}$         |

## DN:DTC P2008 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT / OPEN (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of tumble generator valve motor.

Judge NG when the open signal is sent from IC after tumble generator valve driving IC diagnosis.

### 2. COMPONENT DESCRIPTION

- (1) Engine control module (ECM)
- (2) Tumble generator valve
- (3) Battery

EN-01789

### 3. ENABLE CONDITION

| Secondary Parameters                         | Enable Conditions       |
|--|-------------------------|
| Battery voltage                              | ≥ 10.9 V                |
| ECM output signal                            | before set ON → OFF     |
| Tumble generator valve ON signal output time | 20 milliseconds or more |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

At the main IC, check the sent signal at each timing which occurs just before the tumble generator valve output is set to ON and OFF, and judge open NG when the open NG signal is sent during 1 second in a row. Judge OK and clear the NG when the OK signal is sent.

#### Judgment Value

| Malfunction Criteria        | Threshold Value |
|-----------------------------|-----------------|
| Open NG signal input        | Low             |
| Overcurrent NG signal input | High            |

**Time Needed for Diagnosis:** 10 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Tumble generator valve control: Not allowed to move tumble generator valve.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

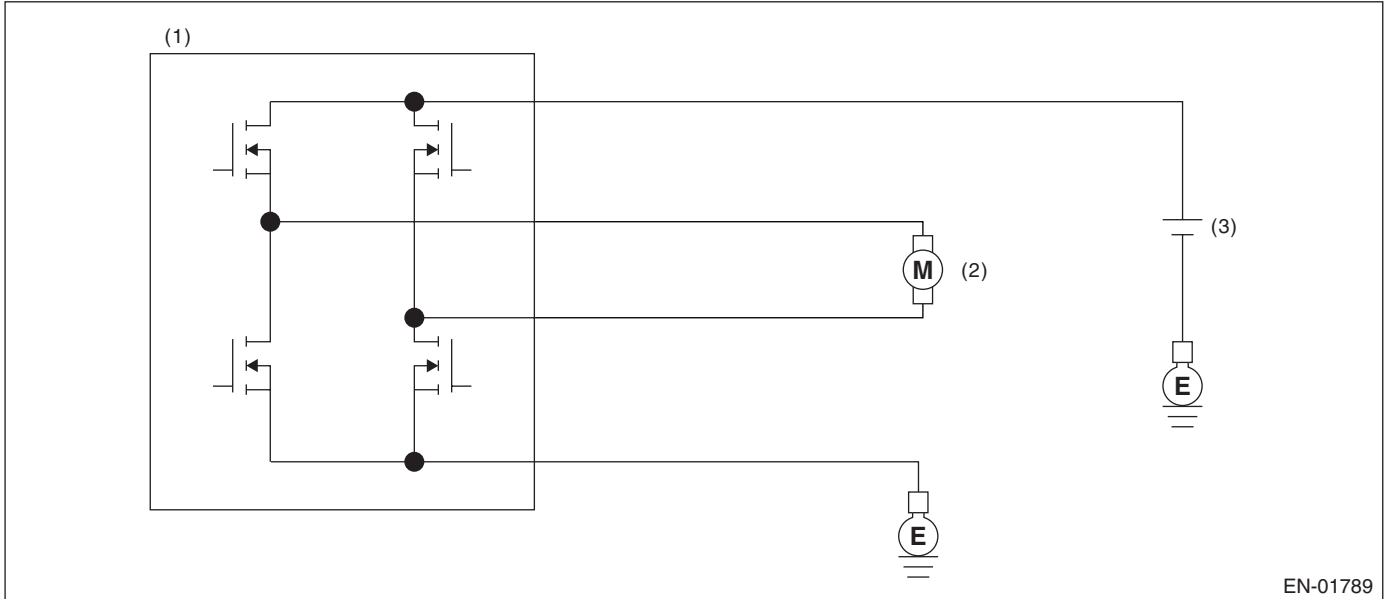

## DO:DTC P2009 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT LOW (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of tumble generator valve motor.

Judge NG when the overcurrent signal is sent from IC after tumble generator valve driving IC diagnosis.

### 2. COMPONENT DESCRIPTION

- (1) Engine control module (ECM)
- (2) Tumble generator valve
- (3) Battery

### 3. ENABLE CONDITION

| Secondary Parameters                         | Enable Conditions       |
|--|-------------------------|
| Battery voltage                              | $\geq 10.9$ V           |
| ECM output signal                            | Before set ON → OFF     |
| Tumble generator valve ON signal output time | 20 milliseconds or more |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

NG signal is sent to main IC. At the main IC, check the sent signal at each timing which occurs just before the tumble generator valve output is set to ON and OFF, and judge overcurrent NG when the overcurrent NG signal is sent during 1 second in a row. Judge OK and clear the NG when the OK signal is sent.

#### Judgment Value

| Malfunction Criteria        | Threshold Value |
|-----------------------------|-----------------|
| Open NG signal input        | High            |
| Overcurrent NG signal input | Low             |

**Time Needed for Diagnosis:** 10 seconds

## DW:DTC P2089 OCV SOLENOID VALVE SIGNAL A CIRCUIT SHORT (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of oil flow control solenoid valve.

Judge open NG when the current flow is small whereas duty signal is large, and judge short NG when the current flow is large whereas duty signal is small.

### 2. ENABLE CONDITION

| Secondary Parameter | Enable Condition |
|---------------------|------------------|
| Battery voltage     | $\geq 10.9$ V    |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

#### Judgment Value

| Malfunction Criteria               | Threshold Value |
|------------------------------------|-----------------|
| OCV solenoid valve duty            | $< 0.39\%$      |
| OCV solenoid valve present current | $\geq 0.306$ A  |

**Time Needed for Diagnosis:** 2,000 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Target current value of OCV solenoid valve – Control current value of OCV solenoid valve | $< 0.08$ A      |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 7. FAIL SAFE

- Ignition timing whole learning compensation:
  - Enter the initial value (whole learning compensation factor = 0.5, Variable amount of whole learning compensation factor = 0.25) to the whole learning compensation factor and variable amount of whole learning compensation factor when IG OFF, and then make the whole learning incomplete.
  - Enter the initial value (whole learning compensation factor = 0.5, Variable amount of whole learning compensation factor = 0.25) to the whole learning compensation factor and variable amount of whole learning compensation factor when making a normality judgment from abnormality judgment, and then make the whole learning incomplete.
- Ignition timing partial learning compensation:
  - Enter the initial value (0°CA) to the compensation value of partial learning zone when IG OFF.
  - Enter the initial value (0°CA) to the compensation value of partial learning zone when making a normality judgment from abnormality judgment.
- AVCS control:
  - Most timing retard learning is not complete or most timing retard learning completion is not experienced.
  - ISC feedback compensation: Do not perform the AVCS actual timing advance compensation.
  - Make the OCV driving Duty to be the given value (9.36%).

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## DX:DTC P2092 OCV SOLENOID VALVE SIGNAL A CIRCUIT OPEN (BANK 2)

### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of oil flow control valve solenoid.

Judge open NG when the current flow is small whereas duty signal is large, and judge short NG when the current flow is large whereas duty signal is small.

### 2. ENABLE CONDITION

| Secondary Parameter | Enable Condition |
|---------------------|------------------|
| Battery voltage     | $\geq 10.9$ V    |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

#### Judgment Value

| Malfunction Criteria        | Threshold Value |
|-----------------------------|-----------------|
| OCV control duty            | $\geq 99.61\%$  |
| OCV control present current | $< 0.306$ A     |

**Time Needed for Diagnosis:** 2000 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

#### Judgment Value

| Malfunction Criteria                                       | Threshold Value |
|--|-----------------|
| Target current value of OCV                                | $\geq 0.14\%$   |
| Target current value of OCV – Control current value of OCV | $\geq 0.08$ A   |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 7. FAIL SAFE

- Ignition timing whole learning compensation:
  - Enter the initial value (whole learning compensation factor = 0.5, Variable amount of whole learning compensation factor = 0.25) to the whole learning compensation factor and variable amount of whole learning compensation factor when IG OFF, and then make the whole learning incomplete.

  - ISC feedback compensation: Do not perform the AVCS actual timing advance compensation.
  - Make the OCV driving Duty to be the given value (9.36%).

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## DZ:DTC P2096 POST CATALYST FUEL TRIM SYSTEM TOO LEAN BANK 1

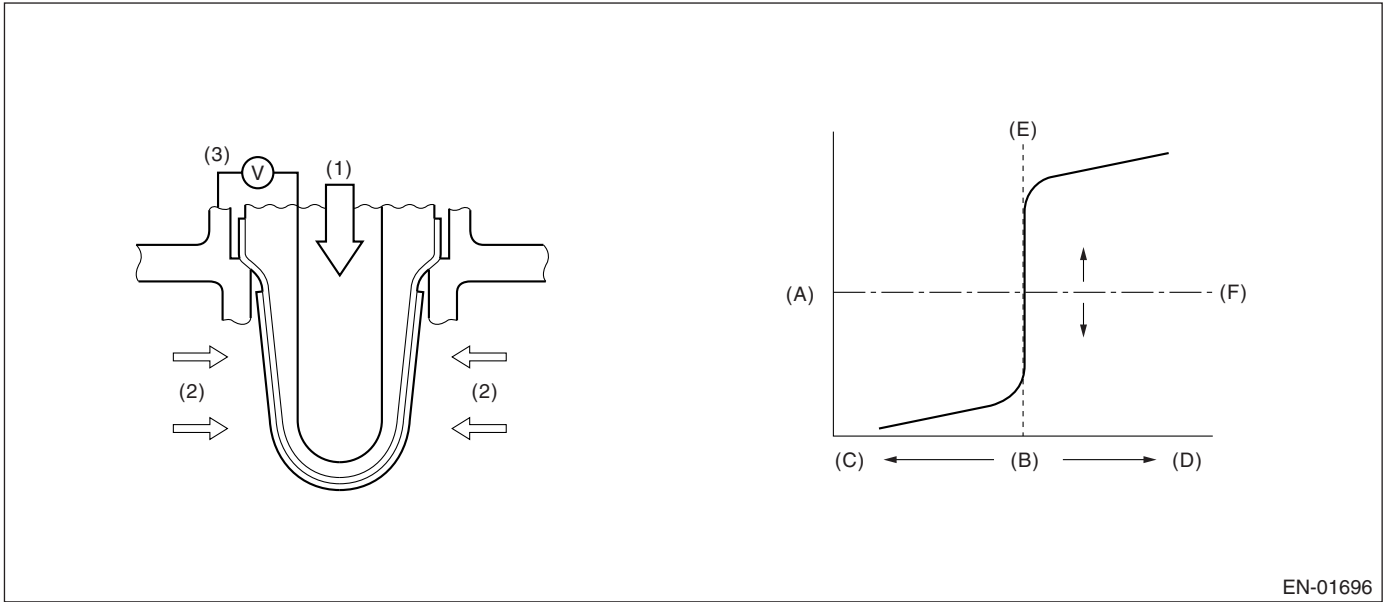

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the amount of sub feedback control, if it is shifted to rich or lean. If the sub feedback amount from the engine started till ignition switch OFF is shifted to rich or lean, judge as insufficient sub feedback amount.

If insufficient, change the sub feedback amount guard value and shift judge line, and increment the guard operation counter (tentative NG counter).

Judge NG when the guard operation counter (tentative NG counter) exceeds the specified value and sub feedback amount is shifted to rich or lean.

### 2. COMPONENT DESCRIPTION

- (1) Atmosphere
- (2) Exhaust gas
- (3) Electromotive force

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Rich
- (D) Lean
- (E) Theoretical air fuel ratio
- (F) Comparative voltage

### 3. ENABLE CONDITION

| Secondary Parameters                         | Enable Conditions |
|--|-------------------|
| Continuous time of completing all conditions | 1 second or more  |
| Sub feedback learning enable condition       | Completed         |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously at a constant speed at more than approx. 75 km/h (47 MPH).

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria becomes more than 5 seconds. Judge OK and clear NG when the continuous time of incompleting the malfunction criteria becomes more than 5 seconds.

#### Judgment Value

| Malfunction Criteria        | Threshold Value |
|-----------------------------|-----------------|
| Sub feedback learning value | < -0.018        |

**Time Needed for Diagnosis:** 5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When OK with similar drive in 3 drive cycles.
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## EA:DTC P2097 POST CATALYST FUEL TRIM SYSTEM TOO RICH BANK 1

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the amount of sub feedback control, if it is shifted to rich or lean. If the sub feedback amount from the engine started till ignition switch OFF is shifted to rich or lean, judge as insufficient sub feedback amount.

If insufficient, change the sub feedback amount guard value and shift judge line, and increment the guard operation counter (tentative NG counter).

Judge NG when the guard operation counter (tentative NG counter) exceeds the specified value and sub feedback amount is shifted to rich or lean.

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | $\geq 0.219$ V  |

**Time Needed for Diagnosis:** 100 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 8. FAIL SAFE

- Single malfunction: Control with normal sensor
- Multi malfunction: Fix the throttle opening angle to 6°.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## EI: DTC P2128 THROTTLE/PEDAL POSITION SENSOR/SWITCH “E” CIRCUIT HIGH INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 2.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-01861

- |  |  |
|--|--|
| (1) Engine control module (ECM)                | (3) Accelerator pedal position sensor 2 signal |
| (2) Accelerator pedal position sensor 1 signal | (4) Accelerator pedal position sensor          |

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | ≤ 4.781 V       |

**Time Needed for Diagnosis:** 100 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 8. FAIL SAFE

- Single malfunction: Control with normal sensor
- Multi malfunction: Fix the throttle opening angle to 6°.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## EJ: DTC P2135 THROTTLE/PEDAL POSITION SENSOR/SWITCH “A”/“B” VOLTAGE CORRELATION

### 1. OUTLINE OF DIAGNOSIS

Judge NG when the signal level of throttle position sensor 1 is different from the throttle position sensor 2.

### 2. COMPONENT DESCRIPTION

EN-01859

- (1) Throttle position sensor 1 signal      (3) Throttle position sensor  
 (2) Throttle position sensor 2 signal      (4) Engine control module (ECM)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                  | Threshold Value |
|---------------------------------------|-----------------|
| Signal difference between two sensors | $\leq 4.25$     |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## Details of Judgment Value

EN-04083

(1) Sensor output difference (°)

(2) Throttle position sensor 1 opening angle (°)

(3) NG area

**Time Needed for Diagnosis:** 212 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 8. FAIL SAFE

Stop the continuity to ETC motor. (Fix the throttle opening angle to 6°.)

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### EK:DTC P2138 THROTTLE/PEDAL POSITION SENSOR/SWITCH “D”/“E” VOLT-AGE CORRELATION

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when the signal level of throttle position sensor 1 is different from the throttle position sensor 2.

#### 2. COMPONENT DESCRIPTION

EN-01861

- |  |  |
|--|--|
| (1) Engine control module (ECM)                | (3) Accelerator pedal position sensor 2 signal |
| (2) Accelerator pedal position sensor 1 signal | (4) Accelerator pedal position sensor          |

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria                  | Threshold Value   |
|---------------------------------------|-------------------|
| Signal difference between two sensors | $\leq 0.77^\circ$ |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## Details of Judgment Value

EN-04084

- (1) Sensor output difference (°)      (2) Accelerator pedal position sensor 2 opening angle (°)      (3) NG area

### Time Needed for Diagnosis:

- 116 milliseconds (For NG)
- 1,000 milliseconds (For OK)

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Fix the throttle opening angle to 6°.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### EL:DTC P2227 BAROMETRIC PRESSURE TOO LOW

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of atmospheric pressure sensor output property. Judge NG when the atmospheric pressure sensor output is largely different from the intake manifold pressure at engine starting.

#### 2. COMPONENT DESCRIPTION

Atmospheric pressure sensor is built in ECM.

#### 3. ENABLE CONDITION

| Secondary Parameters            | Enable Conditions |
|---------------------------------|-------------------|
| Engine speed at engine starting | < 300 rpm         |
| Vehicle speed                   | < 1 km/h (1 MPH)  |

#### 4. GENERAL DRIVING CYCLE

Perform the diagnosis once before engine starting with the ignition switch ON.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.3 seconds.

##### Judgment Value

| Malfunction Criteria   | Threshold Value                       |
|--|---------------------------------------|
| Atmospheric – manifold absolute pressure                                 | $\geq 26.7$ kPa (200 mmHg, 7.88 inHg) |
| Intake manifold pressure at engine starting – manifold absolute pressure | $< 1.33$ kPa (10 mmHg, 2.95 inHg)     |

**Time Needed for Diagnosis:** 0.3 seconds

**Malfunction Indicator Light Illumination:** Detect when malfunction occurs in 2 continuous driving cycles.

##### • Normality Judgment

Judge OK and clear the NG when the continuous time of completing the malfunction criteria below becomes more than 0.26 seconds.

##### Judgment Value

| Malfunction Criteria                     | Threshold Value                    |
|--|------------------------------------|
| Atmospheric – manifold absolute pressure | $< 26.7$ kPa (200 mmHg, 7.88 inHg) |

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 8. FAIL SAFE

Atmospheric pressure sensor process: Fix the atmospheric pressure to 101.3 kPa (760 mmHg, 29.8 inHg).

#### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## EM:DTC P2228 ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (LOW INPUT)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of atmospheric pressure sensor.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

Atmospheric pressure sensor is built in ECM.

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | < 0.118 V       |

**Time Needed for Diagnosis:** 0.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | $\geq 0.118$ V  |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Atmospheric pressure sensor process: Fix the atmospheric pressure to 101.3 kPa (760 mmHg, 29.9 inHg).

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### EN:DTC P2229 ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (HIGH INPUT)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of atmospheric pressure sensor.  
Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

Atmospheric pressure sensor is built in ECM.

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | $\geq 4.936$ V  |

**Time Needed for Diagnosis:** 0.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | $< 4.936$ V     |

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 8. FAIL SAFE

Atmospheric pressure sensor process: Fix the atmospheric pressure to 101.3 kPa (760 mmHg, 29.9 inHg).

#### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## EO:DTC P2431 SECONDARY AIR INJECTION SYSTEM AIR FLOW / PRESSURE SENSOR CIRCUIT RANGE / PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of secondary air pressure sensor output property.

Judge NG when the secondary air pressure sensor output is largely different from the intake manifold pressure at engine starting.

### 2. ENABLE CONDITION

| Secondary Parameters                            | Enable Conditions   |
|---|---------------------|
| Engine speed at starting                        | < 300 rpm           |
| Vehicle speed                                   | < 1 km/h            |
| After secondary air injection system is stopped | More than 3 seconds |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis with ignition switch ON.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.3 seconds.

#### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Secondary air pipe pressure - Intake manifold pressure          | ≥ 200 mmHg      |
| Intake manifold pressure at starting - Intake manifold pressure | < 10 mmHg       |

**Time Needed for Diagnosis:** 0.3 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear the NG when the continuous time of completing the malfunction criteria below becomes more than 0.26 seconds.

#### Judgment Value

| Malfunction Criteria                                   | Threshold Value |
|--|-----------------|
| Secondary air pipe pressure - Intake manifold pressure | < 200 mmHg      |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### EP:DTC P2432 SECONDARY AIR INJECTION SYSTEM AIR FLOW / PRESSURE SENSOR CIRCUIT LOW

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when out of the standard value.

#### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| OFF                  |                   |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | < 0.568 V       |

**Time Needed for Diagnosis:** 0.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | ≥ 0.568 V       |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## EV:DTC P2444 SECONDARY AIR INJECTION SYSTEM PUMP STUCK ON

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction (always ON) of secondary air pump.

Judge NG when the secondary air supply pipe pressure is higher than atmospheric pressure.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| OFF                  |                   |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

Judge NG when the secondary air supply pipe pressure is higher than atmospheric pressure though it should become atmospheric pressure with the secondary air pump OFF.

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 5 seconds.

#### Judgment Value

| Malfunction Criteria                             | Threshold Value                                     |
|--|---|
| Presumed ambient temperature                     | $\geq 4.4^{\circ}\text{C}$ ( $40^{\circ}\text{F}$ ) |
| Battery voltage                                  | $\geq 10.9\text{ V}$                                |
| After secondary air injection system is operated | More than 0.6 seconds                               |
| Battery voltage                                  | $\geq 7\text{ V}$                                   |
| Atmospheric pressure                             | $\geq 75.0\text{ kPa}$ (563 mmHg, 22.15 inHg)       |
| Engine   | In operation  |
| After secondary air injection system is stopped  | More than 3 seconds                                 |
| Secondary air pipe pressure (absolute pressure)  | > Value of Map 22                                   |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### Map 22

| Unit: kPa (mmHg, inHg) |      | Ambient pressure (kPa (mmHg, inHg)) |                   |                   |                    |                    |                    |                    |                    |

|                        | 11.5 | 79.3 (595, 23.42)                   | 85.4 (641, 25.22) | 91.6 (687, 27.05) | 97.7 (733, 28.86)  | 103.7 (778, 30.63) | 109.8 (824, 32.43) | 116.0 (870, 34.26) | 122.1 (916, 36.06) |
|                        | 12.5 | 80.8 (606, 23.86)                   | 86.9 (652, 25.67) | 93.2 (699, 27.53) | 99.3 (745, 29.33)  | 105.6 (792, 31.19) | 111.7 (838, 32.99) | 118.0 (885, 34.85) | 124.2 (932, 36.68) |
|                        | 13.5 | 82.1 (616, 24.25)                   | 88.4 (663, 26.11) | 94.8 (711, 28.0)  | 101.0 (758, 29.83) | 107.3 (805, 31.69) | 113.7 (853, 33.58) | 120.0 (900, 35.44) | 126.2 (947, 37.27) |
|                        | 14.5 | 83.4 (626, 24.63)                   | 89.8 (674, 26.52) | 96.2 (722, 28.41) | 102.8 (771, 30.36) | 109.2 (819, 32.25) | 115.6 (867, 34.14) | 122.0 (915, 36.03) | 128.4 (963, 37.92) |
|                        | 15.5 | 84.8 (636, 25.05)                   | 89.8 (685, 26.52) | 97.8 (734, 28.89) | 104.4 (783, 30.83) | 110.9 (832, 32.75) | 117.4 (881, 34.67) | 124.0 (930, 36.62) | 130.5 (979, 68.54) |

**Time Needed for Diagnosis:** 5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs.

**• Normality Judgment**

Judge OK and clear the NG when the continuous time of completing the malfunction criteria below becomes more than 5 seconds.

**Judgment Value**

| Malfunction Criteria                             | Threshold Value                   |
|--|-----------------------------------|
| Presumed ambient temperature                     | ≥ 4.4°C (40°F)                    |
| Battery voltage                                  | ≥ 10.9 V                          |
| After secondary air injection system is operated | More than 0.6 seconds             |
| Battery voltage                                  | ≥ 7 V                             |
| Atmospheric pressure                             | ≥ 75.0 kPa (563 mmHg, 22.15 inHg) |
| Engine   | In operation                      |
| After secondary air injection system is stopped  | More than 3 seconds               |
| Secondary air pipe pressure (absolute pressure)  | ≤ Value of Map 22                 |

**5. DTC CLEAR CONDITION**

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

**6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION**

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

**7. FAIL SAFE**

None

**8. ECM OPERATION AT DTC SETTING**

Memorize the freeze frame data. (For test mode \$02)

# General Description

FUEL INJECTION (FUEL SYSTEMS)

## C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.

- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.
- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

## D: PREPARATION TOOL

| ILLUSTRATION  | TOOL NUMBER | DESCRIPTION       | REMARKS  |
|---|-------------|-------------------|--|
| <br><br>ST42099AE000 | 42099AE000  | CONNECTOR REMOVER | Used for removing quick connector in engine compartment. |

### 2. Throttle Body

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
- 3) Disconnect the connector from the throttle position sensor (A) and manifold absolute pressure sensor (B).

- 4) Disconnect the engine coolant hoses from the throttle body.

- 5) Remove the bolts which secure the throttle body to intake manifold.

#### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Always use a new gasket.

**Tightening torque:**

**8 N·m (0.8 kgf-m, 5.8 ft-lb)**

## 3. Intake Manifold

### A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Open the fuel filler flap lid and remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.
- 4) Lift up the vehicle.
- 5) Remove the under cover.
- 6) Drain the engine coolant about 3.0 ℓ (3.2 US qt, 2.6 Imp qt).

- 7) Remove the air cleaner upper cover and air intake boot. <Ref. to IN(STI)-8, REMOVAL, Air Cleaner Case.>
- 8) Remove the air cleaner element.
- 9) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
- 10) Remove the coolant filler tank. <Ref. to CO(H4DOTC)-33, REMOVAL, Coolant Filler Tank.>
- 11) Remove the power steering pump.
  - (1) Remove the front side V-belt. <Ref. to ME(STI)-40, REMOVAL, V-belt.>
  - (2) Disconnect the power steering switch connector.

- (3) Remove the bolts which secure the power steering pipe brackets to the intake manifold.

### NOTE:

Do not disconnect the power steering hose.

- (4) Remove the bolts which secure the power steering pump bracket.

- (5) Remove the power steering tank from the bracket by pulling it upward.

- (6) Place the power steering pump on the right side wheel apron.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

12) Disconnect the emission hose (A) and connector (B) from the PCV hose assembly.

13) Disconnect the engine coolant hoses from the throttle body.

14) Disconnect the brake booster hose.

15) Disconnect the pressure hose from the intake duct.

16) Disconnect the engine harness connectors from the bulkhead harness connectors.

17) Disconnect the engine harness connector from front harness connector.

18) Disconnect the connectors from the engine coolant temperature sensor (A), oil pressure switch (B) and crankshaft position sensor (C).

19) Disconnect the knock sensor connector.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

20) Disconnect the connector from the camshaft position sensor.

21) Disconnect the connector from the ignition coil and ignitor assembly.

- RH side

- LH side

22) Disconnect the engine harness fixed by clip (A) from the rocker cover.

- RH side

- LH side

23) Using ST, disconnect fuel hoses from fuel pipes. <Ref. to FU(STI)-60, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

### CAUTION:

- Be careful not to spill fuel.
- Catch fuel from hoses using a container or cloth.

ST 42099AE000 CONNECTOR REMOVER

- (A) Fuel delivery hose
- (B) Return hose
- (C) Evaporation hose

24) Remove the bolts which secure the intake manifold to the cylinder heads.

25) Remove the intake manifold.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

### B: INSTALLATION

1) Install the intake manifold onto cylinder heads.

NOTE:

Always use new gaskets.

**Tightening torque:**

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

2) Connect the fuel delivery hose, return hose and evaporation hose.

NOTE:

If fuel hoses or clamps are damaged, replace them with new ones.

3) Connect the connector to the oil pressure switch (B), crankshaft position sensor (C) and engine coolant temperature sensor (A).

4) Connect the connector to the knock sensor.

5) Connect the connector to the camshaft position sensor.

6) Connect the connector to the ignition coil and ignitor assembly.

- RH side

- LH side

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

7) Connect the engine harness with clip (A) to the rocker cover.

- RH side

- LH side

8) Connect the engine harness connector to the front harness connectors.

9) Connect the engine harness connector to the bulkhead harness connectors.

10) Connect the brake booster vacuum hose.

11) Connect the engine coolant hoses to the throttle body.

12) Connect the emission hose (A) and connector (B) to the PCV hose assembly.

13) Connect the pressure hose to the intake duct.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

14) Install the power steering pump.

(1) Install the power steering tank on the bracket.

(2) Connect the connector to the power steering pump switch.

(3) Install the power steering pump, and tighten the bolts.

### Tightening torque:

**22 N·m (2.2 kgf-m, 15.9 ft-lb)**

(4) Install the power steering pipe brackets on the intake manifold RH.

(5) Install the front side V-belt. <Ref. to ME(STI)-40, INSTALLATION, V-belt.>

15) Install the coolant filler tank. <Ref. to CO(H4DOTC)-33, INSTALLATION, Coolant Filler Tank.>

16) Install the intercooler. <Ref. to IN(STI)-11, INSTALLATION, Intercooler.>

17) Install the air cleaner element.

18) Install the air cleaner upper cover and air intake duct as a unit. <Ref. to IN(STI)-8, INSTALLATION, Air Cleaner Case.>

19) Connect the connector to the fuel pump relay.

20) Connect the battery ground cable to battery.

21) Lift up the vehicle.

22) Install the under cover.

23) Fill the engine coolant. <Ref. to CO(H4DOTC)-17, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

## C: DISASSEMBLY

1) Remove the fuel pipe protector RH.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

2) Remove the engine ground terminal from the intake manifold.

3) Disconnect the connector from the throttle position sensor (A) and manifold absolute pressure sensor (B).

4) Remove the throttle body from the intake manifold.

5) Disconnect the connector from the fuel injector.

6) Disconnect the connector from the tumble generator valve actuator.

7) Disconnect the connector from the tumble generator valve sensor.

8) Disconnect the connector from the purge control solenoid valve.

9) Remove the purge control solenoid valve.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

10) Disconnect the evaporation hose and purge valve from the intake manifold.

11) Remove the two bolts which hold the fuel pipes on the left side of intake manifold.

12) Remove the bolt which hold the fuel injector pipe onto intake manifold.

• LH SIDE

• RH SIDE

13) Remove the harness bracket which holds the engine harness onto intake manifold.

14) Remove the engine harness from the intake manifold.

15) Loosen the clamp which holds the front left side fuel hose to injector pipe, and then remove the pipe from clamp.

# Intake Manifold

FUEL INJECTION (FUEL SYSTEMS)

16) Loosen the clamp which holds the right side fuel hose to injector pipe, and then remove the pipe from clamp.

17) Remove the bolts which install the fuel pipe on intake manifold.

18) Remove the fuel pipe assembly and pressure regulator from the intake manifold.

19) Remove the intake duct from the intake manifold.

20) Remove the tumble generator valve assembly from the intake manifold.

## D: ASSEMBLY

NOTE:

Replace the gasket with a new one.

1) Install the tumble generator valve assembly to the intake manifold.

**Tightening torque:**

**8.25 N·m (0.84 kgf-m, 6.1 ft-lb)**

2) Install the air intake duct to the intake manifold.

**Tightening torque:**

**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

3) Install the fuel pipe assembly and pressure regulator to the intake manifold.

**Tightening torque:**

**T1: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

**T2: 19 N·m (1.94 kgf-m, 13.7 ft-lb)**

4) Install the fuel injector pipe LH.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

5) Connect the left side fuel hose to injector pipe, and tighten the clamp screw.

6) Install the fuel injector pipe RH.  
7) Connect the right side fuel hose to injector pipe, and tighten the clamp screw.

8) Install the engine harness to the intake manifold.  
9) Install the harness bracket which holds the engine harness onto intake manifold.

**Tightening torque:**  
**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

10) Tighten the bolts which install the fuel injector pipe onto intake manifold.

**Tightening torque:**  
**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

### • LH SIDE

### • RH SIDE

11) Tighten the two bolts which install the fuel pipes on the left side of intake manifold.

# Intake Manifold

**Tightening torque:**  
**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

12) Connect the evaporation hoses to the purge valve.

**NOTE:**  
Connect the evaporation hoses as shown in the figure.

- (A) To intake duct
- (B) To intake manifold
- (C) To purge control solenoid valve
- (D) To fuel pipe ASSY

13) Connect the evaporation hose and purge valve to the intake manifold.

14) Install the purge control solenoid valve.

**Tightening torque:**  
**16 N·m (1.6 kgf-m, 11.8 ft-lb)**

15) Connect the hoses to the purge control solenoid valve.

**NOTE:**  
Connect the evaporation hoses as shown in the figure.

- (A) To purge valve
- (B) To intake manifold

16) Connect the connector to the purge control solenoid valve.

17) Connect the connector to the tumble generator valve sensor.

# Intake Manifold

## FUEL INJECTION (FUEL SYSTEMS)

18) Connect the connector to the tumble generator valve actuator.

FU-00616

19) Connect the connector to the fuel injector.

FU-01043

20) Install the throttle body to the intake manifold.

NOTE:

Replace the gasket with a new one.

**Tightening torque:**

**8 N·m (0.8 kgf-m, 5.8 ft-lb)**

FU-01075

21) Connect the connector to the throttle position sensor (A) and manifold absolute pressure sensor (B).

FU-01073

22) Install the engine ground terminal to the intake manifold.

**Tightening torque:**

**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

FU-01041

FU-01042

23) Install the fuel pipe protector RH.

**Tightening torque:**

**19 N·m (1.94 kgf-m, 13.7 ft-lb)**

FU-01040

## **E: INSPECTION**

Make sure the fuel pipe and fuel hoses are not cracked and the connections are tightened securely.

## 4. Engine Coolant Temperature Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the generator. <Ref. to SC(H4SO)-14, REMOVAL, Generator.>
- 3) Drain the engine coolant. <Ref. to CO(H4DOTC)-17, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 4) Disconnect the connector from the engine coolant temperature sensor.

- 5) Remove the engine coolant temperature sensor.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

**Tightening torque:**

**18 N·m (1.8 kgf·m, 13.3 ft-lb)**

# Crankshaft Position Sensor

FUEL INJECTION (FUEL SYSTEMS)

---

## 5. Crankshaft Position Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the bolt which installs the crankshaft position sensor to cylinder block.

- 3) Remove the crankshaft position sensor, and disconnect the connector from it.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

***T: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)***

## 6. Camshaft Position Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from the camshaft position sensor RH.
- 3) Remove the camshaft position sensor RH from the backside of cylinder head.

- 4) Remove the camshaft position sensor LH same as RH side.

### B: INSTALLATION

Install in the reverse order of removal.

#### ***Tightening torque:***

***6.4 N·m (0.65 kgf-m, 4.7 ft-lb)***

# Knock Sensor

FUEL INJECTION (FUEL SYSTEMS)

## 7. Knock Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
- 3) Disconnect the knock sensor connector.

- 4) Remove the knock sensor from the cylinder block.

### B: INSTALLATION

- 1) Install the knock sensor to the cylinder block.

#### **Tightening torque:**

**24 N·m (2.4 kgf·m, 17.4 ft·lb)**

#### **NOTE:**

Extraction area of the knock sensor cord must be positioned at a 60° angle relative to the engine rear.

(A) Front side

- 2) Connect the knock sensor connector.

- 3) Install the intercooler. <Ref. to IN(STI)-11, INSTALLATION, Intercooler.>
- 4) Connect the battery ground cable to battery.

## 8. Mass Air Flow and Intake Air Temperature Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from mass air flow and intake air temperature sensor.
- 3) Remove the mass air flow and intake air temperature sensor.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**1.7 N·m (0.17 kgf-m, 1.3 ft-lb)**

# Manifold Absolute Pressure Sensor

FUEL INJECTION (FUEL SYSTEMS)

---

## 9. Manifold Absolute Pressure Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connectors from manifold absolute pressure sensor.

- 3) Remove the manifold absolute pressure sensor from the throttle body.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Replace the O-rings for the manifold absolute pressure sensor with new ones.

#### *Tightening torque:*

***1.6 N·m (0.16 kgf-m, 1.2 ft-lb)***

## 10. Fuel Injector

### A: REMOVAL

#### 1. RH SIDE

- 1) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Open the fuel filler flap lid and remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.
- 4) Remove the fuel pipe protector RH.

- 5) Disconnect the connector from the fuel injector.
- 6) Remove the screw and remove the fuel injector.

#### 2. LH SIDE

- 1) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Open the fuel filler flap lid and remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.
- 4) Remove the intake manifold. <Ref. to FU(STI)-13, REMOVAL, Intake Manifold.>
- 5) Disconnect the connector from the fuel injector.

- 6) Remove the screw and remove the fuel injector.

### B: INSTALLATION

#### 1. RH SIDE

Install in the reverse order of removal.

NOTE:

Replace the O-rings with new ones.

#### 2. LH SIDE

Install in the reverse order of removal.

NOTE:

Replace the O-rings with new ones.

# Tumble Generator Valve Assembly

FUEL INJECTION (FUEL SYSTEMS)

## 11. Tumble Generator Valve Assembly

### A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Open the fuel filler flap lid and remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.
- 4) Remove the intake manifold. <Ref. to FU(STI)-13, REMOVAL, Intake Manifold.>
- 5) Disconnect the connector from the tumble generator valve sensor.

- 6) Disconnect the connector from the tumble generator valve actuator.

- 7) Remove the fuel injector. <Ref. to FU(STI)-31, REMOVAL, Fuel Injector.>
- 8) Remove the tumble generator valve body from the intake manifold.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Always use new gaskets.

**Tightening torque:**

**8.25 N·m (0.84 kgf-m, 6.1 ft-lb)**

### 12. Tumble Generator Valve Position Sensor

#### A: SPECIFICATION

Do not remove the tumble generator valve position sensor from tumble generator valve assembly, since it cannot be adjusted during installation.

Refer to "Tumble Generator Valve Assembly" for removal and installation procedures. <Ref. to FU(STI)-32, REMOVAL, Tumble Generator Valve Assembly.> <Ref. to FU(STI)-32, INSTALLATION, Tumble Generator Valve Assembly.>

# Tumble Generator Valve Actuator

FUEL INJECTION (FUEL SYSTEMS)

## 13. Tumble Generator Valve Actuator

### A: REMOVAL

#### 1. RH SIDE

- 1) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Open the fuel filler flap lid and remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.
- 4) Remove the intake manifold. <Ref. to FU(STI)-13, REMOVAL, Intake Manifold.>
- 5) Disconnect the connector from tumble generator valve actuator RH.
- 6) Remove the tumble generator valve actuator RH.

#### 2. LH SIDE

- 1) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Open the fuel filler flap lid and remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.
- 4) Disconnect the connector from tumble generator valve actuator LH.
- 5) Remove the tumble generator valve actuator LH.

### B: INSTALLATION

#### 1. RH SIDE

Install in the reverse order of removal.

#### 2. LH SIDE

Install in the reverse order of removal.

# Wastegate Control Solenoid Valve

FUEL INJECTION (FUEL SYSTEMS)

## 14. Wastegate Control Solenoid Valve

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the engine harness connector (A) from bracket.
- 3) Disconnect the connector (B) from wastegate control solenoid valve.
- 4) Remove the bracket from body.

- 5) Disconnect the pressure hoses (C) from wastegate control solenoid valve.

- 6) Remove the wastegate control solenoid valve from bracket.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

# Front Oxygen (A/F) Sensor

FUEL INJECTION (FUEL SYSTEMS)

## 15. Front Oxygen (A/F) Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from the front oxygen (A/F) sensor.

- 3) Disconnect the engine harness fixed by clip (A) from the bracket (B).

- 4) Remove the front right side wheel.
- 5) Lift-up the vehicle.
- 6) Remove the service hole cover.

- 7) Apply spray type lubricant to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.
- 8) Remove the front oxygen (A/F) sensor.

### CAUTION:

When removing the oxygen (A/F) sensor, wait until exhaust pipe cools; otherwise, it will damage exhaust pipe.

### B: INSTALLATION

- 1) Before installing front oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

#### Anti-seize compound:

**NEVER-SEEZ NS-165 or equivalent**

### CAUTION:

Never apply anti-seize compound to protector of front oxygen (A/F) sensor.

- 2) Install the front oxygen (A/F) sensor.

#### Tightening torque:

**30 N·m (3.1 kgf-m, 22.1 ft-lb)**

- 3) Install the service hole cover.

- 4) Lower the vehicle.
- 5) Install the front right side wheel.

# Front Oxygen (A/F) Sensor

FUEL INJECTION (FUEL SYSTEMS)

6) Connect the engine harness to the bracket (B) using clips (A).

7) Connect the connector of front oxygen (A/F) sensor.

8) Connect the battery ground cable to battery.

# Rear Oxygen Sensor

FUEL INJECTION (FUEL SYSTEMS)

## 16. Rear Oxygen Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Disconnect the connector from the rear oxygen sensor.

- 4) Remove the clip by pulling out from the upper side of crossmember.

- 5) Apply spray type lubricant to the threaded portion of rear oxygen sensor, and leave it for one minute or more.
- 6) Remove the rear oxygen sensor.

### CAUTION:

**When removing the rear oxygen sensor, wait until exhaust pipe cools; otherwise, it will damage exhaust pipe.**

### B: INSTALLATION

- 1) Before installing rear oxygen sensor, apply anti-seize compound only to the threaded portion of rear oxygen sensor to make the next removal easier.

### CAUTION:

**Never apply anti-seize compound to protector of rear oxygen sensor.**

### Anti-seize compound:

**NEVER-SEEZ NS-165 or equivalent**

- 2) Install the rear oxygen sensor.

### Tightening torque:

**21 N·m (2.1 kgf-m, 15.2 ft-lb)**

- 3) Connect the connector to the rear oxygen sensor.

- 4) Connect the clip to the crossmember.

- 5) Lower the vehicle.
- 6) Connect the battery ground cable to battery.

## 17.Engine Control Module (ECM)

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lower inner trim of the passenger side.  
<Ref. to EI-51, REMOVAL, Lower Inner Trim.>
- 3) Detach the floor mat of the front passenger seat.
- 4) Remove the protect cover.

- 5) Remove the nuts (A) which hold ECM to the bracket.
- 6) Remove the clip (B) from the bracket.

- 7) Disconnect the ECM connectors and take out the ECM.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

- When replacing ECM, be careful not to use the wrong spec. ECM to avoid any damage to the fuel injection system.
- When replacing ECM, be careful not to damage the harnesses and connectors.

## 18.Main Relay

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the passenger's side front side sill cover.
- 3) Remove the bolt which holds the relay bracket on the body.
- 4) Disconnect the connectors from the main relay.

- 5) Remove the main relay from the mounting bracket.

### B: INSTALLATION

Install in the reverse order of removal.

## 19. Fuel Pump Relay

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the passenger's side front side sill cover.
- 3) Remove the bolt which holds relay bracket on the body.
- 4) Disconnect the connector from the fuel pump relay.

- 5) Remove the fuel pump relay from the mounting bracket.

### B: INSTALLATION

Install in the reverse order of removal.

# Electronic Throttle Control Relay

FUEL INJECTION (FUEL SYSTEMS)

---

## 20. Electronic Throttle Control Relay

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the passenger's side front side sill cover.
- 3) Remove the bolt which holds relay bracket on the body.
- 4) Disconnect the connector from electronic throttle control relay.

- 5) Remove the electronic throttle control relay from the mounting bracket.

### B: INSTALLATION

Install in the reverse order of removal.

## 21. Fuel Pump Control Unit

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the rear quarter trim. <Ref. to EI-52, REMOVAL, Rear Quarter Trim.>
- 3) Disconnect the connector from the fuel pump control unit.
- 4) Remove the fuel pump control unit.

### B: INSTALLATION

Install in the reverse order of removal.

### 22. Fuel

#### A: PROCEDURE

##### 1. RELEASING OF FUEL PRESSURE

**WARNING:**

Place “NO FIRE” signs near the working area.

**CAUTION:**

Be careful not to spill the fuel.

- 1) Disconnect the connector from the fuel pump relay.

- 2) Start and run the engine until it stalls.
- 3) After the engine stalls, crank it for five more seconds.
- 4) Turn the ignition switch to OFF.

##### 2. DRAINING FUEL

• Model with fuel drain plug

**WARNING:**

Place “NO FIRE” signs near the working area.

**CAUTION:**

Be careful not to spill the fuel.

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Open the fuel filler flap lid, and remove the fuel filler cap.
- 4) Lift-up the vehicle.
- 5) Set a container under the vehicle, and remove drain plug from the fuel tank to drain fuel.

- 6) Tighten the fuel drain plug.

**NOTE:**

Use a new gasket.

**Tightening torque:**

26 N·m (2.65 kgf-m, 19.2 ft-lb)

• Model without fuel drain plug

**WARNING:**

Place “NO FIRE” signs near the working area.

**CAUTION:**

Be careful not to spill the fuel.

- 1) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Disconnect the ground cable from battery.
- 3) Remove the fuel pump. <Ref. to FU(STI)-52, REMOVAL, Fuel Pump.>
- 4) Drain fuel from the fuel pump installing part using a pump etc.

**CAUTION:**

Use a pump resistant to gasoline.

- 5) Install the fuel pump. <Ref. to FU(STI)-52, INSTALLATION, Fuel Pump.>

## 23. Fuel Tank

### A: REMOVAL

**WARNING:**

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Set the vehicle on a lift.
- 2) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 3) Drain the fuel from the fuel tank. <Ref. to FU(STI)-44, DRAINING FUEL, PROCEDURE, Fuel.>
- 4) Remove the rear seat.
- 5) Disconnect the connector (A) of rear harness from fuel tank cord.
- 6) Push the grommet (B) which holds the fuel tank cord on floor panel into the under side of body.

- 7) Remove the rear crossmember. <Ref. to RS-17, REMOVAL, Rear Crossmember.>
- 8) Disconnect connector (A) from drain valve.
- 9) Disconnect evaporation hoses (B) and (C) from canister.

- 10) Disconnect the connector from the pressure control solenoid valve.
- 11) Loosen the clamp and disconnect the fuel filler hose (A) from fuel filler pipe.

- 12) Move the clip, and disconnect the evaporation hose (B).

- 13) Move the clips, and disconnect the quick connector. <Ref. to FU(STI)-60, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>
- 14) Disconnect the fuel hoses.

- 15) Support the fuel tank with transmission jack, remove the bolts from bands and dismount the fuel tank from vehicle.

**WARNING:**

- A helper is required to perform this work.
- Fuel may be left in the side, which has no drain plug, of the fuel tank. In this case, the tank is imbalanced between right and left sides. Be careful not to drop it when removing.

### B: INSTALLATION

- 1) Support the fuel tank with transmission jack and push the fuel tank harness into the access hole with grommet.
- 2) Set the fuel tank and temporarily tighten the bolts of fuel tank bands.

# Fuel Tank

## FUEL INJECTION (FUEL SYSTEMS)

**WARNING:**  
A helper is required to perform this work.

3) Insert the fuel filler hose (A) approx. 35 to 40 mm (1.38 to 1.57 in) over the lower end of fuel filler pipe and tighten the clamp.

**CAUTION:**  
Do not allow clips to touch air vent hose (B) and rear suspension crossmember.

4) Connect the fuel hoses, and hold them with clips and quick connector. <Ref. to FU(STI)-61, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

5) Connect the connector to the pressure control solenoid valve.  
6) Connect the evaporation hoses (B) and (C) to the canister, and hold them with clamps.

7) Connect the connector (A) to drain valve.

8) Tighten the band mounting bolts.

**Tightening torque:**  
**33 N·m (3.4 kgf-m, 25 ft-lb)**

9) Install the rear crossmember. <Ref. to RS-17, INSTALLATION, Rear Crossmember.>

10) Connect the connector (A) to the fuel tank cord and plug the service hole with grommet (B).

11) Set the rear seat and floor mat.  
12) Connect the connector to the fuel pump relay.

## **C: INSPECTION**

- 1) Make sure there are no cracks, holes, or other damage on the fuel tank.
- 2) Make sure that the fuel hoses and fuel pipes are not cracked and the connections are tightened firmly.

# Fuel Filler Pipe

FUEL INJECTION (FUEL SYSTEMS)

## 24. Fuel Filler Pipe

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Set the vehicle on a lift.
- 2) Open the fuel filler flap lid and remove the filler cap.
- 3) Disconnect the ground cable from battery.
- 4) Remove the screws holding packing.

- 5) Loosen the rear right side wheel nuts.
- 6) Lift-up the vehicle.
- 7) Remove the rear right side wheel.

- 8) Set a container under the vehicle and remove the drain plug from fuel tank to drain fuel.

- 9) Tighten the fuel drain plug and then install the front right side tank cover.

#### NOTE:

Use a new gasket.

#### Tightening torque:

26 N·m (2.65 kgf·m, 19.2 ft·lb)

- 10) Remove the fuel filler pipe protector.

- 11) Separate the evaporation hoses from the clip of fuel filler pipe.

- 12) Disconnect the evaporation hoses from the pipes.

- 13) Remove the bolts which hold fuel filler pipe bracket on the body.

- 14) Loosen the clamp, and disconnect the fuel filler hose (A) from fuel filler pipe.

- 15) Move the clip, and disconnect the evaporation hose (B).

- 16) Remove the fuel filler pipe to the underside of vehicle.

- 17) Remove the air vent pipe together with clip from the body.

### B: INSTALLATION

- 1) Open the fuel filler flap lid.  
2) Set the fuel saucer (A) with rubber packing (C), and then insert the fuel filler pipe into the hole from the inside of apron.

- 3) Align the holes in fuel filler pipe neck and set the cup (B), and tighten the screws.

#### NOTE:

If the edges of rubber packing are folded toward the inside, straighten them with a flat-tip screwdriver.

- 4) Install the evaporation pipes.

# Fuel Filler Pipe

## FUEL INJECTION (FUEL SYSTEMS)

5) Connect the evaporation hose to pipes.

6) Insert the fuel filler hose (A) approx. 35 to 40 mm (1.38 to 1.57 in) over the lower end of fuel filler pipe, and then tighten the clamp.

**CAUTION:**  
Do not allow clips to touch air vent hose (B) and rear suspension crossmember.

7) Insert the air vent hose approx. 25 to 30 mm (0.98 to 1.18 in) into the lower end of air vent pipe, and then hold the clip.

$L = 27.5 \pm 2.5 \text{ mm (1.083 \pm 0.098 in)}$

- (1) Hose
- (2) Clip or clamp
- (3) Pipe

8) Tighten the bolt which holds fuel filler pipe bracket on the body.

**Tightening torque:**  
 $7.5 \text{ N}\cdot\text{m (0.76 kgf}\cdot\text{m, 5.5 ft}\cdot\text{lb)}$

9) Tighten the bolts which hold evaporation hoses onto the clip of fuel filler pipe.

10) Install the fuel filler pipe protector.

11) Install the rear right wheel.

- 12) Lower the vehicle.
- 13) Tighten the wheel nuts.
- 14) Connect the battery ground cable to battery.

### C: DISASSEMBLY

1) Move the clip, and disconnect the evaporation hose from joint pipe.

2) Remove the bolt which installs the joint pipe on fuel filler pipe.

3) Disconnect the evaporation hose from the fuel filler pipe.

4) Remove the shut valve from the fuel filler pipe. <Ref. to EC(STI)-15, REMOVAL, Shut Valve.>

### D: ASSEMBLY

1) Install the shut valve on the fuel filler pipe. <Ref. to EC(STI)-15, INSPECTION, Shut Valve.>

2) Connect the evaporation hose to the fuel filler pipe.

3) Connect the evaporation hose to the evaporation pipe.

4) Install the evaporation pipe to the fuel filler pipe.

# Fuel Pump

FUEL INJECTION (FUEL SYSTEMS)

## 25. Fuel Pump

### A: REMOVAL

#### WARNING:

Place "NO FIRE" signs near the working area.

#### CAUTION:

Be careful not to spill the fuel.

#### NOTE:

Fuel pump assembly consists of fuel pump and fuel level sensor.

- 1) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Open the fuel filler flap lid and remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.
- 4) Remove the luggage floor mat. <Ref. to EI-61, REMOVAL, Luggage Floor Mat.>
- 5) Remove the service hole cover.

- 6) Disconnect the connector from the fuel pump.

- 7) Disconnect the quick connector and then disconnect the fuel delivery hose and return hose. <Ref. to FU(STI)-60, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

- 8) Move the clips, and then disconnect the jet pump hose (A).

- 9) Remove the nuts which install the fuel pump assembly onto fuel tank.

- 10) Take off the fuel pump assembly from the fuel tank.

### B: INSTALLATION

Carefully following the steps below, install in the reverse order of removal.

#### NOTE:

- Replace the gasket and retainer with new ones.
- Ensure the sealing portion is free from fuel or foreign particles before installation.
- Tighten the nuts to the specified torque in alphabetical sequence as shown in the figure.

#### Tightening torque:

**4.4 N·m (0.45 kgf·m, 3.3 ft·lb)**

## C: DISASSEMBLY

1) Separate the chamber into upper and lower parts, and then remove them.

2) Disconnect the connector of fuel pump.

3) Remove the screw and remove the fuel pump and fuel filter.

4) Separate the fuel filter from fuel pump.

- (A) Fuel filter
- (B) Fuel pump

## D: ASSEMBLY

Assemble in the reverse order of disassembly.

## E: INSPECTION

Connect the lead harness to the connector terminal of fuel pump and apply battery power supply to check whether the pump operate.

### WARNING:

- Wipe off the fuel completely.
- Keep battery as far apart from fuel pump as possible.
- Be sure to turn the battery supply ON and OFF on the battery side.
- Do not run fuel pump for a long time under non-load condition.

### 26. Fuel Level Sensor

#### A: REMOVAL

##### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

##### NOTE:

Fuel level sensor is built in fuel pump assembly.

- 1) Remove the fuel pump assembly. <Ref. to FU(STI)-52, REMOVAL, Fuel Pump.>
- 2) Disconnect the connector from the fuel pump bracket.

- 3) Remove the fuel temperature sensor.

- 4) Remove the bolt which installs the fuel level sensor on mounting bracket.

#### B: INSTALLATION

Install in the reverse order of removal.

## 27. Fuel Sub Level Sensor

### A: REMOVAL

#### WARNING:

- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.
- Reduce the fuel on the fuel tank to less than 3/4 beforehand. Be careful that fuel may spill when the fuel is more than 3/4.

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Set a container under the vehicle and remove the drain plug from fuel tank to drain fuel.

- 4) Tighten the fuel drain plug.

#### NOTE:

Use a new gasket.

#### Tightening torque:

**26 N·m (2.65 kgf·m, 19.2 ft·lb)**

- 5) Remove the luggage floor mat. <Ref. to EI-61, REMOVAL, Luggage Floor Mat.>
- 6) Remove the service hole cover.

- 7) Disconnect the connector from the fuel sub level sensor.

- 8) Disconnect the fuel jet pump hose.

- 9) Remove the bolts which install the fuel sub level sensor on fuel tank.

- 10) Remove the fuel sub level sensor.

## Fuel Sub Level Sensor

FUEL INJECTION (FUEL SYSTEMS)

---

### **B: INSTALLATION**

Install in the reverse order of removal.

NOTE:

- Use a new gasket.
- Ensure the sealing portion is free from fuel or foreign particles before installation.

***Tightening torque:***

***4.4 N·m (0.45 kgf-m, 3.3 ft-lb)***

## 28. Fuel Filter

### A: REMOVAL

**WARNING:**

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

**NOTE:**

Fuel filter is built into the fuel pump assembly.

- 1) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 2) Remove the fuel pump assembly. <Ref. to FU(STI)-52, REMOVAL, Fuel Pump.>
- 3) Remove the fuel pump. <Ref. to FU(STI)-53, DISASSEMBLY, Fuel Pump.>
- 4) Separate the fuel filter from fuel pump.

- (A) Fuel filter  
(B) Fuel pump

- 5) Turn the filter holder around to the arrow direction, and then remove the filter.

### B: INSTALLATION

**CAUTION:**

- If fuel hoses are damaged at the connecting portion, replace them with new ones.
- If clamps are badly damaged, replace them with new ones.

Install in the reverse order of removal.

### C: INSPECTION

- 1) Check the inside of fuel filter for dirt and water sediment.
- 2) If it is clogged, or if replacement interval has been reached, replace it.

## 29. Fuel Cut Valve

### A: REMOVAL

- 1) Remove the fuel tank. <Ref. to FU(STI)-45, REMOVAL, Fuel Tank.>
- 2) Remove the protect cover.

- 3) Move the clip and disconnect the evaporation hose from fuel cut valve.

- 4) Remove the bolts which install the fuel cut valve.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

**Tightening torque:**

**4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

## 30. Fuel Damper Valve

### A: REMOVAL

1) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Remove the fuel damper valve from the fuel delivery line (A) and fuel return line (B).

### WARNING:

- Be careful not to spill fuel.
- Catch the fuel from hoses using a container or cloth.

### B: INSTALLATION

Install in the reverse order of removal.

### *Tightening torque:*

***1.25 N·m (0.13 kgf-m, 0.94 ft-lb)***

# Fuel Delivery, Return and Evaporation Lines

FUEL INJECTION (FUEL SYSTEMS)

## 31. Fuel Delivery, Return and Evaporation Lines

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 3) Open the fuel filler flap lid and remove the fuel filler cap.
- 4) Remove the floor mat. <Ref. to EI-60, REMOVAL, Floor Mat.>
- 5) Disconnect the fuel delivery pipes and hoses, and disconnect the fuel return pipes and hoses, evaporation pipes and hoses.

FU-02885

6) In engine compartment, detach the fuel delivery hoses, return hoses and evaporation hose.

- (1) Separate the quick connectors of fuel delivery line and return line by pushing the ST to the direction of arrow.

ST 42099AE000 CONNECTOR REMOVER

- (2) Remove the clip, and separate the evaporation hose from pipe.

#### WARNING:

- Be careful not to spill fuel.
- Catch the fuel from hoses using a container or cloth.

FU-02752

- (A) Fuel delivery hose
- (B) Return hose
- (C) Evaporation hose

7) Lift-up the vehicle.

FU(STI)-60

# Fuel Delivery, Return and Evaporation Lines

FUEL INJECTION (FUEL SYSTEMS)

8) Disconnect the quick connector on the fuel delivery line.

(1) Clean the pipe and connector, if they are covered with dust.

(2) To prevent from damaging or entering foreign matter, wrap the pipes and connectors with plastic bag, etc.

(3) Hold the connector (A) and push retainer (B) down.

(4) Pull out the connector (A) from retainer (B).

- (A) Connector
- (B) Retainer
- (C) Pipe

## B: INSTALLATION

1) Connect the quick connector on the fuel line.

### CAUTION:

- Always use a new retainer.
- Make sure that the connected portion is not damaged or has no dust. If necessary, clean seal surface of pipe.

- (A) Seal surface
- (B) Pipe

(1) Set a new retainer (B) to connector (A).

(2) Push the pipe into the connector completely.

### NOTE:

At this time, two clicking sounds are heard.

- (A) Connector
- (B) Retainer
- (C) Pipe

# Fuel Delivery, Return and Evaporation Lines

## FUEL INJECTION (FUEL SYSTEMS)

### CAUTION:

- Pull the connector to ensure it is connected securely.
- Ensure the two retainer pawls are engaged in their mating positions in the connector.
- Be sure to inspect hoses and their connections for any leakage of fuel.

- (A) Connector
- (B) Retainer
- (C) Pipe

2) Connect the fuel delivery hose and return hose by inserting them into the pipe for 20 to 25 mm (0.79 to 0.98 in) in length.

Type A: When the fitting length is specified.

Type B: When the fitting length is not specified.

$$\varnothing : 2.5 \pm 1.5 \text{ mm } (0.098 \pm 0.059 \text{ in})$$

$$L : 22.5 \pm 2.5 \text{ mm } (0.886 \pm 0.098 \text{ in})$$

### CAUTION:

Be sure to inspect hoses and their connections for any leakage of fuel.

- (1) Type A
- (2) Type B
- (3) Pipe
- (4) Clamp
- (5) Hose

3) Connect the evaporation hose by inserting it into the pipe for 15 to 20 mm (0.59 to 0.79 in) in length.

$$L = 17.5 \pm 2.5 \text{ mm } (0.689 \pm 0.098 \text{ in})$$

- (1) Hose
- (2) Clip
- (3) Pipe

### C: INSPECTION

1) Make sure there are no cracks on the fuel pipes and fuel hoses.

2) Make sure the fuel pipe and fuel hose connections are tightened firmly.

# Fuel System Trouble in General

FUEL INJECTION (FUEL SYSTEMS)

## 32. Fuel System Trouble in General

### A: INSPECTION

| Trouble and possible cause                         |  | Corrective action   |
|--|--|---|
| <b>1. Insufficient fuel supply to the injector</b> |  |   |
| 1)   | Fuel pump will not operate.  |   |
|  | ○ Defective terminal contact.  | Inspect connections, especially ground, and tighten securely. |
|  | ○ Trouble in electromagnetic or electronic circuit parts.              | Replace faulty parts.   |
| 2)   | Lowering of fuel pump function.  | Replace fuel pump.  |
| 3)   | Clogged dust or water in the fuel filter.                              | Replace fuel filter, clean or replace fuel tank.              |
| 4)   | Clogged or bent fuel pipe or hose.                                     | Clean, correct or replace fuel pipe or hose.                  |
| 5)   | Air is mixed in the fuel system.                                       | Inspect or retighten each connection part.                    |
| 6)   | Clogged or bent breather tube or pipe.                                 | Clean, correct or replace air breather tube or pipe.          |
| 7)   | Damaged diaphragm of pressure regulator.                               | Replace.  |
| <b>2. Leakage or blow out fuel</b>                 |  |   |
| 1)   | Loosened joints of the fuel pipe.                                      | Retightening.   |
| 2)   | Cracked fuel pipe, hose and fuel tank.                                 | Replace.  |
| 3)   | Defective welding part on the fuel tank.                               | Replace.  |
| 4)   | Defective drain packing of the fuel tank.                              | Replace.  |
| 5)   | Clogged or bent air breather tube or air vent tube.                    | Clean, correct or replace air breather tube or air vent tube. |
| <b>3. Gasoline smell inside of compartment</b>     |  |   |
| 1)   | Loose joints at air breather tube, air vent tube and fuel filler pipe. | Retightening.   |
| 2)   | Defective packing air tightness on the fuel saucer.                    | Correct or replace packing.                                   |
| 3)   | Inoperative fuel pump modulator or circuit.                            | Replace.  |
| <b>4. Defective fuel meter indicator</b>           |  |   |
| 1)   | Defective operation of fuel level sensor.                              | Replace.  |
| 2)   | Defective operation of fuel meter.                                     | Replace.  |
| <b>5. Noise</b>                                    |  |   |
| 1)   | Large operation noise or vibration of fuel pump.                       | Replace.  |

#### NOTE:

- When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. Fill fuel fully to prevent those problem. And also drain the water condensation from fuel filter.
- In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop below 0°C (32°F) throughout the winter season, use water removing agent in the fuel system to prevent freezing fuel system and accumulating water. Fill the water removing agent at the time when the fuel reduced at half to maintain the advantage.
- When water condensation is noticed in the fuel filter, drain the water from both the fuel filter and fuel tank or use water removing agent in the fuel tank.
- Before using water removing agent, follow the cautions noted on the bottle.

# General Description

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

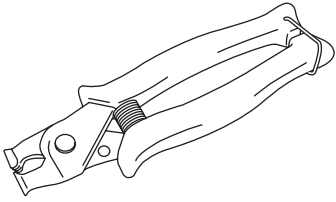

## 1. General Description

### A: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.

### B: PREPARATION TOOL

- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

| ILLUSTRATION  | TOOL NUMBER | DESCRIPTION  | REMARKS                                    |
|---|-------------|--------------|--|
| <br>ST18353AA000 | 18353AA000  | CLAMP PLIERS | Used for removing and installing PCV hose. |

# Front Catalytic Converter

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 2. Front Catalytic Converter

### A: REMOVAL

1) Remove the center exhaust pipe. <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>

2) Separate the front catalytic converter (A) from rear catalytic converter (B).

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Replace the gaskets with new ones.

### C: INSPECTION

1) Make sure there are no exhaust leaks from connections and welds.

2) Make sure there are no holes or rusting.

# Rear Catalytic Converter

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

## 3. Rear Catalytic Converter

### A: REMOVAL

1) Remove the center exhaust pipe. <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>

2) Separate the rear catalytic converter (B) from front catalytic converter (A).

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Replace the gaskets with new ones.

### C: INSPECTION

1) Make sure there are no exhaust leaks from connections and welds.

2) Make sure there are no holes or rusting.

# Canister

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 4. Canister

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift up the vehicle.
- 3) Disconnect connector (A) from drain valve.
- 4) Disconnect evaporation hoses (B) and (C) from canister.

- 5) Disconnect quick connector (A) from canister.
- 6) Disconnect drain hoses (B) from canister.

- 7) Remove the canister from vehicle.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Replace the retainer of quick connector with new one.

#### Tightening torque:

**23 N·m (2.3 kgf-m, 17 ft-lb)**

### C: INSPECTION

Make sure the canister and canister hoses are not cracked or loose.

# Purge Control Solenoid Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

## 5. Purge Control Solenoid Valve

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector and hoses from purge control solenoid valve.
- 3) Remove the bolt which installs the purge control solenoid valve onto intake manifold.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**16 N·m (1.6 kgf·m, 11.6 ft·lb)**

#### NOTE:

Connect the evaporation hoses as shown in the figure.

- (A) To purge valve
- (B) To intake manifold

### C: INSPECTION

Make sure the hoses are not cracked or loose.

## Fuel Level Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### 6. Fuel Level Sensor

#### A: REMOVAL

For work procedures, refer to FU(STI) section.  
<Ref. to FU(STI)-54, REMOVAL, Fuel Level Sensor.>

#### B: INSTALLATION

For work procedures, refer to FU(STI) section.  
<Ref. to FU(STI)-54, INSTALLATION, Fuel Level Sensor.>

## Fuel Temperature Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### 7. Fuel Temperature Sensor

#### A: REMOVAL

Fuel temperature sensor and fuel level sensor are integrated into one unit; therefore, the removal procedure is the same as that for fuel level sensor. <Ref. to FU(STI)-54, REMOVAL, Fuel Level Sensor.>

#### B: INSTALLATION

Fuel temperature sensor and fuel level sensor are integrated into one unit; therefore, the installation procedure is the same as that for fuel level sensor. <Ref. to FU(STI)-54, INSTALLATION, Fuel Level Sensor.>

## Fuel Sub Level Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### 8. Fuel Sub Level Sensor

#### A: REMOVAL

For removal procedures, refer to FU(STI) section.  
<Ref. to FU(STI)-55, REMOVAL, Fuel Sub Level Sensor.>

#### B: INSTALLATION

For installation procedures, refer to FU(STI) section.  
<Ref. to FU(STI)-56, INSTALLATION, Fuel Sub Level Sensor.>

# Fuel Tank Pressure Sensor

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 9. Fuel Tank Pressure Sensor

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Remove the fuel tank. <Ref. to FU(STI)-45, REMOVAL, Fuel Tank.>
- 2) Remove the protector cover.

- 3) Disconnect the connector from fuel tank pressure sensor.
- 4) Release the clips which hold fuel pipes onto fuel tank.

- 5) Remove the bolt and nut which hold the fuel tank pressure sensor onto the bracket.

- 6) Disconnect the pressure hose from fuel tank pressure sensor.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**7.4 N·m (0.75 kgf·m, 5.4 ft·lb)**

#### Tightening torque:

**T1: 7.4 N·m (0.75 kgf·m, 5.4 ft·lb)**

**T2: 4.4 N·m (0.45 kgf·m, 3.3 ft·lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

## 10. Fuel Tank Sensor Control Valve

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

1) Remove the fuel tank. <Ref. to FU(STI)-45, REMOVAL, Fuel Tank.>

2) Remove the protector cover.

3) Disconnect the connector from fuel tank sensor control valve.

4) Disconnect hose and remove fuel tank sensor control valve.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**T1: 7.4 N·m (0.75 kgf-m, 5.4 ft-lb)**

**T2: 4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

# Pressure Control Solenoid Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 11. Pressure Control Solenoid Valve

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Lift up the vehicle.
- 4) Remove the canister. <Ref. to EC(STI)-5, REMOVAL, Canister.>
- 5) Remove the bolt which installs the pressure control solenoid valve holding bracket on body.

- 6) Remove the pressure control solenoid valve with bracket.
- 7) Disconnect the connector from pressure control solenoid valve.

- 8) Disconnect the two evaporation hoses from pressure control solenoid valve.

- 9) Remove the pressure control solenoid valve from bracket.

- 10) Disconnect the pressure control valve hose from pressure control solenoid valve.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**25 N·m (2.6 kgf·m, 18.8 ft·lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

## **Drain Filter**

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### **12.Drain Filter**

#### **A: SPECIFICATION**

Drain filter is built in the canister, and it is a part which cannot be disassembled.

# Vent Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 13. Vent Valve

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Remove the fuel tank. <Ref. to FU(STI)-45, REMOVAL, Fuel Tank.>
- 2) Remove the protector cover.

- 3) Remove the clips, and disconnect the hoses from vent valve.

- 4) Remove the nuts and then remove the vent valve.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Use a new gasket.

#### Tightening torque:

**T: 4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

(A) Gasket

#### Tightening torque:

**T1: 7.4 N·m (0.75 kgf-m, 5.4 ft-lb)**

**T2: 4.4 N·m (0.45 kgf-m, 3.3 ft-lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

# Shut Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 14. Shut Valve

### A: REMOVAL

#### WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Remove the fuel filler pipe. <Ref. to FU(STI)-48, REMOVAL, Fuel Filler Pipe.>
- 2) Disconnect the evaporation hoses from shut valve.

- 3) Remove the shut valve from fuel filler pipe.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**4.5 N·m (0.46 kgf-m, 3.3 ft-lb)**

### C: INSPECTION

Make sure the hoses are not cracked or loose.

## Drain Valve

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### 15. Drain Valve

#### A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Disconnect the ground cable from battery.
- 3) Lift up the vehicle.
- 4) Remove the canister. <Ref. to EC(STI)-5, REMOVAL, Canister.>
- 5) Remove clip (A), and then remove drain valve (B) from canister.
- 6) Remove the filter from drain valve (B).

#### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

- Assemble the drain valve filter without any clearance.
- Make sure the packing in the groove before assembling drain valve to canister.
- Replace the clip with new one.

#### C: INSPECTION

- 1) Make sure that all hoses are installed securely.
- 2) Make sure that hoses are not cracked or loose.

## 16.PCV Hose Assembly

### A: REMOVAL

#### CAUTION:

Removal is not allowed except for the damage of PCV hose, diagnosis connector and PCV valve.

- 1) Remove the intake manifold.  
<Ref. to FU(STI)-13, REMOVAL, Intake Manifold.>
- 2) Clip the protrusion of clamp after aligning the concave portion of ST with protrusion of clamp, and then unlock the lock.
- 3) Remove the PCV hose assembly.  
ST 18353AA000 CLAMP PLIERS

### B: INSTALLATION

#### NOTE:

Replace the clamp with a new one.

- 1) Install the PCV hose assembly, and then lock the clamp with protrusion of clamp clipped by pliers.  
ST 18353AA000 CLAMP PLIERS

- 2) Install the intake manifold.  
<Ref. to FU(STI)-16, INSTALLATION, Intake Manifold.>

# General Description

INTAKE (INDUCTION)

## 5. INTERCOOLER WATER SPRAY

- (1) Water tank ASSY
- (2) Water tank cap
- (3) Clamp
- (4) Rear hose

- (5) Clamp
- (6) Center hose
- (7) Front hose
- (8) Intercooler hose

- (9) Nozzle

**Tightening torque: N·m (kgf·m, ft·lb)**

**T: 6.0 (0.61, 4.4)**

### B: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensor or units, be sure to disconnect the ground cable from battery.

## 2. Air Cleaner Element

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from mass air flow and intake air temperature sensor.

- 3) Loosen the clamp (A) which connects the air intake boot and intake duct.
- 4) Remove the clip (B) from air cleaner upper cover.

- 5) Remove the air cleaner upper cover.
- 6) Remove the air cleaner element.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Before installing the air cleaner upper cover, align the holes with protruding portions of air cleaner lower case, then secure the upper cover to the lower case.

### C: INSPECTION

Replace it if excessively damaged or dirty.

# Air Cleaner Case

INTAKE (INDUCTION)

## 3. Air Cleaner Case

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector from mass air flow and intake air temperature sensor.

- 3) Loosen the clamp (A) which connects the air intake boot and intake duct.
- 4) Remove the clip (B) from air cleaner upper cover.

- 5) Remove the air cleaner upper cover.
- 6) Remove the air cleaner element.
- 7) Remove the air cleaner lower case.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**  
**33 N·m (3.4 kgf·m, 24.6 ft·lb)**

### NOTE:

Before installing the air cleaner upper cover, align the holes with protruding portions of air cleaner lower case, then secure the upper cover to the lower case.

### C: INSPECTION

Inspect for cracks and loose connections.

## 4. Air Intake Duct

### A: REMOVAL

Remove the bolts which install the air intake duct on front side of body.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

### C: INSPECTION

- 1) Inspect for cracks and loose connections.
- 2) Inspect that no foreign objects are mixed in air intake duct.

## 5. Intake Duct

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the intake manifold. <Ref. to FU(STI)-13, REMOVAL, Intake Manifold.>
- 3) Remove the sensor, engine harness and fuel pipe attached to intake manifold. <Ref. to FU(STI)-18, DISASSEMBLY, Intake Manifold.>
- 4) Remove the intake duct from intake manifold.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

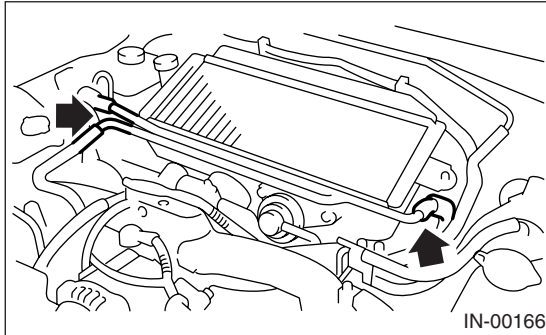

**19 N·m (1.9 kgf·m, 13.7 ft·lb)**

## 6. Intercooler

### A: REMOVAL

1) Disconnect the air by-pass hoses from intercooler.

2) Remove the air by-pass valve from intercooler.

3) Remove the bolts which secure the intercooler to bracket.

4) Remove the intercooler air duct from turbocharger.

5) Remove the intercooler from throttle body.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**16 N·m (1.6 kgf-m, 11.8 ft-lb)**

# Intercooler

INTAKE (INDUCTION)

---

## C: DISASSEMBLY

Remove the intercooler ducts from intercooler.

## D: ASSEMBLY

Assemble in the reverse order of disassembly.

**Tightening torque:**

**16 N·m (1.6 kgf·m, 11.8 ft·lb)**

## 7. Turbocharger

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Remove the center exhaust pipe. <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>
- 4) Lower the vehicle.
- 5) Disconnect the turbocharger joint pipe from turbo-charger.

- 6) Disconnect the engine coolant hose which is connected to coolant filler tank.

- 7) Loosen the clamp which secures the turbocharger to intake duct.

- 8) Loosen the flare joint of oil inlet pipe, and disconnect the flare joint.

- 9) Remove the oil inlet pipe from turbocharger.

- 10) Disconnect the engine coolant hose.
- 11) Remove the turbocharger bracket.

- 12) Disconnect the oil outlet hose from pipe.

- 13) Take out the turbocharger from engine compartment.

### B: INSTALLATION

- 1) Connect the oil outlet hose to outlet pipe.

- 2) Install the turbocharger to intake duct.

# Turbocharger

## INTAKE (INDUCTION)

**Tightening torque:**  
**3 N·m (0.3 kgf-m, 2.2 ft-lb)**

3) Install the oil inlet pipe to turbocharger, and connect the flare joint.

**Tightening torque:**  
**Union bolt**  
**16±1.5 N·m (1.6±0.15 kgf-m, 11.8±1.1 ft-lb)**  
**Flare joint**  
**20±2.0 N·m (2.0±0.2 kgf-m, 14.8±1.5 ft-lb)**

4) Install the turbocharger joint pipe to turbocharger.

NOTE:

Replace the gasket with a new one.

**Tightening torque:**  
**35 N·m (3.6 kgf-m, 25.8 ft-lb)**

5) Connect the engine coolant hose.  
6) Install the turbocharger bracket.

**Tightening torque:**  
**33 N·m (3.4 kgf-m, 24.6 ft-lb)**

7) Connect the engine coolant hose which is connected to coolant filler tank.

8) Lift-up the vehicle.

9) Install the center exhaust pipe. <Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.>

## 8. Air By-pass Valve

### A: REMOVAL

1) Remove the air by-pass valve from intercooler.

2) Disconnect the air by-pass hoses from air by-pass valve.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**16 N·m (1.6 kgf·m, 11.8 ft·lb)**

# Resonator Chamber

INTAKE (INDUCTION)

## 9. Resonator Chamber

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Remove the air intake duct. <Ref. to IN(STI)-9, REMOVAL, Air Intake Duct.>
- 3) Remove the air cleaner lower case. <Ref. to IN(STI)-8, REMOVAL, Air Cleaner Case.>
- 4) Remove the resonator chamber mounting nut on right side of engine compartment.

- 5) Lift-up the vehicle, and then remove the front wheel RH.
- 6) Remove the front mud guard RH.
- 7) Remove the resonator chamber from the inside front fender.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

### C: INSPECTION

- 1) Inspect for cracks and loose connections.
- 2) Inspect that no foreign objects are mixed in resonator chamber.

## 10. Intercooler Water Spray Tank

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the trunk room trim. <Ref. to EI-59, REMOVAL, Trunk Room Trim.>
- 3) Disconnect the water tank connector.

- 4) Remove the two water tank installation bolts.

- 5) Remove the hose between body and water tank, then remove the water tank.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

**6.0 N·m (0.61 kgf-m, 4.4 ft-lb)**

### C: INSPECTION

- 1) Make sure the hose is not deformed, damaged, cracked or clogged.
- 2) Make sure the water tank is not damaged or cracked.

## 11. Intercooler Water Spray Nozzle

### A: REMOVAL

- 1) Open the front hood.
- 2) Disconnect the connecting part of hose.
- 3) Push the clip of nozzle upward with the clip pressed by fingers from inside of front hood.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Make sure the hose and nozzle are not deformed, damaged, cracked or clogged.

**T1: 52 (5.3, 38.4)**  
**T2: 75 (7.6, 55.3)**

# General Description

MECHANICAL

## 6. ENGINE MOUNTING

(1) Front cushion rubber

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 35 (3.6, 25.8)**

**T2: 85 (8.7, 62.7)**

## **C: CAUTION**

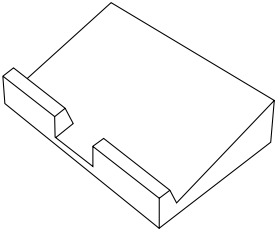

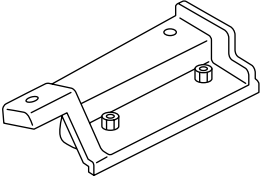

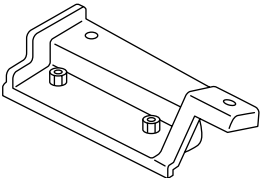

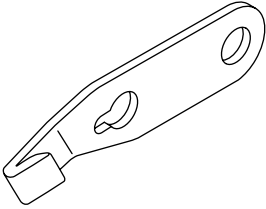

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- All parts should be thoroughly cleaned, paying special attention to the engine oil passages, pistons and bearings.
- Rotating parts and sliding parts such as piston, bearing and gear should be coated with oil prior to assembly.
- Be careful not to let oil, grease or coolant contact the timing belt, clutch disc and flywheel.
- All removed parts, if to be reused, should be reinstalled in the original positions and directions.
- Bolts, nuts and washers should be replaced with new ones as required.
- Even if necessary inspections have been made in advance, proceed with assembly work while making rechecks.
- Remove or install the engine in an area where chain hoists, lifting devices, etc. are available for ready use.
- Be sure not to damage coated surfaces of body panels with tools or stain seats and windows with coolant or oil. Place a cover over fenders, as required, for protection.
- Prior to starting work, prepare the following: Service tools, clean cloth, containers to catch coolant and oil, wire ropes, chain hoist, transmission jacks, etc.
- Lift-up or lower the vehicle when necessary. Make sure to support the correct positions.

## 2. GENERAL TOOL

| TOOL NAME         | REMARKS                         |
|-------------------|---------------------------------|
| Compression gauge | Used for measuring compression. |

## E: PROCEDURE

It is possible to conduct the following service procedures with engine on the vehicle, however, the procedures described in this section are based on the condition that the engine is removed from the vehicle.

- V-belt
- Timing Belt
- Camshaft
- Cylinder Head

## 2. Compression

### A: INSPECTION

**CAUTION:**

**After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.**

- 1) After warming-up the engine, turn the ignition switch to OFF.
- 2) Make sure that the battery is fully charged.
- 3) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 4) Remove all the spark plugs. <Ref. to IG(STI)-4, REMOVAL, Spark Plug.>
- 5) Fully open the throttle valve.
- 6) Check the starter motor for satisfactory performance and operation.
- 7) Fix the compression gauge securely against spark plug hole.

**NOTE:**

The screw of screw-in type compression gauge (put into cylinder head spark plug hole) should be less than 18 mm (0.71 in) long.

- 8) Crank the engine by means of starter motor, and then read the maximum value on the gauge when the needle of gauge is steady.

- 9) Perform at least two measurements per cylinder, and make sure that the values are correct.

**Compression (at 200 — 300 rpm):**

**Standard:**

**981 — 1,177 kPa (10 — 12 kgf/cm<sup>2</sup>, 142 — 171 psi)**

**Limit:**

**882 kPa (9.0 kgf/cm<sup>2</sup>, 128 psi)**

**Difference between cylinders**

**Less than 49 kPa (0.5 kgf/cm<sup>2</sup>, 7 psi)**

## 3. Idle Speed

### A: INSPECTION

1) Before checking the idle speed, check the following:

(1) Ensure the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and that the hoses are connected properly.

(2) Ensure the malfunction indicator light does not illuminate.

2) Warm-up the engine.

3) Stop the engine, and then turn the ignition switch to OFF.

4) Insert the cartridge to Subaru Select Monitor.

5) Connect the Subaru Select Monitor to data link connector.

6) Turn the ignition switch to ON, and Subaru Select Monitor power switch to ON.

7) Select the {2. Each System Check} in Main Menu.

8) Select the {Engine Control System} in Selection Menu.

9) Select the {1. Current Data Display & Save} in Engine Control System Diagnosis.

10) Select the {1.12 Data Display} in Data Display Menu.

11) Start the engine, and then read the engine idle speed.

12) Check the idle speed when unloaded. (With headlights, heater fan, rear defroster, radiator fan, air conditioning, etc. OFF)

***Idle speed [No load and gears in neutral]:***

***700±100 rpm***

13) Check the idle speed when loaded. (Turn the air conditioning switch to “ON” and operate the compressor for at least 1 minute before measurement.)

***Idle speed [A/C “ON”, no load and gears in neutral]:***

***800±100 rpm***

NOTE:

As the idle speed is automatically controlled, it can not be adjusted manually. If the idle speed is out of specifications, refer to General On-board Diagnosis Table under “Engine Control System”. <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>

## 4. Ignition Timing

### A: INSPECTION

**CAUTION:**

**After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.**

- 1) Before checking the ignition timing speed, check the following:
  - (1) Ensure the air cleaner element is free from clogging, spark plugs are in good condition, and that hoses are connected properly.
  - (2) Ensure the malfunction indicator light does not illuminate.
- 2) Warm-up the engine.
- 3) Stop the engine, and then turn the ignition switch to OFF.
- 4) Insert the cartridge to Subaru Select Monitor.
- 5) Connect the Subaru Select Monitor to data link connector.
- 6) Turn the ignition switch to ON, and Subaru Select Monitor power switch to ON.
- 7) Select the {2. Each System Check} in Main Menu.
- 8) Select the {Engine Control System} in Selection Menu.
- 9) Select the {1. Current Data Display & Save} in Engine Control System Diagnosis.
- 10) Select the {1.12 Data Display} in Data Display Menu.
- 11) Start the engine and check the ignition timing at idle speed.

**Ignition timing [BTDC/rpm]:** **$17^{\circ} \pm 10^{\circ} / 700$** 

If the timing is not correct, check the ignition control system. Refer to Engine Control System. <Ref. to EN(STI)(diag)-2, Basic Diagnostic Procedure.>

## 5. Intake Manifold Vacuum

### A: INSPECTION

- 1) Warm-up the engine.
- 2) Disconnect the brake vacuum hose from intake manifold, and then install the vacuum gauge.
- 3) Keep the engine at the idle speed, and then read the vacuum gauge indication.

By observing the gauge needle movement, the internal condition of engine can be diagnosed as described below.

**Vacuum pressure (at idling, A/C "OFF"):**  
**Less than  $-60.0$  kPa ( $-450$  mmHg,  $-17.72$  in-Hg)**

| Diagnosis of engine condition by measurement of manifold vacuum   |   |
|---|---|
| Vacuum gauge indication   | Possible engine condition   |
| 1. Needle is steady but lower than normal position. This tendency becomes more evident as engine temperature rises.                                     | Leakage around intake manifold gasket or disconnection or damaged vacuum hose |
| 2. Needle intermittently drops to position lower than normal position.  | Leakage around cylinder   |
| 3. Needle drops suddenly and intermittently from normal position.   | Sticky valves   |
| 4. When engine speed is gradually increased, needle begins to vibrate rapidly at certain speed, and then vibration increases as engine speed increases. | Weak or broken valve springs  |
| 5. Needle vibrates above and below normal position in narrow range.   | Defective ignition system or throttle chamber idle adjustment                 |

## 6. Engine Oil Pressure

### A: INSPECTION

- 1) Remove the oil pressure switch from engine cylinder block. <Ref. to LU(STI)-18, REMOVAL, Oil Pressure Switch.>
- 2) Connect the oil pressure gauge hose to cylinder block.
- 3) Connect the battery ground cable to battery.
- 4) Start the engine, and then measure the oil pressure.

#### **Oil pressure:**

**98 kPa (1.0 kgf/cm<sup>2</sup>, 14 psi) or more at 600 rpm**

**294 kPa (3.0 kgf/cm<sup>2</sup>, 43 psi) or more at 5,000 rpm**

#### **CAUTION:**

- If the oil pressure is out of specification, check oil pump, oil filter and lubrication line. <Ref. to LU(STI)-25, INSPECTION, Engine Lubrication System Trouble in General.>
- If the oil pressure warning light is turned ON and oil pressure is in specification, replace the oil pressure switch. <Ref. to LU(STI)-25, INSPECTION, Engine Lubrication System Trouble in General.>

#### **NOTE:**

The specified data is based on an engine oil temperature of 80°C (176°F).

- 5) After measuring the oil pressure, install the oil pressure switch. <Ref. to LU(STI)-18, INSTALLATION, Oil Pressure Switch.>

#### **Tightening torque:**

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

## 7. Fuel Pressure

### A: INSPECTION

#### CAUTION:

Before removing the fuel pressure gauge, release the fuel pressure.

#### NOTE:

If out of specification, check or replace the pressure regulator and pressure regulator vacuum hose.

1) Release the fuel pressure. <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>

2) Open the fuel filler flap lid, and then remove the fuel filler cap.

3) Disconnect the fuel delivery hoses, and then connect the fuel pressure gauge.

4) Connect the connector of fuel pump relay.

5) Start the engine.

6) Measure the fuel pressure while disconnecting the pressure regulator vacuum hose from intake manifold.

#### Fuel pressure:

**Standard: 284 — 314 kPa (2.9 — 3.2 kgf/cm<sup>2</sup>, 41 — 46 psi)**

7) After connecting the pressure regulator vacuum hose, measure the fuel pressure.

#### Fuel pressure:

**Standard: 230 — 260 kPa (2.35 — 2.65 kgf/cm<sup>2</sup>, 33 — 38 psi)**

#### NOTE:

The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kgf/cm<sup>2</sup>, 1 to 3 psi) higher than standard values during high-altitude operations.

## 8. Valve Clearance

### A: INSPECTION

Inspection and adjustment of the valve clearance should be performed while engine is cold.

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>
- 4) Remove the bolts which secure the timing belt cover (RH).
- 5) Lift-up the vehicle.
- 6) Remove the under cover.
- 7) Loosen the remaining bolts which secure the timing belt cover (RH), and then remove the timing belt cover.
- 8) Lower the vehicle.
- 9) When inspecting the #1 and #3 cylinders:
  - (1) Pull out the engine harness connector with bracket from air cleaner upper cover.

- (2) Remove the air cleaner case. <Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>
  - (3) Disconnect the ignition coil connector.
  - (4) Remove the ignition coil.
  - (5) Place a suitable container under the vehicle.
  - (6) Disconnect the PCV hose from rocker cover (RH).
  - (7) Remove the bolts, and then remove the rocker cover (RH).
- 10) When inspecting the #2 and #4 cylinders:
    - (1) Disconnect the battery cable, and then remove the battery and battery carrier.
    - (2) Disconnect the ignition coil connector.
    - (3) Remove the ignition coil.
    - (4) Place a suitable container under the vehicle.
    - (5) Disconnect the PCV hose from rocker cover (LH).
    - (6) Remove the bolts, and then remove the rocker cover (LH).
  - 11) Turn the crank pulley clockwise until arrow mark on the cam sprocket is set to position shown in the figure.

NOTE:

Turn the crankshaft using socket wrench.

- 12) Measure the #1 cylinder intake valve and #3 cylinder exhaust valve clearance by using thickness gauge (A).

NOTE:

- Insert the thickness gauge (A) as horizontally as possible with respect to the shim.
- Measure the exhaust valve clearances while lifting-up the vehicle.

**Valve clearance:**

**Intake:  $0.20 \pm 0.02$  mm ( $0.0079 \pm 0.0008$  in)**

**Exhaust:  $0.35 \pm 0.02$  mm ( $0.0138 \pm 0.0008$  in)**

NOTE:

If the measured value is not within specification, take notes of the value in order to adjust the valve clearance later on.

- 13) If necessary, adjust the valve clearance. <Ref. to ME(STI)-28, ADJUSTMENT, Valve Clearance.>
- 14) Further turn the crank pulley clockwise. Using the same procedures described previously, measure the valve clearances again.

# Valve Clearance

## MECHANICAL

(1) Set the arrow mark on cam sprocket to position shown in the figure, and then measure the #2 cylinder exhaust valve and #3 cylinder intake valve clearances.

(2) Set the arrow mark on cam sprocket to position shown in the figure, and then measure the #2 cylinder intake valve and #4 cylinder exhaust valve clearances.

(3) Set the arrow mark on cam sprocket to position shown in the figure, and then measure the #1 cylinder exhaust valve and #4 cylinder intake valve clearances.

15) After inspection, install the related parts in the reverse order of removal.

**Tightening torque:**  
**33 N·m (3.4 kgf·m, 25 ft·lb)**

## B: ADJUSTMENT

### CAUTION:

**Adjustment of the valve clearance should be performed while engine is cold.**

1) Measure all valve clearances. <Ref. to ME(STI)-27, INSPECTION, Valve Clearance.>

### NOTE:

Record each valve clearance after it has been measured.

2) Remove the camshaft. <Ref. to ME(STI)-54, REMOVAL, Camshaft.>

3) Remove the valve lifter.

4) Measure the thickness of valve lifter with a micrometer.

5) Select a valve lifter of suitable thickness using measured valve clearance and valve lifter thickness, by referring to the following table.

# Valve Clearance

MECHANICAL

|                                       |
|---------------------------------------|
| Unit: mm                              |
| Intake valve: $S = (V + T) - 0.20$    |
| Exhaust valve: $S = (V + T) - 0.35$   |
| S: Required thickness of valve lifter |
| V: Measured valve clearance           |
| T: Used valve lifter thickness        |

## Valve Clearance

### MECHANICAL

---

6) Inspect all valves for clearance again at this stage. If the valve clearance is not correct, repeat the procedure over again from the first step.

7) After inspection, install the related parts in the reverse order of removal.

## 9. Engine Assembly

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Open the front hood fully, and then support with the hood stay.
- 3) Collect the refrigerant from A/C system.
- 4) Release the fuel pressure.
  - (1) Disconnect the fuel pump relay connector.

- (2) Start the engine, and run until it stalls.
  - (3) After the engine stalls, crank it for 5 seconds more.
  - (4) Turn the ignition switch to OFF.
- 5) Remove the fuel filler cap.
  - 6) Disconnect the ground cable from battery.
  - 7) Remove the radiator from vehicle. <Ref. to CO(H4DOTC)-23, REMOVAL, Radiator.>
  - 8) Remove the coolant filler tank. <Ref. to CO(H4DOTC)-33, REMOVAL, Coolant Filler Tank.>
  - 9) Disconnect the A/C pressure hoses from A/C compressor.

- 10) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>
- 11) Disconnect the following connectors and cable.

- (1) Engine harness connector

- (2) Engine ground terminal

- (3) Engine harness connector

- (4) Generator connector, terminal and A/C compressor connectors

- (A) A/C compressor connector
- (B) Generator connector and terminal

# Engine Assembly

## MECHANICAL

### (5) Clutch release spring

### 12) Disconnect the following hoses.

#### (1) Brake booster vacuum hose

#### (2) Heater inlet outlet hose

### 13) Remove the power steering pump from bracket.

(1) Loosen the lock bolt and slider bolt, and then remove the front side V-belt. <Ref. to ME(STI)-40, FRONT SIDE BELT, REMOVAL, V-belt.>

(2) Disconnect the power steering switch connector.

### (3) Remove the pipe with bracket from intake manifold.

### (4) Remove the power steering pump from engine.

### (5) Remove the power steering tank from bracket by pulling it upward.

### (6) Place the power steering pump on right side wheel apron.

### 14) Lift-up the vehicle.

15) Remove the center exhaust pipe. <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>

16) Remove the nuts which hold the lower side of transmission to engine.

17) Remove the nuts which install the front cushion rubber onto front crossmember.

18) Lower the vehicle.

19) Separate the clutch release fork from release bearing.

- (1) Remove the clutch operating cylinder from transmission.
- (2) Remove the plug using a 10 mm hexagon wrench.

(3) Screw the 6 mm dia. bolt into release fork shaft, and remove it.

- (A) Shaft  
(B) Bolt

(4) Raise the release fork, and then unfasten the release bearing tabs to free release fork.

**NOTE:**

Step (4) is required to prevent interference with engine when removing the engine from transmission.

20) Remove the pitching stopper.

21) Disconnect the fuel delivery hose (A), return hose (B) and evaporation hose (C).

**NOTE:**

- Catch fuel from the hose into container.
- Disconnect the hose with its end wrapped with cloth to prevent fuel from splashing.

# Engine Assembly

MECHANICAL

## ST 42099AE000 CONNECTOR REMOVER

22) Support the engine with a lifting device and wire ropes.

23) Support the transmission with a garage jack.

### CAUTION:

Doing this is very important in order to facilitate re-installation and because transmission lowers under its own weight.

### CAUTION:

Before removing the engine away from transmission, check to be sure no work has been overlooked.

- 24) Separation of the engine and transmission
- (1) Remove the starter. <Ref. to SC(H4SO)-8, REMOVAL, Starter.>
  - (2) Remove the bolts which hold the right upper side of transmission to engine.

- 25) Remove the engine from vehicle.
- (1) Slightly raise the engine.
  - (2) Raise the transmission with garage jack.
  - (3) Move the engine horizontally until the mainshaft is withdrawn from clutch cover.
  - (4) Slowly move the engine away from engine compartment.

### NOTE:

Be careful not to damage adjacent parts or body panels with crank pulley, oil pressure gauge, etc.

26) Remove the front cushion rubbers.

## B: INSTALLATION

1) Install the clutch release fork and bearing onto transmission.

- (1) Remove the release bearing from clutch cover with flat-tip screwdriver.

- (2) Install the release bearing on transmission.

(3) Install the release fork into release bearing tab.

- (A) Release fork
- (B) Release bearing

(4) Apply grease to the specified points.  
 • Spline NICHIMOLY 130

- (A) Spline

(5) Insert the release fork shaft into release fork.

**CAUTION:**  
 Make sure the cutout portion of release fork shaft contacts spring pin.

- (A) Release fork
- (B) Release shaft
- (C) Spring pin

(6) Tighten the plug.

**Tightening torque:**  
**44 N·m (4.5 kgf-m, 33.5 ft-lb)**

2) Install the front cushion rubbers to engine.

**Tightening torque:**  
**35 N·m (3.6 kgf-m, 25.8 ft-lb)**

3) Install the engine onto transmission.

(1) Position the engine in engine compartment, and then align it with the transmission.

**NOTE:**

Be careful not to damage the adjacent parts or body panels with crank pulley, oil pressure gauge, etc.

(2) Apply a small amount of grease to the splines of mainshaft.

4) Tighten the bolts which hold the upper side of transmission to engine.

# Engine Assembly

MECHANICAL

**Tightening torque:**  
**50 N·m (5.1 kgf·m, 36.9 ft·lb)**

5) Remove the lifting device and wire ropes.

6) Remove the garage jack.  
7) Install the pitching stopper.

**Tightening torque:**  
**T1: 50 N·m (5.1 kgf·m, 36.9 ft·lb)**  
**T2: 58 N·m (5.9 kgf·m, 42.8 ft·lb)**

8) Install the power steering pump on bracket.  
(1) Install the power steering tank on bracket.

(2) Install the power steering pump.

**Tightening torque:**  
**20 N·m (2.0 kgf·m, 14.5 ft·lb)**

(3) Install the power steering pipe bracket on intake manifold RH.

(4) Connect the power steering switch connector.

(5) Install the front side V-belt, and adjust it.  
<Ref. to ME(STI)-40, FRONT SIDE BELT, INSTALLATION, V-belt.>

9) Lift-up the vehicle.  
10) Tighten the nuts which hold the lower side of transmission to engine.

**Tightening torque:**

**50 N·m (5.1 kgf·m, 36.9 ft·lb)**

11) Tighten the nuts which install the front cushion rubber onto crossmember.

**Tightening torque:**

**85 N·m (8.7 kgf·m, 62.7 ft·lb)**

**NOTE:**

Make sure the front cushion rubber mounting bolts (A) and locator (B) are securely installed.

12) Install the center exhaust pipe.  
<Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.>

13) Lower the vehicle.

14) Connect the following hoses:

- (1) Fuel delivery hose, return hose and evaporation hose
- (2) Heater inlet and outlet hoses
- (3) Brake booster vacuum hose

15) Connect the following connectors and terminals:

- (1) Engine ground terminal
- (2) Engine harness connectors
- (3) Generator connector and terminal
- (4) A/C compressor connectors

16) Install the air intake system.

- (1) Install the intercooler. <Ref. to IN(STI)-11, INSTALLATION, Intercooler.>
- (2) Install the air cleaner element and air cleaner upper cover.
- (3) Install the engine harness connector bracket.
- (4) Install the filler hose to air cleaner case.

17) Install the A/C pressure hoses.

**NOTE:**

Use new O-rings.

**Tightening torque:**

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

18) Install the radiator. <Ref. to CO(H4DOTC)-24, INSTALLATION, Radiator.>

19) Install the coolant filler tank. <Ref. to CO(H4DOTC)-33, INSTALLATION, Coolant Filler Tank.>

20) Install the window washer tank.

21) Install the battery in the vehicle, and then connect the cables.

22) Fill coolant.

<Ref. to CO(H4DOTC)-17, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

23) Charge the A/C system with refrigerant.

<Ref. to AC-21, PROCEDURE, Refrigerant Charging Procedure.>

24) Remove the front hood stay, and close the front hood.

25) Take off the vehicle from lift arms.

**C: INSPECTION**

1) Check that the pipes and hoses are installed firmly.

2) Check that the engine coolant is at specified level.

## 10.Engine Mounting

### A: REMOVAL

- 1) Remove the engine assembly. <Ref. to ME(STI)-31, REMOVAL, Engine Assembly.>
- 2) Remove the engine mounting from engine assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

#### *Engine mounting;*

*35 N·m (3.6 kgf-m, 25.8 ft-lb)*

### C: INSPECTION

Make sure there are no cracks or other damage.

## 11. Preparation for Overhaul

### A: PROCEDURE

1) After removing the engine from body, secure it in the STs shown below.

|     |           |                            |
|-----|-----------|----------------------------|
| ST1 | 498457000 | ENGINE STAND ADAPTER<br>RH |
| ST2 | 498457100 | ENGINE STAND ADAPTER<br>LH |
| ST3 | 499817000 | ENGINE STAND               |

2) In this section the procedures described under each index are all connected and stated in order. It will be the complete procedure for overhauling of the engine itself when you go through all steps in the process.

Therefore, in this section, to conduct the particular procedure within the flow of a section, you need to go back and conduct the procedure described previously in order to do that particular procedure.

## 12.V-belt

### A: REMOVAL

#### 1. FRONT SIDE BELT

- 1) Remove the V-belt cover.

- 2) Loosen the lock bolt (A).
- 3) Loosen the slider bolt (B).
- 4) Remove the front side belt (C).

#### 2. REAR SIDE BELT

- 1) Loosen the lock nut (A).
- 2) Loosen the slider bolt (B).

- 3) Remove the A/C belt.

- 4) Remove the A/C belt tensioner.

### B: INSTALLATION

#### NOTE:

Wipe off any oil or water on the belt and pulley.

#### 1. FRONT SIDE BELT

- 1) Install the belt (C), and tighten the slider bolt so as to obtain the specified belt tension <Ref. to ME(STI)-41, INSPECTION, V-belt.>
- 2) Tighten the lock bolt (A).
- 3) Tighten the slider bolt (B).

#### Tightening torque:

##### Lock bolt through bolt:

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

##### Slider bolt:

**8 N·m (0.8 kgf-m, 5.9 ft-lb)**

- 4) Idle the engine for approx. 5 min. to normalize the V-belt. (With using tension gauge)
- 5) Stop the engine, and then check the belt tension and adjust it. (With using tension gauge)
- 6) Idle the engine for approx. 1 min. to normalize the V-belt. (With using tension gauge)
- 7) Stop the engine, and then check that the belt tension is within specified value. (With using tension gauge)
- 8) Adjust the belt tension within the specification. (With using tension gauge)

## 2. REAR SIDE BELT

- 1) Install the belt, and tighten the slider bolt (B) so as to obtain the specified belt tension. <Ref. to ME(STI)-41, INSPECTION, V-belt.>
- 2) Tighten the lock nut (A).

### Tightening torque:

**Lock nut (A):**

**23 N·m (2.3 kgf·m, 17.0 ft·lb)**

- 3) Idle the engine for approx. 5 min. to normalize the V-belt. (With using tension gauge)
- 4) Stop the engine, and then check the belt tension and adjust it. (With using tension gauge)
- 5) Idle the engine for approx. 1 min. to normalize the V-belt. (With using tension gauge)
- 6) Stop the engine, and then check the belt tension is within specified value. (With using tension gauge)
- 7) Adjust the belt tension within the specification. (With using tension gauge)

## C: INSPECTION

- 1) Replace the belts, if cracks, fraying or wear are found.
- 2) Check the V-belt tension and adjust it if necessary by changing generator installing position and/or idler pulley installing position.

### Belt tension (without using belt tension gauge)

**(A)**

**replaced: 7 — 9 mm (0.276 — 0.354 in)**

**reused: 9 — 11 mm (0.354 — 0.433 in)**

**(B)**

**replaced: 7.5 — 8.5 mm (0.295 — 0.335 in)**

**reused: 9.0 — 10.0 mm (0.354 — 0.394 in)**

(A) Front side belt

(B) Rear side belt

(C) 98 N (10 kgf, 22 lbf)

C/P Crank pulley

GEN Generator

P/S Power steering oil pump pulley

A/C Air conditioning compressor pulley

I/P Idler pulley

### Belt tension (with using belt tension gauge)

**(A) 490 — 640 N (50 — 65 kgf, 110 — 144 lbf)**

**(B) 350 — 450 N (36 — 46 kgf, 79 — 101 lbf)**

(A) Front side belt

(B) Rear side belt

C/P Crank pulley

GEN Generator

P/S Power steering oil pump pulley

A/C A/C compressor pulley

I/P Idler pulley

## 13. Crank Pulley

### A: REMOVAL

1) Remove the V-belt. <Ref. to ME(STI)-40, REMOVAL, V-belt.>

2) Remove the crank pulley bolt. To lock the crankshaft, use ST.

ST 499977100 CRANK PULLEY WRENCH

3) Remove the crank pulley.

### B: INSTALLATION

1) Install the crank pulley.

2) Install the pulley bolt.

To lock the crankshaft, use ST.

ST 499977100 CRANK PULLEY WRENCH

(1) Clean the crank pulley thread using an compressed air.

(2) Apply engine oil to the crank pulley bolt seat and thread.

(3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft·lb).

(4) Tighten the crank pulley bolts.

#### Tightening torque:

**180 N·m (18.4 kgf·m, 132.8 ft·lb)**

3) Confirm that the tightening angle of crank pulley bolt is 65 degrees or more. If the tightening angle of crank pulley bolt is less than 65 degrees, conduct the following procedures.

#### CAUTION:

**If the tightening angle of crank pulley bolt is less than 65 degrees, the bolt should be damaged. In this case, the bolt must be replaced.**

(1) Replace the crank pulley bolts and clean them.

#### Crank pulley bolt:

**Part No. 12369AA011**

(2) Clean the crankshaft thread using an compressed air.

(3) Apply engine oil to the crank pulley bolt seat and thread.

(4) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft·lb).

(5) Tighten the crank pulley bolts keeping them in an angle between 65 degrees and 75 degrees.

#### NOTE:

Conduct the tightening procedures by confirming the turning angle of crank pulley bolt referring to the gauge indicated on timing belt cover.

4) Install the A/C belt tensioner.

5) Install the V-belt. <Ref. to ME(STI)-40, INSTALLATION, V-belt.>

### C: INSPECTION

1) Make sure the V-belt is not worn or otherwise damaged.

2) Check the tension of the belt. <Ref. to ME(STI)-41, INSPECTION, V-belt.>

## 14. Timing Belt Cover

### A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(STI)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(STI)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover (LH) (A).
- 4) Remove the timing belt cover (RH) (B).
- 5) Remove the front timing belt cover (C).

### B: INSTALLATION

- 1) Install the front timing belt cover (C).

**Tightening torque:**

**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

- 2) Install the timing belt cover (RH) (B).

**Tightening torque:**

**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

- 3) Install the timing belt cover (LH) (A).

**Tightening torque:**

**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

- 4) Install the crank pulley. <Ref. to ME(STI)-42, INSTALLATION, Crank Pulley.>
- 5) Install the V-belt. <Ref. to ME(STI)-40, INSTALLATION, V-belt.>

### C: INSPECTION

Make sure the cover is not damaged.

## 15. Timing Belt

### A: REMOVAL

#### 1. TIMING BELT

- 1) Remove the V-belt. <Ref. to ME(STI)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(STI)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(STI)-43, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt guides.

- 5) If the alignment mark and/or arrow mark (which indicates rotation direction) on timing belt fade away, put new marks before removing the timing belt as follows:

- (1) Turn the crankshaft using ST, and align the alignment marks on crank sprocket, intake cam sprocket (LH), exhaust cam sprocket (LH), intake cam sprocket (RH) and exhaust cam sprocket (RH) with notches of timing belt cover and cylinder block.

ST 499987500 CRANKSHAFT SOCKET

- (2) Using white paint, put alignment and/or arrow marks on the timing belts in relation to the sprockets.

**Z<sub>1</sub>: 54.5 tooth length**  
**Z<sub>2</sub>: 51 tooth length**  
**Z<sub>3</sub>: 28 tooth length**

6) Remove the belt idler (A).

7) Remove the timing belt.

**CAUTION:**

After the timing belt has been removed, never rotate the intake and exhaust cam sprocket. If the cam sprockets are rotated, the intake and exhaust valve heads strike together and valve stems are bent.

**2. BELT IDLER AND AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY**

1) Remove the belt idler (B) and (C).

2) Remove the belt idler No. 2.

3) Remove the automatic belt tension adjuster assembly.

**B: INSTALLATION**

**1. AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER**

1) Preparation for installation of automatic belt tension adjuster assembly:

**CAUTION:**

- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.
- Press-in the push adjuster rod gradually taking more than 3 minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lbf).
- Press the adjuster rod as far as the end surface of cylinder. Do not press the adjuster rod into the cylinder. Doing so may damage the cylinder.
- Do not release the press pressure until stopper pin is completely inserted.

(1) Attach the automatic belt tension adjuster assembly to the vertical pressing tool.

# Timing Belt

## MECHANICAL

(2) Slowly move the adjuster rod down with a pressure of more than 165 N (16.8 kgf, 37.1 lbf) until the adjuster rod is aligned with the stopper pin hole in the cylinder.

(3) With a 2 mm (0.08 in) dia. stopper pin or a 2 mm (nominal) dia. hex bar wrench inserted into the stopper pin hole in the cylinder, secure the adjuster rod.

2) Install the automatic belt tension adjuster assembly.

### **Tightening torque:**

**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

3) Install the belt idler No. 2.

### **Tightening torque:**

**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

4) Install the belt idler.

### **Tightening torque:**

**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

## 2. TIMING BELT

1) Preparation for installation of automatic belt tension adjuster assembly <Ref. to ME(STI)-51, AUTOMATIC BELT TENSION ADJUSTER, INSPECTION, Timing Belt.>

2) Crankshaft and cam sprocket alignment

(1) Align mark (A) on the crank sprocket with mark on the oil pump cover at cylinder block.

# Timing Belt

MECHANICAL

(2) Align single line mark (A) on the exhaust cam sprocket (RH) with notch (B) on timing belt cover.

(3) Align single line mark (A) on the intake cam sprocket (RH) with notch (B) on timing belt cover.

(Make sure double lines (C) on intake camshaft and exhaust cam sprockets are aligned.)

(4) Align single line mark (A) on exhaust cam sprocket (LH) with notch (B) on timing belt cover by turning the sprocket counterclockwise (as viewed from front of engine).

(5) Align the single line mark (A) on intake cam sprocket (LH) with notch (B) on timing belt cover by turning the sprocket clockwise (as viewed from front of engine).

Ensure the double lines (C) on intake and exhaust cam sprockets are aligned.

(6) Ensure the camshaft and crank sprockets are positioned properly.

### CAUTION:

- Intake and exhaust camshafts for this DOHC engine can be independently rotated with the timing belts removed. As can be seen from the figure, if the intake and exhaust valves are lifted simultaneously, their heads will interfere with each other, resulting in bent valves.

- (A) Intake camshaft
- (B) Exhaust camshaft

# Timing Belt

## MECHANICAL

- When the timing belts are not installed, four camshafts are held at the “zero-lift” position, where all cams on camshafts do not push the intake and exhaust valves down. (Under this condition, all valves remain unlifted.)
- When the camshafts are rotated to install the timing belts, #2 intake and #4 exhaust cam of camshafts (LH) are held to push their corresponding valves down. (Under this condition, these valves are held lifted.) Camshafts (RH) are held so that their cams do not push valves down.
- Camshafts (LH) must be rotated from the “zero-lift” position to the position where the timing belt is to be installed at as small an angle as possible, in order to prevent mutual interference of intake and exhaust valve heads.
- Do not allow the camshafts to rotate in the direction shown by the upper illustration in the figure as this causes both intake and exhaust valves to lift simultaneously, resulting in interference with their heads.

- (A) Rotating direction
- (B) Timing belt installation position

### 3) Installation of timing belt

Align the alignment mark on timing belt with marks on sprockets in alphabetical order shown in the figure. While aligning marks, position the timing belt properly.

#### CAUTION:

- Disengagement of more than three timing belt teeth may result in interference between the valve and piston.
- Ensure the belt's rotating direction is correct.

- |                     |                       |                           |
|---------------------|-----------------------|---------------------------|
| (1) Arrow mark      | (4) 54.5 tooth length | (7) Install it in the end |
| (2) Timing belt     | (5) 51 tooth length   |                           |
| (3) 28 tooth length | (6) 28 tooth length   |                           |

### 4) Install the belt idlers.

#### Tightening torque:

**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

#### NOTE:

Make sure that the marks on the timing belt and sprockets are aligned.

5) After ensuring that the marks on the timing belt and sprockets are aligned, remove the stopper pin from tensioner adjuster.

6) Install the timing belt guide.

#### CAUTION:

- Before installing the bolts, clean the threaded portion of timing belt cover.

- Apply liquid gasket to the threaded portion of bolts. (Cam sprocket side only)

#### Liquid gasket:

**THREE BOND 1324 (Part No. 004403042) or equivalent**

- (1) Temporarily tighten the bolts.
- (2) Check and adjust the clearance between timing belt and timing belt guide.

# Timing Belt

MECHANICAL

## Clearance:

$1.0 \pm 0.5 \text{ mm}$  ( $0.039 \pm 0.020 \text{ in}$ )

## Tightening torque:

$9.75 \text{ N}\cdot\text{m}$  ( $1.0 \text{ kgf}\cdot\text{m}$ ,  $7 \text{ ft}\cdot\text{lb}$ )

## Tightening torque:

$6.4 \text{ N}\cdot\text{m}$  ( $0.65 \text{ kgf}\cdot\text{m}$ ,  $4.7 \text{ ft}\cdot\text{lb}$ )

## Tightening torque:

$6.4 \text{ N}\cdot\text{m}$  ( $0.65 \text{ kgf}\cdot\text{m}$ ,  $4.7 \text{ ft}\cdot\text{lb}$ )

## Tightening torque:

$6.4 \text{ N}\cdot\text{m}$  ( $0.65 \text{ kgf}\cdot\text{m}$ ,  $4.7 \text{ ft}\cdot\text{lb}$ )

(3) Tighten the bolts.

7) Install the timing belt cover. <Ref. to ME(STI)-43, INSTALLATION, Timing Belt Cover.>

- 8) Install the crank pulley. <Ref. to ME(STI)-42, INSTALLATION, Crank Pulley.>
- 9) Install the V-belt. <Ref. to ME(STI)-40, INSTALLATION, V-belt.>

## C: INSPECTION

### 1. TIMING BELT

- 1) Check the timing belt teeth for breaks, cracks, and wear. If any fault is found, replace the belt.
- 2) Check the condition of back side of belt; if any crack is found, replace the belt.

#### CAUTION:

- Be careful not to let oil, grease or coolant contact the timing belt. Remove quickly and thoroughly if this happens.
- Do not bend the belt sharply.

#### Bending radius h:

60 mm (2.36 in) or more

### 2. AUTOMATIC BELT TENSION ADJUST-ER

- 1) Visually check the oil seals for leaks, and rod ends for abnormal wear or scratches. If necessary, replace the automatic belt tension adjuster assembly.

#### NOTE:

Slight traces of oil at rod's oil seal does not indicate a problem.

- 2) Check that the adjuster rod does not move when a pressure of 165 N (16.8 kgf, 37.1 lbf) is applied to it. This is to check adjuster rod stiffness.

- 3) If the adjuster rod is not stiff and moves freely when applying 165 N (16.8 kgf, 37.1 lbf), check it using the following procedures:

- (1) Slowly press the adjuster rod down to the end surface of the cylinder. Repeat this motion 2 or 3 times.

- (2) With the adjuster rod moved all the way up, apply a pressure of 165 N (16.8 kgf, 37.1 lbf) to it. Check the adjuster rod stiffness.

- (3) If the adjuster rod is not stiff and moves down, replace the automatic belt tension adjuster assembly with a new one.

#### CAUTION:

- Always use a vertical type pressing tool to move the adjuster rod down.
  - Do not use a lateral type vise.
  - Push the adjuster rod vertically.
  - Press-in the push adjuster rod gradually taking more than 3 minutes.
  - Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lbf).
  - Press the adjuster rod till the end of the surface of the cylinder. Do not press the adjuster rod into the cylinder. Doing so may damage the cylinder.
- 4) Measure the extension of rod beyond the body. If it is not within specifications, replace with a new one.

#### Rod extension H:

5.7±0.5 mm (0.224±0.020 in)

### 3. BELT TENSION PULLEY

- 1) Check the mating surfaces of timing belt and contact point of adjuster rod for abnormal wear or scratches. Replace the belt tension pulley if faulty.
- 2) Check the belt tension pulley for smooth rotation. Replace if noise or excessive play is noted.
- 3) Check the belt tension pulley for grease leakage.

### 4. BELT IDLER

- 1) Check the belt idler for smooth rotation. Replace if noise or excessive play is noted.
- 2) Check the outer contacting surfaces of idler pulley for abnormal wear and scratches.
- 3) Check the belt idler for grease leakage.

# Cam Sprocket

MECHANICAL

## 16. Cam Sprocket

### A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(STI)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(STI)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(STI)-43, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(STI)-44, REMOVAL, Timing Belt.>
- 5) Remove the cam sprockets. To lock the camshaft, use ST.

ST 499207400 CAM SPROCKET WRENCH

ST 499977500 CAM SPROCKET WRENCH

### B: INSTALLATION

- 1) Install the cam sprocket. To lock the camshaft, use ST.

#### NOTE:

Do not confuse cam sprockets (RH) and (LH) during installation.

ST 499207400 CAM SPROCKET WRENCH

### Tightening torque:

**30 N·m (3.0 kgf·m, 21.8 ft·lb), and then tighten 45° furthermore**

ST 499977500 CAM SPROCKET WRENCH

### Tightening torque:

**30 N·m (3.0 kgf·m, 21.8 ft·lb), and then tighten 45° furthermore**

- 2) Install the timing belt. <Ref. to ME(STI)-45, INSTALLATION, Timing Belt.>
- 3) Install the timing belt cover. <Ref. to ME(STI)-43, INSTALLATION, Timing Belt Cover.>
- 4) Install the crank pulley. <Ref. to ME(STI)-42, INSTALLATION, Crank Pulley.>
- 5) Install the V-belt. <Ref. to ME(STI)-40, INSTALLATION, V-belt.>

### C: INSPECTION

- 1) Check the sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between sprocket and key.
- 3) Check the crank sprocket notch used for sensor for damage and contamination of foreign matter.

## 17.Crank Sprocket

### A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(STI)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(STI)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(STI)-43, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(STI)-44, REMOVAL, Timing Belt.>
- 5) Remove the cam sprocket. <Ref. to ME(STI)-52, REMOVAL, Cam Sprocket.>
- 6) Remove the crank sprocket.

### B: INSTALLATION

- 1) Install the crank sprocket.

- 2) Install the cam sprocket. <Ref. to ME(STI)-52, INSTALLATION, Cam Sprocket.>
- 3) Install the timing belt. <Ref. to ME(STI)-45, INSTALLATION, Timing Belt.>
- 4) Install the timing belt cover. <Ref. to ME(STI)-43, INSTALLATION, Timing Belt Cover.>
- 5) Install the crank pulley. <Ref. to ME(STI)-42, INSTALLATION, Crank Pulley.>
- 6) Install the V-belt. <Ref. to ME(STI)-40, INSTALLATION, V-belt.>

### C: INSPECTION

- 1) Check the sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between sprocket and key.
- 3) Check the crank sprocket notch used for sensor for damage and contamination of foreign matter.

## 18. Camshaft

### A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(STI)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(STI)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(STI)-43, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(STI)-44, REMOVAL, Timing Belt.>
- 5) Remove the cam sprocket. <Ref. to ME(STI)-42, REMOVAL, Crank Pulley.>
- 6) Remove the crank sprocket. <Ref. to ME(STI)-53, REMOVAL, Crank Sprocket.>
- 7) Disconnect the oil flow control solenoid valve assembly connector.

- 8) Remove the tensioner bracket.

- 9) Remove the timing belt cover No. 2 (LH).

- 10) Remove the timing belt cover No. 2 (RH).

- 11) Remove the spark plug cord.
- 12) Remove the oil level gauge guide. (LH side)
- 13) Remove the rocker cover and gasket.
- 14) Remove the oil pipe.

- (A) Union screw (with protrusion)
- (B) Union screw (without protrusion)
- (C) Oil pipe

- 15) Loosen the oil flow control solenoid valve assembly and intake camshaft cap bolts equally, a little at a time in alphabetical sequence shown in the figure.

16) Loosen the exhaust camshaft cap bolts equally, a little at a time in alphabetical sequence shown in the figure.

17) Remove the oil flow control solenoid valve assembly, intake camshaft cap, and camshaft.  
18) Remove the exhaust camshaft cap and camshaft.

**NOTE:**

Arrange the camshaft caps in order so that they can be reinstalled in their original positions.

19) Similarly, remove the camshafts (RH) and related parts.

## B: INSTALLATION

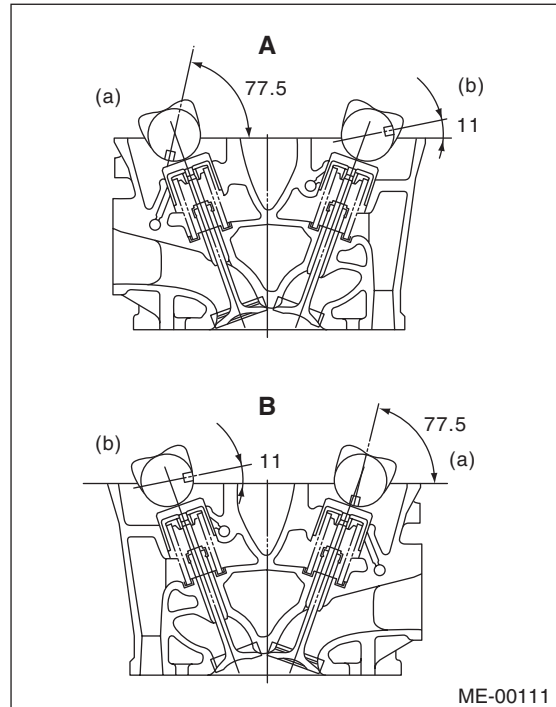

### 1) Camshaft installation

Apply engine oil to cylinder head at camshaft bearing location before installing the camshaft. Install the camshaft so that each valve is close to or in contact with “base circle” of cam lobe.

**NOTE:**

- When the camshafts are positioned as shown in the figure, camshafts need to be rotated at a minimum to align with the timing belt during installation.

- Camshaft (RH) need not be rotated when set at position shown in the figure. Intake camshaft (LH): Rotate 80° clockwise. Exhaust camshaft (LH): Rotate 45° counterclockwise.

- A Cylinder head (LH)
- B Cylinder head (RH)
- (a) Intake camshaft
- (b) Exhaust camshaft

### 2) Camshaft cap and oil flow control solenoid valve assembly installation

(1) Apply liquid gasket sparingly to cap mating surface.

**NOTE:**

Do not apply liquid gasket excessively. Failure to do so may cause excess gasket to come out and flow toward the oil seal, resulting in oil leaks.

**Liquid gasket:**

**Part No. 004403007**

**THREE BOND 1215 or equivalent**

# Camshaft

MECHANICAL

(2) Apply engine oil to cap bearing surface and install the cap on camshaft.

(3) Gradually tighten the camshaft cap and oil control valve assembly in at least two stages in alphabetical sequence shown in the figure, and then tighten to specified torque.

**Tightening torque:**

**T1: 9.75 N·m (1.0 kgf-m, 7 ft-lb)**

**T2: 20 N·m (2.0 kgf-m, 14.8 ft-lb)**

(4) After tightening camshaft cap, ensure the camshaft rotates only slightly while holding it at “base” circle.

3) Apply engine oil to the outer perimeter and lips of oil seal, and install the oil seal on camshaft using ST1 and ST2.

**NOTE:**

Use a new oil seal.

ST1 499587600 OIL SEAL GUIDE

ST2 499597200 OIL SEAL GUIDE

**4) Rocker cover installation**

(1) Install the gasket on rocker cover. Install the nearby gaskets and ignition coil gasket.

**NOTE:**

Use a new gasket.

(2) Apply liquid gasket to the specified point of cylinder head.

**NOTE:**

Apply liquid gasket to the half moon plug portion with sticking out more than 5 mm (0.2 in).

**Liquid gasket:**

**THREE BOND 1215 (Part No. 004403007) or equivalent**

(3) Install the rocker cover on cylinder head. Ensure the gasket is properly positioned during installation.

(4) Tighten the rocker cover tightening bolt in alphabetical sequence shown in the figure, and then tighten to specified torque.

**Tightening torque:**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

5) Install the oil pipe. Assemble the union screw to the location as shown in the figure during installation.

**Tightening torque:**  
**29 N·m (3.0 kgf·m, 21.4 ft·lb)**

- (A) Union screw (with protrusion)
- (B) Union screw (without protrusion)
- (C) Oil pipe

6) Connect the oil flow control solenoid valve connector.

- 7) Install the spark plug cord.
- 8) Similarly, install the parts on right-hand side.
- 9) Install the timing belt cover No. 2 (RH).

**Tightening torque:**  
**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

10) Install the timing belt cover No. 2 (LH).

**Tightening torque:**  
**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

11) Install the tensioner bracket.

**Tightening torque:**  
**24.5 N·m (2.5 kgf·m, 18.1 ft·lb)**

12) Install the crank sprocket. <Ref. to ME(STI)-53, INSTALLATION, Crank Sprocket.>

13) Install the cam sprockets. <Ref. to ME(STI)-52, INSTALLATION, Cam Sprocket.>

14) Install the timing belt. <Ref. to ME(STI)-45, INSTALLATION, Timing Belt.>

15) Install the timing belt cover. <Ref. to ME(STI)-43, INSTALLATION, Timing Belt Cover.>

16) Install the crank pulley. <Ref. to ME(STI)-42, INSTALLATION, Crank Pulley.>

17) Install the V-belt. <Ref. to ME(STI)-40, INSTALLATION, V-belt.>

# Camshaft

MECHANICAL

## C: INSPECTION

1) Measure the bend, and repair or replace if necessary.

**Limit:**

**0.020 mm (0.00079 in)**

2) Check the journal for damage and wear. Replace if faulty.

3) Measure the outside diameter of camshaft journal. If the journal diameter is not as specified, check the oil clearance.

|          | Camshaft journal                           |  |
|----------|--|--|
|          | Front                                      | Center, rear                               |
| Standard | 37.946 — 37.963 mm<br>(1.4939 — 1.4946 in) | 29.946 — 29.963 mm<br>(1.1790 — 1.1796 in) |

4) Measurement of the camshaft journal oil clearance

- (1) Clean the bearing caps and camshaft journals.
- (2) Place the camshafts on cylinder head.
- (3) Place a plastigauge across each of the camshaft journals.
- (4) Gradually tighten the cap in at least two stages in alphabetical sequence shown in the figure, and then tighten to specified torque. Do not turn the camshaft.

**Tightening torque:**

**T1: 10 N·m (1.0 kgf·m, 7.4 ft·lb)**

**T2: 20 N·m (2.0 kgf·m, 14.8 ft·lb)**

(5) Remove the bearing caps.

(6) Measure the widest point of plastigauge on each journal. If the oil clearance exceeds the limit, replace the camshaft. If necessary, replace the camshaft caps and cylinder head as a set.

**Standard:**

**0.037 — 0.072 mm (0.0015 — 0.0028 in)**

**Limit:**

**0.10 mm (0.0039 in)**

(7) Completely remove the plastigauge.

5) Check the cam face condition, and remove the minor faults by grinding with oil stone. Measure the cam height H. If it exceeds the limit or offset wear occurs, replace the camshaft.

**Cam height H:**

**Standard:**

**Intake:**

**46.55 — 46.65 mm (1.833 — 1.837 in)**

**Exhaust:**

**46.75 — 46.85 mm (1.841 — 1.844 in)**

**Limit:**

**Intake:**

**46.45 mm (1.829 in)**

**Exhaust:**

**46.65 mm (1.837 in)**

**Cam base circle diameter A:**

**37.0 mm (1.457 in)**

6) Measure the thrust clearance of camshaft with dial gauge. If the thrust clearance exceeds the limit, replace the caps and cylinder head as a set. If necessary, replace the camshaft.

**Standard:**

**0.068 — 0.116 mm (0.0027 — 0.0046 in)**

**Limit:**

**0.14 mm (0.0055 in)**

## 19. Cylinder Head

### A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(STI)-40, REMOVAL, V-belt.>
- 2) Remove the crank pulley. <Ref. to ME(STI)-42, REMOVAL, Crank Pulley.>
- 3) Remove the timing belt cover. <Ref. to ME(STI)-43, REMOVAL, Timing Belt Cover.>
- 4) Remove the timing belt. <Ref. to ME(STI)-44, REMOVAL, Timing Belt.>
- 5) Remove the cam sprocket. <Ref. to ME(STI)-52, REMOVAL, Cam Sprocket.>
- 6) Remove the intake manifold. <Ref. to FU(STI)-13, REMOVAL, Intake Manifold.>
- 7) Remove the bolt which installs the A/C compressor bracket on cylinder head.
- 8) Remove the camshaft. <Ref. to ME(STI)-54, REMOVAL, Camshaft.>
- 9) Remove the cylinder head bolts in alphabetical sequence shown in the figure.  
Leave bolts (A) and (D) engaged by three or four threads to prevent the cylinder head from falling.

- 10) While tapping the cylinder head with a plastic hammer, separate it from cylinder block. Remove the bolts (A) and (D) to remove cylinder head.

- 11) Remove the cylinder head gasket.

### CAUTION:

**Be careful not to scratch the mating surface of cylinder head and cylinder block.**

- 12) Similarly, remove the cylinder head (RH).

### B: INSTALLATION

- 1) Install the cylinder head and gaskets on cylinder block.

### CAUTION:

- Use new cylinder head gaskets.
  - Be careful not to scratch the mating surface of cylinder head and cylinder block.
- 2) Tighten the cylinder head bolts.
    - (1) Apply a coat of engine oil to the washers and bolt threads.
    - (2) Tighten all bolts to 29 N·m (3.0 kgf-m, 21.4 ft-lb) in alphabetical sequence.
    - (3) Tighten all bolts to 69 N·m (7.0 kgf-m, 50.9 ft-lb) in alphabetical sequence again.
    - (4) Back off all bolts by 180° first; back them off by 180° again in reverse order of installation.
    - (5) Tighten all bolts to 49 N·m (5.0 kgf-m, 36 ft-lb) in alphabetical sequence.
    - (6) Tighten all bolts 80 to 90° in alphabetical sequence.
    - (7) Tighten all bolts by 40 to 45° in alphabetical sequence again.

### CAUTION:

**Do not tighten the bolts by more than 45°.**

- (8) Further tighten all bolts (A) and (B) by 40 to 45°.

### CAUTION:

**Ensure that the total “re-tightening angle” in the previous two steps do not exceed 90°.**

- 3) Install the camshaft. <Ref. to ME(STI)-55, INSTALLATION, Camshaft.>
- 4) Install the A/C compressor bracket on cylinder head.
- 5) Install the intake manifold. <Ref. to FU(STI)-16, INSTALLATION, Intake Manifold.> <Ref. to FU(STI)-44, RELEASING OF FUEL PRESSURE, PROCEDURE, Fuel.>
- 6) Install the cam sprocket. <Ref. to ME(STI)-52, INSTALLATION, Cam Sprocket.>
- 7) Install the timing belt. <Ref. to ME(STI)-45, INSTALLATION, Timing Belt.>
- 8) Install the timing belt cover. <Ref. to ME(STI)-43, INSTALLATION, Timing Belt Cover.>

9) Install the crank pulley. <Ref. to ME(STI)-42, INSTALLATION, Crank Pulley.>

10) Install the V-belt. <Ref. to ME(STI)-40, INSTALLATION, V-belt.>

## C: DISASSEMBLY

1) Remove the valve lifters.

2) Compress the valve spring and remove the valve spring retainer key. Remove each valve and valve spring.

ST1 498267600 CYLINDER HEAD TABLE

ST2 499718000 VALVE SPRING REMOVER

### NOTE:

Keep the removed parts in order for re-installing in their original positions.

### CAUTION:

- Mark each valve to prevent confusion.
- Use extreme care not to damage the lips of the intake valve oil seals and exhaust valve oil seals.

# Cylinder Head

MECHANICAL

## D: ASSEMBLY

ME-02832

- |                       |                           |                             |
|-----------------------|---------------------------|-----------------------------|
| (1) Exhaust valve     | (5) Intake valve oil seal | (9) Valve lifter            |
| (2) Intake valve      | (6) Valve spring          | (10) Exhaust valve oil seal |
| (3) Cylinder head     | (7) Retainer              | (11) Intake valve guide     |
| (4) Valve spring seat | (8) Retainer key          | (12) Exhaust valve guide    |

### 1) Installation of valve spring and valve:

- (1) Coat the stem of each valve with engine oil and insert the valve into valve guide.

#### NOTE:

When inserting the valve into valve guide, use special care not to damage the oil seal lip.

- (2) Set the cylinder head on ST1.
- (3) Install the valve spring and retainer using ST2.

ST1 498267600 CYLINDER HEAD TABLE  
ST2 499718000 VALVE SPRING REMOVER

**NOTE:**

Be sure to install the valve springs with their close-coiled end facing the seat on cylinder head.

ME-00124

(4) Compress the valve spring, and then fit the valve spring retainer key.

(5) After installing, tap the valve spring retainers lightly with wooden hammer for better seating.

2) Apply oil to the surface of the valve lifter.

3) Install the valve lifter.

## E: INSPECTION

### 1. CYLINDER HEAD

1) Make sure that no crack or other damage exists. In addition to visual inspection, inspect the important areas by means of liquid penetrant tester.

2) Measure the warping of the cylinder head surface that mates with crankcase by using a straight edge (A) and thickness gauge (B).

If the warping exceeds the limit, grind the surface with a surface grinder.

**Warping limit:**

**0.035 mm (0.0014 in)**

**Grinding limit:**

**0.3 mm (0.012 in)**

**Standard height of cylinder head:**

**127.5 mm (5.02 in)**

**NOTE:**

Uneven torque for the cylinder head nuts can cause warping. When reassembling, pay special attention to the torque so as to tighten evenly.

ME-00126

### 2. VALVE SEAT

Inspect the intake and exhaust valve seats, and then correct the contact surfaces with valve seat cutter if they are defective or when valve guides are replaced.

**Valve seat contact width W:**

**Intake**

**Standard 0.6 — 1.6 mm (0.024 — 0.055 in)**

**Limit 1.7 mm (0.067 in)**

**Exhaust**

**Standard 1.2 — 1.8 mm (0.047 — 0.071 in)**

**Limit 2.2 mm (0.087 in)**

ME-00127

### 3. VALVE GUIDE

1) Check the clearance between valve guide and stem. The clearance can be checked by measuring the outside diameter of valve stem and the inside diameter of valve guide with outside and inside micrometers respectively.

**Clearance between the valve guide and valve stem:**

**Standard**

**Intake**

**0.030 — 0.057 mm (0.0012 — 0.0022 in)**

**Exhaust**

**0.040 — 0.067 mm (0.0016 — 0.0026 in)**

**Limit**

**0.15 mm (0.0059 in)**

2) If the clearance between valve guide and stem exceeds the limit, replace the valve guide or valve itself whichever shows greater amount of wear. See the following procedure for valve guide replacement.

**Valve guide inner diameter:**

**6.000 — 6.012 mm (0.2362 — 0.2367 in)**

**Valve stem outer diameters:**

**Intake**

**5.955 — 5.970 mm (0.2344 — 0.2350 in)**

**Exhaust**

**5.945 — 5.960 mm (0.2341 — 0.2346 in)**

# Cylinder Head

## MECHANICAL

- (1) Place the cylinder head on ST1 with the combustion chamber upward so that valve guides enter the holes in ST1.
- (2) Insert the ST2 into valve guide and press it down to remove the valve guide.

ST1 498267600 CYLINDER HEAD TABLE  
ST2 499767200 VALVE GUIDE REMOVER

- (3) Turn the cylinder head upside down and place ST as shown in the figure.

ST 18251AA020 VALVE GUIDE ADJUSTER

- (4) Before installing a new valve guide, make sure that neither scratches nor damages exist on the inside surface of the valve guide holes in cylinder head.
- (5) Put a new valve guide, coated with sufficient oil, in cylinder, and insert ST1 into valve guide. Press in until the valve guide upper end is flush with the upper surface of ST2.

ST1 499767200 VALVE GUIDE REMOVER  
ST2 18251AA020 VALVE GUIDE ADJUSTER

- (6) Check the valve guide protrusion.

### Valve guide protrusion L:

15.8 — 16.2 mm (0.622 — 0.638 in)

- (7) Ream the inside of valve guide with ST. Gently rotate the reamer clockwise while pressing it lightly into the valve guide, and return it also rotating clockwise. After reaming, clean the valve guide to remove chips.

ST 499767400 VALVE GUIDE REAMER

### NOTE:

- Apply engine oil to the reamer when reaming.
  - If the inner surface of the valve guide is torn, the edge of the reamer should be slightly ground with an oil stone.
  - If the inner surface of the valve guide becomes lustrous and the reamer does not chip, use a new reamer or remedy the reamer.
- (8) Recheck the contact condition between valve and valve seat after replacing the valve guide.

## 4. INTAKE AND EXHAUST VALVE

1) Inspect the flange and stem of valve, and replace if damaged, worn, or deformed, or if head edge thickness "H" is less than the specified limit.

### Head edge thickness H:

#### Intake (A)

**Standard 1.0 — 1.4 mm (0.039 — 0.055 in)**

**Limit 0.8 mm (0.031 in)**

#### Exhaust (B)

**Standard 1.3 — 1.7 mm (0.051 — 0.067 in)**

**Limit 0.8 mm (0.031 in)**

### Valve overall length:

#### Intake (A)

**104.4 mm (4.110 in)**

#### Exhaust (B)

**104.65 mm (4.120 in)**

2) Put a small amount of grinding compound on the seat surface and lap the valve and seat surface. Install a new intake valve oil seal after lapping.

## 5. VALVE SPRINGS

1) Check the valve springs for damage, free length, and tension. Replace the valve spring if it is not within specifications presented in the table.

2) To measure the squareness of valve spring, stand the spring on a surface plate and measure its deflection at the top using a try square.

|                       |      | Valve spring   |
|-----------------------|------|--|
| Free length           |      | 47.32 mm (1.863 in)  |
| Tension/spring height | Set  | 205 — 235 N<br>(20.9 — 24.0 kgf, 46.1 — 52.8 lbf)<br>/36.0 mm (1.417 in) |
|                       | Lift | 426 — 490 N (43.4 — 50.0 kgf, 95.8 — 110 lbf) /26.50 mm (1.043 in)       |
| Squareness            |      | 2.5°, 2.1 mm (0.083 in) or less  |

## 6. INTAKE AND EXHAUST VALVE OIL SEAL

In the following case, pinch and remove the oil seal from valve using pliers, and then replace it with a new one.

- When the lip is damaged.
- When the spring is out of the specified position.
- When readjusting the surfaces of valve and valve seat.
- When replacing the intake valve guide.

- 1) Place the cylinder head on ST1.
- 2) Press in the oil seal to the specified dimension indicated in the figure by using ST2.

ST1 498267600 CYLINDER HEAD TABLE

ST2 498857100 VALVE OIL SEAL GUIDE

### NOTE:

- Apply engine oil to oil seal before press-fit.
- Differentiate between the intake valve oil seal and exhaust valve oil seal by noting their difference in color.

### Color of rubber part:

**Intake [Gray] Exhaust [Green]**

# Cylinder Head

MECHANICAL

## 7. VALVE LIFTER

- 1) Visually check the valve lifter.
- 2) Measure the outer diameter of valve lifter.

### Outer diameter:

**34.959 — 34.975 mm (1.3763 — 1.3770 in)**

- 3) Measure the inner diameter of valve lifter mating part on cylinder head.

### Inner diameter:

**34.994 — 35.016 mm (1.3777 — 1.3786 in)**

### NOTE:

If difference between outer diameter of valve lifter and inner diameter of valve lifter mating part is over the limit, replace the cylinder head.

### Standard:

**0.019 — 0.057 mm (0.0007 — 0.0022 in)**

### Limit:

**0.100 mm (0.0039 in)**

## F: DISPOSAL

### CAUTION:

- Metallic sodium is enclosed in the exhaust valve. Metallic sodium is extremely alkaline and may produce severe chemical reactions. Full consideration must therefore be given to the following points when handling or disposing of the valve.
- Since metallic sodium may cause blindness if contacted with the eyes, burns if contacted with the skin, and fire, do not deliberately take the valve apart.

If the valve is damaged, remove the valve and neutralize it by immersing it in water, and dispose of it in the same way that general steel materials are disposed of. The disposal method is described in the following.

- 1) Wearing rubber gloves, remove the damaged valve from the cylinder head.
- 2) Prepare a large receptacle (bucket or other container) in a well ventilated location, and fill the receptacle with water (at least 10 ℓ (21.14 US qt, 17.6 Imp qt)).
- 3) Immerse the damaged valve in the receptacle.

### CAUTION:

**A severe reaction may occur, so stand at least 2 — 3 m from the receptacle. Because the reaction will produce hydrogen gas, moreover, keep the receptacle away from sparks or flames.**

- 4) Once the reaction is completed (about 4 — 5 hours have elapsed), carefully remove the valve using large pincers so that the reaction liquid does not contact your skin, and dispose of it with other parts that are being disposed of.

- 5) The reaction liquid is a strong alkaline solution, so it must be disposed of in accordance with local regulations.

### CAUTION:

**Make sure the reaction liquid does not contact your skin. If contact with skin occurs, immediately wash the affected area with large quantities of water.**

## 20. Cylinder Block

### A: REMOVAL

**NOTE:**

Before conducting this procedure, drain the engine oil completely if applicable.

- 1) Remove the intake manifold. <Ref. to FU(STI)-13, REMOVAL, Intake Manifold.>
- 2) Remove the V-belt. <Ref. to ME(STI)-40, REMOVAL, V-belt.>
- 3) Remove the crank pulley. <Ref. to ME(STI)-42, REMOVAL, Crank Pulley.>
- 4) Remove the timing belt cover. <Ref. to ME(STI)-43, REMOVAL, Timing Belt Cover.>
- 5) Remove the timing belt. <Ref. to ME(STI)-44, REMOVAL, Timing Belt.>
- 6) Remove the cam sprocket. <Ref. to ME(STI)-52, REMOVAL, Cam Sprocket.>
- 7) Remove the crank sprocket. <Ref. to ME(STI)-53, REMOVAL, Crank Sprocket.>
- 8) Remove the generator and A/C compressor with their brackets.
- 9) Remove the cylinder head. <Ref. to ME(STI)-60, REMOVAL, Cylinder Head.>
- 10) Remove the clutch disc and cover. <Ref. to CL-14, REMOVAL, Clutch Disc and Cover.>
- 11) Remove the flywheel. <Ref. to CL-17, REMOVAL, Flywheel.>

ST 498497100 CRANKSHAFT STOPPER

- 12) Remove the oil separator cover.
  - 13) Remove the water by-pass pipe for heater.
  - 14) Remove the oil filter using ST.
- ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))
- ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))

**NOTE:**

Standard oil filter is outer diameter of 65 mm (2.56 in). However, SUBARU genuine oil filter having outer diameter of 68 mm (2.68 in) can also be used.

- 15) Remove the oil cooler.

- (A) Gasket
- (B) Oil cooler
- (C) Oil cooler connector

- 16) Remove the water pump.
- 17) Remove the oil pump from cylinder block. Use a flat-bladed screwdriver as shown in the figure when removing the oil pump.

**NOTE:**

Be careful not to scratch the mating surface of cylinder block and oil pump.

- 18) Removal of oil pan:
  - (1) Turn the cylinder block with #2 and #4 piston sides facing upward.
  - (2) Remove the bolts which secure oil pan to cylinder block.
  - (3) Insert an oil pan cutter blade between cylinder block-to-oil pan clearance, and then remove the oil pan.

Do not use a screwdriver or similar tool in place of oil pan cutter.

# Cylinder Block

## MECHANICAL

- 19) Remove the oil strainer stay.
- 20) Remove the oil strainer.

- 21) Remove the baffle plate.
- 22) Remove the water pipes.

# Cylinder Block

MECHANICAL

**NOTE:**

Be careful not to confuse the original combination of piston, piston pin and cylinder.

26) Similarly remove the piston pins from #3 and #4 pistons.

27) Remove the bolts which connect the cylinder block on the side of #2 and #4 cylinders.

28) Back off the bolts which connect the cylinder block on the side of #1 and #3 cylinders two or three turns.

29) Set up the cylinder block so that #1 and #3 cylinders are on the upper side, then remove the cylinder block connecting bolts.

30) Separate the cylinder blocks (LH) and (RH).

**NOTE:**

When separating the cylinder block, do not allow the connecting rod to fall or damage the cylinder block.

(1) Cylinder block

(3) Crankshaft

(5) Piston

(2) Rear oil seal

(4) Crankshaft bearing

31) Remove the rear oil seal.

32) Remove the crankshaft together with connecting rod.

33) Remove the crankshaft bearings from cylinder block using a hammer handle.

**NOTE:**

Do not confuse the combination of crankshaft bearings. Press the bearing at the end opposite to locking lip.

34) Draw out each piston from cylinder block using a wooden bar or hammer handle.

**NOTE:**

Be careful not to confuse the original combination of piston and cylinder.

# Cylinder Block

MECHANICAL

## B: INSTALLATION

- (1) Crankshaft bearing (2) Crankshaft (3) Cylinder block (4) Rear oil seal (5) O-ring

1) Remove oil in the mating surface of bearing and cylinder block before installation. Also apply engine oil to crankshaft pins.

2) Position the crankshaft and O-ring on #1 and #3 cylinder block.

3) Apply liquid gasket to the mating surface of #1 and #3 cylinder block, and position #2 and #4 cylinder block.

### Liquid gasket:

**THREE BOND 1215 (Part No. 004403007) or equivalent**

### NOTE:

Do not allow liquid gasket to jut into O-ring grooves, oil passages, bearing grooves, etc.

- 4) Apply engine oil to washers and thread of bolts.  
5) Tighten the 10 mm cylinder block connecting bolts in alphabetical sequence shown in the figure. (LH side)

### Tightening torque:

**10 N·m (1.0 kgf·m, 7.4 ft·lb)**

- 6) Tighten the 10 mm cylinder block connecting bolts in alphabetical sequence shown in the figure. (RH side)

**Tightening torque:**

**10 N·m (1.0 kgf-m, 7.4 ft-lb)**

7) Further tighten the LH side bolts (A) — (D) in alphabetical sequence.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13.3 ft-lb)**

8) Further tighten the RH side bolts (E) — (J) in alphabetical sequence.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13.3 ft-lb)**

9) Further tighten the LH side bolts (A) — (D) in alphabetical sequence, by 90° for (A) and (C), and to 40 N·m (4.1 kgf-m, 29.5 ft-lb) for (B) and (D).

10) Further tighten the RH side bolts (E) — (J) by 90° in alphabetical sequence.

11) Tighten the 8 mm and 6 mm cylinder block connecting bolts in alphabetical sequence shown in the figure.

**Tightening torque:**

**(A) — (G): 25 N·m (2.5 kgf-m, 18.4 ft-lb)**

**(H): 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

12) Apply engine oil to the outer perimeter of rear oil seal, and install the rear oil seal using ST1 and ST2.

**NOTE:**

Use a new rear oil seal.

## C: DISASSEMBLY

ME-00787

- |                            |                 |               |
|----------------------------|-----------------|---------------|
| (1) Connecting rod cap     | (3) Top ring    | (5) Oil ring  |
| (2) Connecting rod bearing | (4) Second ring | (6) Snap ring |

- 1) Remove the connecting rod cap.
- 2) Remove the connecting rod bearing.

### NOTE:

Arrange the removed connecting rod, connecting rod cap and bearing in order to prevent confusion.

3) Remove the piston rings using the piston ring expander.

- 4) Remove the oil ring by hand.

### NOTE:

Arrange the removed piston rings in proper order to prevent confusion.

- 5) Remove the snap ring.

## D: ASSEMBLY

ME-00788

- |                            |                 |
|----------------------------|-----------------|
| (1) Connecting rod bearing | (5) Second ring |
| (2) Connecting rod         | (6) Top ring    |
| (3) Connecting rod cap     | (7) Snap ring   |
| (4) Oil ring               |                 |

**Tightening torque: N·m (kgf·m, ft·lb)**

**T: 52 (5.3, 38.4)**

- 1) Apply oil to the surfaces of the connecting rod bearings. Install the connecting rod bearings on connecting rods and connecting rod caps.
- 2) Install the connecting rod on crankshaft.

**NOTE:**

Position each connecting rod with the side marked facing forward.

- 3) Install the connecting rod cap.

Ensure the arrow on connecting rod cap faces the front during installation.

**CAUTION:**

- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching number.
- When tightening the connecting rod nuts, apply oil on the threads.

- 4) Install the oil ring spacer, upper rail and lower rail in this order by hand. Then install the second ring and top ring with a piston ring expander.

## E: INSPECTION

### 1. CYLINDER BLOCK

- 1) Visually check for cracks and damage. Especially, inspect the important parts by means of liquid penetrant tester.
- 2) Check the oil passages for clogging.
- 3) Inspect the crankcase surface that mates with cylinder head for warping by using a straight edge, and correct by grinding if necessary.

**Warping limit:**  
**0.025 mm (0.00098 in)**

**Grinding limit:**  
**0.1 mm (0.004 in)**

**Standard height of cylinder block:**  
**201.0 mm (7.91 in)**

### 2. CYLINDER AND PISTON

- 1) The cylinder bore size is stamped on cylinder block's front upper surface.

**NOTE:**

- Measurement should be performed at a temperature of 20°C (68°F).
- Standard sized pistons are classified into two grades, "A" and "B". These grades should be used as a guide line in selecting a standard piston.

**Standard inner diameter:**

**A: 99.505 — 99.515 mm (3.9175 — 3.9179 in)**

**B: 99.495 — 99.505 mm (3.9171 — 3.9175 in)**

- (A) Main journal size mark
- (B) Cylinder block (RH)-(LH) combination mark
- (C) #1 cylinder bore size mark
- (D) #2 cylinder bore size mark
- (E) #3 cylinder bore size mark
- (F) #4 cylinder bore size mark

- 2) How to measure the inner diameter of each cylinder

Measure the inner diameter of each cylinder in both the thrust and piston pin directions at the heights shown in the figure, using a cylinder bore gauge.

**NOTE:**

Measurement should be performed at a temperature of 20°C (68°F).

A: 99.505 — 99.515 mm (3.9175 — 3.9179 in)

B: 99.495 — 99.505 mm (3.9171 — 3.9175 in)

### 0.25 mm (0.0098 in) oversize

99.745 — 99.765 mm (3.9270 — 3.9278 in)

### 0.50 mm (0.0197 in) oversize

99.995 — 100.015 mm (3.9368 — 3.9376 in)

(A) Piston pin direction

(B) Thrust direction

H1: 10 mm (0.39 in)

H2: 45 mm (1.77 in)

H3: 80 mm (3.15 in)

H4: 115 mm (4.53 in)

3) When the piston is to be replaced due to general or cylinder wear, determine a suitable sized piston by measuring the piston clearance.

4) How to measure the outer diameter of each piston:

Measure the outer diameter of each piston at the height shown in the figure. (Thrust direction)

## NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

## Piston grade point H:

38.2 mm (1.50 in)

5) Calculate the clearance between cylinder and piston.

## NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

## Cylinder to piston clearance at 20°C (68°F):

### Standard

-0.010 — 0.010 mm (-0.0004 — 0.0004 in)

### Limit

0.030 mm (0.0012 in)

6) Boring and honing

(1) If the measured value of either taper, out-of-roundness, or cylinder-to-piston clearance exceeds the specified limit, or if there is any damage on the cylinder wall, reboring it to use an oversize piston.

## CAUTION:

**When any of the cylinders needs reboring, all other cylinders must be bored at the same time, and use oversize pistons. Do not perform boring on one cylinder only, nor use an oversize piston for one cylinder only.**

(2) If the cylinder inner diameter exceeds the limit after boring and honing, replace the crankcase.

## NOTE:

Immediately after reboring, the cylinder diameter may differ from its real diameter due to temperature rise. Thus, pay attention to this when measuring the cylinder diameter.

## Cylinder enlarging (boring) limit (dia.):

To 100.005 mm (3.937 in)

### 3. PISTON AND PISTON PIN

- 1) Check the pistons and piston pins for damage, cracks, and wear and the piston ring grooves for wear and damage. Replace if defective.
- 2) Measure the piston-to-cylinder clearance at each cylinder. <Ref. to ME(STI)-79, CYLINDER AND PISTON, INSPECTION, Cylinder Block.> If any of the clearances is not within specification, replace the piston or bore the cylinder to use an over-size piston.
- 3) Make sure that the piston pin can be inserted into the piston pin hole with a thumb at 20°C (68°F). Replace if defective.

**Standard clearance between piston pin and hole in piston:**

**Standard**

**0.004 — 0.008 mm (0.0002 — 0.0003 in)**

**Limit**

**0.020 mm (0.0008 in)**

- 4) Check the snap ring installation groove (A) on piston for burr. If necessary, remove the burr from groove so that the piston pin can lightly move.

- 5) Check the piston pin snap ring for distortion, cracks and wear.

### 4. PISTON RING

- 1) If the piston ring is broken, damaged, or worn, or if its tension is insufficient, or when the piston is replaced, replace the piston ring with a new one of the same size as the piston.

**NOTE:**

- Marks are shown on the end of top and second rings. When installing the rings to piston, face this mark upward.
- Oil ring consists of upper rail, expander and lower rail. When installing on piston, be careful of each rail's direction.

- (A) Upper rail
- (B) Expander
- (C) Lower rail

# Cylinder Block

## MECHANICAL

2) Squarely place the piston ring and oil ring in cylinder, and then measure the piston ring closed gap with a thickness gauge.

|                        |               | Unit: mm (in)                    |             |
|------------------------|---------------|----------------------------------|-------------|
|                        |               | Standard                         | Limit       |
| Piston ring closed gap | Top ring      | 0.20 — 0.25<br>(0.0079 — 0.0098) | 1.0 (0.039) |
|                        | Second ring   | 0.37 — 0.52<br>(0.015 — 0.020)   | 1.0 (0.039) |
|                        | Oil ring rail | 0.20 — 0.50<br>(0.0079 — 0.0197) | 1.5 (0.059) |

3) Measure the clearance between piston ring and piston ring groove with a thickness gauge.

### NOTE:

Before measuring the clearance, clean the piston ring groove and piston ring.

|  |             | Unit: mm (in)                      |               |
|--|-------------|------------------------------------|---------------|
|  |             | Standard                           | Limit         |
| Clearance between piston ring and piston ring groove | Top ring    | 0.040 — 0.080<br>(0.0016 — 0.0031) | 0.15 (0.0059) |
|  | Second ring | 0.030 — 0.070<br>(0.0012 — 0.0028) | 0.15 (0.0059) |

## 5. CONNECTING ROD

- 1) Replace the connecting rod, if the large or small end thrust surface is damaged.
- 2) Check for bend or twist using a connecting rod aligner. Replace the connecting rod if the bend or twist exceeds the limit.

**Limit of bend or twist per 100 mm (3.94 in) in length:**  
**0.10 mm (0.0039 in)**

- (A) Thickness gauge  
 (B) Connecting rod

3) Install the connecting rod fitted with bearing to crankshaft, and then measure the side clearance (thrust clearance). Replace the connecting rod if the side clearance exceeds the specified limit.

### Connecting rod side clearance:

#### Standard

**0.070 — 0.330 mm (0.0028 — 0.0130 in)**

#### Limit

**0.40 mm (0.016 in)**

- 4) Inspect the connecting rod bearing for scar, peeling, seizure, melting, wear, etc.
- 5) Measure the oil clearance on individual connecting rod bearings by means of plastigauge. If any oil clearance is not within specification, replace the defective bearing with a new one of standard size or undersize as necessary. (See the table below.)

**Connecting rod oil clearance:**

**Standard**

**0.017 — 0.045 mm (0.0007 — 0.0018 in)**

**Limit**

**0.050 mm (0.0020 in)**

| Unit: mm (in)                 |                                       |                                      |
|-------------------------------|---------------------------------------|--------------------------------------|
| Bearing                       | Bearing size<br>(Thickness at center) | Outer diameter of<br>crank pin       |
| Standard                      | 1.490 — 1.502<br>(0.0587 — 0.0591)    | 51.984 — 52.000<br>(2.0466 — 2.0472) |
| 0.03<br>(0.0012)<br>undersize | 1.504 — 1.512<br>(0.0592 — 0.0595)    | 51.954 — 51.970<br>(2.0454 — 2.0461) |
| 0.05<br>(0.0020)<br>undersize | 1.514 — 1.522<br>(0.0596 — 0.0599)    | 51.934 — 51.950<br>(2.0447 — 2.0453) |
| 0.25<br>(0.0098)<br>undersize | 1.614 — 1.622<br>(0.0635 — 0.0639)    | 51.734 — 51.750<br>(2.0368 — 2.0374) |

- 6) Inspect the bushing at connecting rod small end, and replace if worn or damaged. Also measure the piston pin clearance at connecting rod small end.

**Clearance between piston pin and bushing:**

**Standard**

**0 — 0.022 mm (0 — 0.0009 in)**

**Limit**

**0.030 mm (0.0012 in)**

- 7) Replacement procedure is as follows:
  - (1) Remove the bushing from connecting rod with ST and press.
  - (2) Press the bushing with ST after applying oil on the periphery of bushing.

ST 499037100 CONNECTING ROD BUSHING REMOVER AND INSTALLER

- (3) Make two 3 mm (0.12 in) holes in bushing. Ream the inside of bushing.
- (4) After the completion of reaming, clean the bushing to remove chips.

# Cylinder Block

MECHANICAL

## 6. CRANKSHAFT AND CRANKSHAFT BEARING

- 1) Clean the crankshaft completely and check for cracks by means of liquid penetrant tester etc., and replace if defective.
- 2) Measure the crankshaft bend, and correct or replace if it exceeds the limit.

### NOTE:

If a suitable V-block is not available, install the #1 and #5 crankshaft bearing on cylinder block, position the crankshaft on these bearings and measure the crankshaft bend using a dial gauge.

**Crankshaft bend limit:**  
**0.035 mm (0.0014 in)**

- 3) Inspect the crank journal and crank pin for wear. If they are not within the specifications, replace the bearing with a suitable (undersize) one, and then replace or recondition the crankshaft as necessary. When grinding the crank journal or crank pin, finish them to specified dimensions according to the undersize bearing to be used.

### Crank pin:

**Out-of-roundness**

**0.003 mm (0.0001 in)**

**Cylindricality**

**0.004 mm (0.0002 in)**

**Grinding limit**

**To 51.750 mm (2.0374 in) dia.**

### Crank journal:

**Out-of-roundness**

**0.005 mm (0.0002 in)**

**Cylindricality**

**0.006 mm (0.0002 in)**

**Grinding limit**

**To 59.750 mm (2.3524 in) dia.**

O.D.: Outer Diameter

4) Measure the thrust clearance of crankshaft at center bearing. If the clearance exceeds the limit, replace the bearing.

**Crankshaft side clearance:**

**Standard**

**0.030 — 0.115 mm (0.0012 — 0.0045 in)**

**Limit**

**0.25 mm (0.0098 in)**

**Crankshaft oil clearance:**

**Standard**

**0.010 — 0.030 mm (0.0004 — 0.0012 in)**

**Limit**

**0.040 mm (0.0016 in)**

5) Inspect individual crankshaft bearings for signs of flaking, seizure, melting, and wear.

6) Measure the oil clearance on each crankshaft bearing by means of plastigauge. If the measurement is not within the specification, replace the defective bearing with an undersize one, and replace or recondition the crankshaft as necessary.

## 21. Intake and Exhaust Valve

### A: SPECIFICATION

For the removal and installation procedure of intake and exhaust valve, refer to "Cylinder Head". <Ref. to ME(STI)-60, REMOVAL, Cylinder Head.> and <Ref. to ME(STI)-60, INSTALLATION, Cylinder Head.>

## 22.Piston

### A: SPECIFICATION

For the removal and installation procedure of piston, refer to "Cylinder Block". <Ref. to ME(STI)-67, REMOVAL, Cylinder Block.> and <Ref. to ME(STI)-70, INSTALLATION, Cylinder Block.>

## 23. Connecting Rod

### A: SPECIFICATION

For the removal and installation procedure of connecting rod, refer to "Cylinder Block". <Ref. to ME(STI)-67, REMOVAL, Cylinder Block.> and <Ref. to ME(STI)-70, INSTALLATION, Cylinder Block.>

## 24.Crankshaft

### A: SPECIFICATION

For the removal and installation procedure of crankshaft, refer to "Cylinder Block". <Ref. to ME(STI)-67, REMOVAL, Cylinder Block.> and <Ref. to ME(STI)-70, INSTALLATION, Cylinder Block.>

# Engine Trouble in General

|                                  | Working voltage — wattage                        |                          | 12 V — 3.4 W or less                                 |
|                                  | Warning light activation pressure                |                          | 14.7 kPa (0.15 kgf/cm <sup>2</sup> , 2.1 psi)        |
|                                  | Proof pressure                                   |                          | More than 981 kPa (10 kgf/cm <sup>2</sup> , 142 psi) |
| Oil capacity (at replacement)    |  |                          | 4.0 ℓ (4.2 US qt, 3.5 Imp qt)                        |

**Recommended oil:**

**API standard SM with the “Energy Conserving” logo is printed.**  
**ILSAC standard, GF4 “Star burst mark” label is on the container.**

- (1) SAE viscosity No. and applicable temperature
- (2) Recommended

The proper viscosity helps vehicle get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.

**CAUTION:**

**When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the API standard and SAE viscosity No. designated by SUBARU.**

**NOTE:**

If the vehicle is used in areas with very high temperatures or for other heavy duty applications, the following viscosity oils may be used: API standard:

SM or SL

SAE Viscosity No.: 30, 40, 10W-50, 20W-40, 20W-50.

- T8: 69 (7.0, 50.9)**

### **C: CAUTION**

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

## 3. Engine Oil

### A: INSPECTION

- 1) Park the vehicle on a level surface.
- 2) After turning off the engine, wait a few minutes for oil to drain back into the oil pan before checking the level.
- 3) Just after driving or while the engine is warm, engine oil level may show in the range between the "F" line and notch mark. This is caused by thermal expansion of engine oil.
- 4) Remove the oil level gauge and wipe it clean.
- 5) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in proper orientation.
- 6) Remove it again and check the engine oil level. If the engine oil level is below the "L" line, add oil to bring the level up to "F" line.

**NOTE:**

To prevent overfilling the engine oil, do not add oil above "F" line when the engine is cold.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. 1.0 ℓ (1.1 US qt, 0.9 Imp qt)

### B: REPLACEMENT

- 1) Open the engine oil filler cap for quick draining of engine oil.
- 2) Lift-up the vehicle.
- 3) Drain the engine oil by loosening the engine oil drain plug.

**NOTE:**

Prepare the container for draining of engine oil.

- 4) Replace the drain plug gasket.
- 5) Tighten the engine oil drain plug after draining engine oil.

**Tightening torque:**

**44 N·m (4.5 kgf-m, 32.5 ft-lb)**

- 6) Install the service hole cover.
- 7) Use the engine oil of proper quality and viscosity, fill engine oil through the oil filler duct up to upper level on level gauge. Make sure that the vehicle is placed level when checking oil level.

**Recommended oil:**

**API standard SM with the "Energy Conserving" logo is printed.**

**ILSAC standard, GF4 "Star burst mark" label is on the container.**

# Engine Oil

LU-02250

(1) SAE viscosity No. and applicable temperature

(2) Recommended

The proper viscosity helps vehicle get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.

### CAUTION:

**When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the API standard and SAE viscosity No. designated by SUBARU.**

### NOTE:

If the vehicle is used in areas with very high temperatures or for other heavy duty applications, the following viscosity oils may be used: API standard: SM or SL  
SAE Viscosity No.: 30, 40, 10W-50, 20W-40, 20W-50.

8) Close the engine oil filler cap.

9) Start the engine and warm it up for a time.

10) After the engine stops, recheck the oil level. If necessary, add engine oil up to the upper level on level gauge.

(A) Oil level gauge

(B) Engine oil filler cap

(C) Upper level

(D) Lower level

(E) Approx. 1.0 ℓ (1.1 US qt, 0.9 Imp qt)

## 4. Oil Pump

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Remove the under cover.
- 4) Remove the bolts which install the water pipe of oil cooler to oil pump.

- 5) Remove the water pipe and hoses between oil cooler and water pump.

- 6) Remove the radiator. <Ref. to CO(H4DOTC)-23, REMOVAL, Radiator.>
- 7) Remove the crankshaft position sensor.

- 8) Remove the V-belts. <Ref. to ME(STI)-40, REMOVAL, V-belt.>

- 9) Remove the rear side V-belt tensioner.

- 10) Remove the crank pulley by using ST. <Ref. to ME(STI)-42, REMOVAL, Crank Pulley.>  
ST 499977100 CRANK PULLEY WRENCH

- 11) Remove the timing belt. <Ref. to ME(STI)-44, REMOVAL, Timing Belt.>
- 12) Remove the timing belt guide. (MT model)

- 13) Remove the water pump. <Ref. to CO(H4DOTC)-19, REMOVAL, Water Pump.>
- 14) Remove the crank sprocket.

# Oil Pump

## LUBRICATION

15) Remove the bolts which install the oil pump onto cylinder block.

### NOTE:

If disassembling or inspecting the oil pump, loosen the plug of relief valve before removing the oil pump.

16) Remove the oil pump using flat tip screwdriver.

### CAUTION:

Be careful not to scratch the mating surfaces of cylinder block and oil pump.

## B: INSTALLATION

Install in the reverse order of removal.

Do the following:

1) Apply liquid gasket to the matching surfaces of oil pump.

### Liquid gasket:

**THREE BOND 1215 (Part No. 004403007) or equivalent**

2) Replace the O-ring (A) with a new one.

3) Apply a coat of engine oil to the inside of oil seal.

4) Be careful not to scratch the oil seal when installing the oil pump on cylinder block.

5) Position the oil pump, aligning the notched area with crankshaft, and push the oil pump straight.

### CAUTION:

- Make sure the oil seal lip is not folded.
- Be careful not to scratch the oil seal when installing oil pump on cylinder block.

6) Install the oil pump.

7) Apply liquid gasket to the threaded portion of three bolts. (If to be reuse the bolts.)

### Liquid gasket:

**THREE BOND 1324 (Part No. 004403042) or equivalent**

### Tightening torque:

**6.4 N-m (0.65 kgf-m, 4.7 ft-lb)**

## C: DISASSEMBLY

Remove the screws which secure the oil pump cover and disassemble oil pump. Inscribe alignment marks on the inner and outer rotors so that they can be replaced in their original positions during reassembly.

**CAUTION:**  
Before disassembling the oil pump, remove the relief valve.

- (A) Oil seal
- (B) Pump case
- (C) Inner rotor
- (D) Outer rotor
- (E) Pump cover
- (F) Relief valve
- (G) Relief valve spring
- (H) Plug
- (I) Gasket

## D: ASSEMBLY

1) Install the front oil seal by using ST.  
ST 499587100 OIL SEAL INSTALLER

**NOTE:**  
Use a new oil seal.

2) Apply a coat of engine oil to the inner and outer rotors.

3) Install the inner and outer rotors in their original positions.  
4) Install the oil relief valve, relief valve spring and plug.

**NOTE:**  
Use a new gasket.  
5) Install the oil pump cover.

**Tightening torque:**  
T1: 5.4 N·m (0.55 kgf-m, 4.0 ft-lb)  
T2: 44 N·m (4.5 kgf-m, 32.5 ft-lb)

## E: INSPECTION

### 1. TIP CLEARANCE

Measure the tip clearance of rotors. If clearance exceeds the limit, replace the rotors as a matched set.

**Tip clearance:**  
**Standard**  
0.04 — 0.14 mm (0.0016 — 0.0055 in)  
**Limit**  
0.18 mm (0.0071 in)

# Oil Pump

## LUBRICATION

### 2. CASE CLEARANCE

Measure the clearance between outer rotor and oil pump rotor housing. If clearance exceeds the limit, replace the rotor.

**Case clearance:**

**Standard**

**0.10 — 0.175 mm (0.0039 — 0.0069 in)**

**Limit**

**0.20 mm (0.0079 in)**

### 3. SIDE CLEARANCE

Measure the clearance between the oil pump inner rotor and pump cover. If clearance exceeds the limit, replace the rotor or pump body.

**Side clearance:**

**Standard**

**0.02 — 0.07 mm (0.0008 — 0.0028 in)**

**Limit**

**0.12 mm (0.0047 in)**

### 4. OIL RELIEF VALVE

Check the valve for fitting condition and damage, and the relief valve spring for damage and deterioration. Replace the parts if defective.

**Relief valve spring:**

**Free length**

**73.7 mm (2.902 in)**

**Installed length**

**54.7 mm (2.154 in)**

**Load when installed**

**93.1 N (9.49 kgf, 20.88 lbf)**

### 5. OIL PUMP CASE

Check the oil pump case for worn shaft hole, clogged oil passage, worn rotor chamber, cracks, and other faults.

### 6. OIL SEAL

Check the oil seal lips for deformation, hardening, wear, etc. and replace if defective.

## 5. Oil Pan and Strainer

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Remove the front wheels.
- 3) Disconnect the ground cable from battery.
- 4) Disconnect the connector from mass air flow and intake air temperature sensor.

- 5) Remove the air intake boot and air cleaner upper cover.

- 6) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 7) Remove the pitching stopper.

- 8) Remove the radiator upper brackets.

- 9) Support the engine with a lifting device and wire ropes.

- 10) Lift-up the vehicle.

### CAUTION:

**When lifting up the vehicle, rise up the wire rope together.**

- 11) Remove the under cover.
- 12) Drain the engine oil.
- 13) Remove the front exhaust pipe assembly. <Ref. to EX(H4DOTC)-8, REMOVAL, Front Exhaust Pipe.>
- 14) Remove the nuts which install the front cushion rubber onto front crossmember.

- 15) Remove the bolts which install the oil pan on cylinder block while raising up engine.
- 16) Insert the oil pan cutter blade between cylinder block-to-oil pan clearance.

### CAUTION:

**Do not use a screwdriver or similar tool in place of oil pan cutter.**

- 17) Remove the oil strainer.

# Oil Pan and Strainer

## LUBRICATION

18) Remove the baffle plate.

- (A) Oil pan
- (B) Oil strainer
- (C) Baffle plate
- (D) Cylinder block

## B: INSTALLATION

### CAUTION:

**Before installing the oil pan, clean sealant from oil pan and engine block.**

1) Check the seal (A) is securely installed in baffle plate in the direction as shown in the figure.

2) Install the baffle plate.

### Tightening torque:

**6.4 N-m (0.65 kgf-m, 4.7 ft-lb)**

3) Install the oil strainer onto baffle plate.

### NOTE:

Replace the O-ring with a new one.

### Tightening torque:

**10 N-m (1.0 kgf-m, 7.2 ft-lb)**

4) Apply liquid gasket to the mating surfaces, and then install the oil pan.

### Liquid gasket:

**THREE BOND 1207C (Part No. 004403012) or equivalent**

5) Tighten the bolts which install the oil pan onto engine block.

### Tightening torque:

**5 N-m (0.5 kgf-m, 3.6 ft-lb)**

- (A) Oil pan
- (B) Oil strainer
- (C) Baffle plate
- (D) Cylinder block

6) Lower the engine onto front crossmember.

7) Tighten the nuts which install the front cushion rubber onto front crossmember.

**Tightening torque:**

**85 N·m (8.7 kgf-m, 62.7 ft-lb)**

8) Install the front exhaust pipe assembly. <Ref. to EX(H4DOTC)-8, INSTALLATION, Front Exhaust Pipe.>

9) Install the under cover.

10) Lower the vehicle.

**CAUTION:**

**When lowering the vehicle, lower the lifting device and wire rope together.**

11) Remove the lifting device and wire ropes.

12) Install the pitching stopper.

**Tightening torque:**

**T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)**

**T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)**

13) Install the radiator upper brackets.

14) Install the intercooler. <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

15) Install the air intake boot and air cleaner upper cover.

16) Connect the connector to mass air flow and intake air temperature sensor.

17) Install the front wheels.

18) Connect the battery ground cable to battery.

19) Fill engine oil. <Ref. to LU(STI)-9, INSPECTION, Engine Oil.>

**C: INSPECTION**

By visual check, make sure the oil pan, oil strainer, oil strainer stay and baffle plate are not damaged.

# Oil Pressure Switch

LUBRICATION

## 6. Oil Pressure Switch

### A: REMOVAL

- 1) Remove the generator from bracket. <Ref. to SC(H4SO)-14, REMOVAL, Generator.>
- 2) Disconnect the terminal from oil pressure switch.

- 3) Remove the oil pressure switch.

### B: INSTALLATION

- 1) Apply liquid gasket to the oil pressure switch threads.

**Liquid gasket:**  
**THREE BOND 1324 (Part No. 004403042) or equivalent**

- 2) Install the oil pressure switch onto engine block.

**Tightening torque:**  
**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

- 3) Connect the terminal of oil pressure switch.

- 4) Install the generator on bracket. <Ref. to SC(H4SO)-14, INSTALLATION, Generator.>

### C: INSPECTION

Make sure oil does not leak or seep from where the oil pressure switch is installed.

## 7. Oil Pipe

### A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>  
 3) Remove the intercooler bracket RH.  
 4) Remove the turbocharger upper cover.

- 5) Remove the oil inlet pipe from the turbocharger.

#### CAUTION:

In order to prevent damaging the oil pipe on the cylinder head side, fix the section (a) shown in the figure when loosening the oil inlet pipe flare nut, and avoid the part from rotating together while loosening the nut.

- 6) Remove the intake manifold. <Ref. to FU(STI)-13, REMOVAL, Intake Manifold.>  
 7) Remove the radiator main fan and radiator sub fan. <Ref. to CO(H4DOTC)-28, REMOVAL, Radiator Main Fan and Fan Motor.> <Ref. to CO(H4DOTC)-30, REMOVAL, Radiator Sub Fan and Fan Motor.>  
 8) Remove the V-belts. <Ref. to ME(STI)-40, REMOVAL, V-belt.>  
 9) Remove the crank pulley. <Ref. to ME(STI)-42, REMOVAL, Crank Pulley.>  
 10) Remove the timing belt cover. <Ref. to ME(STI)-43, REMOVAL, Timing Belt Cover.>  
 11) Remove the timing belt. <Ref. to ME(STI)-44, TIMING BELT, REMOVAL, Timing Belt.>  
 12) Remove the cam sprocket LH. <Ref. to ME(STI)-52, REMOVAL, Cam Sprocket.>

13) Remove the belt cover No. 2 LH.

14) Remove the oil pipe.

- (A) Union screw with filter (with protrusion)
- (B) Union screw without filter (without protrusion)
- (C) Oil pipe
- (D) Gasket

## B: INSTALLATION

1) Inspect the union screw with filter. <Ref. to LU(STI)-22, INSPECTING UNION SCREW WITH FILTER, INSPECTION, Oil Pipe.>

2) Install the oil pipe.

### NOTE:

- Make sure not to mix up the union screws with filter and without filter as their installation positions are different.
- Use a new gasket.

### Tightening torque:

**T1: 8 N·m (0.8 kgf-m, 5.9 ft-lb)**

**T2: 29 N·m (3.0 kgf-m, 21.4 ft-lb)**

- (A) Union screw with filter (with protrusion)
- (B) Union screw without filter (without protrusion)
- (C) Oil pipe
- (D) Gasket

3) Install the belt cover No. 2 LH.

### Tightening torque:

**5 N·m (0.5 kgf-m, 3.7 ft-lb)**

- 4) Install the cam sprocket LH. <Ref. to ME(STI)-52, INSTALLATION, Cam Sprocket.>
- 5) Install the timing belt. <Ref. to ME(STI)-46, TIMING BELT, INSTALLATION, Timing Belt.>
- 6) Install the timing belt cover. <Ref. to ME(STI)-43, INSTALLATION, Timing Belt Cover.>
- 7) Install the crank pulley. <Ref. to ME(STI)-42, INSTALLATION, Crank Pulley.>
- 8) Install the V-belts. <Ref. to ME(STI)-40, INSTALLATION, V-belt.>
- 9) Install the radiator main fan and the radiator sub fan. <Ref. to CO(H4DOTC)-28, INSTALLATION, Radiator Main Fan and Fan Motor.> <Ref. to CO(H4DOTC)-30, INSTALLATION, Radiator Sub Fan and Fan Motor.>
- 10) Install the intake manifold. <Ref. to FU(STI)-16, INSTALLATION, Intake Manifold.>
- 11) Temporarily tighten the oil inlet pipe of turbocharger.

**NOTE:**

Use a new gasket.

- 12) Tighten the oil inlet pipe of turbocharger.

**CAUTION:**

In order to prevent damaging the oil pipe on the cylinder head side, fix the section (a) shown in the figure when tightening the oil inlet pipe flare nut, and avoid the part from rotating together while tightening the nut.

**Tightening torque:**

**T1: 16 N·m (1.6 kgf·m, 11.8 ft·lb)**

**T2: 20 N·m (2.0 kgf·m, 14.8 ft·lb)**

- 13) Install the turbocharger upper cover.

**Tightening torque:**

**7.5 N·m (0.8 kgf·m, 5.5 ft·lb)**

- 14) Install the intercooler bracket RH.
- 15) Install the intercooler. <Ref. to IN(STI)-11, INSTALLATION, Intercooler.>

16) Connect the ground cable to battery.

## C: INSPECTION

### 1. INSPECTING UNION SCREW WITH FILTER

Check the filter part of union screw for clogging or damage, and if defective, replace the union screw with filter with a new part.

- (A) Union screw with filter (with protrusion)
- (B) Union screw without filter (without protrusion)
- (C) Oil pipe
- (D) Gasket

### 2. OTHER INSPECTIONS

- 1) Check that the oil pipe and union screw have no deformation, cracks and other damages.
- 2) Check that there are no oil leaks or oil oozing from the oil pipe attachment section.

## 8. Engine Oil Cooler

### A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove the under cover.
- 3) Drain the engine oil.
- 4) Drain the engine coolant.
- 5) Remove the water by-pass pipe between oil cooler and water pump.

- 6) Remove the engine oil filter. <Ref. to LU(STI)-24, REMOVAL, Engine Oil Filter.>
- 7) Remove the connector, and then remove the oil cooler.

- (A) O-ring
- (B) Oil cooler
- (C) Oil cooler connector

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**T: 54 N·m (5.5 kgf-m, 40 ft-lb)**

#### NOTE:

Always use a new O-ring.

- (A) O-ring
- (B) Oil cooler
- (C) Oil cooler connector

### C: INSPECTION

- 1) Check the coolant passages are not clogged by blowing compressed air.
- 2) Check the mating surfaces of cylinder block, O-ring groove and oil filter for damage.

## 9. Engine Oil Filter

### A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove the under cover.
- 3) Remove the oil filter with ST.

ST 18332AA000 OIL FILTER WRENCH (Outer diameter: 68 mm (2.68 in))

ST 18332AA010 OIL FILTER WRENCH (Outer diameter: 65 mm (2.56 in))

#### NOTE:

Standard oil filter is outer diameter of 68 mm (2.68 in). However, SUBARU genuine oil filter having outer diameter of 65 mm (2.56 in) can also be used.

### B: INSTALLATION

- 1) Get a new oil filter and apply a thin coat of engine oil to seal rubber.
- 2) Install the oil filter by turning it by hand, being careful not to damage seal rubber.
  - Tighten the oil filter 68 mm (2.68 in) in diameter by approx. 1 rotation more after the seal rubber of oil filter comes in contact with cylinder block or oil cooler. If using a torque wrench, tighten it to 14 N·m (1.4 kgf·m, 10.3 ft·lb).
  - Tighten the oil filter 65 mm (2.56 in) in diameter by approx. 2/3 — 3/4 rotation more after the seal rubber of oil filter comes in contact with cylinder block or oil cooler. If using a torque wrench, tighten it to 12 N·m (1.2 kgf·m, 8.7 ft·lb).

#### CAUTION:

**Do not tighten excessively, or oil may leak.**

- 3) Install the under cover.
- 4) Lower the vehicle.

### C: INSPECTION

- 1) After installing the oil filter, run the engine and make sure that no oil is leaking around seal rubber.

#### NOTE:

The filter element and filter case are permanently jointed; therefore, interior cleaning is not necessary.

- 2) Check the engine oil level. <Ref. to LU(STI)-9, INSPECTION, Engine Oil.>

## 10. Engine Lubrication System Trouble in General

### A: INSPECTION

Before performing diagnostics, make sure that the engine oil level is correct and no oil leakage exists.

| Symptom                                | Possible cause                           |   | Corrective action  |
|--|--|---|--|
| 1. Warning light remains on.           | 1) Oil pressure switch failure           | Cracked diaphragm or oil leakage within switch                        | Replace.   |
|  |  | Broken spring or seized contacts                                      | Replace.   |
|  | 2) Low oil pressure                      | Clogged oil filter  | Replace.   |
|  |  | Malfunition of oil by-pass valve of oil filter                        | Clean or replace.  |
|  |  | Malfunition of oil relief valve of oil pump                           | Clean or replace.  |
|  |  | Clogged oil passage   | Clean.   |
|  |  | Excessive tip clearance and side clearance of oil pump rotor and gear | Replace.   |
|  |  | Clogged oil strainer or broken pipe                                   | Clean or replace.  |
|  | 3) No oil pressure                       | Insufficient engine oil   | Replenish.   |
|  |  | Broken pipe of oil strainer   | Replace.   |
| Stuck oil pump rotor                   |  | Replace.  |  |
| 2. Warning light does not turn on.     | 1) Malfunition of combination meter      |   | Replace.   |
|  | 2) Poor contact of switch contact points |   | Replace.   |
|  | 3) Disconnection of wiring               |   | Repair.  |
| 3. Warning light flickers momentarily. | 1) Poor contact at terminals             |   | Repair.  |
|  | 2) Defective wiring harness              |   | Repair.  |
|  | 3) Low oil pressure                      |   | Check for the same possible causes as listed in 1. — 2). |

SPEED CONTROL SYSTEMS

## 1. General Description

### A: SPECIFICATION

|                   |        |              |                             |
|-------------------|--------|--------------|-----------------------------|
| Accelerator pedal | Stroke | At pedal pad | 52 — 57 mm (2.05 — 2.24 in) |
|-------------------|--------|--------------|-----------------------------|

### B: COMPONENT

SP-02002

- |                            |             |
|----------------------------|-------------|
| (1) Accelerator pedal ASSY | (3) Clip    |
| (2) Accelerator plate      | (4) Stopper |

**Tightening torque: N·m (kgf·m, ft·lb)**  
**T: 18 (1.8, 13.0)**

### C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

## 2. Accelerator Pedal

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector.
- 3) Remove the nut securing accelerator pedal assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

*18 N·m (1.8 kgf-m, 13.0 ft-lb)*

### C: DISASSEMBLY

NOTE:

Accelerator pedal cannot be disassembled.

# Spark Plug

## IGNITION

### 2. Spark Plug

#### A: REMOVAL

##### CAUTION:

All spark plugs installed on an engine, must be of the same heat range.

**Spark plug:**

**NGK: ILFR6B**

#### 1. RH SIDE

- 1) Disconnect the ground cable from battery.
- 2) Remove the air cleaner lower case. <Ref. to IN(STI)-8, REMOVAL, Air Cleaner Case.>
- 3) Disconnect the connector from ignition coil and ignitor assembly.

- 4) Remove the ignition coil and ignitor assembly.

- 5) Remove the spark plugs with the spark plug sockets.

#### 2. LH SIDE

- 1) Disconnect the battery cables, and then remove the battery and battery carrier.
- 2) Disconnect the connector from ignition coil and ignitor assembly.

- 3) Remove the ignition coil and ignitor assembly.

- 4) Remove the spark plugs with the spark plug sockets.

#### B: INSTALLATION

##### 1. RH SIDE

Install in the reverse order of removal.

**Tightening torque (Spark plug):**

**21 N·m (2.1 kgf-m, 15.2 ft-lb)**

**Tightening torque (Ignition coil and ignitor assembly):**

**16 N·m (1.6 kgf-m, 11.7 ft-lb)**

**NOTE:**

The above torque should be only applied to new spark plugs without oil on their threads.

In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.

**2. LH SIDE**

Install in the reverse order of removal.

**Tightening torque (Spark plug):**

**21 N·m (2.1 kgf·m, 15.2 ft·lb)**

**Tightening torque (Ignition coil and ignitor assembly):**

**16 N·m (1.6 kgf·m, 11.7 ft·lb)**

**NOTE:**

The above torque should be only applied to new spark plugs without oil on their threads.

In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.

**C: INSPECTION**

Check the electrodes and inner and ceramic insulator of plugs, noting the type of deposits and the degree of electrode erosion.

- (A) Spark plug gap
- (B) Carbon accumulation or wear
- (C) Cracks
- (D) Damage
- (E) Damaged gasket

**1) Normal:**

Brown to grayish-tan deposits and slight electrode wear indicates correct spark plug heat range.

**2) Carbon fouled:**

Dry fluffy carbon deposits on insulator and electrode are mostly caused by slow speed driving in city, weak ignition, too rich fuel mixture and dirty air cleaner.

**3) Oil fouled:**

Wet black deposits show oil entrance into combustion chamber through worn rings and pistons or excessive clearance between valve guides and stems.

# Spark Plug

## IGNITION

---

### 4) Overheating:

White or light gray insulator with black or brown spots and bluish burnt electrodes indicates engine overheating. Moreover, the appearance results from incorrect ignition timing, loose spark plugs, wrong selection of fuel, hotter range plug, etc.

## D: ADJUSTMENT

Clean the spark plugs with a wire brush. Clean and remove the carbon or oxide deposits, but do not wear away ceramic insulator.

If deposits are too stubborn, replace the plugs.

After cleaning the spark plugs, correct the spark plug gap using a gap gauge.

### NOTE:

Do not use spark plug cleaners, because the spark plugs are applied with iridium tips.

### **Spark plug gap L:**

**0.7 — 0.8 mm (0.028 — 0.031 in)**

## 3. Ignition Coil and Ignitor Assembly

### A: REMOVAL

Direct ignition type has been adopted. Refer to the "Spark Plug Removal" for removal procedure.  
<Ref. to IG(STI)-4, REMOVAL, Spark Plug.>

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

***16 N·m (1.6 kgf-m, 11.7 ft-lb)***

### C: INSPECTION

For inspection, refer to "Ignition Control System".  
<Ref. to EN(STI)(diag)-63, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>

# Basic Diagnostic Procedure

ENGINE (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

#### 1. ENGINE

| Step   | Check   | Yes  | No   |
|--|---|--|--|
| <b>1 CHECK ENGINE START FAILURE.</b><br>1) Ask the customer when and how trouble occurred using the interview check list. <Ref. to EN(STI)(diag)-3, CHECK, Check List for Interview.><br>2) Start the engine.  | Does the engine start?  | Go to step 2.  | Inspection using "Diagnostics for Engine Start Failure". <Ref. to EN(STI)(diag)-57, Diagnostics for Engine Starting Failure.>  |
| <b>2 CHECK ILLUMINATION OF MALFUNCTION INDICATOR LIGHT.</b>  | Does the malfunction indicator light illuminate?                  | Go to step 3.  | Inspection using "General Diagnostics Table". <Ref. to EN(STI)(diag)-371, General Diagnostic Table.>   |
| <b>3 CHECK INDICATION OF DTC ON DISPLAY.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the Subaru Select Monitor or general scan tool to data link connector.<br>3) Turn the ignition switch to ON and the Subaru Select Monitor or general scan tool power switch to ON.<br>4) Read the DTC on Subaru Select Monitor or general scan tool. | Does the Subaru Select Monitor or general scan tool indicate DTC? | Record the DTC code. Repair the trouble cause. <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).> Go to step 4.                                | Repair the related parts.<br>NOTE:<br>If a DTC is not shown on display although malfunction indicator light illuminates, perform diagnostics of malfunction indicator light circuit or combination meter. <Ref. to EN(STI)(diag)-48, Malfunction Indicator Light.> |
| <b>4 PERFORM THE DIAGNOSIS.</b><br>1) Perform the clear memory mode. <Ref. to EN(STI)(diag)-45, Clear Memory Mode.><br>2) Perform the inspection mode. <Ref. to EN(STI)(diag)-36, Inspection Mode.>  | Does the Subaru Select Monitor or general scan tool indicate DTC? | Inspect using "Diagnostics Procedure with Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-76, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> | Complete the diagnosis.  |

# Check List for Interview

ENGINE (DIAGNOSTICS)

## 2. Check List for Interview

### A: CHECK

#### 1. CHECK LIST No. 1

Check the following items when problem has occurred.

NOTE:

Use copies of this page for interviewing customers.

|                     |   |                  |  |
|---------------------|---|------------------|--|
| Customer's name     |   | Engine No.       |  |
| Date of sale        |   | Fuel brand       |  |
| Date of repair      |   | Odometer reading | km   |
| VIN                 |   |                  | miles  |

# Check List for Interview

## ENGINE (DIAGNOSTICS)

---

### 2. CHECK LIST No. 2

Check the following items about the vehicle's state when malfunction indicator light turns on.

**NOTE:**

Use copies of this page for interviewing customers.

|  |
|--|
| a) Other warning lights or indicators turn on. <input type="checkbox"/> Yes / <input type="checkbox"/> No  |
| <input type="checkbox"/> Low fuel warning light<br><input type="checkbox"/> Charge indicator light<br><input type="checkbox"/> AT diagnostics indicator light<br><input type="checkbox"/> ABS warning light<br><input type="checkbox"/> Engine oil pressure warning light  |
| b) Fuel level  |
| <ul style="list-style-type: none"><li>• Lack of gasoline: <input type="checkbox"/> Yes / <input type="checkbox"/> No</li><li>• Indicator position of fuel gauge:</li><li>• Had run out of gas before: <input type="checkbox"/> Yes / <input type="checkbox"/> No</li></ul>   |
| c) Intentional connecting or disconnecting of harness connectors or spark plug cords: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| <ul style="list-style-type: none"><li>• What:</li></ul>  |
| d) Intentional connecting or disconnecting of hoses: <input type="checkbox"/> Yes / <input type="checkbox"/> No  |
| <ul style="list-style-type: none"><li>• What:</li></ul>  |
| e) Installing of parts other than genuine parts: <input type="checkbox"/> Yes / <input type="checkbox"/> No  |
| <ul style="list-style-type: none"><li>• What:</li><li>• Where:</li></ul>   |
| f) Occurrence of noise: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| <ul style="list-style-type: none"><li>• From where:</li><li>• What kind:</li></ul>   |
| g) Occurrence of smell: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| <ul style="list-style-type: none"><li>• From where:</li><li>• What kind:</li></ul>   |
| h) Intrusion of water into engine compartment or passenger compartment: <input type="checkbox"/> Yes / <input type="checkbox"/> No   |
| i) Troubles occurred   |
| <input type="checkbox"/> Engine does not start.<br><input type="checkbox"/> Engine stalls during idling.<br><input type="checkbox"/> Engine stalls while driving.<br><input type="checkbox"/> Engine speed decreases.<br><input type="checkbox"/> Engine speed does not decrease.<br><input type="checkbox"/> Rough idling<br><input type="checkbox"/> Poor acceleration<br><input type="checkbox"/> Back fire<br><input type="checkbox"/> After fire<br><input type="checkbox"/> No shift<br><input type="checkbox"/> Excessive shift shock |

## 3. General Description

### A: CAUTION

1) Airbag system wiring harness is routed near the ECM, main relay and fuel pump relay.

#### CAUTION:

- All airbag system connectors are colored yellow. Do not use the electrical test equipment on these circuit.
- Be careful not to damage the airbag system wiring harness when servicing the ECM, TCM, main relay and fuel pump relay.

2) Never connect the battery in reverse polarity.

- The ECM will be destroyed instantly.
- The fuel injector and other part will be damaged in just a few minutes more.

3) Do not disconnect the battery cables while the engine is running.

- A large counter electromotive force will be generated in the alternator, and this voltage may damage electronic parts such as ECM, etc.

4) Before disconnecting the connectors of each sensor and the ECM, be sure to turn the ignition switch to OFF.

5) Poor contact has been identified as a primary cause of this problem. To measure the voltage and/or resistance of individual sensors or all electrical control modules at the harness side connector, use a tapered pin with a diameter of less than 0.64 mm (0.025 in). Do not insert the pin more than 5 mm (0.20 in) into the part.

6) Before removing the ECM from located position, disconnect two cables on battery.

- Otherwise, the ECM may be damaged.

#### CAUTION:

**When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage on the fuel injection system.**

7) The connectors to each sensor in the engine compartment and the harness connectors on the engine side and body side are all designed to be waterproof. However, it is still necessary to take care not to allow water to get into the connectors when washing the vehicle, or when servicing the vehicle on a rainy day.

8) Use the ECM mounting stud bolt at the body head grounding points when measuring voltage and resistance inside the passenger compartment.

(A) Stud bolt

9) Use the engine grounding terminal or engine proper as the grounding point to the body, when measuring voltage and resistance in the engine compartment.

10) Every MFI-related part is a precision part. Do not drop them.

11) Observe the following cautions when installing a radio in MFI equipped models.

#### CAUTION:

- The antenna must be kept as far apart as possible from the control unit.

(The ECM is located under the steering column, inside of the instrument panel lower trim panel.)

- The antenna feeder must be placed as far as possible from ECM and MFI harness.
- Carefully adjust the antenna for correct matching.
- When mounting a large power type radio, pay special attention to the three items above mentioned.
- Incorrect installation of the radio may affect the operation of ECM.

12) Before disconnecting the fuel hose, disconnect the fuel pump connector and crank the engine for more than 5 seconds to release pressure in the fuel system. If the engine starts during this operation, run it until it stops.

# General Description

## ENGINE (DIAGNOSTICS)

13) Diagnostics should be conducted by rotating with simple, easy operations and proceeding to complicated, difficult operations. The most important thing in diagnostics is to understand the customer's complaint, and distinguish between the three causes.

14) On model with ABS, when performing driving test in jacked-up or lifted-up position, sometimes the warning light may be lit, but this is not a malfunction of the system. The reason for this is the speed difference between front and rear wheels. After diagnosis of engine control system, perform the ABS memory clearance procedure of self-diagnosis function.

### B: INSPECTION

Before performing diagnostics, check the following items which might affect engine problems:

#### 1. BATTERY

1) Measure the battery voltage and specific gravity of electrolyte.

**Standard voltage: 12 V**

**Specific gravity: Above 1.260**

2) Check the condition of main and other fuses, and harnesses and connectors. Also check for proper grounding.

#### 2. ENGINE GROUND

Make sure the engine grounding terminal is properly connected to engine.

### C: NOTE

#### 1. DESCRIPTION

- The on-board diagnostics (OBD) system detects and indicates a fault in various inputs and outputs of the complex electronic control. Malfunction indicator light in the combination meter indicates occurrence of a fault or trouble.
- Further, against such a failure or sensors as may disable the drive, the fail-safe function is provided to ensure the minimal driveability.

- The OBD system incorporated with the vehicles within this engine family complies with OBD-II Regulations. The OBD system monitors the components and the system malfunction listed in Engine Section which affects on emissions.
- When the system decides that a malfunction occurs, malfunction indicator light illuminates. At the same time of the malfunction indicator light illumination or blinking, a DTC and a freeze frame engine conditions are stored into on-board computer.
- The OBD system stores freeze frame engine condition data (engine load, engine coolant temperature, fuel trim, engine speed and vehicle speed, etc.) into on-board computer when it detects a malfunction first.
- If the OBD system detects the various malfunctions including the fault of fuel trim or misfire, the OBD system first stores freeze frame engine conditions about the fuel trim or misfire.
- When the malfunction does not occur again for three consecutive driving cycles, malfunction indicator light is turned off, but DTC remains at on-board computer.
- When troubleshooting the vehicle which complies with OBD-II Regulations, connect the Subaru Select Monitor or general scan tool to the vehicle.

#### 2. ENGINE AND EMISSION CONTROL SYSTEM

- The Multipoint Fuel Injection (MFI) system is a system that supplies the optimum air-fuel mixture to the engine for all the various operating conditions through the use of the latest electronic technology.

With this system fuel, which is pressurized at a constant pressure, is injected into the intake air passage of the cylinder head. The injection quantity of fuel is controlled by an intermittent injection system where the electro-magnetic injection valve (fuel injector) opens only for a short period of time, depending on the quantity of air required for one cycle of operation. In actual operation, the injection quantity is determined by the duration of an electric pulse applied to the fuel injector and this permits simple, yet highly precise metering of the fuel.

- Further, all the operating conditions of the engine are converted into electric signals, and this results in additional features of the system, such as large improved adaptability, easier addition of compensating element, etc.

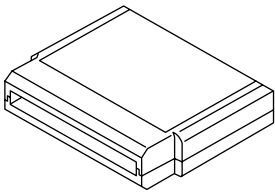

# General Description

ENGINE (DIAGNOSTICS)

The MFI system also has the following features:

- Reduced emission of harmful exhaust gases.
- Reduced in fuel consumption.
- Increased engine output.
- Superior acceleration and deceleration.
- Superior startability and warm-up performance in cold weather since compensation is made for coolant and intake air temperature.

## 6. Engine Condition Data

### A: ELECTRICAL SPECIFICATION

| Content     | Specified data                    |
|-------------|-----------------------------------|
| Engine load | 19.2 — 38.88 (%): Idling          |
|             | 23.7 — 50.0 (%): 2,500 rpm racing |

Measuring condition:

- After warm-up the engine.
- Gear position is in neutral position.
- A/C is turned to OFF.
- All accessory switches are turned to OFF.

# Data Link Connector

ENGINE (DIAGNOSTICS)

## 7. Data Link Connector

### A: NOTE

This connector is used both for the general scan tools and Subaru Select Monitor.

### CAUTION:

Do not connect any scan tools other than the general scan tools and Subaru Select Monitor, because the circuit for Subaru Select Monitor may be damaged.

| Terminal No. | Contents     | Terminal No. | Contents                                       |

## 8. General Scan Tool

### A: OPERATION

#### 1. HOW TO USE GENERAL SCAN TOOL

- 1) Prepare a general scan tool required by SAE J1978.
- 2) Open the cover and connect the general scan tool to data link connector located in the lower portion of instrument panel (on the driver's side).

- 3) Using the general scan tool, call up DTC and freeze frame data.

#### 2. MODE \$01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refers to data denoting the current operating condition of analog input/output, digital input/output and/or the powertrain system.

A list of the support data and PID (Parameter Identification) codes are shown in the following table.

| PID | Data   | Unit of measure |
|-----|--|-----------------|
| 01  | Number of emission-related powertrain DTC and malfunction indicator light status and diagnosis support information | —               |
| 03  | Fuel system control status   | —               |
| 04  | Calculated engine load value   | %               |
| 05  | Engine coolant temperature   | °C              |
| 06  | Short term fuel trim   | %               |
| 07  | Long term fuel trim  | %               |
| 0B  | Intake manifold absolute pressure  | kPa             |
| 0C  | Engine revolution  | rpm             |
| 0D  | Vehicle speed  | km/h            |
| 0E  | Ignition timing advance  | °               |
| 0F  | Intake air temperature   | °C              |
| 10  | Air flow rate from mass air flow sensor  | g/sec           |
| 11  | Throttle valve absolute opening angle  | %               |
| 13  | Check whether oxygen sensor is installed.  | —               |
| 15  | Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor                                | V and %         |
| 1C  | Supporting OBD system  | —               |
| 24  | A/F value and A/F sensor output voltage  | — and V         |
| 34  | A/F value and A/F sensor current   | — and mA        |

**NOTE:**

Refer to general scan tool manufacturer's instruction manual to access generic OBD-II PIDs (MODE \$01).

General scan tool functions consist of:

- (1) MODE \$01: Current powertrain diagnostic data
- (2) MODE \$02: Powertrain freeze frame data
- (3) MODE \$03: Emission-related powertrain DTC
- (4) MODE \$04: Clear/Reset emission-related diagnostic information
- (5) MODE \$06: Request on-board monitoring test results for non-continuously monitored systems
- (6) MODE \$07: Request on-board monitoring test results for continuously monitored systems
- (7) MODE \$09: Request vehicle information

Read out the data according to repair procedures. (For detailed operation procedures, refer to the General Scan Tool Operation Manual.)

**NOTE:**

For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).>

# General Scan Tool

## ENGINE (DIAGNOSTICS)

### 3. MODE \$02 (POWERTRAIN FREEZE FRAME DATA)

Refers to data denoting the operating condition when trouble is sensed by the on-board diagnosis system. A list of the support data and PID (Parameter Identification) codes are shown in the following table.

| PID | Data  | Unit of measure |
|-----|---|-----------------|
| 02  | DTC that caused CARB required freeze frame data storage                             | —               |
| 03  | Fuel system control status  | —               |
| 04  | Calculated engine load value  | %               |
| 05  | Engine coolant temperature  | °C              |
| 06  | Short term fuel trim  | %               |
| 07  | Long term fuel trim   | %               |
| 0B  | Intake manifold absolute pressure   | mmHg            |
| 0C  | Engine revolution   | rpm             |
| 0D  | Vehicle speed   | km/h            |
| 0E  | Ignition timing advance   | °               |
| 0F  | Intake air temperature  | °C              |
| 10  | Air flow rate from mass air flow sensor   | g/sec           |
| 11  | Throttle valve opening angle  | %               |
| 15  | O <sub>2</sub> sensor output voltage and O <sub>2</sub> sensor short term fuel trim | V and %         |

**NOTE:**

Refer to general scan tool manufacturer's instruction manual to access freeze frame data (MODE \$02).

### 4. MODE \$03 (EMISSION-RELATED POWERTRAIN DIAGNOSTIC TROUBLE CODE (DTC))

Refer to Read Diagnostic Trouble Code (DTC) for information about data denoting emission-related powertrain DTC. <Ref. to EN(STI)(diag)-35, Read Diagnostic Trouble Code (DTC).>

### 5. MODE \$04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refers to the mode used to clear or reset emission-related diagnostic information (OBD-II trouble diagnostic information).

**NOTE:**

Refer to general scan tool manufacturer's instruction manual to clear or reset emission-related diagnostic information (MODE \$04).

### 6. MODE \$06

Refer to test value of troubleshooting and data of test limit on support data bit sequence table. List of support data is shown in the following table.

| TID  | CID  | Test value & Test limit  |
|------|------|--|
| \$01 | \$01 | Catalyst system efficiency below threshold                                       |
| \$03 | \$01 | Evaporative emission control system large leak                                   |
|      | \$02 | Evaporative emission control system small leak                                   |
|      | \$03 | Evaporative emission control system very small leak                              |
| \$05 | \$01 | O <sub>2</sub> sensor circuit slow response (Bank 1 Sensor 1)                    |
| \$06 | \$01 | O <sub>2</sub> sensor circuit (Bank 1 Sensor 2)                                  |
|      | \$02 |  |
| \$07 | \$01 | O <sub>2</sub> sensor circuit slow response (Bank 1 Sensor 2)                    |
| \$0C | \$01 | Coolant thermostat (Coolant temperature below thermostat regulating temperature) |
| \$0F | \$01 | Drain valve range/performance  |
|      | \$02 |  |

### 7. MODE \$07

Refer to data of DTC (pending code) for troubleshooting result about emission in first time.

## 8. MODE \$09

Refer to data of vehicle specification (VIN, calibration ID, etc.).

# Subaru Select Monitor

ENGINE (DIAGNOSTICS)

## 9. Subaru Select Monitor

### A: OPERATION

#### 1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(STI)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(STI)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

5) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor power switch to ON.

(A) Power switch

6) Using the Subaru Select Monitor, call up the DTC and various data, and then record them.

#### 2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE. (NORMAL MODE)

Refer to Read Diagnostic Trouble Code (DTC) for information about how to indicate DTC. <Ref. to EN(STI)(diag)-35, Read Diagnostic Trouble Code (DTC).>

#### 3. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE. (OBD MODE)

Refer to Read Diagnostic Trouble Code (DTC) for information about how to indicate DTC. <Ref. to EN(STI)(diag)-35, Read Diagnostic Trouble Code (DTC).>

### CAUTION:

Do not connect the scan tools except for Subaru Select Monitor and general scan tool.

## 4. READ CURRENT DATA FOR ENGINE. (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
  - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
  - 3) Press the [YES] key after the information of engine type is displayed.
  - 4) On the «Engine Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
  - 5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
  - 6) Using the scroll key, move the display screen up or down until desired data is shown.
- A list of the support data is shown in the following table.

| Contents  | Display                    | Unit of measure            |
|---|----------------------------|----------------------------|
| Battery voltage   | Battery Voltage            | V                          |
| Vehicle speed signal  | Vehicle Speed              | km/h or MPH                |
| Engine speed signal   | Engine Speed               | rpm                        |
| Engine coolant temperature signal                           | Coolant Temp.              | °C or °F                   |
| Ignition timing signal                                      | Ignition Timing            | deg                        |
| Throttle position signal                                    | Throttle Opening Angle     | %                          |
| Injection pulse width                                       | Fuel Injection #1 Pulse    | ms                         |
| Fuel pump duty control signal                               | Fuel Pump Duty             | %                          |
| A/F sensor current  | A/F Sensor #1 Current      | mA                         |
| A/F sensor resistance                                       | A/F Sensor #1 Resistance   | ohm                        |
| Front oxygen (A/F) sensor lambda value                      | A/F Sensor #1              | —                          |
| Rear oxygen sensor output signal                            | Rear O <sub>2</sub> Sensor | V                          |
| Short term fuel trim  | A/F Correction #1          | %                          |
| Knock sensor correction                                     | Knocking Correction        | deg                        |
| Atmospheric absolute pressure signal                        | Atmosphere Pressure        | mmHg or kPa or inHg or psi |
| Intake manifold relative pressure signal                    | Mani. Relative Pressure    | mmHg or kPa or inHg or psi |
| Intake manifold absolute pressure signal                    | Mani. Absolute Pressure    | mmHg or kPa or inHg or psi |
| A/F correction (short term fuel trim) by rear oxygen sensor | A/F Correction #3          | %                          |
| Long term whole fuel trim                                   | A/F Learning #1            | %                          |

| Fuel level signal                         | Fuel Level                      | V                          |
| Intake air temperature signal             | Intake Air Temp.                | °C or °F                   |
| Mass air flow sensor signal               | Mass Air Flow                   | g/s                        |
| Mass air flow sensor signal               | Air Flow Sensor Voltage         | V                          |
| Fuel tank pressure signal                 | Fuel Tank Pressure              | mmHg or kPa or inHg or psi |
| Fuel temperature signal                   | Fuel Temp.                      | °C or °F                   |
| AT/MT identification signal               | AT Vehicle ID Signal            | ON or OFF                  |
| Fuel pressure control signal              | PCV Solenoid Valve              | ON or OFF                  |
| Drain valve signal                        | Vent. Solenoid Valve            | ON or OFF                  |
| Tank sensor control solenoid valve signal | Tank Sensor Cntl Valve          | ON or OFF                  |
| ETC Motor Relay                           | ETC Motor Relay                 | ON or OFF                  |
| Clutch SW                                 | Clutch Switch                   | ON or OFF                  |
| Stop light SW                             | Stop Light Switch               | ON or OFF                  |
| SET/COAST SW                              | SET/COAST Switch                | ON or OFF                  |
| RESUME/ACCEL SW                           | RESUME/ACCEL Switch             | ON or OFF                  |
| Brake SW                                  | Brake Switch                    | ON or OFF                  |
| Main SW                                   | Main Switch                     | ON or OFF                  |
| Ignition switch signal                    | Ignition Switch                 | ON or OFF                  |
| Test mode signal                          | Test Mode Signal                | ON or OFF                  |
| Neutral position switch signal            | Neutral Position Switch         | ON or OFF                  |
| Air conditioning switch signal            | A/C Switch                      | ON or OFF                  |
| Air conditioning signal                   | A/C Compressor Signal           | ON or OFF                  |
| Radiator main fan relay signal            | Radiator Fan Relay #1           | ON or OFF                  |
| Blow-by leak diagnosis SW                 | Blow-by Leak Connector          | ON or OFF                  |
| Knocking signal                           | Knocking Signal                 | ON or OFF                  |
| Radiator sub fan relay signal             | Radiator Fan Relay #2           | ON or OFF                  |
| Power steering switch signal              | P/S Switch                      | ON or OFF                  |
| Rear oxygen sensor rich signal            | Rear O <sub>2</sub> Rich Signal | ON or OFF                  |
| Starter switch signal                     | Starter Switch                  | ON or OFF                  |
| Idle switch signal                        | Idle Switch                     | ON or OFF                  |
| Crankshaft position sensor signal         | Crankshaft Position Sig.        | ON or OFF                  |
| Camshaft position sensor signal           | Camshaft Position Sig.          | ON or OFF                  |
| Rear defogger switch signal               | Rear Defogger SW                | ON or OFF                  |
| Blower fan switch signal                  | Blower Fan SW                   | ON or OFF                  |
| Small light switch signal                 | Light Switch                    | ON or OFF                  |
| Tumble generator valve output signal      | TGV Output                      | ON or OFF                  |
| Tumble generator valve drive signal       | TGV Drive                       | OPEN or CLOSE              |

**NOTE:**

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

## 5. READ CURRENT DATA FOR ENGINE. (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
  - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
  - 3) Press the [YES] key after the information of engine type is displayed.
  - 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
  - 5) On the «OBD Menu» display screen, select the {Current Data Display & Save} and press the [YES] key.
  - 6) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
  - 7) Using the scroll key, move the display screen up or down until desired data is shown.
- A list of the support data is shown in the following table.

| Contents  | Display                         | Unit of measure            |
|---|---------------------------------|----------------------------|
| Number of DTC                                     | Number of DTC                   | —                          |
| Malfunction indicator light status                | MI (MIL)                        | ON or OFF                  |
| Monitoring test of misfire                        | Misfire monitoring              | Complete or incomplete     |
| Monitoring test of fuel system                    | Fuel system monitoring          | Complete or incomplete     |
| Monitoring test of comprehensive component        | Component monitoring            | Complete or incomplete     |
| Test of catalyst                                  | Catalyst Diagnosis              | Complete or incomplete     |
| Test of heated catalyst                           | Heated catalyst                 | No support                 |
| Test of evaporative emission purge control system | Evaporative purge system        | Complete or incomplete     |
| Test of secondary air system                      | Secondary air system            | No support                 |
| Test of air conditioning system refrigerant       | A/C system refrigerant          | No support                 |
| Test of oxygen sensor                             | Oxygen sensor                   | Complete or incomplete     |
| Test of oxygen sensor heater                      | O <sub>2</sub> Heater Diagnosis | Complete or incomplete     |
| Test of EGR system                                | EGR system                      | No support                 |
| Air fuel ratio control system for bank 1          | Fuel System for Bank 1          | —                          |
| Engine load data                                  | Calculated load value           | %                          |
| Engine coolant temperature signal                 | Coolant Temp.                   | °C or °F                   |
| Short term fuel trim by front oxygen (A/F) sensor | Short term fuel trim B1         | %                          |
| Long term fuel trim by front oxygen (A/F) sensor  | Long term fuel trim B1          | %                          |
| Intake manifold absolute pressure signal          | Mani. Absolute Pressure         | mmHg or kPa or inHg or psi |
| Engine speed signal                               | Engine Speed                    | rpm                        |
| Vehicle speed signal                              | Vehicle Speed                   | km/h or MPH                |

| Intake air temperature signal                     | Intake Air Temp.                | °C or °F                   |
| Intake air amount                                 | Mass Air Flow                   | g/s                        |
| Throttle position signal                          | Throttle Opening Angle          | %                          |
| Oxygen sensor #11                                 | Oxygen Sensor #11               | —                          |
| Oxygen sensor #12                                 | Oxygen Sensor #12               | —                          |
| Rear oxygen sensor output signal                  | Oxygen Sensor #12               | V                          |
| Air fuel ratio correction by rear oxygen sensor   | Short term fuel trim #12        | %                          |
| On-board diagnostic system                        | OBD System                      | CARB-OBD2                  |
| A/F sensor output signal                          | A/F sensor #11                  | V                          |
| A/F lambda signal                                 | A/F sensor #11                  | —                          |
| A/F lambda signal #11                             | A/F sensor #11                  | —                          |
| A/F sensor current #11                            | A/F sensor #11                  | mA                         |

**NOTE:**

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

# Subaru Select Monitor

## ENGINE (DIAGNOSTICS)

### 6. READ FREEZE FRAME DATA FOR ENGINE. (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
  - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
  - 3) Press the [YES] key after the information of engine type is displayed.
  - 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
  - 5) On the «OBD Menu» display screen, select the {Freeze Frame Data} and press the [YES] key.
- A list of the support data is shown in the following table.

| Contents  | Display                  | Unit of measure          |
|---|--------------------------|--------------------------|
| DTC for freeze frame data                         | Freeze frame data        | DTC                      |
| Air fuel ratio control system for bank 1          | Fuel system for Bank1    | Closed loop or Open loop |
| Air fuel ratio control system for bank 2          | Fuel system for Bank2    | Open loop                |
| O <sub>2</sub> sensor output voltage              | Oxygen Sensor #12        | V                        |
| Short term fuel trim by O <sub>2</sub> sensor     | Short term fuel trim #12 | %                        |
| Engine load data                                  | Calculated load value    | %                        |
| Engine coolant temperature signal                 | Coolant Temp.            | °C or °F                 |
| Short term fuel trim by front oxygen (A/F) sensor | Short term fuel trim B1  | %                        |
| Long term fuel trim by front oxygen (A/F) sensor  | Long term fuel trim B1   | %                        |
| Intake manifold absolute pressure signal          | Mani. Absolute Pressure  | mmHg, kPa, inHg or psi   |
| Engine speed signal                               | Engine Speed             | rpm                      |
| Vehicle speed signal                              | Vehicle Speed            | km/h or MPH              |
| Ignition timing advance for #1 cylinder           | Ignition timing adv. #1  | °                        |
| Intake air temperature signal                     | Intake Air Temp.         | °C or °F                 |
| Intake air amount                                 | Mass Air Flow            | g/s                      |
| Throttle position signal                          | Throttle Opening Angle   | %                        |

#### NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

## 7. LED OPERATION MODE FOR ENGINE

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
  - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
  - 3) Press the [YES] key after the information of engine type is displayed.
  - 4) On the «Engine Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
  - 5) On the «Data Display Menu» display screen, select the {Data & LED Display} and press the [YES] key.
  - 6) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

| Contents                                       | Display                         | Message       | LED "ON" requirements                                     |
|--|---------------------------------|---------------|---|
| Ignition switch signal                         | Ignition Switch                 | ON or OFF     | When ignition switch is turned to ON.                     |
| Test mode signal                               | Test Mode Signal                | ON or OFF     | When test mode connector is connected.                    |
| Neutral position switch signal                 | Neutral Position Switch         | ON or OFF     | When neutral position signal is entered.                  |
| Air conditioning switch signal                 | A/C Switch                      | ON or OFF     | When air conditioning switch is turned ON.                |
| Air conditioning relay signal                  | A/C Compressor Signal           | ON or OFF     | When air conditioning relay is in function.               |
| Radiator main fan relay signal                 | Radiator Fan Relay #1           | ON or OFF     | When radiator main fan relay is in function.              |
| Knocking signal                                | Knocking Signal                 | ON or OFF     | When knocking signal is entered.                          |
| Radiator sub fan relay signal                  | Radiator Fan Relay #2           | ON or OFF     | When radiator sub fan relay is in function.               |
| Rear oxygen sensor rich signal                 | Rear O <sub>2</sub> Rich Signal | ON or OFF     | When rear oxygen sensor mixture ratio is rich.            |
| Starter switch signal                          | Starter Switch Signal           | ON or OFF     | When starter switch signal is entered.                    |
| Idle switch signal                             | Idle Switch Signal              | ON or OFF     | When idle switch signal is entered.                       |
| Crankshaft position sensor signal              | Crankshaft Position Signal      | ON or OFF     | When crankshaft position sensor signal is entered.        |
| Camshaft position sensor signal                | Camshaft Position Signal        | ON or OFF     | When camshaft position sensor signal is entered.          |
| Power steering switch signal                   | P/S Switch                      | ON or OFF     | When power steering switch is entered.                    |
| Rear defogger switch signal                    | Rear Defogger Switch            | ON or OFF     | When rear defogger switch is turned ON.                   |
| Blower fan switch signal                       | Blower Fan Switch               | ON or OFF     | When blower fan switch is turned ON.                      |
| Small light switch signal                      | Light Switch                    | ON or OFF     | When small light switch is turned ON.                     |
| Tumble generator valve actuator signal         | TGV Output                      | ON or OFF     | When TGV actuator signal is entered.                      |
| Tumble generator valve drive signal            | TGV Drive                       | Close or Open | When TGV moves and valve opens.                           |
| Fuel pressure control solenoid                 | PCV Solenoid Valve              | ON or OFF     | When fuel pressure control solenoid valve is in function. |
| Drain valve signal                             | Vent. Solenoid Valve            | ON or OFF     | When drain valve is in function.                          |
| Fuel tank sensor control solenoid valve signal | Fuel Tank Sensor Ctrl Valve     | ON or OFF     | When tank sensor control solenoid valve is in function.   |
| Blow-by leak diagnosis SW                      | Blow-by Leak Connector          | ON or OFF     | When connected.   |
| Handle SW                                      | Handle SW                       | RHD/LHD       | When the vehicle is LHD model.                            |
| ETC motor relay                                | ETC Motor Relay                 | ON or OFF     | When electronic throttle control is in function.          |
| Clutch SW                                      | Clutch SW                       | ON or OFF     | When clutch switch is turned ON.                          |
| Stop SW  | Stop Light Switch               | ON or OFF     | When stop light switch is turned ON.                      |
| SET/CST SW                                     | SET/COAST Switch                | ON or OFF     | When SET/COAST switch is turned ON.                       |
| RES/ACC SW                                     | RESUME/ACCEL Switch             | ON or OFF     | When RESUME/ACCEL switch is turned ON.                    |
| Brake SW                                       | Brake Switch                    | ON or OFF     | When brake switch is turned ON.                           |
| Main SW  | Main Switch                     | ON or OFF     | When main switch is turned ON.                            |

**NOTE:**

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

# Subaru Select Monitor

ENGINE (DIAGNOSTICS)

---

## 8. VIN REGISTRATION

- 1) On «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On «System Selection Menu» display screen, select the {Engine} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On «Engine Diagnosis» display screen, select the {VIN Registration}, and then press the [YES] key.
- 5) Perform the procedure shown on the display.

### NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

## 10. Read Diagnostic Trouble Code (DTC)

### A: OPERATION

#### 1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On the «Engine Diagnosis» display screen, select the {DTC Display} and press the [YES] key.
- 5) On the «DTC Display» display screen, select the {Current DTC} or {History DTC} and press the [YES] key.

#### NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).>

#### 2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
- 5) On the «OBD Menu» display screen, select the {DTC Display} and press the [YES] key.
- 6) Make sure that a DTC is shown on the display screen.

#### NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).>

### 3. GENERAL SCAN TOOL

Refers to data denoting emission-related powertrain DTC.

For details concerning DTC, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).>

#### NOTE:

Refer to general scan tool manufacturer's instruction manual to access emission-related powertrain DTC (MODE \$03).

## Inspection Mode

ENGINE (DIAGNOSTICS)

### 11. Inspection Mode

#### A: PROCEDURE

Carry out trouble diagnosis shown in the following DTC table.

When performing trouble diagnosis which is not shown in the DTC table, refer to the next item Drive cycle.

<Ref. to EN(STI)(diag)-41, Drive Cycle.>

| DTC   | Item  | Condition |
|-------|---|-----------|
| P0011 | "A" Camshaft Position-Timing Over-Advanced or System Performance (Bank 1) | —         |
| P0021 | "A" Camshaft Position-Timing Over-Advanced or System Performance (Bank 2) | —         |
| P0031 | HO2S Heater Control Circuit Low (Bank 1 Sensor 1)                         | —         |
| P0032 | HO2S Heater Control Circuit High (Bank 1 Sensor 1)                        | —         |
| P0037 | HO2S Heater Control Circuit Low (Bank 1 Sensor 2)                         | —         |
| P0038 | HO2S Heater Control Circuit High (Bank 1 Sensor 2)                        | —         |
| P0102 | Mass or Volume Air Flow Circuit Low Input                                 | —         |
| P0103 | Mass or Volume Air Flow Circuit High Input                                | —         |
| P0107 | Manifold Absolute Pressure/Barometric Pressure Circuit Low Input          | —         |
| P0108 | Manifold Absolute Pressure/Barometric Pressure Circuit High Input         | —         |
| P0112 | Intake Air Temperature Circuit Low Input                                  | —         |
| P0113 | Intake Air Temperature Circuit High Input                                 | —         |
| P0117 | Engine Coolant Temperature Circuit Low Input                              | —         |
| P0118 | Engine Coolant Temperature Circuit High Input                             | —         |
| P0122 | Throttle/Pedal Position Sensor/Switch "A" Circuit Low Input               | —         |
| P0123 | Throttle/Pedal Position Sensor/Switch "A" Circuit High Input              | —         |
| P0131 | O <sub>2</sub> Sensor Circuit Low Voltage (Bank 1 Sensor 1)               | —         |
| P0132 | O <sub>2</sub> Sensor Circuit High Voltage (Bank 1 Sensor 1)              | —         |
| P0137 | O <sub>2</sub> Sensor Circuit Low Voltage (Bank 1 Sensor 2)               | —         |
| P0138 | O <sub>2</sub> Sensor Circuit High Voltage (Bank 1 Sensor 2)              | —         |
| P0182 | Fuel Temperature Sensor "A" Circuit Low Input                             | —         |
| P0183 | Fuel Temperature Sensor "A" Circuit High Input                            | —         |
| P0222 | Throttle/Pedal Position Sensor/Switch "B" Circuit Low Input               | —         |
| P0223 | Throttle/Pedal Position Sensor/Switch "B" Circuit High Input              | —         |
| P0230 | Fuel Pump Primary Circuit   | —         |
| P0245 | Turbo/Super Charger Wastegate Solenoid "A" Low                            | —         |
| P0327 | Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)                | —         |
| P0328 | Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)               | —         |
| P0335 | Crankshaft Position Sensor "A" Circuit                                    | —         |
| P0336 | Crankshaft Position Sensor "A" Circuit Range/Performance                  | —         |
| P0340 | Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)            | —         |
| P0345 | Camshaft Position Sensor "A" Circuit (Bank 2)                             | —         |
| P0447 | Evaporative Emission Control System Vent Control Circuit Open             | —         |
| P0448 | Evaporative Emission Control System Vent Control Circuit Shorted          | —         |
| P0452 | Evaporative Emission Control System Pressure Sensor Low Input             | —         |
| P0453 | Evaporative Emission Control System Pressure Sensor High Input            | —         |
| P0458 | Evaporative Emission Control System Purge Control Valve Circuit Low       | —         |
| P0462 | Fuel Level Sensor Circuit Low Input                                       | —         |
| P0463 | Fuel Level Sensor Circuit High Input                                      | —         |
| P0502 | Vehicle Speed Sensor Circuit Low Input                                    | —         |
| P0503 | Vehicle Speed Sensor Intermittent/Erratic/High                            | —         |
| P0512 | Starter Request Circuit   | —         |

# Inspection Mode

## ENGINE (DIAGNOSTICS)

### 1. PREPARATION FOR THE INSPECTION MODE

- 1) Make sure that the fuel remains approx. half amount [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)] and the battery voltage is 12 V or more.
- 2) Raise the vehicle using a garage jack and place on rigid racks or drive the vehicle onto free rollers.

#### WARNING:

- Before raising the vehicle, ensure the parking brake is applied.
- Do not use a pantograph jack in place of a rigid rack.
- Secure a rope or wire to the front and rear towing or tie-down hooks to prevent the lateral runout of front wheels.
- Do not abruptly depress/release the clutch pedal or accelerator pedal during works even when engine is operating at low speeds since this may cause vehicle to jump off free rollers.
- In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the rigid racks and the vehicle.
- Since the rear wheels will also rotate, do not place anything near them. Also, make sure that nobody goes in front of the vehicle.

- (A) Rigid rack  
(B) Free rollers

### 2. SUBARU SELECT MONITOR

- 1) After cleaning the memory, check for any remaining unsolved trouble data. <Ref. to EN(STI)(diag)-45, Clear Memory Mode.>
- 2) Warm up the engine.
- 3) Prepare the Subaru Select Monitor kit. <Ref. to EN(STI)(diag)-7, PREPARATION TOOL, General Description.>

- 4) Connect the diagnosis cable to Subaru Select Monitor.
- 5) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(STI)(diag)-7, PREPARATION TOOL, General Description.>

- 6) Connect the test mode connector (A) at the lower portion of instrument panel (on the driver's side).

- (A) Test mode connector

7) Connect the Subaru Select Monitor to data link connector located in the lower portion of the instrument panel (on the driver's side).

### CAUTION:

**Do not connect the scan tools except for Subaru Select Monitor and general scan tool.**

8) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor power switch to ON.

(A) Power switch

9) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.

10) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.

11) Press the [YES] key after the information of engine type is displayed.

12) On the «Engine Diagnosis» display screen, select the {Dealer Check Mode Procedure} and press the [YES] key.

13) When the “Perform Inspection (Dealer Check Mode)?” is shown on the display screen, press the [YES] key.

14) Perform subsequent procedures as instructed on the display screen.

- If trouble still remains in the memory, the corresponding DTC appears on the display screen.

### NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

- For detailed concerning the DTC, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).>

- Release the parking brake.
- The speed difference between front and rear wheels may light either the ABS warning light, but this indicates no malfunctions. When the engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis function.

### 3. GENERAL SCAN TOOL

- 1) Warm up the engine.
- 2) Connect the test mode connector (A) at the lower side of instrument panel (on the driver's side).

- 3) Connect the general scan tool to its data link connector in the lower portion of instrument panel (on the driver's side).

### CAUTION:

**Do not connect the scan tools except for Subaru Select Monitor and general scan tool.**

- 4) Start the engine.

### NOTE:

Depress the clutch pedal when starting engine.

- 5) Using the shift lever, turn the “N” position switch to ON.

- 6) Keep the engine speed in 2,500 — 3,000 rpm range for 40 seconds.

- 7) Place the shift lever in “1st” gear and drive the vehicle at 5 to 10 km/h (3 to 6 MPH).

### NOTE:

- On AWD model, release the parking brake.

- The speed difference between front and rear wheels may light ABS warning light, but this indicates no malfunctions. When the engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis function.

8) Using the general scan tool, check for DTC and record the result(s).

**NOTE:**

- For detailed operation procedures, refer to the General Scan Tool Instruction Manual.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).>

## 12. Drive Cycle

### A: PROCEDURE

There are six drive patterns of drive cycles A — F for the trouble diagnosis. Performing the specified drive pattern allows to diagnose malfunctioning items listed below. After the malfunctioning items listed below are repaired, always check if they correctly resume their functions by performing the required drive pattern.

#### 1. PREPARATION FOR THE DRIVE CYCLE

- 1) Make sure that the fuel remains approx. half amount [20 — 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)], and battery voltage is 12 V or more.
- 2) Disconnect the test mode connector.

**NOTE:**

- Except for the engine coolant temperature specified items at starting, the diagnosis is carried out after engine warm up.
- Carry out the diagnosis which is marked \* on DTC twice, then, after finishing first diagnosis, stop the engine and do second time at the same condition.

#### 2. DRIVE CYCLE A (AFTER RUNNING 20 MINUTES AT 80 KM/H (50 MPH), IDLE ENGINE FOR 1 MINUTE).

| DTC    | Item   | Condition   |
|--------|--|---|
| *P0125 | Insufficient Coolant Temperature for Closed Loop Fuel Control          | Engine coolant temperature is less than 20°C (68°F) at engine start.  |
| *P0126 | Insufficient Coolant Temperature for Stable Operation                  | —   |
| *P0128 | Coolant Thermostat   | Engine coolant temperature is less than 55°C (131°F) at engine start. |
| *P0133 | O <sub>2</sub> Sensor Circuit Slow Response (Bank 1 Sensor 1)          | —   |
| *P0171 | System Too Lean (Bank 1)   | Diagnosis completes in drive cycle B or C as well.                    |
| *P0172 | System Too Rich (Bank 1)   | Diagnosis completes in drive cycle B or C as well.                    |
| *P0301 | Cylinder 1 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.                    |
| *P0302 | Cylinder 2 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.                    |
| *P0303 | Cylinder 3 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.                    |
| *P0304 | Cylinder 4 Misfire Detected  | Diagnosis completes in drive cycle B or C as well.                    |
| *P0420 | Catalyst System Efficiency Below Threshold (Bank 1)                    | —   |
| *P0442 | Evaporative Emission Control System Leak Detected (small leak)         | Engine coolant temperature is less than 25°C (77°F) at engine start.  |
| *P0451 | Evaporative Emission Control System Pressure Sensor Range/Performance  | —   |
| *P0456 | Evaporative Emission Control System Leak Detected (very small leak)    | Engine coolant temperature is less than 25°C (77°F) at engine start.  |
| *P0457 | Evaporative Emission Control System Leak Detected (fuel cap loose/off) | Engine coolant temperature is less than 25°C (77°F) at engine start.  |
| *P0459 | Evaporative Emission Control System Purge Control Valve Circuit High   | —   |
| *P0692 | Cooling Fan 1 Control Circuit High                                     | —   |
| P1443  | Vent Control Solenoid Valve Function Problem                           | —   |
| *P2096 | Post Catalyst Fuel Trim System Too Lean Bank 1                         | Diagnosis completes in drive cycle B or C as well.                    |
| *P2097 | Post Catalyst Fuel Trim System Too Rich Bank 1                         | Diagnosis completes in drive cycle B or C as well.                    |

# Drive Cycle

## ENGINE (DIAGNOSTICS)

### 3. DRIVE CYCLE B (IDLE FOR 10 MINUTES)

**NOTE:**

Before the diagnosis, drive the vehicle at 10 km/h (6 MPH) or more.

| DTC    | Item  | Condition  |
|--------|---|--|
| *P0111 | Intake Air Temperature Sensor Range/Performance Problem | Engine coolant temperature is less than 30°C (86°F) at engine start. |
| *P0171 | System too Lean (Bank 1)                                | Diagnosis completes in drive cycle A or C as well.                   |
| *P0172 | System too Rich (Bank 1)                                | Diagnosis completes in drive cycle A or C as well.                   |
| *P0301 | Cylinder 1 Misfire Detected                             | Diagnosis completes in drive cycle A or C as well.                   |
| *P0302 | Cylinder 2 Misfire Detected                             | Diagnosis completes in drive cycle A or C as well.                   |
| *P0303 | Cylinder 3 Misfire Detected                             | Diagnosis completes in drive cycle A or C as well.                   |
| *P0304 | Cylinder 4 Misfire Detected                             | Diagnosis completes in drive cycle A or C as well.                   |
| *P0464 | Fuel Level Sensor Circuit Intermittent                  | —  |
| *P0483 | Cooling Fan Rationality Check                           | —  |
| *P0506 | Idle Control System RPM Lower Than Expected             | —  |
| *P0507 | Idle Control System RPM Higher Than Expected            | —  |
| *P2096 | Post Catalyst Fuel Trim System Too Lean Bank 1          | Diagnosis completes in drive cycle A or C as well.                   |
| *P2097 | Post Catalyst Fuel Trim System Too Rich Bank 1          | Diagnosis completes in drive cycle A or C as well.                   |

## 4. DRIVE CYCLE C (DRIVE ACCORDING TO THE FOLLOWING DRIVE PATTERN)

EN-00842

- |   |  |  |
|---|--|--|
| (A) Idle engine for 10 seconds or more.               | (D) Decelerate with fully closed throttle to 64 km/h (40 MPH). | (G) Stop vehicle with throttle fully closed. |
| (B) Accelerate to 97 km/h (60 MPH) within 20 seconds. | (E) Drive vehicle at 64 km/h (40 MPH) for 20 seconds.          | (H) km/h (MPH)                               |
| (C) Drive vehicle at 97 km/h (60 MPH) for 20 seconds. | (F) Accelerate to 97 km/h (60 MPH) within 10 seconds.          | (I) second                                   |

| DTC    | Item   | Condition  |
|--------|--|--|
| *P0030 | HO2S Heater Control Circuit (Bank 1 Sensor 1)                            | —  |
| *P0068 | Manifold Absolute Pressure/Barometric Pressure Circuit Range/Performance | —  |
| *P0101 | Mass or Volume Air Flow Circuit Range/Performance                        | —  |

| *P2096 | Post Catalyst Fuel Trim System Too Lean Bank 1                           | Diagnosis completes in drive cycle A or B as well. |
| *P2097 | Post Catalyst Fuel Trim System Too Rich Bank 1                           | Diagnosis completes in drive cycle A or B as well. |

# Drive Cycle

## ENGINE (DIAGNOSTICS)

### 5. DRIVE CYCLE D

#### • DRIFT DIAGNOSIS

- 1) Make sure that the engine coolant temperature at engine starting is less than 30°C (86°F).
- 2) Make sure that fuel of more than 10 ℓ (2.6 US gal, 2.2 Imp gal) remains and the battery voltage is more than 10.9 V.
- 3) Make sure that the engine coolant temperature rises for more than 10°C (50°F) from the level of engine starting and is also more than 75°C (167°F).
- 4) Idle the engine for more than 120 seconds in the condition of step 3.

#### • STUCK DIAGNOSIS

- 1) Make sure that the battery voltage is more than 10.9 V.
- 2) Perform the clear memory mode. <Ref. to EN(STI)(diag)-45, Clear Memory Mode.>
- 3) Drive the vehicle for the distance equal to fuel of 50 ℓ (13.2 US gal, 11 Imp gal).

#### NOTE:

- It is possible to drive intermittently.
- Do not disconnect the terminal of battery during diagnosis. (If disconnecting the terminal of battery, the data will be cleared.)

| DTC   | Item  | Condition |
|-------|---|-----------|
| P0181 | Fuel Temperature Sensor "A" Circuit Range/Performance | —         |

### 6. DRIVE CYCLE E

- 1) Make sure that the battery voltage is more than 10.9 V.
- 2) Perform the clear memory mode. <Ref. to EN(STI)(diag)-45, Clear Memory Mode.>
- 3) Drive the vehicle for the distance equal to fuel of 30 ℓ (7.9 US gal, 6.6 Imp gal).

#### NOTE:

- It is possible to drive intermittently.
- Do not disconnect the terminal of battery during diagnosis. (If disconnecting the terminal of battery, the data will be cleared.)

| DTC   | Item  | Condition |
|-------|---|-----------|
| P0461 | Fuel Level Sensor Circuit Range/Performance | —         |

### 7. DRIVE CYCLE F

- 1) Make sure that the battery voltage is more than 10.9 V.
- 2) Drive the vehicle at 80 km/h (50 MPH) for 20 minutes, and then idle the engine for a minute.
- 3) Read the current data of engine using Subaru Select Monitor. Make sure that the item of evaporative emission purge control system is displayed as "Completed". <Ref. to EN(STI)(diag)-31, READ CURRENT DATA FOR ENGINE. (OBD MODE), OPERATION, Subaru Select Monitor.>
- 4) Drive down for difference of elevation of 52 m (164 ft) within 80 seconds. (Ex: Drive down a incline with grade of 6% at 40 km/h (25 MPH).)
- 5) Repeat the step 4 for five times.

#### NOTE:

- Do not drive at than 68 km/h (42 MPH) in step 4 and 5.
- Do not disconnect the terminal of battery during diagnosis. (If disconnecting the terminal of battery, the data will be cleared.)
- Do not perform the Clear Memory in diagnosis. (If the Clear Memory is performed, the data will be cleared.)

| DTC   | Item   | Condition |
|-------|--|-----------|
| P1448 | Fuel Tank Sensor Control Valve Range/Performance | —         |

## 13. Clear Memory Mode

### A: OPERATION

#### 1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On the «Engine Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.
- 5) When the 'Done' and 'Turn Ignition Switch OFF' are shown on the display screen, turn the ignition switch to OFF, and then turn the Subaru Select Monitor to OFF.

**NOTE:**

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

#### 2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after the information of engine type is displayed.
- 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
- 5) On the «OBD Menu» display screen, select the {Diagnosis Code(s) Cleared} and press the [YES] key.
- 6) When the 'Clear Diagnostic Code?' is shown on the display screen, press the [YES] key.
- 7) Turn the ignition switch to OFF, and then turn the Subaru Select Monitor power switch to OFF.

**NOTE:**

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

#### 3. GENERAL SCAN TOOL

For clear memory procedures using the general scan tool, refer to the General Scan Tool Instruction Manual.

# Compulsory Valve Operation Check Mode

ENGINE (DIAGNOSTICS)

## 14. Compulsory Valve Operation Check Mode

### A: OPERATION

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(STI)(diag)-7, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(STI)(diag)-7, PREPARATION TOOL, General Description.>

4) Connect the test mode connector (A) at the lower portion of instrument panel (on the driver's side).

5) Connect the Subaru Select Monitor to data link connector located in the lower portion of instrument panel (on the driver's side).

### CAUTION:

**Do not connect scan tools except for the Subaru Select Monitor and general scan tool.**

6) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor power switch to ON.

(A) Power switch

7) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.

8) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.

9) Press the [YES] key after the information of engine type is displayed.

10) On the «Engine Diagnosis» display screen, select the {System Operation Check Mode} and press the [YES] key.

11) On the «System Operation Check Mode» display screen, select the {Actuator ON/OFF Operation} and press the [YES] key.

12) Select the desired compulsory actuator on the «Actuator ON/OFF Operation» display screen and press the [YES] key.

13) Pressing the [NO] key completes the compulsory operation check mode. The display will then return to the «Actuator ON/OFF Operation» screen.

• A list of support data is shown in the following table.

# Compulsory Valve Operation Check Mode

ENGINE (DIAGNOSTICS)

| Contents   | Display                        |
|--|--------------------------------|
| Compulsory fuel pump relay operation check                 | Fuel Pump Relay                |
| Compulsory radiator fan relay operation check              | Radiator Fan Relay             |
| Compulsory air conditioning relay operation check          | A/C Compressor Relay           |
| Compulsory purge control solenoid valve operation check    | CPC Solenoid Valve             |
| Compulsory pressure control solenoid valve operation check | PCV Solenoid Valve             |
| Compulsory drain valve operation check                     | Vent. Control Solenoid Valve   |
| Compulsory fuel tank sensor control valve operation check  | Fuel Tank Sensor Control Valve |

## NOTE:

- The following parts will be displayed but not functional because they are not installed on the vehicle.

| Display                         |
|---------------------------------|
| EGR Solenoid Valve              |
| ASV Solenoid Valve              |
| FICD Solenoid                   |
| Pressure Switching Sol. 1       |
| Pressure Switching Sol. 2       |
| AAI Solenoid Valve              |
| Turbocharger Wastegate Solenoid |

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

# Malfunction Indicator Light

ENGINE (DIAGNOSTICS)

## 15. Malfunction Indicator Light

### A: PROCEDURE

|   |
|---|
| 1. Activation of check malfunction indicator light. <Ref. to EN(STI)(diag)-49, ACTIVATION OF MALFUNCTION INDICATOR LIGHT, Malfunction Indicator Light.>   |
| ↓   |
| 2. Check that the malfunction indicator light does not come on. <Ref. to EN(STI)(diag)-50, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON., Malfunction Indicator Light.>                                       |
| ↓   |
| 3. Check that the malfunction indicator light does not go off. <Ref. to EN(STI)(diag)-52, MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF., Malfunction Indicator Light.>   |
| ↓   |
| 4. Check that the malfunction indicator light does not blink at a cycle of 3 Hz. <Ref. to EN(STI)(diag)-53, MALFUNCTION INDICATOR LIGHT DOES NOT BLINK AT A CYCLE OF 3 HZ., Malfunction Indicator Light.>     |
| ↓   |
| 5. Check that the malfunction indicator light remains blinking at a cycle of 3 Hz. <Ref. to EN(STI)(diag)-55, MALFUNCTION INDICATOR LIGHT REMAINS BLINKING AT A CYCLE OF 3 HZ., Malfunction Indicator Light.> |

## B: ACTIVATION OF MALFUNCTION INDICATOR LIGHT

1) When the ignition switch is turned to ON (engine off), the malfunction indicator light in the combination meter illuminates.

**NOTE:**

If the malfunction indicator light does not illuminate, perform diagnostics of the malfunction indicator light circuit or the combination meter circuit. <Ref. to EN(STI)(diag)-50, MALFUNCTION INDICATOR LIGHT DOES NOT COME ON., Malfunction Indicator Light.>

EN-01604

2) After starting the engine, the malfunction indicator light goes out. If it does not, either the engine or the emission control system is malfunctioning.

EN-01679

- (1) No trouble
- (2) Trouble occurs
- (3) ON
- (4) OFF
- (5) Ignition switch ON
- (6) Engine start

3) If the diagnosis system senses a misfire which could damage the catalyzer, the malfunction indicator light will blink at a cycle of 1 Hz.

EN-01680

- (1) ON
- (2) OFF
- (3) Ignition switch ON
- (4) Engine start
- (5) Misfire start
- (6) 1 second

4) When the ignition switch is turned to ON (engine off) or to START with the test mode connector connected, the malfunction indicator light blinks at a cycle of 3 Hz.

EN-01681

- (1) ON
- (2) OFF
- (3) Ignition switch ON
- (4) 1 second

# Malfunction Indicator Light

ENGINE (DIAGNOSTICS)

## C: MALFUNCTION INDICATOR LIGHT DOES NOT COME ON.

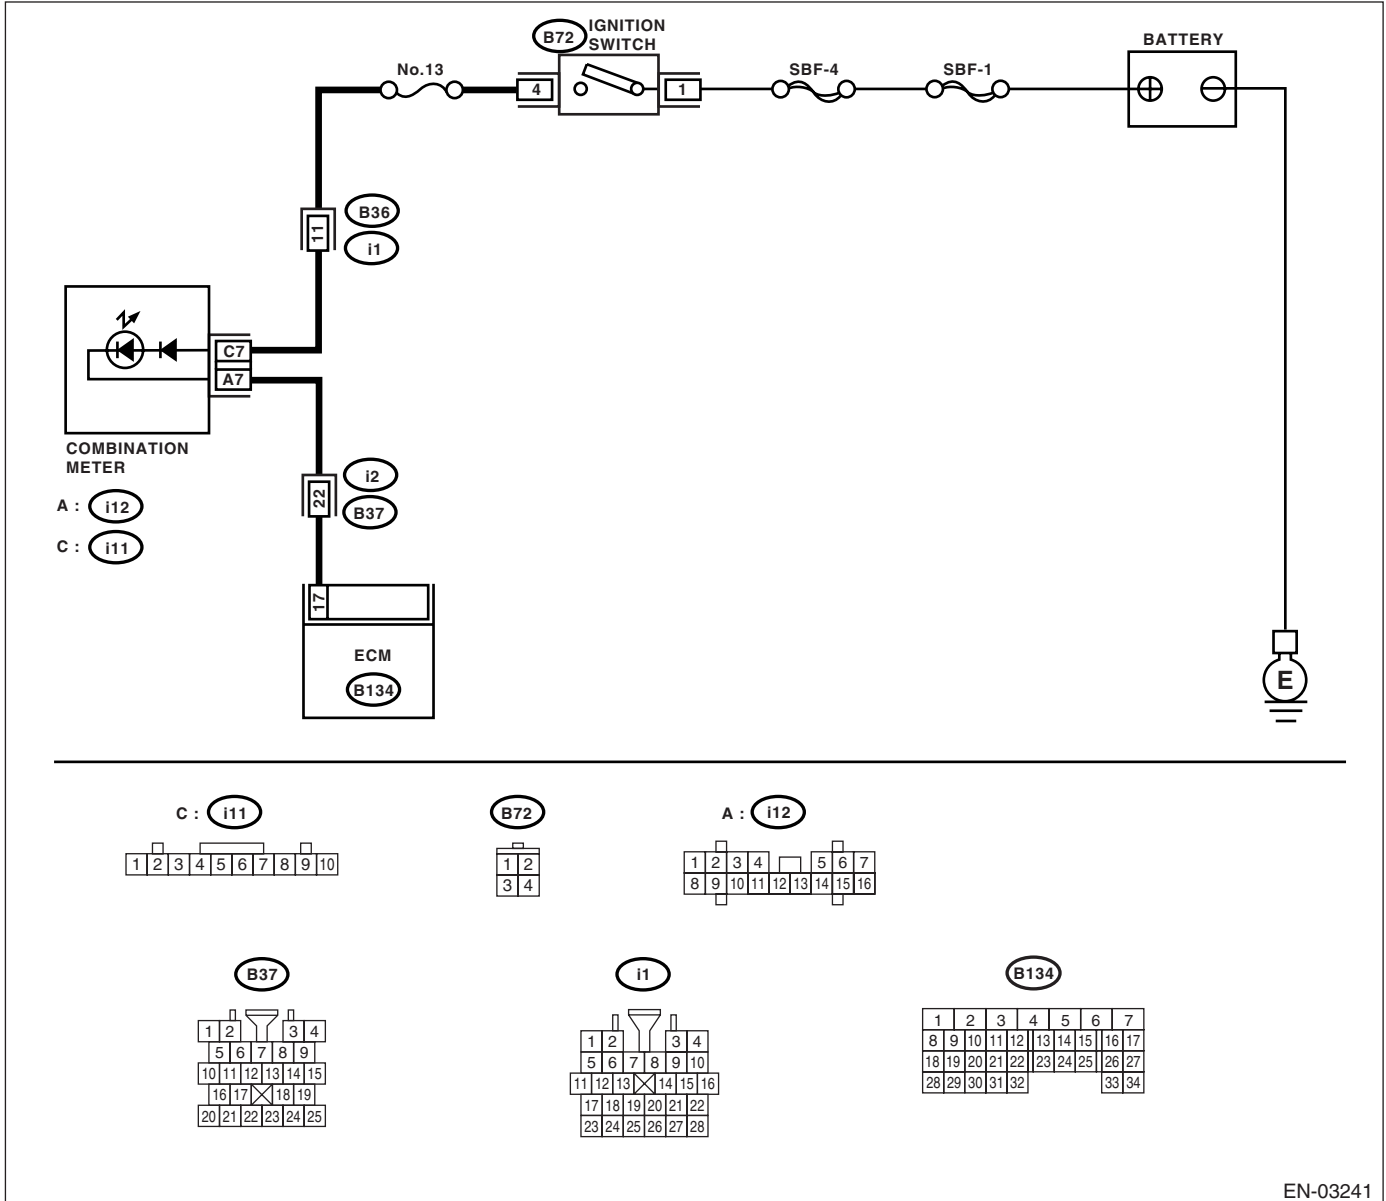

### DIAGNOSIS:

The malfunction indicator light circuit is shorted.

### TROUBLE SYMPTOM:

When the ignition switch is turned to ON (engine OFF), malfunction indicator light does not come on.

### WIRING DIAGRAM:

| Step | Check   | Yes  | No            |
|------|---|--|---------------|
| 1    | <b>CHECK OUTPUT SIGNAL FROM ECM.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between ECM connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B134) No. 17 (+) — Chassis ground (-):</b> | Is the voltage less than 1 V?<br><br>Go to step 4.   | Go to step 2. |
| 2    | <b>CHECK POOR CONTACT.</b>  | Does the malfunction indicator light come on when shaking or pulling ECM connector and harness?<br><br>Repair the poor contact in ECM connector. | Go to step 3. |

| Step  | Check   | Yes   | No  |
|---|---|---|---|
| <b>3 CHECK ECM CONNECTOR.</b>   | Is the ECM connector correctly connected?             | Replace the ECM. <Ref. to FU(STI)-39, Engine Control Module (ECM).>               | Repair the connection of ECM connector.   |
| <b>4 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the combination meter. <Ref. to IDI-10, Combination Meter.><br>3) Disconnect the connector from ECM and combination meter.<br>4) Measure the resistance of harness between ECM and combination meter connector.<br><br><b>Connector &amp; terminal</b><br><b>(B134) No. 17 — (i12) No. 7:</b> | Is the resistance less than 1 $\Omega$ ?              | Go to step 5.   | Repair the harness and connector.<br><br>NOTE:<br>In this case, repair the following: <ul style="list-style-type: none"> <li>• Open circuit in harness between ECM and combination meter connector</li> <li>• Poor contact in coupling connector</li> </ul>                       |
| <b>5 CHECK POOR CONTACT.</b><br>Check poor contact in combination meter connector.  | Is there poor contact in combination meter connector? | Repair the poor contact in combination meter connector.                           | Go to step 6.   |
| <b>6 CHECK HARNESS BETWEEN COMBINATION METER AND IGNITION SWITCH CONNECTOR.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between combination meter connector and chassis ground.<br><br><b>Connector &amp; terminal</b><br><b>(i11) No. 7 (+) — Chassis ground (-):</b>  | Is the voltage more than 10 V?                        | Replace the combination meter circuit board. <Ref. to IDI-10, Combination Meter.> | Check the following and repair if necessary.<br><br>NOTE: <ul style="list-style-type: none"> <li>• Blown out fuse (No. 13)</li> <li>• Open or short circuit in harness between fuse (No. 13) and battery terminal</li> <li>• Poor contact in ignition switch connector</li> </ul> |

# Malfunction Indicator Light

ENGINE (DIAGNOSTICS)

## D: MALFUNCTION INDICATOR LIGHT DOES NOT GO OFF.

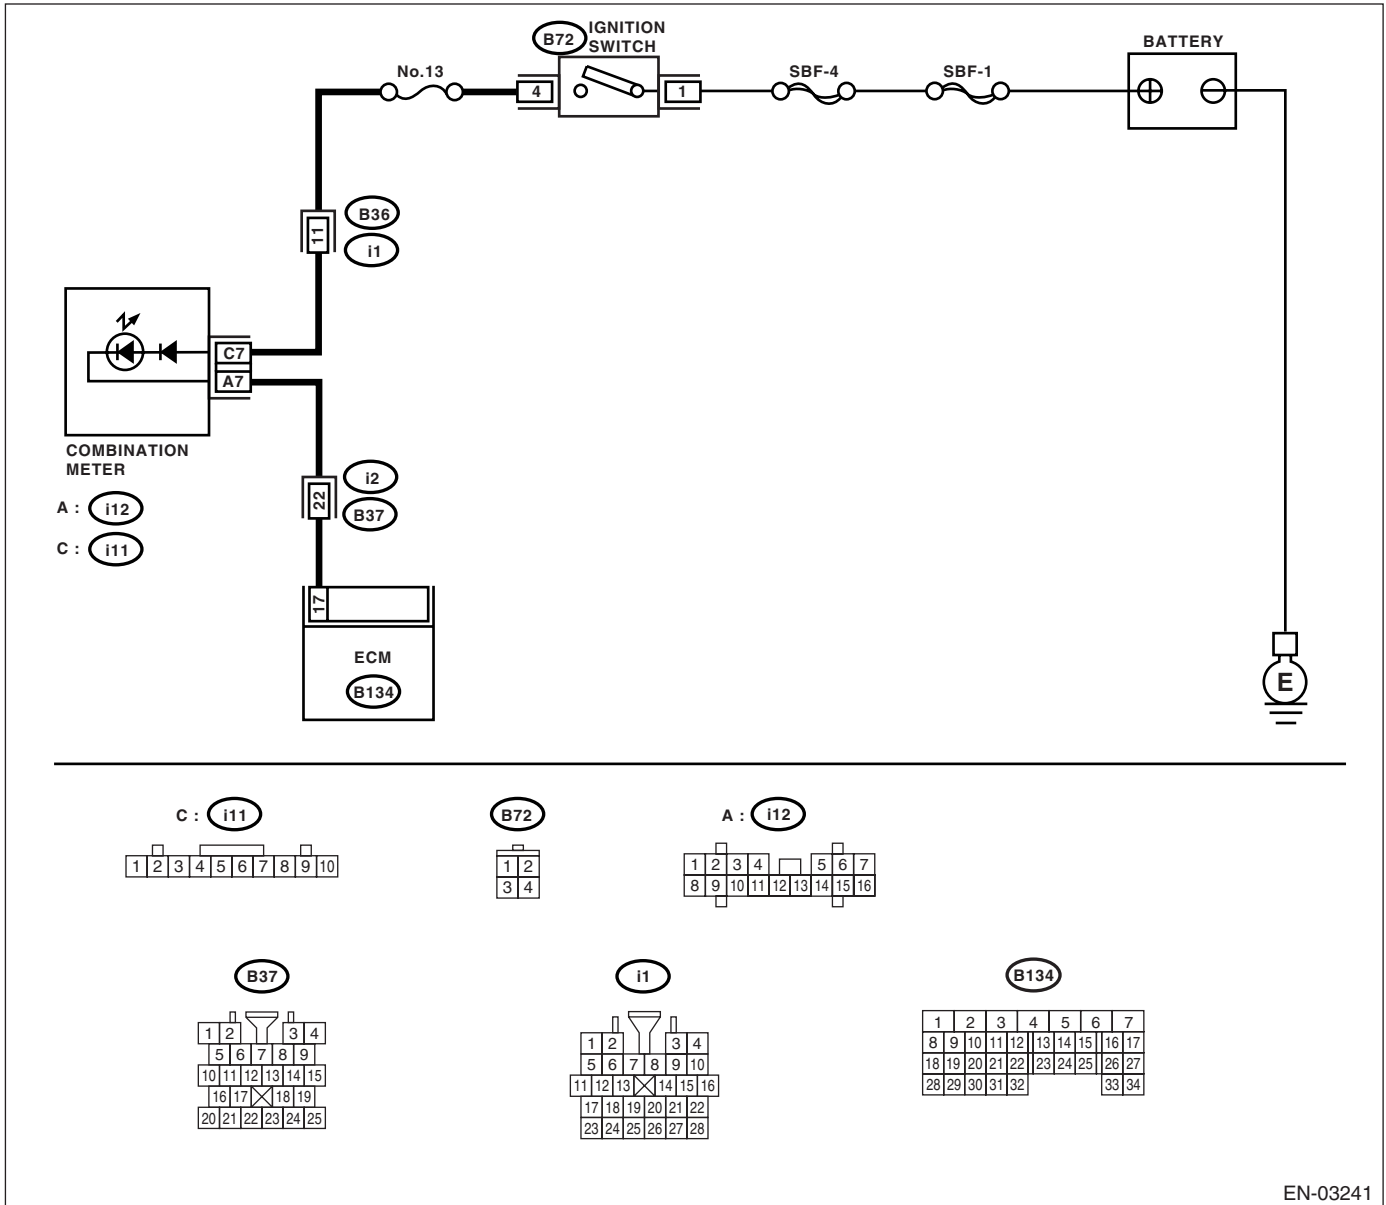

### DIAGNOSIS:

The malfunction indicator light circuit is shorted.

### TROUBLE SYMPTOM:

Although malfunction indicator light comes on when engine runs, but DTC is not shown on Subaru Select Monitor or general scan tool display.

### WIRING DIAGRAM:

| Step | Check   | Yes   | No   |   |
|------|---|---|--|---|
| 1    | <b>CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ECM.<br>3) Turn the ignition switch to ON. | Does the malfunction indicator light come on? | Repair the short circuit in harness between combination meter and ECM connector. | Replace the ECM. <Ref. to FU(STI)-39, Engine Control Module (ECM).> |

# Malfunction Indicator Light

ENGINE (DIAGNOSTICS)

## E: MALFUNCTION INDICATOR LIGHT DOES NOT BLINK AT A CYCLE OF 3 Hz.

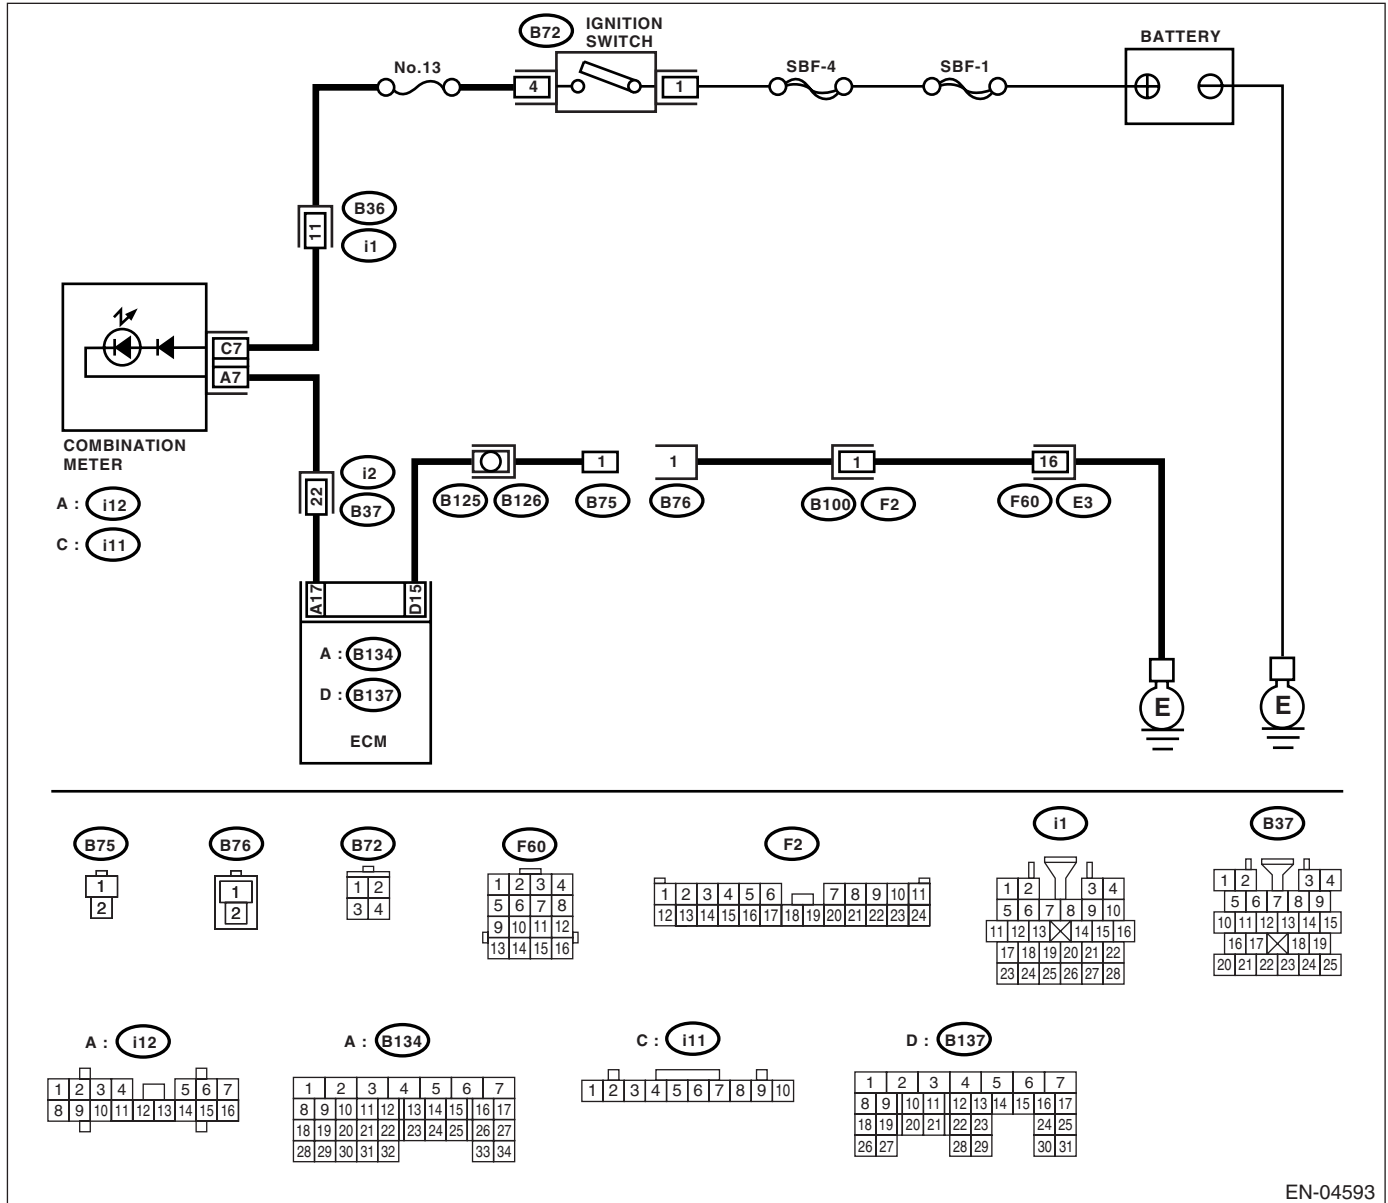

### DIAGNOSIS:

- The malfunction indicator light circuit is open or shorted.
- Test mode connector circuit is open.

### TROUBLE SYMPTOM:

During inspection mode, malfunction indicator light does not blink at a cycle of 3 Hz.

### WIRING DIAGRAM:

| Step   | Check  | Yes   | No   |
|--|--|---|--|
| <p><b>1</b></p> <p><b>CHECK OPERATING SOUND OF FUEL PUMP.</b></p> <p>Make sure that the fuel pump is in operation for 2 seconds when turning ignition switch to ON.</p> <p>NOTE:<br/>Fuel pump operation check can also be executed using the Subaru Select Monitor.<br/>For the procedure, refer to "Compulsory Valve Operation Check Mode". &lt;Ref. to EN(STI)(diag)-46, Compulsory Valve Operation Check Mode.&gt;</p> | <p>Does the fuel pump produce "operating" sound?</p> | <p>Check the fuel injector circuit.<br/>&lt;Ref. to EN(STI)(diag)-67, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.&gt;</p> | <p>Display the DTC.<br/>&lt;Ref. to EN(STI)(diag)-35, OPERATION, Read Diagnostic Trouble Code (DTC).&gt;</p> |

## F: FUEL INJECTOR CIRCUIT

### CAUTION:

- Inspect or repair the faulty parts only.
- After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.

### WIRING DIAGRAM:

# Diagnostics for Engine Starting Failure

## ENGINE (DIAGNOSTICS)

| Step   | Check  | Yes   | No  |
|--|--|---|---|
| <p><b>1</b></p> <p><b>CHECK OPERATION OF EACH FUEL INJECTOR.</b><br/>While cranking the engine, check that each fuel injector emits “operating” sound. Use a sound scope or attach a screwdriver to injector for this check.</p>   | Does the fuel injector emit “operating” sound? | Check the fuel pressure. <Ref. to ME(STI)-26, INSPECTION, Fuel Pressure.>           | Go to step 2.   |
| <p><b>2</b></p> <p><b>CHECK POWER SUPPLY TO EACH FUEL INJECTOR.</b><br/>1) Turn the ignition switch to OFF.<br/>2) Disconnect the connector from fuel injector.<br/>3) Turn the ignition switch to ON.<br/>4) Measure the power supply voltage between the fuel injector terminal and engine ground.<br/><b>Connector &amp; terminal</b><br/><b>#1 (E5) No. 2 (+) — Engine ground (-):</b><br/><b>#2 (E16) No. 2 (+) — Engine ground (-):</b><br/><b>#3 (E6) No. 2 (+) — Engine ground (-):</b><br/><b>#4 (E17) No. 2 (+) — Engine ground (-):</b></p> | Is the voltage more than 10 V?                 | Go to step 3.   | <p>Repair the harness and connector.</p> <p>NOTE:<br/>In this case, repair the following:</p> <ul style="list-style-type: none"> <li>• Open circuit in harness between main relay and fuel injector connector</li> <li>• Poor contact in main relay connector</li> <li>• Poor contact in coupling connector</li> <li>• Poor contact in fuel injector connector</li> </ul> |
| <p><b>3</b></p> <p><b>CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.</b><br/>1) Disconnect the connector from ECM.<br/>2) Measure the resistance of harness between ECM and fuel injector connector.<br/><b>Connector &amp; terminal</b><br/><b>(B136) No. 6 — (E5) No. 1:</b><br/><b>(B136) No. 5 — (E16) No. 1:</b><br/><b>(B136) No. 4 — (E6) No. 1:</b><br/><b>(B136) No. 3 — (E6) No. 1:</b></p>  | Is the resistance less than 1 $\Omega$ ?       | Go to step 4.   | <p>Repair the harness and connector.</p> <p>NOTE:<br/>In this case, repair the following:</p> <ul style="list-style-type: none"> <li>• Open circuit in harness between ECM and fuel injector connector</li> <li>• Poor contact in coupling connector</li> </ul>   |
| <p><b>4</b></p> <p><b>CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.</b><br/>Measure the resistance of harness between ECM and fuel injector connector.<br/><b>Connector &amp; terminal</b><br/><b>(B136) No. 6 — Chassis ground:</b><br/><b>(B136) No. 5 — Chassis ground:</b><br/><b>(B136) No. 4 — Chassis ground:</b><br/><b>(B136) No. 3 — Chassis ground:</b></p>  | Is the resistance less than 1 $\Omega$ ?       | Repair the ground short circuit in harness between ECM and fuel injector connector. | Go to step 5.   |
| <p><b>5</b></p> <p><b>CHECK EACH FUEL INJECTOR.</b><br/>1) Turn the ignition switch to OFF.<br/>2) Measure the resistance between each fuel injector terminals.<br/><b>Terminals</b><br/><b>No. 1 — No. 2:</b></p>   | Is the resistance 5 — 20 $\Omega$ ?            | Go to step 6.   | Replace the faulty fuel injector.   |
| <p><b>6</b></p> <p><b>CHECK POOR CONTACT.</b><br/>Check poor contact in ECM connector.</p>   | Is there poor contact in ECM connector?        | Repair the poor contact in ECM connector.   | Inspection using “General Diagnostic Table”. <Ref. to EN(STI)(diag)-371, INSPECTION, General Diagnostic Table.>   |

## List of Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

### 17. List of Diagnostic Trouble Code (DTC)

#### A: LIST

| DTC   | Item  | Index   |
|-------|---|---|
| P0011 | "A" Camshaft Position-Timing Over-Advanced or System Performance (Bank 1) | <Ref. to EN(STI)(diag)-76, DTC P0011 "A" CAMSHAFT POSITION-TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P0021 | "A" Camshaft Position-Timing Over-Advanced or System Performance (Bank 2) | <Ref. to EN(STI)(diag)-77, DTC P0021 "A" CAMSHAFT POSITION-TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P0030 | HO2S Heater Control Circuit (Bank 1 Sensor 1)                             | <Ref. to EN(STI)(diag)-78, DTC P0030 HO2S HEATER CONTROL CIRCUIT (BANK 1 SENSOR 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                             |
| P0031 | HO2S Heater Control Circuit Low (Bank 1 Sensor 1)                         | <Ref. to EN(STI)(diag)-80, DTC P0031 HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                         |
| P0032 | HO2S Heater Control Circuit High (Bank 1 Sensor 1)                        | <Ref. to EN(STI)(diag)-83, DTC P0032 HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                        |
| P0037 | HO2S Heater Control Circuit Low (Bank 1 Sensor 2)                         | <Ref. to EN(STI)(diag)-85, DTC P0037 HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                         |
| P0038 | HO2S Heater Control Circuit High (Bank 1 Sensor 2)                        | <Ref. to EN(STI)(diag)-88, DTC P0038 HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                        |
| P0068 | Map/Maf – Throttle Position Correlation                                   | <Ref. to EN(STI)(diag)-90, DTC P0068 MAP/MAF – THROTTLE POSITION CORRELATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                   |
| P0101 | Mass or Volume Air Flow Circuit Range/Performance                         | <Ref. to EN(STI)(diag)-92, DTC P0101 MASS OR VOLUME AIR FLOW CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                         |
| P0102 | Mass or Volume Air Flow Circuit Low Input                                 | <Ref. to EN(STI)(diag)-94, DTC P0102 MASS OR VOLUME AIR FLOW CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                 |
| P0103 | Mass or Volume Air Flow Circuit High Input                                | <Ref. to EN(STI)(diag)-97, DTC P0103 MASS OR VOLUME AIR FLOW CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                |
| P0107 | Manifold Absolute Pressure/Barometric Pressure Circuit Low Input          | <Ref. to EN(STI)(diag)-99, DTC P0107 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>          |
| P0108 | Manifold Absolute Pressure/Barometric Pressure Circuit High Input         | <Ref. to EN(STI)(diag)-101, DTC P0108 MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>        |
| P0111 | Intake Air Temperature Circuit Range/Performance                          | <Ref. to EN(STI)(diag)-103, DTC P0111 INTAKE AIR TEMPERATURE CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                         |
| P0112 | Intake Air Temperature Circuit Low Input                                  | <Ref. to EN(STI)(diag)-105, DTC P0112 INTAKE AIR TEMPERATURE CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                 |
| P0113 | Intake Air Temperature Circuit High Input                                 | <Ref. to EN(STI)(diag)-107, DTC P0113 INTAKE AIR TEMPERATURE CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                |
| P0117 | Engine Coolant Temperature Circuit Low Input                              | <Ref. to EN(STI)(diag)-110, DTC P0117 ENGINE COOLANT TEMPERATURE CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                             |
| P0118 | Engine Coolant Temperature Circuit High Input                             | <Ref. to EN(STI)(diag)-112, DTC P0118 ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |

## List of Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| DTC   | Item   | Index   |
|-------|--|---|
| P0122 | Throttle/Pedal Position Sensor/Switch "A" Circuit Low Input                      | <Ref. to EN(STI)(diag)-115, DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |
| P0123 | Throttle/Pedal Position Sensor/Switch "A" Circuit High Input                     | <Ref. to EN(STI)(diag)-118, DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                     |
| P0125 | Insufficient Coolant Temperature for Closed Loop Fuel Control                    | <Ref. to EN(STI)(diag)-121, DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                    |
| P0126 | Insufficient Coolant Temperature for Stable Operation                            | <Ref. to EN(STI)(diag)-123, DTC P0126 INSUFFICIENT COOLANT TEMPERATURE FOR STABLE OPERATION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |
| P0128 | Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature) | <Ref. to EN(STI)(diag)-125, DTC P0128 COOLANT THERMOSTAT (COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P0131 | O <sub>2</sub> Sensor Circuit Low Voltage (Bank 1 Sensor 1)                      | <Ref. to EN(STI)(diag)-126, DTC P0131 O <sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |
| P0132 | O <sub>2</sub> Sensor Circuit High Voltage (Bank 1 Sensor 1)                     | <Ref. to EN(STI)(diag)-128, DTC P0132 O <sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                     |
| P0133 | O <sub>2</sub> Sensor Circuit Slow Response (Bank 1 Sensor 1)                    | <Ref. to EN(STI)(diag)-130, DTC P0133 O <sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                    |
| P0134 | O <sub>2</sub> Sensor Circuit No Activity Detected (Bank 1 Sensor 1)             | <Ref. to EN(STI)(diag)-132, DTC P0134 O <sub>2</sub> SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 1 SENSOR 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>             |
| P0137 | O <sub>2</sub> Sensor Circuit Low Voltage (Bank 1 Sensor 2)                      | <Ref. to EN(STI)(diag)-134, DTC P0137 O <sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |
| P0138 | O <sub>2</sub> Sensor Circuit High Voltage (Bank 1 Sensor 2)                     | <Ref. to EN(STI)(diag)-137, DTC P0138 O <sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                     |
| P0139 | O <sub>2</sub> Sensor Circuit Slow Response (Bank 1 Sensor 2)                    | <Ref. to EN(STI)(diag)-140, DTC P0139 O <sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                    |
| P0171 | System too Lean (Bank 1)   | <Ref. to EN(STI)(diag)-142, DTC P0171 SYSTEM TOO LEAN (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0172 | System too Rich (Bank 1)   | <Ref. to EN(STI)(diag)-142, DTC P0172 SYSTEM TOO RICH (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0181 | Fuel Temperature Sensor "A" Circuit Range/Performance                            | <Ref. to EN(STI)(diag)-145, DTC P0181 FUEL TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |
| P0182 | Fuel Temperature Sensor "A" Circuit Low Input                                    | <Ref. to EN(STI)(diag)-147, DTC P0182 FUEL TEMPERATURE SENSOR "A" CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                    |
| P0183 | Fuel Temperature Sensor "A" Circuit High Input                                   | <Ref. to EN(STI)(diag)-149, DTC P0183 FUEL TEMPERATURE SENSOR "A" CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                   |
| P0222 | Throttle/Pedal Position Sensor/Switch "B" Circuit Low Input                      | <Ref. to EN(STI)(diag)-152, DTC P0222 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |
| P0223 | Throttle/Pedal Position Sensor/Switch "B" Circuit High Input                     | <Ref. to EN(STI)(diag)-155, DTC P0223 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                     |

# List of Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| DTC   | Item  | Index  |
|-------|---|--|
| P0230 | Fuel Pump Primary Circuit   | <Ref. to EN(STI)(diag)-159, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0244 | Turbo/Super Charger Wastegate Solenoid "A" Range/Performance          | <Ref. to EN(STI)(diag)-162, DTC P0244 TURBO/SUPER CHARGER WASTEGATE SOLENOID "A" RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>          |
| P0245 | Turbo/Super Charger Wastegate Solenoid "A" Low                        | <Ref. to EN(STI)(diag)-164, DTC P0245 TURBO/SUPER CHARGER WASTEGATE SOLENOID "A" LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                        |
| P0246 | Turbo/Super Charger Wastegate Solenoid "A" High                       | <Ref. to EN(STI)(diag)-166, DTC P0246 TURBO/SUPER CHARGER WASTEGATE SOLENOID "A" HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                       |
| P0301 | Cylinder 1 misfire detected   | <Ref. to EN(STI)(diag)-168, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0302 | Cylinder 2 misfire detected   | <Ref. to EN(STI)(diag)-168, DTC P0302 CYLINDER 2 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0303 | Cylinder 3 misfire detected   | <Ref. to EN(STI)(diag)-168, DTC P0303 CYLINDER 3 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0304 | Cylinder 4 misfire detected   | <Ref. to EN(STI)(diag)-168, DTC P0304 CYLINDER 4 MISFIRE DETECTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0327 | Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)            | <Ref. to EN(STI)(diag)-173, DTC P0327 KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>            |
| P0328 | Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)           | <Ref. to EN(STI)(diag)-175, DTC P0328 KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>           |
| P0335 | Crankshaft Position Sensor "A" Circuit                                | <Ref. to EN(STI)(diag)-177, DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                |
| P0336 | Crankshaft Position Sensor "A" Circuit Range/Performance              | <Ref. to EN(STI)(diag)-179, DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>              |
| P0340 | Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)        | <Ref. to EN(STI)(diag)-181, DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 1 OR SINGLE SENSOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>        |
| P0345 | Camshaft Position Sensor "A" Circuit (Bank 2)                         | <Ref. to EN(STI)(diag)-183, DTC P0345 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 2), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                         |
| P0420 | Catalyst System Efficiency Below Threshold (Bank 1)                   | <Ref. to EN(STI)(diag)-185, DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                   |
| P0442 | Evaporative Emission Control System Leak Detected (small leak)        | <Ref. to EN(STI)(diag)-189, DTC P0442 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (SMALL LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>        |
| P0447 | Evaporative Emission Control System Vent Control Circuit Open         | <Ref. to EN(STI)(diag)-193, DTC P0447 EVAPORATIVE EMISSION CONTROL SYSTEM VENT CONTROL CIRCUIT OPEN, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>         |
| P0448 | Evaporative Emission Control System Vent Control Circuit Shorted      | <Ref. to EN(STI)(diag)-196, DTC P0448 EVAPORATIVE EMISSION CONTROL SYSTEM VENT CONTROL CIRCUIT SHORTED, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>      |
| P0451 | Evaporative Emission Control System Pressure Sensor Range/Performance | <Ref. to EN(STI)(diag)-198, DTC P0451 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P0452 | Evaporative Emission Control System Pressure Sensor Low Input         | <Ref. to EN(STI)(diag)-200, DTC P0452 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>         |

## List of Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| DTC   | Item   | Index   |
|-------|--|---|
| P0453 | Evaporative Emission Control System Pressure Sensor High Input         | <Ref. to EN(STI)(diag)-203, DTC P0453 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>         |
| P0456 | Evaporative Emission Control System Leak Detected (very small leak)    | <Ref. to EN(STI)(diag)-206, DTC P0456 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (VERY SMALL LEAK), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>    |
| P0457 | Evaporative Emission Control System Leak Detected (fuel cap loose/off) | <Ref. to EN(STI)(diag)-210, DTC P0457 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (FUEL CAP LOOSE/OFF), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P0458 | Evaporative Emission Control System Purge Control Valve Circuit Low    | <Ref. to EN(STI)(diag)-214, DTC P0458 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>    |
| P0459 | Evaporative Emission Control System Purge Control Valve Circuit High   | <Ref. to EN(STI)(diag)-216, DTC P0459 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |
| P0461 | Fuel Level Sensor Circuit Range/Performance                            | <Ref. to EN(STI)(diag)-218, DTC P0461 FUEL LEVEL SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |
| P0462 | Fuel Level Sensor Circuit Low Input                                    | <Ref. to EN(STI)(diag)-221, DTC P0462 FUEL LEVEL SENSOR CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                    |
| P0463 | Fuel Level Sensor Circuit High Input                                   | <Ref. to EN(STI)(diag)-225, DTC P0463 FUEL LEVEL SENSOR CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                   |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

### 18. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

#### A: DTC P0011 “A” CAMSHAFT POSITION-TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 1)

**DTC DETECTING CONDITION:**

Immediately at fault recognition

**TROUBLE SYMPTOM:**

- Engine stalls.
- Erroneous idling

**CAUTION:**

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, Inspection Mode.>.

| Step   | Check   | Yes  | No   |
|--|---|--|--|
| <p><b>1</b></p> <p><b>CHECK FOR ANY OTHER DTC ON DISPLAY.</b></p>  | <p>Is any other DTC displayed?</p>  | <p>Inspect the relevant DTC using “List of Diagnostic Trouble Code (DTC)”. &lt;Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).&gt;</p>  | <p>Go to step 2.</p>   |
| <p><b>2</b></p> <p><b>CHECK CURRENT DATA.</b></p> <p>1) Start the engine and let it idle.<br/>2) Inspect the AVCS operating angle and oil flow control solenoid valve duty output using Subaru Select Monitor and general scan tool.</p> <p><b>NOTE:</b></p> <ul style="list-style-type: none"> <li>• Subaru Select Monitor</li> </ul> <p>For detailed operation procedure, refer to the “READ CURRENT DATA FOR ENGINE”. &lt;Ref. to EN(STI)(diag)-28, Subaru Select Monitor.&gt;</p> <ul style="list-style-type: none"> <li>• General scan tool</li> </ul> <p>For detailed operation procedures, refer to the General Scan Tool Instruction Manual.</p> | <p>Is the AVCS operating angle more than approx. 0°C and the oil flow control solenoid valve duty output more than approx. 10%?</p> | <p>Inspect the following items and repair or replace if necessary.</p> <ul style="list-style-type: none"> <li>• Oil pipe (clog)</li> <li>• Oil flow control solenoid valve (clog or contamination in oil passage, settling at spring, stuck at valve)</li> <li>• Intake camshaft (sludge, damage at camshaft)</li> <li>• Timing belt (timing mark aligning)</li> </ul> | <p>A temporary malfunction. Conduct the following to clean the oil passage.</p> <p>Replace the engine oil and idle the engine for 5 minutes, then replace the oil filter and engine oil.</p> |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

## **B: DTC P0021 “A” CAMSHAFT POSITION-TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 2)**

### **DTC DETECTING CONDITION:**

Immediately at fault recognition

### **TROUBLE SYMPTOM:**

- Engine stalls.
- Erroneous idling

### **CAUTION:**

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.**

## R: DTC P0118 ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(STI)-42, DTC P0118 ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

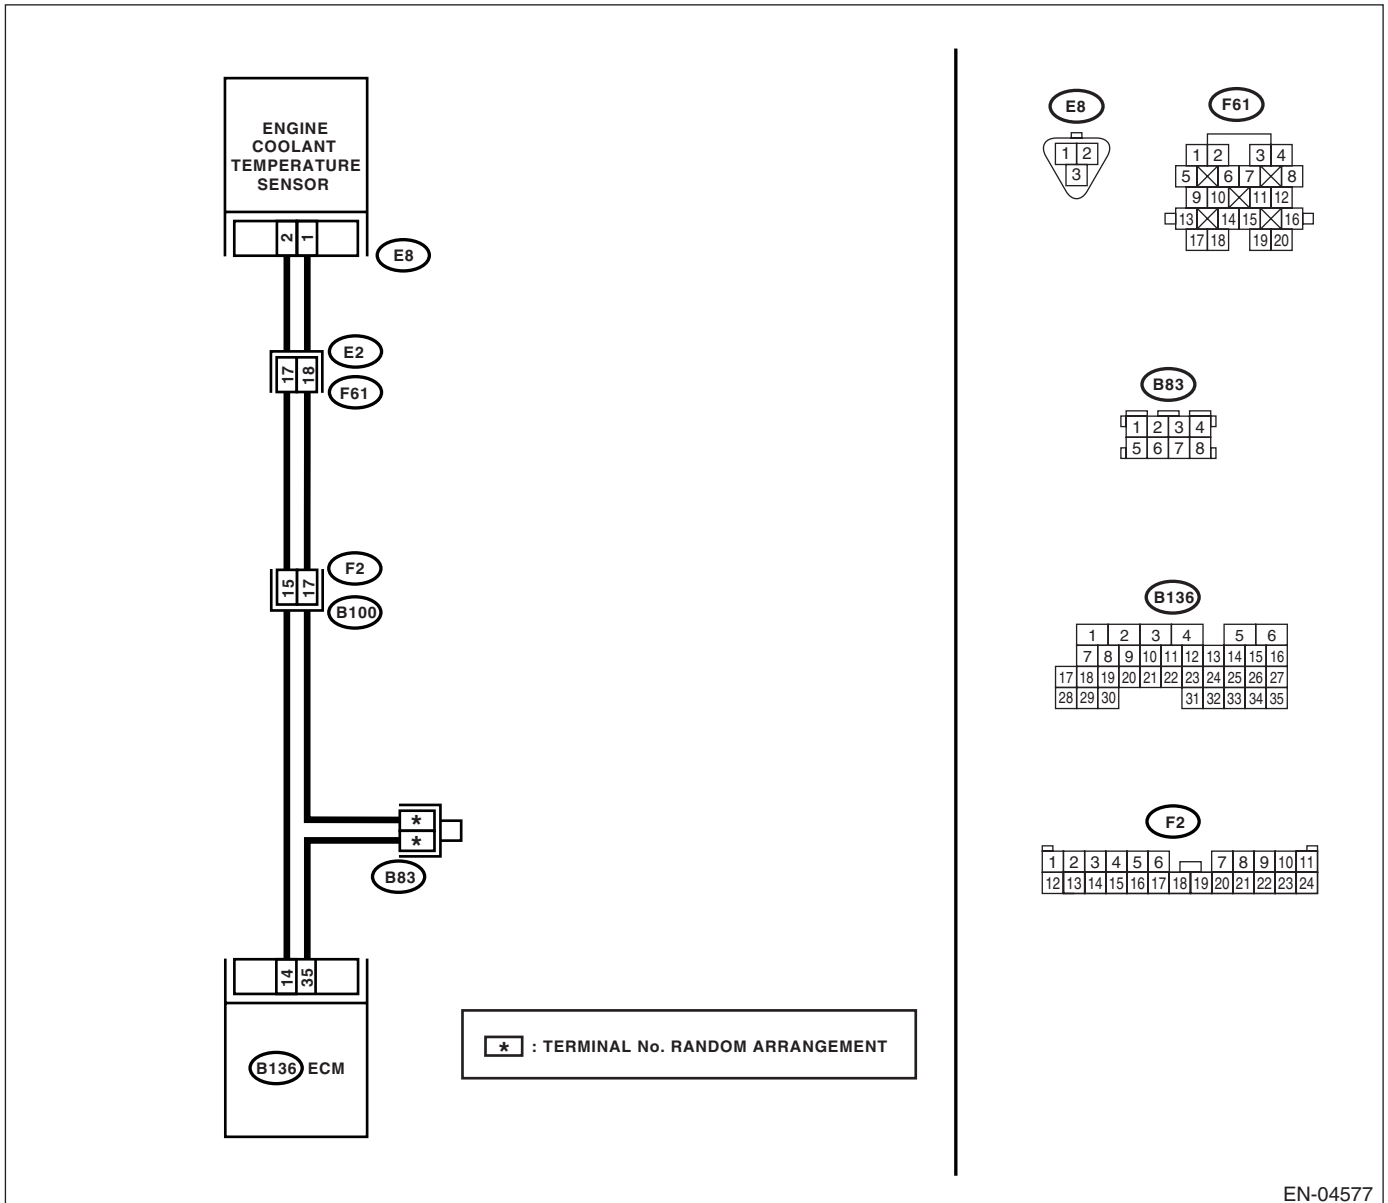

### TROUBLE SYMPTOM:

- Hard to start
- Erroneous idling
- Poor driving performance

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.

### WIRING DIAGRAM:

| <b>1 CHECK OUTPUT VOLTAGE OF SENSOR.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between ECM connector terminals.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B136) No. 29 (+) — (B136) No. 35 (-):</b></i><br>3) Shake the ECM harness and connector, engine harness connectors (E84, E22), electronic throttle control connector harness while monitoring value of voltage meter.      | Is the voltage more than 0.8 V?  | Go to step 2.   | Go to step 3.  |
| <b>2 CHECK POOR CONTACT IN CONNECTORS.</b><br>Check poor contact in the connectors between the ECM and electronic throttle control.  | Is there poor contact in the connectors between ECM and electronic throttle control? | Repair the poor contact in connectors.  | Connector has returned to a normal condition at this time. A temporary poor contact of the connector may be the cause.             |
| <b>3 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ECM.<br>3) Disconnect the connector from electronic throttle control.<br>4) Measure the resistance between the ECM connector and electronic throttle control connector.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B136) No. 16 — (E57) No. 5:</b></i>           | Is the resistance less than 1 $\Omega$ ?   | Go to step 4.   | Repair the open harness connector.   |
| <b>4 CHECK HARNESS BETWEEN ECM AND ELECTRONIC THROTTLE CONTROL.</b><br>Check the resistance between the ECM connector and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B136) No. 29 — Chassis ground:</b></i><br><i><b>(B136) No. 16 — Chassis ground:</b></i>  | Is the resistance more than 1 M $\Omega$ ?   | Go to step 5.   | Repair the ground short of harness.  |
| <b>5 CHECK POWER SUPPLY TO SENSOR.</b><br>1) Connect the ECM connectors.<br>2) Turn the ignition switch to ON.<br>3) Measure the voltage between electronic throttle control connector and engine ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(E57) No. 5 (+) — Engine ground (-):</b></i><br>4) Shake the ECM harness and connector, engine harness connectors, while monitoring value of voltage meter. | Is the voltage 4.5 — 5.5 V?  | Go to step 6.   | Repair the poor contact in ECM connector. If problem persists, replace the ECM. <Ref. to FU(STI)-39, Engine Control Module (ECM).> |
| <b>6 CHECK SHORT OF ECM.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance between electronic throttle control connector and engine ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(E57) No. 4 — Engine ground:</b></i>  | Is the resistance more than 10 $\Omega$ ?  | Repair the poor contact in electronic throttle control connector. If problem persists, replace the electronic throttle control. | Repair the poor contact in ECM connectors. If problem persists, replace the ECM.   |

## **AK:DTC P0223 THROTTLE/PEDAL POSITION SENSOR/SWITCH “B” CIRCUIT HIGH INPUT**

### **DTC DETECTING CONDITION:**

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(STI)-87, DTC P0223 THROTTLE/PEDAL POSITION SENSOR/SWITCH “B” CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### **TROUBLE SYMPTOM:**

- Erroneous idling
- Poor driving performance
- Engine stalls.

### **CAUTION:**

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.**

| <p><b>6</b></p> <p><b>CHECK POWER SUPPLY LINE.</b><br/>                     1) Turn the ignition switch to ON.<br/>                     2) Measure the voltage between fuel injector and engine ground on faulty cylinders.<br/> <b>Connector &amp; terminal</b><br/> <b>#1 (E5) No. 2 (+) — Engine ground (-):</b><br/> <b>#2 (E16) No. 2 (+) — Engine ground (-):</b><br/> <b>#3 (E6) No. 2 (+) — Engine ground (-):</b><br/> <b>#4 (E17) No. 2 (+) — Engine ground (-):</b></p>   | Is the voltage more than 10 V?   | Repair the poor contact in all connectors in fuel injector circuit.  | Repair the harness and connector.<br>NOTE:<br>In this case, repair the following:<br><ul style="list-style-type: none"> <li>• Open circuit in harness between main relay and fuel injector connector on faulty cylinders</li> <li>• Poor contact in coupling connector</li> <li>• Poor contact in main relay connector</li> <li>• Poor contact in fuel injector connector on faulty cylinders</li> </ul> |
| <p><b>7</b></p> <p><b>CHECK HARNESS BETWEEN FUEL INJECTOR AND ECM CONNECTOR.</b><br/>                     1) Turn the ignition switch to OFF.<br/>                     2) Disconnect the connector from fuel injector on faulty cylinder.<br/>                     3) Turn the ignition switch to ON.<br/>                     4) Measure the voltage between ECM connector and chassis ground on faulty cylinders.<br/> <b>Connector &amp; terminal</b><br/> <b>#1 (B136) No. 6 (+) — Chassis ground (-):</b><br/> <b>#2 (B136) No. 5 (+) — Chassis ground (-):</b><br/> <b>#3 (B136) No. 4 (+) — Chassis ground (-):</b><br/> <b>#4 (B136) No. 3 (+) — Chassis ground (-):</b></p> | Is the voltage more than 10 V?   | Repair the battery short circuit in harness between ECM and fuel injector. After repair, replace the ECM. <Ref. to FU(STI)-39, Engine Control Module (ECM).> | Go to step 8.  |
| <p><b>8</b></p> <p><b>CHECK FUEL INJECTOR.</b><br/>                     1) Turn the ignition switch to OFF.<br/>                     2) Measure the resistance between fuel injector terminals on faulty cylinder.<br/> <b>Terminals</b><br/> <b>No. 1 — No. 2:</b></p>  | Is the resistance less than 1 $\Omega$ ?   | Replace the faulty fuel injector <Ref. to FU(STI)-31, Fuel Injector.> and ECM <Ref. to FU(STI)-39, Engine Control Module (ECM).>                             | Go to step 9.  |
| <p><b>9</b></p> <p><b>CHECK INSTALLATION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.</b></p>   | Is the camshaft position sensor or crankshaft position sensor installing bolt loose? | Tighten the camshaft position sensor or crankshaft position sensor.  | Go to step 10.   |
| <p><b>10</b></p> <p><b>CHECK CRANK SPROCKET.</b><br/>                     Remove the timing belt cover.</p>  | Is the crank sprocket rusted or its teeth damaged?                                   | Replace the crank sprocket. <Ref. to ME(STI)-53, Crank Sprocket.>  | Go to step 11.   |
| <p><b>11</b></p> <p><b>CHECK INSTALLATION CONDITION OF TIMING BELT.</b><br/>                     Turn the crankshaft, and align alignment mark on crank sprocket with alignment mark on cylinder block.</p>  | Is the timing belt dislocated from its proper position?                              | Repair the installation condition of timing belt. <Ref. to ME(STI)-44, Timing Belt.>   | Go to step 12.   |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| Step  | Check  | Yes  | No   |
|---|--|--|--|
| <b>12</b> <b>CHECK FUEL LEVEL.</b>  | Is the fuel meter indication higher than the "Lower" level?    | Go to step <b>13</b> .   | Replenish the fuel so fuel meter indication is higher than the "Lower" level. After replenishing fuel; Go to step <b>13</b> .  |
| <b>13</b> <b>CHECK STATUS OF MALFUNCTION INDICATOR LIGHT.</b><br>1) Clear the memory using Subaru Select Monitor.<br><Ref. to EN(STI)(diag)-28, Subaru Select Monitor.><br>2) Start the engine, and drive the vehicle more than 10 minutes. | Is the malfunction indicator light coming on or blinking?      | Go to step <b>15</b> .   | Go to step <b>14</b> .   |
| <b>14</b> <b>CHECK CAUSE OF MISFIRE DIAGNOSED.</b>  | Was the cause of misfire diagnosed when the engine is running? | Finish the diagnostics operation, if the engine has no abnormality.  | Repair the poor contact.<br><b>NOTE:</b><br>In this case, repair the following:<br>• Poor contact in ignition coil connector<br>• Poor contact in fuel injector connector on faulty cylinders<br>• Poor contact in ECM connector<br>• Poor contact in coupling connector |
| <b>15</b> <b>CHECK AIR INTAKE SYSTEM.</b>   | Is there any fault in air intake system?                       | Repair the air intake system.<br><b>NOTE:</b><br>Check the following items:<br>• Are there air leaks or air suction caused by loose or dislocated nuts and bolts?<br>• Are there cracks or any disconnection of hoses? | Go to step <b>16</b> .   |
| <b>16</b> <b>CHECK CYLINDER.</b>  | Is there any fault in that cylinder?                           | Repair or replace the faulty parts.<br><b>NOTE:</b><br>Check the following items.<br>• Spark plug<br>• Fuel injector<br>• Compression pressure   | Go to DTC P0171 and P0172. <Ref. to EN(STI)(diag)-142, DTC P0171 SYSTEM TOO LEAN (BANK 1), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   |

## AT:DTC P0327 KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR)

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(STI)-103, DTC P0327 KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

- Poor driving performance
- Knocking occurs.

### CAUTION:

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.**

### WIRING DIAGRAM:

EN-03263

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step   | Check   | Yes   | No   |
|--|---|---|--|
| <b>1</b><br><b>CHECK HARNESS BETWEEN KNOCK SENSOR AND ECM CONNECTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from ECM.<br>3) Measure the resistance between ECM harness connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B136) No. 25 — Chassis ground:</b> | Is the resistance more than 700 kΩ?                       | Go to step 2.   | Repair the harness and connector.<br>NOTE:<br>In this case, repair the following: <ul style="list-style-type: none"> <li>• Open circuit in harness between knock sensor and ECM connector</li> <li>• Poor contact in knock sensor connector</li> <li>• Poor contact in coupling connector</li> </ul> |
| <b>2</b><br><b>CHECK KNOCK SENSOR.</b><br>1) Disconnect the connector from knock sensor.<br>2) Measure the resistance between knock sensor connector terminal and engine ground.<br><b>Terminals</b><br><b>No. 2 — Engine ground:</b>  | Is the resistance more than 700 kΩ?                       | Go to step 3.   | Repair the harness and connector.<br>NOTE:<br>In this case, repair the following: <ul style="list-style-type: none"> <li>• Poor contact in knock sensor connector</li> <li>• Poor contact in coupling connector</li> </ul>   |
| <b>3</b><br><b>CHECK CONDITION OF KNOCK SENSOR INSTALLATION.</b>   | Is the knock sensor installation bolt tightened securely? | Replace the knock sensor. <Ref. to FU(STI)-28, Knock Sensor.> | Tighten the knock sensor installation bolt securely.   |

## AU:DTC P0328 KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR)

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(STI)-105, DTC P0328 KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### TROUBLE SYMPTOM:

- Poor driving performance
- Knocking occurs.

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.

### WIRING DIAGRAM:

| <b>2</b><br><b>CHECK EXHAUST SYSTEM.</b><br>Check for gas leaks or air suction caused by loose or dislocated nuts and bolts, and open hole at exhaust pipes.<br>NOTE:<br>Check the following positions. <ul style="list-style-type: none"> <li>• Between cylinder head and front exhaust pipe</li> <li>• Between front exhaust pipe and front catalytic converter</li> <li>• Between front catalytic converter and rear catalytic converter</li> <li>• Looseness and incomplete installation of front oxygen (A/F) sensor and rear oxygen sensor</li> </ul> | Is there a fault in exhaust system? | Repair or replace the exhaust system. <Ref. to EX(STI)-2, General Description.>  | Go to step 3. |
| <b>3</b><br><b>CHECK WAVEFORM ON SUBARU SELECT MONITOR. (DURING DRIVING)</b><br>1) Drive at a constant speed of 80 — 113 km/h (50 — 70 MPH).<br>2) After leaving it in the condition of Step 1) for 5 minutes, read the waveform data using Subaru Select Monitor while driving. <Ref. to EN(STI)(diag)-18, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.>  | Is normal waveform displayed?       | Contact your SOA Service Center since deterioration of some parts may be the cause.  | Go to step 4. |
| <b>4</b><br><b>CHECK WAVEFORM ON SUBARU SELECT MONITOR. (DURING IDLING)</b><br>1) Run the vehicle at idle.<br>2) In the condition of Step 1), read the waveform data using Subaru Select Monitor. <Ref. to EN(STI)(diag)-18, ELECTRICAL SPECIFICATION, Engine Control Module (ECM) I/O Signal.>   | Is normal waveform displayed?       | Go to step 10.   | Go to step 5. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step  | Check                                   | Yes   | No  |
|---|---|---|---|
| <p><b>5 CHECK VOLTAGE OF REAR OXYGEN SENSOR.</b></p> <p>1) Warm-up the engine until engine coolant temperature is above 70°C (158°F), and keep the engine speed at 3,000 rpm. (2 minutes at the longest)</p> <p>2) Read the rear oxygen sensor voltage using Subaru Select Monitor.</p> <p><b>NOTE:</b></p> <ul style="list-style-type: none"> <li>• Depress the clutch pedal.</li> <li>• Subaru Select Monitor</li> </ul> <p>For detailed operation procedures, refer to "READ CURRENT DATA FOR ENGINE". &lt;Ref. to EN(STI)(diag)-28, Subaru Select Monitor.&gt;</p> <ul style="list-style-type: none"> <li>• General scan tool</li> </ul> <p>For detailed operation procedures, refer to the General Scan Tool Instruction Manual.</p> | <p>Is the voltage more than 490 mV?</p> | <p>Go to step 9.</p>  | <p>Go to step 6.</p>  |
| <p><b>6 CHECK REAR OXYGEN SENSOR CONNECTOR AND COUPLING CONNECTOR.</b></p>  | <p>Is there water in connector?</p>     | <p>Remove infiltrating water completely.</p>  | <p>Go to step 7.</p>  |
| <p><b>7 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.</b></p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the connectors from ECM and rear oxygen sensor.</p> <p>3) Measure the resistance of harness between ECM and rear oxygen sensor connector.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B137) No. 25 — (T6) No. 3:</b><br/> <b>(B136) No. 35 — (T6) No. 4:</b></p>  | <p>Is the resistance more than 3 Ω?</p> | <p>Repair the open circuit in harness between ECM and rear oxygen sensor connector.</p> | <p>Go to step 8.</p>  |
| <p><b>8 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR.</b></p> <p>1) Turn the ignition switch to ON.</p> <p>2) Measure the voltage between rear oxygen sensor connector and chassis ground.</p> <p><b>Connector &amp; terminal</b><br/> <b>(T6) No. 3 (+) — Chassis ground (-):</b></p>  | <p>Is the voltage 0.2 — 0.5 V?</p>      | <p>Go to step 11.</p>   | <p>Repair the harness and connector.</p> <p><b>NOTE:</b><br/>           Repair the following items.</p> <ul style="list-style-type: none"> <li>• Open circuit in harness between rear oxygen sensor and ECM connector</li> <li>• Poor contact of rear oxygen sensor and ECM connector</li> <li>• Poor contact in ECM connector</li> </ul> |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| Step  | Check                               | Yes   | No  |
|---|-------------------------------------|---|---|
| <b>9 CHECK VOLTAGE OF REAR OXYGEN SENSOR.</b><br>1) Warm-up the engine until engine coolant temperature is above 70°C (158°F), and immediately decrease the engine speed from 3,000 rpm.<br>2) Read the rear oxygen sensor voltage using Subaru Select Monitor.<br><b>NOTE:</b> <ul style="list-style-type: none"> <li>• Depress the clutch pedal.</li> <li>• Subaru Select Monitor</li> </ul> For detailed operation procedures, refer to "READ CURRENT DATA FOR ENGINE". <Ref. to EN(STI)(diag)-28, Subaru Select Monitor.> <ul style="list-style-type: none"> <li>• General scan tool</li> </ul> For detailed operation procedures, refer to the General Scan Tool Instruction Manual. | Is the voltage less than 250 mV?    | Contact your SOA Service Center since deterioration of some parts may be the cause. | Go to step 6.   |
| <b>10 CHECK CATALYTIC CONVERTER.</b>  | Is the catalytic converter damaged? | Replace the catalytic converter.<br><Ref. to EC(STI)-3, Front Catalytic Converter.> | Contact your SOA Service Center since deterioration of some parts may be the cause. |
| <b>11 CHECK REAR OXYGEN SENSOR SHIELD.</b><br>1) Turn the ignition switch to OFF.<br>2) Bare the sensor shield of body side harness of rear oxygen sensor connector.<br>3) Measure the resistance between sensor shield and chassis ground.   | Is the resistance less than 1 Ω?    | Replace the rear oxygen sensor.<br><Ref. to FU(STI)-38, Rear Oxygen Sensor.>        | Repair the open circuit in rear oxygen sensor harness.                              |

## **BA:DTC P0442 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (SMALL LEAK)**

### **DTC DETECTING CONDITION:**

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(STI)-116, DTC P0442 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (SMALL LEAK), Diagnostic Trouble Code (DTC) Detecting Criteria.>

### **TROUBLE SYMPTOM:**

- Fuel odor
- There is a hole of more than 1.0 mm (0.04 in) dia. in evaporation system or fuel tank.

### **CAUTION:**

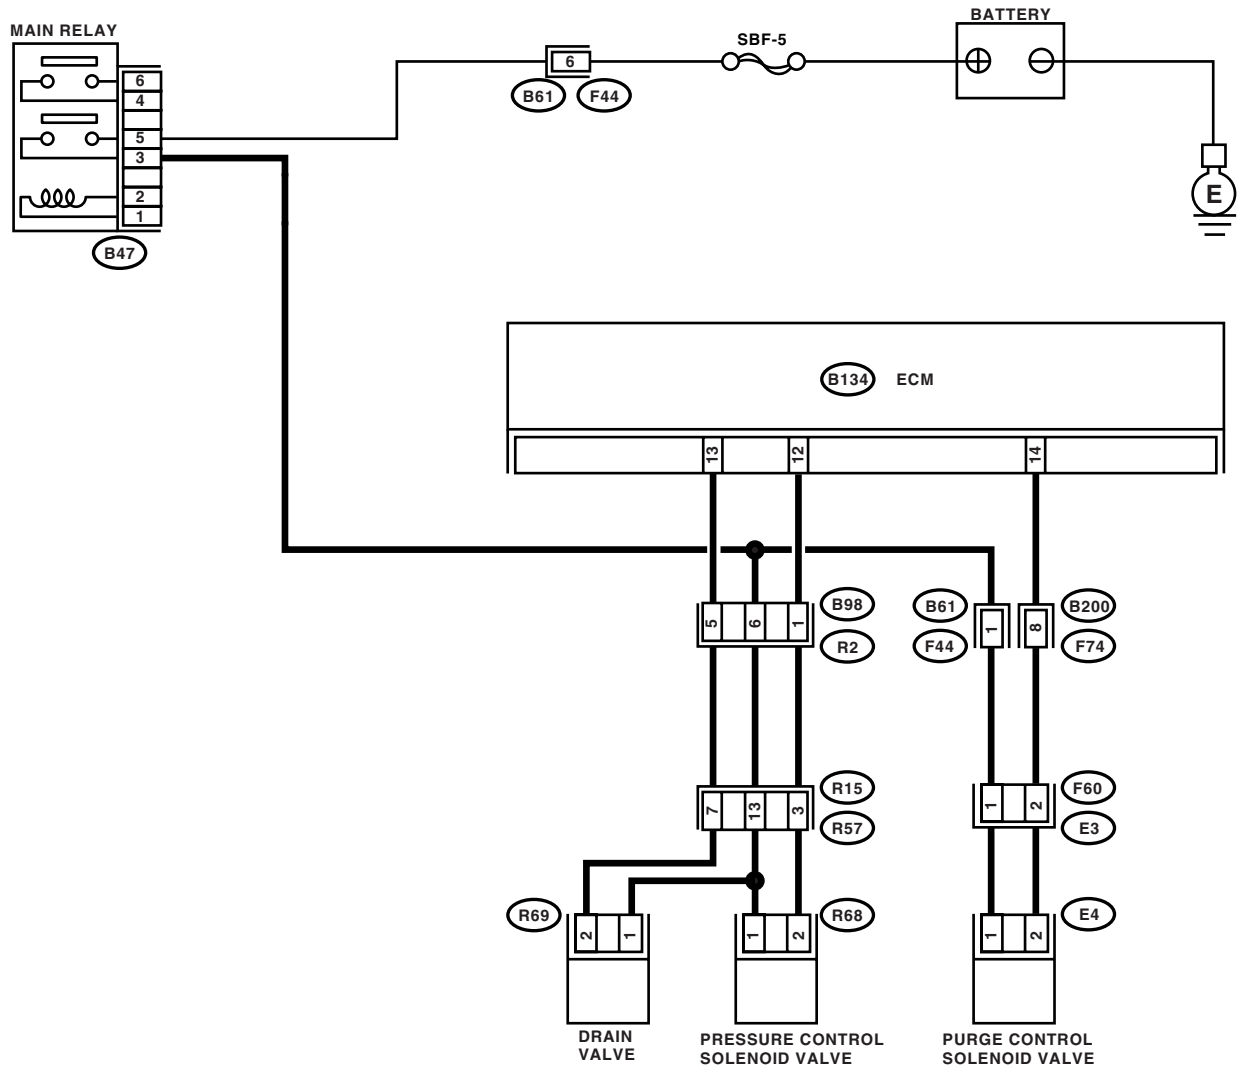

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.**

| Step  | Check   | Yes   | No   |
|---|---|---|--|
| <b>7 CHECK HARNESS BETWEEN ECM AND COUPLING CONNECTOR IN REAR WIRING HARNESS.</b><br>1) Turn ignition switch to OFF.<br>2) Disconnect the connector from ECM.<br>3) Measure the resistance of harness between ECM and rear wiring harness connector.<br><br><b>Connector &amp; terminal</b><br><b>(B136) No. 35 — (R15) No. 17:</b> | Is the resistance less than 1 $\Omega$ ?                      | Go to step <b>8</b> .                                       | Repair harness and connector.<br><br><b>NOTE:</b><br>In this case, repair the following:<br>• Open circuit in harness between ECM and rear wiring harness connector<br>• Poor contact in coupling connector<br>• Poor contact in joint connector |
| <b>8 CHECK HARNESS BETWEEN ECM AND COUPLING CONNECTOR IN REAR WIRING HARNESS.</b><br>Measure the resistance of harness between rear wiring harness connector and chassis ground.<br><br><b>Connector &amp; terminal</b><br><b>(R15) No. 17 — Chassis ground:</b>  | Is the resistance more than 1 $M\Omega$ ?                     | Go to step <b>9</b> .                                       | Repair short circuit to ground in harness between ECM and rear wiring harness connector.   |
| <b>9 CHECK FUEL TANK CORD.</b><br>1) Disconnect the connector from fuel tank pressure sensor.<br>2) Measure the resistance of fuel tank cord.<br><br><b>Connector &amp; terminal</b><br><b>(R57) No. 19 — (R47) No. 3:</b>  | Is the resistance less than 1 $\Omega$ ?                      | Go to step <b>10</b> .                                      | Repair open circuit in fuel tank cord.   |
| <b>10 CHECK FUEL TANK CORD.</b><br>Measure the resistance of fuel tank cord.<br><br><b>Connector &amp; terminal</b><br><b>(R57) No. 17 — (R47) No. 2:</b>   | Is the resistance less than 1 $\Omega$ ?                      | Go to step <b>11</b> .                                      | Repair open circuit in fuel tank cord.   |
| <b>11 CHECK FUEL TANK CORD.</b><br>Measure the resistance of harness between fuel tank pressure sensor connector and engine ground.<br><br><b>Connector &amp; terminal</b><br><b>(R47) No. 1 — Chassis ground:</b>  | Is the resistance more than 1 $M\Omega$ ?                     | Go to step <b>12</b> .                                      | Repair short circuit to ground in fuel tank cord.  |
| <b>12 CHECK FOR POOR CONTACT.</b><br>Check for poor contact in fuel tank pressure sensor connector.   | Is there poor contact in fuel tank pressure sensor connector? | Repair poor contact in fuel tank pressure sensor connector. | Replace the fuel tank pressure sensor. <Ref. to EC(STI)-10, Fuel Tank Pressure Sensor.>  |

## BF:DTC P0453 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR HIGH INPUT

### DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(STI)-147, DTC P0453 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.

### WIRING DIAGRAM:

EN-04164

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## ENGINE (DIAGNOSTICS)

| Step  | Check   | Yes                                   | No  |
|---|---|---------------------------------------|---|
| <b>1 CHECK CURRENT DATA.</b><br>1) Turn ignition switch to OFF.<br>2) Remove the fuel filler cap.<br>3) Install the fuel filler cap.<br>4) Turn ignition switch to ON.<br>5) Read the data of fuel tank pressure sensor signal using Subaru Select Monitor or the general scan tool.<br><br><b>NOTE:</b><br>• Subaru Select Monitor<br>For detailed operation procedures, refer to "READ CURRENT DATA FOR ENGINE". <Ref. to EN(STI)(diag)-28, Subaru Select Monitor.><br>• General scan tool<br>For detailed operation procedures, refer to the General Scan Tool Instruction Manual. | Is the measured value more than 2.8 kPa (21.0 mmHg, 0.827 inHg)   | Go to step 11.                        | Go to step 2.   |
| <b>2 CHECK POWER SUPPLY TO FUEL TANK PRESSURE SENSOR.</b><br>Measure the voltage between ECM connector and chassis ground.<br><br><b>Connector &amp; terminal</b><br><b>(B136) No. 16 (+) — Chassis ground (-):</b>   | Is the voltage more than 4.5 V?   | Go to step 4.                         | Go to step 3.   |
| <b>3 CHECK POWER SUPPLY TO FUEL TANK PRESSURE SENSOR.</b><br>Measure the voltage between ECM connector and chassis ground.<br><br><b>Connector &amp; terminal</b><br><b>(B136) No. 16 (+) — Chassis ground (-):</b>   | Does the measured value exceed the specified value by shaking the ECM harness and connector?                | Repair poor contact in ECM connector. | Replace the ECM. <Ref. to FU(STI)-39, Engine Control Module (ECM).>   |
| <b>4 CHECK INPUT SIGNAL FOR ECM.</b><br>Measure the voltage between ECM and chassis ground.<br><br><b>Connector &amp; terminal</b><br><b>(B136) No. 21 (+) — Chassis ground (-):</b>  | Is the voltage less than 0.2 V?   | Go to step 6.                         | Go to step 5.   |
| <b>5 CHECK INPUT SIGNAL FOR ECM. (USING SUBARU SELECT MONITOR.)</b><br>Read the data of fuel tank pressure sensor signal using Subaru Select Monitor.<br><br><b>NOTE:</b><br>• Subaru Select Monitor<br>For detailed operation procedures, refer to "READ CURRENT DATA FOR ENGINE". <Ref. to EN(STI)(diag)-28, Subaru Select Monitor.>  | Does the measured value exceed -2.8 kPa (-21.0 mmHg, -0.827 inHg) by shaking the ECM harness and connector? | Repair poor contact in ECM connector. | Go to step 6.   |
| <b>6 CHECK HARNESS BETWEEN ECM AND COUPLING CONNECTOR IN REAR WIRING HARNESS.</b><br>1) Turn ignition switch to OFF.<br>2) Remove the rear seat cushion.<br>3) Separate rear wiring harness and fuel tank cord.<br>4) Turn ignition switch to ON.<br>5) Measure the voltage between rear wiring harness connector and chassis ground.<br><br><b>Connector &amp; terminal</b><br><b>(R15) No. 19 (+) — Chassis ground (-):</b>   | Is the voltage more than 4.5 V?   | Go to step 7.                         | Repair harness and connector.<br><br><b>NOTE:</b><br>In this case, repair the following:<br>• Open circuit in harness between ECM and rear wiring harness connector<br>• Poor contact in coupling connector |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| Step     | Check   | Yes   | No   |   |
|----------|---|---|--|---|
| <b>1</b> | <b>CHECK FOR ANY OTHER DTC ON DISPLAY.</b>  | Is any other DTC displayed?   | Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).> | Go to step 2.   |
| <b>2</b> | <b>CHECK FUEL FILLER CAP.</b><br>1) Turn ignition switch to OFF.<br>2) Check the fuel filler cap.<br><br>NOTE:<br>The DTC is stored in memory if fuel filler cap is or was loose or if the cap chain was caught while tightening.   | Is the fuel filler cap tightened securely?                                    | Go to step 3.  | Tighten fuel filler cap securely.   |
| <b>3</b> | <b>CHECK FUEL FILLER CAP.</b>   | Is the fuel filler cap SUBARU genuine?  | Go to step 4.  | Replace with a SUBARU genuine fuel filler cap.  |
| <b>4</b> | <b>CHECK FUEL FILLER PIPE PACKING.</b>  | Is there any damage to the seal between fuel filler cap and fuel filler pipe? | Repair or replace the fuel filler cap and fuel filler pipe. <Ref. to FU(STI)-48, Fuel Filler Pipe.>  | Go to step 5.   |
| <b>5</b> | <b>CHECK DRAIN VALVE.</b><br>1) Connect the test mode connector.<br>2) Turn ignition switch to ON.<br>3) Operate the drain valve.<br><br>NOTE:<br>Drain valve operation can also be executed using Subaru Select Monitor. For the procedure, refer to "Compulsory Valve Operation Check Mode". <Ref. to EN(STI)(diag)-46, Compulsory Valve Operation Check Mode.> | Does the drain valve operate?   | Go to step 6.  | Replace the drain valve. <Ref. to EC(STI)-16, Drain Valve.>                                     |
| <b>6</b> | <b>CHECK PURGE CONTROL SOLENOID VALVE.</b><br>Operate the purge control solenoid valve.<br><br>NOTE:<br>Purge control solenoid valve operation can also be executed using Subaru Select Monitor. For the procedure, refer to "Compulsory Valve Operation Check Mode". <Ref. to EN(STI)(diag)-46, Compulsory Valve Operation Check Mode.>                          | Does the purge control solenoid valve operate?                                | Go to step 7.  | Replace the purge control solenoid valve. <Ref. to EC(STI)-6, Purge Control Solenoid Valve.>    |
| <b>7</b> | <b>CHECK PRESSURE CONTROL SOLENOID VALVE.</b><br>Operate the pressure control solenoid valve.<br><br>NOTE:<br>Pressure control solenoid valve operation can also be executed using Subaru Select Monitor. For the procedure, refer to "Compulsory Valve Operation Check Mode". <Ref. to EN(STI)(diag)-46, Compulsory Valve Operation Check Mode.>                 | Does the pressure control solenoid valve operate?                             | Go to step 8.  | Replace the pressure control solenoid valve. <Ref. to EC(STI)-6, Purge Control Solenoid Valve.> |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step      | Check  | Yes   | No   |   |
|-----------|--|---|--|---|
| <b>8</b>  | <b>CHECK EVAPORATIVE EMISSION CONTROL SYSTEM LINE.</b><br>Turn ignition switch to OFF. | Is there a hole of more than 0.5 mm (0.020 in) dia. on evaporation line?  | Repair or replace the evaporation line. <Ref. to FU(STI)-60, Fuel Delivery, Return and Evaporation Lines.> | Go to step <b>9</b> .   |
| <b>9</b>  | <b>CHECK CANISTER.</b>   | Is the canister damaged or is there a hole of more than 0.5 mm (0.020 in) dia. in it?   | Repair or replace the canister. <Ref. to EC(STI)-5, Canister.>   | Go to step <b>10</b> .  |
| <b>10</b> | <b>CHECK FUEL TANK.</b><br>Remove the fuel tank. <Ref. to FU(H4DOTC)-51, Fuel Tank.>   | Is the fuel tank damaged or is there a hole of more than 0.5 mm (0.020 in) dia. in it?  | Repair or replace the fuel tank. <Ref. to FU(STI)-45, Fuel Tank.>  | Go to step <b>11</b> .  |
| <b>11</b> | <b>CHECK ANY OTHER MECHANICAL TROUBLE IN EVAPORATIVE EMISSION CONTROL SYSTEM.</b>      | Are there holes of more than 0.5 mm (0.020 in) dia., cracks, clogging, or disconnections, bend, misconnection of hoses or pipes in evaporative emission control system? | Repair or replace the hoses or pipes.  | Contact your SOA Service Center since deterioration of some parts may be the cause. |
