## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### ENGINE (DIAGNOSTICS)

| Step     | Check   | Yes   | No   |   |
|----------|---|---|--|---|
| <b>1</b> | <b>CHECK FOR ANY OTHER DTC ON DISPLAY.</b>  | Is any other DTC displayed?   | Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).> | Go to step 2.   |
| <b>2</b> | <b>CHECK FUEL FILLER CAP.</b><br>1) Turn ignition switch to OFF.<br>2) Check the fuel filler cap.<br><br>NOTE:<br>The DTC is stored in memory if fuel filler cap is or was loose or if the cap chain was caught while tightening.   | Is the fuel filler cap tightened securely?                                    | Go to step 3.  | Tighten fuel filler cap securely.   |
| <b>3</b> | <b>CHECK FUEL FILLER CAP.</b>   | Is the fuel filler cap SUBARU genuine?  | Go to step 4.  | Replace with a SUBARU genuine fuel filler cap.  |
| <b>4</b> | <b>CHECK FUEL FILLER PIPE PACKING.</b>  | Is there any damage to the seal between fuel filler cap and fuel filler pipe? | Repair or replace the fuel filler cap and fuel filler pipe. <Ref. to FU(STI)-48, Fuel Filler Pipe.>  | Go to step 5.   |
| <b>5</b> | <b>CHECK DRAIN VALVE.</b><br>1) Connect the test mode connector.<br>2) Turn ignition switch to ON.<br>3) Operate the drain valve.<br><br>NOTE:<br>Drain valve operation can also be executed using Subaru Select Monitor. For the procedure, refer to "Compulsory Valve Operation Check Mode". <Ref. to EN(STI)(diag)-46, Compulsory Valve Operation Check Mode.> | Does the drain valve operate?   | Go to step 6.  | Replace the drain valve. <Ref. to EC(STI)-16, Drain Valve.>                                     |
| <b>6</b> | <b>CHECK PURGE CONTROL SOLENOID VALVE.</b><br>Operate the purge control solenoid valve.<br><br>NOTE:<br>Purge control solenoid valve operation can also be executed using Subaru Select Monitor. For the procedure, refer to "Compulsory Valve Operation Check Mode". <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).>                          | Does the purge control solenoid valve operate?                                | Go to step 7.  | Replace the purge control solenoid valve. <Ref. to EC(STI)-6, Purge Control Solenoid Valve.>    |
| <b>7</b> | <b>CHECK PRESSURE CONTROL SOLENOID VALVE.</b><br>Operate the pressure control solenoid valve.<br><br>NOTE:<br>Pressure control solenoid valve operation can also be executed using Subaru Select Monitor. For the procedure, refer to "Compulsory Valve Operation Check Mode". <Ref. to EN(STI)(diag)-46, Compulsory Valve Operation Check Mode.>                 | Does the pressure control solenoid valve operate?                             | Go to step 8.  | Replace the pressure control solenoid valve. <Ref. to EC(STI)-6, Purge Control Solenoid Valve.> |
| <b>8</b> | <b>CHECK CANISTER.</b>  | Is the canister damaged?  | Repair or replace the canister. <Ref. to EC(STI)-5, Canister.>   | Go to step 9.   |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step   | Check   | Yes   | No  |
|--|---|---|---|
| <b>9</b><br><b>CHECK FUEL TANK.</b><br>Remove the fuel tank. <Ref. to FU(STI)-45, Fuel Tank.>  | Is the fuel tank damaged?   | Repair or replace the fuel tank. <Ref. to FU(STI)-45, Fuel Tank.> | Go to step <b>10</b> .  |
| <b>10</b><br><b>CHECK ANY OTHER MECHANICAL TROUBLE IN EVAPORATIVE EMISSION CONTROL SYSTEM.</b> | Are there holes of more than 0.5 mm (0.020 in) dia., cracks, clogging, or disconnections, misconnection of hoses or pipes in evaporative emission control system? | Repair or replace the hoses or pipes.                             | Contact your SOA Service Center since deterioration of some parts may be the cause. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

## BI: DTC P0458 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT LOW

### DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(STI)-149, DTC P0458 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>

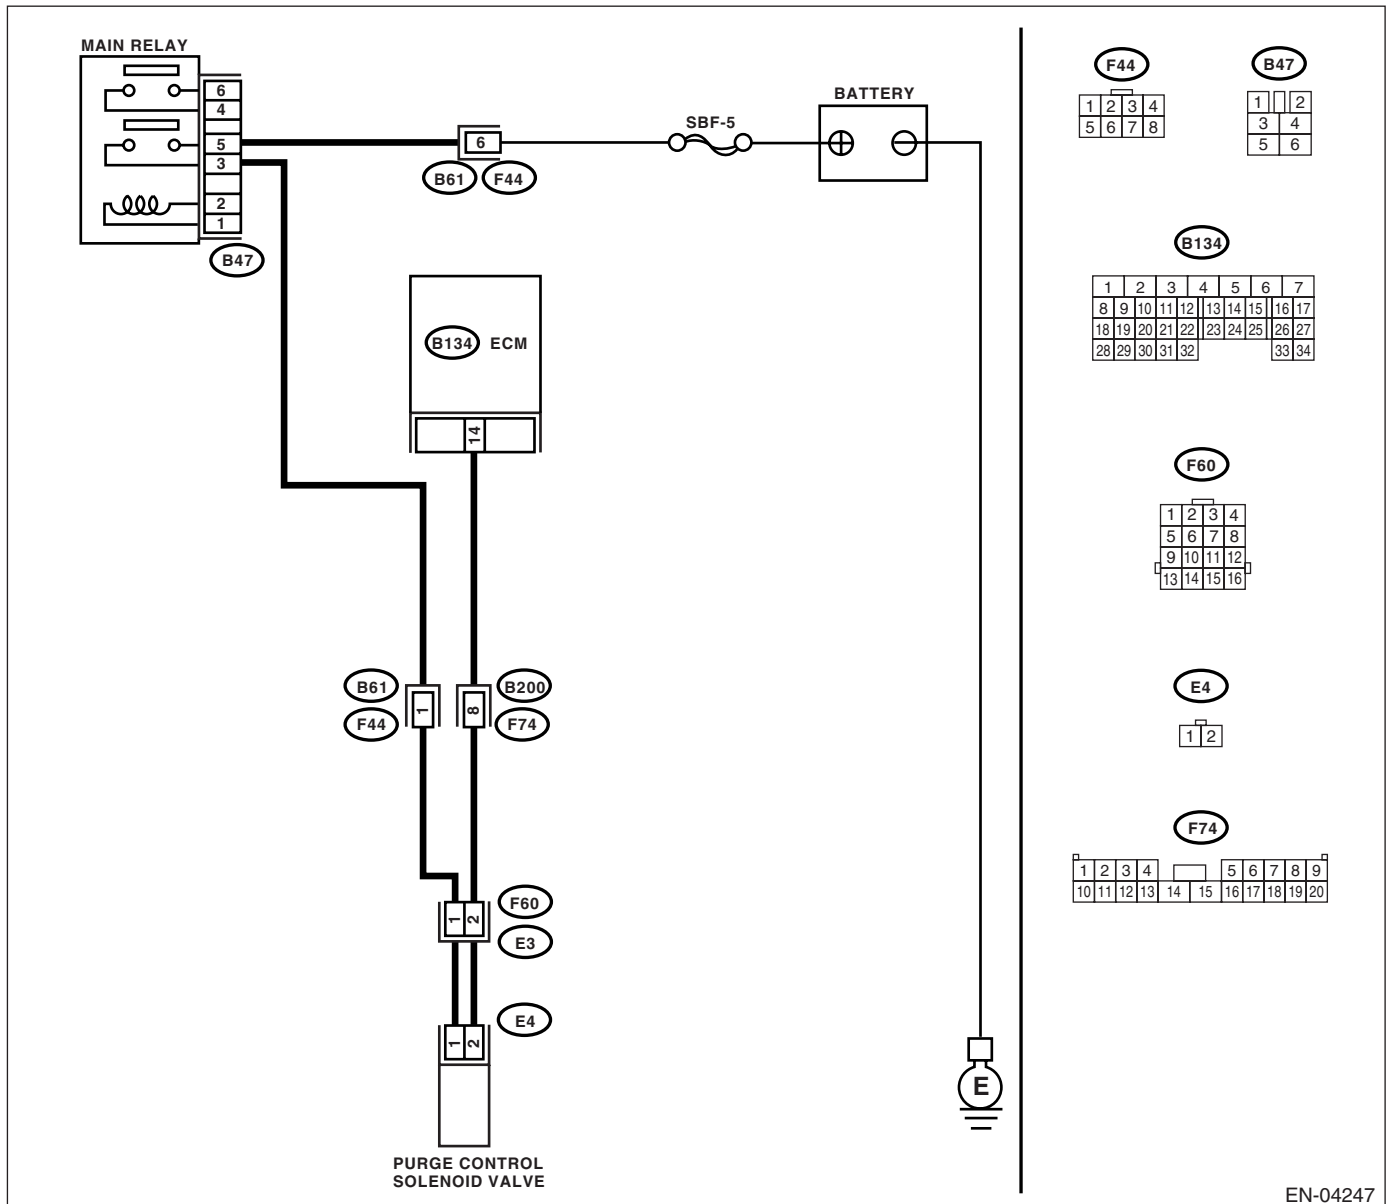

### TROUBLE SYMPTOM:

Erroneous idling

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.

### WIRING DIAGRAM:

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step  | Check  | Yes   | No  |
|---|--|---|---|
| <b>1</b><br><b>CHECK OUTPUT SIGNAL FROM ECM.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between ECM and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B134) No. 14 (+) — Chassis ground (-):</b></i>   | Is the voltage more than 10 V?                                   | Even if malfunction indicator light lights up, the circuit has returned to a normal condition at this time. | Go to step 2.   |
| <b>2</b><br><b>CHECK HARNESS BETWEEN PURGE CONTROL SOLENOID VALVE AND ECM CONNECTOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from purge control solenoid valve and ECM.<br>3) Measure the resistance of harness between purge control solenoid valve connector and engine ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(E4) No. 2 — Engine ground:</b></i> | Is the resistance more than 1 M $\Omega$ ?                       | Go to step 3.   | Repair the ground short circuit in harness between ECM and purge control solenoid valve connector.  |
| <b>3</b><br><b>CHECK HARNESS BETWEEN PURGE CONTROL SOLENOID VALVE AND ECM CONNECTOR.</b><br>Measure the resistance of harness between ECM and purge control solenoid valve of harness connector.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B134) No. 14 — (E4) No. 2:</b></i>   | Is the resistance less than 1 $\Omega$ ?                         | Go to step 4.   | Repair the open circuit in harness between ECM and purge control solenoid valve connector.<br><br>NOTE:<br>In this case, repair the following: <ul style="list-style-type: none"> <li>• Open circuit in harness between ECM and purge control solenoid valve connector</li> <li>• Poor contact in coupling connector</li> </ul> |
| <b>4</b><br><b>CHECK PURGE CONTROL SOLENOID VALVE.</b><br>1) Remove the purge control solenoid valve.<br>2) Measure the resistance between purge control solenoid valve terminals.<br><i><b>Terminals</b></i><br><i><b>No. 1 — No. 2:</b></i>   | Is the resistance 10 — 100 $\Omega$ ?                            | Go to step 5.   | Replace the purge control solenoid valve. <Ref. to EC(STI)-6, Purge Control Solenoid Valve.>  |
| <b>5</b><br><b>CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between purge control solenoid valve and engine ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(E4) No. 1 (+) — Engine ground (-):</b></i>   | Is the voltage more than 10 V?                                   | Go to step 6.   | Repair the open circuit in harness between main relay and purge control solenoid valve connector.   |
| <b>6</b><br><b>CHECK POOR CONTACT.</b><br>Check poor contact in purge control solenoid valve connector.   | Is there poor contact in purge control solenoid valve connector? | Repair the poor contact in purge control solenoid valve connector.  | Contact your SOA Service Center since deterioration of some parts may be the cause.   |

- Overheating

#### **CAUTION:**

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.**

#### **NOTE:**

If the vehicle, with the engine idling, is placed very close to a wall or another vehicle, preventing normal cooling function, the OBD system may detect malfunction.

## **CA:DTC P0692 COOLING FAN 1 CONTROL CIRCUIT HIGH**

### **DTC DETECTING CONDITION:**

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(STI)-183, DTC P0692 COOLING FAN 1 CONTROL CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### **TROUBLE SYMPTOM:**

- Radiator fan does not operate properly.
- Overheating

### **CAUTION:**

**After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.**

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

| Step   | Check                                    | Yes   | No   |
|--|--|---|--|
| <p><b>1 CHECK INPUT SIGNAL FOR ECM.</b></p> <p>1) Turn ignition switch to OFF.<br/>2) Connect the test mode connector at the lower portion of instrument panel (on the driver's side).<br/>3) Turn ignition switch to ON.<br/>4) While operating the pressure control solenoid valve, measure voltage between ECM and chassis ground.</p> <p><b>NOTE:</b><br/>Pressure control solenoid valve operation can be executed using Subaru Select Monitor. For the procedure, refer to "Compulsory Valve Operation Check Mode". &lt;Ref. to EN(STI)(diag)-46, Compulsory Valve Operation Check Mode.&gt;</p> <p><b>Connector &amp; terminal</b><br/><b>(B134) No. 12 (+) — Chassis ground (-):</b></p> | Does the voltage value change 0 — 10 V?  | Go to step 2.   | The malfunction indicator light may light up, however, the circuit is returned to the normal status at the moment. In this case, repair poor contact in ECM connector. |
| <p><b>2 CHECK INPUT SIGNAL FOR ECM.</b></p> <p>1) Turn ignition switch to ON.<br/>2) Measure the voltage between ECM and chassis ground.</p> <p><b>Connector &amp; terminal</b><br/><b>(B134) No. 12 (+) — Chassis ground (-):</b></p>   | Is the voltage more than 10 V?           | Go to step 4.   | Go to step 3.  |
| <p><b>3 CHECK FOR POOR CONTACT.</b></p> <p>Check for poor contact in ECM connector.</p>  | Is there poor contact in ECM connector?  | Repair poor contact in ECM connector.   | Replace the ECM. <Ref. to FU(STI)-39, Engine Control Module (ECM).>  |
| <p><b>4 CHECK HARNESS BETWEEN PRESSURE CONTROL SOLENOID VALVE AND ECM CONNECTOR.</b></p> <p>1) Turn ignition switch to OFF.<br/>2) Disconnect the connector from pressure control solenoid valve.<br/>3) Turn ignition switch to ON.<br/>4) Measure the voltage between ECM and chassis ground.</p> <p><b>Connector &amp; terminal</b><br/><b>(B134) No. 12 (+) — Chassis ground (-):</b></p>  | Is the voltage more than 10 V?           | Repair short circuit to battery in harness between ECM and pressure control solenoid valve connector. After repair, replace the ECM. <Ref. to FU(STI)-39, Engine Control Module (ECM).> | Go to step 5.  |
| <p><b>5 CHECK PRESSURE CONTROL SOLENOID VALVE.</b></p> <p>1) Turn ignition switch to OFF.<br/>2) Measure the resistance between pressure control solenoid valve terminals.</p> <p><b>Terminals</b><br/><b>No. 1 — No. 2:</b></p>   | Is the resistance less than 1 $\Omega$ ? | Replace the pressure control solenoid valve <Ref. to EC(STI)-12, Pressure Control Solenoid Valve.> and the ECM <Ref. to FU(STI)-39, Engine Control Module (ECM).>.                      | Go to step 6.  |
| <p><b>6 CHECK FOR POOR CONTACT.</b></p> <p>Check for poor contact in ECM connector.</p>  | Is there poor contact in ECM connector?  | Repair poor contact in ECM connector.   | Replace the ECM. <Ref. to FU(STI)-39, Engine Control Module (ECM).>  |

**CI: DTC P1443 VENT CONTROL SOLENOID VALVE FUNCTION PROBLEM**  
DTC DETECTING CONDITION:

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## ENGINE (DIAGNOSTICS)

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(STI)-196, DTC P1443 VENT CONTROL SOLENOID VALVE FUNCTION PROBLEM, Diagnostic Trouble Code (DTC) Detecting Criteria.>

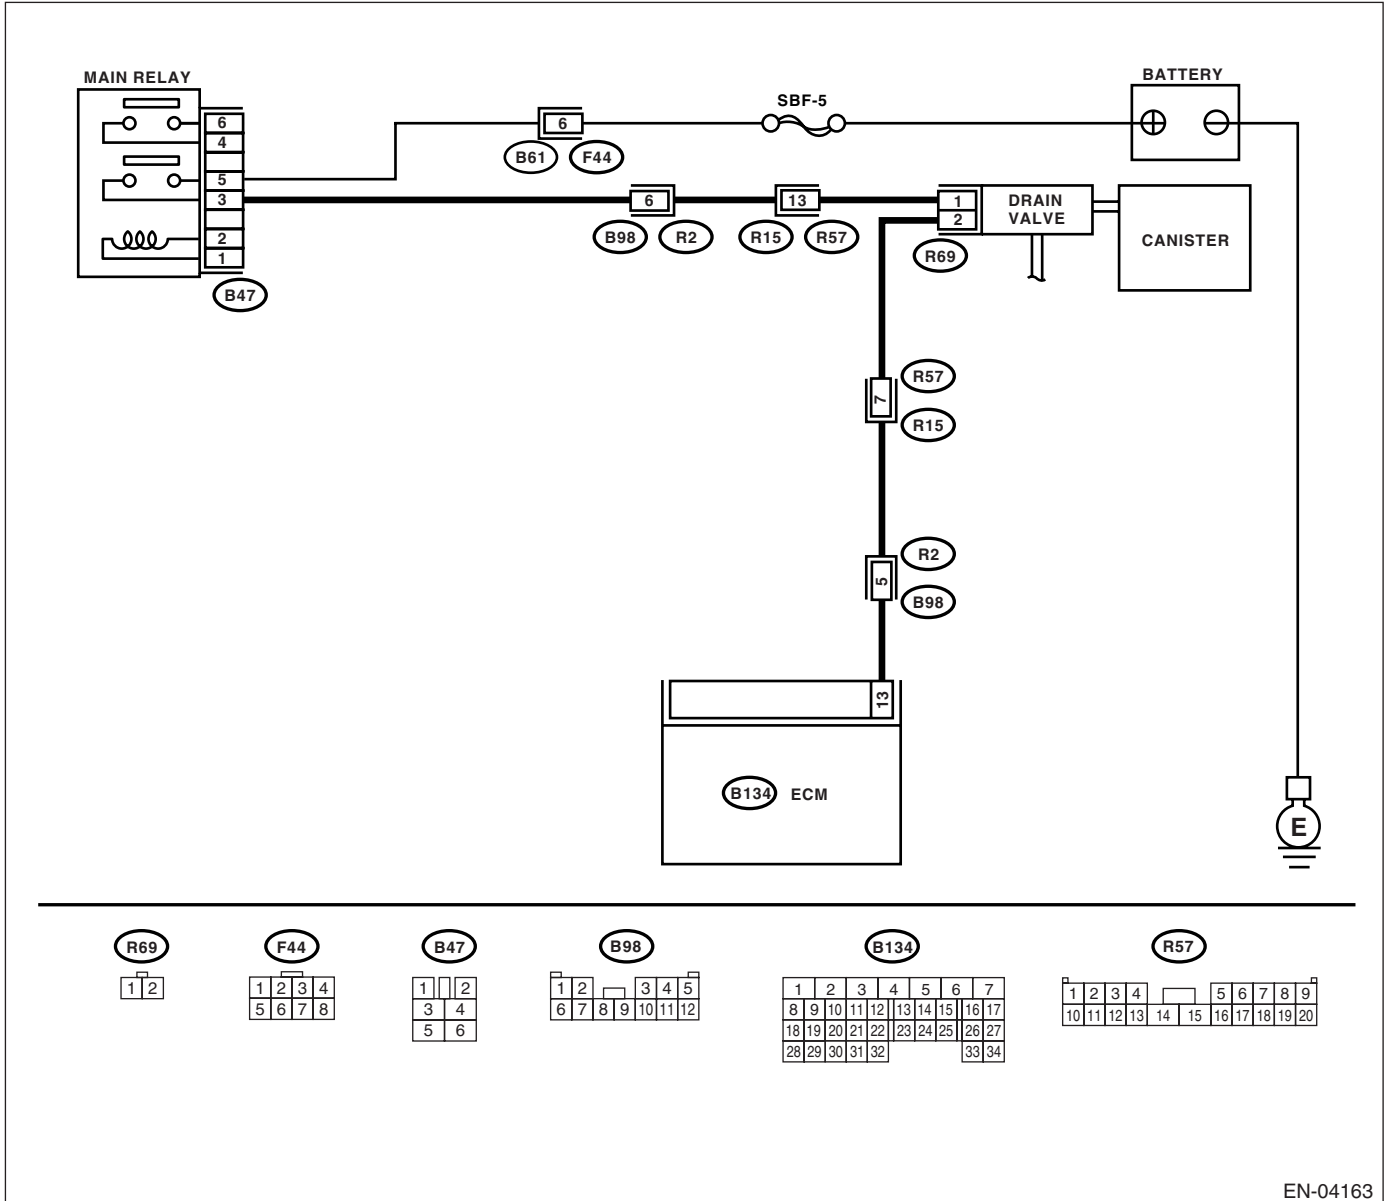

### TROUBLE SYMPTOM:

Improper fuel supply

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.

## DR:DTC P2227 BAROMETRIC PRESSURE CIRCUIT RANGE/PERFORMANCE

### DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- GENERAL DESCRIPTION <Ref. to GD(STI)-262, DTC P2227 BAROMETRIC PRESSURE CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### CAUTION:

After repair or replacement of faulty parts, conduct **Clear Memory Mode** <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and **Inspection Mode** <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.

| Step   | Check                       | Yes   | No   |
|--|-----------------------------|---|--|
| <b>1 CHECK FOR ANY OTHER DTC ON DISPLAY.</b> | Is any other DTC displayed? | Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).> | Replace the ECM. <Ref. to FU(STI)-39, Engine Control Module (ECM).><br><br>NOTE:<br>Atmospheric pressure sensor is built into ECM. |

## DS:DTC P2228 BAROMETRIC PRESSURE CIRCUIT LOW INPUT

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(STI)-263, DTC P2228 BAROMETRIC PRESSURE CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### CAUTION:

After repair or replacement of faulty parts, conduct **Clear Memory Mode** <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and **Inspection Mode** <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.

| Step   | Check                       | Yes   | No   |
|--|-----------------------------|---|--|
| <b>1 CHECK FOR ANY OTHER DTC ON DISPLAY.</b> | Is any other DTC displayed? | Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).> | Replace the ECM. <Ref. to FU(STI)-39, Engine Control Module (ECM).><br><br>NOTE:<br>Atmospheric pressure sensor is built into ECM. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

ENGINE (DIAGNOSTICS)

## DT:DTC P2229 BAROMETRIC PRESSURE CIRCUIT HIGH INPUT

### DTC DETECTING CONDITION:

- Immediately at fault recognition
- GENERAL DESCRIPTION <Ref. to GD(STI)-264, DTC P2229 BAROMETRIC PRESSURE CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>

### CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(STI)(diag)-45, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(STI)(diag)-36, PROCEDURE, Inspection Mode.>.

| Step                                     | Check                       | Yes   | No   |
|--|-----------------------------|---|--|
| 1<br>CHECK FOR ANY OTHER DTC ON DISPLAY. | Is any other DTC displayed? | Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(STI)(diag)-69, List of Diagnostic Trouble Code (DTC).> | Replace the ECM. <Ref. to FU(STI)-39, Engine Control Module (ECM).><br>NOTE:<br>Atmospheric pressure sensor is built into ECM. |

## 19. General Diagnostic Table

### A: INSPECTION

#### 1. ENGINE

**NOTE:**

Malfunction of parts other than those listed is also possible. <Ref. to ME(STI)-90, Engine Trouble in General.>

| Symptom   | Problem parts   |
|---|---|
| 1. Engine stalls during idling.                               | 1) Electronic throttle control<br>2) Manifold absolute pressure sensor<br>3) Mass air flow and intake temperature sensor<br>4) Ignition parts (*1)<br>5) Engine coolant temperature sensor (*2)<br>6) Crankshaft position sensor (*3)<br>7) Camshaft position sensor (*3)<br>8) Fuel injection parts (*4)   |
| 2. Rough idling   | 1) Electronic throttle control<br>2) Manifold absolute pressure sensor<br>3) Mass air flow and intake temperature sensor<br>4) Engine coolant temperature sensor (*2)<br>5) Ignition parts (*1)<br>6) Air intake system (*5)<br>7) Fuel injection parts (*4)<br>8) Crankshaft position sensor (*3)<br>9) Camshaft position sensor (*3)<br>10) Oxygen sensor<br>11) Fuel pump and fuel pump relay                              |
| 3. Engine does not return to idle.                            | 1) Electronic throttle control<br>2) Engine coolant temperature sensor<br>3) Manifold absolute pressure sensor<br>4) Mass air flow sensor   |
| 4. Poor acceleration  | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake temperature sensor<br>3) Electronic throttle control<br>4) Fuel injection parts (*4)<br>5) Fuel pump and fuel pump relay<br>6) Engine coolant temperature sensor (*2)<br>7) Crankshaft position sensor (*3)<br>8) Camshaft position sensor (*3)<br>9) A/C switch and A/C cut relay<br>10) Engine torque control signal circuit<br>11) Ignition parts (*1) |
| 5. Engine stalls or engine sags or hesitates at acceleration. | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake temperature sensor<br>3) Engine coolant temperature sensor (*2)<br>4) Crankshaft position sensor (*3)<br>5) Camshaft position sensor (*3)<br>6) Purge control solenoid valve<br>7) Fuel injection parts (*4)<br>8) Fuel pump and fuel pump relay  |
| 6. Surge  | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake temperature sensor<br>3) Engine coolant temperature sensor (*2)<br>4) Crankshaft position sensor (*3)<br>5) Camshaft position sensor (*3)<br>6) Fuel injection parts (*4)<br>7) Throttle position sensor<br>8) Fuel pump and fuel pump relay  |

# General Diagnostic Table

## ENGINE (DIAGNOSTICS)

| Symptom                            | Problem parts   |
|------------------------------------|---|
| 7. Spark knock                     | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake temperature sensor<br>3) Engine coolant temperature sensor<br>4) Knock sensor<br>5) Fuel injection parts (*4)<br>6) Fuel pump and fuel pump relay |
| 8. After-burning in exhaust system | 1) Manifold absolute pressure sensor<br>2) Mass air flow and intake temperature sensor<br>3) Engine coolant temperature sensor (*2)<br>4) Fuel injection parts (*4)<br>5) Fuel pump and fuel pump relay               |

\*1: Check ignition coil and ignitor assembly and spark plug.

\*2: Indicate the symptom occurring only in cold temperatures.

\*3: Ensure the secure installation.

\*4: Check fuel injector, fuel pressure regulator and fuel filter.

\*5: Inspect air leak in air intake system.

| P0117 | Engine Coolant Temperature Circuit Low Input                              | <Ref. to GD(STI)-40, DTC P0117 ENGINE COOLANT TEMPERATURE CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                |
| P0118 | Engine Coolant Temperature Circuit High Input                             | <Ref. to GD(STI)-42, DTC P0118 ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                               |
| P0122 | Throttle/Pedal Position Sensor/Switch "A" Circuit Low Input               | <Ref. to GD(STI)-44, DTC P0122 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                 |
| P0123 | Throttle/Pedal Position Sensor/Switch "A" Circuit High Input              | <Ref. to GD(STI)-46, DTC P0123 THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                |

# List of Diagnostic Trouble Code (DTC)

GENERAL DESCRIPTION

| DTC   | Item   | Index   |
|-------|--|---|
| P0125 | Insufficient Coolant Temperature for Closed Loop Fuel Control                    | <Ref. to GD(STI)-48, DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL, Diagnostic Trouble Code (DTC) Detecting Criteria.>                    |
| P0126 | Insufficient Engine Coolant Temperature for Stable Operation                     | <Ref. to GD(STI)-50, DTC P0126 INSUFFICIENT ENGINE COOLANT TEMPERATURE FOR STABLE OPERATION, Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P0128 | Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature) | <Ref. to GD(STI)-52, DTC P0128 COOLANT THERMOSTAT (COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P0131 | O <sub>2</sub> Sensor Circuit Low Voltage (Bank 1 Sensor 1)                      | <Ref. to GD(STI)-54, DTC P0131 O <sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                      |
| P0132 | O <sub>2</sub> Sensor Circuit High Voltage (Bank 1 Sensor 1)                     | <Ref. to GD(STI)-56, DTC P0132 O <sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P0133 | O <sub>2</sub> Sensor Circuit Slow Response (Bank 1 Sensor 1)                    | <Ref. to GD(STI)-58, DTC P0133 O <sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                    |
| P0134 | O <sub>2</sub> Sensor Circuit No Activity Detected (Bank 1 Sensor 1)             | <Ref. to GD(STI)-61, DTC P0134 O <sub>2</sub> SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 1 SENSOR 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>             |
| P0137 | O <sub>2</sub> Sensor Circuit Low Voltage (Bank 1 Sensor 2)                      | <Ref. to GD(STI)-63, DTC P0137 O <sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>                      |
| P0138 | O <sub>2</sub> Sensor Circuit High Voltage (Bank 1 Sensor 2)                     | <Ref. to GD(STI)-65, DTC P0138 O <sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P0139 | O <sub>2</sub> Sensor Circuit Slow Response (Bank 1 Sensor 2)                    | <Ref. to GD(STI)-67, DTC P0139 O <sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>                    |
| P0171 | System too Lean (Bank 1)   | <Ref. to GD(STI)-72, DTC P0171 SYSTEM TOO LEAN (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P0172 | System too Rich (Bank 1)   | <Ref. to GD(STI)-75, DTC P0172 SYSTEM TOO RICH (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P0181 | Fuel Temperature Sensor "A" Circuit Range/Performance                            | <Ref. to GD(STI)-78, DTC P0181 FUEL TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0182 | Fuel Temperature Sensor "A" Circuit Low Input                                    | <Ref. to GD(STI)-81, DTC P0182 FUEL TEMPERATURE SENSOR "A" CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                    |
| P0183 | Fuel Temperature Sensor "A" Circuit High Input                                   | <Ref. to GD(STI)-83, DTC P0183 FUEL TEMPERATURE SENSOR "A" CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                   |
| P0222 | Throttle/Pedal Position Sensor/Switch "B" Circuit Low Input                      | <Ref. to GD(STI)-85, DTC P0222 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                      |
| P0223 | Throttle/Pedal Position Sensor/Switch "B" Circuit High Input                     | <Ref. to GD(STI)-87, DTC P0223 THROTTLE/PEDAL POSITION SENSOR/SWITCH "B" CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P0230 | Fuel Pump Primary Circuit  | <Ref. to GD(STI)-89, DTC P0230 FUEL PUMP PRIMARY CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0244 | Turbo/Super Charger Wastegate Solenoid "A" Range/Performance                     | <Ref. to GD(STI)-91, DTC P0244 TURBO/SUPER CHARGER WASTEGATE SOLENOID "A" RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>                     |
| P0245 | Turbo/Super Charger Wastegate Solenoid "A" Low                                   | <Ref. to GD(STI)-93, DTC P0245 TURBO/SUPER CHARGER WASTEGATE SOLENOID "A" LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                   |
| P0246 | Turbo/Super Charger Wastegate Solenoid "A" High                                  | <Ref. to GD(STI)-95, DTC P0246 TURBO/SUPER CHARGER WASTEGATE SOLENOID "A" HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                  |
| P0301 | Cylinder 1 misfire detected  | <Ref. to GD(STI)-97, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |

## List of Diagnostic Trouble Code (DTC)

### GENERAL DESCRIPTION

| DTC   | Item   | Index  |
|-------|--|--|
| P0302 | Cylinder 2 misfire detected  | <Ref. to GD(STI)-102, DTC P0302 CYLINDER 2 MISFIRE DETECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0303 | Cylinder 3 misfire detected  | <Ref. to GD(STI)-102, DTC P0303 CYLINDER 3 MISFIRE DETECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0304 | Cylinder 4 misfire detected  | <Ref. to GD(STI)-102, DTC P0304 CYLINDER 4 MISFIRE DETECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0327 | Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)             | <Ref. to GD(STI)-103, DTC P0327 KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>             |
| P0328 | Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)            | <Ref. to GD(STI)-105, DTC P0328 KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>            |
| P0335 | Crankshaft Position Sensor "A" Circuit                                 | <Ref. to GD(STI)-107, DTC P0335 CRANKSHAFT POSITION SENSOR "A" CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                 |
| P0336 | Crankshaft Position Sensor "A" Circuit Range/Performance               | <Ref. to GD(STI)-109, DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>               |
| P0340 | Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)         | <Ref. to GD(STI)-111, DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P0345 | Camshaft Position Sensor "A" Circuit (Bank 2)                          | <Ref. to GD(STI)-112, DTC P0345 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>                          |
| P0420 | Catalyst System Efficiency Below Threshold (Bank 1)                    | <Ref. to GD(STI)-113, DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                    |
| P0442 | Evaporative Emission Control System Leak Detected (small leak)         | <Ref. to GD(STI)-116, DTC P0442 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (SMALL LEAK), Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P0447 | Evaporative Emission Control System Vent Control Circuit Open          | <Ref. to GD(STI)-139, DTC P0447 EVAPORATIVE EMISSION CONTROL SYSTEM VENT CONTROL CIRCUIT OPEN, Diagnostic Trouble Code (DTC) Detecting Criteria.>          |
| P0448 | Evaporative Emission Control System Vent Control Circuit Shorted       | <Ref. to GD(STI)-141, DTC P0448 EVAPORATIVE EMISSION CONTROL SYSTEM VENT CONTROL CIRCUIT SHORTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>       |
| P0451 | Evaporative Emission Control System Pressure Sensor Range/Performance  | <Ref. to GD(STI)-143, DTC P0451 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0452 | Evaporative Emission Control System Pressure Sensor Low Input          | <Ref. to GD(STI)-145, DTC P0452 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>          |
| P0453 | Evaporative Emission Control System Pressure Sensor High Input         | <Ref. to GD(STI)-147, DTC P0453 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>         |
| P0456 | Evaporative Emission Control System Leak Detected (very small leak)    | <Ref. to GD(STI)-148, DTC P0456 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (VERY SMALL LEAK), Diagnostic Trouble Code (DTC) Detecting Criteria.>    |
| P0457 | Evaporative Emission Control System Leak Detected (fuel cap loose/off) | <Ref. to GD(STI)-148, DTC P0457 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (FUEL CAP LOOSE/OFF), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P0458 | Evaporative Emission Control System Purge Control Valve Circuit Low    | <Ref. to GD(STI)-149, DTC P0458 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>    |
| P0459 | Evaporative Emission Control System Purge Control Valve Circuit High   | <Ref. to GD(STI)-151, DTC P0459 EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |

# List of Diagnostic Trouble Code (DTC)

GENERAL DESCRIPTION

| DTC   | Item   | Index  |
|-------|--|--|
| P0461 | Fuel Level Sensor Circuit Range/Performance                            | <Ref. to GD(STI)-153, DTC P0461 FUEL LEVEL SENSOR CIRCUIT RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0462 | Fuel Level Sensor Circuit Low Input                                    | <Ref. to GD(STI)-155, DTC P0462 FUEL LEVEL SENSOR CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                    |
| P0463 | Fuel Level Sensor Circuit High Input                                   | <Ref. to GD(STI)-157, DTC P0463 FUEL LEVEL SENSOR CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                   |
| P0464 | Fuel Level Sensor Circuit Intermittent                                 | <Ref. to GD(STI)-159, DTC P0464 FUEL LEVEL SENSOR CIRCUIT INTERMITTENT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                 |
| P0483 | Cooling Fan Rationality Check  | <Ref. to GD(STI)-162, DTC P0483 COOLING FAN RATIONALITY CHECK, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0502 | Vehicle Speed Sensor Circuit Low Input                                 | <Ref. to GD(STI)-164, DTC P0502 VEHICLE SPEED SENSOR CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                 |
| P0503 | Vehicle Speed Sensor Intermittent/Erratic/High                         | <Ref. to GD(STI)-165, DTC P0503 VEHICLE SPEED SENSOR INTERMITTENT/ERRATIC/HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>                         |
| P0506 | Idle Control System RPM Lower Than Expected                            | <Ref. to GD(STI)-167, DTC P0506 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0507 | Idle Control System RPM Higher Than Expected                           | <Ref. to GD(STI)-169, DTC P0507 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>                           |
| P0512 | Starter Request Circuit  | <Ref. to GD(STI)-171, DTC P0512 STARTER REQUEST CIRCUIT, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0513 | Incorrect Immobilizer Key  | <Ref. to GD(STI)-172, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P0519 | Idle Control System Malfunction (Fail-Safe)                            | <Ref. to GD(STI)-173, DTC P0519 IDLE CONTROL SYSTEM MALFUNCTION (FAIL-SAFE), Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P0604 | Internal Control Module Random Access Memory (RAM) Error               | <Ref. to GD(STI)-174, DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>               |
| P0605 | Internal Control Module Read Only Memory (ROM) Error                   | <Ref. to GD(STI)-175, DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR, Diagnostic Trouble Code (DTC) Detecting Criteria.>                   |
| P0607 | Control Module Performance   | <Ref. to GD(STI)-176, DTC P0607 CONTROL MODULE PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P0638 | Throttle Actuator Control Range/Performance (Bank 1)                   | <Ref. to GD(STI)-179, DTC P0638 THROTTLE ACTUATOR CONTROL RANGE/PERFORMANCE (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                   |
| P0691 | Cooling Fan 1 Control Circuit Low                                      | <Ref. to GD(STI)-182, DTC P0691 COOLING FAN 1 CONTROL CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                      |
| P0692 | Cooling Fan 1 Control Circuit High                                     | <Ref. to GD(STI)-183, DTC P0692 COOLING FAN 1 CONTROL CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                     |
| P0851 | Neutral Switch Input Circuit Low                                       | <Ref. to GD(STI)-184, DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                       |
| P0852 | Neutral Switch Input Circuit High                                      | <Ref. to GD(STI)-185, DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                      |
| P1152 | O <sub>2</sub> Sensor Circuit Range/Performance (Low) (Bank1 Sensor1)  | <Ref. to GD(STI)-186, DTC P1152 O <sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (LOW) (BANK1 SENSOR1), Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P1153 | O <sub>2</sub> Sensor Circuit Range/Performance (High) (Bank1 Sensor1) | <Ref. to GD(STI)-188, DTC P1153 O <sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (HIGH) (BANK1 SENSOR1), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P1160 | Return Spring Failure  | <Ref. to GD(STI)-190, DTC P1160 RETURN SPRING FAILURE, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P1400 | Fuel Tank Pressure Control Solenoid Valve Circuit Low                  | <Ref. to GD(STI)-192, DTC P1400 FUEL TANK PRESSURE CONTROL SOLENOID VALVE CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>                  |

## List of Diagnostic Trouble Code (DTC)

### GENERAL DESCRIPTION

| DTC   | Item  | Index   |
|-------|---|---|
| P1420 | Fuel Tank Pressure Control Sol. Valve Circuit High        | <Ref. to GD(STI)-194, DTC P1420 FUEL TANK PRESSURE CONTROL SOL. VALVE CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>        |
| P1443 | Vent Control Solenoid Valve Function Problem              | <Ref. to GD(STI)-196, DTC P1443 VENT CONTROL SOLENOID VALVE FUNCTION PROBLEM, Diagnostic Trouble Code (DTC) Detecting Criteria.>              |
| P1446 | Fuel Tank Sensor Control Valve Circuit Low                | <Ref. to GD(STI)-198, DTC P1446 FUEL TANK SENSOR CONTROL VALVE CIRCUIT LOW, Diagnostic Trouble Code (DTC) Detecting Criteria.>                |
| P1447 | Fuel Tank Sensor Control Valve Circuit High               | <Ref. to GD(STI)-200, DTC P1447 FUEL TANK SENSOR CONTROL VALVE CIRCUIT HIGH, Diagnostic Trouble Code (DTC) Detecting Criteria.>               |
| P1448 | Fuel Tank Sensor Control Valve Range/Performance          | <Ref. to GD(STI)-202, DTC P1448 FUEL TANK SENSOR CONTROL VALVE RANGE/PERFORMANCE, Diagnostic Trouble Code (DTC) Detecting Criteria.>          |
| P1491 | Positive Crankcase Ventilation (Blow-by) Function Problem | <Ref. to GD(STI)-205, DTC P1491 POSITIVE CRANKCASE VENTILATION (BLOW-BY) FUNCTION PROBLEM, Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P1518 | Starter Switch Circuit Low Input                          | <Ref. to GD(STI)-207, DTC P1518 STARTER SWITCH CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>                          |
| P1560 | Back-Up Voltage Circuit Malfunction                       | <Ref. to GD(STI)-208, DTC P1560 BACK-UP VOLTAGE CIRCUIT MALFUNCTION, Diagnostic Trouble Code (DTC) Detecting Criteria.>                       |
| P1570 | Antenna   | <Ref. to GD(STI)-209, DTC P1570 ANTENNA, Diagnostic Trouble Code (DTC) Detecting Criteria.>   |
| P1571 | Reference Code Incompatibility                            | <Ref. to GD(STI)-209, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Trouble Code (DTC) Detecting Criteria.>                            |
| P1572 | IMM Circuit Failure (Except Antenna Circuit)              | <Ref. to GD(STI)-209, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Trouble Code (DTC) Detecting Criteria.>              |
| P1574 | Key Communication Failure                                 | <Ref. to GD(STI)-209, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                 |
| P1576 | EGI Control Module EEPROM                                 | <Ref. to GD(STI)-209, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                 |
| P1577 | IMM Control Module EEPROM                                 | <Ref. to GD(STI)-209, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Trouble Code (DTC) Detecting Criteria.>                                 |
| P2004 | Intake Manifold Runner Control Stuck Open (Bank 1)        | <Ref. to GD(STI)-210, DTC P2004 INTAKE MANIFOLD RUNNER CONTROL STUCK OPEN (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>        |
| P2005 | Intake Manifold Runner Control Stuck Open (Bank 2)        | <Ref. to GD(STI)-211, DTC P2005 INTAKE MANIFOLD RUNNER CONTROL STUCK OPEN (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>        |
| P2006 | Intake Manifold Runner Control Stuck Closed (Bank 1)      | <Ref. to GD(STI)-212, DTC P2006 INTAKE MANIFOLD RUNNER CONTROL STUCK CLOSED (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>      |
| P2007 | Intake Manifold Runner Control Stuck Closed (Bank 2)      | <Ref. to GD(STI)-213, DTC P2007 INTAKE MANIFOLD RUNNER CONTROL STUCK CLOSED (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>      |
| P2008 | Intake Manifold Runner Control Circuit / Open (Bank 1)    | <Ref. to GD(STI)-214, DTC P2008 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT / OPEN (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>    |
| P2009 | Intake Manifold Runner Control Circuit Low (Bank 1)       | <Ref. to GD(STI)-216, DTC P2009 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT LOW (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>       |
| P2011 | Intake Manifold Runner Control Circuit / Open (Bank 2)    | <Ref. to GD(STI)-218, DTC P2011 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT / OPEN (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>    |
| P2012 | Intake Manifold Runner Control Circuit Low (Bank 2)       | <Ref. to GD(STI)-220, DTC P2012 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT LOW (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>       |

# List of Diagnostic Trouble Code (DTC)

GENERAL DESCRIPTION

| DTC   | Item  | Index   |
|-------|---|---|
| P2016 | Intake Manifold Runner Position Sensor/Switch Circuit Low (Bank 1)  | <Ref. to GD(STI)-222, DTC P2016 INTAKE MANIFOLD RUNNER POSITION SENSOR/SWITCH CIRCUIT LOW (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P2017 | Intake Manifold Runner Position Sensor/Switch Circuit High (Bank 1) | <Ref. to GD(STI)-224, DTC P2017 INTAKE MANIFOLD RUNNER POSITION SENSOR/SWITCH CIRCUIT HIGH (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P2021 | Intake Manifold Runner Position Sensor/Switch Circuit Low (Bank 2)  | <Ref. to GD(STI)-226, DTC P2021 INTAKE MANIFOLD RUNNER POSITION SENSOR/SWITCH CIRCUIT LOW (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P2022 | Intake Manifold Runner Position Sensor/Switch Circuit High (Bank 2) | <Ref. to GD(STI)-228, DTC P2022 INTAKE MANIFOLD RUNNER POSITION SENSOR/SWITCH CIRCUIT HIGH (BANK 2), Diagnostic Trouble Code (DTC) Detecting Criteria.> |
| P2088 | OCV Solenoid Valve Signal A Circuit Open (Bank 1)                   | <Ref. to GD(STI)-230, DTC P2088 OCV SOLENOID VALVE SIGNAL A CIRCUIT OPEN (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>                   |

## List of Diagnostic Trouble Code (DTC)

### GENERAL DESCRIPTION

| DTC   | Item                                   | Index  |
|-------|--|--|
| P2228 | Barometric Pressure Circuit Low Input  | <Ref. to GD(STI)-263, DTC P2228 BAROMETRIC PRESSURE CIRCUIT LOW INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.>  |
| P2229 | Barometric Pressure Circuit High Input | <Ref. to GD(STI)-264, DTC P2229 BAROMETRIC PRESSURE CIRCUIT HIGH INPUT, Diagnostic Trouble Code (DTC) Detecting Criteria.> |

## 2. Diagnostic Trouble Code (DTC) Detecting Criteria

### A: DTC P0011 “A” CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of AVCS system.

Judge NG when the amount of AVCS actual timing advance does not approach to the amount of AVCS target timing advance.

#### 2. COMPONENT DESCRIPTION

EN-01852

- (1) AVCS timing controller
- (2) Vane
- (3) Engine control module (ECM)
- (4) Oil flow control valve
- (5) Oil pressure

#### 3. ENABLE CONDITION (FOR ABNORMALITY JUDGMENT ONLY)

| Secondary Parameters                 | Enable Conditions |
|--------------------------------------|-------------------|
| Battery voltage                      | ≥ 10.9 V          |
| Engine speed                         | ≥ 600 rpm         |
| Engine coolant temperature           | ≥ 60°C            |
| Amount of AVCS target timing advance | = 0°CA            |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis after idling when the amount of AVCS target timing advance is equal to 0.

#### 5. DIAGNOSTIC METHOD

Judge NG when the difference of the amount of AVCS target timing advance and the amount of AVCS actual timing advance becomes large, and judge OK when the difference becomes small.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 10 seconds.

#### Judgment Value

| Malfunction Criteria                        | Threshold Value |
|---|-----------------|
| AVCS target position – AVCS actual position | $\geq 20^\circ$ |

**Time Needed for Diagnosis:** 10 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK and clear the NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria                        | Threshold Value |
|---|-----------------|
| AVCS control                                | During feedback |
| Amount of AVCS target timing advance        | 5 — 30°CA       |
| AVCS target position – AVCS actual position | $< 10^\circ$    |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

- Ignition timing whole learning compensation:
  - Enter the initial value (whole learning compensation factor = 0.5, Variable amount of whole learning compensation factor = 0.25) to the whole learning compensation factor and variable amount of whole learning compensation factor when IG OFF, and then make the whole learning incomplete.
  - Enter the initial value (whole learning compensation factor = 0.5, Variable amount of whole learning compensation factor = 0.25) to the whole learning compensation factor and variable amount of whole learning compensation factor when making a normality judgment from abnormality judgment, and then make the whole learning incomplete.
- Ignition timing partial learning compensation:
  - Enter the initial value (0°CA) to the compensation value of partial learning zone when IG OFF.
  - Enter the initial value (0°CA) to the compensation value of partial learning zone when making a normality judgment from abnormality judgment.
- AVCS control: Most timing retard learning is not complete or most timing retard learning completion is not experienced.
- ISC feedback compensation: Do not perform the AVCS actual timing advance compensation. Make the OCV driving Duty to be the given value (9.36%).

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## B: DTC P0021 “A” CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 2)

### 1. OUTLINE OF DIAGNOSIS

For the diagnostic procedure, refer to DTC P0011. <Ref. to GD(STI)-9, DTC P0011 “A” CAMSHAFT POSITION - TIMING OVER-ADVANCED OR SYSTEM PERFORMANCE (BANK 1), Diagnostic Trouble Code (DTC) Detecting Criteria.>

## C: DTC P0030 HO2S HEATER CONTROL CIRCUIT (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of front oxygen (A/F) sensor heater.

Judge NG when impedance of front oxygen (A/F) sensor is larger than the standard value by referring to the engine condition such as fuel shut-off in deceleration, etc.

### 2. COMPONENT DESCRIPTION

- (1) Protection tube
- (2) Gasket
- (3) Sensor housing
- (4) Ceramic heater

### 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions  |
|---|--------------------|
| Time needed for all secondary parameters to be in enable conditions | 60 seconds or more |
| Battery voltage   | > 10.9 V           |
| After fuel shut-off   | 20 seconds or more |
| Front oxygen (A/F) sensor heater control duty $\geq$ 70%            | Experienced        |

### 4. GENERAL DRIVING CYCLE

Perform diagnosis continuously in 60 seconds after starting engine.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than the time needed for diagnosis (10 seconds). Judge OK and clear NG when the continuous time of not completing the malfunction criteria below becomes more than the time needed for diagnosis (10 seconds).

#### Judgment Value

| Malfunction Criteria                   | Threshold Value |
|--|-----------------|
| Impedance of front oxygen (A/F) sensor | > 50 $\Omega$   |

**Time Needed for Diagnosis:** 10 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor main learning correction: Not allowed to calculate
- Correction when re-starting at high temperature: Normally minimum value 0.3 → 0
- Purge control: Not allowed to purge

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## D: DTC P0031 HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of heater.

The heater conducts the duty control. The output terminal voltage at ON becomes 0 V, and the output terminal voltage at OFF becomes battery voltage.

Judge NG when the terminal voltage remains to be Low.

### 2. COMPONENT DESCRIPTION

EN-01792

- (A) Battery voltage
- (B) Front oxygen (A/F) sensor heater output voltage
- (C) 128 milliseconds
- (D) Low abnormality

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions     |
|----------------------|-----------------------|
| Battery voltage      | $\geq 10.9 \text{ V}$ |

### 4. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second (8 cycles).

#### Judgment Value

| Malfunction Criteria                          | Threshold Value |
|---|-----------------|
| Output voltage level                          | Low             |
| Front oxygen (A/F) sensor heater control duty | $< 87.5\%$      |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | High            |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor activation judgment: Front oxygen (A/F) sensor full activation is not complete, or front oxygen (A/F) sensor half activation is not complete.
- A/F main learning: Not allowed to calculate the A/F main learning compensation factor.
- Compensation when starting the engine at high temperature: Make the MIN value to be 0 from 0.3 normally.
- Purge control: Not allowed to purge.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## E: DTC P0032 HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 1)

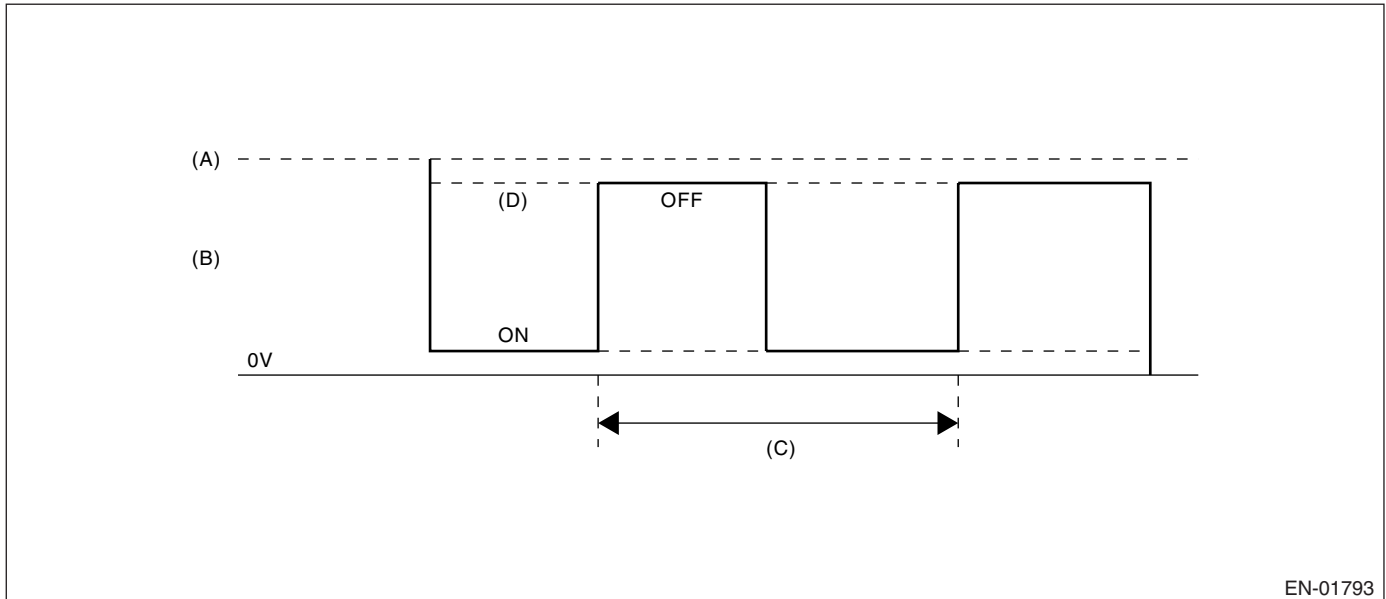

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of heater.

The heater conducts the duty control. The output terminal voltage at ON becomes 0 V, and the output terminal voltage at OFF becomes battery voltage.

Judge NG when the terminal voltage remains to be High.

### 2. COMPONENT DESCRIPTION

- (A) Battery voltage
- (B) Front oxygen (A/F) sensor heater output voltage
- (C) 128 milliseconds
- (D) High abnormality

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions     |
|----------------------|-----------------------|
| Battery voltage      | $\geq 10.9 \text{ V}$ |

### 4. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes 1 second (8 cycles).

#### Judgment Value

| Malfunction Criteria                          | Threshold Value |
|---|-----------------|
| Output voltage level                          | High            |
| Front oxygen (A/F) sensor heater control duty | $\geq 12.5\%$   |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | Low             |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor activation judgment: Front oxygen (A/F) sensor full activation is not complete, or front oxygen (A/F) sensor half activation is not complete.
- A/F main learning: Not allowed to calculate the A/F main learning compensation factor.
- Compensation when starting the engine at high temperature: Make the MIN value to be 0 from 0.3 normally.
- Purge control: Not allowed to purge.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## F: DTC P0037 HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 2)

### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of rear oxygen sensor heater.

Rear oxygen sensor heater conducted the duty control, and the output terminal voltage at ON is 0 V and the output terminal voltage at OFF is the battery voltage.

Judge NG when the terminal voltage remains to be Low.

### 2. COMPONENT DESCRIPTION

- (A) Battery voltage
- (B) Rear oxygen sensor heater output voltage
- (C) 256 milliseconds (cycles)
- (D) Low malfunction

### 3. ENABLE CONDITION

| Secondary Parameters               | Enable Conditions |
|------------------------------------|-------------------|
| Battery voltage                    | > 10.9 V          |
| Elapsed time after engine starting | ≥ 1 second        |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 1 second after engine starting.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing all the malfunction criteria below becomes more than 2,560 millisecond (10 cycles).

#### Judgment Value

| Malfunction Criteria                   | Threshold Value |
|--|-----------------|
| Output voltage level                   | Low             |
| Rear oxygen sensor heater control duty | < 75%           |

**Time Needed for Diagnosis:** 2.56 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | High            |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Sub feedback control: Not allowed

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## G: DTC P0038 HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 2)

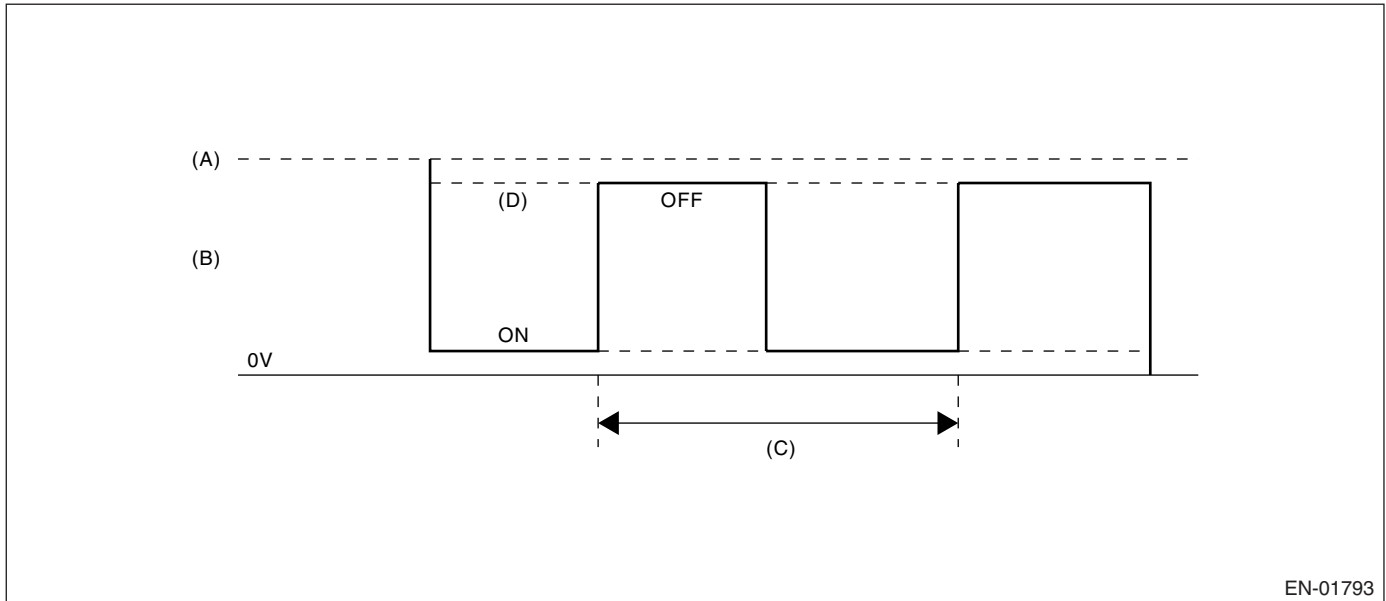

### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of rear oxygen heater.

Rear oxygen heater conducted the duty control, and the output terminal voltage at ON is 0 V and the output terminal voltage at OFF is the battery voltage.

Judge NG when the terminal voltage remains to be High.

### 2. COMPONENT DESCRIPTION

- (A) Battery voltage
- (B) Rear oxygen sensor heater output voltage
- (C) 256 milliseconds (cycle)
- (D) High malfunction

### 3. ENABLE CONDITION

| Secondary Parameters               | Enable Conditions |
|------------------------------------|-------------------|
| Battery voltage                    | > 10.9 V          |
| Elapsed time after engine starting | ≥ 21 second       |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 1 second after engine starting.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing all the malfunction criteria below becomes more than 2,560 milliseconds (10 cycles).

#### Judgment Value

| Malfunction Criteria                   | Threshold Value |
|--|-----------------|
| Output voltage level                   | High            |
| Rear oxygen sensor heater control duty | ≥ 25%           |

**Time Needed for Diagnosis:** 2.56 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear the NG when all the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage level | Low             |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Sub feedback control: Not allowed

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## H: DTC P0068 MAP/MAF – THROTTLE POSITION CORRELATION

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of intake manifold pressure sensor output property. Judge NG when the intake air pressure AD value is Low whereas it seemed to be High from the viewpoint of engine condition, or when it is High whereas it seemed to be Low from the engine condition.

### 2. COMPONENT DESCRIPTION

- (1) Connector
- (2) Terminal
- (3) O-ring

- (A) Output voltage
- (B) Absolute pressure

EN-01765

### 3. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions                 |
|----------------------------|-----------------------------------|
| Engine coolant temperature | $\geq 75^{\circ}\text{C}$ (167°F) |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when either Low side or High side becomes NG. Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value                   |
|----------------------|-----------------------------------|
| Low side             |                                   |
| Engine speed         | $< 2,500$ rpm                     |
| Throttle position    | $\geq 10^{\circ}$                 |
| Output voltage       | $< 1.0$ V                         |
| High side            |                                   |
| Engine speed         | $600 \longleftrightarrow 900$ rpm |
| Throttle position    | $< 1.3^{\circ}$                   |
| Output voltage       | $\geq 2.6$ V                      |

**Time Needed for Diagnosis:** 3 seconds

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK and clear the NG when both Low side and High side become OK. Judge OK when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Low side             |                 |
| Engine speed         | < 2,500 rpm     |
| Throttle position    | ≥ 10°           |
| Output voltage       | ≥ 1.0 V         |
| High side            |                 |
| Engine speed         | 600 ←→ 900 rpm  |
| Throttle position    | < 1.3°          |
| Output voltage       | < 2.6 V         |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Intake manifold pressure sensor process: Estimate the pressure from engine load.
- ISC feedback: Not allowed to calculate the amount of feedback.
- Heavy fuel judgment: Not allowed to carry out the heavy judgment.
- Fuel cut control: Not allowed to cut the over pressure charged fuel.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## I: DTC P0101 MASS OR VOLUME AIR FLOW CIRCUIT RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of air flow sensor output property. Judge Low side NG when the air flow voltage indicates low value in spite of the driving condition that the air flow voltage might be high; otherwise, judge High side NG when the air flow voltage indicates high value in spite of the driving condition that the air flow voltage might be low. Judge air flow sensor property NG when the Low side or High side becomes NG.

### 2. COMPONENT DESCRIPTION

EN-01766

- (1) Air flow sensor
  - (2) Intake air temperature sensor
  - (3) Voltage (V)
  - (4) Intake air volume (kg/s)
- (A) Air

### 3. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions                 |
|----------------------------|-----------------------------------|
| Engine coolant temperature | $\geq 70^{\circ}\text{C}$ (167°F) |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously after idling.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than the time needed for diagnosis.

#### Judgment Value

| Malfunction Criteria  | Threshold Value  |
|---|--|
| Low side NG<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure                                 | < 1.5 V<br>≥ 2,500 rpm<br>≥ 15°<br>≥ 53.3 kPa (400 mmHg, 15.7 inHg)                                |
| High side NG 1<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure                              | ≥ 1.95 V<br>600 ↔ 1,200 rpm<br>< 2.75°<br>< 46.7 kPa (350 mmHg, 13.8 inHg)                         |

#### Time Needed for Diagnosis:

|           |            |
|-----------|------------|
| Low side  | 3 seconds  |
| High side | 10 seconds |

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK the when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value   |
|--|---|
| Low side NG<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure  | ≥ 1.5 V<br>≥ 2,500 rpm<br>≥ 15°<br>≥ 53.3 kPa (400 mmHg, 15.7 inHg)     |
| High side NG<br>Output voltage<br>Engine speed<br>Throttle angle<br>Intake manifold pressure | < 2.5 V<br>550 ↔ 900 rpm<br>< 1.92°<br>< 46.7 kPa (350 mmHg, 13.8 inHg) |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Air flow meter: Engine load is normally calculated by manifold pressure and engine speed; however, calculated only by manifold pressure.
- EVAP conc. learning (fuel): Not allowed to learn.
- Knock compensation:
  - Knock compensation final timing advance and retard value = knock compensation + whole learning compensation value + partial learning compensation value.
  - At normal: knock compensation = 0°CA is fixed.
  - At trouble: knock compensation ≠ 0°CA is fixed. (Retard max. 12°CA at knock.)
  - Not allowed to update the whole learning compensation factor.
  - Not allowed to calculate the partial learning zone compensation value.
- ISC control: Make the open loop compensation to be the given value (1 g/s). Stop calculating the throttle sensor temperature compensation. (Hold the previous value.)
- Purge control: Not allowed to purge.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### J: DTC P0102 MASS OR VOLUME AIR FLOW CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of air flow sensor. Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

EN-01766

- |     |                               |     |     |
|-----|-------------------------------|-----|-----|
| (1) | Air flow sensor               | (A) | Air |
| (2) | Intake air temperature sensor |     |     |

- Fuel cut control: Not allowed to cut the over pressure charged fuel.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### N: DTC P0111 INTAKE AIR TEMPERATURE CIRCUIT RANGE/PERFORMANCE

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of intake air temperature sensor output property. Judge NG when the intake air temperature is not varied whereas it seemed to be varied from the viewpoint of engine condition.

#### 2. COMPONENT DESCRIPTION

- (1) Air flow sensor
  - (2) Intake air temperature sensor
  - (3) Resistance value ( $\Omega$ )
  - (4) Intake air temperature °C (°F)
- (A) Air

#### 3. ENABLE CONDITION

| Secondary Parameters   | Enable Conditions   |
|--|---------------------|
| Coolant temp. before engine start                                    | < 30°C (86°F)       |
| Engine coolant temperature   | > 75°C (167°F)      |
| Battery voltage  | ≥ 10.9 V            |
| Continuous time when the vehicle speed is less than 50 km/h (31 MPH) | 600 seconds or more |

#### 4. GENERAL DRIVING CYCLE

Perform the diagnosis when the vehicle speed condition is completed after idling from starting the cooled engine.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second.

### Judgment Value

| Malfunction Criteria                            | Threshold Value   |
|---|---|
| Output voltage difference between Max. and Min. | < 20 mV (It is equal to approx. 0.5°C (33°F) around 25°.) |
| Exhaust temperature above 500°C (932°F)         | 60 seconds or more  |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria                            | Threshold Value |
|---|-----------------|
| Output voltage difference between Max. and Min. | ≥ 20 mV         |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

Intake air temperature sensor process: Intake air temperature is fixed at 20°C (68°F).

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### U: DTC P0125 INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of engine coolant temperature output property. Judge NG when the engine coolant temperature does not rise whereas it seemed to rise from the viewpoint of the engine condition.

#### 2. COMPONENT DESCRIPTION

- (1) Connector
- (2) Thermistor element

- (A) Resistance value (kΩ)
- (B) Temperature °C (°F)

EN-01690

#### 3. ENABLE CONDITION

| Secondary Parameters                                    | Enable Conditions |
|---|-------------------|
| Diagnosis of engine coolant temperature sensor property | Not finished      |
| Engine speed  | ≥ 500 rpm         |
| Battery voltage   | > 10.9 V          |

#### 4. GENERAL DRIVING CYCLE

Perform the diagnosis only once after engine starting.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria                      | Threshold Value                              |
|---|--|
| Engine coolant temperature                | < 20°C (68°F)                                |
| Timer for diagnosis after engine starting | ≥ Timer judgment value after engine starting |

Timer for diagnosis after engine starting

- a) Timer stop at fuel cut mode.
- b) During the driving conditions (except a) above), timer count up by 64 milliseconds + TWCNT milliseconds at every 64 milliseconds.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

Where, TWCNT is determined as follows,  
TWCNT = 0 at idle switch ON,  
TWCNT show on the following table at idle switch OFF.

| Temperature<br>°C (°F) | Vehicle speed km/h (MPH) |          |           |           |           |           |           |           |
|------------------------|--------------------------|----------|-----------|-----------|-----------|-----------|-----------|-----------|
|                        | 0 (0)                    | 8 (4.97) | 16 (9.94) | 24 (14.9) | 32 (19.9) | 40 (24.9) | 48 (29.8) | 56 (34.8) |
| -20 (-4)               | 0 ms                     | 37.14 ms | 74.27 ms  | 111.41 ms | 126.66 ms | 141.91 ms | 163.59 ms | 185.26 ms |
| -10 (14)               | 0 ms                     | 27.39 ms | 54.78 ms  | 82.17 ms  | 99.65 ms  | 117.13 ms | 135.96 ms | 154.80 ms |
| 0 (32)                 | 0 ms                     | 17.65 ms | 35.29 ms  | 52.94 ms  | 72.64 ms  | 92.34 ms  | 108.34 ms | 124.33 ms |
| 10 (50)                | 0 ms                     | 7.90 ms  | 15.80 ms  | 23.70 ms  | 45.63 ms  | 67.56 ms  | 80.71 ms  | 93.87 ms  |
| 20 (68)                | 0 ms                     | 7.90 ms  | 15.80 ms  | 23.70 ms  | 45.63 ms  | 67.56 ms  | 80.71 ms  | 93.87 ms  |

Judgment value of timer after engine starting

$$t = 451.1 - 25.9 \times T_i$$

$T_i$  is the lowest engine coolant temperature after starting the engine.

**Time Needed for Diagnosis:** To be determined. (It is varied by the Min. engine coolant temperature and engine conditions such as vehicle speed and engine coolant temperature.)

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria       | Threshold Value                |
|----------------------------|--------------------------------|
| Engine coolant temperature | $\geq 20^\circ\text{C}$ (68°F) |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Engine coolant temperature process: Fix the engine coolant temperature at 70°C (158°F).
- ISC feedback: Calculate the target engine speed setting the engine coolant temperature to 70°C (158°F).
- ISC learning: Not allowed to learn.
- Heavy fuel judgment control: Not allowed to carry out the heavy judgment.
- Air conditioner control: Not allowed to turn the air conditioner to ON.
- Radiator fan control: Both main and sub fan are in High driving.
- Increase compensation factor at high engine coolant temperature: Increase normally occurs with high temperature and other conditions; however, occurs with other conditions except engine coolant temperature condition.
- AVCS control: Make the oil flow control valve driving output to be Duty=0%.
- Tumble generator valve control: Open the tumble generator valve.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### V: DTC P0126 INSUFFICIENT ENGINE COOLANT TEMPERATURE FOR STABLE OPERATION

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of engine coolant temperature sensor property.

The engine coolant temperature and fuel temperature are memorized when stopping the engine at the previous time. Judge NG when the engine coolant temperature does not decrease in the case the engine coolant temperature seems to decrease after starting the engine this time.

#### 2. COMPONENT DESCRIPTION

EN-02917

- (1) Connector
- (2) Thermistor element

- (A) Resistance value (k $\Omega$ )
- (B) Temperature °C (°F)

#### 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions  |
|---|--|
| Battery voltage   | $\geq 10.9$ V  |
| Filling fuel from stopping engine at the previous time to starting it this time | No   |
| Fuel level  | $\geq 15$ $\varnothing$  |
| Engine coolant temperature when stopping engine at the previous time            | $\geq 70^{\circ}\text{C}$ (158°F) and $< 95^{\circ}\text{C}$ (203°F) |

#### 4. GENERAL DRIVING CYCLE

Perform the diagnosis once after starting the engine.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criteria below becomes more than 2.5 seconds.

### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Engine coolant temperature when stopping engine at the previous time – The lowest engine coolant temperature after starting engine | < 2.5°C (4.5°F) |
| Fuel temperature when stopping engine at the previous time – Fuel temperature  | ≥ 5°C (9°F)     |
| Intake air temperature – Fuel temperature  | < 2.5°C (4.5°F) |
| Fuel temperature   | < 35°C (95°F)   |

### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Engine coolant temperature when stopping engine at the previous time – The lowest engine coolant temperature after starting engine | ≥ 2.5°C (4.5°F) |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illuminations:** Detect when malfunction occurs in 2 continuous driving cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle is completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### W: DTC P0128 COOLANT THERMOSTAT (COOLANT TEMPERATURE BELOW THERMOSTAT REGULATING TEMPERATURE)

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of thermostat function. Judge NG when the engine coolant temperature is lower than the estimated engine coolant temperature and the difference between them is large. Judge OK when the engine coolant temperature becomes 75°C (167°F) and the difference is small before judging NG.

#### 2. COMPONENT DESCRIPTION

- |             |                    |
|-------------|--------------------|
| (1) Valve   | (6) Rubber packing |
| (2) Spring  | (7) Stop ring      |
| (3) Stopper | (8) Wax element    |
| (4) Piston  | (9) Jiggle valve   |
| (5) Guide   |                    |

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 30 seconds.

### Judgment Value

| Malfunction Criteria                              | Threshold Value                    |
|---|------------------------------------|
| Battery voltage                                   | $\geq 10.9$ V                      |
| Estimated ambient air temperature                 | $\geq -7^{\circ}\text{C}$ (19.4°F) |
| Thermostat malfunction diagnosis                  | Not finished                       |
| Engine coolant temperature at engine starting     | $< 55^{\circ}\text{C}$ (131°F)     |
| Estimated engine coolant temperature              | $\geq 75^{\circ}\text{C}$ (167°F)  |
| Engine coolant temperature                        | $< 75^{\circ}\text{C}$ (167°F)     |
| (Estimated – measured) engine coolant temperature | $> 20^{\circ}\text{C}$ (68°F)      |

**Time Needed for Diagnosis:** 30 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria                              | Threshold Value                    |
|---|------------------------------------|
| Battery voltage                                   | $\geq 10.9$ V                      |
| Estimated ambient air temperature                 | $\geq -7^{\circ}\text{C}$ (19.4°F) |
| Thermostat malfunction diagnosis                  | Not finished                       |
| Engine coolant temperature at engine starting     | $< 55^{\circ}\text{C}$ (131°F)     |
| Engine coolant temperature                        | $\geq 75^{\circ}\text{C}$ (167°F)  |
| (Estimated – measured) engine coolant temperature | $\leq 30^{\circ}\text{C}$ (86°F)   |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

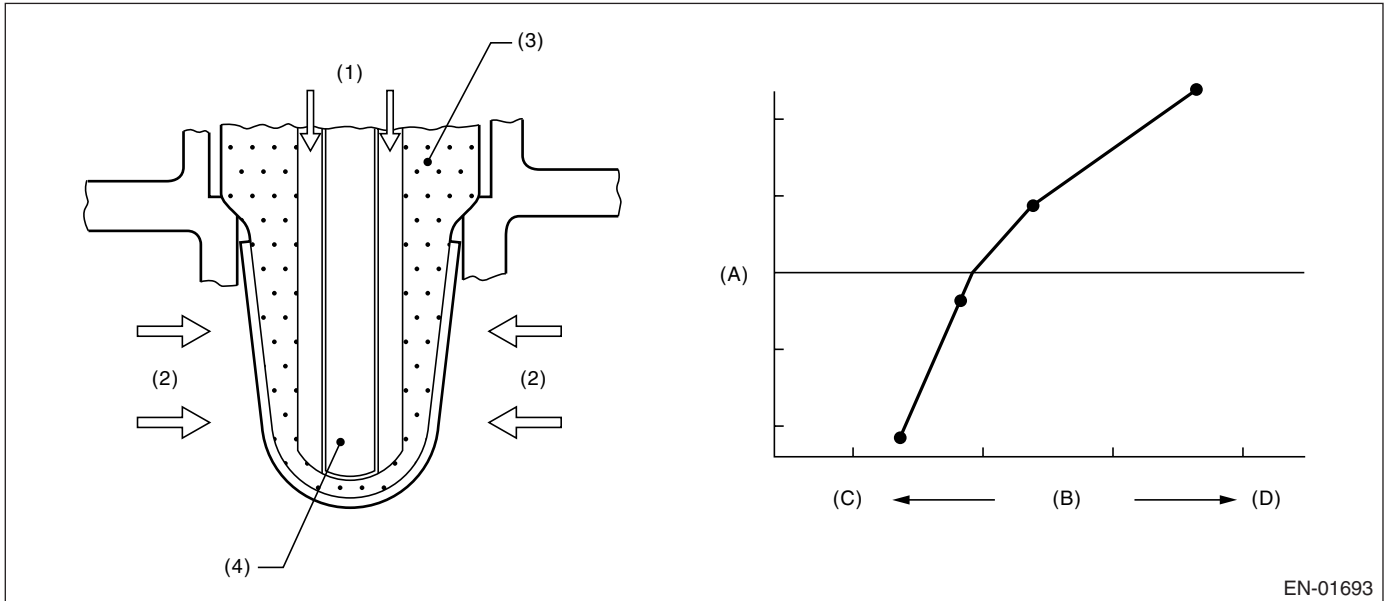

### X: DTC P0131 O<sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of sensor.

Judge NG when the element impressed voltage is out of range, or the element current is out of range.

#### 2. COMPONENT DESCRIPTION

- (1) Atmosphere
- (2) Exhaust
- (3) ZrO<sub>2</sub>
- (4) Ceramic heater

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Lean
- (D) Rich

EN-01693

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Voltage              | ≥ 10.9 V          |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing any malfunction criteria below becomes more than 1 second.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Input voltage        | < 1.8 V         |
| Input current        | < -0.01 A       |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Front oxygen (A/F) sensor activation judgment: Front oxygen (A/F) sensor full activation is not complete, or front oxygen (A/F) sensor half activation is not complete.
- A/F main learning: Not allowed to calculate the A/F main learning compensation factor.
- Compensation when starting the engine at high temperature: Make the MIN value to be 0 from 0.3 normally.
- Purge control: Not allowed to purge.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### Y: DTC P0132 O<sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of sensor.

Judge NG when the element impressed voltage is out of range, or the element current is out of range.

#### 2. COMPONENT DESCRIPTION

- (1) Atmosphere
- (2) Exhaust
- (3) ZrO<sub>2</sub>
- (4) Ceramic heater

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Lean
- (D) Rich

EN-01693

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Voltage              | ≥ 10.9 V          |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing any malfunction criteria below becomes more than 1 second.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Input voltage        | ≥ 3.8 V         |
| Input current        | ≥ 0.01 A        |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Front oxygen (A/F) sensor activation judgment: Front oxygen (A/F) sensor full activation is not complete, or front oxygen (A/F) sensor half activation is not complete.
- A/F main learning: Not allowed to calculate the A/F main learning compensation factor.
- Compensation when starting the engine at high temperature: Make the MIN value to be 0 from 0.3 normally.
- Purge control: Not allowed to purge.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### Z: DTC P0133 O<sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect time-lag of front oxygen (A/F) sensor response. Front oxygen (A/F) sensor cover has some ventilation holes for exhaust gas. Clogged ventilation holes are diagnosed. When the holes are clogged, the A/F output variation becomes slow comparing with the actual A/F variation because oxygen which reaches the zirconia layer is insufficient. Therefore, if the cover has clogged holes, the rich to lean judgment in ECM is delayed when the change from rich to lean is caused.

- (1) Cover
- (2) Zirconia
- (3) Clogging

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 2. COMPONENT DESCRIPTION

EN-01693

- (1) Atmosphere
- (2) Exhaust
- (3) ZrO<sub>2</sub>
- (4) Ceramic heater

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Lean
- (D) Rich

## 3. ENABLE CONDITION

| Secondary Parameters                         | Enable Conditions                  |
|--|------------------------------------|
| All secondary parameter enable conditions    | more than 1 second                 |
| Diagnosis of A/F response                    | Not done                           |
| Battery voltage                              | > 10.9 V                           |
| Atmospheric pressure                         | > 75.1 kPa (563 mmHg, 22.2 inHg)   |
| Closed loop control with main feedback       | operating                          |
| Impedance of front oxygen (A/F) sensor       | 0 ↔ 50 Ω                           |
| After engine starting                        | 120 seconds or more                |
| Engine coolant temperature                   | ≥ 75°C (167°F)                     |
| Engine speed                                 | 1,000 ↔ 3,200 rpm                  |
| Vehicle speed                                | 10 ↔ 120 km/h<br>(6.21 ↔ 74.6 MPH) |
| Amount of intake air                         | 10 ↔ 31 g/s                        |
| Engine load change during 0.5 engine rev.    | ≤ 0.01 g/rev                       |
| All conditions for EVAP canister purge       | to be in enable                    |
| Learning value of EVAP conc. during purge    | ≤ 0.2                              |
| Accumulated time of operating canister purge | 20 seconds or more                 |

## 4. GENERAL DRIVING CYCLE

Perform diagnosis only once at a constant speed of 10 to 120 km/h (6.21 to 74.6 MPH) in 120 seconds after starting the engine.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 5. DIAGNOSTIC METHOD

Integrate the difference of  $faf$  in every 128 milliseconds and difference of  $\lambda$  value.

After integrate 1,640 times (210 seconds), calculate the diagnosis value.

Judge NG when the malfunction criteria below are completed. Judge OK and clear NG when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| $para_{fca} = td2_{faf}/td2_{lmd}$<br>where,<br>$td2_{faf}(N) = td2_{faf}(n-1) +  d2_{faf}(n) $<br>$td2_{lmd}(N) = td2_{lmd}(n-1) +  d2_{lmd}(n) $<br>add up for a total of 210 seconds<br>$d2_{faf}(n) = (faf(n) - faf(n-1)) - (faf(n-1) - faf(n-2))$<br>$d2_{lmd}(n) = (lmd(n) - lmd(n-1)) - (lmd(n-1) - lmd(n-2))$<br>$faf$ = main feedback compensation coefficient every 128 milliseconds<br>$lmd$ = output lambda every 128 milliseconds | $\geq 0.30$     |

**Time Needed for Diagnosis:** 210 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor main learning correction: Not allowed to calculate.
- Correction when re-starting at high temperature: Normally minimum value  $0.3 \rightarrow 0$ .
- Purge control: Not allowed to purge.

### 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AA:DTC P0134 O<sub>2</sub> SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 1 SENSOR 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the open circuit of sensor.

Judge NG when the element impedance is large.

### 2. COMPONENT DESCRIPTION

- (1) Atmosphere
- (2) Exhaust
- (3) ZrO<sub>2</sub>
- (4) Ceramic heater

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Lean
- (D) Rich

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

#### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Voltage   | ≥ 10.9 V        |
| Time after engine starting  | ≥ 50 seconds    |
| Variable amount of Front O <sub>2</sub> (A/F) sensor heater control duty every 128 milliseconds | ≥ 28,000%       |
| Front lambda sensor impedance   | ≥ 500 Ω         |

**Time Needed for Diagnosis:** 2 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

- Front oxygen (A/F) sensor activation judgment: Front oxygen (A/F) sensor full activation is not complete, or front oxygen (A/F) sensor half activation is not complete.
- A/F main learning: Not allowed to calculate the A/F main learning compensation factor.
- Compensation when starting the engine at high temperature: Make the MIN value to be 0 from 0.3 normally.
- Purge control: Not allowed to purge.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## AB:DTC P0137 O<sub>2</sub> SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 2)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of rear oxygen sensor open or short circuit. Judge NG when the rear oxygen sensor voltage may be abnormal from rear oxygen sensor voltage value with considering the conditions such as intake air amount, engine coolant temperature, main feedback control.

### 2. COMPONENT DESCRIPTION

- (1) Atmosphere
- (2) Exhaust
- (3) Electromotive force

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Rich
- (D) Lean
- (E) Theoretical air fuel ratio
- (F) Comparative voltage

### 3. ENABLE CONDITION (USED ONLY FOR MALFUNCTION JUDGMENT)

| Secondary Parameters   | Enable Conditions  |
|--|--------------------|
| Low side diagnosis of rear oxygen sensor voltage with main feedback control  | Incomplete         |
| Closed loop control with main feedback control                               | In operation       |
| Target output voltage of rear oxygen sensor with main feedback control       | ≥ 0.54 V           |
| Amount of intake air with main feedback control                              | ≥ 10 g/s           |
| Engine coolant temperature with main feedback control                        | ≥ 75°C (167°F)     |
| Misfire detection during 200 engine revs.                                    | < 5 times          |
| Compensation factor for front oxygen (A/F) sensor with main feedback control | Not in limit value |
| Battery voltage with main feedback control                                   | > 10.9 V           |
| Cumulative time for completing the conditions with main feedback control     | ≥ 200 seconds      |
| 5 seconds or more fuel shut-off in decel.                                    | Experienced        |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis once after starting the engine.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Max. output voltage  | < 490 mV        |

**Time Needed for Diagnosis:** 200 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                             | Threshold Value |
|--|-----------------|
| Low side diagnosis of rear oxygen sensor voltage | Incomplete      |
| Max. output voltage                              | $\geq 490$ mV   |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Sub feedback control: Not allowed

### 9. ECM OPERATION AT DTC SETTING

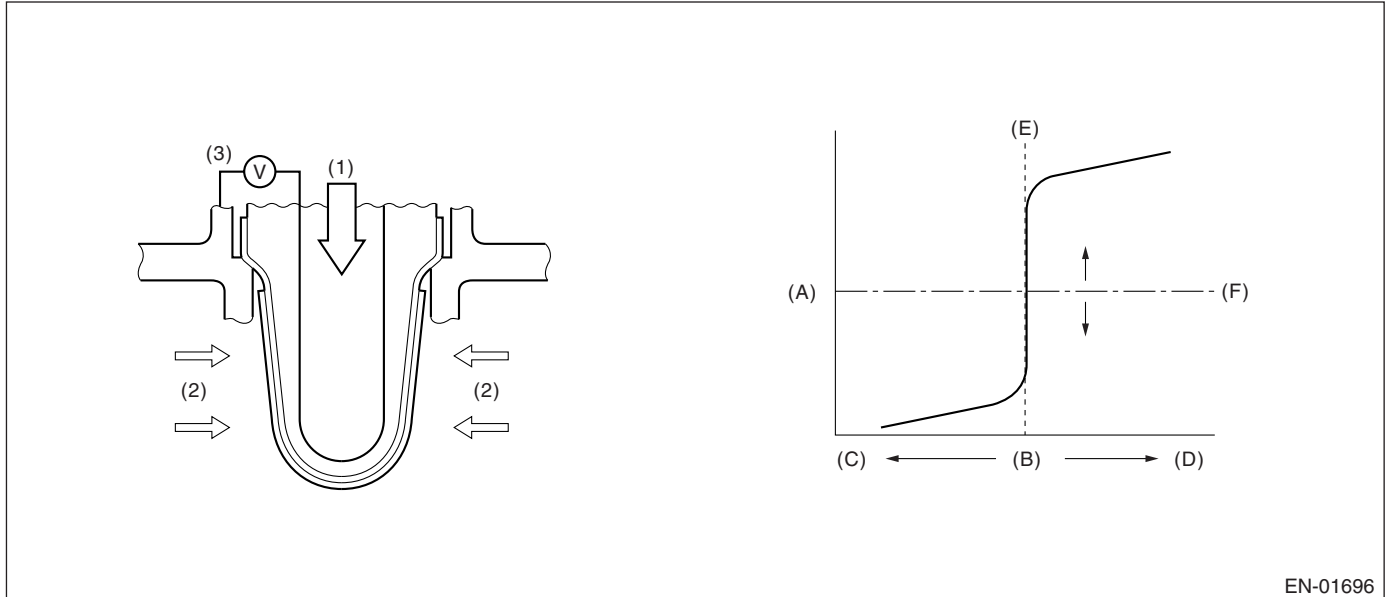

Memorize the freeze frame data. (For test mode \$02)

## AC:DTC P0138 O<sub>2</sub> SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 2)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of rear oxygen sensor open or short circuit. Judge NG when the rear oxygen sensor voltage may be abnormal with considering the conditions such as intake air amount, engine coolant temperature, main feedback control.

### 2. COMPONENT DESCRIPTION

EN-01696

- (1) Atmosphere
- (2) Exhaust
- (3) Electromotive force

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Rich
- (D) Lean
- (E) Theoretical air fuel ratio
- (F) Comparative voltage

### 3. ENABLE CONDITION (USED ONLY FOR MALFUNCTION JUDGMENT)

| Secondary Parameters   | Enable Conditions  |
|--|--------------------|
| High side diagnosis of rear oxygen sensor voltage with main feedback control | Incomplete         |
| Closed loop control with main feedback control                               | In operation       |
| Target output voltage of rear oxygen sensor with main feedback control       | ≥ 0.54 V           |
| Amount of intake air with main feedback control                              | ≥ 10 g/s           |
| Engine coolant temperature with main feedback control                        | ≥ 75°C (167°F)     |
| Misfire detection during 200 engine revs.                                    | < 5 times          |
| Compensation factor for front oxygen (A/F) sensor with main feedback control | Not in limit value |
| Battery voltage with main feedback control                                   | > 10.9 V           |
| Cumulative time for completing the conditions with main feedback control     | ≥ 200 seconds      |
| 5 seconds or more fuel shut-off in decel.                                    | Experienced        |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis once after starting the engine.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Min. output voltage  | > 250 mV        |

**Time Needed for Diagnosis:** 200 seconds

**Malfunction Indicator Light Illumination:** Detect when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                              | Threshold Value |
|---|-----------------|
| High side diagnosis of rear oxygen sensor voltage | Incomplete      |
| Min. output voltage                               | $\leq 250$ mV   |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Sub feedback control: Not allowed

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AD:DTC P0139 O<sub>2</sub> SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 2)

### 1. OUTLINE OF DIAGNOSIS

Detect the slow response of rear oxygen sensor.

Judge NG when the Rich → Lean response diagnosis or Lean → Rich response diagnosis is NG and judge OK when both response diagnoses are OK.

[Rich → Lean diagnosis response]

(1) When the measured response time is larger than a threshold, since the A/F ratio is rich, the response time of the output change of O<sub>2</sub> sensor when changing from Rich to Lean is measured, and it judges with NG, and when small, it judges with OK.

(2) When O<sub>2</sub> sensor voltage at the time of a fuel shut-off in deceleration return is large (rich), it judges with NG.

[Lean → Rich diagnosis response]

(1) The response time of output change of O<sub>2</sub> sensor when an A/F ratio changes from Lean to Rich is measured, and it is referred to as NG when the measured response time is larger than a threshold.

(2) It is referred to as NG when O<sub>2</sub> sensor voltage after recovery of fuel shut-off in deceleration is small and still small.

#### • Diagnostic Method

Measure the response time of the output change of the oxygen sensor when the A/F ratio changes from rich to lean. And Judge NG when the measured response time is larger than the threshold value.

### 2. COMPONENT DESCRIPTION

EN-01696

- (1) Atmosphere
- (2) Exhaust
- (3) Electromotive force

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Rich

- (D) Lean
- (E) Theoretical air fuel ratio
- (F) Comparative voltage

### 3. ENABLE CONDITION

- Rich → Lean response diagnosis

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

| Secondary Parameters                                    | Enable Conditions          |
|---|----------------------------|
| Battery voltage   | > 10.9 V                   |
| A/F sub feedback control condition                      | Completed                  |
| 6 seconds or more fuel shut-off indecel. After fuel cut | Experienced<br>≥ 2 seconds |
| Accumulated time with rear oxygen sensor heater ON      | ≥ 60 seconds               |
| Continuous time with rear oxygen sensor heater ON       | ≥ 30 seconds               |
| Catalyst warm-up counter                                | ≥ 11,000 times             |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis only once when fuel shut-off in deceleration after rapid acceleration. (Pay attention to oxygen sensor voltage for the timing of deceleration.)

### 5. DIAGNOSTIC METHOD

When the oxygen sensor output voltage changes from 0.55 V (rich) to 0.25 V (lean), calculate the Min. value of response time regarded as judgment value while the output varies from 0.5 V to 0.3 V.

EN-02209

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Abnormality Judgment

(1) Judge NG when the judgment value is larger than the threshold value after fuel shut-off in deceleration. Response time (Diagnosis value) > Threshold value → Abnormal

NOTE:

Variation time of rear oxygen sensor output voltage is short during fuel shut-off in deceleration. Carry out the NG judgment only after the fuel shut-off in deceleration. As for OK judgment, without the condition of fuel shut-off in deceleration, judge OK if the value is below the threshold value.

Judge NG when the malfunction criteria below are completed in 2 seconds after the recovery of fuel shut-off in deceleration which requires 6 seconds or more.

(2) Judge NG when the O<sub>2</sub> sensor voltage after recovery of fuel shut-off in deceleration is large. Judge NG when fuel shut-off in deceleration is also long (6 sec. or more), and although carried out the fuel shut-off in deceleration cut return, when O<sub>2</sub> sensor voltage is large (more than 0.55 V).

### Judgment Value

| Malfunction Criteria   | Threshold Value                         |
|--|---|
| Shortest time change from rich (500 mV O <sub>2</sub> output) to lean (300 mV) if voltage reduces from 550 mV to 250 mV.<br>or<br>Time when more than 550 mV | > 0.698 milliseconds<br><br>> 2 seconds |

**Time Needed for Diagnosis:** Once

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## • Normality Judgement

(1) Judge Normal when the response time (diagnostic value) is smaller than threshold (judgment value) when changing to lean since O<sub>2</sub> sensor voltage.

(2) A normal judging is not carried out.

### Judgment Value

Judge OK when the following standards value are completed.

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Change of the shortest time from rich (500 mV O <sub>2</sub> output) to lean (300 mV), when voltage decreases from 550 mV to 250 mV. | ≤ 0.698 seconds |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

Sub feedback control: Not allowed

## 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

## 10. ENABLE CONDITION

- Lean → Rich response diagnosis

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

| Secondary Parameters                      | Enable Conditions |
|---|-------------------|
| Battery voltage                           | > 10.9 V          |
| A/F main feedback control condition       | Completed         |
| Fuel cut on deceleration $\geq 6$ seconds | Experienced       |
| After fuel cut                            | $\geq 2$ seconds  |

## 11.GENERAL DRIVING CYCLE

Perform the diagnosis only once when fuel shut-off in deceleration after rapid acceleration. (Pay attention to oxygen sensor voltage for the timing of deceleration.)

## 12.DIAGNOSTIC METHOD

When the oxygen sensor output voltage changes from 0.25 V (lean) to 0.55 V (rich), calculate the Min. value of response time regarded as judgment value while the output varies from 0.3 V to 0.5 V.

### • Abnormality Judgment

(1) Judge NG when the judgment value is larger than the threshold value after recovery of fuel shut-off in deceleration.

Response time (Diagnosis value) > Threshold value → Abnormal

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

(2) Judge NG when the O<sub>2</sub> sensor voltage after recovery of fuel shut-off in deceleration is small.

## Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Shortest time change from lean (300 mV O <sub>2</sub> output) to rich (500 mV) if voltage reduces from 500 mV to 250 mV. | > 2 seconds     |
| Or longest time to change to 250 mV  | > 120 seconds   |

**Time Needed for Diagnosis:** Once

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## • Normality Judgement

(1) Judge Normal when the response time (diagnostic value) is smaller than threshold (judgment value) when changing to lean since O<sub>2</sub> sensor voltage.

Response Time (diagnosis value) ≤ Threshold value → Normal

(2) A normal judging is not carried out.

## Judgment Value

Judge OK when the following standards value are completed.

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Change of the shortest time from rich (300 mV O <sub>2</sub> output) to lean (500 mV), when voltage decreases from 550 mV to 250 mV. | ≤ 2 seconds     |

## 13.DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 14.MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 15.FAIL SAFE

Sub feedback control: Not allowed

## 16.ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

| Malfunction Criteria                    | Threshold Value |
|---|-----------------|
| $fsobd = (sglmd - tglmda) + faf + flaf$ | $\geq -20\%$    |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When OK with similar drive in 3 drive cycles.
- When "Clear Memory" was performed

### 7. FAIL SAFE

Rich side malfunction

- Purge control solenoid valve control: Not allowed to purge.
- Heavy fuel judgment control: Not allowed to carry out the heavy judgment.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### AG:DTC P0181 FUEL TEMPERATURE SENSOR "A" CIRCUIT RANGE/PERFORMANCE

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel temperature sensor output property. Perform the diagnosis in two methods; namely, drift diagnosis and stuck diagnosis. Judge NG when either of them results in NG, and judge OK when both of them result in OK.

##### • Drift Diagnosis

Normally fuel temperature is lower than engine coolant temperature. When the fuel temperature becomes higher than the engine coolant temperature, the range is considered to be shifted, and make an NG judgment.

#### 2. COMPONENT DESCRIPTION

(A) Resistance value ( $\Omega$ )

(B) Fuel temperature  $^{\circ}\text{C}$  ( $^{\circ}\text{F}$ )

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 120 seconds.

### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| Fuel level   | $\geq 10 \text{ } \varnothing$ (2.64 US gal, 2.20 Imp gal) |
| After engine starting  | 20 seconds or more   |
| Engine coolant temperature – engine coolant temperature at engine starting | $> 10^{\circ}\text{C}$ (50°F)                              |
| Fuel temperature – engine coolant temperature                              | $\geq 10^{\circ}\text{C}$ (50°F)                           |
| Battery voltage  | $> 10.9 \text{ V}$   |

**Time Needed for Diagnosis:** 120 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| Fuel level   | $\geq 10 \text{ } \varnothing$ (2.64 US gal, 2.20 Imp gal) |
| After engine starting  | 20 seconds or more   |
| Engine coolant temperature – engine coolant temperature at engine starting | $> 10^{\circ}\text{C}$ (50°F)                              |
| Fuel temperature – engine coolant temperature                              | $< 10^{\circ}\text{C}$ (50°F)                              |
| Battery voltage  | $> 10.9 \text{ V}$   |

### • Stuck Diagnosis

If the fuel temperature which might rise along with the engine idling (the cumulative amount of intake air after engine starting is large) does not increase, the engine is considered to be stuck and make an NG judgment.

## 6. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions  |
|-----------------------|--------------------|
| After engine starting | 20 seconds or more |
| Battery voltage       | $> 10.9 \text{ V}$ |

## 7. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 20 seconds or more after starting the engine.

## 8. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria                              | Threshold Value                    |
|---|------------------------------------|
| Accumulated amount of intake air                  | $\geq 550 \text{ kg}$ (1,212.5 lb) |
| Fuel temperature difference between Max. and Min. | $< 3^{\circ}\text{C}$ (37.4°F)     |

**Time Needed for Diagnosis:** To be determined.

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                              | Threshold Value                                     |
|---|---|
| Accumulated amount of intake air                  | $\geq 550$ kg (1,212.5 lb)                          |
| Fuel temperature difference between Max. and Min. | $\geq 3^{\circ}\text{C}$ (37.4 $^{\circ}\text{F}$ ) |

### 9. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 10.MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 11.FAIL SAFE

None

### 12.ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## AH:DTC P0182 FUEL TEMPERATURE SENSOR “A” CIRCUIT LOW INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of fuel temperature sensor. Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-01700

- (A) Resistance value ( $\Omega$ )
- (B) Fuel temperature  $^{\circ}\text{C}$  ( $^{\circ}\text{F}$ )

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value       |
|----------------------|-----------------------|
| Output voltage       | $< 0.1646 \text{ V}$  |
| Battery voltage      | $\geq 10.9 \text{ V}$ |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value         |
|----------------------|-------------------------|
| Output voltage       | $\geq 0.1646 \text{ V}$ |
| Battery voltage      | $\geq 10.9 \text{ V}$   |

## AJ:DTC P0222 THROTTLE/PEDAL POSITION SENSOR/SWITCH “B” CIRCUIT LOW INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 2.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

- (1) Throttle position sensor 1 signal
- (2) Throttle position sensor 2 signal
- (3) Throttle position sensor
- (4) Engine control module (ECM)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | ≤ 0.749 V       |

**Time Needed for Diagnosis:** 24 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### **7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION**

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### **8. FAIL SAFE**

Stop power distribution to electronic throttle control motor. (Throttle opening is fixed to 6°.)

### **9. ECM OPERATION AT DTC SETTING**

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

## AK:DTC P0223 THROTTLE/PEDAL POSITION SENSOR/SWITCH “B” CIRCUIT HIGH INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of throttle position sensor 2.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-01859

- (1) Throttle position sensor 1 signal
- (2) Throttle position sensor 2 signal
- (3) Throttle position sensor
- (4) Engine control module (ECM)

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | $\geq 4.747$ V  |

**Time Needed for Diagnosis:** 24 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

Stop power distribution to electronic throttle control motor. (Throttle opening is fixed to 6°.)

### 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AL:DTC P0230 FUEL PUMP PRIMARY CIRCUIT

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel pump control unit. Judge NG when the NG signal is sent through a diagnostic line coming from the fuel pump control unit. Fuel pump control unit detects the open or short circuit malfunction for each line, and then sends NG signals if one of them is found NG.

### 2. COMPONENT DESCRIPTION

- (1) Engine control module (ECM)
- (2) Fuel pump control unit
- (3) Fuel pump
- (4) Battery

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds.

#### Judgment Value

| Malfunction Criteria                           | Threshold Value                  |
|--|----------------------------------|
| Battery voltage                                | ≥ 8 V                            |
| After engine starting                          | 180 seconds or more              |
| Fuel pump control                              | ON                               |
| Fuel pump control unit output diagnosis signal | Low                              |
| Fuel level                                     | ≥ 10 ℓ (2.6 US gal, 2.2 Imp gal) |

**Time Needed for Diagnosis:** 2.5 seconds

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

• **Normality Judgment**

Judge OK and clear the NG when the malfunction criteria below are completed.

**Judgment Value**

| Malfunction Criteria                           | Threshold Value    |
|--|--------------------|
| Battery voltage                                | $\geq 8$ V         |
| After engine starting                          | 30 seconds or more |
| Fuel pump control                              | ON                 |
| Fuel pump control unit output diagnosis signal | High               |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

OFF setting may be needed depending on the NG portion.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## AM:DTC P0244 TURBO/SUPER CHARGER WASTEGATE SOLENOID “A” RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of wastegate control solenoid valve function. Judge NG when becoming high wastegate pressure.

### 2. COMPONENT DESCRIPTION

EN-01772

(1) Coil

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AP:DTC P0301 CYLINDER 1 MISFIRE DETECTED

### 1. OUTLINE OF DIAGNOSIS

Detect whether the misfire occurred or not. (Revolution fluctuation method) Monitoring the misfire which influences exhaust deterioration (1.5 times of FTP) and catalyst damage is made obligatory by the law. Misfire affecting these two has three patterns below.

- Intermittent misfire (The same cylinder misfires in random, or different cylinders misfire in random.): FTP 1.5 times misfire
- Every time misfire (The same cylinder misfires every time.): FTP 1.5 times misfire, Catalyst damage misfire

The following detecting methods are adopted for these detection.

1) Intermittent misfire: FTP 1.5 times misfire

- 180° Interval Difference Method (MT: 1,800 rpm or less; AT: None)
- 360° Interval Difference Method (whole range)
- 720° Interval Difference Method (3,000 rpm or less)

2) Every time misfire: FTP 1.5 times misfire, Catalyst damage misfire

- 360° Interval Difference Method

### 2. ENABLE CONDITION

| Secondary Parameters                                   | Enable Conditions                 |
|--|-----------------------------------|
| Intake manifold pressure change during 0.5 engine rev. | < 16.0 kPa (120 mmHg, 4.72 inHg)  |
| Engine speed change                                    | < 500 rpm/32 milliseconds         |
| Throttle position change during 16 milliseconds        | < 10°                             |
| Fuel shut-off function                                 | Not operating                     |
| Atmospheric pressure                                   | ≥ 75.1 kPa (563 mmHg, 22.2 inHg)  |
| Fuel level   | ≥ 9 ℓ (2.38 US gal, 1.98 Imp gal) |
| Evaporative system leak check                          | Not in operation                  |
| Engine speed   | 500 — 7,000 rpm                   |
| Intake manifold pressure                               | > Map 3                           |
| Battery voltage  | ≥ 8 V                             |

### 3. GENERAL DRIVING CYCLE

- Detecting misfire is able to be carried out in the condition between idling and high revolution; however, idling condition is better for detecting misfire from the viewpoint of engine load and damage.
- Perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 4. DIAGNOSTIC METHOD

- (A) Engine control module (ECM)
- (B) Diagnosis circuit
- (C) Crankshaft position sensor

When the misfire occurred, the engine speed is decreased and the crankshaft position speed will change. Calculate the interval difference value (diagnostic value) from crankshaft position speed by the following formula, and judge whether the misfire occurs or not comparing the calculated result with judgment value. Counting the number of misfire up, and if the misfire ratio is higher during 1,000 rev. or 200 rev., judge NG for the corresponding cylinder.

Calculate the diagnostic value (from crankshaft position speed)

- Misfire detection every single ignition (Compare diagnostic value with judgment value)
  - 180° Interval Difference Method
  - 360° Interval Difference Method
  - 720° Interval Difference Method

- NG judgment (Judge misfire occurrence required by the law) (Compare number of misfire with judgment)
  - FTP1.5 times misfire NG judgment
  - Catalyst damage misfire NG judgment

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

As the following figure, pick out a random cylinder as the standard and name it  $\omega_0$ . And the former crankshaft position speed is named  $\omega_1$ , the second former crankshaft position speed is named  $\omega_2$ , the third is named  $\omega_3$ , and the following is the same.

EN-01774

- (A) Ignition order
- (B) Crankshaft position speed

## • 180° Interval Difference Method

$$\text{Diagnosis value } \text{domg } 180 = (\omega_{-1} \omega_0) - (\omega_7 - \omega_1)/6$$

Judge misfire occurs in the following cases.

- $\text{domg } 180 > \text{judgment value of positive side}$
- $\text{domg } 180 \leq \text{judgment value of negative side}$   
(judgment value before 180°CA)

EN-01775

- (A) Threshold value (Judgment value of positive side)
- (B) Threshold value (Judgment value of negative side)
- (C) Judged as misfire

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### • 360° Interval Difference Method

Diagnosis value  $\text{domg } 360 = (\text{omg } 1 - \text{omg } 0) - (\text{omg } 4 - \text{omg } 3)$

Misfire judgment  $\text{domg } 360 > \text{judgment value} \rightarrow \text{Misfire occurs}$

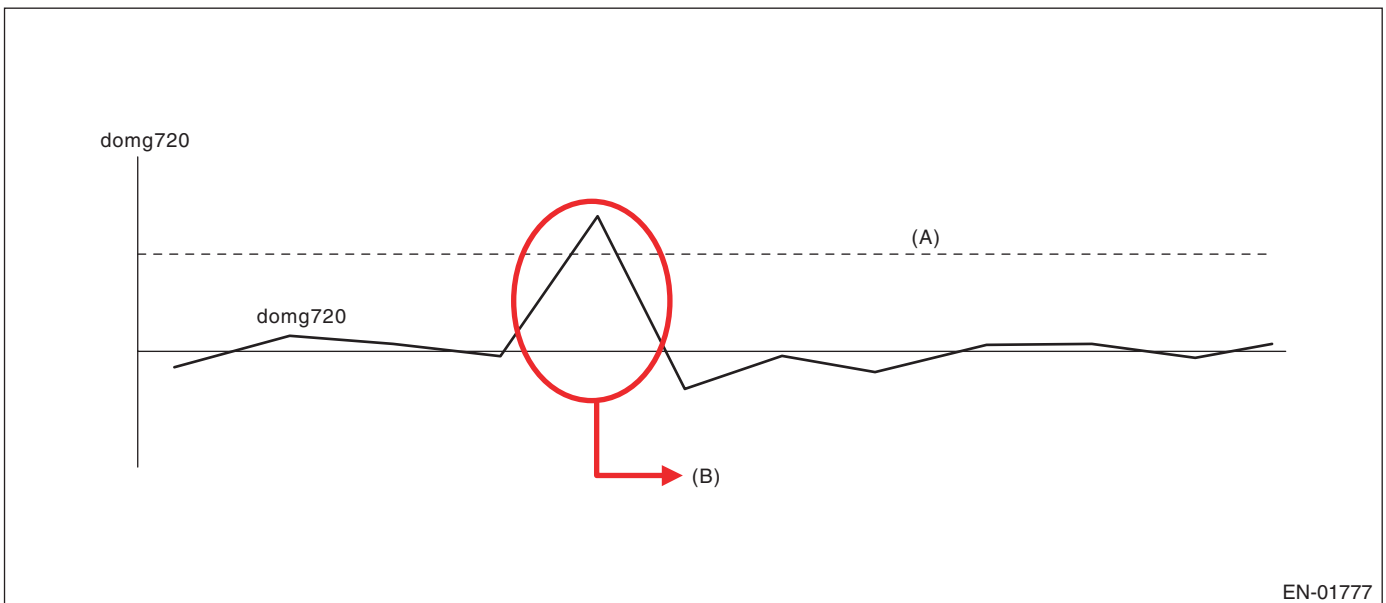

- (A) Threshold value
- (B) Judged as misfire

### • 720° Interval Difference Method

Diagnosis value  $\text{domg } 720 = (\text{omg } 1 - \text{omg } 0) - (\text{omg } 7 - \text{omg } 6)$

Misfire judgment  $\text{domg } 720 > \text{judgment value} \rightarrow \text{Misfire occurs}$

- (A) Threshold value
- (B) Judged as misfire

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

- FTP 1.5 times misfire (Misfire occurrence level affecting exhaust gas)

**Judgment Value (Judge that malfunction occurs when the misfire ratio is high in 1,000 engine revs.)**

| Malfunction Criteria        | Threshold Value       |
|-----------------------------|-----------------------|
| FTP emission judgment value | > 1.0% in 1,000 revs. |

**Time Needed for Diagnosis:** 1,000 engine revs.

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

- Catalyst damage misfire (Misfire occurrence level damaging catalyst)

**Judgment Value (Judge that malfunction occurs when the misfire ratio is high in 200 engine revs. (400 ignitions))**

| Malfunction Criteria                   | Threshold Value |
|--|-----------------|
| Catalyst damage misfire judgment value | See Map 1       |

**Map 1 Fault criteria threshold for misfire which would result in catalyst damage**

| Percentage         | Intake air (g/rev.) |      |      |      |      |      |      |      |      |      |     |     |     |
|--------------------|---------------------|------|------|------|------|------|------|------|------|------|-----|-----|-----|

| 7000               | —                   | 15.0 | 9.5  | 9.0  | 7.5  | 6.5  | 5.0  | 5.0  | 5.0  | 5.0  | —   | —   |     |

EN-03266

These figures mean the misfire ratio (%) in 400 ignitions; for example, 22.5 (%) means 400 (ignition) × 22.5 (%) = 90 (ignition) or more, so this case is judged misfire.

**Time Needed for Diagnosis:** 200 engine revs.

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 7. FAIL SAFE

None

## Diagnostic Trouble Code (DTC) Detecting Criteria

### GENERAL DESCRIPTION

---

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

#### **AQ:DTC P0302 CYLINDER 2 MISFIRE DETECTED**

For the diagnostic procedure, refer to DTC P0301. <Ref. to GD(STI)-97, DTC P0301 CYLINDER 1 MISFIRE DETECTED, Diagnostic Trouble Code (DTC) Detecting Criteria.>

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AT:DTC P0327 KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the knock sensor. Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

- (1) Case
- (2) Weight
- (3) Piezoelectric element
- (4) Nut
- (5) Resistance

(A) To knock sensor harness

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | < 0.238 V       |
| Ignition switch      | ON              |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\geq 0.238$ V  |
| Ignition switch      | ON              |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Knock compensation:

- Knock compensation final timing advance and retard value = knock compensation + whole learning compensation value + partial learning compensation value.
- At normal: knock compensation =  $0^{\circ}\text{CA}$  is fixed.
- At trouble: knock compensation =  $-5^{\circ}\text{CA}$ . (Retard  $5^{\circ}\text{CA}$ .)
- Not allowed to update the whole learning compensation factor.
- Not allowed to calculate the partial learning zone compensation value.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AU:DTC P0328 KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the knock sensor. Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

- (1) Case
- (2) Weight
- (3) Piezoelectric element
- (4) Nut
- (5) Resistance

(A) To knock sensor harness

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 1 second.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | $\geq 4.714$ V  |
| Ignition switch      | ON              |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Output voltage       | < 4.714 V       |
| Ignition switch      | ON              |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Knock compensation:

- Knock compensation final timing advance and retard value = knock compensation + whole learning compensation value + partial learning compensation value.
- At normal: knock compensation = 0°CA is fixed.
- At trouble: knock compensation = -5°CA. (Retard 5°CA.)
- Not allowed to update the whole learning compensation factor.
- Not allowed to calculate the partial learning zone compensation value.

## GENERAL DESCRIPTION

---

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria              | Threshold Value   |
|-----------------------------------|-------------------|
| Starter switch                    | ON                |
| Crankshaft position sensor signal | Not detected      |
| Battery voltage                   | $\geq 8\text{ V}$ |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### • Normality Judgment

Judge OK when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria              | Threshold Value   |
|-----------------------------------|-------------------|
| Crankshaft position sensor signal | Input exists      |
| Battery voltage                   | $\geq 8\text{ V}$ |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

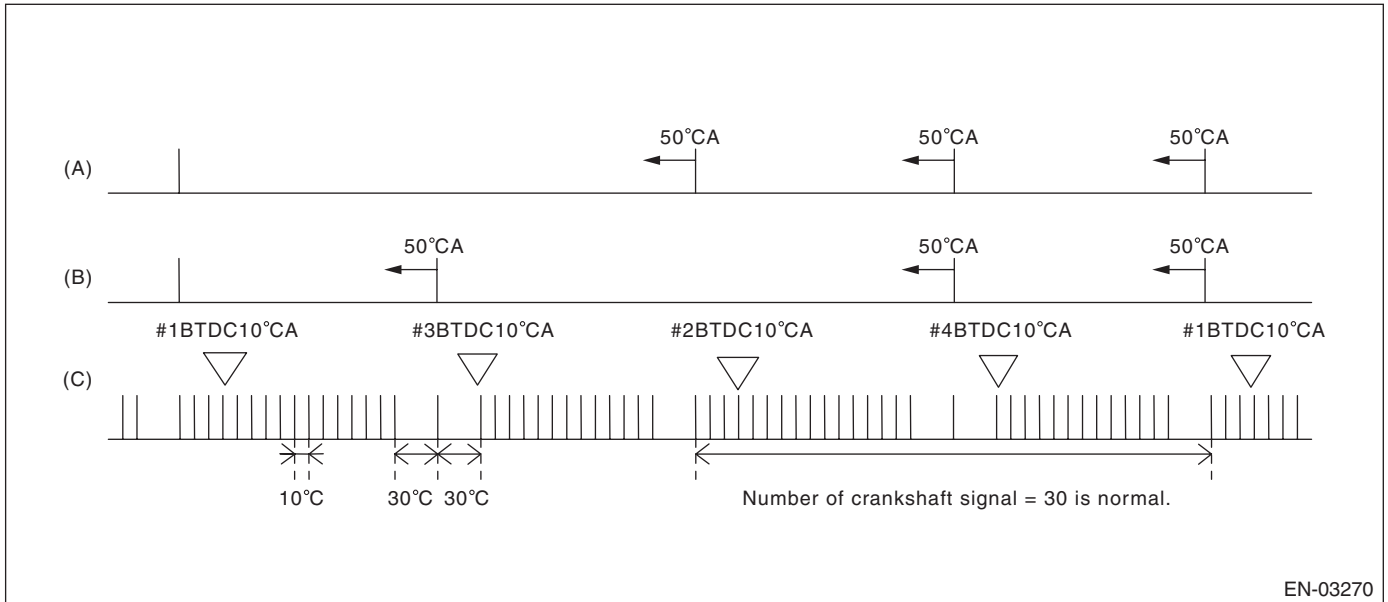

Memorize the freeze frame data. (For test mode \$02)

## AW:DTC P0336 CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of crankshaft position sensor output property. Judge NG when the number of crankshaft signal every 1 revolution becomes abnormal.

### 2. COMPONENT DESCRIPTION

- (A) Camshaft signal RH
- (B) Camshaft signal LH
- (C) Crankshaft signal

- (1) Crankshaft position sensor
- (2) Crank sprocket
- (3) Crankshaft half-turn

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions     |
|----------------------|-----------------------|
| Battery voltage      | $\geq 8 \text{ V}$    |
| Engine speed         | $< 3,000 \text{ rpm}$ |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously under 3,000 rpm engine speed.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when all the malfunction criteria below are completed more than 10 times in a row.

#### Judgment Value

| Malfunction Criteria                        | Threshold Value |
|---|-----------------|
| Cylinder number distinction                 | Completed       |
| Amount of crank sensor signal during 1 rev. | Not = 30        |

**Time Needed for Diagnosis:** 10 engine revs.

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                        | Threshold Value |
|---|-----------------|
| Cylinder number distinction                 | Completed       |
| Amount of crank sensor signal during 1 rev. | = 30            |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

# Diagnostic Trouble Code (DTC) Detecting Criteria

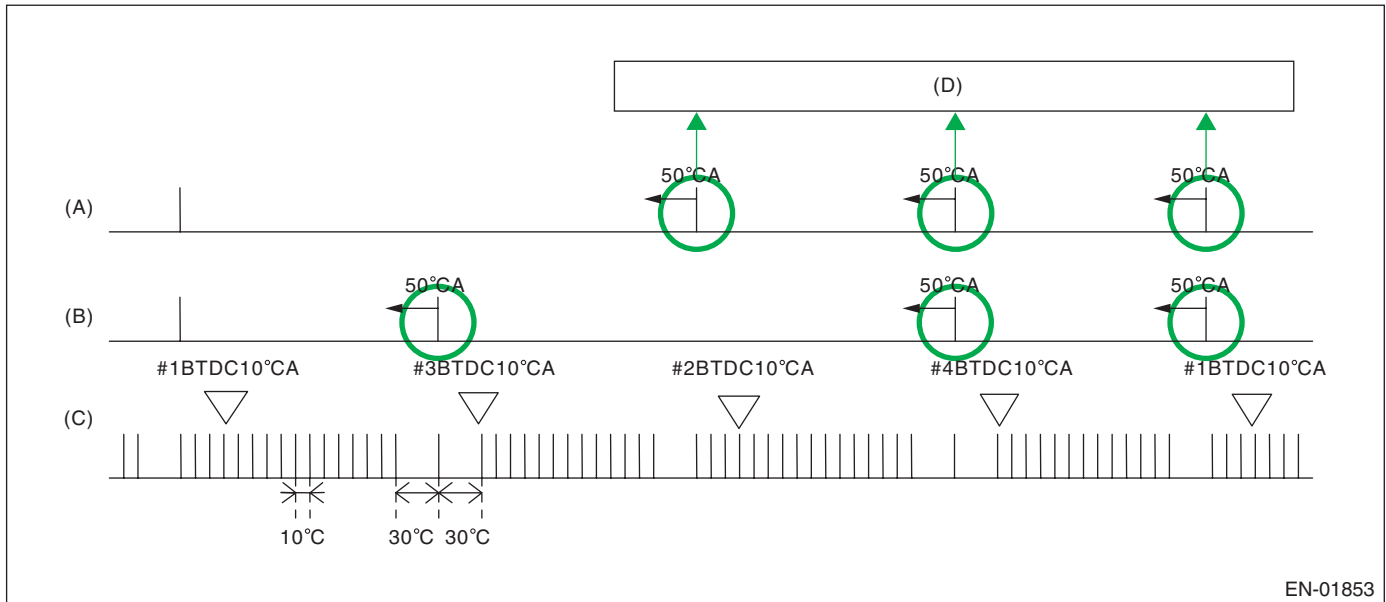

GENERAL DESCRIPTION

## AX:DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 1 OR SINGLE SENSOR)

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of camshaft position sensor. Judge NG when the number of camshaft signal remains to be abnormal.

### 2. COMPONENT DESCRIPTION

- (A) Camshaft signal RH
- (B) Camshaft signal LH
- (C) Crankshaft signal

- (D) Number of camshaft signal = 3 is normal at two engine revolution.

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Voltage              | ≥ 8 V             |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment 1

The camshaft signal normally enters three times by two rev. of engine speed; however, judge NG when the camshaft signal does not enter three times continuously.

Judge NG when the malfunction criteria below are completed more than 100 rev. of engine speed. Judge OK and clear NG when the malfunction criteria below are not completed.

#### Judgment Value

| Malfunction Criteria                                    | Threshold Value |
|---|-----------------|
| Number of camshaft position sensor signal during 2 rev. | Except 3        |

**Time Needed for Diagnosis:** 100 rev.

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### • Abnormality Judgment 2

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria  | Threshold Value |
|-----------------------|-----------------|
| Starter switch        | ON              |
| Camshaft angle signal | None            |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria  | Threshold Value |
|-----------------------|-----------------|

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

- Ignition timing whole learning compensation:
  - Enter the initial value (whole learning compensation factor = 0.5, Variable amount of whole learning compensation factor = 0.25) to the whole learning compensation factor and variable amount of whole learning compensation factor when IG OFF, and then make the whole learning incomplete.
  - Enter the initial value (whole learning compensation factor = 0.5, Variable amount of whole learning compensation factor = 0.25) to the whole learning compensation factor and variable amount of whole learning compensation factor when making a normality judgment from abnormality judgment, and then make the whole learning incomplete.
- Ignition timing partial learning compensation:
  - Enter the initial value (0°CA) to the compensation value of partial learning zone when IG OFF.
  - Enter the initial value (0°CA) to the compensation value of partial learning zone when making a normality judgment from abnormality judgment.
- AVCS control: Most timing retard learning is not complete or most timing retard learning completion is not experienced.
- ISC feedback compensation: Do not perform the AVCS actual timing advance compensation. Make the OCV driving Duty to be the given value (9.36%).

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## AY:DTC P0345 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 2)

### 1. OUTLINE OF DIAGNOSIS

For diagnostic procedure, refer to DTC P0340. <Ref. to GD(STI)-111, DTC P0340 CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 1 OR SINGLE SENSOR), Diagnostic Trouble Code (DTC) Detecting Criteria.>

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## AZ:DTC P0420 CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Detect the deterioration of catalyst function.

Though the rear oxygen sensor output would change slowly with a new catalyst, the sensor output with a deteriorated catalyst becomes high and the inversion time is shortened. For this reason, the catalyst diagnosis is carried out by monitoring the rear oxygen sensor output and comparing it with the front A/F sensor output.

### 2. COMPONENT DESCRIPTION

EN-01713

- (1) Front oxygen (A/F) sensor
- (2) Rear oxygen sensor
- (3) Catalyst

- (A) Normal
- (B) Deterioration
- (C) Front oxygen (A/F) sensor waveform
- (D) Rear oxygen sensor waveform

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis once at the constant vehicle speed from 80 to 100 km/h (49.7 to 62.1 MPH).

### 5. DIAGNOSTIC METHOD

After the malfunction criteria are completed, calculate the output fluctuation value of front oxygen (A/F) sensor and output fluctuation value of rear oxygen sensor.

Calculate the diagnosis value when the front oxygen (A/F) sensor output fluctuation value more than specified value.

Regard the A/F response properties and diagnosis value as parameters for judgment value.

Judge NG when the malfunction criteria below are completed, and judge OK when they are not completed.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Accumulated variation of output voltage of rear oxygen sensor per 32 milliseconds $\times$ 4 divided by accumulated variation of lambda of front oxygen (A/F) sensor per 32 milliseconds $\times$ 4 | $\geq$ Map 3    |

## Map 3

|                 |      |       |       |       |       |
|-----------------|------|-------|-------|-------|-------|
| Diagnosis value | 0.1  | 0.162 | 0.214 | 0.266 | 0.318 |
| Judgment value  | 4.51 | 4.51  | 10.45 | 16.39 | 22.34 |

**Time Needed for Diagnosis:** 55 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### BA:DTC P0442 EVAPORATIVE EMISSION CONTROL SYSTEM LEAK DETECTED (SMALL LEAK)

#### 1. OUTLINE OF DIAGNOSIS

Perform the diagnosis of leakage of fuels system and valve functions.

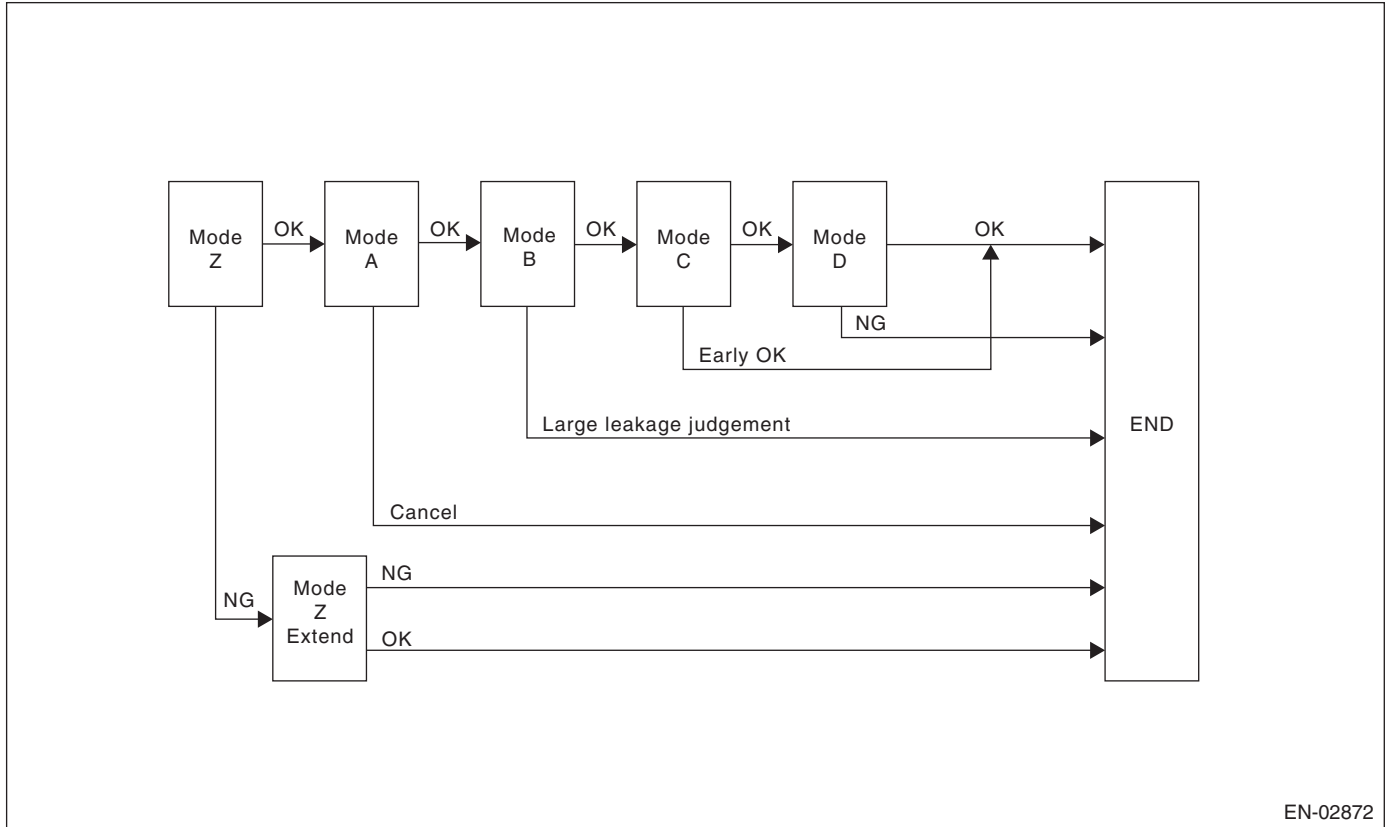

- |      |                                 |      |  |
|------|---------------------------------|------|--|
| (1)  | Purge control solenoid valve    | (14) | Fuel temperature sensor                |
| (2)  | Purge valve                     | (15) | Fuel level sensor                      |
| (3)  | Pressure regulator              | (16) | Fuel pump                              |
| (4)  | Throttle body                   | (17) | Jet pump                               |
| (5)  | Fuel filter                     | (18) | Fuel cut valve                         |
| (6)  | Intake manifold                 | (19) | Fuel sub level sensor                  |
| (7)  | Engine control module (ECM)     | (20) | Fuel tank                              |
| (8)  | Canister                        | (21) | Fuel tank pressure sensor              |
| (9)  | Pressure control solenoid valve | (22) | Fuel meter                             |
| (10) | Drain valve                     | (23) | Combination meter                      |
| (11) | Drain filter                    | (24) | Fuel injector                          |
| (12) | Shut-off valve                  | (25) | Tank pressure switching solenoid valve |
| (13) | Vent valve                      |      |  |

In this system diagnosis, checking for leakage and valve function is conducted by changing the fuel tank pressure and monitoring the pressure change using the fuel tank pressure sensor. 0.04 inch diagnosis is performed in the order of mode Z, mode A, mode B, mode C, mode D and mode E, and 0.02 inch diagnosis is performed in the order of mode Y, mode A, mode B, mode C, mode D and mode E.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 2. COMPONENT DESCRIPTION

#### • Pressure Control Solenoid Valve

PCV controls the fuel tank pressure to be equal to the atmospheric air pressure.

Normally, the solenoid is set to OFF. And the valve opens and closes mechanically in accordance with the pressure difference between tank and atmospheric air, or tank and canister.

The solenoid which is set to ON forces to open the valve.

EN-01715

- (1) Solenoid
- (2) Diaphragm
- (3) Valve
- (4) Spring

- (a) Atmospheric pressure
- (b) Fuel tank
- (c) Canister

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Valve Operation and Air Flow

In the figure below, divided by the diaphragm, the part above X is charged with atmospheric air pressure, and the part below X is charged with tank pressure. Also, the part above Y is charged with tank pressure, and the part below Y is charged with canister pressure.

If the atmospheric air pressure port is A, tank pressure port is B, and canister pressure port is C, the air flows according to pressure difference from each port as shown in the table below.

- (a) Atmospheric pressure
- (b) Fuel tank
- (c) Canister

| Condition of pressure  | Flow                  |
|------------------------|-----------------------|
| $A < B$ (solenoid OFF) | $B \rightarrow C$     |
| $B < C$ (solenoid OFF) | $C \rightarrow B$     |
| Solenoid ON            | $B \leftrightarrow C$ |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### • When $A < B$ (Solenoid OFF)

- (a) Atmospheric pressure
- (b) Fuel tank
- (c) Canister

### • When $B < C$ (Solenoid OFF)

- (1) Valve
- (a) Atmospheric pressure

- (c) Canister

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • When Solenoid is ON

- (a) Atmospheric pressure
- (b) Fuel tank
- (c) Canister

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### • CCV

CCV controls the ambient air to be introduced to the canister.

EN-01720

- (A) Open (Solenoid OFF)
- (B) Close (Solenoid ON)
- (C) Filter
- (D) Canister

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Tank Pressure Switching Solenoid

One of the atmospheric pressure switching solenoid valves is connected to fuel tank pressure sensor and the other is released to atmosphere. The passage to fuel tank pressure sensor is usually released to atmosphere because the solenoid is set to OFF, but the solenoid which is set to ON closes the passage open to atmosphere.

- (A) Fuel tank pressure sensor
- (B) Atmosphere

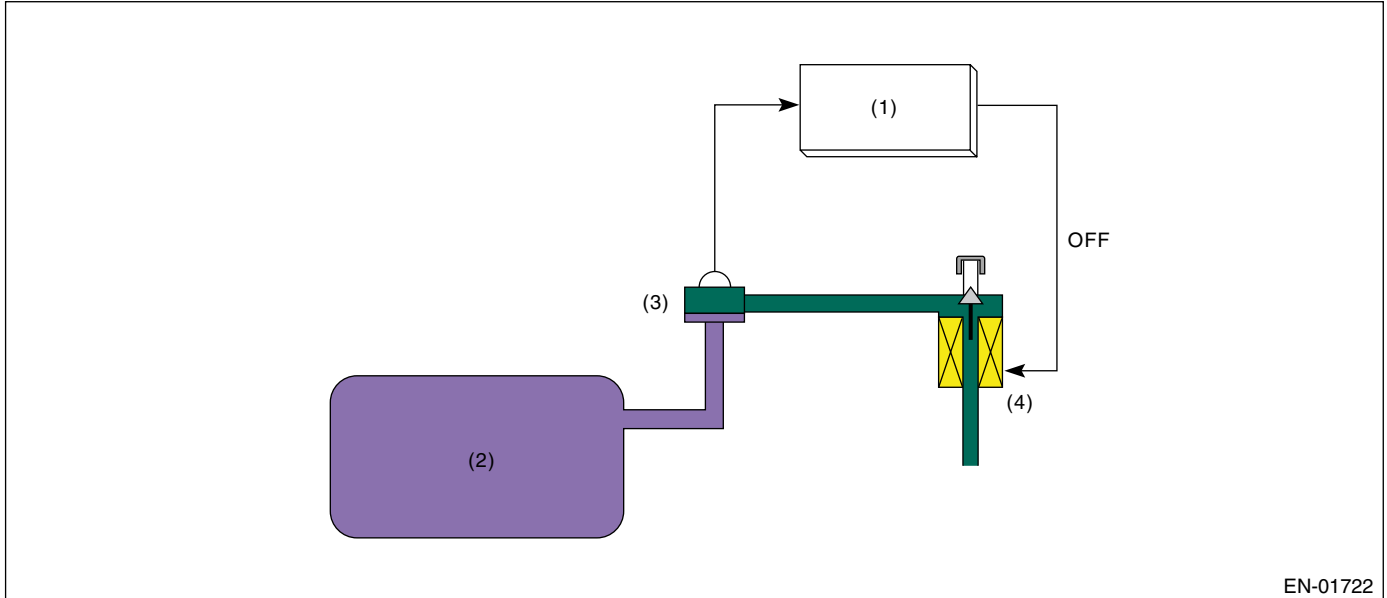

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### • Purpose of this solenoid

Fuel tank pressure sensor detects the difference between the atmospheric air pressure and the tank pressure and the ECM monitors the pressure difference.

Even if the tank pressure is constant, the atmospheric air pressure varies depending on the driving height, and the pressure signal transmitted to ECM will change.

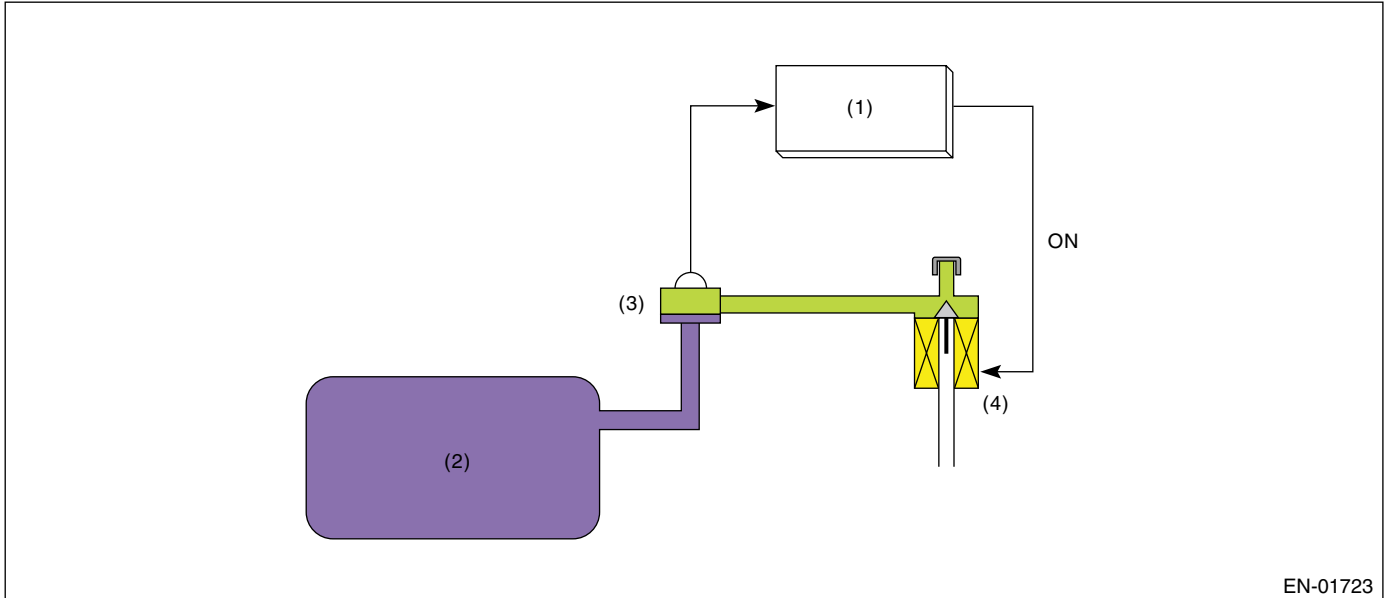

- (1) Engine control module (ECM)
- (2) Fuel tank
- (3) Fuel tank pressure sensor
- (4) Atmospheric pressure switching solenoid

EN-01722

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

Especially, in the small leakage [0.5 mm (0.02 in)], minute change in the tank pressure has to be detected. This diagnosis period is long (approx. 29 seconds). And if the driving height changes during the diagnosis, the atmospheric air pressure changes. In this case, it becomes difficult to precisely detect the tank pressure variation, causing erroneous diagnosis. Therefore, using the atmospheric pressure switching solenoid, atmospheric air is sealed between the fuel tank pressure sensor and atmospheric pressure switching solenoid, maintaining the air pressure constant and enabling the detection of minute variation of tank pressure.

- (1) Engine control module (ECM)
- (2) Fuel tank
- (3) Fuel tank pressure sensor
- (4) Atmospheric pressure switching solenoid

## NOTE:

ECM also has the atmospheric air pressure sensor, and always monitors atmospheric air. However, as the monitoring range is large, that is, 53 to 107 kPa (400 to 800 mmHg, 16 to 32 inHg) it is not suitable for detection of minute pressure variation.

In the case of small leakage diagnosis, the tank pressure variation is very small, that is, 0.13 to 0.27 kPa (1 to 2 mmHg, 0.04 to 0.08 inHg) and the fuel tank pressure sensor is equipped.

# Diagnostic Trouble Code (DTC) Detecting Criteria

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 4. GENERAL DRIVING CYCLE

#### • 0.04-inch Diagnosis

- Perform the diagnosis only once in more than 856 seconds after the engine start at the constant driving speed of 32 km/h (20 MPH) or more.
- Pay attention to the fuel temperature and fuel level.

#### • 0.02-inch Diagnosis

- Perform diagnosis in more than 335 seconds after engine start at the constant speed of 68 km/h (42 MPH) or more, and then terminate the diagnosis when judged OK or NG.
- If not judged OK or NG, repeat the diagnosis until judged OK or NG.
- Pay attention to the fuel temperature and fuel level.

### 5. DIAGNOSTIC METHOD

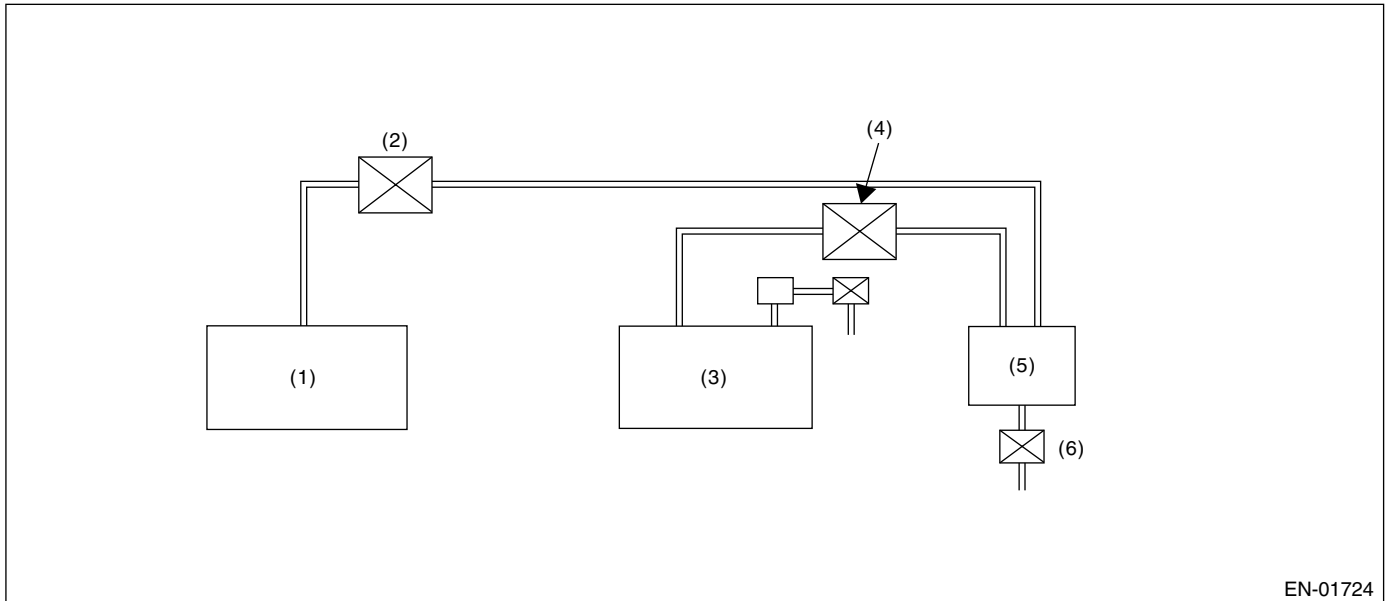

#### • MODE Z (Purge control solenoid valve open malfunction diagnosis)

DTC P0457

#### • Purpose of Mode Z

When performing the leakage diagnosis of EVAP system, CPC has to operate normally. Therefore, mode Z is used to diagnose the CPC open fixation.

If the CPC open fixation trouble is detected, the EVAP system leakage diagnosis is cancelled.

- (1) Engine
- (2) Purge control solenoid valve open
- (3) Fuel tank

- (4) Pressure control solenoid valve close
- (5) Canister
- (6) CCV stuck close

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

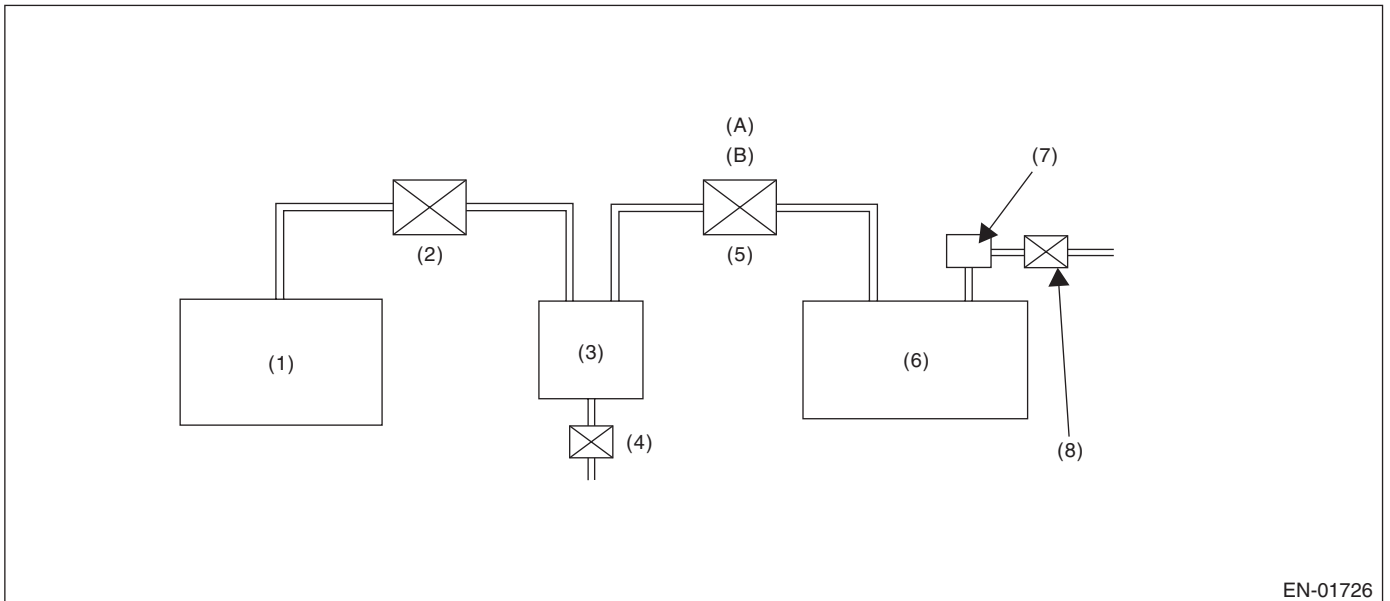

EN-01725

- (A) To fuel tank
- (B) To canister (Negative pressure)
- (C) Solenoid ON
- (D) Valve cannot be open.
- (E) Negative pressure

## • Diagnostic method

CPC open fixation diagnosis is performed in mode Z as shown in the figure below.

EN-01726

- |                                  |  |
|----------------------------------|--|
| (1) Engine                       | (5) Pressure control solenoid valve        |
| (2) Purge control solenoid valve | (6) Fuel tank                              |
| (3) Canister                     | (7) Fuel tank pressure sensor              |
| (4) Drain valve                  | (8) Tank pressure switching solenoid valve |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### • Normal Operation

EN-01873

- $evptez - evptezha \leq 0.4 \text{ kPa (3.0 mmHg, 0.12 inHg)}$
  - $evptezini - evptezha \leq 0.71 \text{ kPa (5.3 mmHg, 0.21 inHg)}$
- Judge normal when both of above calculations are completed.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Purge Control Solenoid Valve Open Fixation

- $evptez - evptezha > 0.6 \text{ kPa (4.5 mmHg, 0.18 inHg)}$
- $evptezini \leq 0.91 \text{ kPa (6.8 mmHg, 0.27 inHg)}$
- No fuel rolling of above 32(0.79 US gal, 0.67 Imp gal) for more than 35 seconds.

Judge normal when both of above calculations are completed.

### Normality Judgment

Judge OK and change to Mode A when the criteria below are completed in 3 seconds after Mode Z started.

### Judgment Value

| Malfunction Criteria   | Threshold Value                              | DTC   |
|--|--|-------|
| (Tank pressure when Mode Z started) – (Tank pressure when Mode Z finished) | $\leq 0.7 \text{ kPa (5.3 mmHg, 0.21 inHg)}$ | P0457 |

## • Diagnosing function of CPC [P0457]

CPC functional diagnosis is performed by monitoring the tank pressure in Mode Z.

### Normality Judgment

Make OK judgment in 3 seconds after Mode Z started, and change to Mode A if OK.

Both diagnostic method and judgment value are the same as PCV normality judgment.

### Abnormality Judgment

If OK judgment cannot be made, extend Mode Z 16 seconds more, and judge NG when all the criteria below are completed in 16 seconds.

### Judgment Value

| Malfunction Criteria  | Threshold Value                               | DTC   |
|---|---|-------|
| (Tank pressure in 1 second after Mode Z started) – (Tank pressure when Mode Z finished) | $> 0.6 \text{ kPa (4.5 mmHg, 0.18 inHg)}$     | P0457 |
| Tank pressure when Mode Z started   | $\leq 0.91 \text{ kPa (6.8 mmHg, 0.27 inHg)}$ |       |
| No fuel locking time  | $\geq 35 \text{ seconds}$                     |       |

**Time Needed for Diagnosis:** 16 seconds

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

Finish the Evap. diagnosis when making NG judgment for purge control solenoid valve open fixation.

Cancel the Evap. diagnosis when the OK/NG judgment for purge control solenoid valve open fixation cannot be made in Mode Z.

### • Leak Diagnosis

DTC P0442

DTC P0456

DTC P0457

### • Diagnostic method

- The diagnostic method consists of creating a sealed vacuum in the fuel tank and then determining the presence of leakage from the speed at which the tank internal pressure returns to atmospheric pressure.

- The diagnosis is divided into the following five phases.

#### Mode A; (Estimation of evaporation gas yield)

Calculate the tank pressure variation amount (P1). After calculating P1, change to Mode B.

#### Mode B; (Seal negative pressure)

Introduce the negative pressure in the intake manifold to the tank.

Approx. 0 → -1.4 kPa (0 → -10.5 mmHg, 0 → -0.41 inHg) (0.04-in diagnosis)

Approx. 0 → -3.05 kPa (0 → -22.9 mmHg, 0 → -0.9 inHg) (0.02-in diagnosis)

When the pressure above (desired negative pressure) is reached, Mode C is entered.

In this case, if the tank pressure does not become the desired negative pressure, judge that there is a large leakage in the system.

Judge NG when the malfunction criteria below is completed.

Finish the Evap. diagnosis when judging large leak (10 seconds or 25 seconds) in 0.04-inch diagnosis. Cancel the diagnosis (10 to 20 seconds) in 0.02-inch diagnosis.

#### Abnormality Judgment

Judge NG (large leak) when the criteria below are completed in the specified time.

#### Judgment Value

| Malfunction Criteria  | Threshold Value  | DTC   |
|---|--|-------|
| (0.04-inch diagnosis)<br>Time for reaching desired negative pressure<br>Or time for Mode B<br>(Min. value of tank pressure during Mode B) – (Tank pressure when Mode B started) | ≥ 25 seconds<br><br>≥ 10 seconds<br><br>< -0.5 kPa (-4 mmHg, -0.16 inHg) | P0457 |

#### Mode C; (Check increasing pressure)

Stop the introduction of negative pressure. (Wait until returning target pressure.)

When returning to target pressure, move to Mode D.

Judge immediate OK and change to Mode E when it does not return in spite of spending the specified time.

|                     | Target pressure                   | Time for immediate OK judgment |
|---------------------|-----------------------------------|--------------------------------|
| 0.04-inch diagnosis | -1.3 kPa (-9.75 mmHg, -0.38 inHg) | 15 seconds                     |
| 0.02-inch diagnosis | -3 kPa (-22.5 mmHg, -0.89 inHg)   | 20 seconds                     |

#### Mode D; (Measurement of negative pressure changes)

Monitor the tank pressure variation in Mode D. In this case, the tank pressure increases, that is, the pressure becomes as high as the atmospheric air pressure, because evaporator is generated. However, if any leakage exists, the pressure increases additionally in proportion to this leakage. The pressure variation of this tank is P2.

After calculating P2, perform small leak diagnosis and change to Mode E if normal. Complete Evap. diagnosis if abnormal.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • After Mode D

Assigning P1 and P2, which are tank variations measured in Mode A and Mode B, to the formula below, judge the small leakage of the system. If the measured judgment value exceeds the threshold value, it is judged to be malfunction.

## • 0.04-inch Diagnosis

### Abnormality Judgment

Judge NG when the criteria below are completed and judge OK when not completed.

### Judgment Value

| Malfunction Criteria  | Threshold Value  | DTC   |
|---|--|-------|
| P2 – 1.5 × P1<br>P2: Change of tank pressure within 16 seconds on Mode D<br>P1: Change of tank pressure within 16 seconds on Mode A | > Value on map 7.<br>*Threshold value: Figure (Fuel level vs Tank temperature) | P0442 |

\*1.5: Compensation value of the amount of evaporator occurrence. (Because evaporator increases more when becoming negative pressure.)

### Map 7 Limit of malfunction criteria for 0.04-inch leak as Evap. diagnosis.

| (4) | Fuel tank                    | (8) | Drain valve                             |

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### Time Needed for Diagnosis:

- 0.04-inch: 50 — 70 seconds
- 0.02-inch: 90 — 105 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous drive cycles.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 8. FAIL SAFE

Atmospheric purge solenoid function malfunction; Open the pressure control solenoid valve.

## 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

## BB:DTC P0447 EVAPORATIVE EMISSION CONTROL SYSTEM VENT CONTROL CIRCUIT OPEN

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of drain valve.

Judge NG when the ECM output level is different from the actual terminal level.

### 2. COMPONENT DESCRIPTION

- |                    |                  |
|--------------------|------------------|
| (1) Magnetic plate | (6) Valve        |
| (2) Yoke           | (7) Plate        |
| (3) Packing        | (8) Retainer     |
| (4) Spring         | (9) Movable core |
| (5) Valve seat     | (10) Bobbin      |

### 3. ENABLE CONDITION

|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds.

#### Judgment Value

| Malfunction Criteria                              | Threshold Value  |
|---|------------------|
| Ignition switch                                   | ON               |
| Battery voltage                                   | $\geq 10.9$ V    |
| After engine starting                             | 1 second or more |
| Terminal output voltage when ECM sends OFF signal | Low              |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                              | Threshold Value  |
|---|------------------|
| Ignition switch                                   | ON               |
| Battery voltage                                   | $\geq 10.9$ V    |
| After engine starting                             | 1 second or more |
| Terminal output voltage when ECM sends OFF signal | High             |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

PCV control: Open the PCV solenoid.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BD:DTC P0451 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR RANGE/PERFORMANCE

### 1. OUTLINE OF DIAGNOSIS

Detect the tank pressure sensor output property abnormality.

Judge NG when there is no pressure variation, which should exist in the tank, considering the engine status.

### 2. COMPONENT DESCRIPTION

- (1) Connector
- (2) Terminal

- (A) Output voltage
- (B) Input voltage
- (C) To fuel tank
- (D) To atmospheric pressure switching solenoid

### 3. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions                               |
|---------------------------|---|
| After starting the engine | 60 second or more                               |
| Fuel level                | $\geq 18 \text{ l}$ (4.76 US gal, 3.96 Imp gal) |
| Fuel temperature          | $< 35^{\circ}\text{C}$ ( $95^{\circ}\text{F}$ ) |
| Battery voltage           | $\geq 10.9 \text{ V}$                           |
| Atmospheric pressure      | $> 75.1 \text{ kPa}$ (563 mmHg, 22.2 inHg)      |
| Engine speed              | $< 6,500 \text{ rpm}$                           |

### 4. GENERAL DRIVING CYCLE

- Perform the diagnosis continuously in 60 seconds or more after starting the engine.
- Be sure to check the fuel level and fuel temperature.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value                    |
|--|------------------------------------|
| Number of times when the difference between the Max. fuel level and the Min. fuel level every 60 seconds is 2 ℓ (0.53 US gal, 0.44Imp gal) or more (with enable condition completed) | ≥ 16 times                         |
| Max. – Min. tank pressure (with enable condition completed)  | < 0.05 kPa (0.375 mmHg, 0.02 inHg) |
| Max. – Min. fuel temperature (with enable condition completed)   | ≥ 7°C (44.6 °F)                    |

If the fuel level (Max. – Min.) in every 60 seconds is less than 2 ℓ, extend 60 seconds more and make judgment with the Max. and Min. fuel level in 120 seconds.

If the difference did not appear though the time extended, extend the time (180, 240, 300 seconds) and continue the judgment.

Diagnosis counter will count up when the difference of fuel level (Max. – Min.) is more than 2 ℓ.

**Time Needed for Diagnosis:** 1 second × 16 times or more

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in two continuous drive cycles.

#### • Normality Judgment

Judge OK when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria      | Threshold Value                    |
|---------------------------|------------------------------------|
| Max. – Min. tank pressure | ≥ 0.05 kPa (0.375 mmHg, 0.02 inHg) |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 8. FAIL SAFE

Purge control solenoid valve control: Purge fixation mode is prohibited.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BE:DTC P0452 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR LOW INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the fuel tank pressure sensor.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-01732

- (1) Connector
- (2) Terminal

- (A) Output voltage
- (B) Input voltage
- (C) To fuel tank
- (D) To atmospheric pressure switching solenoid

### 3. ENABLE CONDITION (USED WITH HIGH SIDE NORMAL/ABNORMAL JUDGMENT)

| Secondary Parameters                        | Enable Conditions     |
|---|-----------------------|
| Continuous time of completing all condition | $\geq 5$ seconds      |
| Vehicle speed                               | $\geq 2$ km/h (1 MPH) |
| All conditions of EVAP canister purge       | Possible              |
| Learning value of EVAP conc. during purge   | $\leq 0.08$           |
| Feedback lambda coefficient                 | $\geq 0.9$            |
| Battery voltage                             | $\geq 10.9$ V         |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 15 seconds.

#### Judgment Value

| Malfunction Criteria        | Threshold Value                       |
|-----------------------------|---------------------------------------|
| Fuel tank pressure          | < -7.45 kPa (-55.85 mmHg, -2.20 inHg) |
| Feedback lambda coefficient | ≥ 0.9                                 |

**Time Needed for Diagnosis:** 15 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria        | Threshold Value                    |
|-----------------------------|------------------------------------|
| Fuel tank pressure          | ≥ -7.33 kPa (-55 mmHg, -2.17 inHg) |
| Feedback lambda coefficient | ≥ 0.9                              |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Purge control solenoid valve control: Purge fixation mode is prohibited.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BF:DTC P0453 EVAPORATIVE EMISSION CONTROL SYSTEM PRESSURE SENSOR HIGH INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the breaking/shortage of the fuel tank pressure sensor.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

EN-01732

- (1) Connector
- (2) Terminal

- (A) Output voltage
- (B) Input voltage
- (C) To fuel tank
- (D) To atmospheric pressure switching solenoid

### 3. ENABLE CONDITION

| Secondary Parameters                               | Enable Conditions        |
|--|--------------------------|
| Continuous time when all conditions are completed. | $\geq 5$ seconds         |
| Vehicle speed                                      | $\geq 2$ km/h (1.24 MPH) |
| All conditions of EVAP canister purge              | Complete                 |
| Evaporation gas density learning value             | $\leq 0.08$              |
| Main feedback compensation coefficient             | $\geq 0.9$               |
| Battery voltage                                    | $\geq 10.9$ V            |

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BN:DTC P0464 FUEL LEVEL SENSOR CIRCUIT INTERMITTENT

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of unstable output from fuel level sensor caused by noise.

Judge NG when the max. value and cumulative value of output voltage variation of fuel level sensor is larger than the threshold value.

### 2. ENABLE CONDITION

| Secondary Parameters           | Enable Conditions                                       |
|--------------------------------|---|
| Engine speed                   | ≥ 500 rpm   |
| After engine starting          | 1 second or more  |
| Ignition switch                | ON  |
| Battery voltage                | > 10.9 V  |
| Idle switch                    | ON  |
| Fuel level                     | 9 ↔ 51 ℓ (2.4 ↔<br>13.4 US gal, 1.98 ↔<br>11.2 Imp gal) |
| Vehicle speed = 0 km/h (0 MPH) | 10 seconds or more                                      |

### 3. GENERAL DRIVING CYCLE

- Perform the diagnosis continuously in idling condition.
- Pay attention to the fuel level.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 4. DIAGNOSTIC METHOD

Calculate the Max. value (delflmax) and cumulative value (sumfl) of output voltage variation of fuel level sensor during 12.3 seconds. Judge it normal when both max. and cumulative values are not over the threshold value. Otherwise, when either of them is over the threshold value, count the diagnosis counter up. And judge NG if the counter indicated 6 counts.

EN-01857

#### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Integrated times of the condition reaching follows,<br>$DELFLMAX \geq 0.2 \text{ V}$ or $SUMFL \geq 15 \text{ V}$<br>where,<br>DELFLMAX is Max. deviation of sensor output during 12.3 seconds.<br>SUMFL is integrated value of sensor output deviation during 12.3 seconds. | $\geq 4$ times  |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

Do not count the diagnosis counter up when the following conditions are completed during 12.3 seconds.

|  |                                    |
|--|------------------------------------|
| Max – Min of tank pressure during 12.3 seconds   | ≥ 0.05 kPa (0.375 mmHg, 0.02 inHg) |
| Max – Min of battery voltage during 12.3 seconds | ≥ 0.4 V                            |

**Time Needed for Diagnosis:** 12.3 seconds × 4 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

## Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| DELFLMAX   | < 0.2 V         |
| SUMFL  | < 15 V          |
| Where, DELFLMAX is Max. deviation of sensor output during 12.3 seconds.<br>SUMFL is integrated value of sensor output deviation during 12.3 seconds. |                 |

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 7. FAIL SAFE

None

## 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### BO:DTC P0483 COOLING FAN RATIONALITY CHECK

#### 1. OUTLINE OF DIAGNOSIS

Detect the function abnormality of the radiator fan.

Judge NG when the engine coolant temperature slowly decreases even when the radiator fan is rotating.

#### 2. ENABLE CONDITION

Diagnostic enable condition is completed if the radiator fan changes from OFF to ON when all of the conditions below are completed. When one of the conditions below is not completed, the diagnostic enable condition is not completed.

| Secondary Parameters | Enable Conditions  |
|----------------------|--------------------|
| Engine Speed         | 600 — 900 rpm      |
| Idle switch          | ON                 |
| Vehicle speed        | < 2 km/h (1.2 MPH) |
| Battery voltage      | ≥ 10.9 V           |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the radiator fan changes from OFF to ON when idling.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 5 minutes.

##### Judgment Value

| Malfunction Criteria   | Threshold Value                  |
|--|----------------------------------|
| Engine coolant temperature   | ≥ 96°C (204.8°F)                 |
| Engine coolant temperature sensor A/D value – Engine coolant temperature sensor A/D value Min. value (Min. value with radiator fan OFF → ON) | < 15 mV<br>(Approx. 1°C (1.8°F)) |

EN-01737

(A) Engine coolant temperature °C (°F)

(B) A/D value (V)

**Time Needed for Diagnosis:** 5 minutes

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

## Judgment Value

| Malfunction Criteria   | Threshold Value                  |
|--|----------------------------------|
| Engine coolant temperature sensor A/D value – Engine coolant temperature sensor A/D value Min. value (Min. value with radiator fan OFF → ON) | ≥ 15 mV<br>(Approx. 1°C (1.8°F)) |

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 7. FAIL SAFE

None

## 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### BP:DTC P0502 VEHICLE SPEED SENSOR CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of vehicle speed sensor.

Judge NG when low vehicle speed (0 km/h (0 MPH)) remains whereas it seemed to be in a usual driving speed.

#### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Engine speed         | < 4,000 rpm       |
| Fuel cut in decel.   | Operating         |
| Battery voltage      | ≥ 10.9 V          |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during fuel cut in deceleration.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 4 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Vehicle speed        | < 1             |

**Time Needed for Diagnosis:** 4 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when all malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria               | Threshold Value |
|------------------------------------|-----------------|
| Vehicle speed                      | ≥ 1             |
| Starter switch                     | OFF             |
| Time after starter switch ON → OFF | ≥ 3 seconds     |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

- Accelerator sensor signal process: Not allowed all closed points learning.
- Vehicle speed sensor signal process: Vehicle speed = 10 km/h (6 MPH)
- Fuel cut control: Not allowed vehicle speed 0 km/h (0 MPH) fuel cut. Normally the high vehicle speed fuel cut performs on "and" of vehicle speed condition and engine speed, but perform the fuel cut only on engine speed condition (4,800 rpm or more).
- ISC control: Set the open loop compensation to specified value (1 g/s). Not allowed ISC feedback volume calculation.
- Air conditioner control: Not allowed air conditioner cut at accelerating.
- Radiator fan control: Hi drive both main/sub.
- Judge gear ratio: Control as gear fixed on 6th.
- Tumble generator valve control: Open the tumble generator valve.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

### BQ:DTC P0503 VEHICLE SPEED SENSOR INTERMITTENT/ERRATIC/HIGH

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of vehicle speed sensor.

Judge NG when high vehicle speed (240 km/h (149.1 MPH) or more) remains whereas it seemed to be in a usual driving speed.

#### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Engine speed         | < 4,000 rpm       |
| Fuel cut in decel.   | Operating         |
| Battery voltage      | ≥ 10.9 V          |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously during fuel cut in deceleration.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criteria below becomes more than 4 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Vehicle speed        | ≥ 240           |

**Time Needed for Diagnosis:** 4 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when all malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria               | Threshold Value |
|------------------------------------|-----------------|
| Vehicle speed                      | ≥ 300           |
| Starter switch                     | OFF             |
| Time after starter switch ON → OFF | ≥ 3 seconds     |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 7. FAIL SAFE

- Accelerator sensor signal process: Not allowed all closed points learning.
- Vehicle speed sensor signal process: Vehicle speed = 10 km/h (6 MPH)
- Fuel cut control: Not allowed vehicle speed 0 km/h (0 MPH) fuel cut. Normally the high vehicle speed fuel cut performs on “and” of vehicle speed condition and engine speed, but perform the fuel cut only on engine speed condition (4,800 rpm or more).
- ISC control: Set the open loop compensation to specified value (1 g/s). Not allowed ISC feedback volume calculation.
- Air conditioner control: Not allowed air conditioner cut at accelerating.
- Radiator fan control: Hi drive both main/sub.
- Judge gear ratio: Control as gear fixed on 6th.
- Tumble generator valve control: Open the tumble generator valve.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BR:DTC P0506 IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling.  
Judge NG when actual engine speed is not close to target engine speed during idling.

### 2. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                 |
|---|-----------------------------------|
| Engine coolant temperature  | ≥ 75°C (167°F)                    |
| Battery voltage   | ≥ 10.9 V                          |
| Atmospheric pressure  | > 75.1 kPa (563 mmHg, 22.2 inHg)  |
| Fuel level  | ≥ 9 ℓ (2.38 US gal, 1.98 Imp gal) |
| After engine starting   | 10 seconds or more                |
| Feedback in ISC   | In operation                      |
| Measured lambda   | 0.90 ←→ 1.1                       |
| After air condition switching ON-OFF, OFF-ON                          | 5 seconds or more                 |
| After in-manifold pressure change more than 4 kPa (30 mmHg, 1.2 inHg) | > 5 seconds                       |
| After neutral switch ON-OFF event                                     | > 5 seconds                       |
| Vehicle speed   | 0 km/h (0 MPH)                    |

### 3. GENERAL DRIVING CYCLE

Always perform diagnosis during idling after engine warmed.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds × 3 times).

#### Judgment Value

| Malfunction Criteria                                    | Threshold Value |
|---|-----------------|
| Actual – target engine speed                            | < –100 rpm      |
| Feedback correction for idle air control solenoid valve | Max.            |

**Time Needed for Diagnosis:** 10 seconds × 3 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds).

#### Judgment Value

| Malfunction Criteria         | Threshold Value |
|------------------------------|-----------------|
| Actual – target engine speed | ≥ –100 rpm      |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### 7. FAIL SAFE

- Judgment of heavy fuel: Not allowed to make the judgment of heavy fuel.
- Knock compensation:
  - Knock compensation final retard/advance value: Knock compensation value + Total learning compensation value + Partial learning compensation value
  - AT normal: Knock compensation value = Fixed on 0°CA
  - AT abnormal: Knock compensation value ≠ Fixed on 0°CA (Maximum 12°CA retard on knocking)
  - Not allowed to refresh learning compensation coefficient
  - Not allowed to calculate partial learning zone compensation value

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BS:DTC P0507 IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction that actual engine speed is not close to target engine speed during idling.  
Judge NG when actual engine speed is not close to target engine speed during idling.

### 2. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                             |
|---|---|
| Engine coolant temperature  | $\geq 75^{\circ}\text{C}$ (167°F)             |
| Battery voltage   | $\geq 10.9\text{ V}$                          |
| Atmospheric pressure  | $> 75.1\text{ kPa}$ (563 mmHg, 22.2 inHg)     |
| Fuel level  | $\geq 9\text{ ℓ}$ (2.38 US gal, 1.98 Imp gal) |
| After engine starting   | 10 seconds or more                            |
| Feedback in ISC   | In operation                                  |
| Lambda  | $0.90 \leftrightarrow 1.1$                    |
| After air condition switching ON-OFF, OFF-ON                          | 5 seconds or more                             |
| After in-manifold pressure change more than 4 kPa (30 mmHg, 1.2 inHg) | $> 5$ seconds                                 |
| After neutral switch ON-OFF event                                     | $> 5$ seconds                                 |
| Vehicle speed   | 0 km/h (0 MPH)                                |

### 3. GENERAL DRIVING CYCLE

Always perform diagnosis during idling after engine warmed.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds  $\times$  3 times).

#### Judgment Value

| Malfunction Criteria                                    | Threshold Value       |
|---|-----------------------|
| Actual – target eng. speed                              | $\geq 200\text{ rpm}$ |
| Feedback correction for idle air control solenoid valve | Min.                  |

**Time Needed for Diagnosis:** 10 seconds  $\times$  3 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criterion below becomes more than the time needed for diagnosis (10 seconds).

#### Judgment Value

| Malfunction Criteria       | Threshold Value    |
|----------------------------|--------------------|
| Actual – target eng. speed | $< 200\text{ rpm}$ |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

#### 1. OUTLINE OF DIAGNOSIS

| DTC   | ITEM   | OUTLINE OF DIAGNOSIS   |
|-------|--|--|
| P0513 | Incorrect Immobilizer Key                    | Incorrect immobilizer key (Use of key not registered in body integrated module)                          |
| P1570 | Antenna                                      | Improper antenna   |
| P1571 | Reference Code Incompatibility               | Unmatched reference code between body integrated module and ECM  |
| P1572 | IMM Circuit Failure (Except Antenna Circuit) | Communication malfunction between body integrated module and ECM   |
| P1574 | Key Communication Failure                    | Malfunction of body integrated module that check the key (transponder) ID or abnormality of transponder. |
| P1576 | EGI Control Module EEPROM                    | Abnormality of ECM   |
| P1577 | IMM Control Module EEPROM                    | Malfunction of body integrated module.   |

#### 2. ENABLE CONDITION

When the engine starting

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis only once engine starting.

#### 4. DIAGNOSTIC METHOD

Judge NG, when the outline of diagnosis consists.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## BV:DTC P0519 IDLE CONTROL SYSTEM MALFUNCTION (FAIL-SAFE)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction that engine speed increases more than that in normal condition during idling.

### 2. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions   |
|-----------------------|---------------------|
| Battery voltage       | ≥ 10.9 V            |
| Feedback in ISC       | In operation        |
| Vehicle speed         | < 4 km/h (2.49 MPH) |
| After engine starting | 1 seconds or more   |

### 3. GENERAL DRIVING CYCLE

Always perform diagnosis at less than 4 km/h (2.49 MPH) of vehicle speed.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment 1

Judge NG when the continuous time until completing the all malfunction criteria below becomes more than the time needed for diagnosis (2 seconds).

#### Judgment Value

| Malfunction Criteria                             | Threshold Value |
|--|-----------------|
| Engine speed – target eng. speed                 | ≥ 1,000 rpm     |
| Feedback value for ISC                           | ≤ 0             |
| Engine speed change every 180 degree engine rev. | ≥ -5 rpm        |

#### • Abnormality Judgment 2

Judge NG when the continuous time until completing the all malfunction criteria below becomes more than the time needed for diagnosis (5 seconds).

#### Judgment Value

| Malfunction Criteria             | Threshold Value |
|----------------------------------|-----------------|
| Engine speed – target eng. speed | ≥ 1,000 rpm     |
| Feedback value for ISC           | ≤ 0             |

**Time Needed for Diagnosis:** 2 seconds or 5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear NG when the continuous time until completing the malfunction criteria below becomes more than the time needed for diagnosis (5 seconds).

#### Judgment Value

| Malfunction Criteria             | Threshold Value |
|----------------------------------|-----------------|
| Engine speed – target eng. speed | < 200 rpm       |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 7. FAIL SAFE

Fuel shut-off: Shut-off fuel for only #1 and #2 cylinder, or for all cylinder in accordance with vehicle speed, engine speed, throttle position

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## **BW:DTC P0604 INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR**

### 1. OUTLINE OF DIAGNOSIS

Detect the function abnormality of the micro-computer (RAM).

Judge NG when either the main CPU normal RAM or sub CPU normal RAM is abnormal. Judge OK when both of them are normal.

At initial routine, write the data to all area of RAM. Judge OK when same data can be read out, and judge NG when same data cannot be read out.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

Perform the diagnosis in the initial routine.

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis immediately after IG key SW is turned ON.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| Main CPU normal RAM abnormality<br>Write 5AA5A55A, and read out. (All area of RAM)<br>Or write A55A5AA5, and read out. (All area of RAM) | Cannot be read out<br>5AA5A55A.<br>Cannot be read out<br>A55A5AA5. |
| Sub CPU normal RAM abnormality.<br>Write 5AA5, and read out. (All area of RAM)<br>Or write A55A, and read out. (All area of RAM)         | Cannot be read out<br>5AA5.<br>Cannot be read out<br>A55A.         |

**Time Needed for Diagnosis:** 100 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| Main CPU normal RAM abnormality<br>Write 5AA5A55A, and read out. (All area of RAM)<br>Or write A55A5AA5, and read out. (All area of RAM) | Can be read out<br>5AA5A55A.<br>Can be read out<br>A55A5AA5. |
| Sub CPU normal RAM abnormality.<br>Write 5AA5, and read out. (All area of RAM)<br>Or write A55A, and read out. (All area of RAM)         | Can be read out 5AA5.<br>Can be read out A55A.               |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row

Memorize the freeze frame data. (For test mode \$02)

## BX:DTC P0605 INTERNAL CONTROL MODULE READ ONLY MEMORY (ROM) ERROR

### 1. OUTLINE OF DIAGNOSIS

Judge NG when SUM value of ROM is out of the standard value.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| SUM value of ROM     | Standard value  |

**Time Needed for Diagnosis:** To be determined

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

## 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only at engine stop)

## 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 7. FAIL SAFE

Stop the current to electronic throttle control motor. (Fix the throttle opening angle to 6°.)

## 8. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnosis value and malfunction criteria value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

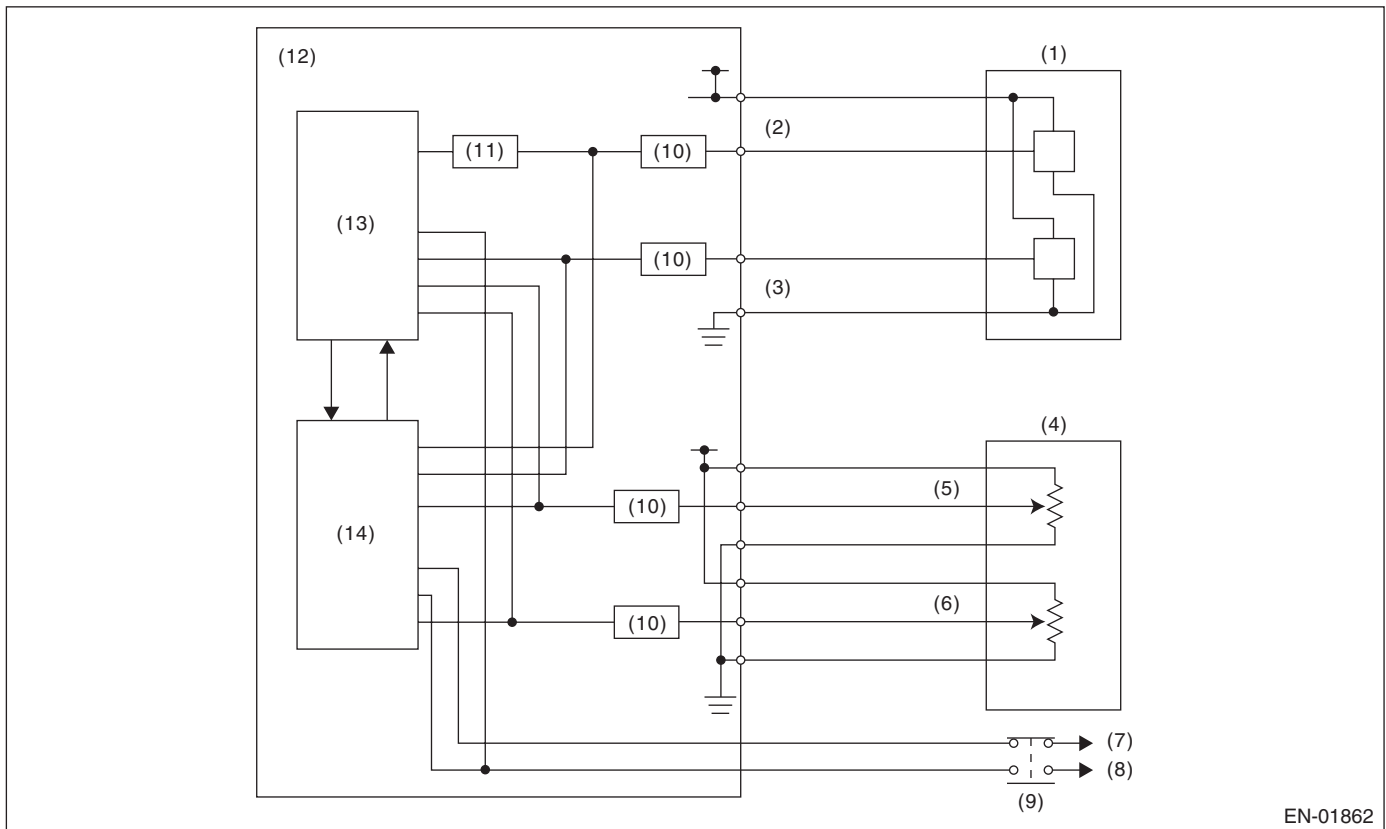

### BY:DTC P0607 CONTROL MODULE PERFORMANCE

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when either the following is completed.

- When the read value of throttle position sensor 1 signal is mismatched between main CPU and sub CPU.
- When the read value of accelerator position sensor 1 signal is mismatched between main CPU and sub CPU.
- When the sub CPU operates abnormally.
- When the communication between main CPU and sub CPU is abnormal.
- When the input amplifier circuit of throttle position sensor 1 is abnormal.
- When the cruise control cannot be canceled correctly.
- When the signal of brake SW1 and 2 is mismatched.
- When the directed angle from main CPU is abnormal.

#### 2. COMPONENT DESCRIPTION

EN-01862

- |     |                                     |      |                             |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 3. ENABLE CONDITION

| Secondary Parameters               | Enable Conditions |
|------------------------------------|-------------------|
| (1) Ignition switch                | ON                |
| (2) Ignition switch                | ON                |
| (3) None                           | —                 |
| (4) None                           | —                 |
| (5) Throttle opening angle         |                   |
| (6) Brake SW (with cruise control) | ON                |
| (7) None                           | —                 |
| (8) Cruise control                 | OFF               |

## 4. GENERAL DRIVING CYCLE

- (1) — (4): Always perform the diagnosis continuously.  
(5): Always perform the diagnosis continuously on idling.  
(6): Perform the diagnosis when the brake pedal is depressed.  
(7): Always perform the diagnosis continuously.  
(8): Always perform the diagnosis continuously when the cruise control pedal is not operating.

## 5. DIAGNOSTIC METHOD

Judge OK and clear NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria   | Threshold Value  |
|--|--|
| (1) Difference of CPU on reading value of throttle position sensor signal    | Within 0.12 V  |
| (2) Difference of CPU on reading value of accelerator position sensor signal | Within 0.07 V  |
| (3) WD pulse from sub CPU  | WD pulse occur   |
| (4) Communication between CPU  | Possible to communicate  |
| (5) Difference of signal on connection of amplifier                          | Within $\times 4 \pm 0.6$ V  |
| (6) Cruise control cancel signal at brake ON                                 | Cruise control cancel signal ON  |
| (7) Brake switch 1, 2 signal   | SW 1 and 2 are matched   |
| (8) Throttle opening angle directing value                                   | Within the opening angle $+3.4^\circ$ which calculated from accelerator opening angle coefficient. |

### Time Needed for Diagnosis:

- (1) 250 milliseconds  
(2) 250 milliseconds  
(3) 200 milliseconds  
(4) 200 milliseconds  
(5) 24 milliseconds  
(6) 250 milliseconds  
(7) 200 milliseconds  
(8) 250 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### **7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION**

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### **8. FAIL SAFE**

Stop the current to electronic throttle control motor. (Fix the throttle opening angle to 6°.)

### **9. ECM OPERATION AT DTC SETTING**

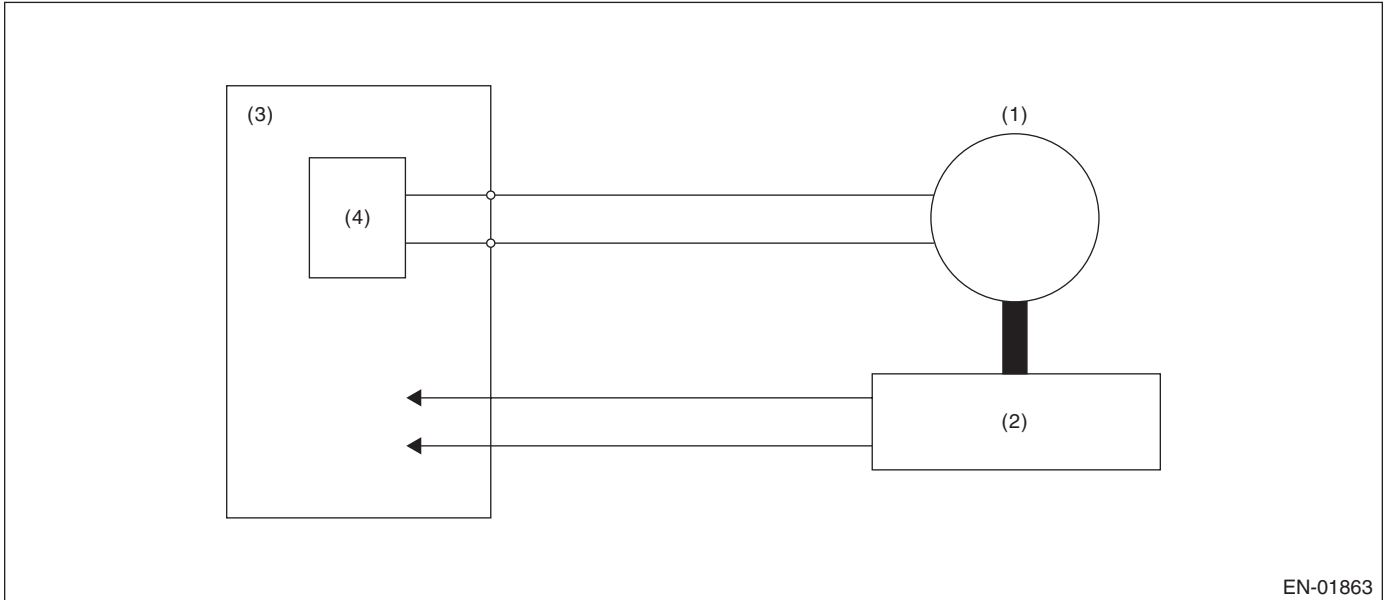

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnosis value and malfunction criteria value. (For test mode \$06)

## BZ:DTC P0638 THROTTLE ACTUATOR CONTROL RANGE/PERFORMANCE (BANK 1)

### 1. OUTLINE OF DIAGNOSIS

Judge NG when the target opening angle and actual opening angle is mismatched or the current to motor is more than specified duty for specified time continuously.

### 2. COMPONENT DESCRIPTION

EN-01863

- (1) Motor
- (2) Throttle position sensor
- (3) Engine control module (ECM)
- (4) Drive circuit

### 3. ENABLE CONDITION

| Secondary Parameters                            | Enable Conditions |
|---|-------------------|
| Ignition switch                                 | ON                |
| Normal operation of electronic throttle control | ON                |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously when the electronic throttle control is operating.

### 5. DIAGNOSTIC METHOD

Judge OK and clear NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Difference between target opening angle and actual opening angle | Less than 3.5°  |
| Output duty to drive circuit                                     | Less than 95%   |

#### Time Needed for Diagnosis:

Target opening angle and actual opening angle: 250 milliseconds (For NG) 2,000 milliseconds (For OK)  
 Output duty to drive circuit: 2,000 milliseconds

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### Details of Judgment

- (1) Difference between target opening angle and actual opening angle (°)
- (2) Target throttle opening angle (°)
- (3) NG area

### Details of Judgment (Always 1,000 milliseconds when the actual opening angle ≤ target opening angle)

- (1) Judgment time (milliseconds)
- (2) Throttle position sensor 1 opening angle
- (3) NG area

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

## Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 8. FAIL SAFE

Stop the current to electronic throttle control motor. (Fix the throttle opening angle to 6°.)

### 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnosis value and malfunction criteria value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### CA:DTC P0691 COOLING FAN 1 CONTROL CIRCUIT LOW

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the radiator fan circuit.

Judge NG when the ECM output level differs from the actual terminal level.

#### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the cumulative time of completing the malfunction criteria below becomes more than 2.5 seconds.

##### Judgment Value

| Malfunction Criteria                                 | Threshold Value   |
|--|-------------------|
| After starting the engine                            | 1 seconds or more |
| Engine speed   | ≥ 500 rpm         |
| Ignition switch                                      | ON                |
| Battery voltage                                      | ≥ 10.9 V          |
| Terminal voltage level when ECM transmits OFF signal | Low level         |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

##### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria                                 | Threshold Value   |
|--|-------------------|
| After starting the engine                            | 1 seconds or more |
| Engine speed   | ≥ 500 rpm         |
| Ignition switch                                      | ON                |
| Battery voltage                                      | ≥ 10.9 V          |
| Terminal voltage level when ECM transmits OFF signal | High level        |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

None

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CB:DTC P0692 COOLING FAN 1 CONTROL CIRCUIT HIGH

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of the radiator fan circuit.

Judge NG when the ECM output level differs from the actual terminal level.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### CC:DTC P0851 NEUTRAL SWITCH INPUT CIRCUIT LOW

#### 1. OUTLINE OF DIAGNOSIS

Judge the open or short circuit of the neutral SW.

Judge NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

#### 2. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions      |
|---------------------------|------------------------|
| Ignition switch           | ON                     |
| Battery voltage           | $\geq 10.9 \text{ V}$  |
| After starting the engine | 2 seconds or more      |
| Starter switch            | OFF                    |
| Engine speed              | $\geq 500 \text{ rpm}$ |

#### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds or more after starting the engine.

#### 4. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed 3 time or more after the neutral SW change. And clear NG if there is change in the neutral SW.

##### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Neutral switch signal (while changing from a to b below)             | ON continues    |
| Driving condition change   | a) to b)        |
| a) Vehicle speed = 0 km/h (0 MPH) & engine speed 600 — 900 rpm       |                 |
| b) Vehicle speed = 64 km/h (40 MPH) & engine speed 1,600 — 2,550 rpm |                 |

**Time Needed for Diagnosis:** 3 monitoring

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

Cruise control command: Not allowed to command cruise control

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CD:DTC P0852 NEUTRAL SWITCH INPUT CIRCUIT HIGH

### 1. OUTLINE OF DIAGNOSIS

Judge the open or short circuit of the neutral SW.

Judge NG when there is no change in the neutral SW even if the driving shift was applied. (There is neutral SW ON/OFF inversion from the vehicle speed and engine speed.)

### 2. ENABLE CONDITION

| Secondary Parameters      | Enable Conditions |
|---------------------------|-------------------|
| Ignition switch           | ON                |
| Battery voltage           | $\geq 10.9$ V     |
| After starting the engine | 2 seconds or more |
| Starter switch            | OFF               |
| Engine speed              | $\geq 500$ rpm    |

### 3. GENERAL DRIVING CYCLE

Perform the diagnosis continuously in 2 seconds or more after starting the engine.

### 4. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed 3 time or more after the neutral SW change. And clear NG if there is change in the neutral SW.

#### Judgment Value

| Malfunction Criteria   | Threshold Value |
|--|-----------------|
| Neutral switch signal (while changing from a to b below)             | OFF continues   |
| Driving condition change   | a) to b)        |
| a) Vehicle speed = 0 km/h (0 MPH) & engine speed 600 — 900 rpm       |                 |
| b) Vehicle speed = 64 km/h (40 MPH) & engine speed 1,600 — 2,550 rpm |                 |

**Time Needed for Diagnosis:** 3 monitoring

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### CE:DTC P1152 O<sub>2</sub> SENSOR CIRCUIT RANGE/PERFORMANCE (LOW) (BANK1 SENSOR1)

#### 1. OUTLINE OF DIAGNOSIS

Detect that lambda value remains Low.

Judge NG when lambda value is abnormal in accordance with lambda value of front oxygen (A/F) sensor and running condition that is vehicle speed, amount of intake air engine coolant temperature, sub feedback control, etc.

**Lambda value = Actual air fuel ratio/Theoretical air fuel ratio**

Lambda > 1: Lean

Lambda < 1: Rich

#### 2. COMPONENT DESCRIPTION

- (1) Atmosphere
- (2) Exhaust
- (3) ZrO<sub>2</sub>
- (4) Ceramic heater

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Lean
- (D) Rich

EN-01693

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions                |
|---|----------------------------------|
| All secondary parameters to be in enable conditions         | 4 seconds or more                |
| Battery voltage   | > 10.9 V                         |
| Atmospheric pressure  | > 75.1 kPa (563 mmHg, 22.2 inHg) |
| Rear oxygen sensor sub feedback                             | Operating                        |
| Rear oxygen sensor output voltage – feedback target voltage | –0.2 V ↔ 0.1 V                   |
| or rear oxygen sensor sub feedback compensation coefficient | On Min.                          |
| or rear oxygen sensor sub feedback compensation coefficient | On Max.                          |
| After engine starting                                       | 60 seconds or more               |
| Engine coolant temperature                                  | ≥ 75°C (167°F)                   |
| Vehicle speed   | ≥ 20 km/h (12 MPH)               |
| Amount of intake air  | ≥ 6 g/s                          |
| Load change during 0.5 engine rev.                          | ≤ 0.01 g/rev                     |
| Impedance of front oxygen (A/F) sensor                      | 0 ↔ 50 Ω                         |
| Learning value of evaporation gas density                   | ≤ 0.2                            |
| Accumulated time of operating canister purge                | 20 seconds or more               |

## 4. GENERAL DRIVING CYCLE

Perform diagnosis continuously at a constant speed of 20 km/h (12 MPH) or more since 60 seconds after starting the engine.

## 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than the time needed for diagnosis (10 seconds). Judge OK and clear NG when the malfunction criteria below are not completed.

### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Output lambda when rear oxygen sensor sub feedback compensation coefficient being at not high limit | ≤ 0.85          |

**Time Needed for Diagnosis:** 10 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

## 8. FAIL SAFE

- Front oxygen (A/F) sensor main learning correction: Not allowed to calculate
- Correction when re-starting at high temperature: Normally minimum value 0.3 → 0
- Purge control: Not allowed to purge

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

### CG:DTC P1160 RETURN SPRING FAILURE

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when the valve does not move to the close direction with the motor power stopped and the valve open more than the default opening.

#### 2. COMPONENT DESCRIPTION

- |                          |                                  |
|--------------------------|----------------------------------|
| (1) Opener spring        | (5) Throttle valve               |
| (2) Return spring        | (6) Gear                         |
| (3) Intermediate stopper | (7) DC motor                     |
| (4) Full closed stopper  | (8) Main and sub throttle sensor |

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Throttle opening     | OFF               |
| Motor continuity     | OFF               |

#### 4. GENERAL DRIVING CYCLE

- Ignition switch ON → OFF
- Ignition switch OFF → ON (After clear memory only)

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

##### Judgment Value

| Malfunction Criteria                             | Threshold Value |
|--|-----------------|
| Opening variation after continuity is set to OFF | $\geq 2^\circ$  |

**Time Needed for Diagnosis:** 600 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

## 8. FAIL SAFE

Fix the throttle opening to 6°.

## 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### CH:DTC P1400 FUEL TANK PRESSURE CONTROL SOLENOID VALVE CIRCUIT LOW

#### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of pressure control solenoid valve. Judge NG when ECM output level is different from actual terminal level.

#### 2. COMPONENT DESCRIPTION

- |                        |                          |
|------------------------|--------------------------|
| (1) Filter             | (A) Atmospheric pressure |
| (2) Coil               | (B) Shut off valve       |
| (3) Connector terminal | (C) To fuel tank         |
| (4) Diaphragm          |                          |
| (5) Valve              |                          |

#### 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions     |
|-----------------------|-----------------------|
| Ignition switch       | ON                    |
| Battery voltage       | $\geq 10.9 \text{ V}$ |
| After engine starting | 1 second or more      |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis after starting the engine.

#### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than time needed for diagnosis (2.5 seconds). Judge OK and clear the NG when the malfunction criteria below are not completed.

##### Judgment Value

| Malfunction Criteria                         | Threshold Value |
|--|-----------------|
| Terminal voltage when ECM outputs off signal | Low             |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in two continuous drive cycles.

#### 3. ENABLE CONDITION

| Secondary Parameter                 | Enable Condition   |
|-------------------------------------|--|
| Drain valve                         | Open   |
| Battery voltage                     | $\geq 10.9$ V  |
| Atmospheric pressure                | $\geq 75.0$ kPa (563 mmHg, 22.17 inHg)   |
| Tank pressure when starter ON → OFF | $-0.67 \leftrightarrow 1.43$ kPa (-5 $\leftrightarrow$ 10.7 mmHg, -0.20 $\leftrightarrow$ 0.42 inHg) |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

### Judgment Value

| Malfunction Criteria | Threshold Value                             |
|----------------------|---|
| Tank pressure        | $\leq -4.0$ kPa ( $-30$ mmHg, $-1.18$ inHg) |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as the malfunction occurs.

### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

### Judgment Value

| Malfunction Criteria  | Threshold Value   |
|---|---|
| Tank pressure   | $> -4.0$ kPa ( $-30$ mmHg, $-1.18$ inHg)  |
| Cumulative time when the malfunction criteria below are completed | $\geq 30$ seconds   |
| Duty ratio of purge control solenoid valve                        | Except 0  |
| Fuel temperature  | $-10 \leftrightarrow 45^\circ\text{C}$ ( $14 \leftrightarrow 113^\circ\text{F}$ ) |
| Relative ratio of intake manifold                                 | $-26.7$ kPa ( $-200$ mmHg, $-7.87$ inHg)  |

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

PCV control: Open the PCV solenoid.

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

- When the OK driving cycle is completed 3 times in a row
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### CM:DTC P1448 FUEL TANK SENSOR CONTROL VALVE RANGE/PERFORMANCE

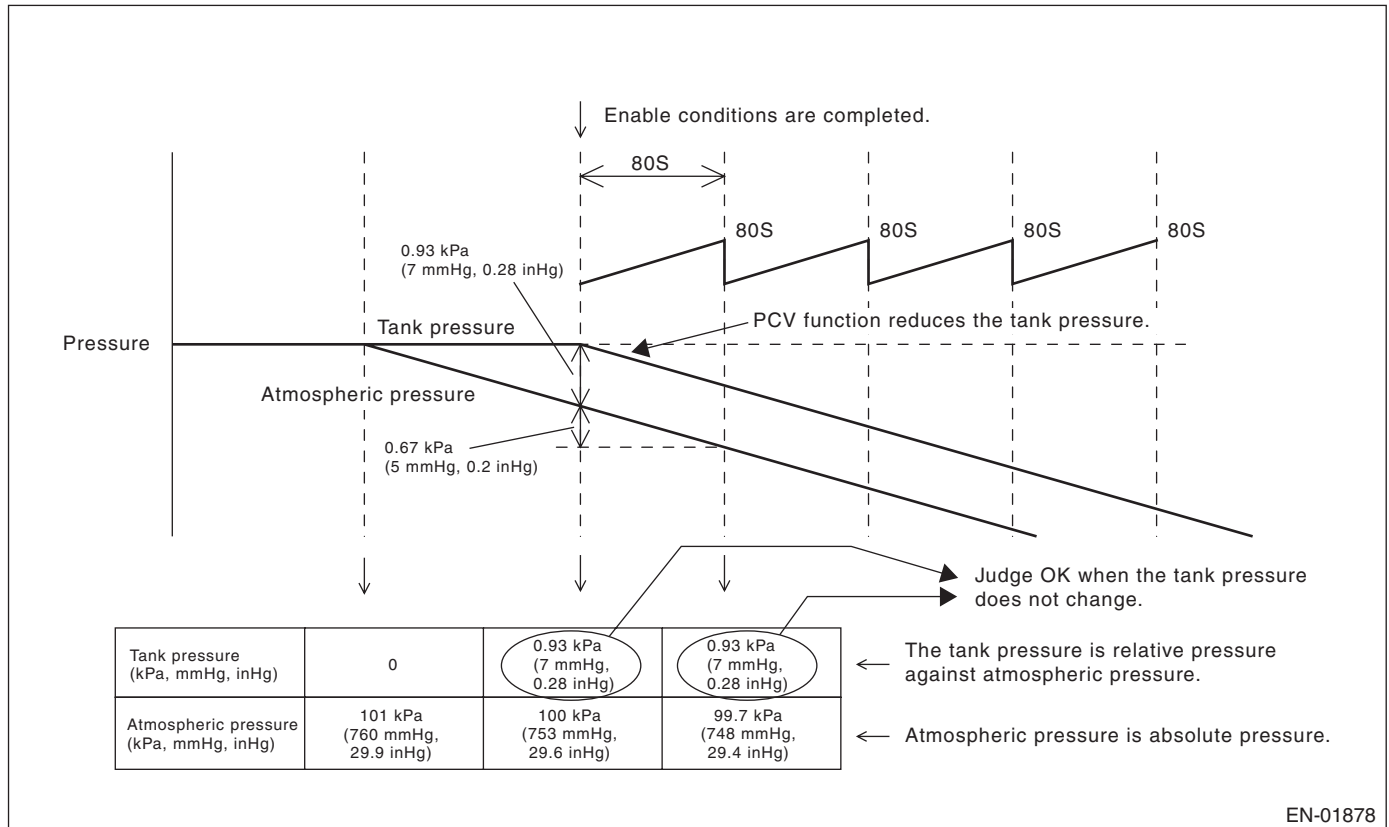

#### 1. OUTLINE OF DIAGNOSIS

Detect the tank pressure switching solenoid function abnormality.

The tank pressure sensor is a relative pressure sensor, which normally compares the pressure with the atmospheric pressure. The tank pressure switching solenoid is a solenoid, which shifts the compare space from opening to closed during the EVAP diagnosis. Detect the malfunction that the compare space remains closed. (Not judge NG after enable condition completed but assume NG before enable condition completed.)

#### • Normality Judgment

Judge OK when the fuel tank pressure does not change (or changes by less than 0.67 kPa (5 mmHg, 0.2 inHg) at atmospheric pressure changing by 0.67 kPa (5 mmHg, 0.2 inHg) or more per 80 seconds.

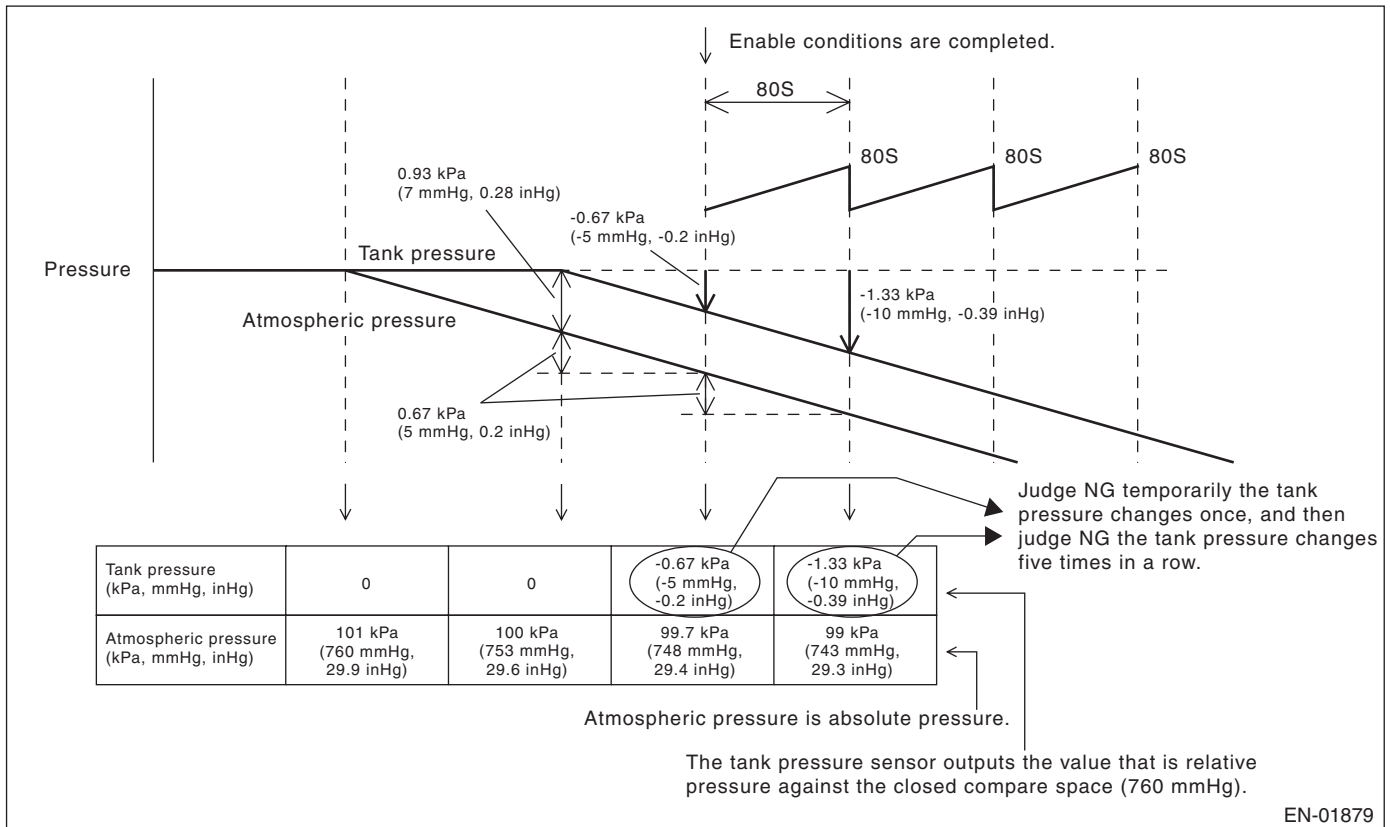

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## • Abnormality Judgment

Judge NG temporarily when the fuel tank pressure changes by 0.67 kPa (5 mmHg, 0.2 inHg) or more at atmospheric pressure changing by 0.67 kPa (5 mmHg, 0.2 inHg) or more per 80 seconds, and then judge NG when the previous condition is completed 5 times in a row.

## 2. COMPONENT DESCRIPTION

- (A) Fuel tank pressure sensor
- (B) Ambient air

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### 3. ENABLE CONDITION

| Secondary Parameter          | Enable Condition   |
|------------------------------|--|
| Battery voltage              | $\geq 10.9$ V  |
| Fuel level                   | $9 \leftrightarrow 51$ ℓ (2.38 $\leftrightarrow$ 13.3 US gal, 1.98 $\leftrightarrow$ 11.2 Imp gal) |
| Evaporation system diagnosis | Not in operation   |
| After starting the engine    | 80 seconds or more   |
| Fuel tank pressure           | $< -0.67$ kPa ( $-5$ mmHg, $-0.2$ inHg) or $> -0.93$ kPa (7 mmHg, 0.28 inHg)                       |

### 4. GENERAL DRIVING CYCLE

Perform the diagnosis continuously when the fuel tank pressure is large or small in 80 seconds or more after starting the engine.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the malfunction criteria below is completed 5 times.

#### Judgment Value

| Malfunction Criteria                    | Threshold Value                        |
|---|--|
| Atmospheric air change in 80 seconds    | $\geq 0.67$ kPa (4.5 mmHg, 0.2 inHg)   |
| Fuel tank pressure change in 80 seconds | $\geq 0.67$ kPa (4.5 mmHg, 0.2 inHg)   |
| Fuel level change                       | $< 2.25$ ℓ (0.59 US gal, 0.49 Imp gal) |

**Time Needed for Diagnosis:** 80 seconds  $\times$  5 times

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below is completed.

#### Judgment Value

| Malfunction Criteria                    | Threshold Value                      |
|---|--------------------------------------|
| Atmospheric air change in 80 seconds    | $\geq 0.67$ kPa (4.5 mmHg, 0.2 inHg) |
| Fuel tank pressure change in 80 seconds | $< 0.67$ kPa (4.5 mmHg, 0.2 inHg)    |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

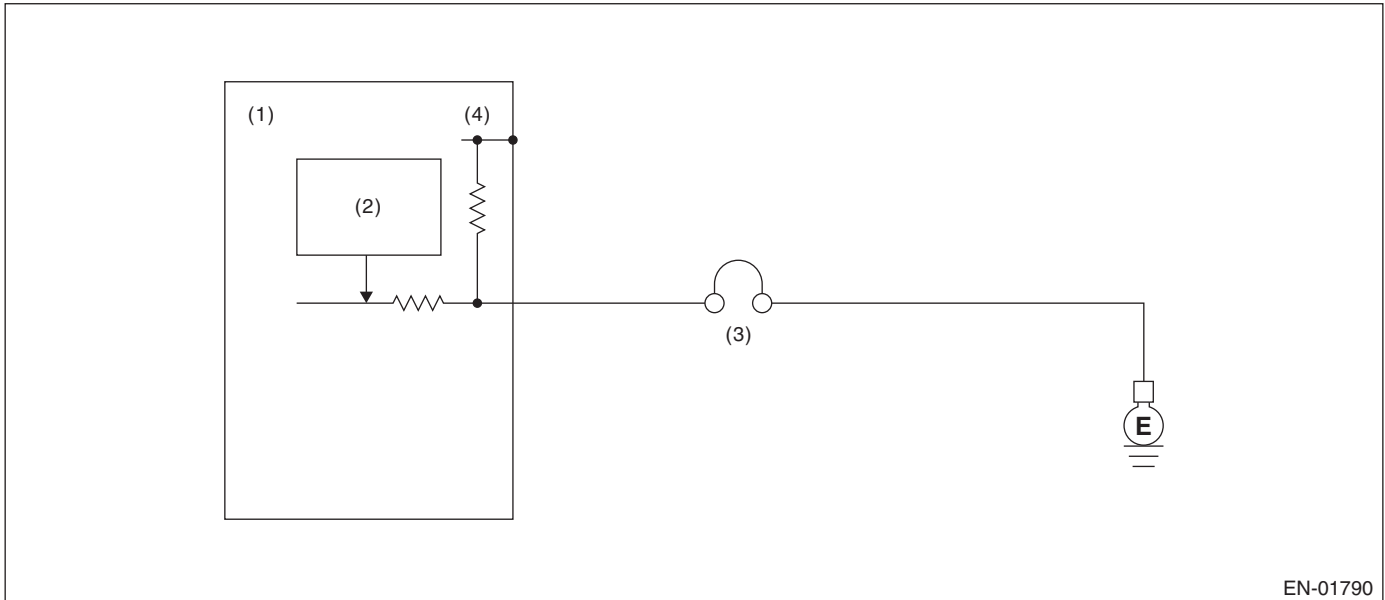

GENERAL DESCRIPTION

## CN:DTC P1491 POSITIVE CRANKCASE VENTILATION (BLOW-BY) FUNCTION PROBLEM

### 1. OUTLINE OF DIAGNOSIS

Detect the blow-by hose release abnormality.  
Judge NG when the diagnosis terminal voltage is high.

### 2. COMPONENT DESCRIPTION

- (1) Engine control module (ECM)
- (2) Detecting circuit
- (3) PCV diagnosis connector
- (4) 5 V

### 3. ENABLE CONDITION

| Secondary Parameter | Enable Condition |
|---------------------|------------------|
| None                |                  |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSIS METHOD

#### • Abnormality Judgment

Judge NG when the continuous time until completing the malfunction criteria below becomes more than 1 second.

#### Judgment Value

| Malfunction Criteria                             | Threshold Value           |
|--|---------------------------|
| Battery voltage                                  | > 10.9 V                  |
| Before and after starting the engine             | After starting the engine |
| Positive crankcase ventilation diagnosis voltage | High                      |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below is completed.

### Judgment Value

| Malfunction Criteria                             | Threshold Value           |
|--|---------------------------|
| Battery voltage                                  | > 10.9 V                  |
| Before and after starting the engine             | After starting the engine |
| Positive crankcase ventilation diagnosis voltage | Low                       |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was performed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

None

### 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnosis value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CO:DTC P1518 STARTER SWITCH CIRCUIT LOW INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of starter SW.

Judge OFF NG when it turns to “after engine starting” while the starter has never been set to ON.

### 2. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge OFF NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria   | Threshold Value     |
|--|---------------------|
| Vehicle speed<br>It took more than 0.8 seconds at engine starting, and then it turned after engine starting. | < 1 km/h (0.62 MPH) |
| Starter ON   | Not experienced     |
| Starter ON diagnosis   | Not diagnosed       |
| Battery voltage  | > 8 V               |

#### Time Needed for Diagnosis:

Not determined.

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

#### • Normality Judgment

Judge OFF OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Starter ON           | Experienced     |
| Starter ON diagnosis | Diagnosed       |
| Battery voltage      | > 8 V           |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

### 7. FAIL SAFE

None

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### CP:DTC P1560 BACK-UP VOLTAGE CIRCUIT MALFUNCTION

#### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of the back-up voltage circuit.

Judge NG when the back-up voltage becomes smaller than the battery voltage.

#### 2. ENABLE CONDITION

| Secondary Parameter | Enable Condition |
|---------------------|------------------|
| None                |                  |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2.5 seconds.

##### Judgment Value

| Malfunction Criteria                 | Threshold Value           |
|--------------------------------------|---------------------------|
| Voltage of back-up power             | Low                       |
| Battery voltage                      | $\geq 10.9$ V             |
| Before and after starting the engine | After starting the engine |

**Time Needed for Diagnosis:** 2.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

##### • Normality Judgment

Judge OK and clear NG when the malfunction criteria below is completed.

##### Judgment Value

| Malfunction Criteria                 | Threshold Value           |
|--------------------------------------|---------------------------|
| Voltage of back-up power supply      | High                      |
| Battery voltage                      | $\geq 10.9$ V             |
| Before and after starting the engine | After starting the engine |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

None

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### CW:DTC P2004 INTAKE MANIFOLD RUNNER CONTROL STUCK OPEN (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.

Judge open fixing malfunction when the opening degree is large even after finishing the tumble generator valve open driving.

#### 2. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions             |
|----------------------------|-------------------------------|
| Battery voltage            | $\geq 10.9 \text{ V}$         |
| Engine coolant temperature | $\geq 0^\circ\text{C}$ (32°F) |
| Ambient temperature        | $\geq 0^\circ\text{C}$ (32°F) |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

##### Judgment Value

| Malfunction Criteria                         | Threshold Value     |
|--|---------------------|
| Tumble generator valve angle                 | $\geq 67.4^\circ$   |
| Tumble generator valve "close" signal output | 2.2 seconds or more |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria                         | Threshold Value     |
|--|---------------------|
| Tumble generator valve angle                 | $< 67.4^\circ$      |
| Tumble generator valve "close" signal output | 2.2 seconds or more |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

Tumble generator valve opening

- For tumble generator valve all closing points learning, not allowed to update to the closing side.
- For tumble generator valve all opening points learning, not allowed to update to the opening side.

Tumble generator valve control

- Output the open signal.

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## CX:DTC P2005 INTAKE MANIFOLD RUNNER CONTROL STUCK OPEN (BANK 2)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.

Judge open fixing malfunction when the opening degree is large even after finishing the tumble generator valve closing driving.

### 2. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions                                 |
|----------------------------|---|
| Battery voltage            | $\geq 10.9 \text{ V}$                             |
| Engine coolant temperature | $\geq 0^{\circ}\text{C}$ ( $32^{\circ}\text{F}$ ) |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria                         | Threshold Value     |
|--|---------------------|
| Tumble generator valve angle                 | $\geq 67.4^{\circ}$ |
| Tumble generator valve "close" signal output | 2.2 seconds or more |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                         | Threshold Value     |
|--|---------------------|
| Tumble generator valve angle                 | $< 67.4^{\circ}$    |
| Tumble generator valve "close" signal output | 2.2 seconds or more |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

Tumble generator valve opening

- For tumble generator valve all closing points learning, not allowed to update to the closing side.
- For tumble generator valve all opening points learning, not allowed to update to the opening side.

Tumble generator valve control

- Output the open signal.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### CY:DTC P2006 INTAKE MANIFOLD RUNNER CONTROL STUCK CLOSED (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.

Judge close fixing malfunction when the opening degree is small even after finishing the tumble generator valve open driving.

#### 2. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions                                 |
|----------------------------|---|
| Battery voltage            | $\geq 10.9 \text{ V}$                             |
| Engine coolant temperature | $\geq 0^{\circ}\text{C}$ ( $32^{\circ}\text{F}$ ) |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

##### Judgment Value

| Malfunction Criteria                        | Threshold Value     |
|---|---------------------|
| Tumble generator valve angle                | $< 67.4^{\circ}$    |
| Tumble generator valve "open" signal output | 1.4 seconds or more |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria                        | Threshold Value     |
|---|---------------------|
| Tumble generator valve angle                | $\geq 67.4^{\circ}$ |
| Tumble generator valve "open" signal output | 1.4 seconds or more |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 7. FAIL SAFE

Tumble generator valve opening

- For tumble generator valve all closing points learning, not allowed to update to the closing side.
- For tumble generator valve all opening points learning, not allowed to update to the opening side.

Tumble generator valve control

- Output the close signal.

#### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## CZ:DTC P2007 INTAKE MANIFOLD RUNNER CONTROL STUCK CLOSED (BANK 2)

### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of tumble generator valve motor function.

Judge close fixing malfunction when the opening degree is small even after finishing the tumble generator valve open driving.

### 2. ENABLE CONDITION

| Secondary Parameters       | Enable Conditions |
|----------------------------|-------------------|
| Battery voltage            | ≥ 10.9 V          |
| Engine coolant temperature | ≥ 0°C (32°F)      |

### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 4. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 3 seconds.

#### Judgment Value

| Malfunction Criteria                        | Threshold Value     |
|---|---------------------|
| Tumble generator valve angle                | < 67.4°             |
| Tumble generator valve "open" signal output | 1.4 seconds or more |

**Time Needed for Diagnosis:** 3 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria                        | Threshold Value     |
|---|---------------------|
| Tumble generator valve angle                | ≥ 67.4°             |
| Tumble generator valve "open" signal output | 1.4 seconds or more |

### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 7. FAIL SAFE

Tumble generator valve opening

- For tumble generator valve all closing points learning, not allowed to update to the closing side.
- For tumble generator valve all opening points learning, not allowed to update to the opening side.

Tumble generator valve control

- Output the close signal.

### 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### DA:DTC P2008 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT / OPEN (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of tumble generator valve motor.

Judge NG when the open signal is sent from IC after tumble generator valve driving IC diagnosis.

#### 2. COMPONENT DESCRIPTION

- (1) Engine control module (ECM)
- (2) Tumble generator valve
- (3) Battery

EN-01789

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | $\geq 10.9$ V     |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed by tumble generator valve driving IC, and then NG signal is sent to main IC. At the main IC, check the sent signal at each timing which occurs just before the tumble generator valve output is set to ON and OFF, and judge open NG when the open NG signal is sent 20 times in a row. Judge OK and clear the NG when the OK signal is sent.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Current              | $< 5$ mA        |

**Time Needed for Diagnosis:** 2 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Tumble generator valve control: Not allowed to move tumble generator valve.

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

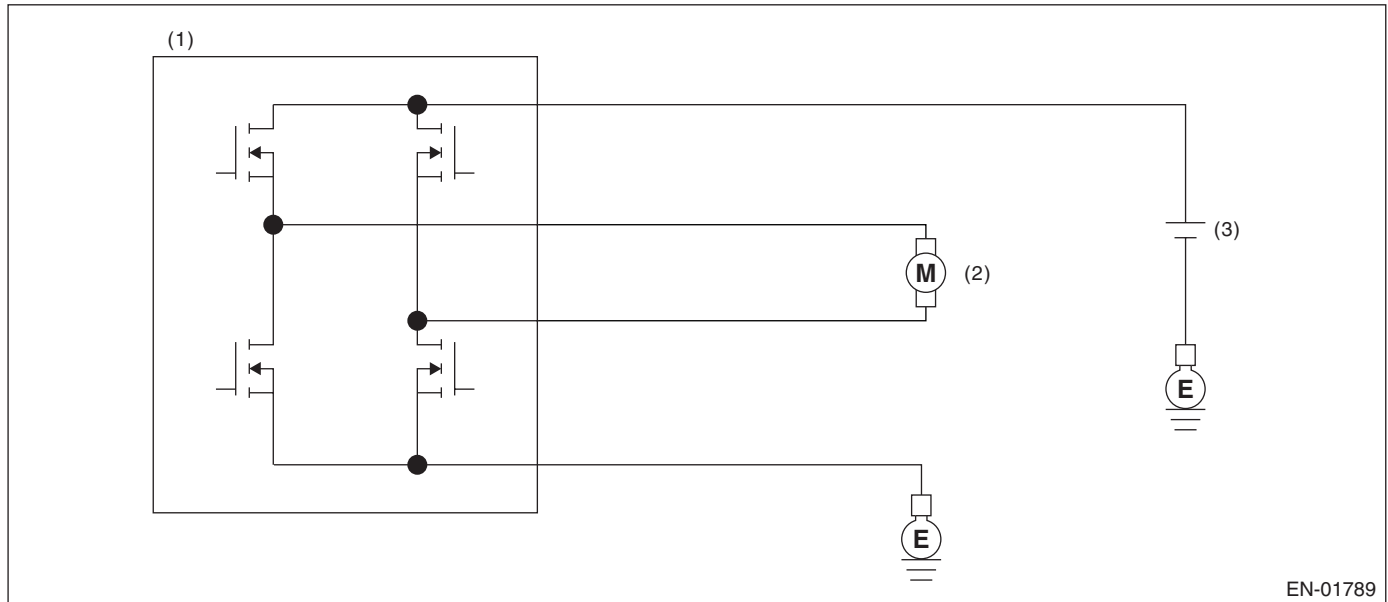

### DB:DTC P2009 INTAKE MANIFOLD RUNNER CONTROL CIRCUIT LOW (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of tumble generator valve motor.

Judge NG when the overcurrent signal is sent from IC after tumble generator valve driving IC diagnosis.

#### 2. COMPONENT DESCRIPTION

- (1) Engine control module (ECM)
- (2) Tumble generator valve
- (3) Battery

EN-01789

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Battery voltage      | $\geq 10.9$ V     |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge NG when the malfunction criteria below are completed by tumble generator valve driving IC, and then NG signal is sent to main IC. At the main IC, check the sent signal at each timing which occurs just before the tumble generator valve output is set to ON and OFF, and judge overcurrent NG when the overcurrent NG signal is sent 10 times in a row. Judge OK and clear the NG when the OK signal is sent.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Current              | $> 3$ A         |

**Time Needed for Diagnosis:** 1 second

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row

### DI: DTC P2088 OCV SOLENOID VALVE SIGNAL A CIRCUIT OPEN (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of oil flow control valve solenoid.

Judge open NG when the current flow is small whereas duty signal is large, and judge short NG when the current flow is large whereas duty signal is small.

#### 2. ENABLE CONDITION

| Secondary Parameter | Enable Condition |
|---------------------|------------------|
| Battery voltage     | $\geq 10.9$ V    |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

##### Judgment Value

| Malfunction Criteria        | Threshold Value |
|-----------------------------|-----------------|
| OCV control duty            | $\geq 99.61\%$  |
| OCV control present current | $< 0.306$ A     |

**Time Needed for Diagnosis:** 2,000 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

##### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

##### Judgment Value

| Malfunction Criteria                                       | Threshold Value |
|--|-----------------|
| Target current value of OCV                                | $\geq 0.14\%$   |
| Target current value of OCV – Control current value of OCV | $\geq 0.08$ A   |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

## 7. FAIL SAFE

- Ignition timing whole learning compensation:
  - Enter the initial value (whole learning compensation factor = 0.5, Variable amount of whole learning compensation factor = 0.25) to the whole learning compensation factor and variable amount of whole learning compensation factor when IG OFF, and then make the whole learning incomplete.
  - Enter the initial value (whole learning compensation factor = 0.5, Variable amount of whole learning compensation factor = 0.25) to the whole learning compensation factor and variable amount of whole learning compensation factor when making a normality judgment from abnormality judgment, and then make the whole learning incomplete.
- Ignition timing partial learning compensation:
  - Enter the initial value (0°CA) to the compensation value of partial learning zone when IG OFF.
  - Enter the initial value (0°CA) to the compensation value of partial learning zone when making a normality judgment from abnormality judgment.
- AVCS control:
  - Most timing retard learning is not complete or most timing retard learning completion is not experienced.
  - ISC feedback compensation: Do not perform the AVCS actual timing advance compensation.
  - Make the OCV driving Duty to be the given value (9.36%).

## 8. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### DJ:DTC P2089 OCV SOLENOID VALVE SIGNAL A CIRCUIT SHORT (BANK 1)

#### 1. OUTLINE OF DIAGNOSIS

Detect open or short circuit of oil flow control valve solenoid.

Judge open NG when the current flow is small whereas duty signal is large, and judge short NG when the current flow is large whereas duty signal is small.

#### 2. ENABLE CONDITION

| Secondary Parameter | Enable Condition |
|---------------------|------------------|
| Battery voltage     | $\geq 10.9$ V    |

#### 3. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 4. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

##### Judgment Value

| Malfunction Criteria        | Threshold Value |
|-----------------------------|-----------------|
| OCV control duty            | $< 0.39\%$      |
| OCV control present current | $\geq 0.306$ A  |

**Time Needed for Diagnosis:** 2,000 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

##### • Normality Judgment

Judge OK and clear NG when the continuous time of completing the malfunction criteria below becomes more than 2 seconds.

##### Judgment Value

| Malfunction Criteria                                       | Threshold Value |
|--|-----------------|
| Target current value of OCV – Control current value of OCV | $< 0.08$ A      |

#### 5. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

#### 6. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

# Diagnostic Trouble Code (DTC) Detecting Criteria

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### DM:DTC P2096 POST CATALYST FUEL TRIM SYSTEM TOO LEAN BANK 1

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of fuel system from the amount of sub feedback control, if it is shifted to lean.

If the sub feedback amount from the engine started till ignition switch OFF is shifted to rich or lean, judge as insufficient sub feedback amount.

If insufficient, change the sub feedback amount guard value and shift judge line, and increment the guard operation counter (tentative NG counter).

Judge NG when the guard operation counter (tentative NG counter) exceeds the specified value and sub feedback amount is shifted to lean.

#### 2. COMPONENT DESCRIPTION

EN-01696

- (1) Atmosphere
- (2) Exhaust gas
- (3) Electromotive force

- (A) Electromotive force
- (B) Air fuel ratio
- (C) Rich
- (D) Lean
- (E) Theoretical air fuel ratio
- (F) Comparative voltage

#### 3. ENABLE CONDITION

| Secondary Parameters  | Enable Conditions        |
|---|--------------------------|
| Engine coolant temperature  | ≥ 40 degC and < 105 degC |
| Accumulative time of closed loop control with secondary oxygen sensor | 130 secs.                |
| Closed loop control with secondary oxygen sensor                      | In operation             |
| Idling SW   | Off                      |
| Accumulative time of vehicle speed above 75 km/h (rich side only)     | 55 secs.                 |

#### 4. GENERAL DRIVING CYCLE

Perform the diagnosis at a speed of more than 75 km/h (47 MPH).

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 5 seconds.

Judge OK and clear NG when the continuous time of completing the malfunction criteria below becomes more than 5 seconds.

### Judgment Value

| Malfunction Criteria  | Threshold Value |
|---|-----------------|
| Average of fuel trim parameter based on a secondary oxygen sensor             | < -0.03         |
| Count of limits moving to rich  | ≥ 4 count       |
| Ratio of time for oxygen sensor upper or lower to time or rich time/lean time | ≥ 1.5           |

**Time Needed for Diagnosis:** 600 seconds

**Malfunction Indicator Light Illumination:** Illuminates when malfunction occurs in 2 continuous driving cycles.

## 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When OK with similar drive in 3 drive cycles
- When "Clear Memory" was performed

## 8. FAIL SAFE

None

## 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### DU:DTC P2127 THROTTLE/PEDAL POSITION SENSOR/SWITCH “E” CIRCUIT LOW INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 2.  
Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

- (1) Engine control module (ECM)
- (2) Accelerator pedal position sensor 1 signal
- (3) Accelerator pedal position sensor 2 signal
- (4) Accelerator pedal position sensor

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | $\geq 0.308$ V  |

**Time Needed for Diagnosis:** 100 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

## 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

## 8. FAIL SAFE

- Single malfunction: Control with normal sensor
- Multi malfunction: Fix the throttle opening angle to 6°.

## 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### DV:DTC P2128 THROTTLE/PEDAL POSITION SENSOR/SWITCH “E” CIRCUIT HIGH INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of accelerator pedal position sensor 2.  
Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

- (1) Engine control module (ECM)
- (2) Accelerator pedal position sensor 1 signal
- (3) Accelerator pedal position sensor 2 signal
- (4) Accelerator pedal position sensor

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria   | Threshold Value |
|------------------------|-----------------|
| Sensor 1 input voltage | $\geq 0.308$ V  |

**Time Needed for Diagnosis:** 100 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed (Only with engine stopped)

## Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

---

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 8. FAIL SAFE

- Single malfunction: Control with normal sensor
- Multi malfunction: Fix the throttle opening angle to 6°.

### 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### DW:DTC P2135 THROTTLE/PEDAL POSITION SENSOR/SWITCH “A” / “B” VOLTAGE RATIONALITY

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when the signal level of throttle position sensor 1 is different from the throttle position sensor 2.

#### 2. COMPONENT DESCRIPTION

- (1) Throttle position sensor 1 signal.
- (2) Throttle position sensor 2 signal.
- (3) Throttle position sensor
- (4) Engine control module (ECM)

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria                  | Threshold Value |
|---------------------------------------|-----------------|
| Signal difference between two sensors | $\leq 4.25$     |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## Details of Judgment Value

- (1) Sensor output difference (°)
- (2) Throttle position sensor 1 opening angle (°)
- (3) NG area

**Time Needed for Diagnosis:** 212 milliseconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed (Only with engine stopped)

### 8. FAIL SAFE

Stop the continuity to ETC motor. (Fix the throttle opening angle to 6°.)

### 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### DX:DTC P2138 THROTTLE/PEDAL POSITION SENSOR/SWITCH “D” / “E” VOLTAGE RATIONALITY

#### 1. OUTLINE OF DIAGNOSIS

Judge NG when the signal level of throttle position sensor 1 is different from the throttle position sensor 2.

#### 2. COMPONENT DESCRIPTION

EN-01861

- (1) Engine control module (ECM)
- (2) Accelerator pedal position sensor 1 signal
- (3) Accelerator pedal position sensor 2 signal
- (4) Accelerator pedal position sensor

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| Ignition switch      | ON                |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

##### Judgment Value

| Malfunction Criteria                  | Threshold Value  |
|---------------------------------------|------------------|
| Signal difference between two sensors | $\leq 0.8^\circ$ |

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## Details of Judgment Value

EN-01870

- (1) Sensor output difference (°)
- (2) Accelerator pedal position sensor 2 opening angle (°)
- (3) NG area

### Time Needed for Diagnosis:

- 116 milliseconds (For NG)
- 1,000 milliseconds (For OK)

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Fix the throttle opening angle to 6°.

### 9. ECM OPERATION AT DTC SETTING

- Memorize the freeze frame data. (For test mode \$02)
- Memorize the diagnostic value and trouble standard value. (For test mode \$06)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

### DY:DTC P2227 BAROMETRIC PRESSURE CIRCUIT RANGE/PERFORMANCE

#### 1. OUTLINE OF DIAGNOSIS

Detect the malfunction of atmospheric pressure sensor output property. Judge NG when the atmospheric pressure sensor output is largely different from the intake manifold pressure at engine starting.

#### 2. COMPONENT DESCRIPTION

Atmospheric pressure sensor is built in ECM.

#### 3. ENABLE CONDITION

| Secondary Parameters                               | Enable Conditions   |
|--|---------------------|
| Engine speed at engine starting                    | < 300 rpm           |
| Vehicle speed                                      | < 1 km/h (0.62 MPH) |
| Diagnosis for atmospheric pressure sensor property | Not finished        |

#### 4. GENERAL DRIVING CYCLE

Perform the diagnosis once turning the ignition switch to ON.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.33 seconds.

##### Judgment Value

| Malfunction Criteria   | Threshold Value                  |
|--|----------------------------------|
| IAtmospheric – manifold absolute pressureI                                 | ≥ 26.7 kPa (200 mmHg, 7.88 inHg) |
| IIntake manifold pressure at engine starting – manifold absolute pressureI | < 1.33 kPa (10 mmHg, 2.95 inHg)  |

**Time Needed for Diagnosis:** 0.3 seconds

**Malfunction Indicator Light Illumination:** Detect when malfunction occurs in 2 continuous driving cycles.

##### • Normality Judgment

Judge OK and clear the NG when the continuous time of completing the malfunction criteria below becomes more than 0.26 seconds.

##### Judgment Value

| Malfunction Criteria                     | Threshold Value                  |
|--|----------------------------------|
| Atmospheric – manifold absolute pressure | < 26.7 kPa (200 mmHg, 7.88 inHg) |

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When “Clear Memory” was performed

#### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When “Clear Memory” was performed

#### 8. FAIL SAFE

Atmospheric pressure sensor process: Fix the atmospheric pressure to 101 kPa (760 mmHg, 29.8 inHg).

#### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

GENERAL DESCRIPTION

## DZ:DTC P2228 BAROMETRIC PRESSURE CIRCUIT LOW INPUT

### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of atmospheric pressure sensor.  
Judge NG when out of the standard value.

### 2. COMPONENT DESCRIPTION

Atmospheric pressure sensor is built in ECM.

### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

### 5. DIAGNOSTIC METHOD

#### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | < 0.118 V       |

**Time Needed for Diagnosis:** 0.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

#### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

#### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | ≥ 0.118 V       |

### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

### 8. FAIL SAFE

Atmospheric pressure sensor process: Fix the atmospheric pressure to 101.3 kPa (760 mmHg, 29.9 inHg).

### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

# Diagnostic Trouble Code (DTC) Detecting Criteria

## GENERAL DESCRIPTION

---

### EA:DTC P2229 BAROMETRIC PRESSURE CIRCUIT HIGH INPUT

#### 1. OUTLINE OF DIAGNOSIS

Detect the open or short circuit of atmospheric pressure sensor.  
Judge NG when out of the standard value.

#### 2. COMPONENT DESCRIPTION

Atmospheric pressure sensor is built in ECM.

#### 3. ENABLE CONDITION

| Secondary Parameters | Enable Conditions |
|----------------------|-------------------|
| None                 |                   |

#### 4. GENERAL DRIVING CYCLE

Always perform the diagnosis continuously.

#### 5. DIAGNOSTIC METHOD

##### • Abnormality Judgment

Judge NG when the continuous time of completing the malfunction criteria below becomes more than 0.5 seconds.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | $\geq 4.936$ V  |

**Time Needed for Diagnosis:** 0.5 seconds

**Malfunction Indicator Light Illumination:** Illuminates as soon as malfunction occurs.

##### • Normality Judgment

Judge OK and clear the NG when the malfunction criteria below are completed.

##### Judgment Value

| Malfunction Criteria | Threshold Value |
|----------------------|-----------------|
| Ignition switch      | ON              |
| Output voltage       | $< 4.936$ V     |

#### 6. DTC CLEAR CONDITION

- When the OK idling cycle was completed 40 times in a row
- When "Clear Memory" was performed

#### 7. MALFUNCTION INDICATOR LIGHT CLEAR CONDITION

- When the OK driving cycle was completed 3 times in a row
- When "Clear Memory" was performed

#### 8. FAIL SAFE

Atmospheric pressure sensor process: Fix the atmospheric pressure to 101.3 kPa (760 mmHg, 29.9 inHg).

#### 9. ECM OPERATION AT DTC SETTING

Memorize the freeze frame data. (For test mode \$02)

## TRANSMISSION SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

| (13) Snap ring        | (27) Spring pin          |                          |
| (14) Bushing          | (28) Rod                 |                          |

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 1.3 (0.13, 0.96)**

**T2: 7.5 (0.76, 5.5)**

**T3: 11.8 (1.2, 8.7)**

**T4: 18 (1.8, 13.0)**

**T5: 32 (3.3, 23.6)**

#### **C: CAUTION**

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply grease onto sliding or revolution surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of grease to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Before disconnecting electrical connectors, be sure to disconnect the ground cable from battery.

| 1 | 2  | 3  | 4  | 5  | 6  | 7  | 8  |
| 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 |

# AT Shift Lock Control System

## CONTROL SYSTEMS

| Step   | Check                                    | Yes   | No  |
|--|--|---|---|
| <b>1 CHECK FUSE.</b><br>Remove the fuse (No. 3, 4 and 11).   | Is the fuse (No. 3, 4 or 11) blown out?  | Replace the fuse (No. 3, 4 or 11). If the replaced fuse (No. 3, 4 or 11) has blown out easily, repair short circuit in harness between fuse and body integrated module. | Go to step 2.   |
| <b>2 CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED MODULE AND BODY GROUND.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance of harness between body integrated module and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B280) No. 4 — Chassis ground:</i><br><i>(B280) No. 13 — Chassis ground:</i> | Is the resistance less than 1 $\Omega$ ? | Go to step 3.   | Repair the open circuit in harness between body integrated module and body ground.                                  |
| <b>3 CHECK BATTERY POWER SUPPLY.</b><br>1) Turn the ignition switch to ON (engine OFF).<br>2) Measure the voltages between body integrated module and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B280) No. 2 (+) — Chassis ground (-):</i>  | Is the voltage more than 9 V?            | Go to step 4.   | Repair the open circuit harness between battery and body integrated module, and poor contact in coupling connector. |
| <b>4 CHECK IGNITION POWER SUPPLY CIRCUIT.</b><br>1) Turn the ignition switch to ACC.<br>2) Measure the voltage between body integrated module and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B281) No. 10 (+) — Chassis ground (-):</i>   | Is the voltage more than 9 V?            | Go to step 5.   | Repair the open circuit harness between battery and body integrated module, and poor contact in coupling connector. |
| <b>5 CHECK IGNITION POWER SUPPLY CIRCUIT.</b><br>1) Turn the ignition switch to ON (engine OFF).<br>2) Measure the voltage between body integrated module and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B281) No. 19 (+) — Chassis ground (-):</i>   | Is the voltage more than 9 V?            | Go to step 6.   | Repair the open circuit harness between battery and body integrated module, and poor contact in coupling connector. |
| <b>6 CHECK POOR CONTACT.</b>   | Is there poor contact in connector?      | Repair the poor contact.  | Replace the body integrated module.   |

## 3. SELECT LEVER CANNOT BE SHIFTED

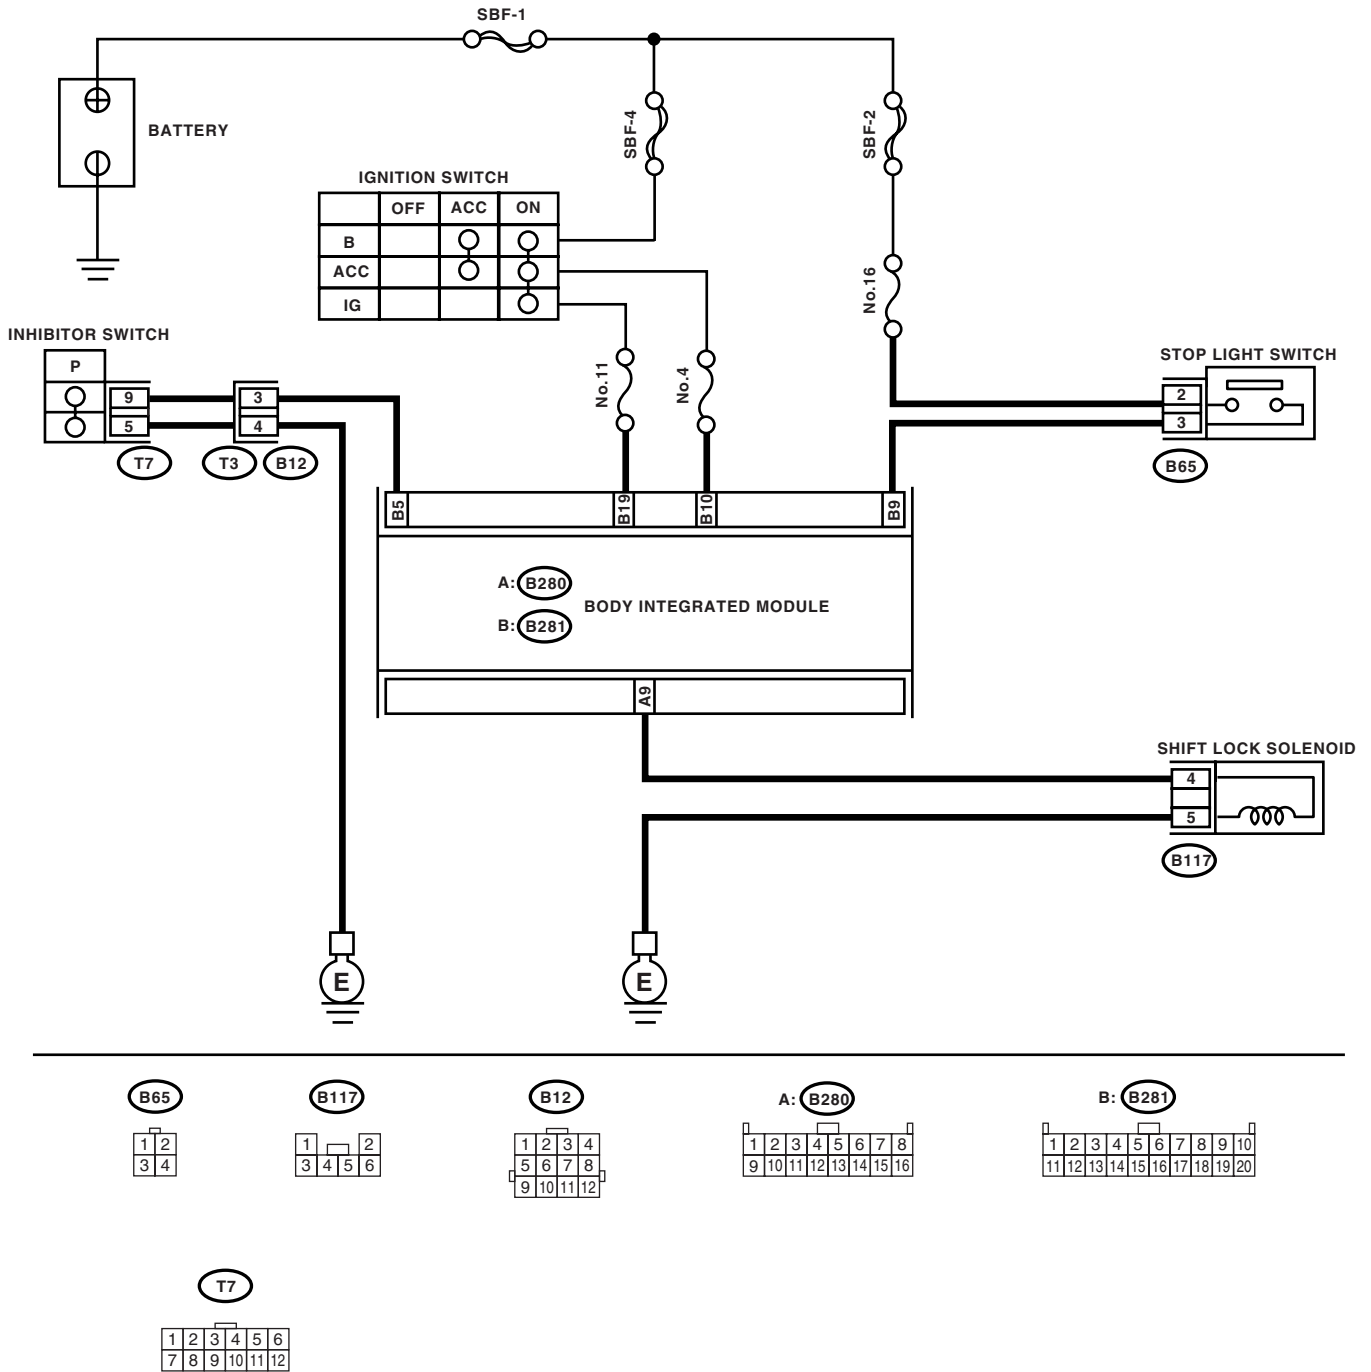

# AT Shift Lock Control System

## CONTROL SYSTEMS

| Step | Check  | Yes  | No  |                                     |
|------|--|--|---|-------------------------------------|
| 1    | <b>CHECK STOP LIGHT SWITCH.</b><br>Depress the brake pedal.  | Does the stop light turn on?                   | Go to step 2.   | Inspect the stop light system.      |
| 2    | <b>CHECK HARNESS BETWEEN STOP LIGHT SWITCH AND BODY INTEGRATED MODULE.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the body integrated module and stoplight switch connector.<br>3) Measure the resistance of harness between stop light switch and body integrated module.<br><b>Connector &amp; terminal</b><br><b>(B65) No. 3 — (B281) No. 9:</b> | Is the resistance more than 1 M $\Omega$ ?     | Repair the open circuit in harness between body integrated module and stop light switch.    | Go to step 3.                       |
| 3    | <b>CHECK HARNESS BETWEEN STOP LIGHT SWITCH AND BODY INTEGRATED MODULE.</b><br>Measure the resistance of harness between stop light switch and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B65) No. 3 — Chassis ground:</b>   | Is the resistance less than 1 $\Omega$ ?       | Repair the short circuit in harness between body integrated module and stop light switch.   | Go to step 4.                       |
| 4    | <b>CHECK HARNESS BETWEEN BODY INTEGRATED MODULE AND SHIFT LOCK SOLENOID.</b><br>1) Disconnect the shift lock solenoid connector.<br>2) Measure the resistance of harness between body integrated module and shift lock solenoid.<br><b>Connector &amp; terminal</b><br><b>(B117) No. 4 — (B280) No. 9:</b>   | Is the resistance more than 1 M $\Omega$ ?     | Repair the open circuit in harness between body integrated module and shift lock solenoid.  | Go to step 5.                       |
| 5    | <b>CHECK HARNESS BETWEEN BODY INTEGRATED MODULE AND SHIFT LOCK SOLENOID.</b><br>Measure the resistance of harness between shift lock solenoid and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B117) No. 4 — Chassis ground:</b>  | Is the resistance less than 1 $\Omega$ ?       | Repair the short circuit in harness between body integrated module and shift lock solenoid. | Go to step 6.                       |
| 6    | <b>CHECK HARNESS BETWEEN SHIFT LOCK SOLENOID AND CHASSIS GROUND.</b><br>Measure the resistance of harness between shift lock solenoid and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B117) No. 5 — Chassis ground:</b>  | Is the resistance more than 1 M $\Omega$ ?     | Repair the open circuit in harness between shift lock solenoid and body ground.             | Go to step 7.                       |
| 7    | <b>CHECK SHIFT LOCK SOLENOID.</b><br>Measure the resistance of shift lock solenoid connector terminals.<br><b>Terminals</b><br><b>No. 4 — No. 5:</b>   | Is the resistance 20 — 40 $\Omega$ ?           | Go to step 8.   | Replace the shift lock solenoid.    |
| 8    | <b>CHECK SHIFT LOCK SOLENOID.</b><br>Connect the battery with shift lock solenoid connector terminal and operate solenoid.<br><b>Terminals</b><br><b>No. 4 (+) — No. 5 (-):</b>  | Does the shift lock solenoid operate properly? | Go to step 9.   | Replace the shift lock solenoid.    |
| 9    | <b>CHECK POOR CONTACT.</b>   | Is there poor contact in connector?            | Repair the poor contact.  | Replace the body integrated module. |

## 4. SELECT LEVER SHIFT LOCK IS NOT OPERATED

CS-00681

# AT Shift Lock Control System

## CONTROL SYSTEMS

| Step   | Check   | Yes  | No  |
|--|---|--|---|
| <b>1 CHECK INHIBITOR SWITCH.</b><br>1) Turn the ignition switch to ON (engine OFF).<br>2) Move the select lever from "P" to "1" range.   | Are combination meter indicator light and select lever "P", "R", "N", "3", "2" and "1" correctly matched? | Go to step 2.  | Adjust the inhibitor switch and select cable.   |
| <b>2 CHECK IGNITION POWER SUPPLY CIRCUIT.</b><br>1) Turn the ignition switch to ON (engine OFF).<br>2) Measure the voltage between body integrated module and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B281) No. 19 (+) — Chassis ground (-):</i>   | Is the voltage more than 9 V?   | Go to step 3.  | Repair the open circuit harness between battery and body integrated module, and poor contact in coupling connector. |
| <b>3 CHECK HARNESS BETWEEN INHIBITOR SWITCH AND BODY INTEGRATED MODULE.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector of transmission harness and body integrated module.<br>3) Measure the resistance of harness between body integrated module and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B281) No. 5 — Chassis ground:</i> | Is the resistance less than 1 $\Omega$ ?  | Repair the short circuit in harness between body integrated module and transmission connector. | Go to step 4.   |
| <b>4 CHECK HARNESS BETWEEN INHIBITOR SWITCH AND BODY INTEGRATED MODULE.</b><br>Measure the resistance of harness between body integrated module and inhibitor switch.<br><i>Connector &amp; terminal</i><br><i>(B12) No. 3 — (B281) No. 5:</i>   | Is the resistance more than 1 $M\Omega$ ?   | Repair the open circuit in harness between body integrated module and transmission connector   | Go to step 5.   |
| <b>5 CHECK HARNESS BETWEEN INHIBITOR SWITCH AND CHASSIS GROUND.</b><br>Measure the resistance of harness between body integrated module and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B12) No. 4 — Chassis ground:</i>   | Is the resistance less than 1 $\Omega$ ?  | Go to step 6.  | Repair the open circuit in harness between body integrated module and chassis ground.                               |
| <b>6 CHECK INHIBITOR SWITCH.</b><br>1) Move the select lever to "P" range.<br>2) Measure the resistance of transmission harness connector terminals.<br><i>Connector &amp; terminal</i><br><i>(T3) No. 3 — No. 4:</i>  | Is the resistance more than 1 $M\Omega$ ?   | Repair or replace the inhibitor switch.  | Go to step 7.   |
| <b>7 CHECK OUTPUT SIGNAL FOR BODY INTEGRATED MODULE.</b><br>1) Connect all connectors.<br>2) Turn the ignition switch to ON.<br>3) Measure the voltage between body integrated module and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B281) No. 5 (+) — Chassis ground (-):</i>  | Is the voltage 9 — 16 V?  | Go to step 8.  | Go to step 16.  |
| <b>8 CHECK STOP LIGHT SWITCH.</b><br>Depress the brake pedal.  | Does the stop light turn on?  | Go to step 9.  | Inspect the stop light system.  |

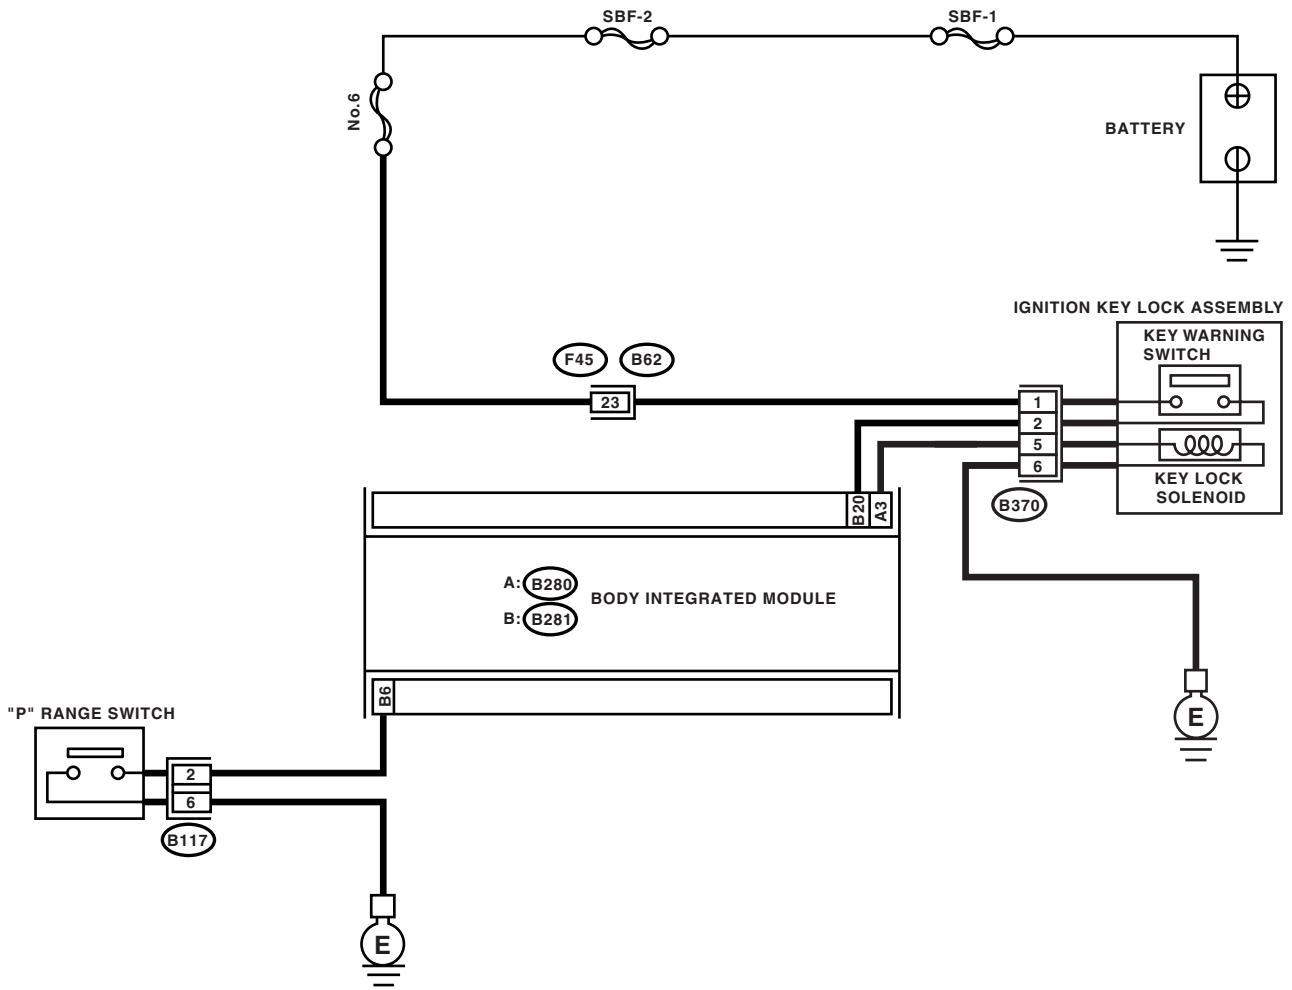

# AT Shift Lock Control System

| Step   | Check  | Yes  | No  |
|--|--|--|---|
| <b>9 CHECK HARNESS BETWEEN STOP LIGHT SWITCH AND AT SHIFT LOCK CONTROL MODULE.</b><br>1) Depress the brake pedal.<br>2) Measure the voltage between body integrated module and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B281) No. 9 (+) — Chassis ground (-):</b></i>   | Is the voltage more than 9 V?                  | Go to step 10.   | Repair the open or short circuit in harness between body integrated module and stop light switch. |
| <b>10 CHECK HARNESS BETWEEN BODY INTEGRATED MODULE AND SHIFT LOCK SOLENOID.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from shift lock solenoid and body integrated module.<br>3) Measure the resistance of harness between body integrated module and shift lock solenoid.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B280) No. 9 — (B117) No. 4:</b></i> | Is the resistance more than 1 M $\Omega$ ?     | Repair the open circuit in harness between body integrated module and shift lock solenoid. | Go to step 11.  |
| <b>11 CHECK HARNESS BETWEEN BODY INTEGRATED MODULE AND SHIFT LOCK SOLENOID.</b><br>Measure the resistance of harness between shift lock solenoid and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B280) No. 9 — Chassis ground:</b></i>   | Is the resistance less than 10 $\Omega$ ?      | Go to step 12.   | Repair the short circuit in harness between body integrated module and shift lock solenoid.       |
| <b>12 CHECK HARNESS BETWEEN SHIFT LOCK SOLENOID AND CHASSIS GROUND.</b><br>Measure the resistance of harness between shift lock solenoid and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B117) No. 5 — Chassis ground:</b></i>   | Is the resistance less than 1 $\Omega$ ?       | Go to step 13.   | Repair the open circuit in harness between shift lock solenoid and chassis ground.                |
| <b>13 CHECK SHIFT LOCK SOLENOID.</b><br>Measure the resistance of shift lock solenoid connector terminals.<br><i><b>Terminals</b></i><br><i><b>No. 4 — No. 5:</b></i>  | Is the resistance 20 — 40 $\Omega$ ?           | Go to step 14.   | Replace the shift lock solenoid.  |
| <b>14 CHECK SHIFT LOCK SOLENOID.</b><br>Connect the battery with shift lock solenoid connector terminal and operate solenoid.<br><i><b>Terminals</b></i><br><i><b>No. 4 (+) — No. 5 (-):</b></i>   | Is the shift lock solenoid operating properly? | Go to step 15.   | Replace the shift lock solenoid.  |
| <b>15 CHECK OUTPUT SIGNAL FOR AT SHIFT LOCK CONTROL MODULE.</b><br>1) Turn the ignition switch to ON (engine OFF).<br>2) Measure the voltage between body integrated module and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B280) No. 9 (+) — Chassis ground (-):</b></i>  | Is the voltage more than 8.5 V?                | Go to step 16.   | Replace the body integrated module.   |
| <b>16 CHECK POOR CONTACT.</b>  | Is there poor contact in connector?            | Repair the poor contact.   | Replace the body integrated module.   |

| <b>15 CHECK POOR CONTACT.</b>  | Is there poor contact in connector?       | Repair the poor contact.  | Replace the body integrated module.  |

## 3. Select Lever

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Set the select lever to the "N" range.
- 4) Lift-up the vehicle.
- 5) Remove the rear exhaust pipe and muffler.
  - SOHC model  
<Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>
  - DOHC turbo model  
<Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>
- 6) Disconnect the cable from select lever, and then remove the cable bracket.

- (A) Adjusting nuts  
(B) Cable bracket

- 7) Lower the vehicle.
- 8) Remove the console box. <Ref. to EI-46, REMOVAL, Console Box.>
- 9) Disconnect the connectors, then remove the four bolts to take out the select lever from the body.

### B: INSTALLATION

- 1) Mount the select lever onto the vehicle body.
- 2) Tighten the four bolts to install the select lever to the vehicle body, then connect connector.

**Tightening torque:**  
**13 N·m (1.3 kgf-m, 9.4 ft-lb)**

- 3) Install the console box. <Ref. to EI-46, INSTALLATION, Console Box.>
- 4) Set location of the select lever at "N" range.
- 5) Lift-up the vehicle.
- 6) Set location of the range select lever to "N" range.
- 7) Insert the thread portion of the other inner cable and into the connector hole of the select lever, and fix the other outer cable end to the bracket.

**Tightening torque:**  
**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- 8) Adjust the select cable position. <Ref. to CS-28, ADJUSTMENT, Select Cable.>
- 9) After completion of fitting, make sure that the select lever operates smoothly all across the operating range.
- 10) Install the rear exhaust pipe and muffler.
  - SOHC model  
<Ref. to EX(H4SO)-7, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, INSTALLATION, Muffler.>
  - DOHC turbo model  
<Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>
- 11) Inspect the following items. If the following inspection reveals faults, adjust the select cable and inhibitor switch. <Ref. to CS-28, ADJUSTMENT, Select Cable.> <Ref. to 4AT-48, ADJUSTMENT, Inhibitor Switch.>

- (1) The engine starts operating when select lever is in range "P" and "N", but not in other ranges.
- (2) The back-up light is lit when the select lever is in range "R", but not in other ranges.
- (3) Select lever and indicator ranges are matched.

### C: DISASSEMBLY

- 1) Remove the packing.
- 2) Remove the grip.
- 3) Remove the indicator light, and then remove the indicator cover.

# Select Lever

## CONTROL SYSTEMS

### NOTE:

Be careful not to break the indicator light during removal.

- (A) Grip
- (B) Indicator cover
- (C) Indicator light

4) Remove the blind.

5) Remove the cover.

- (A) Clip
- (B) Cover

6) Remove the clips, and then remove the guide plate.

- (A) Clips
- (B) Guide plate

7) Remove the clamp, and then remove the shift lock solenoid.

- (A) Clamp
- (B) Shift lock solenoid

8) Remove the bolt securing lock plate B.

9) Remove the lock plates A, B, C and bushing.

- (A) Lock plate A
- (B) Lock plate B
- (C) Bushing
- (D) Lock plate C

10) Remove the cushion plate.

11) Remove the clip, and then remove the "P" range switch.

- (A) Clip
- (B) "P" range switch

12) Remove the grommet, and then extract spring pin.

- (A) Spring pin
- (B) Select lever arm

13) Remove the select lever arm, and then take away the select lever assembly from plate.

- (A) Select lever arm
- (B) Select lever ASSY
- (C) Plate

14) Remove the detent spring, and then remove the detent arm.

- (A) Detent arm
- (B) Detent spring

15) Remove the select lever assembly bushing from bracket.

- 16) Remove the bracket from select lever assembly.

- 17) Remove the bushing from bracket.

### D: ASSEMBLY

- 1) Clean all parts before assembly.
- 2) Apply grease to each select lever parts. <Ref. to CS-2, AT SELECT LEVER, COMPONENT, General Description.>

**Lock plate:**

**SUNCALL GREASE (Part No. 002948040)**

**Except lock plate:**

**KOPR-KOTE (Part No. 003603001) or equivalent**

- 3) Assembly is in the reverse order of disassembly.
- 4) After completion of fitting, transfer the select lever to range "P" — "1", then check whether the indicator and select lever agree, whether the pointer and position mark agree and what the operating force is.

### E: INSPECTION

- 1) Inspect the removed parts for deformation, damage and wear. Correct or replace if defective.
- 2) Confirm the following parts for operating condition before assembly. Moving condition of the select lever assembly, it should move smoothly.

## 4. Select Cable

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Set the select lever to "N" range.
- 3) Disconnect negative cable from battery.
- 4) Lift-up the vehicle.
- 5) Remove front, center, rear exhaust pipe and muffler. (SOHC model)  
 <Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4SO)-6, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>
- 6) Remove the center and rear exhaust pipes and muffler. (DOHC turbo model)  
 <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>
- 7) Remove the snap pin and washer from range select lever.

- (A) Range select lever
- (B) Snap pin
- (C) Select cable
- (D) Clamp
- (E) Washer

- 8) Remove the plate assembly from transmission case.

- (A) Select cable
- (B) Plate ASSY
- (C) Clamp

- 9) Disconnect the cable from select lever, and then remove the cable bracket.

- (A) Adjusting nuts
- (B) Cable bracket

- 10) Remove the select cable from plate assembly.

### B: INSTALLATION

- 1) Install the select cable to plate assembly.

#### Tightening torque:

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- 2) Install the select cable to range select lever.
- 3) Install the plate assembly to transmission.

#### Tightening torque:

**T: 24.5 N·m (2.5 kgf-m, 18.1 ft-lb)**

- (A) Select cable
- (B) Plate ASSY

# Select Cable

## CONTROL SYSTEMS

4) Install the washer and snap pin to range select lever.

- (A) Range select lever
- (B) Snap pin
- (C) Select cable
- (D) Clamp
- (E) Washer

5) Insert the thread portion of other inner cable and into connector hole of select lever, and fix the other outer cable end to the bracket.

### Tightening torque:

**18 N·m (1.8 kgf·m, 13.0 ft·lb)**

6) Move the select lever to “N” range, and then adjust the select cable position. <Ref. to CS-28, ADJUSTMENT, Select Cable.>

7) Install the front, center, rear exhaust pipe and muffler. (SOHC model)

<Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO)-6, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4SO)-7, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, INSTALLATION, Muffler.>

8) Install center and rear exhaust pipes and muffler. (DOHC turbo model)

<Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

## C: INSPECTION

Check the removed cable and replace if damaged, rusty, or malfunctioning.

- 1) Check for smooth operation of the cable.
- 2) Check the inner cable for damage and rust.
- 3) Check the outer cable for damage, bends, and cracks.
- 4) Check the boot for damage, cracks, and deterioration.
- 5) Move the select lever from “P” range to “1” range. You should be able to feel the detents in each range. If the detents cannot be felt or the range pointer is improperly aligned, adjust the cable.

## D: ADJUSTMENT

- 1) Set the vehicle on a lift.
- 2) Set the select lever to “N” range.
- 3) Lift-up the vehicle.
- 4) Remove the rear exhaust pipe and muffler.
  - SOHC model  
<Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>
  - DOHC turbo model  
<Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>
- 5) Loosen the adjusting nut on each side.

- (A) Adjusting nut A
- (B) Adjusting nut B

6) Turn the adjusting nut B until it lightly touches the connector.

- (A) Front side
- (B) Select lever
- (C) Connector
- (D) Adjusting nut B
- (E) Contact point
- (F) Adjusting nut A

7) While preventing the adjusting nut B from moving with a wrench, tighten the adjusting nut A.

**Tightening torque:**  
**7.5 N·m (0.76 kgf·m, 5.5 ft-lb)**

- (A) Adjusting nut A
- (B) Adjusting nut B

- 8) After completion of fitting, make sure that the select lever operates smoothly all across the operating range.
- 9) Install in the reverse order of removal.

# AT Shift Lock Solenoid and "P" Range Switch

## CONTROL SYSTEMS

### 5. AT Shift Lock Solenoid and "P" Range Switch

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console box. <Ref. to EI-46, REMOVAL, Console Box.>
- 3) Disconnect the connector.
- 4) Remove the grip.
- 5) Remove the indicator bulb from indicator cover.

- 6) Remove the indicator cover.

- 7) Remove the blind.
- 8) Remove the cushion.
- 9) Remove the clip, and then remove the "P" range switch.

- (A) Clip  
(B) "P" range switch

- 10) Remove the cover.

- (A) Clip  
(B) Cover

- 11) Remove the clamp, and then remove the shift lock solenoid.

- (A) Clamp  
(B) Shift lock solenoid

#### B: INSTALLATION

Install in the reverse order of removal.

## 6. Body Integrated Module

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lower cover.

- 3) Remove the knee bolster.

- 4) Disconnect the connector from body integrated module.
- 5) Remove the body integrated module.

### B: INSTALLATION

Install in the reverse order of removal.

## 7. MT Gear Shift Lever

### A: REMOVAL

#### 1. 5MT

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Remove the gear shift knob.
- 4) Remove the console box. <Ref. to EI-46, REMOVAL, Console Box.>
- 5) Remove the clamp.

- 6) Remove the boot and insulator assembly.

- 7) Remove the plate assembly from body.

- 8) Lift-up the vehicle.
- 9) Remove the rear exhaust pipe and muffler.
  - SOHC model  
<Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>
  - DOHC turbo model  
<Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>

- 10) Remove the stay from transmission bracket.

- (A) Stay
- (B) Transmission bracket

- 11) Remove the rod from joint.

- (A) Stay
- (B) Rod

- 12) Remove the cushion rubber from body.

- (A) Stay
- (B) Cushion rubber

# MT Gear Shift Lever

## CONTROL SYSTEMS

13) Extract the spring pin, and then remove the joint.

- (A) Joint
- (B) Spring pin

14) Lower the vehicle.

15) Remove the gear shift lever.

## 2. 6MT

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Remove the gear shift knob.
- 4) Remove the console box front. <Ref. to EI-46, REMOVAL, Console Box.>
- 5) Remove the boot plate from body.

- 6) Lift-up the vehicle.
- 7) Remove the under cover.
- 8) Remove the rear exhaust pipe and muffler. <Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>
- 9) Remove the crossmember. <Ref. to 6MT-34, REMOVAL, Transmission Mounting System.>

10) Remove the snap pin and washer, and then remove the reverse check cable from reverse check lever.

- (A) Snap pin
- (B) Washer
- (C) Reverse check cable

11) Move the transmission to right side, and then remove the joint COMPL, stay bolt and reverse check cable.

### NOTE:

If the transmission is not moved, the joint COMPL and stay bolt will contact body and damage may occur.

- (A) Joint COMPL bolt
- (B) Stay bolt
- (C) Reverse check cable

12) Remove the cushion rubber from body.

- 13) Lower the vehicle.
- 14) Remove the gear shift lever.

## B: INSTALLATION

### 1. 5MT

- 1) Install the joint to the transmission and secure with the spring pin.
- 2) Insert gear shift lever from room side.

**NOTE:**

After inserting rod and stay, position them onto transmission mount.

- 3) Lift-up the vehicle.
- 4) Install the joint to shifter arm.
- 5) Insert the spring pin.

- (A) Joint
- (B) Spring pin

- 6) Mount the cushion rubber on body.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- (A) Stay
- (B) Cushion rubber

- 7) Connect the rod to the joint.

**Tightening torque:**

**12 N·m (1.2 kgf-m, 8.9 ft-lb)**

- (A) Stay
- (B) Rod

- 8) Connect the stay to transmission bracket.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- (A) Stay
- (B) Transmission bracket

- 9) Install the rear exhaust pipe and muffler.

- SOHC model  
<Ref. to EX(H4SO)-7, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, INSTALLATION, Muffler.>

- DOHC turbo model  
<Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

- 10) Lower the vehicle.

- 11) Install the plate assembly to body.

# MT Gear Shift Lever

## CONTROL SYSTEMS

### Tightening torque:

**7.5 N·m (0.76 kgf·m, 5.5 ft·lb)**

12) Pay attention to the direction of boot and insulator assembly and install them to the vehicle.

13) Install the clamp.

14) Install console box. <Ref. to EI-46, INSTALLATION, Console Box.>

## 2. 6MT

1) Insert the gear shift lever from room side.

### NOTE:

After inserting the rod and stay, temporarily put them onto transmission mount.

2) Mount the cushion rubber on body.

### Tightening torque:

**18 N·m (1.8 kgf·m, 13.0 ft·lb)**

3) Move the transmission to right side, and then install the joint COMPL and stay.

### Tightening torque:

**T1: 11.8 N·m (1.2 kgf·m, 8.7 ft·lb)**

**T2: 32 N·m (3.3 kgf·m, 23.6 ft·lb)**

(A) Reverse check cable

4) Install the crossmember. <Ref. to 6MT-34, INSTALLATION, Transmission Mounting System.>

5) Install the reverse check cable end, washer and snap pin to reverse check lever.

### NOTE:

- Take care to install the snap pin in proper direction.
- Conduct the adjustment of reverse check cable before installation. <Ref. to CS-49, ADJUSTMENT, Reverse Check Cable.>

(A) Reverse check cable

(B) Washer

(C) Snap pin

(D) Front side

6) Install the rear exhaust pipe and muffler. <Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

7) Install the under cover.

8) Install the boot plate.

### NOTE:

Install the inner boot without any twist.

**Tightening torque:**

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

CS-00219

9) Install the console box. <Ref. to EI-46, INSTALLATION, Console Box.>

10) Check that the gear shift is correctly shifted to each gear.

**C: DISASSEMBLY**

**1. 5MT**

1) Disassemble the lock wire.

CS-00316

(A) Lock wire

2) Remove the rod from lever.

CS-00317

(A) Rod  
(B) Lever  
(C) Stay

3) Separate the rod and inner boot.

4) Remove the snap ring from the stay.

CS-00318

(A) Snap ring

5) Separate the gear shift lever and the stay.

CS-00319

6) Remove the boot, bushing and snap ring from gear shift lever.

CS-00320

(A) O-ring  
(B) Bushing  
(C) Snap ring

# MT Gear Shift Lever

## CONTROL SYSTEMS

7) Remove the spring pin, and then remove the bushing and snap ring.

- (A) Spring pin
- (B) Bushing

8) Remove the boss from the joint.

## 2. 6MT

1) Remove the spring pin from slider.

- (A) Slider
- (B) Spring pin

2) Remove the slider and spring.

- (A) Slider
- (B) Spring

3) Cut the band clip.

4) Remove the reverse check cable from cable plate.

- (A) Cable plate
- (B) Reverse check cable

5) Remove the reverse check cable from gear shift assembly.

6) Remove the holder and spring seat.

(A) Holder

7) Disassemble the lock wire.

**NOTE:**

Do not reuse the lock wire.

(A) Lock wire

8) Remove the boss from rod.

(A) Rod  
(B) Boss

9) Remove the rod from lever.

(A) Rod  
(B) Lever  
(C) Stay

10) Separate the rod and inner boot.

11) Remove the snap ring from stay.

(A) Snap ring

12) Separate the gear shift lever and stay.

# MT Gear Shift Lever

## CONTROL SYSTEMS

13) Remove the boot and bushing from gear shift lever.

- (A) O-ring
- (B) Bushing

16) Remove the bushing and cushion rubber from stay.

- (A) Bushing
- (B) Stay
- (C) Cushion rubber

14) Remove the spring pin, and then remove the bushing and snap ring.

- (A) Bushing
- (B) Snap ring

15) Remove the bushing and spacer from boss.

- (A) Bushing
- (B) Spacer

## D: ASSEMBLY

### 1. 5MT

#### NOTE:

- Clean all the parts before assembly.
- Apply grease [KOPR-KOTE (Part No. 003603001) or equivalent] to each part.

1) Mount the bushing and cushion rubber on the stay.

- (A) Bushing
- (B) Cushion rubber

2) Install the bushing and spacer to boss.

- (A) Bushing
- (B) Spacer

3) Using new self-locking nuts, install the boss to the joint.

**Tightening torque:**  
**12 N·m (1.2 kgf·m, 8.9 ft·lb)**

4) Install the snap ring to gear shift lever and install the bushing.

**NOTE:**  
 Apply grease to the bushing.

5) Apply grease to the bushing and O-ring, and then install to the gear shift lever.

- (A) O-ring
- (B) Bushing
- (C) Snap ring

6) Apply sufficient grease into boss, and then install the gear shift lever to the stay.

7) Install the washer and snap ring.

- (A) Snap ring

8) Insert the gear shift lever and rod into boot hole.  
 9) Install the rod.

**Tightening torque:**  
**12 N·m (1.2 kgf·m, 8.9 ft·lb)**

- (A) Rod
- (B) Lever
- (C) Stay

# MT Gear Shift Lever

## CONTROL SYSTEMS

10) Install a new lock wire.

(A) Lock wire

**NOTE:**

- Install the lock wire to the stay groove.
- Bend the extra wire to same direction of lock wire winding.

(A) Inner boot  
(B) Lock wire  
(C) Stay

11) Check the swing torque of rod in relation to the gear shift lever.

12) Check that there is no excessive play and that parts move smoothly.

## 2. 6MT

**NOTE:**

- Clean all parts before assembly.
- Apply NIGTIGHT LYW No. 2 grease or equivalent to each parts.

1) Mount the bushing and cushion rubber on the stay.

(A) Bushing  
(B) Stay  
(C) Cushion rubber

2) Install the bushing and spacer to boss.

(A) Bushing  
(B) Spacer

3) Install the snap ring to gear shift lever, and then install the bushing.

**NOTE:**

Apply grease to the bushing.

(A) Bushing  
(B) Snap ring

4) Apply grease to the bushing and O-ring, and then install to the gear shift lever.

- (A) O-ring
- (B) Bushing

5) Apply sufficient grease into the boss, and then install the gear shift lever to stay.

6) Install the washer and snap ring.

- (A) Snap ring

7) Insert the gear shift lever and rod into boot hole.  
8) Install the rod.

**Tightening torque:**  
**11.8 N·m (1.2 kgf-m, 8.7 ft-lb)**

- (A) Rod
- (B) Lever
- (C) Stay

9) Install the boss to rod.

**Tightening torque:**  
**11.8 N·m (1.2 kgf-m, 8.7 ft-lb)**

- (A) Rod
- (B) Boss

10) Install a new lock wire.

- (A) Lock wire

# MT Gear Shift Lever

## CONTROL SYSTEMS

### NOTE:

- Install the lock wire to the stay groove.
- Bend the extra wire to same direction of lock wire winding.

- (A) Inner boot  
(B) Lock wire  
(C) Stay

11) Install the holder.

### Tightening torque:

**1.3 N·m (0.13 kgf·m, 0.96 ft·lb)**

- (A) Holder

12) Insert the reverse check cable into boot hole.

13) Insert the reverse check cable into gear shift assembly, and fix with band clip.

### NOTE:

- Cut off the extra band clip.
- Make sure that the reverse check cable is inserted into gear shift lever assembly without any clearance.

14) Install the seat cushion and spring.

- (A) Spring  
(B) Seat cushion

15) Fix the slider and reverse check cable end with spring pin.

### NOTE:

Apply grease to the sliding part of slider.

- (A) Slider  
(B) Spring pin

16) With the cable pulled (slider lowered), adjust the length between end of cable plate and reverse check cable to 84 mm (3.31 in), and then tighten the lock nut.

**Tightening torque:**  
**6 N·m (0.6 kgf·m, 4.4 ft·lb)**

(A) 84 mm (3.31 in)

17) Fix the reverse check cable to clip of stay.

**NOTE:**  
 Install the reverse check cable to upper side of stay.

(A) Reverse check cable  
 (B) Clip

## E: INSPECTION

1) Check the removed parts (bushing, cushion rubber, spacer, boot, stay, rod, etc.) for deformation, damage and wear. Repair or replace any defective part.

- 5MT

(A) Bushing  
 (B) Cushion rubber  
 (C) Spacer  
 (D) Boot  
 (E) Stay  
 (F) Rod

# MT Gear Shift Lever

## CONTROL SYSTEMS

- 6MT

2) Check the swing torque of the rod in relation of the gear shift lever.

If the torque exceeds the specification, replace the bushing or retighten the nuts.

**Swing torque:**

**3.7 N (0.38 kgf, 0.84 lbf) or less**

- (A) Center of rotation
- (B) Swing torque

## 8. Reverse Check Cable

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Remove the gear shift knob.
- 3) Remove the console box front. <Ref. to EI-46, REMOVAL, Console Box.>
- 4) Remove the spring pin from slider.

- (A) Slider
- (B) Spring pin

- 5) Remove the slider and spring.

- (A) Slider
- (B) Spring

- 6) Cut the band clip, and then separate the reverse check cable from gear shift lever.

- 7) Lift-up the vehicle.
- 8) Remove the under cover.

- 9) Remove the rear exhaust pipe and muffler. <Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>

- 10) Remove the crossmember. <Ref. to 6MT-34, REMOVAL, Transmission Mounting System.>

- 11) Remove the snap pin and washer, and then separate the reverse check cable from reverse check lever.

- (A) Snap pin
- (B) Washer
- (C) Reverse check cable

- 12) Move the transmission to right side, and then remove the stay bolt and reverse check cable.

#### NOTE:

If the transmission is not moved, the stay bolt will contact body and damage may occur.

- (A) Stay
- (B) Stay bolt

# Reverse Check Cable

## CONTROL SYSTEMS

13) Raise the clip of stay, and then separate the stay and reverse check cable.

- (A) Reverse check cable
- (B) Clip

14) Remove the reverse check cable by pulling from underneath the vehicle.

### NOTE:

Take care not to damage the inner boot.

15) Loosen the lock nut, then remove the reverse check cable from cable plate.

- (A) Cable plate
- (B) Reverse check cable

## B: INSTALLATION

1) Insert the reverse check cable to the hole of inner boots from underneath the vehicle.

2) Insert the reverse check cable to the gear shift lever assembly, then fix with the band clip.

### NOTE:

- Cut off the extra band clip.

- Make sure that the reverse check cable is inserted into gear shift lever assembly without any clearance.

3) Fix the slider and reverse check cable end with spring pin.

### NOTE:

Apply grease to the sliding part of slider.

- (A) Slider
- (B) Spring pin

4) With the cable pulled (slider lowered), adjust the length between end of cable plate and reverse check cable to 84 mm (3.31 in), and then tighten the lock nut.

### Tightening torque:

**6 N·m (0.6 kgf-m, 4.4 ft-lb)**

- (A) 84 mm (3.31 in)

5) Move the transmission to right side, and then install the stay.

**Tightening torque:**

**T: 32 N·m (3.3 kgf-m, 23.6 ft-lb)**

(A) Stay

6) Install the reverse check cable end, washer and snap pin to reverse check lever.

**NOTE:**

Take care to install the snap pin in proper direction.

(A) Reverse check cable  
(B) Washer  
(C) Snap pin  
(D) Front side

7) Fix the reverse check cable to clip of stay.

**NOTE:**

Install the reverse check cable to upper side of stay.

(A) Reverse check cable  
(B) Clip

8) Install the rear exhaust pipe and muffler. <Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

9) Install the console box. <Ref. to EI-46, INSTALLATION, Console Box.>

**C: INSPECTION**

1) Verify whether the slider moves smoothly. If not, adjust the reverse check cable or check damage of slider. <Ref. to CS-49, ADJUSTMENT, Reverse Check Cable.>

2) Check that the gear can be shift to reverse, when the slider is pulled up. If the gear can not be shift to reverse, adjust the reverse check cable. <Ref. to CS-49, ADJUSTMENT, Reverse Check Cable.>

3) Check that the gear can not be shift to reverse, when the slider is not pulled up. If the gear can be shift to reverse, adjust or replace the reverse check cable. <Ref. to CS-49, ADJUSTMENT, Reverse Check Cable.>

**D: ADJUSTMENT**

1) Set the vehicle on a lift.

2) Remove the under cover.

3) Remove the rear exhaust pipe and muffler. <Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>

4) Remove the crossmember. <Ref. to 6MT-34, REMOVAL, Transmission Mounting System.>

5) Remove the snap pin and washer, and then separate the reverse check cable from reverse check lever.

(A) Snap pin  
(B) Washer  
(C) Reverse check cable

6) Move the transmission to right side, and then remove the stay bolt and reverse check cable.

# Reverse Check Cable

## CONTROL SYSTEMS

### NOTE:

If the transmission is not moved, the stay bolt will contact body and damage may occur.

- (A) Stay
- (B) Stay bolt

7) With the cable pulled (slider lowered), adjust the length between end of cable plate and reverse check cable to 84 mm (3.31 in), and then tighten the lock nut.

### Tightening torque:

**6 N·m (0.6 kgf·m, 4.4 ft·lb)**

- (A) 84 mm (3.31 in)

8) Move the transmission to right side, and then install the stay.

### Tightening torque:

**T: 32 N·m (3.3 kgf·m, 23.6 ft·lb)**

- (A) Stay

9) Install the crossmember. <Ref. to 6MT-34, INSTALLATION, Transmission Mounting System.>

10) Install the rear exhaust pipe and muffler. <Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

11) Install the reverse check cable end, washer and snap pin to reverse check lever.

### NOTE:

Take care to install the snap pin in proper direction.

- (A) Reverse check cable
- (B) Washer
- (C) Snap pin
- (D) Front side

12) Install the under cover.

## 9. General Diagnostic Table

### A: INSPECTION

| Symptom   | Remedy  |
|---|---|
| Starter does not run.   | Adjust select cable and inhibitor switch, or inspect circuit.   |
| Back-up light does not light up.  | Adjust select cable and inhibitor switch, or inspect circuit.   |
| AT shift lock system does not operate normally.                         | Adjust select cable and inhibitor switch, or inspect circuit.   |
| Shift into reverse is impossible. (6MT)                                 | Adjust reverse check cable.   |
| Shift into reverse is possible without pulling up slider. (6MT)         | Adjust or replace reverse check cable.  |
| Slider cannot be pulled up. Or slider is pulled up being sticked. (6MT) | <ul style="list-style-type: none"> <li>• Inspect reverse check system of transmission.</li> <li>• Adjust or replace reverse check cable.</li> </ul> |

# General Description

AUTOMATIC TRANSMISSION

## 1. General Description

### A: SPECIFICATION

#### 1. TORQUE CONVERTER CLUTCH

| Model                          | Non-turbo  | Turbo         |
|--------------------------------|--|---------------|
| Type                           | Symmetric, 3 element, single stage, 2 phase torque converter |               |
| Stall torque ratio             | 2.05 — 2.35  |               |
| Nominal diameter mm (in)       | 246 (9.69)   |               |
| Stall speed (at sea level) rpm | 2,200 — 2,700  | 2,700 — 3,200 |
| One-way clutch                 | Sprague type one-way clutch                                  |               |

#### 2. OIL PUMP

|                 |                                      |    |
|-----------------|--------------------------------------|----|
| Type            | Parachoid constant-displacement pump |    |
| Driving method  | Driven by engine                     |    |
| Number of teeth | Inner rotor                          | 9  |
|                 | Outer rotor                          | 10 |

#### 3. TRANSMISSION CONTROL ELEMENT

|                               |  |
|-------------------------------|--|
| Type                          | 4-forward, 1-reverse, double-row planetary gears |
| Multi-plate clutch            | 3 sets   |
| Multi-plate brake             | 2 sets   |
| One-way clutch (sprague type) | 1 set  |

#### 4. TRANSMISSION GEAR RATIO

|     |       |
|-----|-------|
| 1st | 2.785 |
| 2nd | 1.545 |
| 3rd | 1.000 |
| 4th | 0.694 |
| Rev | 2.272 |

#### 5. PLANETARY GEAR AND PLATE

| Model                                     | Non-turbo | Turbo |
|---|-----------|-------|
| Tooth number of front sun gear            | 33        |       |
| Tooth number of front pinion              | 21        |       |
| Tooth number of front internal gear       | 75        |       |
| Tooth number of rear sun gear             | 42        |       |
| Tooth number of rear pinion               | 17        |       |
| Tooth number of rear internal gear        | 75        |       |
| Drive plate number of high clutch         | 4         | 5     |
| Drive plate number of low clutch          | 5         | 7     |
| Drive plate number of reverse clutch      | 2         |       |
| Drive plate number of 2-4 brake           | 3         | 4     |
| Drive plate number of low & reverse brake | 5         | 7     |

#### 6. SELECTOR POSITION

|                |   |
|----------------|---|
| P (Park)       | Transmission in neutral, output member immovable, and engine start possible |
| R (Reverse)    | Transmission in reverse for backing   |
| N (Neutral)    | Transmission in neutral and engine start possible                           |
| D (Drive)      | Automatic gear change<br>1st ← → 2nd ← → 3rd ← → 4th                        |
| 3 (3rd)        | Automatic gear change<br>1st ← → 2nd ← → 3rd ← 4th                          |
| 2 (2nd)        | 2nd gear locked<br>(Deceleration possible 2nd ← 3rd ← 4th)                  |
| 1 (1st)        | 1st gear locked<br>(Deceleration possible 1st ← 2nd ← 3rd ← 4th)            |
| Control method | Wire cable type   |

# General Description

AUTOMATIC TRANSMISSION

## 7. HYDRAULIC CONTROL AND LUBRICATION

|                                     |  |   |
|-------------------------------------|--|---|
| Type                                | Electronic hydraulic control<br>[Four forward speed changes by electrical signals of vehicle speed and accelerator (throttle) opening] |   |
| Fluid                               | Recommended  | SUBARU ATF Type-HP                      |
|                                     | Alternative  | Idemitsu: ATF HP<br>Castrol: Transmax J |
| Fluid capacity<br>ℓ (US qt, Imp qt) | 9.3 — 9.6<br>(9.8 — 10.1, 8.2 — 8.4)   |   |
| Lubrication system                  | Forced feed lubrication with oil pump  |   |
| Oil                                 | Automatic transmission fluid (above mentioned)   |   |

## 8. COOLING AND HARNESS

|                      |   |
|----------------------|---|
| Cooling system       | Liquid-cooled cooler incorporated in radiator |
| Inhibitor switch     | 12 poles                                      |
| Transmission harness | 20 poles                                      |

## 11.RECOMMENDED GEAR OIL

|                 |   |
|-----------------|---|
| Lubrication oil | <p>(1) Item<br/>(2) Front differential gear oil<br/>(3) API standard<br/>(4) SAE viscosity No. and applicable temperature</p> |
|                 | Front differential oil capacity<br>ℓ (US qt, Imp qt)  |

## 9. TRANSFER

| Model  | Non-turbo  | Turbo                              |
|--|--|------------------------------------|
| Transfer type                                  | Multi-plate transfer (MP-T)  | Variable torque distribution (VTD) |
| Drive & driven plate number of transfer clutch | 5  | 3                                  |
| Control method                                 | Electronic hydraulic type  |                                    |
| Lubricant                                      | The same Automatic transmission fluid used in automatic transmission |                                    |
| 1st reduction gear ratio                       | 1.000 (53/53)  |                                    |

## 10.FINAL REDUCTION

|                  | Non-turbo    | Turbo         |
|------------------|--------------|---------------|
| Final gear ratio | 4.111 (37/9) | 3.900 (39/10) |

**T4: 58 (5.9, 43)**

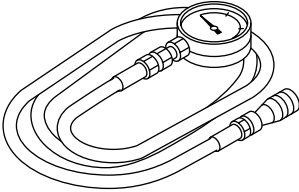

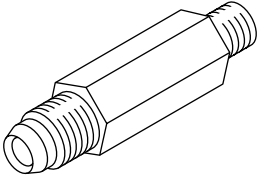

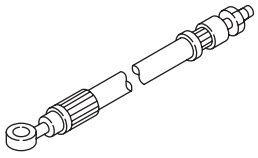

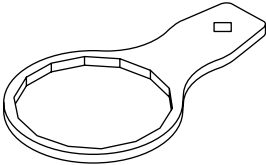

**T5: 70 (7.1, 51.6)**

#### **C: CAUTION**

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation, and disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Do not place the oil pan with its inner side facing upward until it is installed so as to prevent foreign matter intrusion into valve body.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, use a plastic hammer to open. Do not pry it apart with a screwdriver or other tool.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use genuine gear oil, grease etc. or the equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply ATF or gear oil onto sliding or revolution surfaces before installation in view of components usage.
- Replace deformed or otherwise damaged snap rings with new ones.
- Before installing O-rings or oil seals, apply sufficient amount of ATF to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying liquid gasket, completely remove the old seal.
- When disassembling AT, be sure to use nylon or paper towel, do not use cloth glove and cloth.

| Circuit tester  | Used for measuring resistance and voltage.                         |
| TORX® T70       | Used for removing and installing differential gear oil drain plug. |
| Push/pull gauge | Used for measuring low & reverse and high clutch piston stroke.    |

# Automatic Transmission Fluid

## AUTOMATIC TRANSMISSION

## 2. Automatic Transmission Fluid

### A: INSPECTION

#### NOTE:

The level of ATF varies with fluid temperature. Pay attention to the fluid temperature when checking ATF level.

1) Raise the ATF temperature by driving a distance of 5 to 10 km (3 to 6 miles). Otherwise, idle the engine to raise ATF temperature to 70 — 80°C (158 — 176°F) on SUBARU Select Monitor.

<Ref. to 4AT(D)(diag)-13, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>

2) Make sure the vehicle is level.

3) After selecting all positions (P, R, N, D, 3, 2, 1), set the select lever in “P” range. Measure the ATF level with the engine idling for one or two minutes.

- (A) ATF level gauge
- (B) Upper level
- (C) Lower level

4) Make sure that ATF level is between the upper level and lower level at HOT side.

If the level is below the lower level, check for leaks in the transmission. If there are leaks, it is necessary to repair or replace gasket, oil seals, plugs or other parts.

#### CAUTION:

- Use care not to exceed the upper limit level.
- Filling of ATF to the upper level when the transmission is cold will result in overfilling of ATF, causing a transmission failure.

5) Check ATF level after raising ATF temperature to 70 — 80°C (158 — 176°F) by driving the distance of 5 to 10 km (3 to 6 miles) or by idling the engine.

### B: REPLACEMENT

1) Lift-up the vehicle.

2) Drain the ATF completely.

3) Check the ATF for condition. <Ref. to 4AT-31, CONDITION CHECK, Automatic Transmission Fluid.>

#### CAUTION:

Directly after the vehicle has been running, the ATF is hot. Therefore, be careful not to burn yourself.

4) Replace with a new gasket, and then tighten the ATF drain plug.

#### Tightening torque:

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

- (A) Oil pan
- (B) Drain plug (ATF)

5) Lower the vehicle.

6) Pour ATF through the oil charge pipe.

#### Recommended fluid:

<Ref. to RM-4, FLUID, RECOMMENDED MATERIALS, Recommended Materials.>

#### Fluid capacity:

Fill the same amount of ATF drained from drain plug hole.

#### Capacity when transmission is overhauled:

**9.3 — 9.6 ℓ (9.8 — 10.1 US qt, 8.2 — 8.4 Imp qt)**

7) Check the level and leaks of ATF.

<Ref. to 4AT-30, INSPECTION, Automatic Transmission Fluid.>

## C: CONDITION CHECK

**NOTE:**

When replacing ATF, check the inside condition of the transmission body by inspecting the drained ATF.

| Fluid condition                              | Trouble and possible cause                               | Corrective action                                       |
|--|--|---|
| Large amount of metallic pieces are found.   | Excessive wear of the internal of the transmission body. | Replace ATF and check if AT operates correctly.         |
| Thick and varnish-form fluid.                | Burned clutch and etc.                                   | Replace ATF and check AT itself and vehicle for faulty. |
| Clouded fluid or bubbles are found in fluid. | Water mixed in fluid.                                    | Replace ATF and check the water entering point.         |

# Differential Gear Oil

## AUTOMATIC TRANSMISSION

### 3. Differential Gear Oil

#### A: INSPECTION

- 1) Park the vehicle on a level surface.
- 2) Remove the oil level gauge and wipe it clean.
- 3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper orientation.
- 4) Remove it again and check the level. If the differential gear oil level is below the "L" line, add oil to bring the level up to the "F" line.
- 5) To prevent overfilling the differential gear oil, do not replenish oil above the "F" line.

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

#### B: REPLACEMENT

- 1) Lift-up the vehicle.
- 2) Remove the differential gear oil drain plug using TORX® T70, and then drain the differential gear oil completely.

#### CAUTION:

- Directly after the vehicle has been running, the differential gear oil is hot. Therefore, be careful not to burn yourself.
  - Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. When the differential gear oil is spilled on exhaust pipe, wipe it away completely.
- 3) Replace the gasket with a new one, and then tighten the differential gear oil drain plug using TORX® T70.

#### Tightening torque:

**44 N·m (4.5 kgf-m, 32.5 ft-lb) (Aluminum gasket)**

**70 N·m (7.1 kgf-m, 51.6 ft-lb) (Copper gasket)**

- (A) Oil pan
- (B) Differential oil drain plug

- 4) Lower the vehicle.
- 5) Pour gear oil into the gauge hole.

#### Recommended fluid:

<Ref. to 4AT-3, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, **General Description.**>

#### Gear oil capacity:

**1.1 — 1.3 ℓ (1.2 — 1.4 US qt, 1.0 — 1.1 Imp qt)**

- 6) Check the level of differential gear oil.  
<Ref. to 4AT-32, INSPECTION, Differential Gear Oil.>

## 4. Road Test

### A: INSPECTION

#### 1. GENERAL PRECAUTION

Road tests should be conducted to properly diagnose the condition of the automatic transmission.

**NOTE:**

When performing the test, do not exceed posted speed limit.

#### 2. D RANGE SHIFT FUNCTION

Check shifting between 1st ↔ 2nd ↔ 3rd ↔ 4th while driving on normal city streets.

#### 3. D RANGE SHIFT SHOCK

Check the shock level when shifting up during normal driving.

#### 4. KICK-DOWN FUNCTION

Check kick-down for each gear. Also check the kick-down shock level.

#### 5. ENGINE BRAKE OPERATION

- Check the 3rd gear engine brake when shifting between D ↔ 3rd range while driving in 4th gear of D range [50 to 60 km/h (31 to 37 MPH)].
- Check the 2nd gear engine brake when shifting between 3 ↔ 2 range while driving in the 3 range 3rd gear [40 to 50 km/h (25 to 31 MPH)].
- Check the 1st gear engine brake when shifting between 2 ↔ 1 range while driving in the 2 range 2nd gear [20 to 30 km/h (12 to 19 MPH)].

#### 6. LOCK-UP FUNCTION

- Check that engine speed does not change sharply when the accelerator pedal is lightly depressed when driving on flat roads at normal speed in the D range.
- Check slip lock-up with following procedures. Subaru Select Monitor is needed for checking. Before start checking, check that no DTC is displayed. Perform the collective action with DTC and make sure that no more DTC is displayed, and then start the checking.

1) Perform the check on flat and straight road or free roller.

**NOTE:**

- Slip lock-up does not operate when the vehicle is lifted up, because of not occurring surface resistance.
- Also when checking on the free roller, check with depressing the foot brake lightly to make the checking easier, because the surface resistance will be deficient.

2) Connect the Subaru Select Monitor.

3) Check the ATF temperature using Subaru Select Monitor.

**NOTE:**

- ATF temperature is between 50 — 100°C (122 — 212°F)
  - When the temperature is low, warm-up the ATF by running the vehicle or etc.
- 4) Start the engine, so that the lock-up duty can be read on data display of Subaru Select Monitor.
- 5) Drive the vehicle at a constant speed of 35 — 40 km/h (22 — 25 MPH).
- 6) Read the lock-up duty while vehicle is running.

**Standard value:**

**25 — 45%**

**NOTE:**

The value may be lower on the free roller.

- Slip lock-up control is not operating when the lock-up duty is less than 5%, or when the lock-up duty goes down immediately after starts rising. On these cases, improper ATF or deterioration of ATF may be the cause. Check the amount of ATF or replace them, and then recheck it.

#### 7. P RANGE OPERATION

Stop the vehicle on an uphill grade of 5% or more and shift to “P” range. Check that the vehicle does not move when the parking brake is released.

#### 8. UNUSUAL SOUNDS AND VIBRATION

Check for unusual sounds and vibration while driving and during shifting.

#### 9. CLIMBING CONTROL FUNCTION

- Check that the gear remains in 3rd when going up a grade.
- Check that the gear remains in 3rd when applying the brakes while going down a grade.

#### 10. TRANSFER CLUTCH

Check if the tight corner braking occurs when the vehicle is started with steering wheel held at fully turned position.

#### 11. OIL LEAKS

After the driving test, inspect for oil leaks.

# Stall Test

## AUTOMATIC TRANSMISSION

### 5. Stall Test

#### A: INSPECTION

**NOTE:**

The stall test is of extreme importance in diagnosing the condition of the automatic transmission and the engine. It should be conducted to measure the engine stall speeds in "R" and "2" ranges.

Purposes of the stall test:

- To check the operation of the automatic transmission clutch
  - To check the operation of the torque converter clutch
  - To check engine performance
- 1) Check that throttle valve opens fully.
  - 2) Check that engine oil level is correct.
  - 3) Check that engine coolant level is correct.
  - 4) Check that ATF level is correct.
  - 5) Check that differential gear oil level is correct.
  - 6) Increase ATF temperature to 70 to 80°C (158 to 176°F) by idling the engine for approx. 30 minutes (with select lever set to "N" or "P").
  - 7) Place the wheel chocks at the front and rear of all wheels and apply the parking brake.
  - 8) Move the manual linkage to ensure it operates properly, and shift the select lever to the "2" range.
  - 9) While depressing the foot brake pedal, gradually depress the accelerator pedal until the engine operates at full throttle.

(A) Brake pedal  
(B) Accelerator pedal

10) When the engine speed is stabilized, record that speed quickly and release the accelerator pedal.

11) Shift the select lever to "N" range, and cool down the engine by idling it for more than one minute.

12) If the stall speed in "2" range is higher than specifications, low clutch slipping and 2-4 brake slipping may occur. To identify it, conduct the same test as above in "R" range.

13) Perform the stall tests with the select lever in "D" range.

**NOTE:**

- Do not continue the stall test for MORE THAN 5 SECONDS at a time (from closed throttle, fully open throttle to stall speed reading). Failure to follow this instruction causes the engine oil and ATF to deteriorate and the clutch and brake to be adversely affected.
- Be sure to cool down the engine for at least 1 minute after each stall test with the select lever set in the "P" or "N" range and with the idle speed lower than 1,200 rpm.
- If the stall speed is higher than the specified range, attempt to finish the stall test in as short a time as possible, in order to prevent the automatic transmission from sustaining damage.

**Stall speed (at sea level):**

**Non-turbo model:**

**2,200 — 2,700 rpm**

**Turbo model:**

**2,700 — 3,200 rpm**

| Stall speed (at sea level)  | Position | Cause  |
|-----------------------------|----------|--|
| Less than specifications    | 2, R     | <ul style="list-style-type: none"> <li>• Throttle valve not fully open</li> <li>• Erroneous engine operation</li> <li>• Torque converter clutch's one-way clutch slipping</li> </ul> |
| Greater than specifications | D        | <ul style="list-style-type: none"> <li>• Line pressure too low</li> <li>• Low clutch slipping</li> <li>• One-way clutch malfunction</li> </ul>                                       |
|                             | R        | <ul style="list-style-type: none"> <li>• Line pressure too low</li> <li>• Reverse clutch slipping</li> <li>• Low &amp; reverse brake slipping</li> </ul>                             |
|                             | 2        | <ul style="list-style-type: none"> <li>• Line pressure too low</li> <li>• Low clutch slipping</li> <li>• 2-4 brake slipping</li> </ul>   |

## 6. Time Lag Test

### A: INSPECTION

**NOTE:**

If the select lever is shifted while the engine is idling, there will be a certain time elapse or lag before the shock can be felt. This is used for checking the condition of the low clutch, reverse clutch, low & reverse brake and one-way clutch.

- Perform the test at normal operating fluid temperature 70 to 80°C (158 to 176°F).
- Be sure to allow a 1 minute interval between tests.
- Make three measurements and take the average value.

1) Apply the parking brake.

2) Start the engine.

Check the idling speed (A/C OFF).

3) Shift the select lever from "N" to "D" range.

Using a stop watch, measure the time it takes from shifting the lever until the shock is felt.

Time lag: Less than 1.2 seconds

If "N" → "D" time lag is longer than specified:

- Line pressure too low
- Low clutch worn
- One-way clutch not operating properly
- D-ring worn

4) In the same manner, measure the time lag for "N" → "R".

Time lag: Less than 1.5 seconds

If "N" → "R" time lag is longer than specified:

- Line pressure too low
- Reverse clutch worn
- Low & reverse brake worn
- D-ring worn

## Line Pressure Test

AUTOMATIC TRANSMISSION

### 7. Line Pressure Test

#### A: MEASUREMENT

**NOTE:**

If the clutch or the brake shows a sign of slippage or shifting sensation is not correct, the line pressure should be checked.

- Excessive shocks during upshifting or shifting takes place at a higher point than under normal circumstances, may be due to the line pressure being too high.

- Slippage or inability to operate the vehicle may, in most cases, be due to loss of oil pressure for the operation of the clutch, brake or control valve.

- 1) Line pressure measurement (under no load)
  - (1) Before measuring the line pressure, lift-up the vehicle.
  - (2) Maintain the temperature of ATF at approx. 70 — 80°C (158 — 176°F) during measurement. (ATF will reach the above temperature after idling the engine for approx. 30 minutes with select lever in “N” or “P”.)
- 2) Line pressure measurement (under heavy load)
  - (1) Before measuring the line pressure, apply both foot and parking brakes with all wheels chocked (Same as for “stall” test conditions).
  - (2) Measure the line pressure when select lever is in “R” or “2” with engine under stall conditions.
  - (3) Measure the line pressure within 5 seconds after shifting the select lever to each position. (If line pressure needs to be measured again, allow the engine to idle, and then stop it to cool down for at least one minute.)
  - (4) Maintain the temperature of ATF at approx. 70 — 80°C (158 — 176°F) during measurement. (ATF will reach the above temperature after idling the engine for approx. 30 minutes with the select lever in “N” or “P”.)
- 3) Temporarily attach the ST to a suitable place in the driver’s compartment, remove the blind plug located in front of the toe board and pass the hose of the ST to engine compartment.

ST 498575400 OIL PRESSURE GAUGE ASSY

- (A) Pressure gauge hose
- (B) Hole in toe board (blank cap hole)
- (C) Brake pedal

4) Remove the test plug and install the ST instead.

ST 498897200 OIL PRESSURE GAUGE ADAPTER

- (A) Test plug

5) Connect the ST1 with ST2.

ST1 498897200 OIL PRESSURE GAUGE ADAPTER

ST2 498575400 OIL PRESSURE GAUGE ASSY

6) Check for duty ratio changes by opening and closing the throttle valve using SUBARU Select Monitor.

| Standard line pressure |                              |                   |   |
|------------------------|------------------------------|-------------------|---|
| Range position         | Line pressure duty ratio (%) | Throttle position | Line pressure kPa (kgf/cm <sup>2</sup> , psi) |
| 2                      | 25 — 35                      | 100 (Full open)   | 1,000 — 1,300 (10.2 — 13.3, 145 — 189)        |
| R                      | 15 — 25                      | 100 (Full open)   | 1,500 — 1,850 (15.3 — 18.9, 218 — 268)        |
| D                      | 35 — 43                      | 0 (Full closed)   | 500 — 800 (5.1 — 8.2, 73 — 116)               |

## 8. Transfer Clutch Pressure Test

### A: INSPECTION

- MP-T model

Check the transfer clutch pressure in accordance with the following chart in the same manner as with line pressure. <Ref. to 4AT-36, Line Pressure Test.>

ST 498897700 OIL PRESSURE ADAPTER SET

ST 498575400 OIL PRESSURE GAUGE ASSY

AWD mode: "D" range

FWD mode: "P" range, engine speed 2,000 rpm

NOTE:

Before setting in FWD mode, install the spare fuse on FWD switch.

(A) Test plug

NOTE:

If the oil pressure is not produced or if it does not change in the AWD mode, the transfer duty solenoid or transfer valve assembly may be malfunctioning. If the oil pressure is produced in the FWD mode, the problem is similar to that in the AWD mode.

- VTD model

Check transfer clutch pressure using the following chart. <Ref. to 4AT-36, Line Pressure Test.>

ST 498897700 OIL PRESSURE ADAPTER SET

ST 498575400 OIL PRESSURE GAUGE ASSY

(A) Test plug

### STANDARD TRANSFER CLUTCH PRESSURE:

| Range position | ON Duty ratio (%) | Acceleration opening angle (%) | Transfer clutch pressure (kPa (kgf/cm <sup>2</sup> , psi)) |          |
|----------------|-------------------|--------------------------------|--|----------|
|                |                   |                                | AWD mode   | FWD mode |
| 2              | 95                | Fully opens (100)              | 1,000 — 1,200<br>(10.2 — 12.2, 145 — 174)                  | —        |
|                | 60                | Adjust ON Duty ratio to 60%.   | 500 — 700<br>(5.1 — 7.1, 73 — 102)                         | —        |
|                | 5                 | Fully closed (0)               | —  | 0 (0, 0) |
| N or P         | 5                 | Fully closed (0)               | 0  | —        |

# Automatic Transmission Assembly

## AUTOMATIC TRANSMISSION

### 9. Automatic Transmission Assembly

#### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Open the front hood fully, and support it with a stay.
- 3) Disconnect the battery ground cable.
- 4) Remove the air intake chamber and intake duct. (Non-turbo model) <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 5) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 6) Remove the air intake chamber stay. (Non-turbo model)

- 7) Disconnect the following connectors.
  - (1) Transmission harness connector

- (2) Transmission ground terminal
- 8) Remove the starter. <Ref. to SC(H4SO)-8, REMOVAL, Starter.>
- 9) Remove the throttle body. <Ref. to FU(H4SO)-12, REMOVAL, Throttle Body.> <Ref. to FU(H4DOTC)-13, REMOVAL, Throttle Body.>

- 10) Remove the pitching stopper.

- 11) Separate the torque converter clutch from drive plate.

- (1) Install the V-belt cover.
- (2) Remove the service hole plug.
- (3) Remove the bolts which hold the torque converter clutch to drive plate.
- (4) While rotating the crank pulley in the direction of engine rotation little by little, remove all the bolts.

**CAUTION:**  
Be careful not to drop bolts into torque converter clutch housing.

- 12) Install the ST to converter case.  
ST 498277200 STOPPER SET

- 13) Remove the ATF level gauge.

# Automatic Transmission Assembly

AUTOMATIC TRANSMISSION

**NOTE:**

Plug the opening to prevent the entry of foreign particles into transmission fluid.

14) Remove the pitching stopper bracket.

15) Set the ST.

ST 41099AC000 ENGINE SUPPORT ASSY

16) Remove the bolt which holds the upper side of transmission to engine.

17) Lift-up the vehicle.

18) Remove the under cover.

19) Remove the front, center, rear exhaust pipe and muffler. (Non-turbo model)

<Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>

20) Remove the center and rear exhaust pipes, and muffler. (Turbo model)

<Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>

21) Drain ATF to remove the ATF drain plug.

(A) Oil pan

(B) Drain plug (ATF)

22) Disconnect the ATF cooler hoses from pipes of transmission side, and remove the oil charge pipe.

23) Remove the propeller shaft.

<Ref. to DS-16, REMOVAL, Propeller Shaft.>

24) Remove the shift select cable.

<Ref. to CS-27, REMOVAL, Select Cable.>

25) Disconnect the stabilizer link from transverse link.

26) Remove the bolt securing ball joint of transverse link to housing.

27) Pull out the front drive shaft from transmission.

(1) Using a tire lever or a pinch bar, etc., pull out the front drive shaft until its joint facing to transmission can move smoothly.

**NOTE:**

Place cloth between tire lever or pinch bar and transmission in order to avoid damaging the side retainer of transmission.

# Automatic Transmission Assembly

## AUTOMATIC TRANSMISSION

(2) Hold the transmission side joint portion of front drive shaft by hand and extract the housing from the transmission by pressing it outside so as not to stretch the boot.

28) Remove the bolts which hold the clutch housing cover.

29) Remove the nuts which hold the lower side of transmission to engine.

30) Place the transmission jack under transmission.

### NOTE:

Make sure that the support plates of transmission jack don't touch the oil pan.

31) Remove the transmission rear crossmember from vehicle.

32) While gradually lowering the transmission jack, fully contact the engine support, and then tilt the engine rearward.

33) Remove the transmission.

### CAUTION:

**Move the transmission and torque converter as a unit away from engine.**

34) Separate the transmission assembly and rear cushion rubber.

## B: INSTALLATION

1) Replace the differential side oil seal with new one. <Ref. to 4AT-47, REPLACEMENT, Differential Side Retainer Oil Seal.>

### NOTE:

Replacement is not necessary when new oil seal has been installed.

2) Install the rear cushion rubber to transmission assembly.

### Tightening torque:

**39 N·m (4.0 kgf-m, 29 ft-lb)**

3) Install the ST to converter case.

ST 498277200 STOPPER SET

4) Install the transmission onto engine.

(1) Gradually raise the transmission with transmission jack.

(2) Engage them at splines.

(3) While gradually lifting the transmission jack, turn the screw of engine support, and then tilt the engine forward.

5) Install the transmission rear crossmember.

**Tightening torque:**

**T1: 35 N·m (3.6 kgf-m, 26 ft-lb)**

**T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)**

- 6) Take off the transmission jack.
- 7) Tighten the nuts and bolts which hold the lower side of transmission to engine.

**Tightening torque:**

**50 N·m (5.1 kgf-m, 36.9 ft-lb)**

- 8) Tighten the bolt of clutch housing cover.
- 9) Lower the vehicle.
- 10) Connect the engine and transmission.
  - (1) Remove the ST from converter case.

**NOTE:**

Be careful not to drop the ST into the converter case when removing ST.

ST 498277200 STOPPER SET

- (2) Install the starter.
 

<Ref. to SC(H4SO)-8, INSTALLATION, Starter.>
- (3) Tighten the bolt which holds the upper side of transmission to engine.

**Tightening torque:**

**50 N·m (5.1 kgf-m, 36.9 ft-lb)**

- 11) Install the torque converter clutch to drive plate.
  - (1) Tighten the bolts which hold the torque converter clutch to drive plate.
  - (2) While rotating the crank pulley in the direction of engine rotation little by little, tighten all the bolts.

**Tightening torque:**

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

- (3) Clog the plug onto service hole.
- (4) Install the V-belt cover.
- 12) Remove the STs.

ST 41099AC000 ENGINE SUPPORT ASSY

- 13) Install the pitching stopper bracket.

**Tightening torque:**

**41 N·m (4.2 kgf-m, 30.2 ft-lb)**

- 14) Install the pitching stopper.

# Automatic Transmission Assembly

## AUTOMATIC TRANSMISSION

### Tightening torque:

**T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)**

**T2: 58 N·m (5.9 kgf-m, 43 ft-lb)**

15) Install the throttle body. <Ref. to FU(H4SO)-12, INSTALLATION, Throttle Body.> <Ref. to FU(H4DOTC)-13, INSTALLATION, Throttle Body.>

16) Lift-up the vehicle.

17) Replace the snap ring of front drive shaft with a new one.

18) Apply grease to the oil seal lips.

19) Install the ST to side retainer.

ST 28399SA010 OIL SEAL PROTECTOR

20) Align the spline of front differential shaft to that of differential bevel gear for insertion, and remove them using ST.

ST 28399SA010 OIL SEAL PROTECTOR

21) Insert the front drive shaft into transmission securely by pressing the front housing from outside.

22) Install the ball joint into housing.

23) Connect the stabilizer link to transverse link, and tighten the bolts.

### NOTE:

Use a new self-locking nut.

### Tightening torque:

**T1: 30 N·m (3.1 kgf-m, 22.1 ft-lb)**

**T2: 50 N·m (5.1 kgf-m, 36.9 ft-lb)**

24) Install the shift select cable onto select lever. <Ref. to CS-27, INSTALLATION, Select Cable.>

25) Install the oil charge pipe, and connect the ATF cooler hoses to pipe.

26) Install the propeller shaft.

<Ref. to DS-17, INSTALLATION, Propeller Shaft.>

27) Install the rear exhaust pipe and muffler assembly.

Non-turbo model

<Ref. to EX(H4SO)-7, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, INSTALLATION, Muffler.>

Turbo model

<Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

28) Install the front and center exhaust pipe. (Non-turbo model)

<Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.>

29) Install the center exhaust pipe. (Turbo model)

<Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.>

30) Install the under cover.

31) Lower the vehicle.

32) Install the ATF level gauge.

33) Connect the following connectors.

- (1) Transmission harness connectors
- (2) Transmission ground terminal

34) Install the air intake chamber stay.

**Tightening torque:**

**16 N·m (1.6 kgf-m, 11.8 ft-lb)**

35) Install the air intake chamber and intake duct. (Non-turbo model) <Ref. to IN(H4SO)-6, INSTALLATION, Air Intake Chamber.>

36) Install the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

37) Connect the battery ground cable.

38) Fill ATF up to the middle of the "COLD" side on level gauge by using oil charge pipe. <Ref. to 4AT-30, Automatic Transmission Fluid.>

39) Take off the vehicle from lift arms.

40) Check select lever operation. <Ref. to 4AT-48, INSPECTION, Inhibitor Switch.>

41) Bleed air from control valve. <Ref. to 4AT-62, PROCEDURE, Air Bleeding of Control Valve.>

42) Check the ATF level. <Ref. to 4AT-30, Automatic Transmission Fluid.>

43) Perform the advance operation of learning control.

<Ref. to 4AT(D)(diag)-15, FACILITATION OF LEARNING CONTROL, OPERATION, Subaru Select Monitor.>

44) Check the road test.

<Ref. to 4AT-33, Road Test.>

# Transmission Mounting System

AUTOMATIC TRANSMISSION

## 10. Transmission Mounting System

### A: REMOVAL

#### 1. PITCHING STOPPER

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 3) Remove intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 4) Remove the throttle body. <Ref. to FU(H4SO)-12, REMOVAL, Throttle Body.> <Ref. to FU(H4DOTC)-13, REMOVAL, Throttle Body.>
- 5) Remove the pitching stopper.

#### 2. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER

- 1) Disconnect the ground cable from battery.
- 2) Jack-up the vehicle and support it with sturdy racks.
- 3) Remove the front, center, rear exhaust pipes and muffler. (Non-turbo model) <Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>
- 4) Remove center and rear exhaust pipes, and muffler. (Turbo model) <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>
- 5) Set the transmission jack under the transmission. Make sure that the support plates of transmission jack don't touch the oil pan.

- 6) Remove the transmission rear crossmember.

- 7) Remove the rear cushion rubber.

### B: INSTALLATION

#### 1. PITCHING STOPPER

- 1) Install the pitching stopper.

#### Tightening torque:

**T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)**

**T2: 58 N·m (5.9 kgf-m, 43 ft-lb)**

- 2) Install the throttle body. <Ref. to FU(H4SO)-12, INSTALLATION, Throttle Body.> <Ref. to FU(H4DOTC)-13, INSTALLATION, Throttle Body.>
- 3) Install the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, INSTALLATION, Air Intake Chamber.>
- 4) Remove intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

#### 2. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER

- 1) Install the rear cushion rubber.

#### Tightening torque:

**39 N·m (4.0 kgf-m, 29 ft-lb)**

- 2) Install the crossmember.

## Tightening torque:

**T1: 35 N·m (3.6 kgf-m, 26 ft-lb)**

**T2: 70 N·m (7.1 kgf-m, 51.6 ft-lb)**

- 3) Remove the transmission jack.
- 4) Install the front, center, rear exhaust pipes and the muffler. (Non-turbo model)  
<Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO)-7, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, INSTALLATION, Muffler.>
- 5) Install center and rear exhaust pipes, and muffler. (Turbo model)  
<Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

## C: INSPECTION

Repair or replace parts if the results of the inspection below are not satisfactory.

### 1. PITCHING STOPPER

Make sure that the pitching stopper is not bent or damaged. Make sure that the rubber is not stiff, cracked, or otherwise damaged.

### 2. TRANSMISSION REAR CROSSMEMBER AND REAR CUSHION RUBBER

Make sure that the crossmember is not bent or damaged. Make sure that the cushion rubber is not stiff, cracked, or otherwise damaged.

# Extension Case Oil Seal

AUTOMATIC TRANSMISSION

## 11.Extension Case Oil Seal

### A: INSPECTION

Make sure the ATF does not leak from the joint of transmission and propeller shaft. If so, replace the oil seal. <Ref. to 4AT-46, REPLACEMENT, Extension Case Oil Seal.>

### B: REPLACEMENT

- 1) Clean the transmission exterior.
- 2) Drain the ATF completely.

NOTE:

- Tighten the ATF drain plug after draining the ATF.
- Use a new gasket.

**Tightening torque:**

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

- (A) Oil pan  
(B) Drain plug (ATF)

- 3) Remove the rear exhaust pipe and muffler.

Non-turbo model

<Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>

Turbo model

<Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>

- 4) Remove the propeller shaft. <Ref. to DS-16, REMOVAL, Propeller Shaft.>

- 5) Using the ST, remove the oil seal.

ST 398527700 PULLER ASSY

- 6) Using the ST, install the oil seal.

ST 498057300 INSTALLER

- 7) Install the propeller shaft. <Ref. to DS-17, INSTALLATION, Propeller Shaft.>

- 8) Install the rear exhaust pipe and muffler.

Non-turbo model

<Ref. to EX(H4SO)-7, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, INSTALLATION, Muffler.>

Turbo model

<Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

- 9) Pour ATF and check the ATF level. <Ref. to 4AT-30, Automatic Transmission Fluid.>

## 12. Differential Side Retainer Oil Seal

### A: INSPECTION

Check the leakage of gear oil from differential side retainer oil seal part. If there is oil leakage, replace the oil seal.

### B: REPLACEMENT

- 1) Lift-up the vehicle.
- 2) Remove the front exhaust pipe and center exhaust pipe.

Non-turbo model

<Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.>

Turbo model

<Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>

- 3) Drain the differential gear by removing differential gear oil drain plug.

- (A) Oil pan  
(B) Differential gear oil drain plug

- 4) Replace new gasket and tighten the differential oil drain plug.

#### Tightening torque:

**44 N·m (4.5 kgf·m, 32.5 ft·lb) (Aluminum gasket)**

**70 N·m (7.1 kgf·m, 51.6 ft·lb) (Copper gasket)**

- 5) Separate the front drive shaft from transmission. <Ref. to DS-33, REMOVAL, Front Drive Shaft.>

- 6) Remove the differential side retainer oil seal using driver which wrapped with vinyl tape or etc.

- 7) Using ST, install the differential side retainer oil seal by slightly tapping with hammer.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

- 8) Apply oil to the oil seal lips.

- 9) Using the ST, install the front drive shaft. <Ref. to DS-33, INSTALLATION, Front Drive Shaft.>

ST 28399SA010 OIL SEAL PROTECTOR

- 10) Install the front exhaust pipe and center exhaust pipe.

Non-turbo model

<Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.>

Turbo model

<Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.>

- 11) Lower the vehicle.

- 12) Pour differential gear oil into the gauge hole.

#### Recommended gear oil:

**<Ref. to RM-2, LUBRICANTS, RECOMMENDED MATERIALS, Recommended Materials.>**

#### Differential gear oil capacity:

**1.1 — 1.3 ℓ (1.3 — 1.4 US qt, 1.0 — 1.1 Imp qt)**

- 13) Check the gear oil amount. <Ref. to 4AT-32, INSPECTION, Differential Gear Oil.>

## 13. Inhibitor Switch

### A: INSPECTION

When the driving condition or starter motor operation is erroneous, first check the shift linkage for improper operation. If the shift linkage is functioning properly, check the inhibitor switch.

- 1) Disconnect the inhibitor switch connector.
- 2) Check continuity in inhibitor switch circuits with the select lever moved to each position.

**NOTE:**

- Also check that continuity in ignition circuit does not exist when the select lever is in “R”, “D”, “3”, “2” and “1” ranges.
- If the inhibitor switch is inoperative, check for poor contact of connector on transmission side.

|                       | Position | Pin No. |
|-----------------------|----------|---------|
| Signal sent to TCM    | P        | 4 — 3   |
|                       | R        | 4 — 2   |
|                       | N        | 4 — 1   |
|                       | D        | 4 — 8   |
|                       | 3        | 4 — 7   |
|                       | 2        | 4 — 6   |
|                       | 1        | 4 — 5   |
| Ignition circuit      | P/N      | 12 — 11 |
| Back-up light circuit | R        | 10 — 9  |

(A) Inhibitor switch connector

- 3) Check if there is continuity at equal points when the select lever is tilted 1.5° in both directions from “N” range.

If there is continuity in one direction and the continuity in the other or if there is continuity at unequal points, adjust the inhibitor switch. <Ref. to 4AT-48, ADJUSTMENT, Inhibitor Switch.>

- (A) Continuity does not exist.
- (B) Continuity exists.
- (C) 1.5°

- 4) Repeat the above checks. If there are abnormalities, adjust the select cable. <Ref. to CS-28, ADJUSTMENT, Select Cable.>

### B: ADJUSTMENT

- 1) Move the select lever to “N” range.
- 2) Loosen the three inhibitor switch securing bolts.
- 3) Insert the ST as vertical as possible into the holes in inhibitor switch lever and switch body.  
ST 499267300 STOPPER PIN

- 4) Tighten the three inhibitor switch bolts.

**Tightening torque:**

**3.5 N·m (0.36 kgf·m, 2.6 ft·lb)**

- 5) Repeat the above checks. If the inhibitor switch is determined to be “faulty”, replace it.

### C: REMOVAL

- 1) Set up the vehicle on a lift.
- 2) Move the select lever to “N” range.
- 3) Remove the air intake chamber (Non-turbo model). <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 4) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>

5) Disconnect the inhibitor switch connector.

(A) Inhibitor switch

11) Remove the bolts.

(A) Inhibitor switch

6) Remove the inhibitor switch connector from stay.

7) Lift-up the vehicle.

8) Remove the front and center exhaust pipes.

<Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>

9) Remove the snap pin and washer from range select lever.

12) Move the range select lever to parking position (left side).

(A) Range select lever  
 (B) Snap pin  
 (C) Select cable  
 (D) Washer

(A) Range select lever

10) Remove the plate assembly from transmission case.

13) Remove the inhibitor switch from transmission.

(A) Select cable  
 (B) Plate ASSY

(A) Inhibitor switch

14) Disconnect the inhibitor switch harness connector from inhibitor switch.

## D: INSTALLATION

1) Connect the inhibitor switch harness connector to inhibitor switch.

# Inhibitor Switch

## AUTOMATIC TRANSMISSION

2) Install the inhibitor switch to transmission case.

(A) Inhibitor switch

3) Move the range select lever to neutral position.  
4) Using the ST, tighten the bolts of inhibitor switch.  
ST 499267300 STOPPER PIN

### Tightening torque:

**3.5 N·m (0.36 kgf-m, 2.6 ft-lb)**

(A) Inhibitor switch  
(B) Range select lever

5) Install the select cable to range select lever.  
6) Install the plate assembly to transmission.

### Tightening torque:

**T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)**

(A) Select cable  
(B) Plate ASSY

7) Install the washer and snap pin to range select lever.

(A) Range select lever  
(B) Snap ring  
(C) Select cable  
(D) Washer

8) Install the front and center exhaust pipes. (Non-turbo model)

<Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.>

9) Install the center exhaust pipe. (Turbo model)

<Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.>

10) Lower the vehicle.

11) Install the inhibitor switch connector from stay.

12) Connect the inhibitor switch connector.

(A) Inhibitor switch

13) Install the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, INSTALLATION, Air Intake Chamber.>

14) Install the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

15) Inspect the inhibitor switch. <Ref. to 4AT-48, INSPECTION, Inhibitor Switch.>

## 14. Front Vehicle Speed Sensor

### A: REMOVAL

- 1) Set up the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 4) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 5) Disconnect the transmission connector.

(A) Transmission connector

- 6) Remove the pitching stopper. <Ref. to 4AT-44, REMOVAL, Transmission Mounting System.>
- 7) Remove the transmission connector from stay.
- 8) Lift-up the vehicle.
- 9) Clean the transmission exterior.
- 10) Drain the ATF completely.

#### NOTE:

- Tighten the ATF drain plug after draining the ATF.
- Use a new gasket.

#### Tightening torque:

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

(A) Oil pan  
(B) Drain plug (ATF)

- 11) Remove the front, center, exhaust pipes and muffler. (Non-turbo model) <Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>

- 12) Remove the center, rear exhaust pipe and muffler. (Turbo model)

- <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>

- 13) Remove the propeller shaft. <Ref. to DS-16, REMOVAL, Propeller Shaft.>

- 14) Place the transmission jack under transmission.

#### NOTE:

Make sure that the support plates of transmission jack don't touch the crossmember.

- 15) Remove the transmission rear crossmember bolts.

- 16) Lower the AT jack.

#### NOTE:

Do not separate the AT jack and transmission.

- 17) Remove the oil cooler inlet and outlet pipe.

#### NOTE:

When removing the outlet pipe, be careful not to lose balls and springs used with retaining screws.

- 18) Remove the front and torque converter turbine speed sensor.

(A) Front vehicle speed sensor  
(B) Torque converter turbine speed sensor

# Front Vehicle Speed Sensor

## AUTOMATIC TRANSMISSION

19) Disconnect the connector of rear vehicle speed sensor. (VTD model)

(A) Rear vehicle speed sensor

20) Disconnect the connector from rear vehicle speed sensor. (MP-T model)

(A) Rear vehicle speed sensor

21) Remove the oil pan.

22) Disconnect the harness connector and transmission ground terminal.

(A) Transmission ground

(B) Harness connector

23) Remove the harness assembly.

## B: INSTALLATION

1) Pass the harness assembly through the hole in the transmission case.

2) Connect the harness connector and transmission ground.

**Tightening torque:**

**8 N·m (0.8 kgf·m, 5.8 ft·lb)**

(A) Transmission ground

(B) Harness connector

3) Apply proper amount of liquid gasket to the entire oil pan mating surface.

**Liquid gasket:**

**THREE BOND 1217B (Part No. K0877YA020)**

4) Apply liquid gasket fully to three holes other than screw holes on transmission case.

# Front Vehicle Speed Sensor

AUTOMATIC TRANSMISSION

**Liquid gasket:**  
**THREE BOND 1217B (Part No. K0877YA020)**

5) Install the oil pan.

**Tightening torque:**  
**5 N·m (0.5 kgf-m, 3.6 ft-lb)**

6) Connect the connector of rear vehicle speed sensor. (MP-T model)

(A) Rear vehicle speed sensor

7) Connect the connector of rear vehicle speed sensor. (VTD model)

(A) Rear vehicle speed sensor

8) Install the front vehicle speed sensor and torque converter turbine speed sensor, and then fasten the harness.

**Tightening torque:**  
**7 N·m (0.7 kgf-m, 5.1 ft-lb)**

(A) Front vehicle speed sensor  
(B) Torque converter turbine speed sensor

9) Install the inlet pipe.

**NOTE:**

Be sure to use a new copper washer.

**Tightening torque:**  
**T1: 25 N·m (2.5 kgf-m, 18.4 ft-lb)**  
**T2: 45 N·m (4.6 kgf-m, 33 ft-lb)**  
**T3: 40 N·m (4.1 kgf-m, 29.5 ft-lb)**

10) Install the transmission rear crossmember bolts.

**Tightening torque:**  
**70 N·m (7.1 kgf-m, 51 ft-lb)**

11) Install the propeller shaft. <Ref. to DS-17, INSTALLATION, Propeller Shaft.>

12) Install the front, center, rear exhaust pipes and muffler. (Non-turbo model)

<Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO)-7, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, INSTALLATION, Muffler.>

13) Install the center, rear exhaust pipes and muffler. (Turbo model)

<Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

14) Lower the vehicle.

15) Install the transmission connector to the stay.

## Front Vehicle Speed Sensor

### AUTOMATIC TRANSMISSION

---

16) Install the pitching stopper. <Ref. to 4AT-44, INSTALLATION, Transmission Mounting System.>

17) Install the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, INSTALLATION, Air Intake Chamber.>

18) Install the intercooler. (Turbo model)

<Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

## 15.Rear Vehicle Speed Sensor

### A: REMOVAL

- 1) Set the vehicle on a lift, and then lift-up the vehicle.
- 2) Disconnect the connector from rear vehicle speed sensor.

- MP-T model

(A) Rear vehicle speed sensor

- VTD model

(A) Rear vehicle speed sensor

- 3) Remove the rear vehicle speed sensor.

- MP-T model

- VTD model

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Replace with a new O-ring.

#### **Tightening torque:**

**7 N·m (0.7 kgf-m, 5.1 ft-lb)**

## 16. Torque Converter Turbine Speed Sensor

### A: REMOVAL

When removing the torque converter turbine speed sensor, refer to "Front Vehicle Speed Sensor".  
<Ref. to 4AT-51, REMOVAL, Front Vehicle Speed Sensor.>

### B: INSTALLATION

When installing the torque converter turbine speed sensor, refer to "Front Vehicle Speed Sensor"  
<Ref. to 4AT-52, INSTALLATION, Front Vehicle Speed Sensor.>

## 17. Control Valve Strainer

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from the battery.
- 3) Lift up the vehicle.
- 4) Clean the transmission exterior.
- 5) Remove the drain plug (ATF) to drain the ATF.

**CAUTION:**

The ATF will be extremely hot after driving. Be careful not to receive burns.

- 6) Perform replacement with a new gasket, and tighten the drain plug (ATF).

**Tightening torque:**

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

- 7) Remove the oil pan.

**CAUTION:**

Be careful not to allow foreign matter such as dust or dirt to enter the oil pan.

- 8) Remove the magnet.
- 9) Clean the magnet.
- 10) Completely remove the remaining liquid gasket on the transmission case and oil pan.

- 11) Remove the control valve strainer tightening bolt, and remove control valve strainer from the control valve body.

### B: INSTALLATION

- 1) Check the control valve body for dust and other foreign matter.
- 2) Mount new control valve strainer to the control valve body.

- (1) Apply ATF to the entire perimeter of the O-ring on the control valve strainer.

**CAUTION:**

Protect the O-ring from dust and dirt while applying ATF.

- (2) Install the control valve strainer to the control valve body from the O-ring side.

**CAUTION:**

If the control valve strainer is pushed in at an angle, the O-ring may be damaged. Be sure to push in the control valve strainer straight to install.

- (3) Tighten the three bolts.

**Tightening torque:**

**10 N·m (1.0 kgf·m, 7.4 ft·lb)**

# Control Valve Strainer

## AUTOMATIC TRANSMISSION

- 3) Attach the magnet at the specified position of the oil pan.

- 4) Apply proper amount of liquid gasket to the entire oil pan mating surface.

**Liquid gasket:**  
**THREE BOND 1217B (Part No. K0877YA020)**  
**or equivalent**

- 5) Fill the three holes aside from the bolt holes in the transmission case, with liquid gasket.

**Liquid gasket:**  
**THREE BOND 1217B (Part No. K0877YA020)**  
**or equivalent**

- 6) Install the oil pan by equally tightening the bolts.

**Tightening torque:**  
**5 N·m (0.5 kgf·m, 3.7 ft·lb)**

- 7) Fill ATF from the oil charge pipe.

**Recommended fluid:**  
**<Ref. to 4AT-3, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>**

**Capacity:**  
**Fill with the same amount of ATF as drained.**

- 8) Bleed the air of control valve. <Ref. to 4AT-62, Air Bleeding of Control Valve.>

- 9) Check the ATF level. <Ref. to 4AT-30, Automatic Transmission Fluid.>

## C: INSPECTION

Check the control valve strainer for holes, damages or adhesion of dust and other foreign particles.

## 18. Control Valve Body

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Lift-up the vehicle.
- 4) Clean the transmission exterior.
- 5) Remove the drain plug and gasket, and then drain ATF.

- 6) Replace the gasket with a new one, and then tighten the drain plug.

**Tightening torque:**

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

- 7) Remove the oil pan.

**CAUTION:**

**Be careful not to allow dirt or dust to get into the oil pan.**

- 8) Remove the magnet.

- 9) Clean the magnet.
- 10) Remove the liquid gasket completely from oil pan and transmission case.

- 11) Remove the control valve connector.

- 12) Remove the oil cooler pipe.

- 13) Remove the control valve body.

**NOTE:**

Replace the control valve body as assembly, because the control valve body can not be disassembled.

### B: INSTALLATION

- 1) Check the control valve body for dirt and dust.
- 2) Temporarily install the control valve body to transmission.
- 3) Install the oil cooler pipe.

# Control Valve Body

AUTOMATIC TRANSMISSION

**Tightening torque:**  
**8 N·m (0.8 kgf·m, 5.8 ft·lb)**

4) Tighten the bolts evenly.

**Tightening torque:**  
**8 N·m (0.8 kgf·m, 5.8 ft·lb)**

- (A) Transmission ground
- Bolt length mm (in)
- (1) 35 (1.38)
- (2) 30 (1.18)

5) Connect the control valve connector.

6) Attach the magnet at specified position of oil pan.

7) Apply proper amount of liquid gasket to the entire oil pan mating surface.

**Liquid gasket:**  
**THREE BOND 1217B (Part No. K0877YA020)**

8) Apply liquid gasket fully to three holes other than screw holes on transmission case.

**Liquid gasket:**  
**THREE BOND 1217B (Part No. K0877YA020)**

9) Install the oil pan with tightening bolts evenly.

**Tightening torque:**  
**5 N·m (0.5 kgf·m, 3.6 ft·lb)**

10) Pour ATF into the oil charge pipe.

**Recommended fluid:**  
**<Ref. to 4AT-3, HYDRAULIC CONTROL AND LUBRICATION, SPECIFICATION, General Description.>**

**Fluid capacity:**

***Fill the same amount of fluid drained from drain plug hole.***

11) Bleed the air from control valve. <Ref. to 4AT-62, Air Bleeding of Control Valve.>

12) Check the level of ATF. <Ref. to 4AT-30, Automatic Transmission Fluid.>

13) Perform the advance operation of learning control.

<Ref. to 4AT(D)(diag)-15, FACILITATION OF LEARNING CONTROL, OPERATION, Subaru Select Monitor.>

**C: INSPECTION**

Make sure that each component is free of harmful gouges, cuts, or dust.

### 19. Air Bleeding of Control Valve

#### A: PROCEDURE

- 1) Set the select lever to "P" range and apply parking brake, then lift-up the vehicle.
- 2) Connect the SUBARU Select Monitor to vehicle.
- 3) Using SUBARU Select Monitor, check that the DTC is not output.
- 4) Using SUBARU Select Monitor, check that ATF temperature is less than 60°C (140°F). <Ref. to 4AT(D)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>
- 5) Set the SUBARU Select Monitor to OFF.
- 6) Turn the ignition switch to OFF.
- 7) With pressing shift lock release button, set the select lever to "R" range.
- 8) Depress the brake pedal fully with left foot until air bleeding is complete.
- 9) Turn the ignition switch to ON.
- 10) Set the select lever to "P" range, and then wait for more than three seconds.
- 11) Set the select lever to "R" range, and then wait for more than three seconds.
- 12) Set the select lever to "N" range, and then wait for more than three seconds.
- 13) Set the select lever to "D" range, and then wait for more than three seconds.
- 14) Set the select lever to "N" range, and then wait for more than three seconds.
- 15) Slightly depress the accelerator pedal to full open.
- 16) Slightly release the accelerator pedal to close.
- 17) Start the engine.
- 18) Set the select lever to "D" range.
- 19) Turn the SUBARU Select Monitor power to ON.
- 20) On the SUBARU Select Monitor, select the "individual system inspection" of main menu.
- 21) On the "individual system inspection" selection menu, select the "individual system inspection" and air bleeding of control valve will start in transmission. At this time, AT OIL TEMP light in the combination meter blinks at 2 Hz. If the AT OIL TEMP light does not blink, repeat the procedures from step 4).
- 22) Air bleeding of control valve is finished, when AT OIL TEMP light blink in the combination meter changes from 2 Hz to 0.5 Hz, on control valve will finish.

#### NOTE:

Repeat the procedure from step 4) if AT OIL TEMP light blink change from 2 Hz to 4 Hz during air bleeding.

- 23) Set the select lever to "N" range, and turn the ignition switch to OFF.
- 24) Set the select lever to "P" range to finish air bleeding.

## 20.ATF Filter

### A: REMOVAL

**NOTE:**

The ATF filter is maintenance free.

- 1) Lift-up the vehicle.
- 2) Using ST, remove ATF filter.

ST 498545400 OIL FILTER WRENCH

(A) ATF filter

### B: INSTALLATION

- 1) Get new ATF filter and apply a thin coat of ATF to the oil seal.
- 2) Install ATF filter. Turn it by hand, being careful not to damage oil seal.
- 3) Using ST, tighten ATF filter.

Calculate ATF filter torque specifications using the following formula.

$$T2 = L2 / (L1 + L2) \times T1$$

T1: 14 N·m (1.4 kgf·m, 10.1 ft·lb)

[Required torque setting]

T2: Tightening torque

L1: ST length 78 mm (3.07 in)

L2: Torque wrench length

Example:

| Torque wrench length<br>mm (in) | Tightening torque<br>N·m (kgf·m, ft·lb) |
|---------------------------------|---|
| 100 (3.94)                      | 7.7 (0.79, 5.7)                         |
| 150 (5.91)                      | 9.0 (0.92, 6.7)                         |
| 200 (7.87)                      | 10 (1.0, 7.4)                           |

**NOTE:**

Align ST with torque wrench while tightening ATF filter.

ST 498545400 OIL FILTER WRENCH

- 4) Add ATF.
- 5) Inspect level of ATF. <Ref. to 4AT-30, Automatic Transmission Fluid.>

### C: INSPECTION

Check for rust, hole, ATF leaks, and other damage.

# Transmission Control Module (TCM)

AUTOMATIC TRANSMISSION

## 21. Transmission Control Module (TCM)

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lower cover and then disconnect the connector.
- 3) Remove the knee bolster.

- 4) Disconnect the connectors from TCM.

(A) Transmission control module (TCM)

- 5) Remove the TCM.

### B: INSTALLATION

- 1) Install the TCM.

#### **Tightening torque:**

**7.5 N·m (0.76 kgf-m, 5.5 ft-lb)**

(A) Transmission control module (TCM)

- 2) Connect the connectors to TCM.
- 3) Install in the reverse order of removal.

4) If replacing the TCM, execute the advance operation of learning control promotion. <Ref. to 4AT(D)(diag)-15, FACILITATION OF LEARNING CONTROL, OPERATION, Subaru Select Monitor.>

## 22.ATF Cooler Pipe and Hose

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Remove battery and washer tank.
- 3) Lift-up the vehicle.
- 4) Remove the under cover.
- 5) Disconnect ATF cooler hose from radiator.

**NOTE:**

- Do not remove with a screwdriver or other pointed tools.
- When the hose is difficult to remove, wrap a shop cloth around the hose to protect it. Turn it with pliers, and then pull directly out with your hand.

- 6) Disconnect ATF cooler hoses from pipes.

**NOTE:**

- Do not remove with a screwdriver or other pointed tools.
- When the hose is difficult to remove, wrap a shop cloth around the hose to protect it. Turn it with pliers, and then pull directly out with your hand.

- 7) Remove ATF cooler pipe from frame.

- 8) Remove the oil cooler inlet and outlet pipes.

**NOTE:**

When removing outlet pipe, be careful not to lose ball and spring used with retaining screw.

- (A) Inlet pipe
- (B) Outlet pipe

### B: INSTALLATION

- 1) Install the oil cooler outlet and inlet pipes using a new aluminum washer.

# ATF Cooler Pipe and Hose

## AUTOMATIC TRANSMISSION

### Tightening torque:

**T1: 25 N·m (2.5 kgf-m, 18.4 ft-lb)**

**T2: 45 N·m (4.6 kgf-m, 33 ft-lb)**

**T3: 40 N·m (4.1 kgf-m, 30 ft-lb)**

2) Install ATF cooler pipe to frame.

3) Connect ATF cooler hose to pipe transmission side.

### NOTE:

- Install so that the hose is not folded over, excessively bent, or twisted.

- Be careful to insert the hose to the specified position.

4) Connect ATF cooler hose to pipe of radiator side.

### NOTE:

- Install so that the hose is not folded over, excessively bent, or twisted.
- Be careful to insert the hose to the specified position.

5) Install the under cover.

6) Install battery and washer tank.

7) Fill ATF. <Ref. to 4AT-30, Automatic Transmission Fluid.>

### NOTE:

Make sure there are no ATF leaks in joints between the transmission, radiator, pipes, and hoses.

## C: INSPECTION

Repair or replace any defective hoses, pipes, clamps, and washers found from the inspection below.

- 1) Check for ATF leaks in joints between the transmission, radiator, pipes, and hoses.
- 2) Check for deformed clamps.
- 3) Lightly bend the hose and check for cracks in the surface and other damage.
- 4) Pinch the hose with your fingers and check for poor elasticity. Also check for poor elasticity in the parts where the clamp was by pressing with your fingernail.
- 5) Check for peeling, cracks, and deformation at the tip of the hose.

## 23. Air Breather Hose

### A: REMOVAL

1) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>

2) Remove intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>

3) Disconnect the air breather hoses.

- Non-turbo model

- (A) Air breather hose (Transmission case)
- (B) Air breather hose (Oil pump housing)

- Turbo model

- (A) Air breather hose (Transmission case)
- (B) Air breather hose (Oil pump housing)

### B: INSTALLATION

1) Install air breather hoses.

NOTE:

Install so that the hose is not folded over, excessively bent, or twisted.

- Non-turbo model

- (A) Air breather hose (Transmission case)
- (B) Air breather hose (Oil pump housing)

- Turbo model

- (A) Air breather hose (Transmission case)
- (B) Air breather hose (Oil pump housing)

2) Install the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, INSTALLATION, Air Intake Chamber.>

3) Install intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

### C: INSPECTION

Make sure the hose is not cracked or clogged.

## 24. Oil Charge Pipe

### A: REMOVAL

1) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>

2) Remove intercooler. (Turbo model)  
<Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>

3) Remove the oil charge pipe, and remove the O-ring from the flange face.

- (A) Oil level gauge
- (B) Oil charge pipe

### B: INSTALLATION

1) Install the oil charge pipe with new O-ring.

#### **Tightening torque:**

**41 N·m (4.2 kgf·m, 30.2 ft·lb)**

- (A) Oil level gauge
- (B) Oil charge pipe

2) Install the air intake chamber. (Non-turbo model)  
<Ref. to IN(H4SO)-6, INSTALLATION, Air Intake Chamber.>

3) Install intercooler. (Turbo model)  
<Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

### C: INSPECTION

Make sure the oil charge pipe is not deformed or otherwise damaged.

## 25. Torque Converter Clutch Assembly

### A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch and oil pump shaft horizontally.

**NOTE:**

Be careful not to scratch the bushing inside the oil pump shaft.

- 3) Remove the input shaft.

**NOTE:**

When the torque converter clutch assembly is removed, the input shaft will come out.

- 4) Remove the clip from torque converter clutch.

### B: INSTALLATION

- 1) Install the clip to torque converter clutch.
- 2) Install the oil pump shaft to the torque converter clutch, and then check the clip fits securely in its groove.
- 3) Insert the input shaft while rotating it lightly by hand, and then check the protrusion amount.

**Normal protrusion amount A:**  
50 — 55 mm (1.97 — 2.17 in)

- 4) Holding the torque converter clutch assembly by hand, carefully install it to the converter case. Be careful not to damage the bushing. Also avoid undue contact between the oil pump shaft bushing and stator shaft portion of the oil pump cover.
- 5) Rotate the shaft lightly by hand to engage the splines securely.

**Dimension A:**

2.7 — 2.9 mm (0.106 — 0.114 in)

(A) Dimension A

- 6) Install the transmission assembly to vehicle. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

### C: INSPECTION

Make sure the ring gear is not damaged and that the protrusion on the edge of the torque converter clutch is not deformed or otherwise damaged.

# Extension Case

## AUTOMATIC TRANSMISSION

### 26.Extension Case

#### A: REMOVAL

- 1) Remove the transmission assembly.  
<Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the rear vehicle speed sensor.
  - MP-T model

(A) Rear vehicle speed sensor

- VTD model

(A) Rear vehicle speed sensor

- 3) Separate transmission case and extension case sections.

#### B: INSTALLATION

- 1) Attach the selected thrust needle bearing to the end surface of reduction drive gear with vaseline.

#### NOTE:

Install thrust needle bearing in the correct direction.

- 2) Install new gasket.

- 3) Install the extension case to the transmission case.

- 4) Tighten bolts to secure the case.

#### Tightening torque:

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

- 5) Install the rear vehicle speed sensor.

#### Tightening torque:

**7 N·m (0.7 kgf·m, 5.1 ft·lb)**

- MP-T model

(A) Rear vehicle speed sensor

- VTD model

(A) Rear vehicle speed sensor

- 6) Install the transmission assembly.  
<Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

## C: DISASSEMBLY

### 1. MP-T MODEL

1) Take out the transfer clutch by lightly tapping the end of the rear drive shaft.

**NOTE:**

Be careful not to damage the oil seal in the extension.

- (A) Transfer clutch
- (B) Extension case

2) Remove the transmission clutch pipe without deforming pipe.

- (A) Extension case
- (B) Transfer clutch pipe

3) Remove the dust cover from extension case.

4) Remove the oil seal from extension case.

### 2. VTD MODEL

1) Remove snap ring using ST1, ST2, ST3 and a press.

ST1 398673600 COMPRESSOR

2) Remove test plug.

- (A) Test plug
- (B) Extension case

3) Remove clutch piston using compressed air.

4) Pay attention, not to deform pipe, and remove transfer clutch pipe.

5) Remove the dust cover from the extension case.  
6) Remove the oil seal from the extension case.

# Extension Case

## AUTOMATIC TRANSMISSION

### D: ASSEMBLY

#### 1. MP-T MODEL

1) Using the ST and a press, press in a new oil seal.

ST 498057300 INSTALLER

2) Press in the dust cover.

3) Install the transfer clutch pipe to extension case without deforming pipe.

- (A) Extension case
- (B) Transfer clutch pipe

4) Install the transfer clutch assembly to the case.

#### NOTE:

- Be careful not to damage the seal rings.
- Insert the clutch assembly fully into position until the bearing shoulder bottoms.

- (A) Transfer clutch
- (B) Extension case

#### 2. VTD MODEL

1) Press new oil seal using ST and a press.

ST 498057300 INSTALLER

2) Press dust cover.

3) Install the transfer clutch pipe onto the extension case, taking care not to deform the pipe.

4) Apply ATF to new O-ring and install the test plug.

#### Tightening torque:

**13 N·m (1.3 kgf-m, 9.6 ft-lb)**

- (A) Test plug
- (B) Extension case

5) Insert the multi-plate clutch, drive plates, driven plates, and spring retainer.

- (A) Spring retainer
- (B) Multi-plate clutch (LSD) piston ASSY

6) Install the snap ring using special tools 1, 2, and 3.

ST1 398673600 COMPRESSOR

ST2 498627100 SEAT

ST3 398663600 PLIERS

## E: INSPECTION

- Use forced air to make sure the transfer pipe and extension case routes are not clogged and do not leak.
- Measure the extension end play and adjust it to within specifications.

11) Coat a new seal ring with vaseline, and install it in the seal ring groove of the shaft.

NOTE:

Do not expand the seal ring excessively when installing.

(A) Snap ring  
(B) Transfer clutch

12) Install the transfer clutch assembly without damaging seal ring.

(A) Transfer clutch  
(B) Extension case

## E: INSPECTION

- Check the drive plate facing for wear and damage.
- Check the snap ring for wear, return spring for permanent set and breakage, and return spring for deformation.
- Check the D-ring for damage.
- Measure the extension end play and adjust it to within specifications. <Ref. to 4AT-77, ADJUSTMENT, Transfer Clutch.>

- 1) Inspect clearance between snap ring and pressure plate.
- 2) Before measuring clearance, place the same thickness of shim on both sides to prevent pressure plate from tilting.
- 3) If the clearance is not within specification, adjust it by selecting a suitable pressure plate on the transfer clutch piston side. If it exceeds the service limit, replace the drive plate with new one and adjust it within the specification by selecting the pressure plate.

**Initial standard:**

**0.7 — 1.1 mm (0.028 — 0.043 in)**

**Limit thickness:**

**1.6 mm (0.063 in)**

AT-00142

| Pressure plates |                   |
|-----------------|-------------------|
| Part No.        | Thickness mm (in) |
| 31593AA151      | 3.3 (0.130)       |
| 31593AA161      | 3.7 (0.146)       |
| 31593AA171      | 4.1 (0.161)       |
| 31593AA181      | 4.5 (0.177)       |

4) Check if the tight corner braking does not occur when the vehicle is started with steering wheel held at fully turned position. If tight corner braking occurs, perform the following procedures.

- (1) With the steering wheel held at fully turned position, drive the vehicle in “D” range and with vehicle speed at approx. 5 km/h (3 MPH) in both clockwise and counterclockwise directions for approx. ten times each, while repeating acceleration and braking intermittently.
- (2) If the tight corner braking still persists, drive the vehicle again in a circle for several laps.

## F: ADJUSTMENT

### 1. MP-T MODEL

1) Using the ST, measure the distance “A” from the end surface of ST to the end surface of rear drive shaft.

ST 398643600 GAUGE

A: Measured value

2) Using the ST1 and ST2, measure the distance “B” from the transmission case mating surface to the end surface of ST.

ST1 398643600 GAUGE

# Transfer Clutch

AUTOMATIC TRANSMISSION

ST2 499577000 GAUGE

B: Measured value

3) Calculation formula:

NOTE:

Calculate "T":

$$T = A - B + 35.4 \text{ mm}$$

$$[T = A - B + 1.3937 \text{ in}]$$

T: Thrust needle bearing thickness

A: Distance from the end surface of ST to the end surface of rear drive shaft

B: Distance from the mating surface of transmission case to the end surface of ST

Example:

When, A = 33.6 mm (1.3228 in), B = 65.05 mm (2.5610 in)

$$T = 33.6 - 65.05 + 35.4 = 3.95$$

$$[T = 1.3228 - 2.5610 + 1.3937 = 0.1555]$$

After calculation, the value of "T" becomes 3.95 mm (0.1555 in), therefore select bearing thickness of 3.8 mm (0.150 in).

NOTE:

Calculation formula for "T" is applied when measuring using ST (398643600 GAUGE, 499577000 GAUGE). When not using ST, apply

$$T = (A - \alpha + 0.45 \text{ mm}) - (B - \beta) - H$$

$$[T = (A - \alpha + 0.0177 \text{ in}) - (B - \beta) - H].$$

T: Thrust needle bearing thickness

A: Distance from the end surface of collar as substitute for ST to the end surface of reduction drive shaft

B: Distance from the mating surface of transmission case to the end surface of collar as substitute for ST

$\alpha$ : Collar thickness used when measuring "A"

$\beta$ : Collar thickness used when measuring "B"

0.45 (0.0177): Gasket thickness (mm (in))

H: Shim clearance

| Thrust needle bearing |                   |
|-----------------------|-------------------|
| Part No.              | Thickness mm (in) |
| 806536020             | 3.8 (0.150)       |
| 806535030             | 4.0 (0.157)       |
| 806535040             | 4.2 (0.165)       |
| 806535050             | 4.4 (0.173)       |
| 806535060             | 4.6 (0.181)       |
| 806535070             | 4.8 (0.189)       |
| 806535090             | 5.0 (0.197)       |

## 2. VTD MODEL

1) Insert the rear driveshaft into the reduction drive gear and center differential assembly.

(A) Rear drive shaft

(B) Center differential carrier

2) Using the ST, measure the distance "A" from the end surface of ST to the ball bearing outer ring contact surface of rear drive shaft.

ST 398643600 GAUGE

A Measured value

3) Using the ST, measure the distance "B" from the mating surface of transmission case to the end surface of ST.

ST 398643600 GAUGE

B Measured value

4) Formula:

NOTE:

Calculation of "T":

When clearances are 0.05 mm (0.0020 in), select up to four adjusting shims from the table, suitable for clearance value.

When clearances are 0.05 mm (0.0020 in)

$$T = A - B + 0.40 \text{ mm}$$

$$[T = A - B + 0.0157 \text{ in}]$$

When clearances are 0.25 mm (0.0098 in)

$$T = A - B + 0.20 \text{ mm}$$

$$[T = A - B + 0.0079 \text{ in}]$$

T: Shim clearance

A: Distance from the end surface of ST to the ball bearing outer ring contact surface of rear drive shaft

B: Distance from the mating surface of transmission case to the end surface of ST

T: Shim thickness

0.05 — 0.25 mm (0.0020 — 0.0098 in)

Example:

When, A = 90.50 mm (3.5630 in), B = 90.35 mm (3.5571 in)

Calculation for 0.05 mm (0.0020 in) of clearance

$$T = 90.50 - 90.35 + 0.4 = 0.55$$

$$[T = 3.5630 - 3.5571 + 0.0157 = 0.0216]$$

Calculation when clearance is 0.25 mm (0.0098 in)

$$T = 90.50 - 90.35 + 0.2 = 0.35$$

$$[T = 3.5630 - 3.5571 + 0.0079 = 0.0138]$$

NOTE:

Calculation formula for "T" is applied when measuring using ST (398643600 GAUGE). When not using ST, apply

$$T = (A - \alpha + 0.45 \text{ mm}) - (B - \beta) - H$$

$$[T = (A - \alpha + 0.0177 \text{ in}) - (B - \beta) - H]$$

T: Thrust needle bearing thickness

A: Distance from the end surface of collar as substitute for ST to the rear drive shaft ball bearing outer ring contact surface

B: Distance from the mating surface of transmission case to the end surface of collar as substitute for ST

$\alpha$ : Collar thickness used when measuring "A"

$\beta$ : Collar thickness used when measuring "B"

0.45 (0.0177): Gasket thickness (mm (in))

H: Shim clearance

After calculation, the value of "T" becomes between 0.35 mm (0.0138 in) and 0.55 mm (0.0216 in), therefore select two shims with thickness of 0.2 mm (0.010 in) or one shim with thickness of 0.5 mm (0.020 in).

| Adjusting shim |                   |
|----------------|-------------------|
| Part No.       | Thickness mm (in) |
| 33281AA001     | 0.2 (0.008)       |
| 33281AA011     | 0.5 (0.020)       |

# Multi-plate Clutch

AUTOMATIC TRANSMISSION

## 28. Multi-plate Clutch

### A: REMOVAL

Remove multi-plate clutch following the same instructions as for the extension case. <Ref. to 4AT-70, REMOVAL, Extension Case.>

### B: INSTALLATION

Install multi-plate clutch following the same instructions as for the extension case. <Ref. to 4AT-70, INSTALLATION, Extension Case.>

### C: INSPECTION

- Inspect drive plate facing for wear and damage.
- Make sure snap ring is not worn and return spring has no permanent distortion, damage, or deformation.
- Inspect D-ring for damage.
- Measure multi-plate clutch clearance and adjust it to within the specification range. <Ref. to 4AT-80, ADJUSTMENT, Multi-plate Clutch.>

### D: ADJUSTMENT

- 1) Install the drive plate and driven plate to center differential carrier.
- 2) Using the ST, measure the distance “A” from the end surface of ST to multi-plate clutch piston.  
ST 398643600 GAUGE

A Measured value

- 3) Using the ST, measure the height “B” from the mating surface of transmission case to the end surface of ST.  
ST 398744300 GAUGE

B Measured value

4) Calculation formula:

$$T = A - B + 0.45 \text{ mm}$$

$$[T = A - B + 0.0177 \text{ in}]$$

NOTE:

- Calculation formula for “T” is applied when measuring using ST (398643600 GAUGE, 398744300 GAUGE). When not using ST, apply

$$T = (A - \alpha + 0.45 \text{ mm}) - (B - \beta)$$

$$[T = (A - \alpha + 0.0177 \text{ in}) - (B - \beta)]$$

T: Thrust needle bearing thickness

A: Distance from the end surface of collar as substitute for ST to multi-plate clutch piston

B: Distance from the mating surface of transmission case to the end surface of collar as substitute for ST

$\alpha$ : Collar thickness used when measuring “A”

$\beta$ : Collar thickness used when measuring “B”

0.45 (0.0177): Gasket thickness (mm (in))

- Measure multi-plate clutch driven and drive plate thickness to find the clearance between measurement value and “T”.

**Standard value:**

**0.2 — 0.6 mm (0.008 — 0.024 in)**

**Limit value:**

**1.6 mm (0.063 in)**

If outside the standard value, replace the plate set (drive and driven plate). Select a multi-plate clutch piston side adjustment plate that will bring clearance within the standard value.

| Obtainable driven plate |                   |
|-------------------------|-------------------|
| Part No.                | Thickness mm (in) |
| 31589AA041              | 1.6 (0.063)       |
| 31589AA050              | 2.0 (0.079)       |
| 31589AA060              | 2.4 (0.094)       |
| 31589AA070              | 2.8 (0.110)       |

## 29.Rear Drive Shaft

### A: REMOVAL

- 1) Remove transmission assembly. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove rear wheel speed sensor and separate extension case from transmission case. <Ref. to 4AT-70, REMOVAL, Extension Case.>
- 3) Pull out the rear driveshaft from the center differential assembly.

- (A) Rear driveshaft  
(B) Center differential carrier

- 4) Remove drive plate and driven plate.

### B: INSTALLATION

- 1) Select the appropriate shim. <Ref. to 4AT-78, VTD MODEL, ADJUSTMENT, Transfer Clutch.>
- 2) Install drive plate and driven plate.
- 3) Insert rear driveshaft into the center differential assembly.
- 4) Join transmission case and extension case. Install rear wheel speed sensor. <Ref. to 4AT-70, INSTALLATION, Extension Case.>
- 5) Install transmission assembly. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

### C: DISASSEMBLY

- 1) Using a press, remove revolution gear.

- (A) Revolution gear

- 2) Using a press, remove the front and rear side ball bearings and clutch hub.

- (A) Rear ball bearing  
(B) Rear driveshaft  
(C) Clutch hub

### D: ASSEMBLY

Assemble in the reverse order of disassembly.

#### NOTE:

- Use a new revolution gear and ball bearings.
- Make sure the clutch hub is oriented in the correct direction.

- (A) Front side  
(B) Clutch hub  
(C) Rear side  
(D) Revolution gear

### E: INSPECTION

- Inspect parts to make sure there are no holes, cuts, and that they are not dusty.
- Inspect extension end play and adjust it to within the standard value. <Ref. to 4AT-78, VTD MODEL, ADJUSTMENT, Transfer Clutch.>

## 30.Reduction Driven Gear

### A: REMOVAL

#### 1. MP-T MODEL

- 1) Remove the transmission assembly from the vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove rear vehicle speed sensor, and separate the transmission case and extension case. <Ref. to 4AT-70, REMOVAL, Extension Case.>
- 3) Set the range select lever to "P".
- 4) Straighten the staked portion, and remove the lock nut.

- (A) Reduction driven gear
- (B) Reduction drive gear

- 5) Using the ST1 and ST2, extract the reduction driven gear.

ST1 499737000 PULLER  
ST2 899524100 PULLER SET

- (A) Reduction driven gear
- (B) Reduction drive gear

#### 2. VTD MODEL

- 1) Remove the transmission assembly from the vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove rear vehicle speed sensor, and separate the transmission case and extension case. <Ref. to 4AT-70, REMOVAL, Extension Case.>
- 3) Remove the rear drive shaft. <Ref. to 4AT-81, REMOVAL, Rear Drive Shaft.>

- 4) Set the range select lever to "P".
- 5) Straighten the staked portion, and remove the lock nut.

- 6) Using the ST1 and ST2, extract the reduction driven gear.

ST1 499737000 PULLER  
ST2 899524100 PULLER SET

- 7) Pull out the center differential assembly. <Ref. to 4AT-86, REMOVAL, Center Differential Carrier.>

### B: INSTALLATION

#### 1. MP-T MODEL

- 1) Set the select lever to "P" range.
- 2) Using a plastic hammer, install reduction driven gear assembly and new washer, and tighten new drive pinion lock nut.

#### **Tightening torque:**

**100 N·m (10.2 kgf-m, 73.8 ft-lb)**

- (A) Reduction driven gear
- (B) Reduction drive gear

- 3) After tightening, stake the lock nut securely.
- 4) Combine the transmission case with the extension case, and install rear vehicle speed sensor. <Ref. to 4AT-70, INSTALLATION, Extension Case.>
- 5) Install the transmission assembly to vehicle. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

#### 2. VTD MODEL

- 1) Set the select lever to "P" range.

- 2) Using a plastic hammer, install reduction driven gear assembly.
- 3) Using a plastic hammer, install the center differential assembly.
- 4) Install a new self-lock nut and a washer.

**Tightening torque:**

**100 N·m (10.2 kgf-m, 73.8 ft-lb)**

- 5) After tightening, stake the lock nut securely.
- 6) Insert the rear drive shaft assembly. <Ref. to 4AT-81, INSTALLATION, Rear Drive Shaft.>
- 7) Combine the transmission case with the extension case, and install rear vehicle speed sensor. <Ref. to 4AT-70, INSTALLATION, Extension Case.>
- 8) Install the transmission assembly to vehicle. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

**C: DISASSEMBLY**

- 1) Remove snap ring from reduction driven gear.

(A) Snap ring

- 2) Using ST, remove ball bearing from reduction driven gear.

**ST 498077600 REMOVER**

(A) Ball bearing

- 3) Remove snap ring reduction driven gear.

**D: ASSEMBLY**

- 1) Install snap ring to reduction driven gear.
- 2) Using a press, install a new ball bearing to reduction driven gear.

(A) Ball bearing

- 3) Install snap ring to reduction driven gear.

(A) Snap ring

**E: INSPECTION**

Check ball bearing and gear for dents or damage.

## 31.Reduction Drive Gear

### A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove rear vehicle speed sensor, and separate the transmission case and extension case. <Ref. to 4AT-70, REMOVAL, Extension Case.>
- 3) Remove the reduction driven gear. <Ref. to 4AT-82, REMOVAL, Reduction Driven Gear.>
- 4) Using ST, extract the reduction drive gear.

ST1 499737100 PULLER SET  
ST2 899524100 PULLER SET

(A) Reduction drive gear

### B: INSTALLATION

- 1) Install the reduction drive gear assembly.

**NOTE:**

Insert it fully into position until the bearing shoulder bottoms.

(A) Reduction drive gear

- 2) Install the reduction driven gear. <Ref. to 4AT-82, INSTALLATION, Reduction Driven Gear.>
- 3) Combine the transmission case with the extension case, and install rear vehicle speed sensor. <Ref. to 4AT-70, INSTALLATION, Extension Case.>
- 4) Install the transmission assembly to the vehicle. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

### C: DISASSEMBLY

- 1) Take out the seal rings.

(A) Seal rings  
(B) Reduction drive shaft

- 2) Using ST, remove the ball bearing.

ST 498077600 REMOVER

(A) Ball bearing  
(B) Reduction drive gear

- 3) Using a press, remove the reduction drive gear.

(A) Reduction drive gear

### D: ASSEMBLY

- 1) Press-fit the reduction drive gear to the shaft.
- 2) Press-fit the a new ball bearing to the reduction drive gear.
- 3) Apply vaseline to outer surface of seal ring and shaft groove.

4) Apply ATF to new seal rings and attach them.

- (A) Seal rings
- (B) Reduction drive shaft

## E: INSPECTION

- Rotate bearing by hand, make sure it rotates smoothly.
- Make sure that each component is free of harmful gouges, cuts, or dust.
- Measure the extension end play and adjust it to within specifications. <Ref. to 4AT-77, ADJUSTMENT, Transfer Clutch.>

# Center Differential Carrier

AUTOMATIC TRANSMISSION

## 32.Center Differential Carrier

### A: REMOVAL

- 1) Remove the transmission assembly from vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the rear wheel speed sensor, and separate the extension case from the transmission case. <Ref. to 4AT-70, REMOVAL, Extension Case.>
- 3) Pull out the rear drive shaft. <Ref. to 4AT-81, REMOVAL, Rear Drive Shaft.>
- 4) Using the special tools, pull out the center differential carrier assembly.

ST1 499737100 PULLER SET

ST2 899524100 PULLER SET

- 5) Pull out the shim(s) from transmission case.

### B: INSTALLATION

- 1) Install the center differential assembly with the shim(s).

#### NOTE:

Insert the center differential assembly and shim(s) completely into the bearing shoulder bottom.

- 2) Insert the rear drive shaft. <Ref. to 4AT-81, INSTALLATION, Rear Drive Shaft.>
- 3) Connect the transmission case and extension case, and install the rear wheel speed sensor. <Ref. to 4AT-70, INSTALLATION, Extension Case.>
- 4) Install the transmission assembly onto vehicle. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

### C: DISASSEMBLY

- 1) Remove the seal rings.

(A) Seal ring

- 2) Using a press and the special tool, remove the ball bearing.

ST 498077600 REMOVER

- 3) Remove the snap ring, and pull out the shaft from the center differential assembly.

(A) Snap ring

(B) Shaft

- 4) Remove the thrust washers, pinion gears, and washers from the center differential assembly.

(A) Pinion gear

- 5) Pull out the intermediate shaft and thrust bearing.

## D: ASSEMBLY

- 1) Install the thrust washer onto the intermediate shaft.
- 2) Install thrust bearing onto the intermediate shaft.
- 3) Install the pinion gears and washers.
- 4) Insert the shaft into the center differential assembly.
- 5) Install the snap ring.
- 6) Using a press, install a new ball bearing into the center differential assembly.

ST 498077000 REMOVER

(A) Plate

(B) Center differential carrier

- 7) Apply Vaseline onto the seal ring outer surface and shaft grooves.
- 8) Apply ATF to new seal rings and install them.

## E: INSPECTION

- Check all parts for hole, score, or dirt.
- Check the play of the extension end, and if necessary, adjust it. <Ref. to 4AT-78, VTD MODEL, ADJUSTMENT, Transfer Clutch.>

## 33. Parking Pawl

### A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove rear vehicle speed sensor and separate transmission case and extension case sections. <Ref. to 4AT-70, REMOVAL, Extension Case.>
- 3) Remove the reduction drive gear. (MP-T model) <Ref. to 4AT-84, REMOVAL, Reduction Drive Gear.>
- 4) Remove the center differential carrier. (VTD model) <Ref. to 4AT-86, REMOVAL, Center Differential Carrier.>
- 5) Remove the parking pawl, return spring and shaft.

4) Install the rear vehicle speed sensor and extension case. <Ref. to 4AT-70, INSTALLATION, Extension Case.>

5) Install the transmission assembly to the vehicle. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

### C: INSPECTION

Make sure that the tab of the parking pole on the reduction gear is not worn or otherwise damaged.

- (A) Return spring
- (B) Parking pawl

### B: INSTALLATION

- 1) Install the parking pawl, shaft and return spring.

- (A) Return spring
- (B) Parking pawl

2) Install the reduction drive gear. (MP-T model) <Ref. to 4AT-84, INSTALLATION, Reduction Drive Gear.>

3) Install the center differential carrier. (VTD model) <Ref. to 4AT-86, INSTALLATION, Center Differential Carrier.>

## 34. Converter Case

### A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to 4AT-69, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.

- 4) Lift-up lever behind the connector and disconnect it from stay.
- 5) Disconnect inhibitor switch connector from stay.

- (A) Transmission harness  
(B) Inhibitor switch harness

- 6) Remove the oil charge pipe. <Ref. to 4AT-68, REMOVAL, Oil Charge Pipe.>
- 7) Remove the oil cooler inlet and outlet pipes. <Ref. to 4AT-65, REMOVAL, ATF Cooler Pipe and Hose.>
- 8) Lightly tapping the converter case with plastic hammer, separate the transmission case and converter case.

#### NOTE:

- Be careful not to damage the oil seal and bushing inside the converter case by the oil pump cover.

- Be careful not to lose the rubber seal.

- 9) Remove the seal pipe if it is attached. (Reusing is not allowed.)

- (A) Seal pipe

- 10) Remove the differential assembly. <Ref. to 4AT-101, REMOVAL, Front Differential Assembly.>
- 11) Remove the oil seal from converter case.

### B: INSTALLATION

- 1) Check the appearance of each component and clean.
  - 2) Force-fit the oil seal to the converter case with ST.
- ST 398437700 DRIFT

- 3) Install the differential assembly to the case. <Ref. to 4AT-101, INSTALLATION, Front Differential Assembly.>
- 4) Install the left and right side retainers. <Ref. to 4AT-105, ADJUSTMENT, Front Differential Assembly.>

# Converter Case

## AUTOMATIC TRANSMISSION

5) Install the new seal pipe to the converter case.

(A) Seal pipe

6) Install the rubber seal to the converter case.

(A) Rubber seal

7) Apply proper amount of liquid gasket to the entire converter case mating surface.

**Liquid gasket:**  
**THREE BOND 1215 (Part No. 004403007)**

(A) THREE BOND 1215  
(B) Rubber seal

8) Install the converter case assembly without damaging bushing and oil seal and secure with six bolts and four nuts.

**Tightening torque:**  
**41 N·m (4.2 kgf-m, 30.2 ft-lb)**

9) Insert inhibitor switch and transmission connector into stay.

10) Install air breather hose. <Ref. to 4AT-67, INSTALLATION, Air Breather Hose.>

11) Install the oil cooler pipes. <Ref. to 4AT-65, INSTALLATION, ATF Cooler Pipe and Hose.>

12) Install the oil charge pipe with O-ring. <Ref. to 4AT-68, INSTALLATION, Oil Charge Pipe.>

13) Insert the input shaft while turning lightly by hand and verify the protrusion amount.

**Normal protrusion A:**  
**50 — 55 mm (1.97 — 2.17 in)**

14) Install the torque converter clutch assembly. <Ref. to 4AT-69, INSTALLATION, Torque Converter Clutch Assembly.>

15) Install the transmission assembly to the vehicle. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

## C: INSPECTION

Measure the backlash and adjust to within specifications. <Ref. to 4AT-99, ADJUSTMENT, Drive Pinion Shaft Assembly.>

## 35. Oil Pump Housing

### A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to 4AT-69, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.

- 4) Lift-up lever behind the transmission harness connector and disconnect it from stay.
- 5) Disconnect inhibitor switch connector from stay.
- 6) Remove the oil charge pipe. <Ref. to 4AT-68, REMOVAL, Oil Charge Pipe.>
- 7) Remove the ATF oil cooler inlet and outlet pipes. <Ref. to 4AT-65, REMOVAL, ATF Cooler Pipe and Hose.>
- 8) Separation of converter case and transmission case sections <Ref. to 4AT-89, REMOVAL, Converter Case.>
- 9) Separate transmission case and extension case sections. <Ref. to 4AT-70, REMOVAL, Extension Case.>
- 10) Remove the reduction drive gear. (MP-T model) <Ref. to 4AT-84, REMOVAL, Reduction Drive Gear.>
- 11) Remove the center differential carrier. (VTD model) <Ref. to 4AT-86, REMOVAL, Center Differential Carrier.>
- 12) Remove the reduction driven gear. <Ref. to 4AT-82, REMOVAL, Reduction Driven Gear.>
- 13) Loosen the oil pump housing mounting bolts.

- 14) Place two wooden blocks on the workbench, and stand the transmission case with its rear end facing down.

### NOTE:

- Be careful not to scratch the rear mating surface of the transmission case.
- Note that the parking rod and drive pinion protrude from the mating surface.

- 15) Remove the oil pump housing and adjusting thrust washer.

(A) Oil pump housing

### B: INSTALLATION

- 1) Secure the oil pump housing with two nuts and a bolt.

### Tightening torque:

**42 N·m (4.3 kgf-m, 31 ft-lb)**

(A) Oil pump housing

# Oil Pump Housing

## AUTOMATIC TRANSMISSION

2) Install the converter case assembly to the transmission case assembly. <Ref. to 4AT-69, INSTALLATION, Torque Converter Clutch Assembly.>

3) Install reduction driven gear. <Ref. to 4AT-82, INSTALLATION, Reduction Driven Gear.>

4) Install the reduction drive gear. (MP-T model) <Ref. to 4AT-84, INSTALLATION, Reduction Drive Gear.>

5) Install the center differential carrier. (VTD model) <Ref. to 4AT-86, INSTALLATION, Center Differential Carrier.>

6) Combine the extension case with the transmission case, and install rear vehicle speed sensor. <Ref. to 4AT-70, INSTALLATION, Extension Case.>

7) Insert inhibitor switch and transmission connector into stay.

- (A) Transmission harness
- (B) Inhibitor switch harness

8) Install the ATF cooler pipe. <Ref. to 4AT-65, INSTALLATION, ATF Cooler Pipe and Hose.>

9) Install the oil charge pipe with O-ring. <Ref. to 4AT-68, INSTALLATION, Oil Charge Pipe.>

10) Insert the input shaft while rotating it lightly by hand, and then check the protrusion amount.

**Normal protrusion amount A:**  
**50 — 55 mm (1.97 — 2.17 in)**

11) Install the torque converter clutch assembly. <Ref. to 4AT-69, INSTALLATION, Torque Converter Clutch Assembly.>

12) Install the transmission assembly to the vehicle. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

## C: DISASSEMBLY

### 1. OIL PUMP COVER

1) Remove four seal rings.

- (A) Seal rings

2) Lightly tap the end of the stator shaft to remove the cover.

- (A) Oil pump cover
- (B) Oil pump housing

3) Remove the inner and outer rotor.

- (A) Inner rotor
- (B) Outer rotor

## 2. OIL SEAL RETAINER

1) Remove the oil seal retainer.

- (A) Oil seal retainer
- (B) Drive pinion shaft

2) Remove the O-ring.

- (A) O-ring

3) Remove the oil seal from oil seal retainer.

- (A) Oil seal
- (B) Oil seal retainer

## D: ASSEMBLY

### 1. OIL PUMP COVER

1) Install oil pump rotor assembly to oil pump housing.

- (A) Inner rotor
- (B) Outer rotor

2) Align both pivots with the pivot holes of the cover, and install the oil pump cover being careful not to apply undue force to the pivots.

**Tightening torque:**  
**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

- (A) Oil pump cover
- (B) Oil pump housing

3) After assembling, turn the oil pump shaft to check for smooth rotation of the rotor.

4) Install the oil seal retainer and new seal rings. After adjusting the drive pinion backlash and tooth

# Oil Pump Housing

## AUTOMATIC TRANSMISSION

contact. <Ref. to 4AT-95, ADJUSTMENT, Oil Pump Housing.>

**Tightening torque:**  
**7 N·m (0.7 kgf-m, 5.1 ft-lb)**

- (A) Seal rings (Black)
- (B) Seal rings (Brown)

- (A) Oil seal retainer
- (B) Drive pinion shaft

## 2. OIL SEAL RETAINER

1) Install two new oil seals to the oil seal retainer in proper position using ST.  
ST 499247300 INSTALLER

- (A) Oil seal
- (B) Oil seal retainer

2) Install a new O-ring to the oil seal retainer using vaseline. Install the seal to oil pump housing bore.

- (A) O-ring

3) Install the oil seal and secure it using three bolts being careful not to damage oil seal lip.

## E: INSPECTION

- 1) Check seal ring and O-ring oil seal for breaks or damage.
- 2) Check other parts for dents or abnormalities.
- 3) Selection of oil pump rotor assembly
  - (1) Tip clearance  
Install inner rotor and outer rotor to oil pump. With rotor gears facing each other, measure crest-to-crest clearance.

**Tip clearance:**  
**0.02 — 0.15 mm (0.0008 — 0.0059 in)**

- (A) Thickness gauge
- (B) Inner rotor
- (C) Outer rotor

(2) Side clearance  
Set a depth gauge to oil pump housing, then measure oil pump housing-to-rotor clearances.

**Side clearance:**

**0.02 — 0.04 mm (0.0008 — 0.0016 in)**

- (A) Depth gauge
- (B) Inner rotor
- (C) Outer rotor

(3) If depth and/or side clearances are outside specifications, replace oil pump rotor assembly.

| Oil pump rotor assembly |                                 |
|-------------------------|---------------------------------|
| Part No.                | Thickness mm (in)               |
| 15008AA060              | 11.37 — 11.38 (0.4476 — 0.4480) |
| 15008AA070              | 11.38 — 11.39 (0.4480 — 0.4484) |
| 15008AA080              | 11.39 — 11.40 (0.4484 — 0.4488) |

Measure the total end play and adjust to within specifications. <Ref. to 4AT-95, ADJUSTMENT, Oil Pump Housing.>

**F: ADJUSTMENT**

1) Using the ST, measure the distance from the end surface of ST to the recessed portion “L” of the high clutch drum.

ST 398643600 GAUGE

2) Using the ST, measure the distance from the oil pump housing mating surface to the end surface of ST.

ST 398643600 GAUGE

**3) Calculation of total end play**

Select suitable bearing race from among those listed in this table so that clearance C is in the 0.25 to 0.55 mm (0.0098 to 0.0217 in) range.

$$C = (L + G) - l$$

|   |   |
|---|---|
| C | Clearance between concave portion of high clutch and end of clutch drum support |
| L | Length from case mating surface to the end surface of ST                        |
| G | Gasket thickness [0.28 mm (0.0110 in)]  |
| l | Height from housing mating surface to the end surface of ST                     |

| Thrust needle bearing |                   |
|-----------------------|-------------------|
| Part No.              | Thickness mm (in) |
| 806528050             | 4.1 (0.161)       |
| 806528060             | 4.3 (0.169)       |
| 806528070             | 4.5 (0.177)       |
| 806528080             | 4.7 (0.185)       |
| 806528090             | 4.9 (0.193)       |
| 806528100             | 5.1 (0.201)       |

4) After completing end play adjustment, insert the bearing race in the recess of the high clutch. Attach the thrust needle bearing to the oil pump cover with vaseline.

5) After correctly installing the new gasket to the case mating surface, carefully install the oil pump housing assembly. Be careful to avoid hitting the drive pinion against the inside of the case.

6) Install both parts with dowel pins aligned. Make sure no clearance exists at the mating surface.

# Drive Pinion Shaft Assembly

## AUTOMATIC TRANSMISSION

### 36. Drive Pinion Shaft Assembly

#### A: REMOVAL

- 1) Remove the transmission assembly from vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to 4AT-69, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.

- 4) Lift-up lever behind the transmission harness connector and disconnect it from stay.
- 5) Disconnect inhibitor switch connector from stay.
- 6) Disconnect the air breather hose. <Ref. to 4AT-67, REMOVAL, Air Breather Hose.>
- 7) Remove the oil charge pipe. <Ref. to 4AT-68, REMOVAL, Oil Charge Pipe.>
- 8) Remove the oil cooler inlet and outlet pipes. <Ref. to 4AT-65, REMOVAL, ATF Cooler Pipe and Hose.>
- 9) Separation of converter case and transmission case sections <Ref. to 4AT-89, REMOVAL, Converter Case.>
- 10) Separate transmission case and extension case sections. <Ref. to 4AT-70, REMOVAL, Extension Case.>
- 11) Remove the reduction drive gear. (MP-T model) <Ref. to 4AT-84, REMOVAL, Reduction Drive Gear.>
- 12) Remove the center differential carrier. (VTD model) <Ref. to 4AT-86, REMOVAL, Center Differential Carrier.>
- 13) Remove the reduction driven gear. <Ref. to 4AT-82, REMOVAL, Reduction Driven Gear.>

- 14) Remove the drive pinion shaft mounting bolt and remove the drive shaft assembly from oil pump housing.

#### B: INSTALLATION

- 1) Assemble the drive pinion assembly to the oil pump housing.

#### NOTE:

- Pay attention not to bend the shim.
- Pay attention not to press the pinion into housing bore.

#### Tightening torque:

**40 N·m (4.1 kgf-m, 29.5 ft-lb)**

- 2) Combine the torque converter case with the transmission case. <Ref. to 4AT-89, INSTALLATION, Converter Case.>
- 3) Install the reduction driven gear. <Ref. to 4AT-82, INSTALLATION, Reduction Driven Gear.>
- 4) Install the reduction drive gear. (MP-T model) <Ref. to 4AT-84, INSTALLATION, Reduction Drive Gear.>
- 5) Install the center differential carrier. (VTD model) <Ref. to 4AT-86, INSTALLATION, Center Differential Carrier.>
- 6) Join transmission case and extension case. Install rear vehicle speed sensor. <Ref. to 4AT-70, INSTALLATION, Extension Case.>
- 7) Insert inhibitor switch and transmission connector into stay.
- 8) Install the oil cooler inlet and outlet pipes. <Ref. to 4AT-65, INSTALLATION, ATF Cooler Pipe and Hose.>
- 9) Install the oil charge pipe with O-ring.

# Drive Pinion Shaft Assembly

AUTOMATIC TRANSMISSION

10) Insert the input shaft while rotating it lightly by hand, and then check the protrusion amount.

**Normal protrusion amount A:**  
**50 — 55 mm (1.97 — 2.17 in)**

11) Install the torque converter clutch assembly.  
<Ref. to 4AT-69, INSTALLATION, Torque Converter Clutch Assembly.>

12) Install the transmission assembly to vehicle.  
<Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

## C: DISASSEMBLY

1) Straighten the staked portion of the lock nut, and remove the lock nut while locking the rear spline portion of the shaft with ST1 and ST2. Then pull off the drive pinion collar.

ST1 498937110 HOLDER  
ST2 499787700 WRENCH  
ST3 499787500 ADAPTER

2) Remove the O-ring.

3) Using a press, separate the rear roller bearing and outer race from the shaft.

(A) Outer race

4) Using a press and ST, separate the front roller bearing from the shaft.

ST 498517000 REPLACER

(A) Front roller bearing

## D: ASSEMBLY

1) Measure dimension "A" of the drive pinion shaft.

ST 398643600 GAUGE

2) Using a press, force-fit a new roller bearing in position.

# Drive Pinion Shaft Assembly

## AUTOMATIC TRANSMISSION

### NOTE:

If too much pressure is applied, the roller bearing will not turn easily.

- (A) Drive pinion shaft
- (B) Roller bearing

3) After fitting a new O-ring to the shaft, attach the drive pinion collar to the shaft.

4) Install the lock washer to drive pinion shaft in proper direction.

5) Tighten a new lock nut with ST1, ST2 and ST3. Calculate lock washer and lock nut specifications using the following formula.

$$T2 = L2 / (L1 + L2) \times T1$$

T1: 116 N·m (11.8 kgf·m, 85.3 ft·lb)

[Required torque setting]

T2: Tightening torque

L1: ST2 length 0.072 m (2.83 in)

L2: Torque wrench length

Example:

| Torque wrench length<br>m (in) | Tightening torque<br>N·m (kgf·m, ft·lb) |
|--------------------------------|---|
| 0.4 (15.75)                    | 98 (10.0, 72)                           |
| 0.45 (17.72)                   | 100 (10.2, 73.8)                        |
| 0.5 (19.69)                    | 101 (10.3, 74.5)                        |
| 0.55 (21.65)                   | 102 (10.4, 75)                          |

- ST1 498937110 HOLDER
- ST2 499787700 WRENCH
- ST3 499787500 ADAPTER

### NOTE:

Install ST2 to torque wrench as straight as possible.

6) Measure the starting torque of the bearing. Make sure the starting torque is within the specified range. If out of the allowable range, replace the roller bearing.

### Starting torque:

#### MP-T model

7.6 — 38.1 N (0.776 — 3.88 kgf, 1.7 — 8.6 lbf)

#### VTD model

6.8 — 47.5 N (0.69 — 4.84 kgf, 1.52 — 10.67 lbf)

7) Stake the lock nut securely at two places.

8) Measure dimension "B" of the drive pinion shaft.

ST 398643600 GAUGE

9) The thickness "t" (mm) of the drive pinion shim.

$$t = 6.5 \pm 0.0625 - (B - A)$$

10) Select three or less shims from following table.

| Available drive pinion shims |                   |
|------------------------------|-------------------|
| Part No.                     | Thickness mm (in) |
| 31451AA050                   | 0.150 (0.0059)    |
| 31451AA060                   | 0.175 (0.0069)    |
| 31451AA070                   | 0.200 (0.0079)    |
| 31451AA080                   | 0.225 (0.0089)    |
| 31451AA090                   | 0.250 (0.0098)    |
| 31451AA100                   | 0.275 (0.0108)    |

## E: INSPECTION

- Make sure that all component parts are free of harmful cuts, gouges, and other faults.
- Adjust the teeth alignment. <Ref. to 4AT-99, ADJUSTMENT, Drive Pinion Shaft Assembly.>

## F: ADJUSTMENT

- 1) Thoroughly remove the liquid gasket from the case mating surface beforehand.
- 2) Install the oil pump housing assembly to the converter case, and secure evenly by tightening four bolts.

**NOTE:**

Use an old gasket or an aluminum washer so as not to damage the mating surface of the housing.

**Tightening torque:**

**41 N·m (4.2 kgf-m, 30.2 ft-lb)**

AT-00205

- 3) Rotate the drive pinion several times with ST1 and ST2.

ST1 498937110 HOLDER  
ST2 499787700 WRENCH

AT-00206

- 4) Adjust the backlash between drive pinion and hypoid driven gear. <Ref. to 4AT-105, ADJUSTMENT, Front Differential Assembly.>

5) Apply red lead evenly to the surfaces of three or four teeth of the hypoid driven gear. Rotate the drive pinion in the forward and reverse directions several times. Then remove the oil pump housing, and check the tooth contact pattern.

If tooth contact is improper, readjust the backlash or shim thickness. <Ref. to 4AT-105, ADJUSTMENT, Front Differential Assembly.>

- Tooth contact

**Checking item: Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]**

AT-00207

(A) Toe side

(B) Heel side

- Face contact

**Checking item: Backlash is too large.**  
Contact pattern

AT-00208

**Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.**

AT-00212

# Drive Pinion Shaft Assembly

## AUTOMATIC TRANSMISSION

- Flank contact

**Checking item: Backlash is too small.**

Contact pattern

Corrective action: Reduce thickness of drive pinion height adjusting washer in order to move drive pinion away from hypoid driven gear.

- Toe contact (Inside end contact)

**Checking item: Contact area is small.**

Contact pattern

Corrective action: Decrease thickness of drive pinion height adjusting washer in order to move drive pinion away from hypoid driven gear.

- Heel contact (Outside end contact)

**Checking item: Contact area is small.**

Contact pattern

Corrective action: Increase thickness of drive pinion height adjusting washer in order to move drive pinion close to hypoid driven gear.

6) If tooth contact is correct, mark the retainer position and loosen it. After fitting a new O-ring and oil seal, screw in the retainer to the marked position. Then tighten the lock plate to the specified torque.

**Tightening torque:**

**25 N·m (2.5 kgf-m, 18.4 ft-lb)**

(A) Lock plate

## 37. Front Differential Assembly

### A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to 4AT-69, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.

- 4) Lift-up lever behind the transmission harness connector and disconnect it from stay.
- 5) Disconnect inhibitor switch from stay.
- 6) Remove the oil charge pipe. <Ref. to 4AT-68, REMOVAL, Oil Charge Pipe.>
- 7) Remove the oil cooler inlet and outlet pipes. <Ref. to 4AT-65, REMOVAL, ATF Cooler Pipe and Hose.>
- 8) Separation of converter case and transmission case. <Ref. to 4AT-89, REMOVAL, Converter Case.>
- 9) Remove the seal pipe.
- 10) Remove the differential side retainer with ST.

#### NOTE:

Hold the differential case assembly by hand to avoid damaging retainer mounting hole of the converter case.

ST 499787000 WRENCH ASSY

- 11) Remove the differential assembly without damaging installation part of retainer.

### B: INSTALLATION

- 1) Install the differential assembly to the torque converter clutch case.

#### CAUTION:

**Do not damage the inside of the torque converter clutch case (particularly, the differential side retainer contact surface).**

(A) Differential ASSY

- 2) Install the O-rings from left and right side retainer.
- 3) Using ST, install the side retainers. <Ref. to 4AT-101, REMOVAL, Front Differential Assembly.>  
ST 499787000 WRENCH ASSY
- 4) Adjust the front differential backlash. <Ref. to 4AT-105, ADJUSTMENT, Front Differential Assembly.>
- 5) Install the lock plate.

#### Tightening torque:

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

(A) Lock plate

# Front Differential Assembly

## AUTOMATIC TRANSMISSION

6) Install the new seal pipe to the converter case.

(A) Seal pipe

7) Install the converter case to transmission case. <Ref. to 4AT-89, INSTALLATION, Converter Case.>

8) Insert inhibitor switch and transmission connector into stay.

(A) Transmission harness  
(B) Inhibitor switch harness

9) Install oil cooler pipes. <Ref. to 4AT-65, INSTALLATION, ATF Cooler Pipe and Hose.>

10) Install the oil charge pipe with O-ring. <Ref. to 4AT-68, INSTALLATION, Oil Charge Pipe.>

11) Insert the input shaft while rotating it lightly by hand, and then check the protrusion amount.

**Normal protrusion amount A:**  
**50 — 55 mm (1.97 — 2.17 in)**

12) Install the torque converter clutch assembly. <Ref. to 4AT-69, INSTALLATION, Torque Converter Clutch Assembly.>

13) Install the transmission assembly to the vehicle. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

## C: DISASSEMBLY

### 1. DIFFERENTIAL CASE ASSEMBLY

1) Using a press and ST, remove the taper roller bearing.

ST 498077000 REMOVER

2) Secure the case in a vise and remove the hypoid driven gear tightening bolts, then separate the hypoid driven gear, case (RH) and case (LH).

(A) Hypoid driven gear  
(B) Differential case (RH)  
(C) Differential case (LH)

3) Pull out the straight pin and shaft, and remove the differential bevel gear, washer, and differential bevel pinion.

(A) Differential case (RH)

## 2. SIDE RETAINER

**NOTE:**

After adjusting the drive pinion backlash and tooth contact, remove and install the oil seal and O-ring.

1) Remove O-ring.

2) Remove oil seal.

3) Take out either split pin, remove claw.

ST 398527700 PULLER ASSY

- (A) Claw
- (B) Split pin
- (C) Pin

4) Securely attach two claws to outer race, set ST to side retainer.

ST 398527700 PULLER ASSY

- (A) Shaft
- (B) Claw

5) Return removed claw to the original position, and install pin and split pin.

6) Hold the shaft of ST to avoid removing from side retainer, and then remove the bearing outer race.

ST 398527700 PULLER ASSY

**NOTE:**

Replace bearing inner and outer races as a single unit.

- (A) Shaft
- (B) Side retainer

## D: ASSEMBLY

### 1. DIFFERENTIAL CASE ASSEMBLY

1) Install the washer, differential bevel gear and differential bevel pinion in the differential case (RH). Insert the pinion shaft.

# Front Differential Assembly

AUTOMATIC TRANSMISSION

2) Install straight pin from reverse direction.

(A) Differential case (RH)

3) Install the washer and differential bevel gear to the differential case (LH). Then put the case over the differential case (RH), and connect both cases.  
4) Install the hypoid driven gear and secure by tightening the bolt.

**Standard tightening torque:**  
**62 N·m (6.3 kgf·m, 45.7 ft·lb)**

(A) Hypoid driven gear  
(B) Differential case (RH)  
(C) Differential case (LH)

5) Measurement of backlash (Selection of washer)  
(1) Install the genuine axle shaft to differential case.

Part No. 38415AA070 AXLE SHAFT

(2) Measure the gear backlash with ST1 and ST2, and insert ST2 through the access window of the case.

ST1 498247001 MAGNET BASE

ST2 498247100 DIAL GAUGE

NOTE:

- Measure the backlash by applying a pinion tooth between two bevel gear teeth.
- Fix bevel pinion gear in place with a screwdriver or similar tool when measuring.

**Standard value:**

**0.13 — 0.18 mm (0.0051 — 0.0071 in)**

(3) If backlash is not as specified, select a washer from the table below.

| Washer    |                   |
|-----------|-------------------|
| Part No.  | Thickness mm (in) |
| 803038021 | 0.95 (0.037)      |
| 803038022 | 1.00 (0.039)      |
| 803038023 | 1.05 (0.041)      |

6) Using ST, install taper roller bearing.

ST 398437700 DRIFT

(A) Taper roller bearing

## 2. SIDE RETAINER

1) Install bearing outer race to side retainer.

2) Install a new oil seal using the ST and hammer.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

3) Apply gear oil to new O-ring and install it.

## E: INSPECTION

- Check each component for harmful cuts, damage and other faults.
- Measure the backlash and adjust to within specifications.

<Ref. to 4AT-105, ADJUSTMENT, Front Differential Assembly.>

## F: ADJUSTMENT

1) Using ST, screw in the retainer until light contact is felt.

### NOTE:

Screw in the RH side slightly deeper than the LH side.

ST 499787000 WRENCH ASSY

- 2) Remove the oil pump housing.
- 3) Thoroughly remove the liquid gasket from the case mating surface beforehand.
- 4) Install the oil pump housing assembly to the converter case, and secure evenly by tightening four bolts.

### NOTE:

Use an old gasket or an aluminum washer so as not to damage the mating surface of the housing.

## Tightening torque:

**41 N·m (4.2 kgf-m, 30.2 ft-lb)**

5) Rotate the drive pinion several times with ST1 and ST2.

ST1 498937110 HOLDER  
ST2 499787700 WRENCH

6) Tighten the LH retainer until contact is felt while rotating the shaft. Then loosen the RH retainer. Keep tightening the LH retainer and loosening the RH retainer until the pinion shaft can no longer be turned. This is the "zero" state.

(A) Retainer

# Front Differential Assembly

## AUTOMATIC TRANSMISSION

7) After the “zero” state is established, back off the LH retainer 3 notches and secure it with the lock plate. Then back off the RH retainer and retighten until it stops. Rotate drive pinion a few times. Tighten the RH retainer 1-3/4 notches further. This sets the preload. Finally, secure the retainer with its lock plate.

9) Adjust the tooth contact between front differential and drive shaft. <Ref. to 4AT-99, ADJUSTMENT, Drive Pinion Shaft Assembly.>

(A) Lock plate

### NOTE:

Turning the retainer by one tooth changes the backlash about 0.05 mm (0.0020 in).

8) Turn the drive pinion several rotations with ST1 and check to see if the backlash is within the standard value with ST2, ST3, ST4 and ST5.

|     |           |             |
|-----|-----------|-------------|

### **Backlash:**

**0.13 — 0.18 mm (0.0051 — 0.0071 in)**

### 38.AT Main Case

#### A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to 4AT-69, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.

- 4) Lift-up lever behind the transmission harness connector and disconnect it from stay.
- 5) Disconnect inhibitor switch connector from stay.
- 6) Disconnect the air breather hose.
- 7) Remove the oil charge pipe. <Ref. to 4AT-68, REMOVAL, Oil Charge Pipe.>
- 8) Remove the oil cooler inlet and outlet pipes. <Ref. to 4AT-65, REMOVAL, ATF Cooler Pipe and Hose.>
- 9) Separation of converter case and transmission case. <Ref. to 4AT-89, REMOVAL, Converter Case.>
- 10) Remove the oil pump housing. <Ref. to 4AT-91, REMOVAL, Oil Pump Housing.>
- 11) Take out the high clutch, thrust needle bearing and reverse clutch assembly.

- (A) High clutch and reverse clutch ASSY
- (B) Thrust needle bearing

- 12) Take out the high clutch hub and the thrust bearing.

- (A) High clutch hub
- (B) Thrust needle bearing

- 13) Take out the front sun gear and the thrust bearing.

- (A) Front sun gear
- (B) Thrust needle bearing

- 14) Pull out leaf spring without folding.

#### NOTE:

Remove it while pressing down on lower leaf spring.

- (A) Leaf spring
- (B) Retaining plate

# AT Main Case

## AUTOMATIC TRANSMISSION

15) Remove snap ring and thrust needle bearing.

- (A) Snap ring
- (B) Thrust needle bearing

16) Take out retaining plate, drive plate and driven plate of 2-4 brake.

17) Take out the thrust needle bearing, planetary gear assembly and the low clutch assembly.

18) Remove 2-4 brake seal.

19) Remove snap ring.

- (A) Snap ring
- (B) 2-4 brake piston

20) Take out 2-4 brake return spring.

21) Remove the 2-4 brake piston and piston retainer without damaging.

- (A) 2-4 brake piston
- (B) 2-4 brake piston retainer

22) Pull out the leaf spring without folding.

(A) Leaf spring

23) Remove snap ring.

(A) Snap ring

24) Take out retaining plate, drive plate, driven plate and dish plate.

25) Turn the transmission case upside down, and then take out the socket bolts while holding the one-way clutch inner race with hand.

26) Take out the spring retainer.

27) Take out the return spring.

28) Apply compressed air.

29) Take out the low & reverse piston.

# AT Main Case

## AUTOMATIC TRANSMISSION

### B: INSTALLATION

1) Install the low & reverse piston without tilting.

**NOTE:**

Be careful not to damage the lip seal.

2) Install return spring.

3) Install spring retainer.

4) Install the one-way clutch inner race, spring retainer and return spring.

5) Tighten socket head bolts evenly from the rear side of the transmission case.

**Tightening torque:**

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

6) Place the front side of transmission body up.

7) Install thrust needle bearing.

8) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.

9) Set the micro gauge to retaining plate, and read its scale. Make more than three measurements at even distance and take the average value.

**NOTE:**

The value, which is read in the gauge at this time, is zero point.

10) Scale and record the weight Z of a flat board which will be put on plates.

**NOTE:**

- Use a stiff flat board which does not bend against load.

- Use a flat board of its weight less than 8.5 kg (18.7 lb).

11) Put the flat board on retaining plate.

12) Using the following formula, calculate N indicated on the push/pull gauge.

$$N = 83 \text{ N (8.5 kgf, 18.7 lbf)} - Z$$

N: Value indicated on push/pull gauge

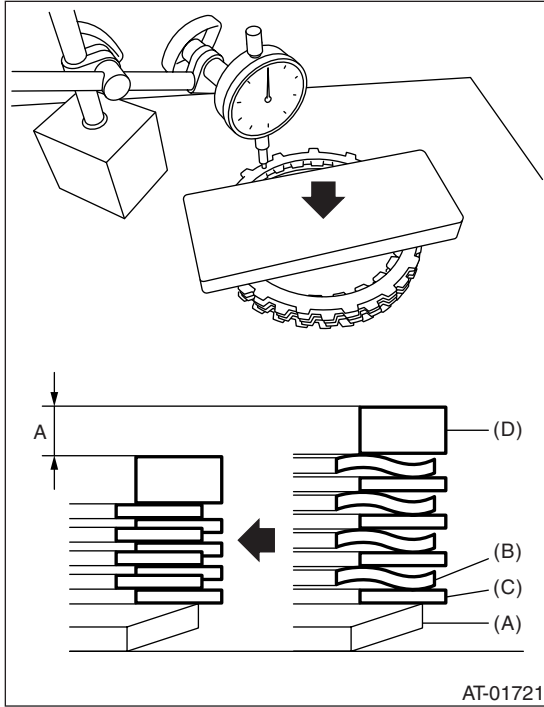

83 N (8.5 kgf, 18.7 lbf): Load applied to clutch plate

Z: Flat board weight

13) Press the center of retaining plate applying force of N with push/pull gauge, and then measure and record the height "A". Make more than three measurements at even distance and take the average value.

**NOTE:**

If three points, measure the height every 120°. If four points, measure the height every 90°.

- (A) Dish plate
- (B) Driven plate
- (C) Drive plate
- (D) Retaining plate

14) Installation of the low & reverse brake:  
Install the dish plate, driven plate and retaining plate, and then secure them with snap ring.

**NOTE:**

Pay attention to the orientation of dish plate.

- (A) Snap ring

15) Apply compressed air intermittently to check for operation.

16) Place the same thickness of shim on both sides to prevent the plate from tilting, and then measure and record the clearance "B".

**NOTE:**

Do not press the shim downward with excessive force, or else the waveform of drive plates will be broken down.

17) Piston stroke calculation

Calculate with "A" and "B" dimensions which have been recorded before, and if the value exceeds the service limit, replace the drive plate with a new one and adjust it within the specification.

$$T = A + B$$

T: Piston stroke

A: Collapse amount of drive plate

B: Clearance between retaining plate and snap ring

**Non-turbo model**

**Initial standard:**

**2.15 — 2.65 mm (0.073 — 0.093 in)**

**Limit thickness:**

**2.95 mm (0.104 in)**

**Turbo model**

**Initial standard:**

**2.70 — 3.20 mm (0.106 — 0.126 in)**

**Limit thickness:**

**3.90 mm (0.154 in)**

# AT Main Case

## AUTOMATIC TRANSMISSION

| Retaining plate |                   |
|-----------------|-------------------|
| Part number     | Thickness mm (in) |
| 31667AA420      | 3.8 (0.150)       |
| 31667AA320      | 4.1 (0.161)       |
| 31667AA330      | 4.4 (0.173)       |
| 31667AA340      | 4.7 (0.185)       |
| 31667AA350      | 5.0 (0.197)       |
| 31667AA360      | 5.3 (0.209)       |
| 31667AA370      | 5.6 (0.220)       |
| 31667AA380      | 5.9 (0.232)       |

**NOTE:**

Do not make adjustment unless the drive plate is replaced.

18) Install the low & reverse brake leaf spring.

(A) Leaf spring

19) Install the 2-4 brake piston and 2-4 brake retainer by aligning hole of 2-4 brake retainer and hole of transmission case.

(A) 2-4 brake piston

(B) 2-4 brake piston retainer

20) Install 2-4 brake piston return spring to transmission case.

21) Position snap ring in transmission. Using ST, press the snap ring into place.

ST 498677100 COMPRESSOR

22) Install planetary gear and low clutch assembly to transmission case.

**CAUTION:**

If installing it while rotating the low clutch and planetary gear assembly, rotate them slowly and pay attention not to damage the seal ring.

23) Selection of 2-4 brake retaining plate (Turbo model)

- (1) Install pressure plate, drive plate, driven plate, retaining plate and snap ring.

- (2) Install a new 2-4 brake oil seal to transmission case.

- (3) After all 2-4 brake component parts have been installed, blow in air intermittently and confirm the operation of the brake.

- (4) Check the clearance between the retaining plate and the snap ring.

**NOTE:**

Do not make adjustment unless the drive plate is replaced.

If it exceeds the service limit, replace the drive plate with a new one and adjust it within the specification.

**Initial standard:**

**0.8 — 1.2 mm (0.031 — 0.047 in)**

**Limit thickness:**  
**1.5 mm (0.059 in)**

| Retaining plate |                   |
|-----------------|-------------------|
| Part No.        | Thickness mm (in) |
| 31567AA991      | 5.6 (0.220)       |
| 31567AB001      | 5.8 (0.228)       |
| 31567AB011      | 6.0 (0.236)       |
| 31567AB021      | 6.2 (0.244)       |
| 31567AB031      | 6.4 (0.252)       |
| 31567AB041      | 6.6 (0.260)       |

- 24) Selection of 2-4 brake retaining plate (Non-turbo model)

(1) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.

(2) Set the micro gauge to clutch, and read its scale.

**NOTE:**

The value, which is read in the gauge at this time, is zero point.

(3) Scale and record the weight Z of a flat board which will be put on plates.

**NOTE:**

- Use a stiff flat board which does not bend against load.

- Use a flat board of its weight less than 10.2 kg (22.5 lb).

(4) Put the flat board on retaining plate.

# AT Main Case

## AUTOMATIC TRANSMISSION

(5) Using the following formula, calculate N indicated on the push/pull gauge.

$$N = 100 N (10.2 \text{ kgf}, 22.5 \text{ lbf}) - Z$$

N: Value indicated on push/pull gauge

100 N (10.2 kgf, 22.5 lbf): Load applied to clutch plate

Z: Flat board weight

(6) Press the center of retaining plate applying force of N with push/pull gauge, and then measure and record the height "A". Make more than three measurements at even distance and take the average value.

### NOTE:

If three points, measure the height every 120°. If four points, measure the height every 90°.

- (A) Driven plate
- (B) Drive plate
- (C) Retaining plate

(7) Install the pressure plate, drive plate, driven plate, retaining plate and snap ring.

(8) Install a new 2-4 brake oil seal to transmission case.

(9) After all 2-4 brake component parts have been installed, blow air intermittently and confirm the operation of brake.

(10) Measure and record the clearance "B" between the retaining plate and snap ring.

(11) Piston stroke calculation

Calculate with "A" and "B" dimensions which have been recorded before, and if the value exceeds the service limit, replace the drive plate with a new one and adjust it within the specification.

$$T = A + B$$

T: Piston stroke

A: Collapse amount of drive plate

B: Clearance between retaining plate and snap ring

**Initial standard:**

**1.7 — 2.1 mm (0.067 — 0.083 in)**

**Limit thickness:**

**2.3 mm (0.091 in)**

| Retaining plate |                   |
|-----------------|-------------------|
| Part number     | Thickness mm (in) |
| 31567AA991      | 5.6 (0.220)       |
| 31567AB001      | 5.8 (0.228)       |
| 31567AB011      | 6.0 (0.236)       |
| 31567AB021      | 6.2 (0.244)       |
| 31567AB031      | 6.4 (0.252)       |
| 31567AB041      | 6.6 (0.260)       |

**NOTE:**

Do not make adjustment unless the drive plate is replaced.

25) Be careful not to mistake the location of the leaf spring to be inserted.

- (A) Leaf spring
- (B) Retaining plate

26) Install thrust needle bearing in the correct direction.

- (A) Snap ring
- (B) Thrust needle bearing
- (C) Upside
- (D) Downside
- (E) Outside

27) Install front sun gear and thrust needle bearing.

- (A) Front sun gear
- (B) Thrust needle bearing
- (C) Clutch hub side
- (D) Front sun gear side
- (E) Outside

28) Install the high clutch hub.

Attach the thrust needle bearing to the hub with vaseline and install the hub by correctly engaging the splines of the front planetary carrier.

29) Install the thrust needle bearing in proper direction.

- (A) High clutch hub
- (B) Thrust needle bearing
- (C) Upside
- (D) Downside
- (E) Outside

30) Install the high clutch assembly.

- (A) High clutch and reverse clutch ASSY

# AT Main Case

## AUTOMATIC TRANSMISSION

31) Adjust total end play. <Ref. to 4AT-95, ADJUSTMENT, Oil Pump Housing.>

32) Install the thrust needle bearing in proper direction.

- (A) High clutch and reverse clutch ASSY
- (B) Thrust needle bearing
- (C) Upside
- (D) Downside
- (E) Outside

33) Install the oil pump housing assembly.

34) Install the converter case assembly to the transmission case assembly. <Ref. to 4AT-89, INSTALLATION, Converter Case.>

35) Insert inhibitor switch and transmission connector into stay.

- (A) Transmission harness
- (B) Inhibitor switch harness

36) Install air breather hose. <Ref. to 4AT-67, INSTALLATION, Air Breather Hose.>

37) Install oil cooler pipes. <Ref. to 4AT-65, INSTALLATION, ATF Cooler Pipe and Hose.>

38) Install the oil charge pipe with O-ring. <Ref. to 4AT-68, INSTALLATION, Oil Charge Pipe.>

39) Insert the input shaft while rotating it lightly by hand, and then check the protrusion amount.

**Normal protrusion amount A:**  
**50 — 55 mm (1.97 — 2.17 in)**

40) Install the torque converter clutch assembly. <Ref. to 4AT-69, INSTALLATION, Torque Converter Clutch Assembly.>

41) Install the transmission assembly to the vehicle. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

## C: DISASSEMBLY

### 1. HIGH CLUTCH, REVERSE CLUTCH

1) Remove the snap ring, and take out the retaining plate, drive plates, driven plates.

(A) Snap ring

2) Remove snap ring, and take out the retaining plate, drive plates and driven plates.

(A) Snap ring

3) Using ST1 and ST2, remove snap ring.  
ST1 398673600 COMPRESSOR

ST2 498627100 SEAT

(A) Snap ring

4) Take out clutch cover, spring retainer, high clutch piston and reverse clutch piston.

(A) Reverse clutch piston  
(B) Cover  
(C) Return spring

5) Remove seal rings and lip seal from high clutch piston and reverse clutch piston.

(A) High clutch piston  
(B) Reverse clutch piston

## 2. PLANETARY GEAR, LOW CLUTCH

1) Remove snap ring from the low clutch drum.

(A) Snap ring  
(B) Low clutch drum

2) Take out front planetary carrier.

(A) Front planetary carrier  
(B) Low clutch drum

3) Take out rear sun gear.

(A) Rear sun gear  
(B) Rear planetary carrier

# AT Main Case

## AUTOMATIC TRANSMISSION

4) Take out rear planetary carrier, washer and thrust needle bearing.

- (A) Rear planetary carrier
- (B) Low clutch drum

5) Take out rear internal gear.

- (A) Rear internal gear
- (B) Low clutch drum

6) Remove the snap ring from the low clutch drum.

- (A) Snap ring
- (B) Low clutch drum

7) Compress the spring retainer, and remove the snap ring from the low clutch drum, by using ST1 and ST2.

ST1 498627100 SEAT  
ST2 398673600 COMPRESSOR

- (A) Snap ring
- (B) Low clutch drum

8) Remove one-way clutch. <Ref. to 4AT-107, REMOVAL, AT Main Case.>

9) Install the one-way clutch inner race to the low clutch drum, and apply compressed air to remove the low clutch piston.

- (A) Apply compressed air.
- (B) One-way clutch inner race

10) Remove the one-way clutch inner race.

11) Remove the one-way clutch after taking out the snap ring.

- (A) Snap ring
- (B) Plate
- (C) One-way clutch

12) Remove the needle bearing after taking out the snap ring.

- (A) Needle bearing
- (B) Snap ring

### 3. 2-4 BRAKE

1) Separate 2-4 brake piston and piston retainer.

- (A) 2-4 brake piston
- (B) 2-4 brake piston retainer

2) Remove the D-ring from 2-4 brake piston.

### 4. ONE-WAY CLUTCH INNER RACE

1) Remove seal rings.

- (A) One way clutch inner race
- (B) Seal rings

2) Using ST, remove needle bearing.  
ST 398527700 PULLER ASSY

### 5. ONE-WAY CLUTCH OUTER RACE

1) Remove the one-way clutch after taking out the snap ring.

- (A) Snap ring
- (B) Plate
- (C) One-way clutch

2) Remove the needle bearing after taking out the snap ring.

- (A) Needle bearing
- (B) Snap ring

## D: ASSEMBLY

### 1. HIGH CLUTCH, REVERSE CLUTCH

1) Install seal rings and lip seal to high clutch piston and reverse clutch piston.

2) Install high clutch piston to reverse clutch piston.

- (A) High clutch piston
- (B) Reverse clutch piston

# AT Main Case

## AUTOMATIC TRANSMISSION

3) Install reverse clutch to high clutch drum. Align the groove on the reverse clutch piston with the groove on the high clutch drum during installation.

(A) Reverse clutch piston  
(B) High clutch drum

4) Install spring retainer to high clutch piston.

(A) Return spring  
(B) High clutch drum

5) Install ST to high clutch piston.  
ST 498437000 HIGH CLUTCH PISTON GUIDE

6) Avoid folding the high clutch piston seal, when installing the cover to high clutch piston.

7) Install the snap ring using ST 1, 2, and 3.  
ST1 398673600 COMPRESSOR  
ST2 498627100 SEAT  
ST3 498437000 HIGH CLUTCH PISTON GUIDE

8) Install the thickest driven plate to piston side, and then install the driven plate, drive plate, retaining plate to high clutch drum.

9) Install the snap ring to high clutch drum.  
10) Apply compressed air intermittently to check for operation.

11) Selection of high clutch retaining plate (Non-turbo model)

- (1) Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.
- (2) Set the dial gauge to clutch, and read its scale.

NOTE:  
The value, which is read in the gauge at this time, is zero point.

(3) Scale and record the weight Z of a flat board which will be put on plates.

**NOTE:**

- Use a stiff flat board which does not bend against load.
- Use a flat board of its weight less than 25.5 kg (56.2 lb).

(4) Put the flat board on retaining plate.

(5) Using the following formula, calculate N indicated on the push/pull gauge.

$$N = 250 \text{ N (25.5 kgf, 56.2 lbf)} - Z$$

N: Value indicated on push/pull gauge

250 N (25.5 kgf, 56.2 lbf): Load applied to clutch plate

Z: Flat board weight

(6) Press the center of retaining plate applying force of N with push/pull gauge, and then measure and record the height "A". Make more than three measurements at even distance and take the average value.

**NOTE:**

If three points, measure the height every 120°. If four points, measure the height every 90°.

- (A) Driven plate
- (B) Drive plate
- (C) Retaining plate

12) Measure the clearance between the retaining plate of high clutch and snap ring. (Turbo model) At this time, do not press down the retaining plate.

**Initial standard:**

**0.8 — 1.1 mm (0.031 — 0.043 in)**

**Limit thickness:**

**1.5 mm (0.059 in)**

- (A) Thickness gauge

If it exceeds the service limit, replace the drive plate with a new one and adjust it within the specification.

# AT Main Case

## AUTOMATIC TRANSMISSION

| High clutch retaining plate |                   |
|-----------------------------|-------------------|
| Part number                 | Thickness mm (in) |
| 31567AA710                  | 4.7 (0.185)       |
| 31567AA720                  | 4.8 (0.189)       |
| 31567AA730                  | 4.9 (0.193)       |
| 31567AA740                  | 5.0 (0.197)       |
| 31567AA670                  | 5.1 (0.201)       |
| 31567AA680                  | 5.2 (0.205)       |
| 31567AA690                  | 5.3 (0.209)       |
| 31567AA700                  | 5.4 (0.213)       |

**NOTE:**

Do not make adjustment unless the drive plate is replaced.

13) Check the piston stroke. (Non-turbo model)

- Measure and record the clearance "B" between the retaining plate and snap ring. (High clutch)

At this time, do not press down the retaining plate.

(A) Thickness gauge

(2) Piston stroke calculation

Calculate with "A" and "B" dimensions which have been recorded before, and if the value exceeds the service limit, replace the drive plate with a new one and adjust it within the specification.

$$T = A + B$$

T: Piston stroke

A: Collapse amount of drive plate

B: Clearance between retaining plate and snap ring

**Initial standard:**

2.0 — 2.3 mm (0.079 — 0.091 in)

**Limit thickness:**

2.6 mm (0.102 in)

| High clutch retaining plate |                   |
|-----------------------------|-------------------|
| Part number                 | Thickness mm (in) |
| 31567AA670                  | 5.1 (0.201)       |
| 31567AA680                  | 5.2 (0.205)       |
| 31567AA690                  | 5.3 (0.209)       |
| 31567AA700                  | 5.4 (0.213)       |
| 31567AA710                  | 4.7 (0.185)       |
| 31567AA720                  | 4.8 (0.189)       |
| 31567AA730                  | 4.9 (0.193)       |
| 31567AA740                  | 5.0 (0.197)       |

14) Selection of reverse clutch retaining plate

- Place the dish plate, driven plate, drive plate and retaining plate neatly in this order on surface table.

- Set the dial gauge to clutch, and read its scale.

**NOTE:**

The value, which is read in the gauge at this time, is zero point.

- Scale and record the weight Z of a flat board which will be put on plates.

**NOTE:**

- Use a stiff flat board which does not bend against load.
- Use a flat board of its weight less than 15.3 kg (33.7 lb).

- Put the flat board on retaining plate.

- Using the following formula, calculate N indicated on the push/pull gauge.

$$N = 150 \text{ N (15.3 kgf, 33.7 lbf)} - Z$$

N: Value indicated on push/pull gauge

150 N (15.3 kgf, 33.7 lbf): Load applied to clutch plate

Z: Flat board weight

- Press the center of retaining plate applying force of N with push/pull gauge, and then measure and record the height "A". Make more than three measurements at even distance and take the average value.

**NOTE:**

If three points, measure the height every 120°. If four points, measure the height every 90°.

- (A) Driven plate
- (B) Drive plate
- (C) Retaining plate

(7) Install the driven plate, drive plate, retaining plate and snap ring.

(8) Apply compressed air intermittently to check for operation.

15) Check the piston stroke.

(1) Measure and record the clearance "B" between the retaining plate and snap ring. (Reverse clutch)

At this time, do not press down the retaining plate.

(A) Thickness gauge

(2) Piston stroke calculation

Calculate with "A" and "B" dimensions which have been recorded before, and if the value exceeds the service limit, replace the drive plate with a new one and adjust it within the specification.

$$T = A + B$$

T: Piston stroke

A: Collapse amount of drive plate

B: Clearance between retaining plate and snap ring

**Initial standard:**

**1.1 — 1.4 mm (0.043 — 0.055 in)**

**Limit thickness:**

**1.6 mm (0.063 in)**

| Reverse clutch retaining plate |                   |
|--------------------------------|-------------------|
| Part number                    | Thickness mm (in) |
| 31567AA910                     | 4.0 (0.157)       |
| 31567AA920                     | 4.2 (0.165)       |
| 31567AA930                     | 4.4 (0.173)       |
| 31567AA940                     | 4.6 (0.181)       |
| 31567AA950                     | 4.8 (0.189)       |
| 31567AA960                     | 5.0 (0.197)       |
| 31567AA970                     | 5.2 (0.205)       |
| 31567AA980                     | 5.4 (0.213)       |

**NOTE:**

Do not make adjustment unless the drive plate is replaced.

# AT Main Case

## AUTOMATIC TRANSMISSION

### 2. PLANETARY GEAR, LOW CLUTCH

- 1) Install D-ring to low clutch piston.
- 2) Fit the low clutch piston to the low clutch drum.

- (A) Low clutch piston
- (B) Low clutch drum

- 3) Install spring retainer to low clutch piston.

- (A) Spring retainer
- (B) Low clutch drum

- 4) Install ST to low clutch drum.

ST 498437100 LOW CLUTCH PISTON GUIDE

- 5) Set the cover on the piston with a press using ST1 and ST2, and attach the snap ring. At this time, be careful not to fold cover seal during installation.

ST1 498627100 SEAT  
ST2 398673600 COMPRESSOR

ST3 498437100 LOW CLUTCH PISTON GUIDE

- 6) Install the dish plate, driven plates, drive plates, and retaining plate, and secure with the snap ring.

- (A) Snap ring
- (B) Low clutch drum
- (C) Dish plate
- (D) Low clutch piston side

- 7) Check the low clutch for operation.

- (1) Remove one-way clutch. <Ref. to 4AT-107, REMOVAL, AT Main Case.>
- (2) Set the one-way clutch inner race, and apply compressed air for checking.

- (A) Apply compressed air.
- (B) Low clutch drum

- 8) Checking low clutch clearance.

- (1) Place the same thickness of shim on both sides to prevent retaining plate from tilting.
- (2) Inspect clearance between retaining plate and operation of the low clutch.

**Initial standard:**

**0.7 — 1.1 mm (0.028 — 0.043 in)**

**Limit thickness:**

**1.6 mm (0.063 in)**

- (A) Thickness gauge
- (B) Low clutch drum

Do not make adjustment unless the drive plate is replaced.  
If it exceeds the service limit, replace the drive plate with a new one and adjust it to the specification.

| Available retaining plate |                   |
|---------------------------|-------------------|
| Part No.                  | Thickness mm (in) |
| 31567AA830                | 3.8 (0.150)       |
| 31567AA840                | 4.0 (0.157)       |
| 31567AA850                | 4.2 (0.165)       |
| 31567AA860                | 4.4 (0.173)       |
| 31567AA870                | 4.6 (0.181)       |

9) Install washer to rear internal gear.

- (A) Rear internal gear
- (B) Washer

10) Install rear internal gear.

- (A) Rear internal gear
- (B) Low clutch drum

11) Install thrust needle bearing in the correct direction.

- (A) Thrust needle bearing
- (B) Low clutch drum
- (C) Rear planetary carrier side
- (D) Low clutch drum side

12) Install the washer by aligning protrusion of washer and hole of rear planetary carrier.

- (A) Washer
- (B) Rear planetary carrier

# AT Main Case

## AUTOMATIC TRANSMISSION

13) Install rear planetary carrier to low clutch drum.

(A) Rear planetary carrier

(B) Low clutch drum

14) Install thrust needle bearing in the correct direction.

(A) Rear sun gear side

(B) Low clutch drum side

15) Install the rear sun gear in proper direction.

(A) Rear sun gear

(B) Rear planetary carrier

16) Install the thrust needle bearing in proper direction.

(A) Thrust needle bearing

(B) Front planetary carrier

(C) Rear sun gear side

(D) Front planetary carrier side

17) Install front planetary carrier to low clutch drum.

(A) Front planetary carrier

(B) Low clutch drum

18) Install snap ring to low clutch drum.

(A) Snap ring

(B) Front planetary carrier

19) Install the needle bearing, and secure with the snap ring.

- (A) Needle bearing
- (B) Snap ring

20) Install the one-way clutch, and secure with the snap ring.

21) Set the inner race. Make sure that the clutch is locked in the clockwise direction and rotates in the counterclockwise direction.

- (A) Locked
- (B) Rotates

### 3. 2-4 BRAKE

1) Apply ATF to new D-ring, and install it to 2-4 brake piston.

2) Install 2-4 brake piston to 2-4 brake piston retainer.

- (A) 2-4 brake piston
- (B) 2-4 brake piston retainer

### 4. ONE-WAY CLUTCH INNER RACE

1) Using a press and ST, install the needle bearing to the inner race.

ST 398497701 INSTALLER

2) Apply vaseline to the groove of the inner race and to the seal ring.

3) Install two seal rings to one-way clutch inner race.

- (A) One way clutch inner race
- (B) Seal rings

### 5. ONE-WAY CLUTCH OUTER RACE

1) Install the needle bearing, and secure with the snap ring.

- (A) Needle bearing
- (B) Snap ring

2) Install the one-way clutch, one-way clutch inner race and plate, and secure with the snap ring.

3) Set the inner race. Make sure that the clutch is locked in the clockwise direction and rotates in the counterclockwise direction.

- (A) Locked
- (B) Rotates

## E: INSPECTION

### 1. HIGH CLUTCH AND REVERSE CLUTCH

Inspect the following items:

- Drive plate facing for wear and damage
- Discoloration of driven plate (Burnt color)
- Snap ring for wear, return spring for setting and breakage, and snap ring retainer for deformation
- Lip seal and D-ring for damage
- Piston and drum check ball for operation
- Adjust total end play. <Ref. to 4AT-95, ADJUSTMENT, Oil Pump Housing.>

### 2. PLANETARY GEAR AND LOW CLUTCH

Inspect the following items:

- Drive plate facing for wear and damage
- Discoloration of driven plate (Burnt color)
- Snap ring for wear, return spring for breakage or setting, and spring retainer for deformation
- Lip seal and D-ring for damage
- Piston check ball for operation
- Measure the total end play and adjust to within specifications. <Ref. to 4AT-95, ADJUSTMENT, Oil Pump Housing.>

### 3. 2-4 BRAKE

Inspect the following items:

- Drive plate facing for wear and damage
- Discoloration of driven plate (Burnt color)
- Snap ring for wear and spring retainer for deformation
- Lip seal and D-ring for damage
- Measure the total end play and adjust to within specifications. <Ref. to 4AT-95, ADJUSTMENT, Oil Pump Housing.>

### 4. ONE-WAY CLUTCH

- Make sure the snap ring is not worn and the seal rings are not damaged.
- Measure the total end play and adjust to within specifications. <Ref. to 4AT-95, ADJUSTMENT, Oil Pump Housing.>

### 5. LOW & REVERSE BRAKE

Check for the following:

- Drive plate facing for wear or damage
- Discoloration of driven plate (Burnt color)
- Snap ring for wear and spring retainer for deformation

## 39. Transmission Control Device

### A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to 4AT-38, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to 4AT-69, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.
- 4) Lift-up lever behind the transmission harness connector and disconnect it from stay.
- 5) Disconnect the air breather hoses. <Ref. to 4AT-67, REMOVAL, Air Breather Hose.>
- 6) Disconnect inhibitor switch connector from stay.
- 7) Wrap vinyl tape around the nipple attached to the air breather hose.
- 8) Remove pitching stopper bracket.
- 9) Remove the inhibitor switch.

- 10) Remove control valve body assembly. <Ref. to 4AT-59, REMOVAL, Control Valve Body.>
- 11) Pull off the straight pin of manual plate.

- 12) Remove bolt securing select lever, then remove select lever, manual plate and parking rod.

### NOTE:

Be careful not to damage the lips of the press-fitted oil seal in the case.

- (A) Bolt
- (B) Range select lever
- (C) Manual plate
- (D) Parking rod

- 13) Remove the detent spring.

### B: INSTALLATION

- 1) Install detent spring to transmission case.

#### **Tightening torque:**

**6 N·m (0.6 kgf-m, 4.3 ft-lb)**

- 2) Insert range select lever, and tighten bolt.

# Transmission Control Device

## AUTOMATIC TRANSMISSION

### Tightening torque:

**6 N·m (0.6 kgf-m, 4.3 ft-lb)**

3) Install the manual plate and parking rod.

- (A) Bolt
- (B) Range select lever
- (C) Manual plate
- (D) Parking rod

4) Insert spring pin to manual plate.

5) Install control valve assembly and oil pan. <Ref. to 4AT-59, INSTALLATION, Control Valve Body.>

6) Turn over the transmission case to its original position.

7) Install pitching stopper bracket.

### Tightening torque:

**41 N·m (4.2 kgf-m, 30.2 ft-lb)**

8) Install inhibitor switch and adjust the inhibitor switch. <Ref. to 4AT-48, Inhibitor Switch.>

9) Insert inhibitor switch and transmission connector into stay.

- (A) Transmission harness
- (B) Inhibitor switch harness

10) Install air breather hose. <Ref. to 4AT-67, INSTALLATION, Air Breather Hose.>

11) Insert the input shaft while rotating it lightly by hand, and then check the protrusion amount.

### Normal protrusion amount A:

**50 — 55 mm (1.97 — 2.17 in)**

12) Install the torque converter clutch assembly. <Ref. to 4AT-69, INSTALLATION, Torque Converter Clutch Assembly.>

13) Install the transmission assembly to the vehicle. <Ref. to 4AT-40, INSTALLATION, Automatic Transmission Assembly.>

## C: INSPECTION

Make sure the manual lever and detent spring are not worn or otherwise damaged.

# General Description

## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### 3. General Description

#### A: CAUTION

- **Supplemental Restraint System “Airbag”**

The airbag system wiring harness is routed near the TCM.

#### CAUTION:

- **Airbag system connectors are colored yellow. Do not use an electrical test equipment on these circuit.**
- **Be careful not to damage the airbag system wiring harness when performing diagnostics and servicing the TCM.**

- **Measurement**

When measuring the voltage and resistance of ECM, TCM or each sensor, use a tapered pin with diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Do not insert the pin more than 0.65 mm (0.026 in).

#### B: INSPECTION

##### 1. BATTERY

Measure the battery voltage and specific gravity of electrolyte.

**Standard voltage: 12 V or more**

**Specific gravity: Above 1.260**

##### 2. TRANSMISSION GROUND

Make sure that the ground terminal bolt is tightened securely.

- **Chassis side**

**Tightening torque:**

**13 N·m (1.3 kgf·m, 9.4 ft·lb)**

##### 3. ATF LEVEL

Make sure that ATF level is within the specification. <Ref. to 4AT-30, INSPECTION, Automatic Transmission Fluid.>

- (A) Level gauge
- (B) “HOT” side
- (C) Upper level
- (D) Lower level
- (E) “COLD” side

##### 4. FRONT DIFFERENTIAL OIL LEVEL

Make sure that front differential oil level is within the specification. <Ref. to 4AT-32, INSPECTION, Differential Gear Oil.>

- (A) Upper level
- (B) Lower level

##### 5. OPERATION OF SELECT LEVER

Make sure there is no abnormal noise, dragging or contact pattern in each select lever range.

# General Description

## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

---

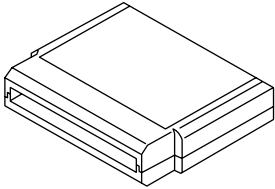

**WARNING:**

**Stop the engine while checking operation of select lever.**

### C: PREPARATION TOOL

#### 1. SPECIAL TOOL

# Subaru Select Monitor

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

## 6. Subaru Select Monitor

### A: OPERATION

#### 1. READ DIAGNOSTIC TROUBLE CODE

1) Prepare the Subaru Select Monitor kit.

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor.  
<Ref. to 4AT(D)(diag)-6, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector located in the lower portion of instrument panel (on driver's side).

(2) Connect the diagnosis cable to data link connector.

#### NOTE:

Do not connect scan tools except for Subaru Select Monitor.

5) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor power switch to ON.

(A) POWER switch

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

7) On the «System Selection Menu» display screen, select the {Transmission Control System} and press the [YES] key.

8) Press the [YES] key after the information of transmission type is displayed.

9) On the «Transmission Diagnosis» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.

#### NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

- For details concerning the DTC, refer to the DTC LIST. <Ref. to 4AT(D)(diag)-30, List of Diagnostic Trouble Code (DTC).>

#### 2. READ CURRENT DATA

1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

2) On the «System Selection Menu» display screen, select the {Transmission Control System} and press the [YES] key.

3) Press the [YES] key after the information of transmission type is displayed.

4) On the «Transmission Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.

5) On the «Transmission Diagnosis» display screen, select the {Data Display} and press the [YES] key.

# Subaru Select Monitor

## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

6) Using the scroll key, move the display screen up or down until desired data is shown.

- A list of the support data is shown in the following table.

| Contents                                     | Display                  | Unit of measure |
|--|--------------------------|-----------------|
| Battery voltage                              | Battery Voltage          | V               |
| Rear vehicle speed sensor signal             | Rear Wheel Speed         | km/h or MPH     |
| Front vehicle speed sensor signal            | Front Wheel Speed        | km/h or MPH     |
| Engine speed signal                          | Engine Speed             | rpm             |
| ATF temperature signal                       | ATF Temp.                | °C or °F        |
| Gear position                                | Gear Position            | —               |
| Line pressure control duty ratio             | Line Pressure Duty Ratio | %               |
| Lock up clutch control duty ratio            | Lock Up Duty Ratio       | %               |
| Transfer clutch control duty ratio           | Transfer Duty Ratio      | %               |
| Torque converter turbine speed signal        | Turbine Revolution Speed | rpm             |
| 2-4 brake timing pressure control duty ratio | Brake Clutch Duty Ratio  | %               |
| Low clutch duty ratio                        | L/C Duty                 | %               |
| High clutch duty ratio                       | H/C Duty                 | %               |
| Low & reverse brake duty ratio               | L&R/B Duty               | %               |
| Stop light switch signal                     | Stop Light Switch        | ON or OFF       |
| Parking range signal                         | P Range Signal           | ON or OFF       |
| Neutral range signal                         | N Range Signal           | ON or OFF       |
| Reverse range signal                         | R Range Signal           | ON or OFF       |
| Drive range signal                           | D Range Signal           | ON or OFF       |
| 3rd range signal                             | 3rd Range Signal         | ON or OFF       |
| 2nd range signal                             | 2nd Range Signal         | ON or OFF       |
| 1st range signal                             | 1st Range Signal         | ON or OFF       |
| AT diagnosis indicator lamp                  | Diagnosis Lamp           | ON or OFF       |
| Shift lock solenoid signal                   | Shift Lock solenoid      | ON or OFF       |
| FWD switch signal                            | FWD SW                   | ON or OFF       |
| Cruise control On signal                     | Cruise Control Signal    | ON or OFF       |
| AT OIL TEMP warning light                    | AT OIL TEMP light        | ON or OFF       |

### NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

### 3. CLEAR MEMORY MODE

1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.

2) On the «System Selection Menu» display screen, select the {Transmission Control System} and press the [YES] key.

3) Press the [YES] key after the information of transmission type is displayed.

4) On the «Transmission Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.

5) When the “Done” is shown on display screen, turn the Subaru Select Monitor power switch and ignition switch to OFF.

### NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

- When {Clear Memory 2} is selected and executed, DTC and learned control memory is cleared. If Clear Memory 2 is performed, execute the learning control. <Ref. to 4AT(D)(diag)-15, FACILITATION OF LEARNING CONTROL, OPERATION, Subaru Select Monitor.>

### 4. FACILITATION OF LEARNING CONTROL

#### NOTE:

When the following services have been performed or when the shifting shock is occurred during the total check with vehicle driving, perform the learning with following procedures.

- Replacement of TCM
  - Replacement of transmission assembly
  - Replacement of each clutch
  - Replacement of control valve body
  - When memory clear 2 is performed
- 1) Shift the select lever to “P” range, and apply parking brake.
  - 2) Lift-up the vehicle.
  - 3) Connect the Subaru Select Monitor to data link connector, and then turn the ignition switch to ON.
  - 4) Perform the {Clear Memory 2} using Subaru Select Monitor. <Ref. to 4AT(D)(diag)-14, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>
  - 5) Using Subaru Select Monitor, check that the DTC is not output. <Ref. to 4AT(D)(diag)-13, READ DIAGNOSTIC TROUBLE CODE, OPERATION, Subaru Select Monitor.>
  - 6) Warm-up the engine until the ATF temperature which is displayed on the Subaru Select Monitor is within 60 — 90°C (140 — 194°F). <Ref. to 4AT(D)(diag)-13, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>
  - 7) Shift the select lever to “R” range.
  - 8) Turn all switches including headlight, air conditioner, seat heater, rear defogger and etc. to OFF.
  - 9) Turn the ignition switch to OFF.
  - 10) Depress the brake pedal fully until the facilitation of learning control is completed when the “Communication Failed!” is displayed on Subaru Select Monitor.
  - 11) Turn the ignition switch to ON.
  - 12) Read the current data to check that the Subaru Select Monitor is returned to normal operation. <Ref. to 4AT(D)(diag)-13, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>
  - 13) Shift the select lever to “P” range, and then wait for more than 3 seconds.
  - 14) Shift the select lever to “R” range, and then wait for more than 3 seconds.
  - 15) Shift the select lever to “N” range, and then wait for more than 3 seconds.
  - 16) Shift the select lever to “D” range, and then wait for more than 3 seconds.
  - 17) Shift the select lever to “N” range, and then wait for more than 3 seconds.
  - 18) Slowly depress the accelerator pedal fully.
  - 19) Slowly release the accelerator pedal fully.

20) Start the engine, and idle it.

21) Shift the select lever to “D” range.

22) Start the facilitation of learning control. At this time, the AT OIL TEMP warning light in combination meter blinks at 2 Hz. When the AT OIL TEMP warning light does not blink, turn the ignition switch to OFF and repeat the procedures from step 4). When the AT OIL TEMP warning light which blinking at 2 Hz changes to blink at 0.5 Hz, facilitation of learning control is completed.

#### NOTE:

When blinking of AT OIL TEMP warning light changes from 2 Hz to 4 Hz during facilitation of learning control, repeat the procedure from step 4).

23) Shift the select lever to “N” range, and then turn the ignition switch to OFF.

24) Shift the select lever to the “P” range, and then complete the facilitation of learning control.

## **Read Diagnostic Trouble Code (DTC)**

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

---

### **7. Read Diagnostic Trouble Code (DTC)**

#### **A: OPERATION**

Refer to Subaru Select Monitor for information about how to obtain and understand DTC. <Ref. to 4AT(D)(diag)-13, OPERATION, Subaru Select Monitor.>

#### **NOTE:**

DTC can not be read through AT OIL TEMP warning light.

## 8. Inspection Mode

### A: OPERATION

**WARNING:**

**Observe the road traffic law.**

Move the select lever to “D” range, and then drive the vehicle at 60 km/h (37 MPH) for at least 10 seconds.

## Clear Memory Mode

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

---

### 9. Clear Memory Mode

#### A: OPERATION

##### 1. WITH SUBARU SELECT MONITOR

Refer to Subaru Select Monitor for information about how to clear DTC.

<Ref. to 4AT(D)(diag)-14, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>

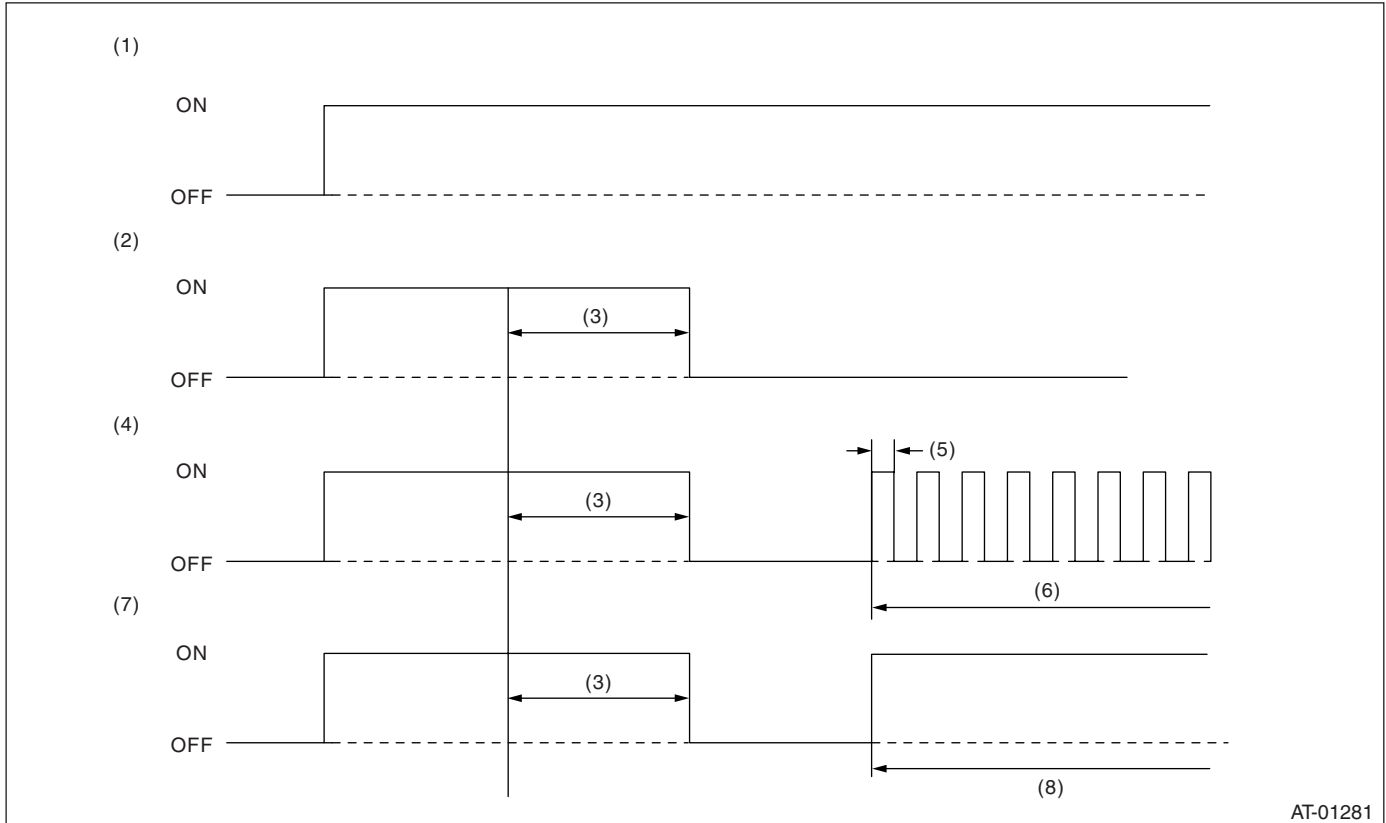

# AT OIL TEMP Warning Light Display

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

## 10. AT OIL TEMP Warning Light Display

### A: OPERATION

When any on-board diagnostics item is malfunctioning, the display on AT OIL TEMP warning light blinks from the time malfunction is detected after starting the engine until ignition switch is turned to OFF. The malfunctioning part or unit can be determined by a DTC during on-board diagnostics operation. Problems which occurred previously can also be identified through the memory function. If the POWER indicator does not show a problem (although a problem is occurring), the problem can be determined by checking the performance characteristics of each sensor using Subaru Select Monitor. The indicator signal is as shown in the figure.

AT-01281

(1) Ignition switch (engine OFF)

(4) Abnormal (Trouble occurs)

(7) Normal (ATF temperature is high)

(2) Normal

(5) 0.25 secs

(8) ATF temperature is high

(3) 2 secs

(6) Blink

Execute the inspection if AT OIL TEMP warning light does not operate normally. <Ref. to 4AT(D)(diag)-20, INSPECTION, AT OIL TEMP Warning Light Display.>

# AT OIL TEMP Warning Light Display

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

## B: INSPECTION

### DIAGNOSIS:

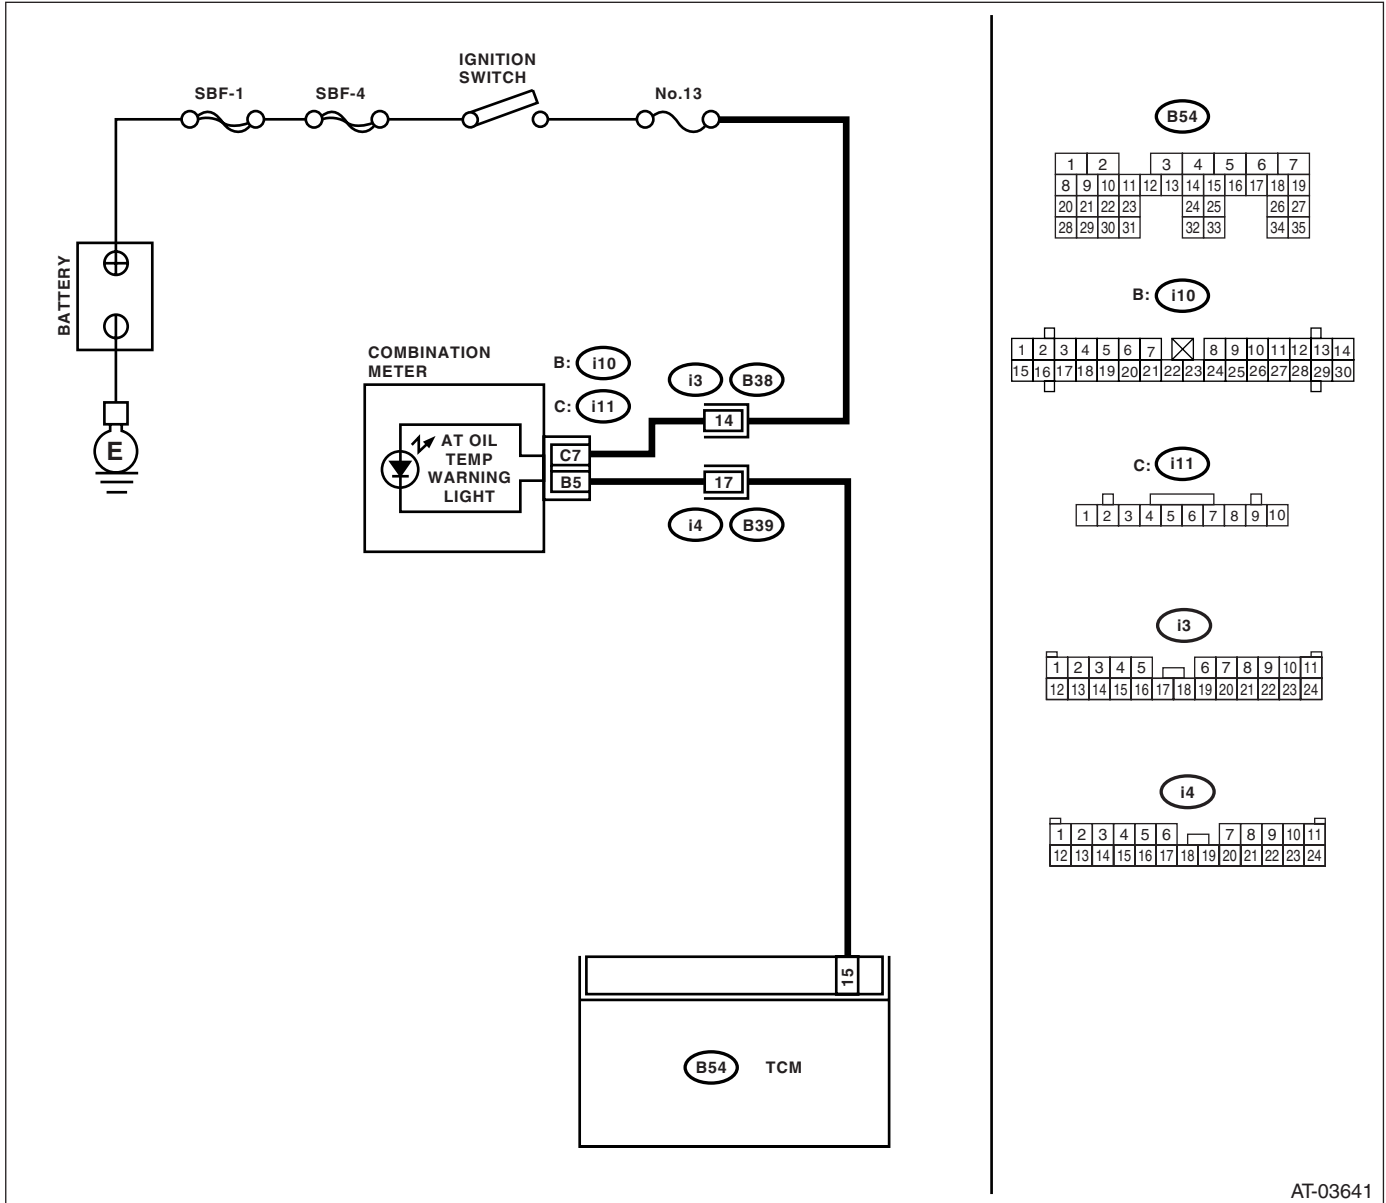

The AT OIL TEMP warning light circuit is open or shorted.

### TROUBLE SYMPTOM:

- When the ignition switch is turned to ON (engine OFF), AT OIL TEMP warning light does not illuminate.

### WIRING DIAGRAM:

|---|---|---|---|
| <b>12 CHECK IGNITION POWER SUPPLY CIRCUIT.</b><br>1) Turn the ignition switch to ON (engine OFF).<br>2) Measure the ignition power supply voltage between TCM connector and chassis ground.<br><i>Connector &amp; terminal</i><br>(B54) No. 25 (+) — Chassis ground (-):<br>(B54) No. 26 (+) — Chassis ground (-):<br>(B54) No. 27 (+) — Chassis ground (-):  | Is the voltage 10 — 13 V?   | Go to step 14.  | Go to step 13.  |
| <b>13 CHECK FUSE (No. 11).</b><br>Remove the fuse (No. 11).   | Is the fuse (No. 11) blown out?   | Replace the fuse (No. 11). If replaced fuse (No. 11) has blown out easily, repair short circuit in harness between fuse (No. 11) and TCM. | Repair the open circuit in harness between fuse (No. 11) and TCM, or fuse (No. 11) and battery, and poor contact in coupling connector. |
| <b>14 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from TCM and transmission.<br>3) Measure the resistance of harness between TCM and transmission connector.<br><i>Connector &amp; terminal</i><br>(B54) No. 22 — (B11) No. 19:<br>(B54) No. 23 — (B11) No. 19:<br>(B54) No. 20 — (B11) No. 20:<br>(B54) No. 21 — (B11) No. 20: | Is the resistance less than 1 $\Omega$ ?  | Go to step 15.  | Repair the open circuit in harness between TCM and transmission harness connector, and poor contact in connector.                       |
| <b>15 CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND TRANSMISSION GROUND.</b><br>Measure the resistance of harness between transmission and transmission ground.<br><i>Connector &amp; terminal</i><br>(T4) No. 19 — Transmission ground:<br>(T4) No. 20 — Transmission ground:   | Is the resistance less than 1 $\Omega$ ?  | Go to step 16.  | Repair the open circuit in harness between transmission and transmission ground.  |
| <b>16 CHECK POOR CONTACT IN CONNECTORS.</b>   | Is there poor contact in TCM power supply, ground line and data link connector? | Repair the connector.   | Replace the TCM. <Ref. to 4AT-64, Transmission Control Module (TCM).>   |

## List of Diagnostic Trouble Code (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### 12. List of Diagnostic Trouble Code (DTC)

#### A: LIST

| DTC   | Item   | Diagnosis content   | Reference   |
|-------|--|---|---|
| P0705 | Transmission Range Sensor Circuit (PRNDL Input)          | Inhibitor switch malfunction, open or short circuit                                       | <Ref. to 4AT(D)(diag)-32, DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>          |
| P0712 | Transmission Fluid Temperature Sensor Circuit Low Input  | ATF temperature sensor malfunction, open input signal circuit                             | <Ref. to 4AT(D)(diag)-42, DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| P0713 | Transmission Fluid Temperature Sensor Circuit High Input | ATF temperature sensor malfunction, open input signal circuit                             | <Ref. to 4AT(D)(diag)-45, DTC P0713 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT HIGH INPUT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P0715 | Input/Turbine Speed Sensor Circuit                       | Torque converter turbine speed sensor malfunction, open or short input signal circuit     | <Ref. to 4AT(D)(diag)-48, DTC P0715 INPUT/TURBINE SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                       |
| P0719 | Torque Converter/Brake Switch "B" Circuit Low            | Brake switch malfunction, open input signal circuit                                       | <Ref. to 4AT(D)(diag)-50, DTC P0719 TORQUE CONVERTER/BRAKE SWITCH "B" CIRCUIT LOW, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>            |
| P0720 | AT Vehicle Speed Sensor Circuit                          | Front vehicle speed sensor malfunction, open or short input signal circuit                | <Ref. to 4AT(D)(diag)-52, DTC P0720 OUTPUT SPEED SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                              |
| P0724 | Torque Converter/Brake Switch "B" Circuit High           | Brake switch malfunction, short input signal circuit                                      | <Ref. to 4AT(D)(diag)-56, DTC P0724 TORQUE CONVERTER/BRAKE SWITCH "B" CIRCUIT HIGH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>           |
| P0725 | Engine Speed Input Circuit                               | Open or short engine speed output signal circuit  | <Ref. to 4AT(D)(diag)-58, DTC P0725 ENGINE SPEED INPUT CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                               |
| P0731 | Gear 1 Incorrect Ratio                                   | Vehicle speed sensor, torque converter turbine speed sensor, or control valve malfunction | <Ref. to 4AT(D)(diag)-59, DTC P0731 GEAR 1 INCORRECT RATIO, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                   |
| P0732 | Gear 2 Incorrect Ratio                                   | Vehicle speed sensor, torque converter turbine speed sensor, or control valve malfunction | <Ref. to 4AT(D)(diag)-59, DTC P0732 GEAR 2 INCORRECT RATIO, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                   |
| P0733 | Gear 3 Incorrect Ratio                                   | Vehicle speed sensor, torque converter turbine speed sensor, or control valve malfunction | <Ref. to 4AT(D)(diag)-59, DTC P0733 GEAR 3 INCORRECT RATIO, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                   |
| P0734 | Gear 4 Incorrect Ratio                                   | Vehicle speed sensor, torque converter turbine speed sensor, or control valve malfunction | <Ref. to 4AT(D)(diag)-59, DTC P0734 GEAR 4 INCORRECT RATIO, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                   |

## List of Diagnostic Trouble Code (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

| DTC   | Item   | Diagnosis content   | Reference   |
|-------|--|---|---|
| P0736 | Reverse Incorrect Ratio                                  | Vehicle speed sensor, torque converter turbine speed sensor, or control valve malfunction | <Ref. to 4AT(D)(diag)-60, DTC P0736 REVERSE INCORRECT RATIO, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                  |
| P0741 | Torque Converter Clutch Circuit Performance or Stuck Off | Lock up clutch malfunction or locking of valve  | <Ref. to 4AT(D)(diag)-61, DTC P0741 TORQUE CONVERTER CLUTCH CIRCUIT PERFORMANCE OR STUCK OFF, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P0743 | Torque Converter Clutch Circuit Electrical               | Lock up solenoid malfunction, open or short output signal circuit                         | <Ref. to 4AT(D)(diag)-62, DTC P0743 TORQUE CONVERTER CLUTCH CIRCUIT ELECTRICAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>               |
| P0748 | Pressure Control Solenoid "A" Electrical                 | Line pressure linear solenoid malfunction, open or short output signal circuit            | <Ref. to 4AT(D)(diag)-65, DTC P0748 PRESSURE CONTROL SOLENOID "A" ELECTRICAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                 |
| P0753 | Shift Solenoid "A" Electrical                            | Low clutch duty solenoid malfunction, open or short output signal circuit                 | <Ref. to 4AT(D)(diag)-67, DTC P0753 SHIFT SOLENOID "A" ELECTRICAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |
| P0758 | Shift Solenoid "B" Electrical                            | 2-4 brake duty solenoid malfunction, open or short output signal circuit                  | <Ref. to 4AT(D)(diag)-70, DTC P0758 SHIFT SOLENOID "B" ELECTRICAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |
| P0763 | Shift Solenoid "C" Electrical                            | High clutch duty solenoid malfunction, open or short output signal circuit                | <Ref. to 4AT(D)(diag)-73, DTC P0763 SHIFT SOLENOID "C" ELECTRICAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |
| P0768 | Shift Solenoid "D" Electrical                            | Low & reverse duty solenoid malfunction, open or short output signal circuit              | <Ref. to 4AT(D)(diag)-76, DTC P0768 SHIFT SOLENOID "D" ELECTRICAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |
| P0801 | Reverse Inhibitor Control Circuit                        | Shift lock solenoid malfunction, open or short output signal circuit                      | <Ref. to 4AT(D)(diag)-79, DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                          |
| P1706 | AT Vehicle Speed Sensor Circuit Malfunction (rear wheel) | Rear vehicle speed sensor malfunction, open or short input signal circuit                 | <Ref. to 4AT(D)(diag)-81, DTC P1706 AT VEHICLE SPEED SENSOR CIRCUIT MALFUNCTION (REAR WHEEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P1707 | AT AWD Solenoid Valve Circuit Malfunction                | Transfer duty solenoid malfunction, open or short output signal circuit                   | <Ref. to 4AT(D)(diag)-84, DTC P1707 AT AWD SOLENOID VALVE CIRCUIT MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                |
| P1718 | CAN Communication Circuit                                | Open or short AT communication signal circuit   | <Ref. to 4AT(D)(diag)-86, DTC P1718 CAN COMMUNICATION CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                |

## **Diagnostic Procedure with Diagnostic Trouble Code (DTC)**

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

---

### **13. Diagnostic Procedure with Diagnostic Trouble Code (DTC)**

#### **A: DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT)**

##### **DIAGNOSIS:**

- There is malfunction in inhibitor switch.
- The input signal circuit of inhibitor switch is open or shorted.

##### **TROUBLE SYMPTOM:**

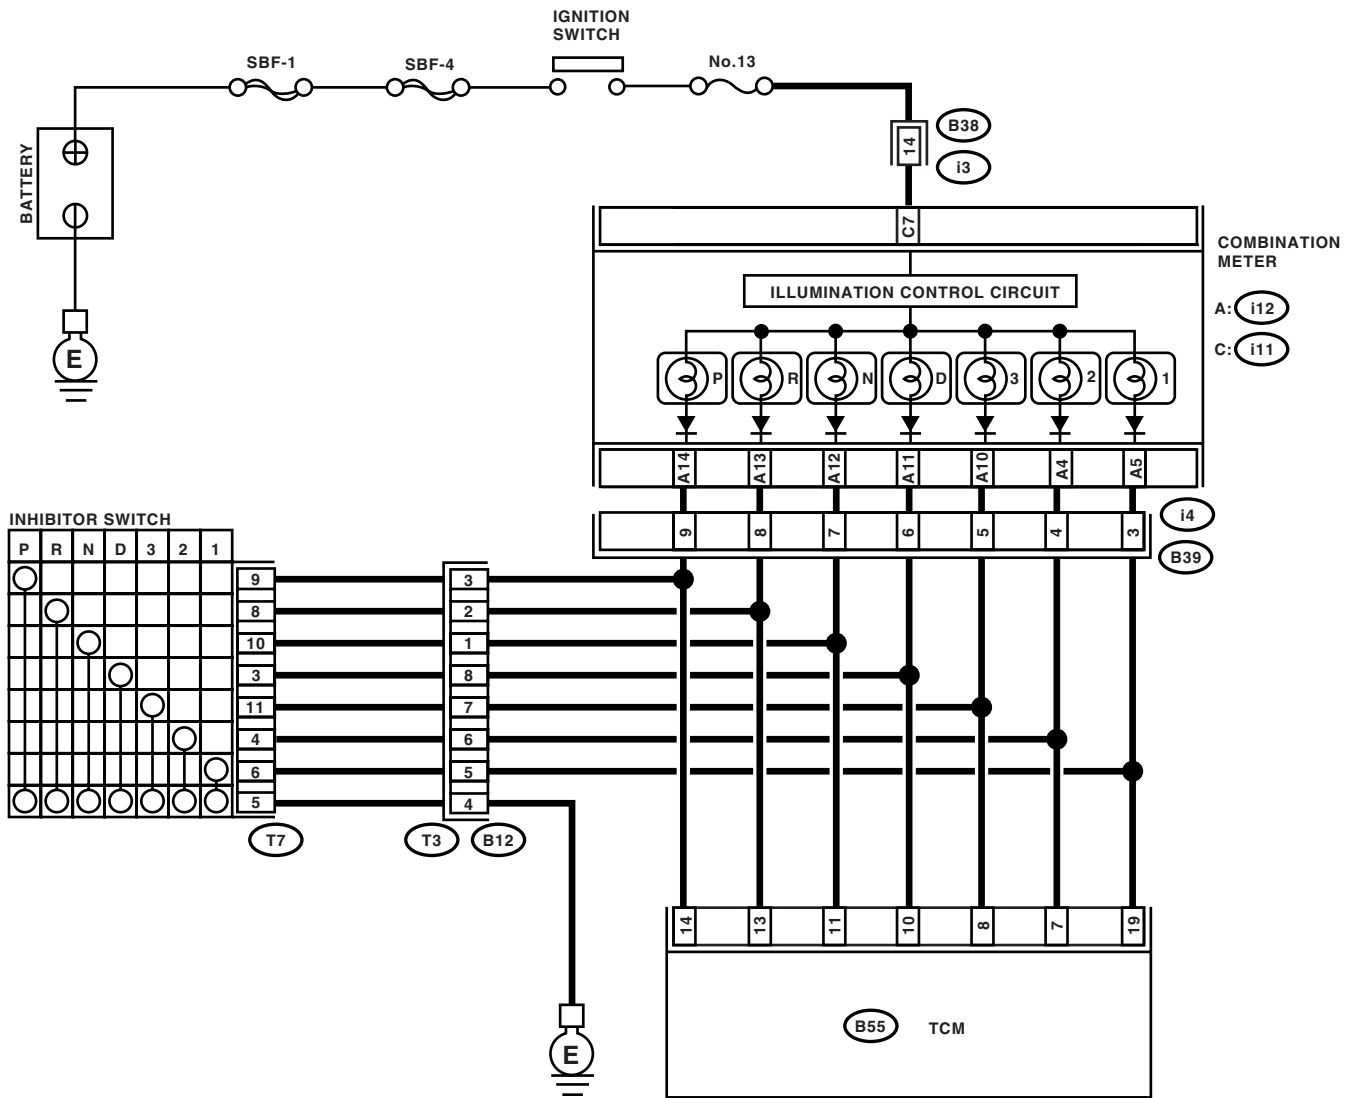

- Shift characteristics are erroneous.
- Engine brake is not effected when select lever is in “3” range.
- Engine brake is not effected when select lever is in “2” range.
- Engine brake is not effected when select lever is in “1” range.

| Step | Check                          | Yes           | No             |
|------|--------------------------------|---------------|----------------|
| 1    | <b>CHECK "P" RANGE SWITCH.</b> | Go to step 2. | Go to step 22. |
| 2    | <b>CHECK INDICATOR LIGHT.</b>  | Go to step 3. | Go to step 26. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

| Step | Check   | Yes  | No             |   |
|------|---|--|----------------|---|
| 3    | <b>CHECK "P" RANGE SWITCH.</b>  | When the "R" range is selected, does "P" range LED light up? | Go to step 28. | Go to step 4.   |
| 4    | <b>CHECK "R" RANGE SWITCH.</b>  | When the "R" range is selected, does LED light up?           | Go to step 5.  | Go to step 29.  |
| 5    | <b>CHECK INDICATOR LIGHT.</b>   | Does the combination meter "R" range indicator illuminate?   | Go to step 6.  | Go to step 32.  |
| 6    | <b>CHECK "R" RANGE SWITCH.</b>  | When the "N" range is selected, does "R" range LED light up? | Go to step 34. | Go to step 7.   |
| 7    | <b>CHECK "N" RANGE SWITCH.</b>  | When the "N" range is selected, does LED light up?           | Go to step 8.  | Go to step 35.  |
| 8    | <b>CHECK INDICATOR LIGHT.</b>   | Does the combination meter "N" range indicator illuminate?   | Go to step 9.  | Go to step 38.  |
| 9    | <b>CHECK "N" RANGE SWITCH.</b>  | When the "D" range is selected, does "N" range LED light up? | Go to step 40. | Go to step 10.  |
| 10   | <b>CHECK "D" RANGE SWITCH.</b>  | When the "D" range is selected, does LED light up?           | Go to step 11. | Go to step 41.  |
| 11   | <b>CHECK INDICATOR LIGHT.</b>   | Does the combination meter "D" range indicator illuminate?   | Go to step 12. | Go to step 44.  |
| 12   | <b>CHECK "D" RANGE SWITCH.</b>  | When the "3" range is selected, does "D" range LED light up? | Go to step 46. | Go to step 13.  |
| 13   | <b>CHECK "3" RANGE SWITCH.</b>  | When the "3" range is selected, does LED light up?           | Go to step 14. | Go to step 47.  |
| 14   | <b>CHECK INDICATOR LIGHT.</b>   | Does the combination meter "3" range indicator illuminate?   | Go to step 15. | Go to step 50.  |
| 15   | <b>CHECK "3" RANGE SWITCH.</b>  | When the "2" range is selected, does "3" range LED light up? | Go to step 52. | Go to step 16.  |
| 16   | <b>CHECK "2" RANGE SWITCH.</b>  | When the "2" range is selected, does LED light up?           | Go to step 17. | Go to step 53.  |
| 17   | <b>CHECK INDICATOR LIGHT.</b>   | Does the combination meter "2" range indicator illuminate?   | Go to step 18. | Go to step 56.  |
| 18   | <b>CHECK "2" RANGE SWITCH.</b>  | When the "1" range is selected, does "2" range LED light up? | Go to step 58. | Go to step 19.  |
| 19   | <b>CHECK "1" RANGE SWITCH.</b>  | When the "1" range is selected, does LED light up?           | Go to step 20. | Go to step 59.  |
| 20   | <b>CHECK INDICATOR LIGHT.</b>   | Does the combination meter "1" range indicator illuminate?   | Go to step 21. | Go to step 62.  |
| 21   | <b>CHECK "1" RANGE SWITCH.</b>  | When the "2" range is selected, does "1" range LED light up? | Go to step 64. | Replace the TCM. <Ref. to 4AT-64, Transmission Control Module (TCM).>   |
| 22   | <b>CHECK HARNESS CONNECTOR BETWEEN INHIBITOR SWITCH AND CHASSIS GROUND.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from inhibitor switch.<br>3) Measure the resistance of harness between inhibitor switch and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(T7) No. 5 — Chassis ground:</b> | Is the resistance less than 1 Ω?                             | Go to step 23. | Repair the open circuit in harness between inhibitor switch connector and chassis ground, and poor contact in coupling connector. |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

| Step  | Check                                     | Yes            | No  |
|---|---|----------------|---|
| <b>23 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from TCM and inhibitor switch.<br>3) Measure the resistance of harness between TCM and inhibitor switch connector.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B55) No. 14 — (T7) No. 9:</b></i>                               | Is the resistance less than 1 $\Omega$ ?  | Go to step 24. | Repair the open circuit in harness between TCM and inhibitor switch connector, and poor contact in coupling connector.  |
| <b>24 CHECK INPUT SIGNAL FOR TCM.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the connector to TCM and inhibitor switch.<br>3) Turn the ignition switch to ON.<br>4) Move the select lever to "P" range.<br>5) Measure the voltage between TCM and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B55) No. 14 (+) — Chassis ground (-):</b></i> | Is the voltage less than 1 V?             | Go to step 25. | Go to step 65.  |
| <b>25 CHECK INPUT SIGNAL FOR TCM.</b><br>1) Move the select lever except for "P" range.<br>2) Measure the voltage between TCM and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B55) No. 14 (+) — Chassis ground (-):</b></i>   | Is the voltage more than 8 V?             | Go to step 65. | Replace the TCM. <Ref. to 4AT-64, Transmission Control Module (TCM).>   |
| <b>26 CHECK "P" RANGE INDICATOR LIGHT BULB.</b><br>1) Turn the ignition switch to OFF.<br>2) Remove the combination meter.  | Is the "P" range indicator light OK?      | Go to step 27. | Replace the combination meter. <Ref. to IDI-10, Combination Meter.>   |
| <b>27 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER.</b><br>1) Disconnect the connectors from TCM and combination meter.<br>2) Measure the resistance of harness between TCM and combination meter.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B55) No. 14 — (i12) No. 14:</b></i>   | Is the resistance less than 1 $\Omega$ ?  | Go to step 65. | Repair the open circuit in harness between TCM connector and combination meter, and poor contact in coupling connector. |
| <b>28 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from TCM, inhibitor switch and combination meter.<br>3) Measure the resistance of harness between TCM connector and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B55) No. 14 — Chassis ground:</b></i>          | Is the resistance more than 1 $M\Omega$ ? | Go to step 29. | Repair the ground short circuit in "P" range circuit.   |
| <b>29 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from TCM and inhibitor switch.<br>3) Measure the resistance of harness between TCM and inhibitor switch connector.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B55) No. 13 — (T7) No. 8:</b></i>                               | Is the resistance less than 1 $\Omega$ ?  | Go to step 30. | Repair the open circuit in harness between TCM and inhibitor switch connector, and poor contact in coupling connector.  |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

| Step  | Check                                      | Yes            | No   |
|---|--|----------------|--|
| <b>30 CHECK INPUT SIGNAL FOR TCM.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the connector to TCM and inhibitor switch.<br>3) Turn the ignition switch to ON.<br>4) Move the select lever to "R" range.<br>5) Measure the voltage between TCM and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B55) No. 13 (+) — Chassis ground (-):</b> | Is the voltage less than 1 V?              | Go to step 31. | Go to step 65.   |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

## B: DTC P0712 TRANSMISSION FLUID TEMPERATURE SENSOR CIRCUIT LOW INPUT

### DIAGNOSIS:

The input signal circuit of TCM to ATF temperature sensor is open or shorted.

### TROUBLE SYMPTOM:

Excessive shift shock.

### WIRING DIAGRAM:

AT-03517

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

| Step  | Check  | Yes   | No   |
|---|--|---|--|
| <b>1 CHECK HARNESS CONNECTOR BETWEEN TCM AND ATF TEMPERATURE SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from transmission and TCM.<br>3) Measure the resistance of harness between TCM and transmission connector.<br><i>Connector &amp; terminal</i><br><i>(B55) No. 23 — (B11) No. 11:</i>   | Is the resistance less than 1 $\Omega$ ?                           | Go to step 2.   | Repair the open circuit in harness between TCM and transmission connector. |
| <b>2 CHECK HARNESS CONNECTOR BETWEEN TCM AND ATF TEMPERATURE SENSOR.</b><br>Measure the resistance of harness between TCM and transmission connector.<br><i>Connector &amp; terminal</i><br><i>(B55) No. 12 — (B11) No. 15:</i>   | Is the resistance less than 1 $\Omega$ ?                           | Go to step 3.   | Repair the open circuit in harness between TCM and transmission connector. |
| <b>3 CHECK ATF TEMPERATURE SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the connectors to transmission and TCM.<br>3) Turn the ignition switch to ON and start engine.<br>4) Warm-up the transmission until ATF temperature reaches to 80°C (176°F).<br>NOTE:<br>If ambient temperature is below 0°C (32°F), drive the vehicle until ATF reaches its operating temperature.<br>5) Disconnect the connector from transmission.<br>6) Measure the resistance between transmission connector terminals.<br><i>Connector &amp; terminal</i><br><i>(T4) No. 11 — No. 15:</i> | Is the resistance 300 — 800 $\Omega$ ?                             | Go to step 4.   | Go to step 7.  |
| <b>4 CHECK ATF TEMPERATURE SENSOR.</b><br>Measure the resistance between transmission connector terminals.<br><i>Connector &amp; terminal</i><br><i>(T4) No. 11 — No. 15:</i>   | Does the resistance value increase when ATF temperature decreases? | Go to step 5.   | Go to step 7.  |
| <b>5 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.</b><br>1) Connect the connector to transmission.<br>2) Turn the ignition switch to ON (engine OFF).  | Does the ATF temperature gradually decrease?                       | Even if the AT OIL TEMP warning light blinks, the circuit has returned to a normal condition at this time. Temporary poor contact of the connector or harness may be the cause. Repair the harness or contact in ATF temperature sensor and transmission connector. | Go to step 6.  |
| <b>6 CHECK POOR CONTACT.</b>  | Is there poor contact in ATF temperature sensor circuit?           | Repair the poor contact.  | Replace the TCM. <Ref. to 4AT-64, Transmission Control Module (TCM).>      |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## AUTOMATIC TRANSMISSION (DIAGNOSTICS)

### M: DTC P0736 REVERSE INCORRECT RATIO

#### DIAGNOSIS:

Vehicle speed sensor malfunction and torque converter turbine speed sensor malfunction, etc. or control valve malfunction.

#### TROUBLE SYMPTOM:

- Shift point is too high or too low.
- Excessive shift shock.
- Tight cornering condition is occurred.
- Gear is not shifted to reverse.
- Gear position is held by fail safe function.

| Step  | Check   | Yes   | No   |
|---|---|---|--|
| <b>1 CHECK ACCELERATOR PEDAL POSITION SENSOR.</b><br>1) Connect the Subaru Select Monitor to data link connector.<br>2) Turn the ignition switch to ON.<br>3) Read the value of accelerator pedal position sensor using Subaru Select Monitor.  | Does the value of accelerator pedal position sensor change from 0% to 100% smoothly when throttle position sensor was operated from fully closing to fully opening? | Go to step 2.   | Check accelerator pedal position sensor circuit.         |
| <b>2 FRONT VEHICLE SPEED SENSOR.</b><br>1) Lift-up the vehicle.<br>2) Start the engine.<br>3) Move the select lever "D" range and slowly increase vehicle speed.<br><br>NOTE:<br>The speed difference between front and rear wheels may light ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. | Does the vehicle speed displayed by Subaru Select Monitor almost correspond with vehicle speed indicated by combination meter?                                      | Go to step 3.   | Check the front vehicle speed sensor circuit.            |
| <b>3 CHECK TORQUE CONVERTER TURBINE SPEED SENSOR.</b><br>1) Move the select lever to "P" or "N" range.<br>2) Idle the engine.   | Does the turbine speed sensor revolution displayed by Subaru Select Monitor almost correspond with engine revolution indicated by tachometer?                       | There are malfunctions in TCM, TCM connector poor contact, or transmission assembly mechanical malfunction. | Check the torque converter turbine speed sensor circuit. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

## N: DTC P0741 TORQUE CONVERTER CLUTCH CIRCUIT PERFORMANCE OR STUCK OFF

### DIAGNOSIS:

- Lock up clutch malfunction
- Locking of valve

### TROUBLE SYMPTOM:

Lock up is not operated.

### WIRING DIAGRAM:

| Step | Check   | Yes   | No  |
|------|---|---|---|
| 1    | <b>CHECK LOCK UP DUTY SOLENOID CIRCUIT.</b><br>Check according as DTC P0743 procedure.  | Is there malfunction?   | Repair or replace the lock up duty solenoid circuit.<br>Go to step 2.   |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

## P: DTC P0748 PRESSURE CONTROL SOLENOID “A” ELECTRICAL

### DIAGNOSIS:

The output signal circuit of line pressure linear solenoid is open or shorted.

### TROUBLE SYMPTOM:

Excessive shift shock.

### WIRING DIAGRAM:

AT-03522

| Step   | Check                                      | Yes           | No  |
|--|--|---------------|---|
| <b>1 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from transmission and TCM.<br>3) Measure the resistance of harness between TCM and transmission connector.<br><i>Connector &amp; terminal</i><br>(B55) No. 3 — (B11) No. 2:<br>(B55) No. 4 — (B11) No. 1: | Is the resistance less than 1 $\Omega$ ?   | Go to step 2. | Repair the open circuit in harness between TCM and transmission connector.  |
| <b>2 CHECK HARNESS CONNECTOR BETWEEN TCM AND CHASSIS GROUND.</b><br>Measure the resistance of harness between TCM connector and chassis ground.<br><i>Connector &amp; terminal</i><br>(B55) No. 3 — Chassis ground:<br>(B55) No. 4 — Chassis ground:   | Is the resistance more than 1 M $\Omega$ ? | Go to step 3. | Repair the short circuit in harness between TCM and transmission connector. |
| <b>3 CHECK LINE PRESSURE LINEAR SOLENOID.</b><br>Measure the resistance between transmission connector receptacle's terminals.<br><i>Connector &amp; terminal</i><br>(T4) No. 1 — No. 2:   | Is the resistance 4 — 8 $\Omega$ ?         | Go to step 4. | Go to step 5.   |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

| Step  | Check   | Yes  | No  |
|---|---|--|---|
| <b>4</b><br><b>CHECK POOR CONTACT.</b>  | Is there poor contact in line pressure linear solenoid circuit? | Repair the poor contact.   | Replace the TCM. <Ref. to 4AT-64, Transmission Control Module (TCM).>                                 |
| <b>5</b><br><b>CHECK LINE PRESSURE LINEAR SOLENOID (IN TRANSMISSION).</b><br>1) Remove the transmission connector from bracket.<br>2) Drain the ATF.<br><b>CAUTION:</b><br><b>Do not drain the ATF until it cools down.</b><br>3) Remove the oil pan, and disconnect connector from line pressure linear solenoid.<br>4) Measure the resistance between line pressure linear solenoid connector and transmission ground.<br><b>Connector &amp; terminal</b><br><b>(AT11) No. 2 — No. 4:</b> | Is the resistance 4 — 8 Ω?                                      | Go to step 6.  | Replace the control valve body. <Ref. to 4AT-59, Control Valve Body.>                                 |
| <b>6</b><br><b>CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND LINE PRESSURE LINEAR SOLENOID.</b><br>Measure the resistance of harness between line pressure linear solenoid and transmission connector.<br><b>Connector &amp; terminal</b><br><b>(T4) No. 2 — (AT11) No. 4:</b><br><b>(T4) No. 1 — (AT11) No. 2:</b>  | Is the resistance less than 1 Ω?                                | Go to step 7.  | Repair the open circuit in harness between line pressure linear solenoid and transmission connector.  |
| <b>7</b><br><b>CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND LINE PRESSURE LINEAR SOLENOID.</b><br>Measure the resistance of harness between transmission connector and transmission ground.<br><b>Connector &amp; terminal</b><br><b>(T4) No. 1 — Transmission ground:</b><br><b>(T4) No. 2 — Transmission ground:</b>  | Is the resistance more than 1 MΩ?                               | Even if the AT OIL TEMP warning light blinks, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in line pressure linear solenoid and transmission. | Repair the short circuit in harness between line pressure linear solenoid and transmission connector. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

## Q: DTC P0753 SHIFT SOLENOID "A" ELECTRICAL

### DIAGNOSIS:

The output signal circuit of low clutch duty solenoid is open or shorted.

### TROUBLE SYMPTOM:

Excessive shift shock.

### WIRING DIAGRAM:

AT-03523

| Step  | Check                                    | Yes           | No   |
|---|--|---------------|--|
| <b>1</b><br><b>CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector from TCM and transmission.<br>3) Measure the resistance of harness between TCM and transmission connector.<br><b>Connector &amp; terminal</b><br><b>(B54) No. 7 — (B11) No. 4:</b> | Is the resistance less than 1 $\Omega$ ? | Go to step 2. | Repair the open circuit in harness between TCM and transmission connector. |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

| Step  | Check  | Yes  | No  |
|---|--|--|---|
| <b>2 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION.</b><br>Measure the resistance of harness between TCM connector and chassis ground.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B54) No. 7 — Chassis ground:</b></i>  | Is the resistance more than 1 MΩ?                          | Go to step 3.  | Repair the short circuit in harness between TCM and transmission connector. |
| <b>3 CHECK LOW CLUTCH DUTY SOLENOID.</b><br>Measure the resistance between transmission connector terminals.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(T4) No. 4 — No. 20:</b></i>  | Is the resistance 2.0 — 6.0 Ω?                             | Go to step 4.  | Go to step 7.   |
| <b>4 CHECK OUTPUT SIGNAL FROM TCM USING SUBARU SELECT MONITOR.</b><br>1) Connect the connectors to TCM and transmission.<br>2) Connect the Subaru Select Monitor to data link connector.<br>3) Start the engine and turn Subaru Select Monitor power switch to ON.<br>4) Warm-up the transmission until ATF temperature is above 80°C (176°F).<br>NOTE:<br>If ambient temperature is below 0°C (32°F), drive the vehicle until ATF reaches its operating temperature.<br>5) Stop the engine and turn ignition switch to ON (engine OFF).<br>6) Shift the select lever to “P” or “N” range, and depress the accelerator pedal.<br>7) Read the data of low clutch duty solenoid using Subaru Select Monitor.<br>Low clutch duty solenoid is indicated in “%”. | Is the value 100%?   | Go to step 5.  | Go to step 6.   |
| <b>5 CHECK OUTPUT SIGNAL FROM TCM USING SUBARU SELECT MONITOR.</b><br>1) Turn the ignition switch to ON (engine OFF).<br>2) Move the select lever to “D” range.<br>3) Read the data of low clutch duty solenoid.  | Is the value 0%?   | Even if the AT OIL TEMP warning light blinks, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in transmission. | Go to step 6.   |
| <b>6 CHECK POOR CONTACT.</b>  | Is there poor contact in low clutch duty solenoid circuit? | Repair the poor contact.   | Replace the TCM. <Ref. to 4AT-64, Transmission Control Module (TCM).>       |

A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in TCM and transmission. | Go to step 6.  |
| <p><b>6</b></p> <p><b>CHECK POOR CONTACT.</b></p>  | Is there poor contact in low & reverse duty solenoid circuit? | Repair the poor contact.   | Replace the TCM. <Ref. to 4AT-64, Transmission Control Module (TCM).>                |
| <p><b>7</b></p> <p><b>CHECK LOW &amp; REVERSE BRAKE DUTY SOLENOID (IN TRANSMISSION).</b></p> <p>1) Remove the transmission connector from bracket.<br/>                     2) Drain the ATF.</p> <p><b>CAUTION:</b><br/> <b>Do not drain the ATF until it cools down.</b></p> <p>3) Remove the oil pan, and disconnect connector from low &amp; reverse duty solenoid.<br/>                     4) Measure the resistance between low &amp; reverse duty solenoid connector and transmission ground.</p> <p><b>Connector &amp; terminal</b><br/> <b>(AT12) No. 1 — Transmission ground:</b></p>   | Is the resistance 2.0 — 6.0 Ω?                                | Go to step 8.  | Replace the low & reverse brake duty solenoid. <Ref. to 4AT-59, Control Valve Body.> |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### AUTOMATIC TRANSMISSION (DIAGNOSTICS)

| Step   | Check                                     | Yes  | No  |
|--|---|--|---|
| <b>8</b><br><b>CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND LOW &amp; REVERSE DUTY SOLENOID.</b><br>Measure the resistance of harness between low & reverse duty solenoid and transmission connector.<br><i>Connector &amp; terminal</i><br><i>(T4) No. 6 — (AT12) No. 1:</i>      | Is the resistance less than 1 $\Omega$ ?  | Go to step 9.  | Repair the open circuit in harness between low & reverse brake duty solenoid and transmission connector.  |
| <b>9</b><br><b>CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND LOW &amp; REVERSE BRAKE DUTY SOLENOID.</b><br>Measure the resistance of harness between transmission connector and transmission ground.<br><i>Connector &amp; terminal</i><br><i>(T4) No. 6 — Transmission ground:</i> | Is the resistance more than 1 $M\Omega$ ? | Even if the AT OIL TEMP warning light blinks, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair the harness or connector in low & reverse brake duty solenoid and transmission. | Repair the short circuit in harness between low & reverse brake duty solenoid and transmission connector. |

**U: DTC P0801 REVERSE INHIBIT CONTROL CIRCUIT**

**DIAGNOSIS:**

Shift lock solenoid malfunction, open or short reverse inhibitor control circuit.

**TROUBLE SYMPTOM:**

- Gear is shifted from “N” range to “R” range during driving at 20 km/h (12 MPH) or more.
- Gear can not be shifted from “N” range to “R” range.

**WIRING DIAGRAM:**

AT-03527

# General Description

MANUAL TRANSMISSION AND DIFFERENTIAL

## 4. DRIVE PINION ASSEMBLY

Preload adjustment of thrust bearing

### Starting torque:

**0.3 — 0.8 N·m (0.03 — 0.08 kgf-m, 0.2 — 0.6 ft-lb)**

| Adjusting washer No. 1 |                   |
|------------------------|-------------------|
| Part No.               | Thickness mm (in) |
| 803025051              | 3.925 (0.1545)    |
| 803025052              | 3.950 (0.1555)    |
| 803025053              | 3.975 (0.1565)    |
| 803025054              | 4.000 (0.1575)    |
| 803025055              | 4.025 (0.1585)    |
| 803025056              | 4.050 (0.1594)    |
| 803025057              | 4.075 (0.1604)    |

| Adjusting washer No. 2 |                   |
|------------------------|-------------------|
| Part No.               | Thickness mm (in) |
| 803025059              | 3.850 (0.1516)    |
| 803025054              | 4.000 (0.1575)    |
| 803025058              | 4.150 (0.1634)    |

## 5. REVERSE IDLER GEAR

Adjustment of reverse idler gear position

### Reverse idler gear to transmission case (LH) wall clearance:

**6.0 — 7.5 mm (0.236 — 0.295 in)**

| Reverse shifter lever |      |                         |
|-----------------------|------|-------------------------|
| Part No.              | Mark | Remarks                 |
| 32820AA070            | 7    | Further from case wall  |
| 32820AA080            | 8    | Standard                |
| 32820AA090            | 9    | Closer to the case wall |

After installing a suitable reverse shifter lever, adjust the clearance using washers.

### Reverse idler gear to transmission case wall clearance:

**0 — 0.5 mm (0 — 0.020 in)**

| Washer (20.5 × 26 × t) |                   |           |                   |
|------------------------|-------------------|-----------|-------------------|
| Part No.               | Thickness mm (in) | Part No.  | Thickness mm (in) |
| 803020151              | 0.4 (0.016)       | 803020154 | 1.9 (0.075)       |
| 803020152              | 1.1 (0.043)       | 803020155 | 2.3 (0.091)       |
| 803020153              | 1.5 (0.059)       | —         | —                 |

## 6. SHIFTER FORK AND ROD

Select the suitable shifter forks so that both coupling sleeve and reverse driven gear are positioned in the center of their synchromesh mechanisms.

### Rod end clearance:

**A: 1st-2nd — 3rd-4th**

**0.4 — 1.4 mm (0.016 — 0.055 in)**

**B: 3rd-4th — 5th**

**0.5 — 1.3 mm (0.020 — 0.051 in)**

| 1st-2nd shifter fork |         |   |
|----------------------|---------|---|
| Part No.             | Mark    | Remarks                                   |
| 32804AA060           | 1       | Approach to 1st gear by 0.2 mm (0.008 in) |
| 32804AA070           | No mark | Standard                                  |
| 32804AA080           | 3       | Approach to 2nd gear by 0.2 mm (0.008 in) |

| 3rd-4th shifter fork |         |   |
|----------------------|---------|---|
| Part No.             | Mark    | Remarks                                   |
| 32810AA061           | 1       | Approach to 4th gear by 0.2 mm (0.008 in) |
| 32810AA071           | No mark | Standard                                  |
| 32810AA101           | 3       | Approach to 3rd gear by 0.2 mm (0.008 in) |

| 5th shifter fork (Non-turbo model) |         |   |
|------------------------------------|---------|---|
| Part No.                           | Mark    | Remarks   |
| 32812AA201                         | 7       | Approach to 5th gear by 0.2 mm (0.008 in)         |
| 32812AA211                         | No mark | Standard  |
| 32812AA221                         | 9       | Become distant from 5th gear by 0.2 mm (0.008 in) |

| 5th shifter fork (Turbo model) |         |   |
|--------------------------------|---------|---|
| Part No.                       | Mark    | Remarks   |
| 32812AA231                     | 7       | Approach to 5th gear by 0.2 mm (0.008 in)         |
| 32812AA241                     | No mark | Standard  |
| 32812AA251                     | 9       | Become distant from 5th gear by 0.2 mm (0.008 in) |

# General Description

### 7. TRANSFER CASE OR REAR CASE

#### Neutral position adjustment

| Adjusting shim |                   |
|----------------|-------------------|
| Part No.       | Thickness mm (in) |
| 32190AA000     | 0.15 (0.0059)     |
| 32190AA010     | 0.30 (0.0118)     |

| Reverse accent shaft |      |   |
|----------------------|------|---|
| Part No.             | Mark | Remarks                                     |
| 32188AA130           | S    | Neutral position is closer to 1st.          |
| 32188AA140           | T    | Standard                                    |
| 32188AA150           | U    | Neutral position is closer to reverse gear. |

#### Reverse check plate adjustment

| Reverse check plate |      |                |                                   |
|---------------------|------|----------------|-----------------------------------|
| Part No.            | Mark | Angle $\theta$ | Remarks                           |
| 32189AA000          | 0    | 28°            | Arm stops closer to 5th gear.     |
| 32189AA010          | 1    | 31°            | Arm stops closer to 5th gear.     |
| 33189AA020          | 2    | 34°            | Arm stops in the center.          |
| 32189AA030          | 3    | 37°            | Arm stops closer to reverse gear. |
| 32189AA040          | 4    | 40°            | Arm stops closer to reverse gear. |

### 8. EXTENSION ASSEMBLY

#### **Preload of the taper roller bearing (amount of standard protrusion):**

**0.15 — 0.20 mm (0.006 — 0.008 in)**

#### NOTE:

Be sure that the amount of preload is within the standard value.

## MANUAL TRANSMISSION AND DIFFERENTIAL

### C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation, and disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, use a plastic hammer to open the case. Do not pry it apart with a screwdriver or other tool.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use SUBARU genuine gear oil, grease etc. or the equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.

- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil onto sliding or revolution surfaces before installation.
- Replace deformed or otherwise damaged snap rings with new ones.
- Before installing O-rings or oil seals, apply sufficient amount of gear oil to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying sealant, completely remove the old seal.

# Transmission Gear Oil

MANUAL TRANSMISSION AND DIFFERENTIAL

## 2. Transmission Gear Oil

### A: INSPECTION

- 1) Park the vehicle on a level surface.
- 2) Turn the ignition switch to OFF, and then wait until the engine cools.
- 3) Remove the oil level gauge and wipe it clean.
- 4) Reinsert the level gauge all the way. Be sure the level gauge is correctly inserted and in the proper direction.
- 5) Pull out the oil level gauge again and check the oil level on it. If it is below the lower level, add oil through the oil level gauge hole to bring the level up to the upper level.

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

### B: REPLACEMENT

- 1) Pull out the oil level gauge.
- 2) Lift-up the vehicle.
- 3) Remove the drain plug using TORX® BIT T70, and drain the transmission gear oil completely.

#### CAUTION:

**Directly after the engine has been running, the transmission gear oil is hot. Be careful not to burn yourself.**

#### NOTE:

Tighten the transmission drain plug after draining the transmission gear oil.

#### Tightening torque:

**Aluminum gasket**

**44 N·m (4.5 kgf-m, 32.5 ft-lb)**

**Copper gasket**

**70 N·m (7.1 kgf-m, 51.6 ft-lb)**

- (A) Drain plug
- (B) Gasket

- 4) Lower the vehicle.
- 5) Pour gear oil into the gauge hole.

#### Recommended gear oil:

**Use GL-5 (75W-90) or equivalent.**

#### Gear oil capacity:

**3.5 l (3.7 US qt, 3.1 Imp qt)**

- 6) Check the level of the transmission gear oil.

#### CAUTION:

**When inserting the level gauge into transmission gear, align the protrusion on the top end of level gauge with the notch in the gauge hole.**

#### NOTE:

The level should be within the specified range marked on the gauge.

# Manual Transmission Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 3. Manual Transmission Assembly

#### A: REMOVAL

- 1) Open the front hood fully, and support with stay.
- 2) Disconnect the ground cable from battery.
- 3) Remove the air intake duct and cleaner case. (Non-turbo model) <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.> <Ref. to IN(H4SO)-5, REMOVAL, Air Cleaner Case.>
- 4) Remove the air cleaner case stay. (Non-turbo model)

- 5) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 6) Disconnect the following connectors:
  - (1) Neutral position switch connector
  - (2) Back-up light switch connector
  - (3) Vehicle speed sensor

- 7) Remove the starter. <Ref. to SC(H4SO)-8, REMOVAL, Starter.>
- 8) Remove the operating cylinder from transmission.
  - Non-turbo model

- Turbo model

- 9) Remove the throttle body.
  - Non-turbo model <Ref. to FU(H4SO)-12, REMOVAL, Throttle Body.>
  - Turbo model <Ref. to FU(H4DOTC)-13, REMOVAL, Throttle Body.>
- 10) Remove the pitching stopper.

- 11) Set the ST.  
ST 41099AC000 ENGINE SUPPORT BRACKET

# Manual Transmission Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

12) Remove the bolt which holds the right upper side of transmission to engine.

13) Remove the front and center exhaust pipes. (Non-turbo model) <Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.>

14) Remove the center exhaust pipe. (Turbo model). <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>

15) Remove the rear exhaust pipe and muffler.

- Non-turbo model

<Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>

- Turbo model

<Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>

**CAUTION:**

**When removing the exhaust pipes, be careful each exhaust pipe does not drop out.**

16) Remove the hanger bracket from right side of transmission.

17) Remove the propeller shaft. <Ref. to DS-16, REMOVAL, Propeller Shaft.>

18) Remove the gear shift rod and the stay from transmission.

(1) Disconnect the stay from transmission.

(2) Disconnect the rod from transmission.

(A) Stay

(B) Rod

19) Disconnect the stabilizer link from transverse link.

20) Remove the bolt securing ball joint of transverse link to housing.

- Wagon model

- Sedan model

21) Remove the drive shafts from the transmission. <Ref. to DS-33, REMOVAL, Front Drive Shaft.>

# Manual Transmission Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

22) Remove the nuts which hold the lower side of transmission to engine.

23) Place the transmission jack under transmission.

### CAUTION:

Always support the transmission case with a transmission jack.

24) Remove the transmission rear crossmember from vehicle.

25) Remove the transmission.

### NOTE:

Move the transmission jack toward rear until main shaft is withdrawn from clutch cover.

26) Separate the transmission assembly and rear cushion rubber.

## B: INSTALLATION

1) Install the rear cushion rubber to transmission assembly.

### Tightening torque:

**35 N·m (3.6 kgf-m, 26 ft-lb)**

2) Install the transmission onto engine.

(1) Gradually raise the transmission with transmission jack.

(2) Engage them at splines.

### NOTE:

Be careful not to strike the main shaft against clutch cover.

3) Install the transmission rear crossmember.

### Tightening torque:

**T1: 70 N·m (7.1 kgf-m, 51.6 ft-lb)**

**T2: 140 N·m (14.3 kgf-m, 103 ft-lb)**

4) Take off the transmission jack.

5) Tighten the nuts which hold the lower side of transmission to engine.

### Tightening torque:

**50 N·m (5.1 kgf-m, 37 ft-lb)**

6) Connect the engine and transmission.

(1) Install the starter.

<Ref. to SC(H4SO)-8, INSTALLATION, Starter.>

(2) Tighten the bolt which holds right upper side of transmission to engine.

# Manual Transmission Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

## Tightening torque:

**50 N·m (5.1 kgf-m, 37 ft-lb)**

7) Remove the ST.

8) Install the pitching stopper.

## Tightening torque:

**T1: 50 N·m (5.1 kgf-m, 37 ft-lb)**

**T2: 58 N·m (5.9 kgf-m, 43 ft-lb)**

9) Install the throttle body.

- Non-turbo model

<Ref. to FU(H4SO)-12, INSTALLATION, Throttle Body.>

- Turbo model

<Ref. to FU(H4DOTC)-13, INSTALLATION, Throttle Body.>

10) Lift-up the vehicle.

11) Replace the differential side retainer oil seal.

## NOTE:

Be sure to replace the differential side retainer oil seal after the procedure of removing the front drive shaft.

12) Install the front drive shaft into transmission.

ST 28399SA010 OIL SEAL PROTECTOR

13) Install the ball joints of lower arm into knuckle arm of housing, and tighten the installing bolts.

## Tightening torque:

**49 N·m (5.0 kgf-m, 36 ft-lb)**

(A) Transverse link

(B) Ball joint

# Manual Transmission Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

14) Install the stabilizer link from transverse link.

- Wagon model

**Tightening torque:**

**30 N·m (3.1 kgf·m, 22 ft·lb)**

- Sedan model

**Tightening torque:**

**45 N·m (4.6 kgf·m, 33 ft·lb)**

15) Install the gear shift rod and the stay.

- (1) Install the gear shift rod onto transmission.

- (A) Stay  
(B) Rod

- (2) Install the stay onto transmission.

16) Install the propeller shaft. <Ref. to DS-17, INSTALLATION, Propeller Shaft.>

17) Install the hanger bracket on right side of transmission.

18) Install the rear exhaust pipe and muffler.

- Non-turbo model

<Ref. to EX(H4SO)-7, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, INSTALLATION, Muffler.>

- Turbo model

<Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

19) Install the front exhaust pipe and center exhaust pipe. (Non-turbo model)

<Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.>

20) Install the center exhaust pipe. (Turbo model) <Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.>

21) Install the under cover.

22) Install the operating cylinder.

**Tightening torque:**

**37 N·m (3.8 kgf·m, 27.5 ft·lb)**

- Non-turbo model

- Turbo model

- 23) Connect the following connectors:  
(1) Transmission ground cable

**Tightening torque:**

**13 N·m (1.3 kgf-m, 9.4 ft-lb)**

- (2) Vehicle speed sensor connector  
(3) Neutral position switch connector  
(4) Back-up light switch connector
- 24) Install the air cleaner case stay.

**Tightening torque:**

**16 N·m (1.6 kgf-m, 11.6 ft-lb)**

- 25) Install the air intake duct and cleaner case.  
(Non-turbo model)
- 26) Install the intercooler. (Turbo model).
- 27) Connect the battery ground cable to battery.
- 28) Take off the vehicle from lift arms.

# Transmission Mounting System

MANUAL TRANSMISSION AND DIFFERENTIAL

## 4. Transmission Mounting System

### A: REMOVAL

#### 1. PITCHING STOPPER

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake duct. (Non-turbo model)  
<Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>
- 3) Remove the air cleaner case. (Non-turbo model)  
<Ref. to IN(H4SO)-5, REMOVAL, Air Cleaner Case.>
- 4) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 5) Remove the throttle body.
  - Non-turbo model  
<Ref. to FU(H4SO)-12, REMOVAL, Throttle Body.>
  - Turbo model  
<Ref. to FU(H4DOTC)-13, REMOVAL, Throttle Body.>
- 6) Remove the pitching stopper.

#### 2. CROSSMEMBER AND CUSHION RUBBER

- 1) Disconnect the ground cable from battery.
- 2) Jack-up the vehicle and support it with rigid racks.
- 3) Remove the front and center exhaust pipes. (Non-turbo model)  
<Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.>
- 4) Remove the center exhaust pipe. (Turbo model)  
<Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>
- 5) Remove the rear exhaust pipe and muffler.
  - Non-turbo model  
<Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>
  - Turbo model  
<Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>
- 6) Set the transmission jack under the transmission body.

### CAUTION:

Always support the transmission case with a transmission jack.

- 7) Remove the rear crossmember.

- 8) Remove the rear cushion rubber.

### B: INSTALLATION

#### 1. PITCHING STOPPER

- 1) Install the pitching stopper.

#### Tightening torque:

**T1: 50 N·m (5.1 kgf-m, 37 ft-lb)**

**T2: 58 N·m (5.9 kgf-m, 43 ft-lb)**

- 2) Install the throttle body.

- Non-turbo model  
<Ref. to FU(H4SO)-12, INSTALLATION, Throttle Body.>
  - Turbo model  
<Ref. to FU(H4DOTC)-13, INSTALLATION, Throttle Body.>
- 3) Install the air intake duct and cleaner case. (Non-turbo model)  
<Ref. to IN(H4SO)-5, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.>
  - 4) Install the intercooler. (Turbo model)  
<Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>
  - 5) Connect the battery ground cable to battery.

## 2. CROSSMEMBER AND CUSHION RUBBER

1) Install the rear cushion rubber.

### **Tightening torque:**

**35 N·m (3.6 kgf-m, 26 ft-lb)**

2) Install the rear crossmember.

### **Tightening torque:**

**T1: 70 N·m (7.1 kgf-m, 51 ft-lb)**

**T2: 140 N·m (14.3 kgf-m, 103 ft-lb)**

3) Remove the transmission jack.

4) Install the front and center exhaust pipes. (Non-turbo model)

<Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.>

5) Install the center exhaust pipe. (Turbo model)  
<Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.>

6) Install the rear exhaust pipe and muffler.

- Non-turbo model

<Ref. to EX(H4SO)-7, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, INSTALLATION, Muffler.>

- Turbo model

<Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

## C: INSPECTION

Repair or replace parts if the results of the inspection below are not satisfactory.

### 1. PITCHING STOPPER

Make sure the pitching stopper is not bent or damaged. Make sure the rubber is not stiff, cracked, or otherwise damaged.

### 2. CROSSMEMBER AND CUSHION RUBBER

Make sure the crossmember is not bent or damaged. Make sure the cushion rubber is not stiff, cracked, or otherwise damaged.

# Oil Seal

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 5. Oil Seal

#### A: INSPECTION

Check the oil seal portion for leakage. If leakage is found, replace the oil seal with a new one.

#### B: REPLACEMENT

- 1) Clean the transmission exterior.
- 2) Remove the drain plug using TORX® BIT T70, and drain the transmission gear oil completely.

NOTE:

Tighten the drain plug after draining gear oil.

#### Tightening torque:

##### Aluminum gasket

**44 N·m (4.5 kgf·m, 32.5 ft·lb)**

##### Copper gasket

**70 N·m (7.1 kgf·m, 51.6 ft·lb)**

- 3) Remove the rear exhaust pipe and muffler.

- Non-turbo model

<Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>

- Turbo model

<Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>

- 4) Remove the propeller shaft. <Ref. to DS-16, REMOVAL, Propeller Shaft.>

- 5) Using the ST, remove the oil seal.

ST 398527700 PULLER ASSY

(A) Oil seal

- 6) Using the ST, install the oil seal.

ST 498057300 INSTALLER

- 7) Install the propeller shaft. <Ref. to DS-17, INSTALLATION, Propeller Shaft.>

- 8) Install the rear exhaust pipe and muffler.

- Non-turbo model

<Ref. to EX(H4SO)-7, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, INSTALLATION, Muffler.>

- Turbo model

<Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

- 9) Pour gear oil and check the oil level. <Ref. to 5MT-25, REPLACEMENT, Transmission Gear Oil.>

# Differential Side Retainer Oil Seal

MANUAL TRANSMISSION AND DIFFERENTIAL

## 6. Differential Side Retainer Oil Seal

### A: INSPECTION

Check leakage of gear oil from the differential side retainer oil seal part. If there is oil leakage, replace with a new oil seal, and check drive shaft.

### B: REPLACEMENT

- 1) Lift-up the vehicle.
- 2) Remove the drain plug using TORX® BIT T70, and drain the differential gear oil completely.

(A) Drain plug

- 3) Replace with a new gasket and tighten the drain plug using TORX® BIT T70.

#### Tightening torque:

##### Aluminum gasket

**44 N·m (4.5 kgf·m, 32.5 ft·lb)**

##### Copper gasket

**70 N·m (7.1 kgf·m, 51.6 ft·lb)**

(A) Drain plug

- 4) Remove the front and center exhaust pipe. (Non-turbo model)  
<Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.>
- 5) Separate the front drive shaft from transmission.  
<Ref. to DS-33, REMOVAL, Front Drive Shaft.>
- 6) Remove the differential side retainer oil seal.

#### NOTE:

- Be sure to replace the differential side retainer oil seal after the procedure of removing the front drive shaft from transmission.

- When removing the oil seal, using the ST 398527700 PULLER ASSY. Also when using a flat tip screwdriver, be careful not to scratch the differential side retainer

7) Using the ST, install the differential side retainer by slightly tapping with a plastic hammer.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

#### NOTE:

Apply oil to the oil seal lips.

MT-00103

8) Install the front drive shaft. <Ref. to DS-33, INSTALLATION, Front Drive Shaft.>

ST 28399SA010 OIL SEAL PROTECTOR

9) Install the front and center exhaust pipe. (Non-turbo model)

<Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.>

10) Lower the vehicle.

11) Pour gear oil through the gauge hole. <Ref. to 5MT-25, REPLACEMENT, Transmission Gear Oil.>

# Switches and Harness

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 7. Switches and Harness

#### A: REMOVAL

##### 1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH

- 1) Disconnect the ground cable from battery.
- 2) Remove the air intake duct and cleaner case. (Non-turbo model) <Ref. to IN(H4SO)-5, REMOVAL, Air Cleaner Case.> <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>
- 3) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 4) Disconnect the connector of back-up light switch and neutral position switch.

- Non-turbo model

- (A) Neutral switch (Brown)
- (B) Back-up light switch (Gray)

- Turbo model

- 5) Lift-up the vehicle.

- 6) Remove the back-up light switch and neutral position switch with harness.

- (A) Neutral position switch (Brown)
- (B) Back-up light switch (Gray)

#### B: INSTALLATION

##### 1. BACK-UP LIGHT SWITCH AND NEUTRAL POSITION SWITCH

- 1) Install the back-up light switch and neutral position switch with harness.

##### *Tightening torque:*

**32.3 N·m (3.3 kgf·m, 23.8 ft·lb)**

- (A) Neutral position switch
- (B) Back-up light switch

- 2) Connect the connector of back-up light switch and neutral position switch.
- 3) Install the air intake duct and cleaner case. (Non-turbo model) <Ref. to IN(H4SO)-5, INSTALLATION, Air Cleaner Case.> <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.>
- 4) Install the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>
- 5) Connect the battery ground cable to battery.

## C: INSPECTION

### 1. BACK-UP LIGHT SWITCH

Inspect the back-up light switch. <Ref. to LI-6, INSPECTION, Back-up Light System.>

### 2. NEUTRAL POSITION SWITCH

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the connector of neutral position switch.
- 3) Measure the resistance between neutral position switch terminals.

#### Non-turbo model:

| Gear shift position | Terminal No. | Specified resistance |
|---------------------|--------------|----------------------|
| Neutral position    | 1 and 2      | Less than 1 $\Omega$ |
| Other positions     |              | 1 M $\Omega$ or more |

#### Turbo model:

| Gear shift position | Terminal No. | Specified resistance |
|---------------------|--------------|----------------------|
| Neutral position    | 1 and 3      | Less than 1 $\Omega$ |
| Other positions     |              | 1 M $\Omega$ or more |

- Non-turbo model

- Turbo model

- 4) Replace defective parts.

# Vehicle Speed Sensor

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 8. Vehicle Speed Sensor

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Remove the front, center and rear exhaust pipes and muffler.
  - Non-turbo model  
<Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4SO)-6, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>
  - Turbo model  
<Ref. to EX(H4DOTC)-8, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>
- 4) Disconnect the connector from vehicle speed sensor.
- 5) Turn and remove the vehicle speed sensor.

#### B: INSTALLATION

##### NOTE:

- When the vehicle speed sensor is removed, discard it and replace with a new one.
  - Ensure the sensor mounting hole is clean and free of foreign matter.
  - Align the tip end of key with key groove on end of speedometer shaft during installation.
- 1) Hand tighten the vehicle speed sensor.
  - 2) Tighten the vehicle speed sensor using suitable tool.

##### **Tightening torque:**

**5.9 N·m (0.6 kgf·m, 4.3 ft·lb)**

- 3) Connect the connector to vehicle speed sensor.
- 4) Install the front, center and rear exhaust pipes and muffler.
  - Non-turbo model  
<Ref. to EX(H4SO)-4, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4SO)-6, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4SO)-7, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, INSTALLATION, Muffler.>

- Turbo model  
<Ref. to EX(H4DOTC)-8, INSTALLATION, Front Exhaust Pipe.> <Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.> <Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>
- 5) Lower the vehicle.
  - 6) Connect the battery ground cable to battery.

#### C: INSPECTION

The vehicle speed sensor can not be inspected as a single unit. Check if speedometer operates normally. If it does not operate normally, inspect the combination meter system. <Ref. to IDI-3, INSPECTION, Combination Meter System.>

## 9. Preparation for Overhaul

### A: PROCEDURE

- 1) Clean oil, grease, dirt and dust from transmission.
- 2) Remove the drain plug using TORX® BIT T70, and drain the oil completely. After draining, retighten it.

**NOTE:**

Replace the gasket with a new one.

**Tightening torque:**

**Aluminum gasket**

**44 N·m (4.5 kgf·m, 32.5 ft·lb)**

**Copper gasket**

**70 N·m (7.1 kgf·m, 51.6 ft·lb)**

- 3) Attach the transmission to ST.  
ST 499937100 TRANSMISSION STAND

- 4) Rotating parts should be coated with oil prior to assembly.
- 5) All disassembled parts, if to be reused, should be reinstalled in the original positions and directions.
- 6) Gaskets, lock washers and lock nut must be replaced with new ones.
- 7) Liquid gasket should be used where specified to prevent leakage.

# Transfer Case and Extension Case Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 10. Transfer Case and Extension Case Assembly

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-36, REMOVAL, Switches and Harness.>
- 3) Remove the transfer case with extension case assembly.

- 4) Remove the shifter arm.
- 5) Remove the extension case assembly.

#### B: INSTALLATION

- 1) Install the center differential and transfer driven gear into transfer case.

- 2) Remove the bearing outer race from the extension case.

- (A) Bearing outer race  
(B) Extension case

- 3) While pressing the bearing outer race horizontally, turn the driven shaft ten rotations.
- 4) Measure the height "W" between transfer case and taper roller bearing on the transfer driven gear.

- 5) Measure the depth "X".

#### NOTE:

Measure with bearing outer race and thrust washer removed.

- 6) Calculate the thrust washer thickness "t" using the following calculation.  
 $t = X - W + 0.15 \text{ to } 0.20 \text{ mm (0.006 to 0.008 in)}$
- 7) Select the nearest washer in the following table:

**Preload of the taper roller bearing (amount of standard protrusion):**

**0.15 — 0.20 mm (0.006 — 0.008 in)**

# Transfer Case and Extension Case Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

**NOTE:**

Be sure that the amount of preload is within the standard value.

| Thrust washer (50 × 61 × t) |                   |
|-----------------------------|-------------------|
| Part No.                    | Thickness mm (in) |

| 803050079                   | 1.45 (0.0571)     |

- 8) Fit the thrust washers on transfer drive shaft.
- 9) Install the bearing outer race into extension case.
- 10) Measure the depth “S” between transfer case and center differential.

ST 398643600 GAUGE

- 11) Measure the depth “T” between extension case and transfer drive gear.

ST 398643600 GAUGE

**NOTE:**

Thickness of ST: 15 mm (0.59 in)

12) Calculate the space “U” using the following equation:  $U = S + T - 30 \text{ mm (1.18 in)}$  [Thickness of ST]

13) Select the suitable washer in the following table:

**Standard clearance:**

**0.15 — 0.35 mm (0.0059 — 0.0138 in)**

| Thrust washer |                   |
|---------------|-------------------|
| Part No.      | Thickness mm (in) |
| 803036050     | 0.9 (0.035)       |
| 803036054     | 1.0 (0.039)       |
| 803036051     | 1.1 (0.043)       |
| 803036055     | 1.2 (0.047)       |
| 803036052     | 1.3 (0.051)       |
| 803036056     | 1.4 (0.055)       |
| 803036053     | 1.5 (0.059)       |
| 803036057     | 1.6 (0.063)       |
| 803036058     | 1.7 (0.067)       |

- 14) Fit the thrust washer on center differential.
- 15) Apply proper amount of liquid gasket to the transfer case mating surface.

**Liquid gasket:**

**THREE BOND 1215B (Part No. 004403007) or equivalent**

- 16) Install the extension assembly into transfer case.

# Transfer Case and Extension Case Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

### Tightening torque:

**40 N·m (4.1 kgf-m, 29.7 ft-lb)**

17) Install the shifter arm to transfer case.

18) Hang the shifter arm on 3rd-4th fork rod.

(A) Shifter arm

(B) 3rd-4th fork rod

19) Install the transfer case with extension case assembly to transmission case.

### Tightening torque:

**24.5 N·m (2.5 kgf-m, 18.1 ft-lb)**

## C: DISASSEMBLY

### 1. TRANSFER CASE

1) Remove the reverse check assembly. <Ref. to 5MT-49, REMOVAL, Reverse Check Sleeve.>

2) Remove the oil guide.

### 2. EXTENSION CASE

1) Remove the transfer drive gear assembly. <Ref. to 5MT-44, REMOVAL, Transfer Drive Gear.>

2) Remove the shift bracket.

3) Remove the oil seal from extension case. <Ref. to 5MT-34, Oil Seal.>

## D: ASSEMBLY

### 1. EXTENSION CASE

1) Using the ST, install the oil seal to extension case. <Ref. to 5MT-34, Oil Seal.>

**NOTE:**

Use a new oil seal.

2) Install the shift bracket to extension case.

**Tightening torque:**

**24.5 N·m (2.5 kgf-m, 18.1 ft-lb)**

3) Install the transfer drive gear to extension case. <Ref. to 5MT-44, INSTALLATION, Transfer Drive Gear.>

### 2. TRANSFER CASE

1) Install the oil guide to transfer case.

**Tightening torque:**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

2) Install the reverse check sleeve assembly to transfer case. <Ref. to 5MT-49, INSTALLATION, Reverse Check Sleeve.>

# Transfer Drive Gear

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 11. Transfer Drive Gear

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-36, REMOVAL, Switches and Harness.>
- 3) Remove the transfer case with extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the extension case assembly.
- 5) Remove the transfer driven gear.
- 6) Remove the transfer drive gear.

#### B: INSTALLATION

- 1) Install the transfer drive gear.

#### Tightening torque:

**26 N·m (2.7 kgf·m, 20 ft·lb)**

- 2) Install the transfer driven gear.
- 3) Install the extension case assembly.
- 4) Install the transfer case and extension case assembly. <Ref. to 5MT-40, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 5) Install the back-up light switch and neutral position switch. <Ref. to 5MT-36, INSTALLATION, Switches and Harness.>
- 6) Install the manual transmission assembly from vehicle. <Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

#### C: DISASSEMBLY

- 1) Remove the snap ring.

- 2) Remove the ball bearing.

#### D: ASSEMBLY

- 1) Set the ST applying to inner race of bearing and install to drive shaft.

ST 398177700 INSTALLER

#### NOTE:

- Use a new bearing.
- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton)

- 2) Install the snap ring on transfer drive shaft.
- 3) Check the clearance between snap ring and ball bearing. <Ref. to 5MT-45, INSPECTION, Transfer Drive Gear.>

## E: INSPECTION

### 1) Bearings

Replace the bearings in the following cases:

- Broken or rusty bearings
- Worn or damaged
- Bearings that fail to turn smoothly or make noise when turned after gear oil lubrication.

### 2) Drive gear

Replace the drive gear if their tooth surfaces and shaft are excessively broken or damaged.

3) Measure the clearance between snap ring and inner race of ball bearing with a thickness gauge.

### Clearance:

**0.01 — 0.15 mm (0.0004 — 0.0059 in)**

If the measurement is not within specification, select a suitable snap ring and replace.

| Snap ring (Outer-30) |                   |
|----------------------|-------------------|
| Part No.             | Thickness mm (in) |
| 805030041            | 1.53 (0.0602)     |
| 805030042            | 1.65 (0.0650)     |
| 805030043            | 1.77 (0.0697)     |

# Transfer Driven Gear

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 12. Transfer Driven Gear

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-36, REMOVAL, Switches and Harness.>
- 3) Remove the transfer case with extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the extension case assembly.
- 5) Remove the transfer driven gear.

- 6) Remove the bearing outer race from extension case and transfer case.

- (A) Bearing outer race (transfer case side)
- (B) Bearing outer race (extension case side)

#### B: INSTALLATION

- 1) Install the bearing outer race to extension case and transfer case.

- (A) Bearing outer race
- (B) Bearing outer race
- (C) Transfer case
- (D) Extension case

- 2) Install the transfer driven gear.

- 3) Install the transfer case and extension case assembly. <Ref. to 5MT-40, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 4) Install the back-up light switch and neutral position switch. <Ref. to 5MT-36, INSTALLATION, Switches and Harness.>
- 5) Install the manual transmission assembly to vehicle. <Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

# Transfer Driven Gear

MANUAL TRANSMISSION AND DIFFERENTIAL

## C: DISASSEMBLY

1) Using the ST, remove the roller bearing (extension case side).

ST 498077000 REMOVER

(A) Roller bearing

2) Using the ST1 and ST2, remove the roller bearing (transfer case side).

ST1 498077000 REMOVER

ST2 899864100 REMOVER

(A) Roller bearing

## D: ASSEMBLY

1) Using the ST, install the roller bearing (extension case side).

ST1 398177700 INSTALLER

ST2 899864100 REMOVER

NOTE:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton)

(A) Roller bearing

2) Using the ST, install the roller bearing (transfer case side).

ST 499757002 INSTALLER

NOTE:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton)

(A) Roller bearing

## E: INSPECTION

1) Bearings

Replace the bearings in the following cases:

- Broken or rusty bearings
- Worn or damaged
- Bearings that fail to turn smoothly or make noise when turned after gear oil lubrication.

2) Driven gear

Replace the driven gear if their tooth surfaces and shaft are excessively broken or damaged.

# Center Differential

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 13.Center Differential

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case with extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove the extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the transfer driven gear. <Ref. to 5MT-46, REMOVAL, Transfer Driven Gear.>
- 5) Remove the center differential.

#### B: INSTALLATION

- 1) Install the center differential into transfer case.
- 2) Install the transfer driven gear. <Ref. to 5MT-46, INSTALLATION, Transfer Driven Gear.>
- 3) Install the extension case assembly. <Ref. to 5MT-40, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 4) Install the transfer case with extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 5) Install the back-up light switch and neutral position switch. <Ref. to 5MT-36, REMOVAL, Switches and Harness.>
- 6) Install the manual transmission assembly to vehicle. <Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

#### C: DISASSEMBLY

##### NOTE:

Do not disassemble the center differential because it is a non-disassemble part.

Remove the ball bearing using ST.

##### NOTE:

Do not reuse the ball bearing.

ST 498077300 CENTER DIFFERENTIAL BEARING REMOVER

#### D: ASSEMBLY

Install the ball bearing to center differential assembly.

##### NOTE:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

(A) Ball bearing

#### E: INSPECTION

##### 1) Bearings

Replace the bearings in the following cases:

- Broken or rusty bearings
- Worn or damaged
- Bearings that fail to turn smoothly or make noise when turned after gear oil lubrication.
- Bearings having other defects

##### 2) Center differential

Replace the center differential assembly if it is worn or damaged.

# Reverse Check Sleeve

MANUAL TRANSMISSION AND DIFFERENTIAL

## 14. Reverse Check Sleeve

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case with extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove the shifter arm.
- 4) Remove the plug, spring, washer and reverse check ball.

- 5) Remove the reverse check sleeve.

### B: INSTALLATION

- 1) Install the reverse check sleeve.

**Tightening torque:**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

- 2) Install the ball, spring, washer and plug to transfer case.

**Tightening torque:**

**9.75 N·m (1.0 kgf-m, 7.2 ft-lb)**

- 3) Install the shifter arm to transfer case assembly.
- 4) Install the transfer case with extension case assembly. <Ref. to 5MT-40, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 5) Install the manual transmission assembly to vehicle. <Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

### C: DISASSEMBLY

- 1) Cover the reverse check sleeve with a rag, and remove the snap ring using a screwdriver.

**NOTE:**

Replace the snap ring with a new one if deformed or weakened.

(A) Snap ring

# Reverse Check Sleeve

## MANUAL TRANSMISSION AND DIFFERENTIAL

2) Remove the reverse check plate, reverse check spring, reverse check cam, return spring (5th-Rev), reverse accent shaft, return spring cap and return spring (1st-2nd).

- (A) Reverse check plate
- (B) Reverse check spring
- (C) Return spring (5th-Rev)
- (D) Reverse check cam
- (E) Reverse accent shaft
- (F) Return spring cap
- (G) Return spring (1st-2nd)

3) Remove the O-ring.

### NOTE:

- For reverse check sleeve assembly, use an O-ring which should not be scratched.
- Be careful not to break the adjusting shim placed between reverse check sleeve assembly and case.

### D: ASSEMBLY

1) Install the return spring (1st-2nd), return spring cap, reverse accent shaft, check cam, return spring and check spring onto reverse check sleeve.

### NOTE:

Be sure the bent section of reverse check spring is positioned in the groove in check cam.

- (A) Reverse check plate
- (B) Reverse check spring
- (C) Return spring (5th-Rev)
- (D) Reverse check cam
- (E) Reverse accent shaft
- (F) Return spring cap
- (G) Return spring (1st-2nd)

2) Hook the bent section of reverse check spring over reverse check plate.

3) Rotate the cam so that the protrusion of reverse check cam is at the opening in plate.

4) With the cam held in that position, install the plate onto reverse check sleeve and hold with snap ring.

5) Position the O-ring in groove in sleeve.

### E: INSPECTION

- Make sure the cutout section of reverse accent shaft is aligned with the opening in reverse check sleeve.
- Spin the cam by hand for smooth rotation.
- Move the cam and shaft all the way toward plate and release.

# Reverse Check Sleeve

MANUAL TRANSMISSION AND DIFFERENTIAL

If the cam does not return properly, replace the reverse check spring; if shaft does not, check for scratches on the inner surface of sleeve. If sleeve is in good order, replace the spring.

- (A) Snap ring
- (B) Reverse check plate
- (C) Check spring
- (D) Check cam

• Select a suitable reverse accent shaft and reverse check plate. <Ref. to 5MT-51, ADJUSTMENT, Reverse Check Sleeve.>

## F: ADJUSTMENT

### 1. NEUTRAL POSITION ADJUSTMENT

- 1) Shift the gear into 3rd gear position.
- 2) Shifter arm turns lightly toward the 1st/2nd gear side but heavily toward the reverse gear side because of the function of return spring, until arm contacts the stopper.
- 3) Make adjustment so that the heavy stroke (reverse side) is a little more than the light stroke (1st/2nd side).
- 4) To adjust, remove the bolts holding reverse check sleeve assembly to the case, move the sleeve assembly outward, and place adjusting shim between sleeve assembly and case to adjust the clearance.

#### CAUTION:

**Be careful not to break the O-ring when placing shim(s).**

#### NOTE:

- When the shim is removed, the neutral position will move closer to reverse; when shim is added, the neutral position will move closer to 1st gear.
- If the shims alone cannot adjust clearance, replace the reverse accent shaft and re-adjust.

| Adjusting shim |                   |
|----------------|-------------------|
| Part No.       | Thickness mm (in) |
| 32190AA000     | 0.15 (0.0059)     |
| 32190AA010     | 0.30 (0.0118)     |

| Reverse accent shaft |      |   |
|----------------------|------|---|
| Part No.             | Mark | Remarks                                     |
| 32188AA130           | S    | Neutral position is closer to 1st gear.     |
| 32188AA140           | T    | Standard                                    |
| 32188AA150           | U    | Neutral position is closer to reverse gear. |

### 2. REVERSE CHECK PLATE ADJUSTMENT

- 1) Shift the shifter arm to "5th" and then to reverse to see if reverse check mechanism operates properly.
- 2) Also check to see if the arm returns to neutral when released from reverse position. If the arm does not return properly, replace the reverse check plate.

| Reverse check plate |          |                |                                   |
|---------------------|----------|----------------|-----------------------------------|
| Part No.            | (A): No. | Angle $\theta$ | Remarks                           |
| 32189AA001          | 0        | 28°            | Arm stops closer to 5th gear.     |
| 32189AA011          | 1        | 31°            | Arm stops closer to 5th gear.     |
| 32189AA021          | 2        | 34°            | Arm stops in the center.          |
| 32189AA031          | 3        | 37°            | Arm stops closer to reverse gear. |
| 32189AA041          | 4        | 40°            | Arm stops closer to reverse gear. |

# Transmission Case

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 15. Transmission Case

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the clutch release lever. <Ref. to CL-18, REMOVAL, Release Bearing and Lever.>
- 3) Remove the transfer case with extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the bearing mounting bolts.

- 5) Remove the main shaft rear plate.

(A) Main shaft rear plate

- 6) Separate the transmission case into right and left cases by loosening the coupling bolts and nuts.

- 7) Remove the drive pinion shaft assembly from left side transmission case.

#### NOTE:

Use a hammer handle, etc. to remove if too tight.

(A) Main shaft ASSY

(B) Drive pinion shaft ASSY

- 8) Remove the main shaft assembly.
- 9) Remove the differential assembly.

#### NOTE:

- Be careful not to confuse the right and left roller bearing outer races.
- Be careful not to damage the retainer oil seal.

#### B: INSTALLATION

- 1) Wipe off grease, oil and dust on the mating surfaces of transmission cases with white gasoline.
- 2) Install the front differential assembly.
- 3) Install the main shaft assembly.  
Install the transmission case knock pin into needle bearing knock pin hole.
- 4) Install the drive pinion shaft assembly.  
Install the transmission case knock pin into roller bearing knock pin hole.
- 5) Apply liquid gasket, and then put the case right side and left side together.

#### Liquid gasket:

**THREE BOND 1215B (Part No. 004403007) or equivalent**

- 6) Tighten the seventeen bolts with bracket, clip, etc. as shown in the figure.

#### NOTE:

- Insert the bolts from bottom and tighten the nuts at top.

# Transmission Case

MANUAL TRANSMISSION AND DIFFERENTIAL

- Put the cases together so that drive pinion shim and input shaft holder shim are not caught up in between.
- Confirm that the speedometer gear is meshed.

### Tightening torque:

**8 mm bolt**

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

**★ 10 mm bolt**

**39 N·m (4.0 kgf·m, 28.9 ft·lb)**

7) Tighten the ball bearing attachment bolts.

### Tightening torque:

**30 N·m (3.1 kgf·m, 22.1 ft·lb)**

8) Backlash adjustment of hypoid gear and preload adjustment of roller bearing:

### NOTE:

Support the drive pinion shaft assembly with ST.

ST 498427100 STOPPER

9) Place the transmission with case left side facing downward and put ST1 on bearing cup.

10) Screw the retainer assembly into left case from the bottom using ST2. Fit the ST3 on transmission main shaft. Shift the gear into 4th or 5th and turn the shaft several times. Screw in the retainer while turning ST3 until a slight resistance is felt on ST2. This is the contact point of hypoid gear and drive pinion shaft. Repeat the above sequence several times to ensure the contact point.

ST1 399780104 WEIGHT

ST2 18630AA010 WRENCH COMPL RETAINER

ST3 499927100 HANDLE

11) Remove the weight and screw in the retainer without O-ring on upper side and stop at the point where slight resistance is felt.

### NOTE:

At this point, the backlash between hypoid gear and drive pinion shaft is zero.

ST 18630AA010 WRENCH COMPL RETAINER

12) Loosen the retainer on the lower side by 3 notches and turn in the retainer on the upper side by the same amount in order to obtain the backlash.

13) Turn in the retainer on the upper side additionally by 1 notch in order to apply preload on taper roller bearing.

14) Install temporarily both the upper and lower lock plates and mark both holder and lock plate for later readjustment.

### NOTE:

Install the lock plate upside down if it is hard to install.

# Transmission Case

## MANUAL TRANSMISSION AND DIFFERENTIAL

---

15) Turn the transmission main shaft several times while tapping around the retainer lightly with plastic hammer.

16) Inspect and adjust the backlash and tooth contact of hypoid gear. <Ref. to 5MT-71, INSPECTION, Front Differential Assembly.>

17) After checking the tooth contact of hypoid gears, remove the lock plate. Then loosen the retainer until the O-ring groove appears. Fit O-ring into the groove and tighten the retainer to the original position.

Install the lock plate.

### NOTE:

- Record how many times the retainer is turned while loosening.
- Carry out this job on both upper and lower retainers.

### **Tightening torque:**

**T: 25 N·m (2.5 kgf-m, 18.4 ft-lb)**

18) Selection of main shaft rear plate <Ref. to 5MT-59, ADJUSTMENT, Main Shaft Assembly.>

19) Install the clutch release lever and bearing. <Ref. to CL-18, INSTALLATION, Release Bearing and Lever.>

20) Install the transfer case with extension case assembly. <Ref. to 5MT-40, INSTALLATION, Transfer Case and Extension Case Assembly.>

21) Install the manual transmission assembly into the vehicle. <Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

## **C: INSPECTION**

Check the transmission case for cracks, damage, and oil leaks.

# Main Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

## 16. Main Shaft Assembly

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case with extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove the transmission case. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the drive pinion shaft assembly. <Ref. to 5MT-60, REMOVAL, Drive Pinion Shaft Assembly.>
- 5) Remove the main shaft assembly.

### B: INSTALLATION

- 1) Install the needle bearing and oil seal onto the front of transmission main shaft assembly.

#### NOTE:

- Wrap the clutch splined section with vinyl tape to prevent damage to oil seal.
- Apply Unilube #2 or equivalent to the sealing lip of oil seal.
- Use a new one.

- 2) Install the transmission case knock pin into needle bearing outer race knock pin hole.

#### NOTE:

Align the end face of seal with surface (A) when installing oil seal.

- 3) Install the drive pinion shaft assembly. <Ref. to 5MT-60, INSTALLATION, Drive Pinion Shaft Assembly.>
- 4) Install the transmission case. <Ref. to 5MT-52, INSTALLATION, Transmission Case.>
- 5) Install the transfer case with extension case assembly. <Ref. to 5MT-40, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 6) Install the manual transmission assembly to vehicle. <Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

### C: DISASSEMBLY

- 1) Put vinyl tape around the main shaft splines to protect oil seal from damage. Then pull out the oil seal and needle bearing by hand.
- 2) Remove the lock nut from transmission main shaft assembly.

#### NOTE:

Remove the caulking before removing lock nut.

- |     |           |                     |

- (D) 5th-Rev sleeve & hub ASSY
- (E) Lock washer
- (F) Lock nuts

# Main Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

11) Tighten the lock nuts to the specified torque using ST1 and ST2.

**NOTE:**

Secure the lock nuts in two places after tightening.

ST1 499987003 SOCKET WRENCH (35)  
ST2 498937000 TRANSMISSION HOLDER

**Tightening torque:**

**120 N·m (12.2 kgf·m, 88.5 ft·lb)**

**E: INSPECTION**

Disassembled parts should be washed clean first and then inspected carefully.

1) Bearings

Replace the bearings in the following cases:

- Bearings whose balls, outer races and inner races are broken or rusty.
- Worn bearings
- Bearings that fail to turn smoothly or make noise when turned after gear oil lubrication.
- Bearings having other defects

2) Bushing (each gear)

Replace the bushing in the following cases:

- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3) Gears

Replace the gears with new ones if their tooth surfaces are broken, damaged, or excessively worn.

- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

4) Baulk ring

Replace the ring in the following cases:

- When the inner surface and end face are damaged.
- When the ring inner surface is abnormally or partially worn down.
- When the contact surface of the synchronizer ring insert is scored or abnormally worn down.

5) Shifting insert key

Replace the insert if deformed, excessively worn or defective in any way.

6) Oil seal

Replace the oil seal if the lip is deformed, hardened, damaged, worn or defective in any way.

7) O-ring

Replace the O-ring if the sealing face is deformed, hardened, damaged, worn or defective in any way.

8) Gearshift mechanism

Repair or replace the gearshift mechanism if excessively worn, bent or defective in any way.

**F: ADJUSTMENT**

Selection of main shaft rear plate:

Using the ST, measure the amount (A) of ball bearing protrusion from transmission main case surface and select the proper plate in the following table.

**NOTE:**

Before measuring, tap the end of main shaft with a plastic hammer lightly in order to make the clearance zero between the main case surface and the moving flange of bearing.

ST 498147000 DEPTH GAUGE

| Dimension (A)<br>mm (in)         | Part No.   | Mark |
|----------------------------------|------------|------|
| 4.00 — 4.13<br>(0.1575 — 0.1626) | 32294AA041 | 1    |
| 3.87 — 3.99<br>(0.1524 — 0.1571) | 32294AA051 | 2    |

MT-00209

MT-01213

# Drive Pinion Shaft Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 17. Drive Pinion Shaft Assembly

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case with extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove the transmission case. <Ref. to 5MT-52, REMOVAL, Transmission Case.>
- 4) Remove the drive pinion shaft assembly.

#### NOTE:

Use a hammer handle, etc. to remove if too tight.

- (A) Main shaft ASSY  
(B) Drive pinion shaft ASSY

#### B: INSTALLATION

- 1) Remove the differential assembly.
- 2) Alignment marks/numbers on hypoid gear set  
The upper number on drive pinion is the match number for combining it with hypoid driven gear. The lower number is for shim adjustment. If no lower number is shown, the value is zero. The number on hypoid driven gear indicates a number for combination with drive pinion.

- (1) Match number  
(2) Shim adjust number

- 3) Place the drive pinion shaft assembly on right hand transmission main case without shim and tighten the bearing mounting bolts.
- 4) Inspection and adjustment of ST

#### NOTE:

- Loosen the two bolts and adjust so that the scale indicates 0.5 correctly when the plate end and the scale end are on the same level.
- Tighten the two bolts.

ST 499917500 DRIVE PINION GAUGE ASSY

- (A) Plate  
(B) Scale

- 5) Position the ST by inserting the knock pin of ST into the knock hole in transmission case.

ST 499917500 DRIVE PINION GAUGE ASSY

- 6) Slide the drive pinion gauge scale with finger tip and read the value at the point where it matches with the end face of drive pinion.

ST 499917500 DRIVE PINION GAUGE ASSY

- (A) Adjust clearance to zero without shim.

- 7) The thickness of shim shall be determined by adding the value indicated on drive pinion to the value indicated on ST. (Add if the number on drive pinion is prefixed by + and subtract if the number is prefixed by -.)

ST 499917500 DRIVE PINION GAUGE ASSY

- 8) Select one to three shims from the next table for the value determined as described above and take a shim thickness which is closest to the indicated value.

# Drive Pinion Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

| Drive pinion shim |                   |
|-------------------|-------------------|
| Part No.          | Thickness mm (in) |
| 32295AA031        | 0.150 (0.0059)    |
| 32295AA041        | 0.175 (0.0069)    |
| 32295AA051        | 0.200 (0.0079)    |
| 32295AA061        | 0.225 (0.0089)    |
| 32295AA071        | 0.250 (0.0098)    |

| 32295AA101        | 0.500 (0.0197)    |

9) Install the differential assembly. <Ref. to 5MT-68, INSTALLATION, Front Differential Assembly.>

10) Set the transmission main shaft assembly and drive pinion shaft assembly in position. (So there is no clearance between the two when moved all the way to the front). Inspect the suitable 1st-2nd, 3rd-4th and 5th shifter fork so that coupling sleeve and reverse driven gear are positioned in the center of their synchronizing mechanisms. <Ref. to 5MT-65, INSPECTION, Drive Pinion Shaft Assembly.>

11) Install the transmission case. <Ref. to 5MT-52, INSTALLATION, Transmission Case.>

12) Install the transfer case with extension case assembly. <Ref. to 5MT-40, INSTALLATION, Transfer Case and Extension Case Assembly.>

13) Install the manual transmission assembly to vehicle. <Ref. to 5MT-26, Manual Transmission Assembly.>

## C: DISASSEMBLY

### NOTE:

Attach a cloth to the end of driven shaft (on the frictional side of thrust needle bearing) to prevent damage during disassembly or reassembly.

1) Straighten the lock nut at staked portion. Remove the lock nut using ST1, ST2 and ST3.

ST1 899884100 HOLDER

ST2 498427100 STOPPER

ST3 899988608 SOCKET WRENCH (27)

2) Withdraw the drive pinion from driven shaft.

Remove the differential bevel gear sleeve, adjusting washer No. 1, adjusting washer No. 2, thrust bearing, needle bearing and drive pinion collar.

- (A) Differential bevel gear sleeve
- (B) Adjusting washer No. 1 (25 × 37.5 × t)
- (C) Thrust bearing (25 × 37.5 × 3)
- (D) Adjusting washer No. 2 (25 × 37.5 × 4)
- (E) Needle bearing (25 × 30 × 20)
- (F) Drive pinion collar
- (G) Needle bearing (30 × 37 × 23)
- (H) Thrust bearing (33 × 50 × 3)

3) Remove the roller bearing and washer using ST and press.

### NOTE:

Do not reuse the roller bearing.

ST 498077000 REMOVER

4) Straighten the lock nut at staked portion. Remove the lock nut using ST1 and ST2.

- 8) Remove the key.  
9) Remove the 2nd driven gear, inner baulk ring,  
synchro cone and outer baulk ring.

- (A) 2nd driven gear
- (B) Inner baulk ring
- (C) Synchro cone
- (D) Outer baulk ring

- 10) Remove the 1st driven gear, inner baulk ring,  
synchro cone, outer baulk ring, 2nd gear bushing,  
gear and hub using ST1 and ST2.

- (A) 1st driven gear
- (B) Inner baulk ring
- (C) Synchro cone
- (D) Outer baulk ring

### NOTE:

Replace the gear and hub if necessary. Do not disassemble because they must engage at a specified point. If they have to be disassembled, mark the engaging point on the spline beforehand.

- ST1 499757002 INSTALLER  
ST2 899714110 REMOVER

### D: ASSEMBLY

- 1) Install the sleeve and hub assembly by matching alignment marks.

# Drive Pinion Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

**NOTE:**

Use the new gear and hub assembly, when replacing the gear or hub.

- (A) 1st gear side
- (B) 2nd gear side
- (C) Flush surface
- (D) Stepped surface

2) Install the washer, snap ring and sub gear to 1st driven gear.

3) Install the 1st driven gear, inner baulk ring, synchro cone, outer baulk ring, gear and hub assembly onto driven shaft. (Turbo model)

- (A) 1st driven gear
- (B) Inner baulk ring
- (C) Synchro cone
- (D) Outer baulk ring

**NOTE:**

- Take care to install the gear and hub assembly in proper direction.
- Align the baulk ring and gear and hub assembly with key groove.

4) Install the 2nd driven gear bushing onto driven shaft using ST1, ST2 and a press.

**NOTE:**

- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
- Attach a cloth to the end of driven shaft to prevent damage.
- When press-fitting, align the oil holes of shaft and bushing.

- ST1 499277200 INSTALLER
- ST2 499587000 INSTALLER

5) Install the 2nd driven gear, inner baulk ring, synchro cone and outer baulk ring, and insert onto driven shaft.

- (A) 2nd driven gear
- (B) Inner baulk ring
- (C) Synchro cone
- (D) Outer baulk ring

6) After installing the key on driven shaft, install the 3rd-4th driven gear using ST and press.

**CAUTION:**

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

**NOTE:**

Align the groove in baulk ring with insert.

- ST 499277200 INSTALLER

7) Install a set of roller bearings onto the driven shaft using ST and press.

# Drive Pinion Shaft Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

### CAUTION:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

ST 499277200 INSTALLER

8) Position the woodruff key in groove on the rear of driven shaft. Install 5th driven gear onto the driven shaft using ST and press.

### CAUTION:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

ST 499277200 INSTALLER

9) Install the lock washer. Install the lock nut and tighten to the specified torque using ST.

ST 499987300 SOCKET WRENCH (50)

### Tightening torque:

260 N·m (26.5 kgf·m, 191.8 ft·lb)

### NOTE:

- Stake the caulking of lock nut at two points.

- Using a spring balancer, check that starting torque of roller bearing is 0.1 — 1.5 N (0.01 — 0.15 kgf, 0.02 — 0.33 lbf).

10) Install the roller bearing onto drive pinion.

### NOTE:

When installing roller bearing, note its directions (front and rear) because the knock pin hole in outer race is offset.

- (A) Roller bearing
- (B) Knock pin hole

11) Install the washer using ST1, ST2 and a press.

### NOTE:

- Do not apply pressure more than 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
- Use a new lock nut.
- Caulk the lock nut at four points.

ST1 499277100 BUSHING 1-2 INSTALLER

# Drive Pinion Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

12) Install the thrust bearing and needle bearing. Install the driven shaft assembly.

13) Install the drive pinion collar, needle bearing, adjusting washer No. 2, thrust bearing, adjusting washer No. 1 and differential bevel gear sleeve in this order.

**NOTE:**

Be careful because the spacer must be installed in proper direction.

- (A) Driven shaft
- (B) Drive shaft
- (C) Drive pinion collar
- (D) Needle bearing (25 × 30 × 20)
- (E) Adjusting washer No. 2 (25 × 36 × 4)
- (F) Thrust bearing (25 × 37.5 × 3)
- (G) Adjusting washer No. 1 (25 × 36 × t)
- (H) Differential bevel gear sleeve

14) Adjust the thrust bearing preload. <Ref. to 5MT-66, THRUST BEARING PRELOAD, ADJUSTMENT, Drive Pinion Shaft Assembly.>

**E: INSPECTION**

Disassembled parts should be washed clean first and then inspected carefully.

1) Bearings

Replace the bearings in the following cases:

- Bearings whose balls, outer races and inner races are broken or rusty.
- Worn bearings
- Bearings that fail to turn smoothly or make noise when turned after gear oil lubrication.

- The ball bearing on the rear side of the drive pinion shaft should be checked for smooth rotation before the drive pinion shaft assembly is disassembled. In this case, because a preload is working on the bearing, its rotation feels like it is slightly dragging unlike other bearings.

- (A) Drive pinion shaft
- (B) Ball bearing

- Bearings having other defects
- 2) Bushing (each gear)  
Replace the bushing in the following cases:
- When the sliding surface is damaged or abnormally worn.
  - When the inner wall is abnormally worn.
- 3) Gears
- Replace the gears with new ones if their tooth surfaces are broken, damaged, or excessively worn.
  - Correct or replace if the cone that contacts the baulk ring is rough or damaged.
  - Correct or replace if the inner surface or end face is damaged.
- 4) Baulk ring  
Replace the ring in the following cases:
- When the inner surface and end face are damaged.
  - When the ring inner surface is abnormally or partially worn down.
  - When the gap between the end faces of the ring and the gear splined part is excessively small.

**Clearance (A):**

**0.5 — 1.0 mm (0.020 — 0.040 in)**

# Drive Pinion Shaft Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

- When the contact surface of the synchronizer ring insert is scored or abnormally worn down.
- 5) Shifting insert key  
 Replace the insert if deformed, excessively worn or defective in any way.

- 6) Oil seal  
 Replace the oil seal if the lip is deformed, hardened, damaged, worn or defective in any way.
- 7) O-ring  
 Replace the O-ring if the sealing face is deformed, hardened, damaged, worn or defective in any way.

## F: ADJUSTMENT

### 1. THRUST BEARING PRELOAD

- 1) Select the adjusting washer No. 1 so that dimension (H) is zero through visual check. Position the washer (18.3 × 30 × 4) and lock washer (18 × 30 × 2) and install the lock nut (18 × 13.5).

- 2) Using the ST1, ST2 and ST3, tighten the new lock nut to specified torque.
- ST1 899884100 HOLDER  
 ST2 498427100 STOPPER

ST3 899988608 SOCKET WRENCH (27)

**Tightening torque:**  
**120 N·m (12.2 kgf·m, 88.5 ft·lb)**

- 3) After removing the ST2, measure the starting torque using torque driver.

ST1 899884100 HOLDER  
 ST3 899988608 SOCKET WRENCH (27)

**Starting torque:**  
**0.3 — 0.8 N·m (0.03 — 0.08 kgf·m, 0.2 — 0.6 ft·lb)**

- 4) If the starting torque is not within specified limit, select a new adjusting washer No. 1 and recheck starting torque.

- (A) Adjusting washer No. 1  
 (B) Adjusting washer No. 2

# Drive Pinion Shaft Assembly

| Adjusting washer No. 1 |                   |
|------------------------|-------------------|
| Part No.               | Thickness mm (in) |
| 803025051              | 3.925 (0.1545)    |
| 803025052              | 3.950 (0.1555)    |
| 803025053              | 3.975 (0.1565)    |
| 803025054              | 4.000 (0.1575)    |
| 803025055              | 4.025 (0.1585)    |
| 803025056              | 4.050 (0.1594)    |
| 803025057              | 4.075 (0.1604)    |

5) If the specified starting torque range cannot be obtained when a No. 1 adjusting washer is used, then select a suitable No. 2 adjusting washer from those listed in the following table. Repeat steps 1) through 4) to adjust starting torque.

- (A) Adjusting washer No. 1
- (B) Adjusting washer No. 2

| Starting torque | Dimension H | Adjusting washer No. 2 |
|-----------------|-------------|------------------------|
| Low             | Small       | Select thicker one.    |
| High            | Large       | Select thinner one.    |

| Adjusting washer No. 2 |                   |
|------------------------|-------------------|
| Part No.               | Thickness mm (in) |
| 803025059              | 3.850 (0.1516)    |
| 803025054              | 4.000 (0.1575)    |
| 803025058              | 4.150 (0.1634)    |

6) Recheck that the starting torque is within specified range, then clinch the lock nut at four positions.

## C: DISASSEMBLY

### 1. DIFFERENTIAL CASE ASSEMBLY

1) Loosen the twelve bolts and remove the hypoid driven gear.

(A) Hypoid driven gear

2) Drive out the straight pin from differential assembly toward hypoid driven gear.

ST 899904100 STRAIGHT PIN REMOVER

3) Pull out the pinion shaft, and remove the differential bevel pinion and gear and washer.

- (A) Pinion shaft
- (B) Bevel pinion
- (C) Bevel gear
- (D) Washer

4) Remove the roller bearing using ST.  
ST 899524100 PULLER SET

### 2. SIDE RETAINER

1) Remove the O-ring.

2) Remove the oil seal.

# Front Differential Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

**NOTE:**

Do not reuse the oil seal. Prepare a new oil seal.

### D: ASSEMBLY

#### 1. DIFFERENTIAL CASE ASSEMBLY

1) Install the differential bevel gear and differential bevel pinion together with washers, and insert pinion shaft.

**NOTE:**

Face the chamfered side of washer toward gear.

- (A) Differential bevel pinion
- (B) Differential bevel gear
- (C) Pinion shaft

2) Measure the backlash between differential bevel gear and pinion. If it is not within specifications, install a suitable washer to adjust it. <Ref. to 5MT-73, ADJUSTMENT, Front Differential Assembly.>

**NOTE:**

Be sure the pinion gear tooth contacts adjacent gear teeth during measurement.

- ST1 498247001 MAGNET BASE
- ST2 498247100 DIAL GAUGE

**Standard backlash:**

**0.13 — 0.18 mm (0.0051 — 0.0071 in)**

3) Align the pinion shaft and differential case at their holes, and drive the straight pin into holes from the hypoid driven gear side, using ST.

**NOTE:**

Lock the straight pin after installing.

ST 899904100 STRAIGHT PIN REMOVER

- (A) Pinion shaft
- (B) Differential case
- (C) Straight pin

4) Install the roller bearing to differential case.

**NOTE:**

- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
- Be careful because the roller bearing outer races are used as a set.

- ST1 499277100 BUSHING 1-2 INSTALLER
- ST2 398497701 ADAPTER

# Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

5) Install the hypoid driven gear to differential case using twelve bolts.

**Tightening torque:**

**T: 62 N·m (6.3 kgf-m, 45.6 ft-lb)**

- (A) Hypoid driven gear
- (B) Differential case

6) Set the drive axle shaft into differential case and hold it using outer spring. Measure the shaft to case clearance to check if it is within specifications using thickness gauge.

**NOTE:**

Replace the snap ring with suitable one, if the measurement is not within specifications.

| Snap ring (Outer) |                   |
|-------------------|-------------------|
| Part No.          | Thickness mm (in) |
| 805028011         | 1.05 (0.0413)     |
| 805028012         | 1.20 (0.0472)     |

**Clearance:**

**0 — 0.2 mm (0 — 0.008 in)**

## 2. SIDE RETAINER

1) Install a new oil seal.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

2) Install a new O-ring.

**NOTE:**

Do not stretch or damage the O-ring.

## E: INSPECTION

Repair or replace the differential gear in the following cases:

- The hypoid drive gear and drive pinion shaft tooth surface are damaged, excessively worn, or seized.
- The roller bearing on the drive pinion shaft has a worn or damaged roller path.
- There is damage, wear, or seizure of the differential bevel pinion, differential bevel gear, washer, pinion shaft, and straight pin.

# Front Differential Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

- The differential case has worn or damaged sliding surfaces.

- (A) Drive pinion shaft
- (B) Hypoid driven gear
- (C) Pinion shaft
- (D) Straight pin
- (E) Washer
- (F) Differential bevel gear
- (G) Differential bevel pinion
- (H) Roller bearing
- (I) Differential case

### 1. BEVEL PINION GEAR BACKLASH

Measure the backlash between differential bevel gear and pinion. If it is not within specifications, install a suitable washer to adjust it.

#### NOTE:

Be sure the pinion gear tooth contacts adjacent gear teeth during measurement.

- ST1 498247001 MAGNET BASE
- ST2 498247100 DIAL GAUGE

#### Standard backlash:

**0.13 — 0.18 mm (0.0051 — 0.0071 in)**

### 2. HYPOID GEAR BACKLASH

1) Set the ST1, ST2 and ST3. Insert the needle through transmission oil drain plug hole so that the needle comes in contact with the tooth surface at a right angle and check the backlash.

ST1 498247001 MAGNET BASE

ST2 498247100 DIAL GAUGE

ST3 498255400 PLATE

2) Install the axle shafts to both sides, rotate in the reverse direction so that the dial gauge contacts the tooth surface, and read the dial gauge.

Part No. 38415AA100AXLE SHAFT

#### Backlash:

**0.13 — 0.18 mm (0.0051 — 0.0071 in)**

#### NOTE:

If the backlash is outside specified range, adjust it by turning the holder in right side case.

### 3. TOOTH CONTACT OF HYPOID GEAR

Check the tooth contact of hypoid gear as follows: Apply a uniform thin coat of red lead on both tooth surfaces of 3 or 4 teeth of the hypoid gear. Move the hypoid gear back and forth by turning the transmission main shaft until a definite contact pattern is developed on hypoid gear, and judge whether face contact is correct. If it is inaccurate, make adjustment. <Ref. to 5MT-73, ADJUSTMENT, Front Differential Assembly.>

# Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

- Tooth contact is correct.

- (A) Toe
- (B) Coast side
- (C) Heel
- (D) Drive side

## F: ADJUSTMENT

### 1. BEVEL PINION GEAR BACKLASH

- 1) Disassemble the front differential. <Ref. to 5MT-68, REMOVAL, Front Differential Assembly.>
- 2) Select a differential washer from the table and install.

| Washer    |                                    |
|-----------|------------------------------------|
| Part No.  | Thickness mm (in)                  |
| 803038021 | 0.925 — 0.950<br>(0.0364 — 0.0374) |
| 803038022 | 0.975 — 1.000<br>(0.0384 — 0.0394) |
| 803038023 | 1.025 — 1.050<br>(0.0404 — 0.0413) |

- 3) Adjust until the specified value is obtained.

#### Standard backlash:

**0.13 — 0.18 mm (0.0051 — 0.0071 in)**

### 2. HYPOID GEAR BACKLASH

Adjust backlash by turning the holder in right side case.

ST 18630AA010 WRENCH COMPL RETAINER

#### NOTE:

Each time holder rotates one tooth, backlash changes by 0.05 mm (0.020 in).

### 3. TOOTH CONTACT OF HYPOID GEAR

- 1) Adjust until the tooth contact is correct.
- 2) Check and adjust the tooth contact with following.

- Tooth contact

**Checking item: Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]**

- (A) Toe side
- (B) Heel side

- Face contact

**Checking item: Backlash is too large.**

Contact pattern

# Front Differential Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

Corrective action: Reduce thickness of pinion height adjusting washer in order to bring drive pinion close to driven gear.

- Flank contact

**Checking item: Backlash is too small.**  
Contact pattern

Corrective action: Increase thickness of pinion height adjusting washer in order to move drive pinion away from driven gear.

Corrective action: Increase thickness of pinion height adjusting washer in order to bring drive pinion close to driven gear.

- Heel contact (Outside end contact)

**Checking item: Contact area is small.**  
Contact pattern

Corrective action: Reduce thickness of pinion height adjusting washer in order to move drive pinion away from driven gear.

- Toe contact (Inside end contact)

**Checking item: Contact area is small.**  
Contact pattern

# Speedometer Gear

MANUAL TRANSMISSION AND DIFFERENTIAL

## 19.Speedometer Gear

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-36, REMOVAL, Switches and Harness.>
- 3) Remove the transfer case with extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the transmission case. <Ref. to 5MT-52, REMOVAL, Transmission Case.>
- 5) Remove the vehicle speed sensor. <Ref. to 5MT-38, REMOVAL, Vehicle Speed Sensor.>
- 6) Remove the outer snap ring and pull out speedometer driven gear. Next, remove the oil seal, speedometer shaft and washer.

- (A) Outer snap ring  
(B) Speedometer driven gear

### B: INSTALLATION

- 1) Install the washer and speedometer shaft, and press fit the oil seal with ST.

#### NOTE:

Use a new oil seal, if it has been removed.

ST 899824100 or 499827000 PRESS

- 2) Install the vehicle speed sensor. <Ref. to 5MT-38, INSTALLATION, Vehicle Speed Sensor.>
- 3) Install the speedometer driven gear and snap ring.

#### NOTE:

Use a new snap ring, if it has been removed.

- (A) Outer snap ring  
(B) Speedometer driven gear

- 4) Install the transmission case. <Ref. to 5MT-52, INSTALLATION, Transmission Case.>
- 5) Install the transfer case with extension case assembly. <Ref. to 5MT-40, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 6) Install the back-up light switch and neutral position switch. <Ref. to 5MT-36, INSTALLATION, Switches and Harness.>
- 7) Install the manual transmission assembly to vehicle. <Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

### C: INSPECTION

Check the speedometer gear, oil seal and speedometer shaft for damage. Replace if damaged.

# Reverse Idler Gear

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 20. Reverse Idler Gear

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-36, REMOVAL, Switches and Harness.>
- 3) Remove the transfer case with extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the transmission case. <Ref. to 5MT-60, REMOVAL, Drive Pinion Shaft Assembly.>
- 5) Remove the drive pinion shaft assembly. <Ref. to 5MT-60, REMOVAL, Drive Pinion Shaft Assembly.>
- 6) Remove the main shaft assembly. <Ref. to 5MT-55, REMOVAL, Main Shaft Assembly.>
- 7) Remove the differential assembly. <Ref. to 5MT-68, REMOVAL, Front Differential Assembly.>
- 8) Remove the shifter forks and rods. <Ref. to 5MT-78, REMOVAL, Shifter Fork and Rod.>
- 9) Pull out the straight pin, and remove the reverse idler gear shaft, reverse idler gear and washer.

- (A) Straight pin
- (B) Reverse idler gear shaft
- (C) Reverse idler gear
- (D) Washer

- 10) Remove the reverse shifter lever.

#### B: INSTALLATION

- 1) Install the reverse shifter lever, reverse idler gear and reverse idler gear shaft, and secure with straight pin.

#### NOTE:

Be sure to install the reverse idler shaft from rear side.

- (A) Reverse shifter lever
- (B) Reverse idler gear
- (C) Reverse idler gear shaft
- (D) Straight pin

- 2) Inspect and adjust the clearance between reverse idler gear and transmission case wall. <Ref. to 5MT-76, INSTALLATION, Reverse Idler Gear.> <Ref. to 5MT-77, ADJUSTMENT, Reverse Idler Gear.>
- 3) Install the shifter forks and rods. <Ref. to 5MT-78, INSTALLATION, Shifter Fork and Rod.>
- 4) Install the differential assembly. <Ref. to 5MT-68, INSTALLATION, Front Differential Assembly.>
- 5) Install the main shaft assembly. <Ref. to 5MT-55, INSTALLATION, Main Shaft Assembly.>
- 6) Install the drive pinion shaft assembly. <Ref. to 5MT-60, INSTALLATION, Drive Pinion Shaft Assembly.>
- 7) Install the transmission case. <Ref. to 5MT-52, INSTALLATION, Transmission Case.>
- 8) Install the transfer case with extension case assembly. <Ref. to 5MT-40, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 9) Install the back-up light switch and neutral position switch. <Ref. to 5MT-36, INSTALLATION, Switches and Harness.>
- 10) Install the manual transmission assembly to vehicle. <Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

# Reverse Idler Gear

MANUAL TRANSMISSION AND DIFFERENTIAL

## C: INSPECTION

1) Move the reverse shifter rod toward the reverse side. Inspect the clearance between reverse idler gear and transmission case wall.

If out of specification, select the appropriate reverse shifter lever and adjust.

### Clearance A:

**6.0 — 7.5 mm (0.236 — 0.295 in)**

2) After installing a suitable reverse shifter lever, shift into neutral. Inspect the clearance between reverse idler gear and transmission case wall.

If out of specification, select the appropriate washer and adjust.

### Clearance:

**0 — 0.5 mm (0 — 0.020 in)**

3) Check the reverse idler gear and shaft for damage. Replace if damaged.

## D: ADJUSTMENT

1) Select the appropriate reverse shifter lever from the table below, and adjust until the gap between the reverse idler gear and transmission case wall is within specification.

### Clearance A:

**6.0 — 7.5 mm (0.236 — 0.295 in)**

| Reverse shifter lever |      |                        |
|-----------------------|------|------------------------|
| Part No.              | Mark | Remarks                |
| 32820AA070            | 7    | Further from case wall |
| 32820AA080            | 8    | Standard               |
| 32820AA090            | 9    | Closer to case wall    |

2) Select the appropriate washer from the table below, and adjust until the gap between the reverse idler gear and transmission case wall is within specification.

### Clearance:

**0 — 0.5 mm (0 — 0.020 in)**

| Washer    |                   |
|-----------|-------------------|
| Part No.  | Thickness mm (in) |
| 803020151 | 0.4 (0.016)       |
| 803020152 | 1.1 (0.043)       |
| 803020153 | 1.5 (0.059)       |
| 803020154 | 1.9 (0.075)       |
| 803020155 | 2.3 (0.091)       |

# Shifter Fork and Rod

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 21. Shifter Fork and Rod

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the back-up light switch and neutral position switch. <Ref. to 5MT-36, REMOVAL, Switches and Harness.>
- 3) Remove the transfer case with extension case assembly. <Ref. to 5MT-40, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the transmission case. <Ref. to 5MT-52, REMOVAL, Transmission Case.>
- 5) Remove the drive pinion shaft assembly. <Ref. to 5MT-60, REMOVAL, Drive Pinion Shaft Assembly.>
- 6) Remove the main shaft assembly. <Ref. to 5MT-55, REMOVAL, Main Shaft Assembly.>
- 7) Remove the differential assembly. <Ref. to 5MT-68, REMOVAL, Front Differential Assembly.>
- 8) Drive out the straight pin with ST, and 5th shifter fork.

ST 398791700 STRAIGHT PIN REMOVER

- (A) Straight pin
- (B) 5th shifter fork

- 9) Remove the plugs, springs and checking balls.
- 10) Drive out the straight pin, and pull out 3rd-4th fork rod and shifter fork.

#### NOTE:

When removing the rod, keep other rods in neutral. Also, when pulling out the straight pin, remove it toward the inside of case so that it does not hit against the case.

- (A) Straight pin
- (B) 3rd-4th fork rod
- (C) Shifter fork

- 11) Drive out the straight pin, and pull out 1st-2nd fork rod and shifter fork.

12) Remove the outer snap ring, and pull out the reverse shifter rod arm and reverse fork rod. Then take out the ball, spring and interlock plunger from rod.

And then remove the rod.

#### NOTE:

When pulling out the reverse shifter rod arm, be careful not to let the ball pop out of arm.

- 13) Remove the reverse shifter lever.

#### B: INSTALLATION

1) Install the reverse arm fork spring, ball and interlock plunger to reverse fork rod arm. Insert the reverse fork rod into hole in reverse fork rod arm, and hold it with outer snap ring using ST.

#### NOTE:

Apply grease to plunger to prevent it from falling.

ST 399411700 ACCENT BALL INSTALLER

2) Position the ball, spring and new gasket in reverse shifter rod hole, on left side transmission case, and tighten the checking ball plug.

3) Install the 1st-2nd fork rod into 1st-2nd shifter fork via the hole on the rear of transmission case.

4) Align the holes in rod and fork, and new drive straight pin into these holes using ST.

#### NOTE:

- Set other rods to neutral.
- Make sure the interlock plunger is on the 3rd-4th fork rod side.

ST 398791700 STRAIGHT PIN REMOVER

- 5) Install the interlock plunger onto 3rd-4th fork rod.

# Shifter Fork and Rod

MANUAL TRANSMISSION AND DIFFERENTIAL

**NOTE:**

Apply a coat of grease to plunger to prevent it from falling.

6) Install the 3rd-4th fork rod into 3rd-4th shifter fork via the hole on the rear of transmission case.

7) Align the holes in rod and fork, and new drive straight pin into these holes.

**NOTE:**

- Set the reverse fork rod to neutral.
- Make sure the interlock plunger to be installed is on the reverse fork rod side.

ST 398791700 STRAIGHT PIN REMOVER

8) Install the 5th shifter fork onto the rear of reverse fork rod. Align holes in the two parts and new drive straight pin into place.

ST 398791700 STRAIGHT PIN REMOVER

- (A) 5th shifter fork
- (B) Reverse fork rod
- (C) Straight pin

9) Position the balls, checking ball springs and new gaskets into 3rd-4th and 1st-2nd rod holes, and install plugs.

**Tightening torque:**

**20 N·m (2.0 kgf·m, 14.5 ft·lb)**

10) Install the differential assembly. <Ref. to 5MT-68, INSTALLATION, Front Differential Assembly.>

11) Install the main shaft assembly.

<Ref. to 5MT-55, INSTALLATION, Main Shaft Assembly.>

12) Install the drive pinion shaft assembly. <Ref. to 5MT-60, INSTALLATION, Drive Pinion Shaft Assembly.>

13) Install the transmission case. <Ref. to 5MT-52, INSTALLATION, Transmission Case.>

14) Install the transfer case with extension case assembly. <Ref. to 5MT-40, INSTALLATION, Transfer Case and Extension Case Assembly.>

15) Install the back-up light switch and neutral position switch. <Ref. to 5MT-36, INSTALLATION, Switches and Harness.>

16) Install the manual transmission assembly to vehicle. <Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

**C: INSPECTION**

1) Check the shift shaft and shift rod for damage. Replace if damaged.

2) Gearshift mechanism:

Repair or replace the gearshift mechanism if excessively worn, bent, or defective in any way.

3) Inspect the clearance between 1st, 2nd driven gear and reverse driven gear. If any clearance is not within specifications, replace the shifter fork as required.

**Clearance (a) and (b):**  
**9.5 mm (0.374 in)**

- (A) 1st driven gear
- (B) Reverse driven gear
- (C) 2nd driven gear

| 1st-2nd shifter fork |         |  |
|----------------------|---------|--|
| Part No.             | Mark    | Remarks  |
| 32804AA060           | 1       | Approach to 1st gear by 0.2 mm (0.008 in).         |
| 32804AA070           | No mark | Standard   |
| 32804AA080           | 3       | Become distant from 2nd gear by 0.2 mm (0.008 in). |

4) Inspect the clearance between 3rd, 4th drive gear and coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

# Shifter Fork and Rod

## MANUAL TRANSMISSION AND DIFFERENTIAL

**Clearance (a) and (b):**  
**9.3 mm (0.366 in)**

- (A) 3rd drive gear
- (B) Coupling sleeve
- (C) 4th drive gear

| 3rd-4th shifter fork |         |  |
|----------------------|---------|--|
| Part No.             | Mark    | Remarks  |
| 32810AA061           | 1       | Approach to 4th gear by 0.2 mm (0.008 in).         |
| 32810AA071           | No mark | Standard   |
| 32810AA101           | 3       | Become distant from 3rd gear by 0.2 mm (0.008 in). |

5) Inspect the clearance between 5th drive gear and coupling sleeve. If any clearance is not within specifications, replace the shifter fork as required.

**Clearance (a):**  
**9.3 mm (0.366 in)**

- (A) 5th drive gear
- (B) Coupling sleeve

| 5th shifter fork (Non-turbo model) |         |  |
|------------------------------------|---------|--|
| Part No.                           | Mark    | Remarks  |
| 32812AA201                         | 7       | Approach to 5th gear by 0.2 mm (0.008 in).         |
| 32812AA211                         | No mark | Standard   |
| 32812AA221                         | 9       | Become distant from 5th gear by 0.2 mm (0.008 in). |

| 5th shifter fork (Turbo model) |         |  |
|--------------------------------|---------|--|
| Part No.                       | Mark    | Remarks  |
| 32812AA231                     | 7       | Approach to 5th gear by 0.2 mm (0.008 in).         |
| 32812AA241                     | No mark | Standard   |
| 32812AA251                     | 9       | Become distant from 5th gear by 0.2 mm (0.008 in). |

6) Inspect the rod end clearances (A) and (B). If any clearance is not within specifications, replace the rod or fork as required.

**Clearance (A):**  
**3rd-4th to 5th:**  
**0.5 — 1.3 mm (0.020 — 0.051 in)**

**Clearance (B):**  
**1st-2nd to 3rd-4th:**  
**0.4 — 1.4 mm (0.016 — 0.055 in)**

# General Diagnostic Table

MANUAL TRANSMISSION AND DIFFERENTIAL

## 22. General Diagnostic Table

### A: INSPECTION

#### 1. MANUAL TRANSMISSION

| Symptom   | Possible cause  | Remedy                                   |
|---|---|--|
| 1. Gears are difficult to intermesh.<br>NOTE:<br>The cause for difficulty in shifting gears can be classified into two kinds: one is malfunction of the gear shift system and the other is malfunction of the transmission. However, if the operation is heavy and engagement of the gears is difficult, defective clutch disengagement may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission. | (a) Worn, damaged or burred chamfer of internal spline of sleeve and reverse driven gear  | Replace.                                 |
|   | (b) Worn, damaged or burred chamfer of spline of gears  | Replace.                                 |
|   | (c) Worn or scratched bushings  | Replace.                                 |
|   | (d) Incorrect contact between synchronizer ring and gear cone or wear   | Correct or replace.                      |
| 2. Gear slips out.<br>• Gear slips out when coasting on rough road.<br>• Gear slips out during acceleration.  | (a) Defective pitching stopper adjustment   | Adjust.                                  |
|   | (b) Loose engine mounting bolts   | Tighten or replace.                      |
|   | (c) Worn fork shifter, broken shifter fork rail spring  | Replace.                                 |
|   | (d) Worn or damaged ball bearing  | Replace.                                 |
|   | (e) Excessive clearance between splines of synchronizer hub and synchronizer sleeve   | Replace.                                 |
|   | (f) Worn tooth step of synchronizer hub (responsible for slip-out of 3rd gear)  | Replace.                                 |
|   | (g) Worn 1st driven gear and driven shaft   | Replace.                                 |
|   | (h) Worn 2nd driven gear and bushing  | Replace.                                 |
|   | (i) Worn 3rd drive gear and needle bearing  | Replace.                                 |
|   | (j) Worn 4th drive gear and needle bearing  | Replace.                                 |
|   | (k) Worn reverse idler gear and bushing   | Replace.                                 |
| 3. Noise comes from transmission.<br>NOTE:<br>If an noise is heard when the vehicle is parked with its engine idling and if the noise ceases when the clutch is disengaged, it may be considered that the noise comes from the transmission.  | (a) Insufficient or improper lubrication  | Lubricate with specified oil or replace. |
|   | (b) Worn or damaged gears and bearings<br>NOTE:<br>If the trouble is only wear of the tooth surfaces, merely a high roaring noise will occur at high speeds, but if any part is broken, rhythmical knocking sound will be heard even at low speeds. | Replace.                                 |

# General Diagnostic Table

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 2. DIFFERENTIAL

| Symptom   | Possible cause  | Remedy  |
|---|---|---|
| <p>1. Broken differential (case, gear, bearing, etc.)</p> <p>NOTE:<br/>Noise will develop and finally it will become impossible to continue to run due to broken pieces obstructing the gear revolution.</p>  | (a) Insufficient or improper oil  | Disassemble the differential and replace broken components and at the same time check other components for any trouble, and replace if necessary. |
|   | (b) Use of vehicle under severe conditions such as excessive load and improper use of clutch  | Readjust the bearing preload and backlash and face contact of gears.  |
|   | (c) Improper adjustment of taper roller bearing   | Adjust.   |
|   | (d) Improper adjustment of drive pinion and hypoid driven gear  | Adjust.   |
|   | (e) Excessive backlash due to worn differential side gear, washer or differential pinion vehicle under severe operating conditions. | Add recommended oil to specified level. Do not use the vehicle under severe operating conditions.   |
|   | (f) Loose hypoid driven gear clamping bolts   | Tighten.  |
| <p>2. Differential and hypoid gear noises</p> <p>Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise is the first indication of the trouble. However noises from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for the differential noise. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following four kinds of noises.</p> <ul style="list-style-type: none"> <li>• Gear noise when driving: If noise increases as vehicle speed increases it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc.</li> <li>• Gear noise when coasting: Damaged gears due to maladjusted bearings and incorrect shim adjustment</li> <li>• Bearing noise when driving or when coasting: Cracked, broken or damaged bearings</li> <li>• Noise which mainly occurs when turning: Unusual noise from differential side gear, differential pinion, differential pinion shaft, etc.</li> </ul> | (a) Insufficient oil  | Lubricate.  |
|   | (b) Improper adjustment of hypoid driven gear and drive pinion  | Check tooth contact.  |
|   | (c) Worn teeth of hypoid driven gear and drive pinion   | Replace as a set.<br>Readjust the bearing preload.  |
|   | (d) Loose roller bearing  | Readjust the hypoid driven gear to drive pinion backlash and check tooth contact.   |
|   | (e) Distorted hypoid driven gear or differential case   | Replace.  |
|   | (f) Worn washer and differential pinion shaft   | Replace.  |

# General Description

MANUAL TRANSMISSION AND DIFFERENTIAL

## C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation, and disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, use a plastic hammer to force it apart. Do not pry it apart with a screwdriver or other tool.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use SUBARU genuine gear oil, grease etc. or the equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.

- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil onto sliding or revolution surfaces before installation.
- Replace deformed or otherwise damaged snap rings with new ones.
- Before installing O-rings or oil seals, apply sufficient amount of gear oil to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate or shop cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying sealant, completely remove the old seal.

# Transmission Gear Oil

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 2. Transmission Gear Oil

#### A: INSPECTION

- 1) Park the vehicle on a level surface.
- 2) Turn the ignition switch to OFF, and wait until the engine cools.
- 3) Remove the oil level gauge and wipe it clean.
- 4) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper direction.
- 5) Pull out the oil level gauge again and record the oil level. If it is below the lower level, add oil through the oil level gauge hole to bring the level up to the upper level.

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

#### B: REPLACEMENT

- 1) Pull out the oil level gauge.
- 2) Lift-up the vehicle.
- 3) Remove the transmission under cover.
- 4) Drain the transmission gear oil completely.

#### CAUTION:

**Directly after the vehicle has been running or the engine has been long idle running, the transmission gear oil is hot. Be careful not to burn yourself.**

#### NOTE:

- Tighten the transmission gear oil drain plug after draining transmission gear oil.
- Use a new gasket.

#### Tightening torque:

##### Oil pan side

**44 N·m (4.5 kgf-m, 32.5 ft-lb)**

##### Clutch housing side

**70 N·m (7.1 kgf-m, 51.6 ft-lb)**

- (A) Drain plug (Oil pan side)
- (B) Drain plug (Clutch housing side)

- 5) Lower the vehicle.
- 6) Pour gear oil into the gauge hole.

#### Recommended gear oil:

**Use GL-5 or equivalent.**

#### Gear oil capacity:

**4.1 ℓ (4.3 US qt, 3.6 Imp qt)**

- 7) Check the level of the transmission gear oil.

#### NOTE:

- When inserting the level gauge into transmission gear, align the protrusion on the side of the top part of the level gauge with the notch in the gauge hole.
- The gear oil level should be within the specified range marked on the level gauge.

## 3. Oil Seal

### A: INSPECTION

Inspect for oil leakage from the oil seal. Replace the oil seal if the lips is deformed, hardened, damaged, worn or defective if any.

### B: REPLACEMENT

- 1) Clean the transmission exterior.
- 2) Drain the gear oil completely.

**NOTE:**

- Tighten the drain plug after draining gear oil.
- Use a new gasket.

**Tightening torque:**

**Oil pan side**

**44 N·m (4.5 kgf·m, 32.5 ft·lb)**

**Clutch housing side**

**70 N·m (7.1 kgf·m, 51.6 ft·lb)**

- (A) Drain plug (Oil pan side)  
 (B) Drain plug (Clutch housing side)

- 3) Remove the rear exhaust pipe and muffler.
- 4) Remove the propeller shaft. <Ref. to DS-16, REMOVAL, Propeller Shaft.>
- 5) Using the ST, remove the oil seal.

ST 398527700 PULLER ASSY

- (A) Oil seal

- 6) Using the ST, install the oil seal.

ST 498057300 INSTALLER

- 7) Install the propeller shaft. <Ref. to DS-17, INSTALLATION, Propeller Shaft.>
- 8) Install the rear exhaust pipe and muffler.
- 9) Pour gear oil and check the oil level. <Ref. to 6MT-30, REPLACEMENT, Transmission Gear Oil.>

# Differential Side Retainer Oil Seal

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 4. Differential Side Retainer Oil Seal

#### A: INSPECTION

Inspect for oil leakage from the differential side retainer oil seal. If there is oil leakage, perform the following procedure.

- Replace the oil seal.
- Check the front drive shaft.

#### B: REPLACEMENT

- 1) Lift-up the vehicle.
- 2) Remove the front and center exhaust pipes. <Ref. to EX(H4DOTC)-8, REMOVAL, Front Exhaust Pipe.>
- 3) Drain the gear oil from drain plug.

#### CAUTION:

- **Directly after the vehicle has been running or the engine has been long idle running, the differential gear oil is hot. Be careful not to burn yourself.**
- **Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. When the differential gear oil is spilled on exhaust pipe, wipe it away completely.**

- (A) Drain plug (Oil pan side)  
(B) Drain plug (Clutch housing side)

- 4) Tighten the drain plug.

#### NOTE:

Use a new gasket.

#### Tightening torque:

##### Oil pan side

**44 N·m (4.5 kgf·m, 32.5 ft·lb)**

##### Clutch housing side

**70 N·m (7.1 kgf·m, 51.6 ft·lb)**

- 5) Separate the front drive shaft from transmission. <Ref. to DS-33, REMOVAL, Front Drive Shaft.>
- 6) Remove the differential side retainer oil seal using driver wrapped with vinyl tape or etc.
- 7) Using the ST, install the differential side retainer by slightly tapping with hammer.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

- 8) Apply gear oil to the oil seal lips.

- 9) Set ST to side retainer.

ST 28399SA010 OIL SEAL PROTECTOR

- 10) Install the front drive shaft into transmission.

#### NOTE:

Replace the circlip of drive shaft with a new one.

- 11) Install the front drive shaft into transmission, remove the ST and insert the drive shaft securely.

ST 28399SA010 OIL SEAL PROTECTOR

- 12) Install the front and center exhaust pipes. <Ref. to EX(H4DOTC)-8, INSTALLATION, Front Exhaust Pipe.>

- 13) Lower the vehicle.

- 14) Pour gear oil through the oil level gauge hole.

#### Recommended gear oil:

<Ref. to 6MT-2, TRANSMISSION GEAR OIL, SPECIFICATION, General Description.>

#### Gear oil capacity:

**4.1 ℓ (4.3 US qt, 3.6 Imp qt)**

- 15) Check the level of the gear oil. <Ref. to 6MT-30, INSPECTION, Transmission Gear Oil.>

## 5. Vehicle Speed Sensor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 3) Disconnect the vehicle speed sensor connector.

- 4) Remove the vehicle speed sensor.

### B: INSTALLATION

- 1) Align the tip end of vehicle speed sensor key with key groove on the end of speedometer driven gear shaft, and then install it.

#### **Tightening torque:**

**5.9 N·m (0.6 kgf-m, 4.4 ft-lb)**

#### **NOTE:**

- Ensure the sensor mounting hole is clean and free of foreign matter.
- Discard the vehicle speed sensor after removal, and replace it with a new one.

- 2) Connect the connector to vehicle speed sensor.
- 3) Install the intercooler. <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

### C: INSPECTION

Inspect that the speedometer is normally operated, because vehicle speed sensor cannot be inspected as a single part. If it is not normally operated, inspect the combination meter system. <Ref. to IDI-3, INSPECTION, Combination Meter System.>

# Transmission Mounting System

MANUAL TRANSMISSION AND DIFFERENTIAL

## 6. Transmission Mounting System

### A: REMOVAL

#### 1. PITCHING STOPPER

- 1) Disconnect the ground cable from battery.
- 2) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 3) Remove the pitching stopper.

#### 2. CROSSMEMBER AND CUSHION RUBBER

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle.
- 3) Remove the center exhaust pipe. <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>
- 4) Remove the rear exhaust pipe and muffler.
- 5) Set the transmission jack under the transmission body.

#### CAUTION:

**Always support the transmission case with a transmission jack.**

- 6) Remove the rear crossmember.

- 7) Remove the rear cushion rubber.

### B: INSTALLATION

#### 1. PITCHING STOPPER

- 1) Install the pitching stopper.

#### Tightening torque:

**T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)**

**T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)**

- 2) Install the intercooler. <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>
- 3) Connect the battery ground cable to battery.

#### 2. CROSSMEMBER AND CUSHION RUBBER

- 1) Install the rear cushion rubber.

#### Tightening torque:

**35 N·m (3.6 kgf-m, 25.8 ft-lb)**

- 2) Install the crossmember.

#### Tightening torque:

**T1: 70 N·m (7.1 kgf-m, 51.6 ft-lb)**

**T2: 140 N·m (14.3 kgf-m, 103 ft-lb)**

- 3) Remove the transmission jack.
- 4) Install the center exhaust pipe. <Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.>
- 5) Install the rear exhaust pipe and muffler. <Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>

## **C: INSPECTION**

Repair or replace parts if the results of the inspection below are not satisfactory.

### **1. PITCHING STOPPER**

Make sure that the pitching stopper is not bent or damaged. Make sure that the rubber is not stiff, cracked, or otherwise damaged.

### **2. CROSSMEMBER AND CUSHION RUBBER**

Make sure that the crossmember is not bent or damaged. Make sure that the cushion rubber is not stiff, cracked, or otherwise damaged.

# Manual Transmission Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 7. Manual Transmission Assembly

#### A: REMOVAL

1) Set the vehicle on a lift, and then open the front hood and support it with hood stay.

#### NOTE:

Set the hood stay to its specified hole.

2) Remove the front wheel.

3) Disconnect the ground cable from battery.

4) Remove the intercooler assembly. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>

5) Lift-up the vehicle, and then remove the under cover.

6) Remove the steering universal joint. <Ref. to PS-21, REMOVAL, Universal Joint.>

7) Lower the vehicle and disconnect the connector located on upper side of transmission.

- (A) Transmission connector
- (B) Vehicle speed sensor connector

8) Disconnect the ground cable at upper side of transmission case and body.

9) Remove the starter assembly. <Ref. to SC(H4SO)-8, REMOVAL, Starter.>

10) Remove the operating cylinder.

#### NOTE:

Hang the removed operating cylinder with a wire, etc.

11) Remove the clutch release shaft.

(1) Remove the plug with hexagon wrench.

(2) Install a 6 mm bolt to the release shaft, then pull out the release shaft.

(3) Lift up the release fork, and then remove it from the release bearing claw. Pull it to the engine side and set it free.

12) Remove the throttle body. <Ref. to FU(STI)-12, REMOVAL, Throttle Body.>

13) Remove the pitching stopper, and then remove the pitching stopper bracket.

# Manual Transmission Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

- 14) Set the ST.  
ST 41099AC000 ENGINE SUPPORT

- 15) Remove the center and rear exhaust pipe and muffler. <Ref. to EX(H4DOTC)-10, REMOVAL, Center Exhaust Pipe.>, <Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.>, <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>  
16) Drain the transmission gear oil. <Ref. to 6MT-30, Transmission Gear Oil.>  
17) Remove the propeller shaft. <Ref. to DS-16, REMOVAL, Propeller Shaft.>  
18) Remove the front stabilizer bolt.

- 19) Remove the ball joint of transverse link from housing.

- 20) Remove the front drive shaft. <Ref. to DS-33, REMOVAL, Front Drive Shaft.>  
21) Remove the front drive shaft, then take the front drive shaft.

- 22) Set the transmission jack under the transmission, then remove the front crossmember and rear crossmember.

- 23) Move the transmission to right side, then remove the joint COMPL, stay bolt and reverse check cable.

**NOTE:**

If the transmission is not moved, the joint COMPL and stay bolt will contact body and damage may occur.

- (A) Joint COMPL bolt  
(B) Stay bolt  
(C) Reverse check cable

- 24) Remove the fixing bolt of engine and transmission, then remove the transmission from vehicle.

**NOTE:**

- Rotate the turn buckle of ST (ENGINE SUPPORT ASSY) and lower the rear side of engine to facilitate removal.
- Take care not to contact the transmission with body when pulling backward to remove.

# Manual Transmission Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

- Remove the clutch pipe and breather pipe carefully which may interfere each other.

- 25) Remove the crossmember from transmission.

### B: INSTALLATION

- 1) Set the release fork, release bearing and release shaft to transmission. <Ref. to CL-18, INSTALLATION, Release Bearing and Lever.>
- 2) Install the crossmember to transmission.

#### Tightening torque:

**35 N·m (3.6 kgf-m, 25.8 ft-lb)**

- 3) Install the transmission.

#### NOTE:

- Make sure the main shaft spline part is inserted completely.
- Make sure the rear side of engine is lowered.

#### Tightening torque:

**50 N·m (5.1 kgf-m, 36.9 ft-lb)**

- 4) Move the transmission to the right side, then install the joint COMPL bolt, stay bolt and reverse check cable.

#### Tightening torque:

**T1: 11.8 N·m (1.2 kgf-m, 8.7 ft-lb)**

**T2: 32 N·m (3.3 kgf-m, 23.6 ft-lb)**

(A) Reverse check cable

- 5) Install the front crossmember and rear crossmember.

#### NOTE:

Rotate the turn buckle of ST (ENGINE SUPPORT ASSY) and lift up the rear side of engine to facilitate installation.

# Manual Transmission Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

## Tightening torque:

**T1: 70 N·m (7.1 kgf-m, 51.6 ft-lb)**

**T2: 140 N·m (14.3 kgf-m, 103 ft-lb)**

6) Lower the vehicle and install the fixing bolt.

## Tightening torque:

**50 N·m (5.1 kgf-m, 36.9 ft-lb)**

7) Make sure the release bearing is installed completely.

## NOTE:

- Push the release fork to operating cylinder side until you hear a “click” sound. Pull the release fork to engine side. Setting is completed if the release fork does not contact the case.
- Make sure the boot cover is firmly set.

8) Install the pitching stopper bracket.

## Tightening torque:

**41 N·m (4.2 kgf-m, 30.2 ft-lb)**

9) Install the pitching stopper.

## Tightening torque:

**T1: 50 N·m (5.1 kgf-m, 36.9 ft-lb)**

**T2: 58 N·m (5.9 kgf-m, 42.8 ft-lb)**

10) Install the throttle body. <Ref. to FU(STI)-12, INSTALLATION, Throttle Body.>

11) Install the operating cylinder.

## Tightening torque:

**41 N·m (4.2 kgf-m, 30.2 ft-lb)**

## NOTE:

Check that the clutch hose is routed properly.

12) Install the starter assembly.

## Tightening torque:

**50 N·m (5.1 kgf-m, 36.9 ft-lb)**

# Manual Transmission Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

13) Install the transmission and body ground cable.

14) Connect the connector located on the upper side of transmission.

- (A) Transmission connector  
(B) Vehicle speed sensor connector

15) Replace the front differential side retainer oil seal.

(1) Remove the oil seal by using flat tip screwdriver and etc.

(2) Fit a new oil seal using ST.

ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

### NOTE:

- Apply oil to the oil seal lips.
- Always replace the differential side oil seal after extracting front drive shaft from the transmission.

16) Apply grease to the oil seal lips.

17) Set the ST to the differential side retainer.

ST 28399SA010 OIL SEAL PROTECTOR

18) Install the front drive shaft into transmission.

### NOTE:

Replace the circlip of drive shaft with a new one.

19) Install the front drive shaft into transmission, remove the ST and insert the drive shaft securely.

ST 28399SA010 OIL SEAL PROTECTOR

20) Install the ball joint of transverse link to housing.

### Tightening torque:

**50 N·m (5.1 kgf-m, 36.9 ft-lb)**

21) Install the stabilizer nut.

### Tightening torque:

**45 N·m (4.6 kgf-m, 33.2 ft-lb)**

### NOTE:

Use a new self-locking nut.

22) Install the propeller shaft. <Ref. to DS-17, INSTALLATION, Propeller Shaft.>

23) Install the center exhaust pipe. <Ref. to EX(H4DOTC)-11, INSTALLATION, Center Exhaust Pipe.>

# Manual Transmission Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

---

- 24) Install the rear exhaust pipe and muffler. <Ref. to EX(H4DOTC)-15, INSTALLATION, Rear Exhaust Pipe.>, <Ref. to EX(H4DOTC)-16, INSTALLATION, Muffler.>
- 25) Install the universal joint. <Ref. to PS-21, INSTALLATION, Universal Joint.>
- 26) Install the under cover.
- 27) Install the intercooler assembly. <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>
- 28) Connect the battery ground cable to battery.

# Preparation for Overhaul

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 8. Preparation for Overhaul

#### A: PROCEDURE

- 1) Clean oil, grease, dirt and dust from transmission.
- 2) Remove the drain plug to drain oil. After draining, retighten it as before.

**NOTE:**

Replace the gasket with a new one.

**Tightening torque:**

**Oil pan side**

**44 N·m (4.5 kgf-m, 32.5 ft-lb)**

**Clutch housing side**

**70 N·m (7.1 kgf-m, 51.6 ft-lb)**

- (A) Drain plug (Oil pan side)
- (B) Drain plug (Clutch housing side)

- 3) Attach the transmission to ST.  
ST 18632AA000 STAND ASSY

- 4) Rotating parts should be coated with oil prior to assembly.
- 5) All disassembled parts, if to be reused, should be reinstalled in the original positions and directions.
- 6) Gaskets, lock washers and lock nut must be replaced with new ones.
- 7) Liquid gasket should be used where specified to prevent leakage.

## 9. Air Breather Hose

### A: REMOVAL

Disconnect the air breather hose.

### B: INSTALLATION

Install the air breather hose.

#### NOTE:

Install so that the hose is not folded over, excessively bent or twisted.

### C: INSPECTION

Make sure the hose is not cracked or clogged.

## 10.Oil Pipe

### A: REMOVAL

Remove the oil pipe.

NOTE:

Use a new gasket.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Use a new gasket.

**Tightening torque:**

**32 N·m (3.3 kgf·m, 23.6 ft·lb)**

### C: INSPECTION

- 1) Make sure there is no damage on pipe. If there is damage, replace the pipe.
- 2) Check the joint parts of pipe for oil leakage. If there is oil leakage, replace the gasket.

# Back-up Light Switch

MANUAL TRANSMISSION AND DIFFERENTIAL

## 11. Back-up Light Switch

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Disconnect the back-up light switch connector.

- (A) Back-up light switch connector (White)
- (B) Neutral position switch connector (Black)
- (C) Clip

- 3) Remove the back-up light switch.

- (A) Back-up light switch
- (B) Neutral position switch

### B: INSTALLATION

- 1) Install the back-up light switch.

#### Tightening torque:

**32 N·m (3.3 kgf·m, 23.6 ft·lb)**

- (A) Back-up light switch
- (B) Neutral position switch

- 2) Connect the back-up light switch connector.

- (A) Back-up light switch connector (White)
- (B) Neutral position switch connector (Black)
- (C) Clip

- 3) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

### C: INSPECTION

- 1) Disconnect the ground cable from battery.
- 2) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 3) Disconnect the transmission harness and chassis harness.

- (A) Transmission connector

- 4) Measure the resistance between back-up light switch terminals. If it is not within specifications, replace the back-up light switch.

# Back-up Light Switch

## MANUAL TRANSMISSION AND DIFFERENTIAL

---

| Gear shift position | Terminal No. | Specified resistance   |
|---------------------|--------------|------------------------|
| Back-up position    | 3 and 6      | Less than 1 $\Omega$   |
| Other positions     |              | More than 1 M $\Omega$ |

# Neutral Position Switch

MANUAL TRANSMISSION AND DIFFERENTIAL

## 12. Neutral Position Switch

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Disconnect the neutral position switch connector and clip.

- (A) Back-up light switch connector (White)
- (B) Neutral position switch connector (Black)
- (C) Clip

- 3) Remove the neutral position switch.

- (A) Back-up light switch
- (B) Neutral position switch

### B: INSTALLATION

- 1) Install the neutral position switch.

**Tightening torque:**

**32 N·m (3.3 kgf-m, 23.6 ft-lb)**

- (A) Back-up light switch
- (B) Neutral position switch

- 2) Connect the neutral position switch connector and clip.

- (A) Back-up light switch connector (White)
- (B) Neutral position switch connector (Black)
- (C) Clip

- 3) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

### C: INSPECTION

- 1) Disconnect the ground cable from battery.
- 2) Remove the intercooler. <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 3) Disconnect the transmission harness and chassis harness.

- (A) Transmission connector

# Neutral Position Switch

## MANUAL TRANSMISSION AND DIFFERENTIAL

---

4) Measure the resistance between neutral position switch terminals. If it is not within specifications, replace the neutral position switch.

| Gear shift position | Terminal No. | Specified resistance   |
|---------------------|--------------|------------------------|
| Neutral position    | 2 and 5      | Less than 1 $\Omega$   |
| Other positions     |              | More than 1 M $\Omega$ |

# Extension Case

MANUAL TRANSMISSION AND DIFFERENTIAL

## 13.Extension Case

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the extension case.

- 4) Completely remove the remaining liquid gasket from the extension case and transmission case.

### B: INSTALLATION

- 1) Select the transfer driven gear thrust washer, and then install it to extension case. <Ref. to 6MT-51, ADJUSTMENT, Extension Case.>
- 2) Apply oil lightly to the outer periphery of bearing cone, and then install it to extension case.
- 3) Select the thrust washer of transfer drive gear, and then install it to center differential.
- 4) Apply liquid gasket to the transmission case.

#### Liquid gasket:

**THREE BOND 1215 (Part No. 004403007)**

- 5) Install the extension case.

#### Tightening torque:

**48 N·m (4.9 kgf-m, 35.4 ft-lb)**

#### NOTE:

Insert the stopper portion of center differential between extension guides.

- (A) Extension guides
- (B) Stopper
- (C) Center differential
- (D) Extension case

- 6) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

### C: DISASSEMBLY

- 1) Remove the transfer drive gear. <Ref. to 6MT-59, REMOVAL, Transfer Drive Gear.>

# Extension Case

## MANUAL TRANSMISSION AND DIFFERENTIAL

2) Remove the extension guide.

3) Remove the shift bracket.

4) Using the ST, remove the bearing cone.  
ST 18758AA000 PULLER

(A) Bearing cone

5) Remove the thrust washer and oil plate.

(A) Thrust washer  
(B) Oil plate

6) Remove the shifter arm oil seal.

(A) Oil seal

7) Remove the reverse checking system. <Ref. to 6MT-56, REMOVAL, Reverse Check System.>

8) Remove the extension oil seal. <Ref. to 6MT-31, REPLACEMENT, Oil Seal.>

### D: ASSEMBLY

1) Install the reverse checking system. <Ref. to 6MT-57, INSTALLATION, Reverse Check System.>

2) Install the extension case oil seal. <Ref. to 6MT-31, REPLACEMENT, Oil Seal.>

3) Using the ST, install the shifter arm oil seal.

ST1 18657AA000 INSTALLER

ST2 18671AA000 OIL SEAL GUIDE

(A) Oil seal

4) Install the oil plate.

5) Select the bearing thrust washer, and then install it to extension case. <Ref. to 6MT-51, ADJUSTMENT, Extension Case.>

# Extension Case

## MANUAL TRANSMISSION AND DIFFERENTIAL

- 6) Apply oil lightly to the outer periphery of bearing cone, and then install it to extension case.
- 7) Install the shift bracket.

### Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

- 8) Install the extension guide, and then install the transfer driven gear. <Ref. to 6MT-59, INSTALLATION, Transfer Drive Gear.>

## E: INSPECTION

- 1) Make sure there is no damage or crack on extension case. If there is damage or crack, replace the extension case.
- 2) Check each oil seal and joint part of extension case and transmission case for oil leakage. If there is oil leakage, replace the oil seal and liquid gasket.

## F: ADJUSTMENT

### 1. TRANSFER DRIVEN GEAR BEARING THRUST WASHER ADJUSTMENT

- 1) Using the ST, remove the bearing cone from extension case.

ST 18758AA000 PULLER

(A) Bearing cone

- 2) Remove the thrust washer.
  - 3) Measure the depth "Z" between end of extension case and contact point of bearing cone.
- ST 499575500 GAUGE

### NOTE:

To measure the depth "Z", subtract the thickness of ST [15 mm (0.59 in)] from the measured value.

(A) 15 mm (0.59 in)

- 4) Remove the transfer driven gear. <Ref. to 6MT-61, REMOVAL, Transfer Driven Gear.>
- 5) Remove the center differential. <Ref. to 6MT-63, REMOVAL, Center Differential.>
- 6) Remove the snap ring and flat washer from selector arm part.

(A) Snap ring

(B) Flat washer

- 7) Using the ST, remove the neutral set spring and support.

ST1 18756AA000 CLAW

# Extension Case

## MANUAL TRANSMISSION AND DIFFERENTIAL

ST2 399893600 PLIERS

8) Lift-up the striking rod and remove the spring pin.

- (A) Striking rod
- (B) Spring pin

9) Remove the selector arm No. 2 and shifter arm. (Transmission serial No. 144576 or earlier)

- (A) Selector arm No. 2
- (B) Shifter arm

10) Remove the selector arm No. 2, shifter arm, selector plunger and spring. (Transmission serial No. 144577 or later)

- (A) Selector arm No. 2
- (B) Shifter arm
- (C) Selector plunger

11) Install the bearing cone to transfer driven gear.

12) Set the ST.

ST 18831AA000 GAUGE

13) Rotate the transfer driven gear approx. ten times to get the bearing accustomed.

14) Measure the depth "Y" between end of ST and bearing cone.

# Extension Case

## MANUAL TRANSMISSION AND DIFFERENTIAL

ST 18831AA000 GAUGE

15) Calculate the value  $t$  of transfer driven gear bearing thrust washer using the following equation.  
 $t = Z - (100 - Y) - \{0.02 \text{ to } 0.11 \text{ mm (0.0008 to 0.0043 in)}\}$

|  |  |
|--|--|
| $t$<br>mm (in)                         | Thickness of transfer driven gear bearing thrust washer.           |
| $Y$<br>mm (in)                         | Depth from end of ST to bearing cone.                              |
| $Z$<br>mm (in)                         | Depth from end of extension case to contact point of bearing cone. |
| 0.02 — 0.11 mm<br>(0.0008 — 0.0043 in) | Standard clearance between thrust washer and taper roller bearing. |
| 100 mm (3.94 in)                       | Height of ST.  |

16) Select the nearest thrust washer from the following table, according to the calculated value  $t$ .

**Standard clearance between thrust washer and taper roller bearing:**

**0.02 — 0.11 mm (0.0008 — 0.0043 in)**

NOTE:

Make clearance within standard.

| Thrust washer (50 × 61 × t) |                   |
|-----------------------------|-------------------|
| Part No.                    | Thickness mm (in) |
| 803050060                   | 0.50 (0.0197)     |

| 803050079                   | 1.45 (0.0571)     |

17) Install the selector arm No. 2 and shifter arm.  
 (Transmission serial No. 144576 or earlier)

(A) Selector arm No. 2

(B) Shifter arm

## Extension Case

### MANUAL TRANSMISSION AND DIFFERENTIAL

18) Install the selector arm No. 2, shifter arm, selector plunger and spring. (Transmission serial No. 144577 or later)

- (A) Selector arm No. 2
- (B) Shifter arm
- (C) Selector plunger

19) Install a new spring pin.  
20) Using the ST, install the neutral set spring and support.

ST1 18756AA000 CLAW  
ST2 399893600 PLIERS

21) Install the snap ring and flat washer.  
22) Install the center differential.

## 2. SELECTING THE TRANSFER DRIVE GEAR THRUST WASHER

1) Measure the height "Z" between end of transmission case and end of ST.

ST 499575500 GAUGE

2) Measure the depth "Y" between end of ST and transfer drive gear.

ST 499575500 GAUGE

3) Calculate the value t of transfer drive gear thrust washer using the following equation.

$$t = \{Y - 15 \text{ mm (1.18 in)}\} - \{Z - 15 \text{ mm (1.18 in)}\} - 0.75 \text{ to } 0.95 \text{ mm (0.030 to 0.037 in)}$$

|                                      |   |
|--------------------------------------|---|
| t<br>mm (in)                         | Thickness of transfer drive gear thrust washer                    |
| Y<br>mm (in)                         | Depth from end of ST to transfer drive gear                       |
| Z<br>mm (in)                         | Height from end of transmission case to the end of ST             |
| 0.75 — 0.95 mm<br>(0.030 — 0.037 in) | Standard clearance between thrust washer and transfer drive gear. |
| 15 mm (1.18 in)                      | Thickness of ST   |

## Extension Case

MANUAL TRANSMISSION AND DIFFERENTIAL

---

4) Select the nearest thrust washer from the following table, according to the calculated value  $t$ .

**Standard clearance between thrust washer and transfer drive gear:**

**0.75 — 0.95 mm (0.030 — 0.037 in)**

| Thrust washer (36.3 × 52 × t) |                   |
|-------------------------------|-------------------|
| Part No.                      | Thickness mm (in) |
| 803036070                     | 0.80 (0.0315)     |
| 803036071                     | 0.95 (0.0374)     |
| 803036072                     | 1.10 (0.0433)     |
| 803036073                     | 1.25 (0.0492)     |
| 803036074                     | 1.40 (0.0551)     |
| 803036075                     | 0.65 (0.0256)     |

5) Install the selected thrust washer.

# Reverse Check System

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 14. Reverse Check System

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 4) Remove the snap ring and washer from reverse check shaft.

- (A) Snap ring
- (B) Washer

- 5) Remove the reverse check shaft and spring from extension case.

- 6) Remove the spring pin, and then remove the reverse check lever and oil seal from reverse check shaft.

NOTE:  
Do not reuse the oil seal.

- (A) Spring pin
- (B) Reverse check lever
- (C) Oil seal

- 7) Remove the plug from extension case, then remove the gasket, spring and plunger.

NOTE:  
Do not reuse the gasket.

- (A) Plug
- (B) Gasket
- (C) Spring
- (D) Plunger

- 8) Remove the reverse lock plunger.

- (A) Reverse lock plunger

# Reverse Check System

MANUAL TRANSMISSION AND DIFFERENTIAL

## B: INSTALLATION

- 1) Insert the reverse lock plunger.
- 2) Install in the order of reverse check plug, spring, gasket and plug.

### Tightening torque:

**41 N·m (4.2 kgf-m, 30.2 ft-lb)**

- (A) Plug
- (B) Gasket
- (C) Spring
- (D) Reverse check plug

- 3) Install the spring and reverse check shaft to extension case.

### NOTE:

Be sure the spring end aligns with the hole of reverse check shaft and cutout portion of extension case.

- (A) Reverse check shaft
- (B) Spring
- (C) Hole
- (D) Cutout portion

- 4) Install the washer and snap ring.

- (A) Snap ring
- (B) Washer

- 5) Set the ST1 to reverse check shaft. Install a new oil seal, then press with ST2.

ST1 18671AA000 OIL SEAL GUIDE

# Reverse Check System

## MANUAL TRANSMISSION AND DIFFERENTIAL

### ST2 18657AA010 INSTALLER

(A) Oil seal

6) Insert the reverse check lever, then rotate the reverse check shaft until the plunger can be pushed in first.

(A) Plunger  
(B) Reverse check shaft

7) Align the hole of reverse check lever and reverse check shaft, then install the spring pin.

(A) Reverse check shaft  
(B) Reverse check lever  
(C) Hole

8) Make sure the reverse check operates correctly. <Ref. to 6MT-58, INSPECTION, Reverse Check System.>

9) Install the extension case. <Ref. to 6MT-49, INSTALLATION, Extension Case.>

10) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

### C: INSPECTION

- 1) Make sure there is no damage on each parts.
- 2) Make sure the reverse check lever operates smoothly.
- 3) Make sure there is no oil leakage on oil seal part of reverse check shaft. If there is oil leakage, replace the oil seal.
- 4) Inspect the reverse check operation.
  - (1) The plunger can be pushed or the gear can be shifted to reverse, when reverse check lever is in the following position.

(2) The plunger cannot be pushed or the gear cannot be shifted to reverse, when reverse check lever is in the following position.

5) If not as specified, reassemble the reverse check system.

# Transfer Drive Gear

MANUAL TRANSMISSION AND DIFFERENTIAL

## 15. Transfer Drive Gear

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 4) Remove the transfer drive gear.

### B: INSTALLATION

- 1) Install the transfer drive gear.

#### **Tightening torque:**

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

- 2) If the ball bearing, transfer drive gear or snap ring is replaced, select the transfer drive gear thrust washer. <Ref. to 6MT-50, ASSEMBLY, Extension Case.>
- 3) Install the extension case. <Ref. to 6MT-49, INSTALLATION, Extension Case.>
- 4) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

### C: DISASSEMBLY

- 1) Remove the snap ring.

- 2) Using the ST, remove the ball bearing.  
ST 499877000 RACE 4-5 INSTALLER

#### **NOTE:**

Do not reuse the ball bearing.

### D: ASSEMBLY

- 1) Using the ST, install the ball bearing.  
ST1 499247400 INSTALLER  
ST2 398497701 SEAT

- 2) Install the snap ring.

# Transfer Drive Gear

## MANUAL TRANSMISSION AND DIFFERENTIAL

3) Inspect the clearance between snap ring and ball bearing. <Ref. to 6MT-60, INSPECTION, Transfer Drive Gear.>

### E: INSPECTION

#### 1) Bearings

Replace the bearings in the following cases.

- Broken or rusty bearings
- Worn or damaged
- Bearings that fail to turn smoothly or make abnormal noise.

#### 2) Drive gear

Replace the drive gear in the following cases.

- If their tooth surface and shaft are excessively broken or damaged.

3) Measure the clearance between snap ring and inner race of ball bearing with a thickness gauge.

**Standard clearance between snap ring and inner race:**

**0 — 0.15 mm (0 — 0.0059 in)**

4) If the measurement is not within specifications, select suitable snap ring.

| Thrust washer |                   |
|---------------|-------------------|
| Part No.      | Thickness mm (in) |
| 805045050     | 1.76 (0.069)      |
| 805045060     | 1.88 (0.074)      |
| 805045070     | 2.00 (0.079)      |

After replacement of the snap ring, inspect the clearance again.

# Transfer Driven Gear

MANUAL TRANSMISSION AND DIFFERENTIAL

## 16. Transfer Driven Gear

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 4) Remove the transfer driven gear.

### B: INSTALLATION

- 1) Install the transfer driven gear.

- 2) If the bearing or transfer driven gear is replaced, select the transfer driven thrust washer. <Ref. to 6MT-51, ADJUSTMENT, Extension Case.>
- 3) Install the extension case. <Ref. to 6MT-49, INSTALLATION, Extension Case.>
- 4) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

### C: DISASSEMBLY

- 1) Using the ST, remove the roller bearing of extension case side.

ST 498515700 REMOVER

- 2) Using the ST, remove the roller bearing of transmission case side.

ST1 899858600 REMOVER

ST2 899864100 REMOVER

### D: ASSEMBLY

- 1) Using the ST, install the roller bearing of extension case side.

ST1 398177700 INSTALLER

ST2 899864100 REMOVER

#### CAUTION:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

(A) Roller bearing

- 2) Using the ST, install the roller bearing of transmission case side.

ST 499757002 INSTALLER

# Transfer Driven Gear

## MANUAL TRANSMISSION AND DIFFERENTIAL

---

### CAUTION:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

(A) Roller bearing

### E: INSPECTION

#### 1) Bearings

Replace the bearing in following cases.

- Broken or rusty bearings
- Worn or damaged
- Bearings that fail to turn smoothly or make noise when turned after gear oil lubrication.

#### 2) Driven gear

Replace the driven gear in following case.

If their tooth surfaces and shaft are excessively broken or damaged.

# Center Differential

## 17.Center Differential

### A: REMOVAL

- 1) Remove the manual transmission case assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 4) Remove the transfer driven gear. <Ref. to 6MT-61, REMOVAL, Transfer Driven Gear.>
- 5) Disconnect the center differential connector.
- 6) Remove the thrust washer and center differential.

- (A) Thrust washer
- (B) Center differential

- 7) Remove the needle bearing.

### B: INSTALLATION

- 1) Install the needle bearing.

- 2) Install the thrust washer and center differential.

- (A) Thrust washer
- (B) Center differential

- 3) If replacing the center differential, select the transfer drive gear and thrust washer and install. <Ref. to 6MT-51, ADJUSTMENT, Extension Case.>
- 4) Connect the center differential connector, and secure it to oil guide.
- 5) Install the transfer driven gear. <Ref. to 6MT-61, INSTALLATION, Transfer Driven Gear.>
- 6) Install the extension case. <Ref. to 6MT-49, INSTALLATION, Extension Case.>
- 7) Install the manual transmission case assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

### C: INSPECTION

Make sure there is no damage on the center differential, ball bearing and oil pump drive gear. Replace the center differential assembly if damaged.

# Oil Pump

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 18.Oil Pump

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 4) Remove the transfer driven gear. <Ref. to 6MT-61, REMOVAL, Transfer Driven Gear.>
- 5) Remove the center differential. <Ref. to 6MT-63, REMOVAL, Center Differential.>
- 6) Remove the oil guide.

(A) Oil guide

- 7) Remove the snap ring and flat washer.

(A) Snap ring  
(B) Flat washer

- 8) Using the ST, remove the neutral set spring and support.

ST1 18756AA000 CLAW

ST2 399893600 PLIERS

- 9) Raise the striking rod up, and then remove the spring pin.

(A) Striking rod  
(B) Spring pin

- 10) Remove the selector arm No. 2 and shifter arm. (Transmission serial No. 144576 or earlier)

(A) Selector arm No. 2  
(B) Shifter arm

# Oil Pump

## MANUAL TRANSMISSION AND DIFFERENTIAL

11) Remove the selector arm No. 2, shifter arm, selector plunger and spring. (Transmission serial No. 144577 or later)

- (A) Selector arm No. 2
- (B) Shifter arm
- (C) Selector plunger

12) Remove the oil pump shaft assembly and plate.

### NOTE:

Remove the bolts using ST, because tool may break if general tool is used.

ST 18663AA000 SOCKET

- (A) Oil pump shaft ASSY
- (B) Plate

13) Remove the oil pump cover assembly.

### NOTE:

Remove the bolts using ST, because tool may break if general tool is used.

ST 18663AA000 SOCKET

14) Remove the thrust washer on main shaft part.

15) Remove the oil pump rotor.

- (A) Outer rotor
- (B) Inner rotor

## B: INSTALLATION

1) Apply oil to the outer periphery of outer rotor, then install to transmission case.

- (A) Outer rotor
- (B) Inner rotor

2) Install the thrust washer to main shaft part.

3) Install the oil pump cover assembly.

### Tightening torque:

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

# Oil Pump

## MANUAL TRANSMISSION AND DIFFERENTIAL

ST 18663AA000 SOCKET

4) Install the oil pump shaft assembly and plate.

**Tightening torque:**

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

ST 18663AA000 SOCKET

- (A) Oil pump shaft ASSY
- (B) Plate

5) If replacing the oil pump cover assembly, select the transfer driven gear and thrust washer, then install them to the extension case. <Ref. to 6MT-51, ADJUSTMENT, Extension Case.>

6) Install the selector arm No. 2 and shifter arm. (Transmission serial No. 144576 or earlier)

- (A) Selector arm No. 2
- (B) Shifter arm

7) Install the selector arm No. 2, shifter arm, selector plunger and spring. (Transmission serial No. 144577 or later)

- (A) Selector arm No. 2
- (B) Shifter arm
- (C) Selector plunger

8) Install a new spring pin.

9) Using the ST, install the neutral set spring and support.

ST1 18756AA000 CLAW

ST2 399893600 PLIERS

10) Install the snap ring and flat washer.

11) Install the oil guide.

(A) Oil guide

**Specification of side clearance:**  
**0.03 — 0.10 mm (0.0012 — 0.0039 in)**

12) Install the center differential. <Ref. to 6MT-63, INSTALLATION, Center Differential.>

13) Install the transfer driven gear. <Ref. to 6MT-61, INSTALLATION, Transfer Driven Gear.>

14) Install the extension case. <Ref. to 6MT-49, INSTALLATION, Extension Case.>

15) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

## C: INSPECTION

1) Make sure there is no damage on the inner rotor and outer rotor. Replace the inner rotor and outer rotor as assembly if damaged.

2) Clearance at tip

Install the inner rotor and outer rotor to transmission case. Align tip of the inner rotor and outer rotor, then measure the clearance. Replace the inner rotor and outer rotor as a set if clearance exceeds specification.

**Specification of clearance at tip:**  
**Less than 0.15 mm (0.0059 in)**

3) Side clearance

Measure to the transmission case and rotor. Replace the inner rotor and outer rotor as a set if clearance exceeds specification.

# Transmission Case

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 19. Transmission Case

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, REMOVAL, Oil Pipe.> <Ref. to 6MT-47, REMOVAL, Neutral Position Switch.> <Ref. to 6MT-45, REMOVAL, Back-up Light Switch.>
- 4) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 5) Remove the transfer driven gear. <Ref. to 6MT-61, REMOVAL, Transfer Driven Gear.>
- 6) Remove the center differential. <Ref. to 6MT-63, REMOVAL, Center Differential.>
- 7) Remove the oil pump. <Ref. to 6MT-64, REMOVAL, Oil Pump.>
- 8) Remove the shim and spacer of driven gear assembly.

(A) Driven gear ASSY

- 9) Remove the snap ring.

- 10) Remove the pilot bolt.

- 11) Remove the holder reverse bolt.

- 12) Remove the transmission case.

#### NOTE:

If the oil guide catches on shift fork, the transmission case may be difficult to be removed. Move the oil guide right and left to remove. Do not pull the transmission case by force.

- 13) Completely remove the remaining liquid gasket on transmission case and adapter plate.

# Transmission Case

MANUAL TRANSMISSION AND DIFFERENTIAL

## B: INSTALLATION

1) Make sure that each shifter fork and interlock block is shifted to neutral position. If not, shift to neutral position.

- (A) Striking rod
- (B) Reverse interlock block
- (C) Interlock block

2) Apply liquid gasket to the adapter plate.

**Liquid gasket:**  
**THREE BOND 1215 (Part No. 004403007)**

3) Install the transmission case.

4) Make sure the interlock block and reverse interlock block are aligned in neutral position by inspecting through the pilot bolt installation hole. If not aligned, remove the transmission case, then shift each shifter fork and interlock block to neutral position.

- (A) Interlock block
- (B) Reverse interlock block

5) Using a new gasket, install the pilot bolts temporarily.

6) Tighten the transmission case with bolts and nuts.

**Tightening torque:**  
**50 N·m (5.1 kgf-m, 36.9 ft-lb)**

7) Tighten the pilot bolts.

**Tightening torque:**  
**34 N·m (3.5 kgf-m, 25.1 ft-lb)**

8) Tighten the holder reverse bolt.

**Tightening torque:**  
**25 N·m (2.5 kgf-m, 18.1 ft-lb)**

# Transmission Case

## MANUAL TRANSMISSION AND DIFFERENTIAL

9) Install the snap ring, washer and collar of driven gear assembly.

- (A) Washer
- (B) Snap ring
- (C) Collar
- (D) Washer

10) Install the oil pump. <Ref. to 6MT-65, INSTALLATION, Oil Pump.>

12) Install the transfer driven gear. <Ref. to 6MT-61, INSTALLATION, Transfer Driven Gear.>

13) Install the extension case. <Ref. to 6MT-49, INSTALLATION, Extension Case.>

14) Install the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, INSTALLATION, Oil Pipe.> <Ref. to 6MT-47, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT-45, INSTALLATION, Back-up Light Switch.>

15) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

## C: DISASSEMBLY

1) Remove the oil pipe and oil guide.

- (A) Oil pipe
- (B) Oil guide

2) Remove the bolt, and then remove the O-ring, relief spring and relief valve.

- (A) O-ring
- (B) Relief valve spring
- (C) Relief valve

3) Remove the bolt, and then remove the O-ring, valve spring and ball.

- (A) O-ring
- (B) Valve spring
- (C) Ball

# Transmission Case

MANUAL TRANSMISSION AND DIFFERENTIAL

4) Remove the harness bracket.

5) Remove the oil pan.

6) Completely remove the remaining liquid gasket on transmission case and oil pan.

7) Remove the oil pan magnet, and then remove the oil strainer.

(A) Oil pan magnet

(B) Oil strainer

## D: ASSEMBLY

1) Install the oil strainer and magnet.

**Tightening torque:**

**10 N·m (1.0 kgf-m, 7.4 ft-lb)**

(A) Oil pan magnet

(B) Oil strainer

2) Apply liquid gasket to the oil pan.

**Liquid gasket:**

**THREE BOND 1215 (Part No. 004403007)**

3) Install the oil pan.

**Tightening torque:**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

4) Install the relief valve, relief valve spring and new O-ring.

5) Install the ball, valve spring and new O-ring.

# Transmission Case

## MANUAL TRANSMISSION AND DIFFERENTIAL

---

### Tightening torque:

**T1: 13 N·m (1.3 kgf-m, 9.6 ft-lb)**

**T2: 16 N·m (1.6 kgf-m, 11.8 ft-lb)**

- (A) O-ring
- (B) Relief valve spring
- (C) Relief valve
- (D) Valve spring
- (E) Ball
- (F) Harness bracket

### E: INSPECTION

- 1) Completely remove with shop cloth if sludge is adhered to the oil pan magnet.
- 2) Make sure there is no clog on the oil strainer. If clogged, remove clog or replace the oil strainer.
- 3) Make sure there is no damage on each parts. Replace damaged parts with new parts.

# Main Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

## 20. Main Shaft Assembly

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, REMOVAL, Oil Pipe.> <Ref. to 6MT-47, REMOVAL, Neutral Position Switch.> <Ref. to 6MT-45, REMOVAL, Back-up Light Switch.>
- 4) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 5) Remove the transfer driven gear. <Ref. to 6MT-61, REMOVAL, Transfer Driven Gear.>
- 6) Remove the center differential. <Ref. to 6MT-63, REMOVAL, Center Differential.>
- 7) Remove the oil pump. <Ref. to 6MT-64, REMOVAL, Oil Pump.>
- 8) Remove the transmission case. <Ref. to 6MT-68, REMOVAL, Transmission Case.>
- 9) Remove the striking rod.
- 10) Using a screwdriver, shift to 4th gear position.

(A) 3rd-4th shift rod

- 11) Remove the reverse idler holder.

(A) Reverse idler holder

- 12) Remove all checking plug, gasket, checking spring, plunger and checking ball from adapter plate.

### NOTE:

Do not reuse the gasket.

- (A) Checking plug
- (B) Gasket
- (C) Checking spring
- (D) Plunger
- (E) Checking ball

- 13) Remove the bolt and gasket installing reverse idler shaft.

- 14) Press the main shaft assembly, driven gear assembly, reverse idler gear and each shifter fork, then remove from the adapter plate at once.

### NOTE:

Two people should do the work.

### B: INSTALLATION

- 1) Adjust the 3rd-4th, and 5th-6th shifter fork rod. <Ref. to 6MT-118, ADJUSTMENT, Shifter Fork and Rod.>

# Main Shaft Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

2) Turn the sub gear counterclockwise for approx. three teeth. Align the sub gear and reverse idler gear hole, then insert the ST.  
ST 18757AA000 STRAIGHT PIN REMOVER

- (A) Sub gear
- (B) Reverse idler gear

3) Install the driven gear assembly to 1st-2nd shifter fork assembly.

- (A) 1st-2nd shifter fork
- (B) Driven gear ASSY
- (C) 1st-2nd sleeve

4) Install the main shaft assembly to 3rd-4th shifter fork, and then assemble to driven gear assembly.

- (A) 3rd-4th shifter fork
- (B) 3rd-4th sleeve
- (C) Driven gear ASSY
- (D) Main shaft ASSY

5) Install the 5th-6th shifter fork assembly to main shaft assembly.

- (A) 5th-6th shifter fork
- (B) 5th-6th sleeve
- (C) Main shaft ASSY

# Main Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

6) Install the reverse shifter fork assembly to reverse idler gear assembly.

**Tightening torque:**  
**37 N·m (3.8 kgf-m, 27.3 ft-lb)**

- (A) Reverse idler gear ASSY
- (B) Reverse shifter fork
- (C) Reverse sleeve

7) Install the reverse idler gear assembly.

- (A) Reverse idler gear ASSY
- (B) 1st drive gear
- (C) Reverse gear

8) Install the thrust bearing of driven gear assembly.

9) Press each shifter fork, main shaft assembly, driven gear assembly and reverse idler gear assembly, then install them to the adapter plate at once.

### NOTE:

Two people should do the work.

10) Install the plunger, checking spring, new gasket and checking plug.

- (A) Checking plug
- (B) Gasket
- (C) Checking spring
- (D) Plunger

11) Install the checking ball, checking spring, new gasket and checking plug.

# Main Shaft Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

### Tightening torque:

**37 N·m (3.8 kgf-m, 27.3 ft-lb)**

- (A) Checking plug
- (B) Gasket
- (C) Checking spring
- (D) Checking ball

12) Install the bolt and a new gasket.

### Tightening torque:

**25 N·m (2.5 kgf-m, 18.1 ft-lb)**

13) Using a screwdriver, shift to 4th gear position.

14) Install the reverse idler holder

(A) Reverse idler holder

15) Install the striking rod.

16) Install the transmission case. <Ref. to 6MT-69, INSTALLATION, Transmission Case.>

17) Install the selected main shaft snap ring and washer.

18) Install the oil pump. <Ref. to 6MT-65, INSTALLATION, Oil Pump.>

19) Install the center differential. <Ref. to 6MT-63, INSTALLATION, Center Differential.>

20) Install the transfer driven gear. <Ref. to 6MT-61, INSTALLATION, Transfer Driven Gear.>

21) Install the extension case. <Ref. to 6MT-49, INSTALLATION, Extension Case.>

22) Install the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, INSTALLATION, Oil Pipe.> <Ref. to 6MT-47, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT-45, INSTALLATION, Back-up Light Switch.>

23) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

## C: DISASSEMBLY

### NOTE:

Each sleeve and hub engage at a specified point. Mark an engagement point on the sleeve and hub before disassembly.

1) Secure the ST on workbench.

ST 18664AA000 BASE

2) Lift the caulking of lock nut.

3) Set the main shaft assembly on ST, then remove the lock nut and washer.

ST1 18665AA000 HOLDER

ST2 18664AA000 BASE

# Main Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

## NOTE:

Use a 38 mm socket wrench.

4) Remove the main shaft assembly from ST.

5) Set the ST1 on 6th drive gear, then remove the taper roller bearing, bushing and 6th drive gear using press.

6) Remove the 5th-6th sleeve, 6th needle bearing and 6th baulk ring.

(A) Needle bearing

(B) 6th baulk ring

(C) 5th-6th sleeve

7) Set the ST on 3rd drive gear, then remove each part using press.

ST 18720AA000 REMOVER

(A) 3rd drive gear

(B) 3rd-4th sleeve

## D: ASSEMBLY

### NOTE:

Replace the following parts as a set.

- Sleeve and hub
- Outer baulk ring, 3rd synchro cone and inner baulk ring
- Taper roller bearing

# Main Shaft Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

- 1) Sufficiently apply gear oil to the main shaft, 3rd needle bearing and inner periphery of 3rd drive gear.
- 2) Install the 3rd needle bearing and 3rd drive gear to main shaft.

- (A) 3rd needle bearing
- (B) 3rd drive gear

- 3) Install the inner baulk ring, 3rd synchro cone and outer baulk ring.

- (A) Inner baulk ring
- (B) Outer baulk ring

**NOTE:**

Install the 3rd synchro cone, by aligning protrusion portions of the 3rd synchro cone with 3rd drive gear hole portion.

- 4) Install the 3rd-4th hub and 4th bushing.
  - (1) Set them to the main shaft, taking care of 3rd-4th hub installing direction.

- (A) Main shaft
- (B) 3rd-4th hub
- (C) 3rd drive gear

- (2) Set them to the main shaft, taking care not to overlap the main shaft oil hole and 4th bushing oil hole.

- (A) 4th bushing
- (B) 3rd-4th hub
- (C) 4th bushing oil hole
- (D) Main shaft oil hole

- (3) Using the ST, press in the 3rd-4th hub and 4th bushing at once.

### Tightening torque:

**392 N·m (40.0 kgf·m, 289 ft·lb)**

32) Using the ST, caulk four portions on the lock nut to obtain dimension A  $27 \pm 0.3$  mm ( $1.06 \pm 0.01$  in).

ST 18668AA000 PUNCH

# Main Shaft Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

### NOTE:

Do not crack the caulking part of lock nut.

### E: INSPECTION

Disassembled parts should be washed clean first and then inspected carefully.

#### 1) Bearing

Replace the bearings in the following cases.

- Worn, rusted and damaged bearing
- Bearings that fail to turn smoothly or make abnormal noise when turned
- Bearings having other defects

#### 2) Bushing (each gear)

Replace the bushings in the following case.

- When the sliding surface is damaged or abnormally worn.

#### 3) Gears

Replace the gears in the following cases.

- Gear teeth surfaces are broken or excessively worn.
- Parts that contact the baulk ring is damaged.
- The inner surface of gear is damaged.

#### 4) Baulk ring, synchro cone

Replace the baulk ring and synchro cone in the following case.

- Worn, rusted and damaged baulk ring

#### 5) Shifting insert key

Replace the shifting insert key if deformed, excessively worn or defective in any way.

### F: ADJUSTMENT

#### 1. SELECTION OF MAIN SHAFT SNAP RING AND WASHER

### NOTE:

Perform the following procedures when:

- Replacing the 1st to 6th driven gear.
- Replacing the 1st and 2nd synchro ring assembly.
- Replacing the ball bearing.
- Replacing the adapter plate.
- Replacing the driven shaft.

1) Insert the drive pinion assembly in adapter plate.

### NOTE:

Make sure the thrust bearing outer race is not removed and drive pinion is not lift-up.

2) Set the height gauge to adapter plate. Lower the indicator of height gauge to mating surface of adapter plate and case, then set to zero point.

ST 18853AA000 HEIGHT GAUGE

### NOTE:

- Remove the remaining gasket on edge surface with scraper, since the adapter plate is base point of measurement.

# Main Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

- Do not place the height gauge on shaded area in the figure during measurement.

- 3) Measure the height to edge surface of ball bearing (height H).

(A) Ball bearing

**NOTE:**

Set the indicator of height gauge near measuring object, then lock the dial (1) as shown in the figure. Turn dial (2) to set the indicator to edge surface of bearing.

Measure the five points of ball bearing by turning every approx. 120°. Round off each two upper and lower measurement value. Use the remaining center value as measurement value.

- 4) According to measurement value, select the snap ring and washer from the following table.

**Snap ring**

| H: mm (in)                         | Part No.  | Thickness: mm (in) |
|------------------------------------|-----------|--------------------|
| 270.83 — 271.40<br>(10.66 — 10.69) | 805072010 | 1.65<br>(0.065)    |
| 271.41 — 271.98<br>(10.69 — 10.71) | 805072011 | 1.95<br>(0.077)    |
| 271.99 — 272.56<br>(10.71 — 10.73) | 805072012 | 2.25<br>(0.089)    |

**Washer**

| H: mm (in)                         | Part No.  | Thickness: mm (in) |
|------------------------------------|-----------|--------------------|
| 270.83 — 271.40<br>(10.66 — 10.69) | 803067012 | 1.6<br>(0.063)     |
| 271.41 — 271.98<br>(10.69 — 10.71) | 803067011 | 1.3<br>(0.051)     |
| 271.99 — 272.56<br>(10.71 — 10.73) | 803067010 | 1.0<br>(0.039)     |

- Align the groove of 3rd-4th driven gear with key.

- (A) 4th gear
- (B) 3rd gear
- (C) 2nd gear

19) Make sure the 2nd driven gear is smoothly turned by hand. If not, reassemble.

20) Install the key.

21) Using the ST, install the 5th-6th driven gear.  
ST 18654AA000 INSTALLER

### CAUTION:

**Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).**

### NOTE:

- Make sure to install the 5th-6th driven gear in proper direction.

- Align the groove of 5th-6th driven gear with key.

- (A) 6th gear
- (B) 5th gear
- (C) 4th gear

22) Using the ST, install the ball bearing.

ST 18654AA000 INSTALLER

### CAUTION:

**Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).**

### NOTE:

Make sure to install the ball bearing in proper direction.

23) Make sure the ball bearing is smoothly turned by hand. If not, reassemble.

24) Install a new lock nut.

25) Install the ST3 to lock nut, then install the ST to driven gear assembly and tighten lock nut.

ST1 18666AA000 HOLDER

ST2 18664AA000 BASE

ST3 18620AA000 ADAPTER WRENCH

ST4 18852AA000 TORQUE WRENCH

# Driven Gear Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

**Tightening torque:**  
**530 N·m (54.0 kgf·m, 391 ft·lb)**

**NOTE:**  
 Do not crack the caulking part of lock nut.

**NOTE:**  
 If torque wrench except ST4 is used, calculate the following equation, then tighten the lock nut.

$$T = L1 / (0.1 + L1) \times 570$$

| T                               | N·m (kgf·m, ft·lb) | Setting value of torque wrench |
|---------------------------------|--------------------|--------------------------------|
| L1                              | m (in)             | Torque wrench length           |
| 0.1 m (3.94 in)                 |                    | ST length                      |
| 570 N·m (58.1 kgf·m, 420 ft·lb) |                    | Tightening torque of lock nut  |

(A) 0.1 m (3.94 in)

26) Using the ST, caulk four portions on the lock nut to obtain dimension A  $44 \pm 0.5$  mm ( $1.73 \pm 0.02$  in).

ST 18669AA000 PUNCH

## E: INSPECTION

Disassembled parts should be washed clean first and then inspected carefully.

### 1) Bearing

Replace the bearings in the following cases.

- Worn, rusted and damaged bearing
- Bearings that fail to turn smoothly or make abnormal noise when turned
- Bearings having other defects

### 2) Bushing (each gear)

Replace the bushings in the following case.

- When the sliding surface is damaged or abnormally worn.

### 3) Gears

Replace the gears in the following cases.

- Gear teeth surfaces are broken or excessively worn.
- Parts that contact the baulk ring is damaged.
- The inner surface of gear is damaged.

### 4) Baulk ring, synchro cone

Replace the baulk ring and synchro cone in the following case:

- Worn, rusted and damaged baulk ring

### 5) Shifting insert key

# Driven Gear Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

Replace the shifting insert key if deformed, excessively worn or defective in any way.

MT-00581

3) Select 0 to 3 washers from the following table to adjust backlash closest to specification.

**Backlash specification at axial direction of driven gear assembly:**

**0.1 — 0.3 mm (0.0039 — 0.0118 in)**

| Washer    |                     |
|-----------|---------------------|
| Part No.  | Thickness t mm (in) |
| 803072030 | 0.15 (0.0059)       |
| 803072031 | 0.30 (0.0118)       |
| 803072032 | 0.45 (0.0177)       |
| 803072033 | 0.60 (0.0236)       |

## F: ADJUSTMENT

1) Measure length “H”, which is from transmission case and oil pump cover mating surface to ball bearing edge.

MT-00616

- (A) Transmission case
- (B) Ball bearing
- (C) Driven gear ASSY

2) Using the following equation, calculate the washer thickness of driven gear assembly.

$$T = H - \{5.8 \pm 0.05 \text{ mm (0.23} \pm 0.002 \text{ in)}\} - \{0.1 \text{ to } 0.3 \text{ mm (0.0039 to 0.0118 in)}\}$$

|  |  |
|--|--|
| t                                      | Thickness of washer  |
| H                                      | Length from transmission case and oil pump cover mating surface to ball bearing edge |
| 5.8±0.05 mm<br>(0.23±0.002 in)         | Thickness of collar  |
| 0.1 to 0.3 mm<br>(0.0039 to 0.0118 in) | Backlash specification at axial direction of driven gear assembly                    |

# Reverse Idler Gear Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

## 22.Reverse Idler Gear Assembly

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, REMOVAL, Oil Pipe.> <Ref. to 6MT-47, REMOVAL, Neutral Position Switch.> <Ref. to 6MT-45, REMOVAL, Back-up Light Switch.>
- 4) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 5) Remove the transfer driven gear. <Ref. to 6MT-61, REMOVAL, Transfer Driven Gear.>
- 6) Remove the center differential. <Ref. to 6MT-63, REMOVAL, Center Differential.>
- 7) Remove the oil pump. <Ref. to 6MT-64, REMOVAL, Oil Pump.>
- 8) Remove the transmission case. <Ref. to 6MT-68, REMOVAL, Transmission Case.>
- 9) Remove the reverse idler gear assembly. <Ref. to 6MT-73, REMOVAL, Main Shaft Assembly.>

### B: INSTALLATION

- 1) Select the reverse fork rod. <Ref. to 6MT-118, ADJUSTMENT, Shifter Fork and Rod.>
- 2) Install the reverse idler gear assembly. <Ref. to 6MT-73, INSTALLATION, Main Shaft Assembly.>
- 3) Install the transmission case. <Ref. to 6MT-69, INSTALLATION, Transmission Case.>
- 4) Install the oil pump. <Ref. to 6MT-65, INSTALLATION, Oil Pump.>
- 5) Install the center differential. <Ref. to 6MT-63, INSTALLATION, Center Differential.>
- 6) Install the transfer driven gear. <Ref. to 6MT-61, INSTALLATION, Transfer Driven Gear.>
- 7) Install the extension case. <Ref. to 6MT-49, INSTALLATION, Extension Case.>
- 8) Install the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, INSTALLATION, Oil Pipe.> <Ref. to 6MT-47, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT-45, INSTALLATION, Back-up Light Switch.>
- 9) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

### C: DISASSEMBLY

#### NOTE:

Sleeve and reverse gear engage at a specified point. Mark an engagement point on the sleeve and hub before disassembly.

- 1) Remove the spring pin.

- 2) Remove the snap ring.

- 3) Remove the washer and reverse idler gear.

- (A) Washer  
(B) Reverse idler gear

- 4) Remove the knock pin and reverse idler gear needle bearing.

- (A) Knock pin  
(B) Reverse idler gear needle bearing

# Reverse Idler Gear Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

5) Remove the collar.

6) Remove the reverse sleeve.

7) Remove the outer baulk ring, reverse synchro cone and inner baulk ring from reverse sleeve.

- (A) Reverse sleeve
- (B) Outer baulk ring
- (C) Reverse synchro cone
- (D) Inner baulk ring

8) Remove the reverse idler gear No. 2.

9) Remove the washer and needle bearing.

- (A) Needle bearing
- (B) Washer

10) Remove the knock pin.

11) Remove the snap ring and friction plate from reverse gear.

- (A) Snap ring
- (B) Friction plate

# Reverse Idler Gear Assembly

12) Remove the sub gear and spring.

- (A) Sub gear
- (B) Spring
- (C) Punch mark (mark A)

## D: ASSEMBLY

1) Install the sub gear and spring.

NOTE:

- Install the spring with white marking on hook part facing to sub gear side.
- Install the sub gear with punch mark (mark A) facing outside.

- (A) Sub gear
- (B) Spring
- (C) Punch mark (mark A)

NOTE:

- Install the spring and sub gear, taking care to install the sub gear installation hole in proper direction.

- (A) Installation hole

2) Install the friction plate and snap ring.

NOTE:

- Make sure to install the friction plate in proper direction.

- (A) Friction plate
- (B) Snap ring
- (C) Snap ring side
- (D) Sub gear side

3) Sufficiently apply gear oil to the shaft, needle bearing and inner periphery of reverse drive gear.

4) Install the knock pin.

5) Install the washer and needle bearing.

NOTE:

- Install the washer with groove facing to reverse idler gear.

- (A) Groove
- (B) Washer
- (C) Needle bearing

# Reverse Idler Gear Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

6) Install the reverse idler gear No. 2.

7) Install the shifting insert key in proper place of reverse sleeve.

NOTE:

Angle of each shifting insert key is 120° apart.

- (A) Reverse sleeve
- (B) Shifting insert key

8) Install the reverse sleeve to reverse idler gear No. 2.

NOTE:

Make sure to install the reverse sleeve in proper direction.

9) Sufficiently apply gear oil to the collar, needle bearing and inner periphery of reverse drive gear.

10) Install the outer baulk ring, reverse synchro cone and inner baulk ring.

- (A) Outer baulk ring
- (B) Reverse synchro cone
- (C) Inner baulk ring

11) Install the collar and needle bearing, then install the knock pin.

- (A) Collar
- (B) Needle bearing
- (C) Knock pin

# Reverse Idler Gear Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

12) Align the protrusion portion of reverse synchro cone with reverse idler gear hole, then install the reverse idler gear.

- (A) Protrusion portion of reverse synchro cone
- (B) Reverse idler gear hole

13) Install the washer with groove facing to reverse idler gear.

14) Using the ST, install the snap ring.

ST 18672AA000 GUIDE CLIP

15) Inspect and adjust the clearance between snap ring and washer. <Ref. to 6MT-98, INSPECTION, Reverse Idler Gear Assembly.>

16) Install a new spring pin.

### E: INSPECTION

Disassembled parts should be washed clean first and then inspected carefully.

#### 1) Bearings

Replace the bearings in the following cases.

- Worn, rusted and damaged bearing
- Bearings that fail to turn smoothly or make abnormal noise when turned
- Bearings having other defects

#### 2) Bushing (each gear)

Replace the bushings in the following case:

- When the sliding surface is damaged or abnormally worn.

#### 3) Gears

Replace the gears in the following cases:

- The gear teeth surfaces are broken or excessively worn.
- The parts that contact the baulk ring is damaged.
- The inner surface of gear is damaged.

#### 4) Baulk ring, synchro cone

Replace the baulk ring and synchro cone in the following case:

Worn, rusted and damaged baulk ring

#### 5) Shifting insert key

Replace the shifting insert key if deformed, excessively worn or defective in any way.

6) Inspect the clearance between snap ring and washer.

#### Specification of clearance:

**0.1 — 0.3 mm (0.0039 — 0.0118 in)**

Select and replace the snap ring from the following table if clearance is out of specification.

| Snap ring |                   |
|-----------|-------------------|
| Parts No. | Thickness mm (in) |
| 031319000 | 1.50 (0.059)      |
| 805019030 | 1.60 (0.062)      |
| 805019010 | 1.72 (0.068)      |

Inspect the clearance again after replacing snap ring.

# Drive Pinion Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

## 23. Drive Pinion Shaft Assembly

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, REMOVAL, Oil Pipe.> <Ref. to 6MT-47, REMOVAL, Neutral Position Switch.> <Ref. to 6MT-45, REMOVAL, Back-up Light Switch.>
- 4) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 5) Remove the transfer driven gear. <Ref. to 6MT-61, REMOVAL, Transfer Driven Gear.>
- 6) Remove the center differential. <Ref. to 6MT-63, REMOVAL, Center Differential.>
- 7) Remove the oil pump. <Ref. to 6MT-64, REMOVAL, Oil Pump.>
- 8) Remove the transmission case. <Ref. to 6MT-68, REMOVAL, Transmission Case.>
- 9) Remove each gear assembly. <Ref. to 6MT-73, REMOVAL, Main Shaft Assembly.>
- 10) Remove the drive pinion shaft assembly.

### B: INSTALLATION

- 1) Completely remove the remaining gasket on drive plate and clutch housing.
- 2) Apply liquid gasket to the clutch housing.

#### Liquid gasket:

**THREE BOND 1215 (Part No. 004403007)**

- 3) Install each gear assembly. <Ref. to 6MT-73, INSTALLATION, Main Shaft Assembly.>
- 4) Install the transmission case. <Ref. to 6MT-69, INSTALLATION, Transmission Case.>
- 5) Install the oil pump. <Ref. to 6MT-65, INSTALLATION, Oil Pump.>
- 6) Install the center differential. <Ref. to 6MT-63, INSTALLATION, Center Differential.>
- 7) Install the transfer driven gear. <Ref. to 6MT-61, INSTALLATION, Transfer Driven Gear.>
- 8) Install the extension case. <Ref. to 6MT-49, INSTALLATION, Extension Case.>
- 9) Install the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, INSTALLATION, Oil Pipe.> <Ref. to 6MT-47, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT-45, INSTALLATION, Back-up Light Switch.>
- 10) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

### C: DISASSEMBLY

#### NOTE:

Replace the drive pinion shaft as a set with hypoid driven gear.

- 1) Remove the pipe and oil chamber.

- (A) Pipe  
(B) Oil chamber

- 2) Remove the drive pinion shaft and shim from adapter plate.

- 3) Secure the ST on workbench.  
ST 18664AA000 BASE
- 4) Lift the caulking of lock nut.

# Drive Pinion Shaft Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

5) Install the ST3 to lock nut, then set drive pinion shaft to ST. Remove the lock nut and washer.

ST1 18667AA000 HOLDER

ST2 18664AA000 BASE

ST3 18621AA000 ADAPTER WRENCH

6) Using the ST, remove the taper roller bearing assembly.

ST 18723AA000 REMOVER

## D: ASSEMBLY

1) Using the ST, measure dimension "A" of drive pinion.

NOTE:

Note dimension "A" for selection of drive pinion shim.

ST 398643600 GAUGE

2) Install the inner bearing inner race to drive pinion shaft using ST and press.

ST 18723AA000 REMOVER

**CAUTION:**

**Do not apply pressure in excess of 40 kN (4.0 ton, 4.4 US ton, 3.9 Imp ton).**

3) Install the retainer and outer bearing inner race to drive pinion shaft using ST and press.

ST 18723AA000 REMOVER

NOTE:

Press to the point where bearing is turned smoothly without slack.

(A) Retainer

4) Install the washer and a new lock nut.

5) Set the ST to drive pinion, then tighten the lock nut.

ST1 18667AA000 HOLDER

ST2 18664AA000 BASE

ST3 18621AA000 ADAPTER WRENCH

ST4 18852AA000 TORQUE WRENCH

NOTE:

Tighten with the ST and torque wrench straight-lined.

# Drive Pinion Shaft Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

## Tightening torque:

**265 N·m (27.0 kgf-m, 195 ft-lb)**

## NOTE:

- If torque wrench except ST4 is used, calculate the following equation, then tighten the lock nut.
- Tighten with the ST and torque wrench straight-lined.

$$T = L1 / (0.1 + L1) \times 285$$

|                                 |                    |                                |
|---------------------------------|--------------------|--------------------------------|
| T                               | N·m (kgf-m, ft-lb) | Setting value of torque wrench |
| L1                              | m (in)             | Torque wrench length           |
| 0.1 m (3.94 in)                 |                    | ST length                      |
| 285 N·m (29.0 kgf-m, 210 ft-lb) |                    | Tightening torque of lock nut  |

(A) 0.1 m (3.94 in)

6) Measure the starting torque. <Ref. to 6MT-102, INSPECTION, Drive Pinion Shaft Assembly.>

7) Using the ST, caulk two portions on the lock nut to obtain dimension "A"  $37 \pm 0.5$  mm ( $1.46 \pm 0.02$  in).

ST 18670AA000 PUNCH

## NOTE:

Do not crack the caulking part of lock nut.

8) Using the ST, measure dimension "B" of the drive pinion.

ST 398643600 GAUGE

9) Calculate the following formula, then select one or two pieces of drive pinion shim from the table below.

$$6.5 \pm 0.0625 \text{ mm} - (B - A) [0.26 \pm 0.0025 \text{ in} - (B - A)]$$

## NOTE:

A: Measured value from step 1).

B: Measured value from step 8).

| Drive pinion shim |                   |
|-------------------|-------------------|
| Part No.          | Thickness mm (in) |
| 32295AA270        | 0.15 (0.0059)     |
| 32295AA280        | 0.175 (0.0069)    |
| 32295AA290        | 0.20 (0.0079)     |
| 32295AA300        | 0.225 (0.0089)    |
| 32295AA310        | 0.25 (0.0098)     |
| 32295AA320        | 0.275 (0.0108)    |

# Drive Pinion Shaft Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

10) Apply gear oil to the side face of taper roller bearing, then install the drive pinion shaft and selected shim to adapter plate.

### Tightening torque:

**54 N·m (5.5 kgf-m, 39.8 ft-lb)**

11) Install the oil chamber and pipe.

### Tightening torque:

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

(A) Pipe

(B) Oil chamber

## E: INSPECTION

1) Using the spring balancer, measure the starting torque. If the starting torque is out of specification, replace the taper roller bearing.

### Starting torque:

**0 — 0.95 N (0 — 0.097 kgf, 0 — 0.21 lbf)**

2) Gears

Replace the gears in the following case.

- Gear teeth surfaces are broken or excessively worn.

3) Bearings

Replace the bearings in the following cases.

- Worn, rusted and damaged bearing
- Bearings that fail to turn smoothly or make abnormal noise when turned

4) Adapter plate

Replace the adapter plate in the following cases.

- Worn, rusted and damaged bearing
- Damaged adapter plate

5) Make sure the pipe and pipe chamber is not damaged or clogged. Repair or replace if damaged or clogged.

## F: ADJUSTMENT

1) Inspect and adjust the backlash between hypoid driven gear and drive pinion. <Ref. to 6MT-109, HYPOID GEAR BACKLASH, ADJUSTMENT, Front Differential Assembly.>

2) Apply a uniform thin coat of red lead on both teeth surfaces of three or four teeth of the hypoid driven gear.

3) Install the drive pinion shaft assembly to clutch housing, then tighten it with at least four bolts.

### NOTE:

Install it with the remaining liquid gasket to prevent the mating surface of clutch housing and adapter plate from damaging.

### Tightening torque:

**50 N·m (5.1 kgf-m, 36.9 ft-lb)**

4) Using the ST, rotate several times.

ST 18631AA000 HANDLE

# Drive Pinion Shaft Assembly

5) Remove the drive pinion shaft assembly, and then check tooth contact. If it is inaccurate, adjust the backlash or thickness of shim.

- Tooth contact

**Checking item: Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]**

- (A) Toe side
- (B) Heel side

- Face contact

**Checking item: Backlash is too large.**

Contact pattern

Corrective action: Verify the backlash again, and then adjust it.

- Flank contact

**Checking item: Backlash is too small.**

Contact pattern

Corrective action: Verify the backlash again, and then adjust it.

- Toe contact (Inside end contact)

**Checking item: Contact areas is small.**

Contact pattern

Corrective action: Reduce thickness of drive pinion shim in order to move drive pinion away from crown gear.

# Drive Pinion Shaft Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

---

- Heel contact (Outside end contact)

**Checking item: Contact areas is small.**

Contact pattern

Corrective action: Increase thickness of drive pinion shim in order to bring drive pinion close to crown gear.

# Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

## 24. Front Differential Assembly

### A: REMOVAL

- 1) Remove the manual transmission assembly. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, REMOVAL, Oil Pipe.> <Ref. to 6MT-47, REMOVAL, Neutral Position Switch.> <Ref. to 6MT-45, REMOVAL, Back-up Light Switch.>
- 4) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 5) Remove the transfer driven gear. <Ref. to 6MT-61, REMOVAL, Transfer Driven Gear.>
- 6) Remove the center differential. <Ref. to 6MT-63, REMOVAL, Center Differential.>
- 7) Remove the oil pump. <Ref. to 6MT-64, REMOVAL, Oil Pump.>
- 8) Remove the transmission case. <Ref. to 6MT-68, REMOVAL, Transmission Case.>
- 9) Remove each gear assembly. <Ref. to 6MT-73, REMOVAL, Main Shaft Assembly.>
- 10) Remove the drive pinion shaft assembly. <Ref. to 6MT-99, REMOVAL, Drive Pinion Shaft Assembly.>
- 11) Remove the retainer lock plates on both side.

(A) Retainer lock plate

- 12) Using the ST, remove the differential side retainer on both side.

ST1 499787000 WRENCH ASSY (RIGHT SIDE)

ST2 18630AA000 WRENCH ASSY (LEFT SIDE)

### NOTE:

Be careful not to damage the part of clutch case where the retainer is to be installed.

(A) Left side

(B) Right side

- 13) Remove the front differential.

### B: INSTALLATION

- 1) Install the differential assembly into clutch housing.
- 2) Apply oil to the threaded portion part of differential side retainer.
- 3) Remove the O-ring from differential side retainer of both sides.
- 4) Using the ST, install the differential side retainer to both sides.

ST1 499787000 WRENCH ASSY (RIGHT SIDE)

ST2 18630AA000 WRENCH ASSY (LEFT SIDE)

# Front Differential Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

### NOTE:

Be careful not to damage the oil seal.

- (A) Left side
- (B) Right side

5) Check and adjust the hypoid gear backlash. <Ref. to 6MT-109, HYPOID GEAR BACKLASH, INSPECTION, Front Differential Assembly.>

6) Check and adjust the tooth contact. <Ref. to 6MT-102, ADJUSTMENT, Drive Pinion Shaft Assembly.>

7) Mark an engagement point on the right and left side retainer and clutch housing.

8) Remove the differential side retainer from both sides.

### NOTE:

Note the rotating number of time till removal, when removing the differential side retainer.

9) Install a new O-ring to differential side retainer of both sides.

10) Install the differential side retainer to both sides.

### NOTE:

Install the differential side retainer by screwing in the same rotating number of time till removal, and then align the mark.

11) Install the retainer lock plate.

### Tightening torque:

**25 N·m (2.5 kgf-m, 18.1 ft-lb)**

### NOTE:

Be careful not to confuse right and left retainer lock plates.

- (A) Left
- (B) Right

12) Completely remove the remaining gasket from the clutch housing and adapter plate.

13) Apply liquid gasket to the clutch housing.

### Liquid gasket:

**THREE BOND 1215 (Part No. 004403007)**

14) Install the drive pinion shaft assembly. <Ref. to 6MT-99, INSTALLATION, Drive Pinion Shaft Assembly.>

15) Install each gear assembly at once. <Ref. to 6MT-73, INSTALLATION, Main Shaft Assembly.>

16) Install the transmission case. <Ref. to 6MT-69, INSTALLATION, Transmission Case.>

17) Install the oil pump. <Ref. to 6MT-65, INSTALLATION, Oil Pump.>

18) Install the center differential. <Ref. to 6MT-63, INSTALLATION, Center Differential.>

19) Install the transfer driven gear. <Ref. to 6MT-61, INSTALLATION, Transfer Driven Gear.>

# Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

20) Install the extension case. <Ref. to 6MT-49, INSTALLATION, Extension Case.>

21) Install the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, INSTALLATION, Oil Pipe.> <Ref. to 6MT-47, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT-45, INSTALLATION, Back-up Light Switch.>

22) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

## C: DISASSEMBLY

### 1. DIFFERENTIAL CASE

1) Secure the differential assembly on a vise, and then remove the hypoid driven gear.

2) Using the ST, remove the hypoid driven gear side bearing.

ST 399527700 PULLER SET

3) Using a screw driver, make clearance of 2 — 3 mm (0.079 — 0.118 in) between the speedometer drive gear and roller bearing.

### NOTE:

Be careful not to damage the differential case.

(A) Speedometer drive gear

(B) Roller bearing

4) Using the ST, remove the roller bearing.

ST 498077000 REMOVER

### 2. DIFFERENTIAL SIDE RETAINER

1) Remove the O-ring from differential side retainer.

# Front Differential Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

2) Remove the oil seal from differential side retainer.

ST1 398527700 PULLER ASSY  
ST2 18760AA000 CLAW

3) Remove the claw of ST1, and then install the claw of ST2.

ST1 398527700 PULLER ASSY  
ST2 18760AA000 CLAW

(A) Differential side retainer

(A) Claw

## D: ASSEMBLY

### 1. DIFFERENTIAL CASE

1) Using the ST, install a new speedometer drive gear and right and left side bearing inner race to differential case.

ST1 398437700 INSTALLER  
ST2 398497701 SEAT

#### CAUTION:

Do not apply pressure in excess of 20 kN (2.0 ton, 2.2 US ton, 2.0 Imp ton).

#### NOTE:

Always replace the inner race and outer race as a set.

4) Remove the bearing outer race from differential side retainer.

2) Install the hypoid driven gear to differential case.

#### Tightening torque:

**69 N·m (7.0 kgf-m, 50.9 ft-lb)**

# Front Differential Assembly

MANUAL TRANSMISSION AND DIFFERENTIAL

## 2. DIFFERENTIAL SIDE RETAINER

- 1) Using the ST, install the oil seal.  
ST 18675AA000 DIFFERENTIAL SIDE OIL SEAL INSTALLER

- 2) Install the bearing outer race to differential side retainer on both sides.
- 3) Install the O-ring to differential side retainer on both sides.

### NOTE:

Be careful not to damage the O-ring.

## E: INSPECTION

Repair or replace the front differential in following cases.

- Each gear is damaged, seized, or excessively worn.
- Sliding surface of the differential case is damaged, seized or excessively worn.
- Bearings and bearings part are damaged, rusted or worn.
- Bearings fail to turn smoothly or make abnormal noise when turned.

## 1. HYPOID GEAR BACKLASH

Check the hypoid gear backlash. If it is not within specifications, adjust it. <Ref. to 6MT-109, HYPOID GEAR BACKLASH, ADJUSTMENT, Front Differential Assembly.>

## 2. TOOTH CONTACT OF HYPOID GEAR

- 1) Be sure the hypoid gear backlash is within specifications. If it is not within specifications, adjust it. <Ref. to 6MT-109, HYPOID GEAR BACKLASH, ADJUSTMENT, Front Differential Assembly.>

- 2) Apply a uniform thin coat of red lead on both tooth surfaces of three or four teeth of the hypoid driven gear.

- 3) Install the drive pinion shaft assembly, and then secure it with five bolts.

### NOTE:

Use the old gasket and washer to prevent the mating surface of housing from damaging.

### Tightening torque:

**50 N·m (5.1 kgf-m, 36.9 ft-lb)**

- 4) Rotate the drive pinion shaft to right and left for several times.
- 5) Remove the drive pinion shaft assembly, and then check tooth contact. If tooth contact is inaccurate, adjust it. <Ref. to 6MT-102, ADJUSTMENT, Drive Pinion Shaft Assembly.>
  - Correct tooth contact.

### NOTE:

Under no load, tooth contacts 50 — 60% from center to toe side (tooth contact shifts to heel side when driving).

- (A) Toe side
- (B) Heel side

## F: ADJUSTMENT

### 1. HYPOID GEAR BACKLASH

- 1) Install the right and left side differential side retainer.

ST1 499787000 WRENCH ASSY (RIGHT SIDE)

ST2 18630AA000 WRENCH ASSY (LEFT SIDE)

# Front Differential Assembly

## MANUAL TRANSMISSION AND DIFFERENTIAL

### NOTE:

Screw in the right side differential side retainer a bit further than left side.

2) Install the drive pinion shaft assembly, and then secure it with five bolts.

### NOTE:

Use the old gasket and washer to prevent the mating surface of housing from damaging.

### Tightening torque:

**50 N·m (5.1 kgf-m, 36.9 ft-lb)**

3) Using the ST, screw in the left side differential side retainer until the drive pinion and hypoid driven gear contacts lightly. Then loosen the right side differential side retainer.

ST1 499787000 WRENCH ASSY (RIGHT SIDE)

ST2 18630AA000 WRENCH ASSY (LEFT SIDE)

4) Using the ST, rotate the drive pinion shaft several times.

ST 18631AA000 HANDLE

5) Repeat step 3) and 4) until the left side differential side retainer can not be rotated. For the right side differential side retainer, screw it in until the inner race and outer race contacts lightly. This condition is "0" backlash.

6) Mark an engagement point on the right and left side retainer and clutch housing.

7) Return the left side differential side retainer for three teeth, and screw in the right side differential side retainer for three teeth.

8) Using the ST, secure the drive pinion shaft.

ST 18621AA000 ADAPTER WRENCH

9) Install the axle shafts to both sides of front differential.

Parts No. 38415AA000 AXLE SHAFT

10) Move the axle shaft, and measure the hypoid gear backlash.

ST1 498255400 PLATE

ST2 498247001 MAGNET BASE

ST3 498247100 DIAL GAUGE

### Hypoid gear backlash:

**0.13 — 0.18 mm (0.0051 — 0.0071 in)**

11) If the backlash is out of specification, adjust it by turning the right and left side differential side retainers.

12) Screw in the right side differential side retainer for further 1.75 teeth.

## 2. TOOTH CONTACT OF HYPOID GEAR

Refer to the section of drive pinion shaft for checking of tooth contact. <Ref. to 6MT-109, TOOTH CONTACT OF HYPOID GEAR, INSPECTION, Front Differential Assembly.>

## 25.Speedometer Gear

### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, REMOVAL, Oil Pipe.> <Ref. to 6MT-47, REMOVAL, Neutral Position Switch.> <Ref. to 6MT-45, REMOVAL, Back-up Light Switch.>
- 4) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 5) Remove the transfer driven gear. <Ref. to 6MT-61, REMOVAL, Transfer Driven Gear.>
- 6) Remove the center differential. <Ref. to 6MT-63, REMOVAL, Center Differential.>
- 7) Remove the oil pump. <Ref. to 6MT-64, REMOVAL, Oil Pump.>
- 8) Remove the transmission case. <Ref. to 6MT-68, REMOVAL, Transmission Case.>
- 9) Remove each gear assembly. <Ref. to 6MT-73, REMOVAL, Main Shaft Assembly.>
- 10) Remove the drive pinion shaft assembly. <Ref. to 6MT-99, REMOVAL, Drive Pinion Shaft Assembly.>
- 11) Remove the front differential assembly. <Ref. to 6MT-105, REMOVAL, Front Differential Assembly.>
- 12) Remove the vehicle speed sensor. <Ref. to 6MT-33, REMOVAL, Vehicle Speed Sensor.>
- 13) Remove the snap ring, and then remove the speedometer driven gear.

- (A) Snap ring  
(B) Speedometer driven gear

- 14) Remove the speedometer driven gear shaft from clutch housing.

- 15) Remove the oil seal, speedometer driven gear shaft and washer.

- (A) Washer  
(B) Snap ring  
(C) Oil seal

- 16) Remove the snap ring from speedometer driven gear shaft.

### B: INSTALLATION

- 1) Install the oil seal, washer and snap ring to speedometer driven gear shaft.
- 2) Insert the speedometer driven gear shaft. Using the ST, press the oil seal.

ST 899824100 or 499827000 PRESS

#### NOTE:

- Replace the oil seal with a new one.
- Insert the oil seal approx. 24 mm (0.94 in) from the edge of clutch case.

- (A) Approx. 24 mm (0.94 in)  
(B) Oil seal  
(C) Speedometer driven gear shaft

## Speedometer Gear

### MANUAL TRANSMISSION AND DIFFERENTIAL

---

3) Install the speedometer driven gear and snap ring.

- (A) Snap ring
- (B) Speedometer driven gear

4) Install the vehicle speed sensor. <Ref. to 6MT-33, INSTALLATION, Vehicle Speed Sensor.>

- (B) Interlock block

## E: INSPECTION

1) Check the shift shaft and shift rod for damage. Replace if damaged.

2) Repair or replace the gearshift mechanism if excessively worn, bent, or defective in any way.

# Shifter Fork and Rod

## MANUAL TRANSMISSION AND DIFFERENTIAL

### F: ADJUSTMENT

#### 1. SELECTION OF 1st-2nd FORK ROD

##### NOTE:

- Perform the following procedures when.  
Replacing the 1st, 2nd driven gear.
- Replacing the 1st, 2nd synchro ring assembly.
- Replacing the adapter plate.
- Replacing the driven shaft.
- Replacing the 1st-2nd hub, sleeve assembly.

1) Insert the drive pinion assembly in adapter plate.

##### NOTE:

Make sure the thrust bearing outer race is not removed and drive pinion is not lift-up.

2) Set the height gauge to adapter plate. Lower the indicator of height gauge to mating surface of adapter plate and case, then set to zero point.

ST 18853AA000 HEIGHT GAUGE

##### NOTE:

- Remove the remaining gasket on edge surface with scraper, since the adapter plate is base point of measurement.
- Do not place the height gauge on shaded area in the figure during measurement.

3) Select the main shaft snap ring. <Ref. to 6MT-84, ADJUSTMENT, Main Shaft Assembly.>

4) Measure "B1" and "B2" as shown in the figure.

(1) Shift the 1st-2nd sleeve to 1st driven gear side, then press down to the stopper and measure "B1".

- (A) 1st driven gear
- (B) 1st-2nd sleeve

##### NOTE:

- Set the indicator of height gauge near measuring object, then lock the dial (1) as shown in the figure. Turn dial (2) to set the indicator to edge surface of sleeve 1st side.
- Measure five points of the sleeve turning every approx. 72°. Round off each two upper and lower measurement value. Use the remaining center value as measurement value.

# Shifter Fork and Rod

(2) Set the height gauge indicator upside down.

(A) Indicator

(3) Shift the 1st-2nd sleeve to 2nd driven gear side, then press up to the stopper and measure "B2".

(A) 2nd driven gear  
(B) 1st-2nd sleeve

**NOTE:**

- Set the indicator of height gauge near measuring object, then lock the dial (1) as shown in the figure. Turn dial (2) to set the indicator to edge surface of sleeve 2nd side.
- Perform the measuring procedure with two people, and measure the sleeve lifted up straight.
- Measure five points of the sleeve turning every approx. 72° apart. Round off each two upper and lower measurement value. Use the remaining center value as measurement value.

(4) According to both measurements, calculate the 1st-2nd sleeve neutral position. Select the

fork rod which applies to the calculated value from following equation.

**Equation:  $T = (B1 + B2) / 2$**

T: 1st-2nd sleeve center position

B1: Height from adapter plate edge to sleeve edge when shifted to 1st gear.

B2: Height from adapter plate edge to sleeve edge when shifted to 2nd gear. [measurement value + 55 mm (2.17 in)]

**NOTE:**

The indicator is installed upside down compared to the setting procedure of zero point. Add "d1" [fixing value: 55 mm (2.17 in)] from the following figure to "B2", to obtain measurement value of "B2".

| T             | mm (in)           | Lot No. (Mark)    |
|---------------|-------------------|-------------------|
| 62.93 — 63.23 | (2.4776 — 2.4894) | 32801AA111 (1)    |
| 63.23 — 63.53 | (2.4894 — 2.5012) | 32801AA131 (None) |
| 63.53 — 63.83 | (2.5012 — 2.5130) | 32801AA141 (2)    |

## 2. SELECTION OF 3rd-4th FORK ROD

**NOTE:**

Perform the following procedures when.

- Replacing the main shaft.
- Replacing the 3rd, 3rd to 6th drive gear and bushing.
- Replacing the 3rd, 3rd to 6th synchro assembly.
- Replacing the 3rd-4th hub, sleeve assembly.

- 1) Insert the main shaft assembly in adapter plate.
- 2) Set the height gauge to adapter plate. Lower the indicator of height gauge to upper surface of snap ring groove, on the upper side of main rear bearing, then set to zero point.

# Shifter Fork and Rod

## MANUAL TRANSMISSION AND DIFFERENTIAL

### ST 18853AA000 HEIGHT GAUGE

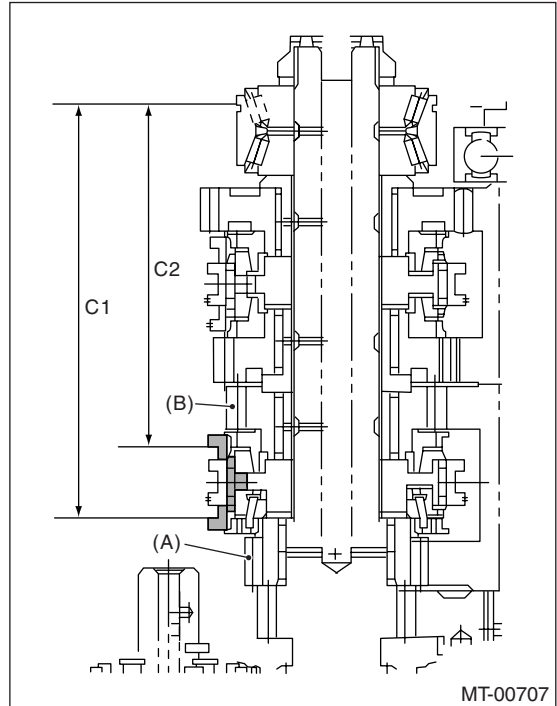

(A) Roller bearing

#### NOTE:

- Remove the remaining gasket on edge surface with scraper, since the height gauge is set on adapter plate during measurement.
- Do not put the height gauge on shaded area in the figure during the measurement.

3) Using the height gauge, measure "C1" and "C2" shown in the figure.

- (A) 3rd drive gear  
(B) 4th drive gear

(1) Shift the 3rd-4th sleeve to 4th gear side, then press up to the stopper and measure "C2".

(A) 4th drive gear

#### NOTE:

- Set the indicator of height gauge near measuring object, then lock the dial (1) as shown in the figure.
- Turn dial (2) to set the indicator to edge surface of sleeve 4th side.
- Perform the measuring procedure with two people, and measure the sleeve lifted up straight.

# Shifter Fork and Rod

- Measure five points of the sleeve turning every approx. 72°. Round off each two upper and lower measurement value. Use the remaining center value as measurement value.

(2) Set the height gauge indicator upside down.

(A) Indicator

(3) Shift the 3rd-4th sleeve to 3rd drive gear side, then press down to the stopper and measure "C1".

(A) 3rd drive gear

**NOTE:**

- Set the indicator of height gauge near measuring object, then lock the dial (1) as shown in the figure. Turn dial (2) to set the indicator to edge surface of sleeve 3rd side.

- Measure five points of the sleeve turning every approx. 72°. Round off each two upper and lower measurement value. Use the remaining center value as measurement value.

4) According to both measurements, calculate the 3rd-4th sleeve neutral position. Select the fork rod which applies to the calculated value from following equation.

**Equation:  $T = (C1 + C2) / 2$**

T: 3rd-4th sleeve center position

C1: Length from main shaft rear bearing snap ring groove to sleeve edge when shifted to 3rd gear. [measurement value +55 mm (2.17 in)]

C2: Length from main shaft rear bearing snap ring groove to sleeve edge when shifted to 4th gear.

**NOTE:**

The indicator is installed upside down compared to the setting procedure of zero point. Add "d1" [fixing value: 55 mm (2.17 in)] from the following figure to "C1", to obtain measurement value of "C1".

T = Thickness

### 3. SELECTION OF 5th-6th FORK ROD

#### NOTE:

Perform the following procedures when.

- Replacing the main shaft.
- Replacing the 3rd to 6th drive gear and bushing.
- Replacing the 3rd to 6th synchro ring assembly.
- Replacing the 3rd-4th hub, sleeve assembly.
- Replacing the 5th-6th hub, sleeve assembly.

- 1) Insert the main shaft assembly in adapter plate.
- 2) Set the height gauge to adapter plate. Lower the indicator of height gauge to upper surface of snap ring groove, or the upper side of main rear bearing. Then set to zero point.

ST 18853AA000 HEIGHT GAUGE

(A) Ball bearing

#### NOTE:

- Remove the remaining gasket on edge surface with scraper, since the height gauge is set on adapter plate during measurement.

- Do not place the height gauge on shaded area in the figure during the measurement.

- 3) Using the height gauge, measure “D1” and “D2” shown in the figure.

- (A) 5th main gear  
(B) 6th main gear

- (1) Shift the 5th-6th sleeve to 6th main gear side, then press up to the stopper and measure “D2”.

(A) 6th main gear

# Shifter Fork and Rod

**NOTE:**

- Set the indicator of height gauge near measuring object, then lock the dial (1) as shown in the figure. Turn dial (2) to set the indicator to edge surface of sleeve 6th side.
- Perform the measuring procedure with two people, and measure the sleeve lifted up straight.
- Measure five points of the sleeve turning every approx. 72°. Round off each two upper and lower measurement value. Use the remaining center value as measurement value.

(2) Set the height gauge indicator upside down.

(A) Indicator

(3) Shift the 5th-6th sleeve to 5th main gear side, then press down to the stopper and measure "D1".

(A) 5th main gear

**NOTE:**

- Set the indicator of height gauge near measuring object, then lock the dial (1) as shown in the figure. Turn dial (2) to set the indicator to edge surface of sleeve 5th side.
- Measure five points of the sleeve turning every approx. 72°. Round off each two upper and lower measurement value. Use the remaining center value as measurement value.

4) According to both measurements, calculate the 5th-6th sleeve neutral position. Select the fork rod, which applies to the calculated value from following equation.

**Equation:  $T = (D1 + D2) / 2$**

T: 5th-6th sleeve center position

D1: Length from the shaft rear bearing snap ring groove to sleeve groove edge when shifted to 5th gear. [measurement value + 55 mm (2.17 in)]

D2: Length from main shaft rear bearing snap ring groove to sleeve groove edge when shifted to 6th gear.

**NOTE:**

The indicator is installed upside down compared to the setting procedure of zero point. Add "d1" [fixing value: 55 mm (2.17 in)] from the following figure to "D1", to obtain measurement value of "D1".

T = Thickness

### 4. SELECTION OF REVERSE FORK ROD

#### NOTE:

Perform the following procedures when.

- Replacing the reverse idler gear.
- Replacing the reverse idler gear No. 2.
- Replacing the adapter plate.
- Replacing the base.

1) Insert the reverse idler gear assembly in adapter plate.

2) Tighten the base COMPL fixing bolt.

#### **Tightening torque:**

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

3) Set the height gauge to adapter plate. Lower the indicator of height gauge to mating surface of adapter plate and case, then set to zero point.

### ST 18853AA000 HEIGHT GAUGE

#### NOTE:

- Remove the remaining gasket on edge surface with scraper, since the adapter plate is base point of measurement.
- Do not place the height gauge on shaded area in the figure during measurement.

# Shifter Fork and Rod

## MANUAL TRANSMISSION AND DIFFERENTIAL

4) Press the reverse sleeve to reverse side idler gear No. 2, then measure "T".

(A) Reverse idler gear No. 2

(A) Reverse idler gear No. 2

| T + 4.8 mm (0.189 in)              | Lot No. (Mark)    |
|------------------------------------|-------------------|
| 33.50 — 33.80<br>(1.3189 — 1.3307) | 32816AA110 (1)    |
| 33.80 — 34.10<br>(1.3307 — 1.3425) | 32816AA130 (None) |
| 34.10 — 34.40<br>(1.3425 — 1.3543) | 32816AA140 (2)    |
| T = Thickness                      |                   |

### NOTE:

- Set the indicator of height gauge near measuring object, then lock the dial (1) as shown in the figure. Turn dial (2) to set the indicator to edge surface of reverse sleeve side.
- Measure five points of the sleeve turning every approx. 72°. Round off each two upper and lower measurement value. Use the remaining center value as measurement value.

5) According to measurement, calculate the reverse sleeve neutral position. Select the fork rod which applies to the calculated value from following equation.

**Equation:  $T + 4.8 \text{ mm (0.189 in)}$**

# Clutch Housing

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 27. Clutch Housing

#### A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>
- 2) Prepare the transmission for overhaul. <Ref. to 6MT-42, Preparation for Overhaul.>
- 3) Remove the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, REMOVAL, Oil Pipe.> <Ref. to 6MT-47, REMOVAL, Neutral Position Switch.> <Ref. to 6MT-45, REMOVAL, Back-up Light Switch.>
- 4) Remove the extension case. <Ref. to 6MT-49, REMOVAL, Extension Case.>
- 5) Remove the transfer driven gear. <Ref. to 6MT-61, REMOVAL, Transfer Driven Gear.>
- 6) Remove the center differential. <Ref. to 6MT-63, REMOVAL, Center Differential.>
- 7) Remove the oil pump. <Ref. to 6MT-64, REMOVAL, Oil Pump.>
- 8) Remove the transmission case. <Ref. to 6MT-68, REMOVAL, Transmission Case.>
- 9) Remove each gear assembly. <Ref. to 6MT-73, REMOVAL, Main Shaft Assembly.>
- 10) Remove the drive pinion shaft assembly. <Ref. to 6MT-99, REMOVAL, Drive Pinion Shaft Assembly.>
- 11) Remove the front differential assembly. <Ref. to 6MT-105, REMOVAL, Front Differential Assembly.>
- 12) Remove the vehicle speed sensor. <Ref. to 6MT-33, REMOVAL, Vehicle Speed Sensor.>
- 13) Remove the speedometer gear. <Ref. to 6MT-111, REMOVAL, Speedometer Gear.>

#### B: INSTALLATION

- 1) Install the pitching stopper bracket.

##### *Tightening torque:*

**41 N·m (4.2 kgf·m, 30.2 ft·lb)**

- 2) Install the speedometer gear. <Ref. to 6MT-111, INSTALLATION, Speedometer Gear.>
- 3) Install the vehicle speed sensor. <Ref. to 6MT-33, INSTALLATION, Vehicle Speed Sensor.>
- 4) Install the front differential assembly. <Ref. to 6MT-105, INSTALLATION, Front Differential Assembly.>
- 5) Install the drive pinion shaft assembly. <Ref. to 6MT-99, INSTALLATION, Drive Pinion Shaft Assembly.>
- 6) Install each gear assembly at once. <Ref. to 6MT-73, INSTALLATION, Main Shaft Assembly.>
- 7) Install the transmission case. <Ref. to 6MT-69, INSTALLATION, Transmission Case.>
- 8) Install the oil pump. <Ref. to 6MT-65, INSTALLATION, Oil Pump.>

- 9) Install the center differential. <Ref. to 6MT-63, INSTALLATION, Center Differential.>
- 10) Install the transfer driven gear. <Ref. to 6MT-61, INSTALLATION, Transfer Driven Gear.>
- 11) Install the extension case. <Ref. to 6MT-49, INSTALLATION, Extension Case.>
- 12) Install the oil pipe, neutral position switch, back-up light switch and harness. <Ref. to 6MT-44, INSTALLATION, Oil Pipe.> <Ref. to 6MT-47, INSTALLATION, Neutral Position Switch.> <Ref. to 6MT-45, INSTALLATION, Back-up Light Switch.>
- 13) Install the manual transmission assembly to vehicle. <Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

#### C: DISASSEMBLY

- 1) Remove the clutch release bearing guide.

- 2) Remove the oil seal.

#### D: ASSEMBLY

- 1) Install the oil seal into clutch housing without damaging.

ST 18657AA020 OIL SEAL INSTALLER

- 2) Install the clutch release bearing guide.

# Clutch Housing

MANUAL TRANSMISSION AND DIFFERENTIAL

## **Tightening torque:**

**6.4 N·m (0.65 kgf-m, 4.7 ft-lb)**

## **E: INSPECTION**

- 1) Make sure there is no damage or crack on the clutch housing. Replace the clutch housing with a new one if there is excessive damage.
- 2) Check the clutch housing for gear oil leakage. If there is oil leakage, repair or replace the leakage part.

## Yaw Rate and Lateral G Sensor

MANUAL TRANSMISSION AND DIFFERENTIAL

---

### 28. Yaw Rate and Lateral G Sensor

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console cover. <Ref. to EI-46, Console Box.>
- 3) Disconnect the connector from yaw rate & lateral G sensor.
- 4) Remove the yaw rate & lateral G sensor from body.

#### CAUTION:

**Do not drop or bump the yaw rate & lateral G sensor.**

#### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

**Do not drop or bump the yaw rate & lateral G sensor.**

*Tightening torque:*

**18 N·m (1.8 kgf-m, 13 ft-lb)**

## 29. Driver's Control Center Differential Control Module

### A: REMOVAL

- 1) Remove the ground cable from battery.
- 2) Remove the glove box. <Ref. to EI-43, REMOVAL, Glove Box.>
- 3) Disconnect the connector after removing the bolt from the inside of glove box, and then remove the control module.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

***44 N·m (4.5 kgf-m, 32.5 ft-lb)***

# Steering Angle Sensor

MANUAL TRANSMISSION AND DIFFERENTIAL

## 30. Steering Angle Sensor

### A: REPLACEMENT

#### CAUTION:

- Do not perform the removal except when the replacement.
- When replacing three times or more, replace the combination switch as assembly to protect screw part.

- 1) Set the steering wheel in a straight-ahead position.
- 2) Disconnect the ground cable from battery.
- 3) Remove the airbag module.  
<Ref. to AB-14, REMOVAL, Driver's Airbag Module.>

#### WARNING:

Always refer to "Airbag System" when performing the airbag module repair service.

<Ref. to AB-3, CAUTION, General Description.>

- 4) Remove the steering wheel.  
<Ref. to PS-20, REMOVAL, Steering Wheel.>
- 5) Remove the screws and detach the steering column lower cover.
- 6) Remove the two screws securing the steering column upper cover.
- 7) Unlock the harness band and disconnect the connector of steering angle sensor.

- (1) Harness band
- (2) Connector

- 8) Remove the screws which secure the roll connector to the steering column.

- 9) Remove the steering angle sensor from the roll connector.

- 10) Turn the protrusion portion of new steering angle sensor to match the alignment mark of inspection hole.

- (1) Protrusion portion
- (2) Inspection hole
- (3) Alignment mark

#### CAUTION:

Be careful not to allow foreign particles to enter from inspection hole.

- 11) Align the center of roll connector.  
<Ref. to AB-20, INSTALLATION, Roll Connector.>
- 12) Apply thin coat of grease which is enclosed with new part to the protruding parts (four) of steering angle sensor.

- (1) Apply grease.

# Steering Angle Sensor

MANUAL TRANSMISSION AND DIFFERENTIAL

13) Align the position of protrusion portion and install the roll connector to the steering angle sensor.

**Tightening torque:**

**0.5 N·m (0.05 kgf-m, 0.36 ft-lb)**

14) Install the roll connector to combination switch.

15) Install the steering wheel.  
<Ref. to PS-20, INSTALLATION, Steering Wheel.>

**Tightening torque:**

**44 N·m (4.5 kgf-m, 32.5 ft-lb)**

16) Install the airbag module to steering wheel.  
<Ref. to AB-14, INSTALLATION, Driver's Airbag Module.>

**WARNING:**

**Always refer to "Airbag System" before performing the service operation.**

<Ref. to AB-3, CAUTION, General Description.>

17) Connect the battery ground cable to battery.

# General Diagnostic Table

MANUAL TRANSMISSION AND DIFFERENTIAL

## 31. General Diagnostic Table

### A: INSPECTION

#### 1. MANUAL TRANSMISSION

| Symptom   | Possible cause  | Remedy                                   |
|---|---|--|
| 1. Gears are difficult to intermesh.<br>NOTE:<br>The cause for difficulty in shifting gears can be classified into two kinds: one is malfunction of the gear shift system and the other is malfunction of the transmission. However, if the operation is heavy and engagement of the gears is difficult, defective clutch disengagement may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission. | (a) Worn, damaged or burred chamfer of internal spline of sleeve and reverse driven gear  | Replace.                                 |
|   | (b) Worn, damaged or burred chamfer of spline of gears  | Replace.                                 |
|   | (c) Worn or scratched bushings  | Replace.                                 |
|   | (d) Incorrect contact between synchronizer ring and gear cone or wear   | Correct or replace.                      |
| 2. Gear slips out.<br>• Gear slips out when coasting on rough road.<br>• Gear slips out during acceleration.  | (a) Defective pitching stopper adjustment   | Adjust.                                  |
|   | (b) Loose engine mounting bolts   | Tighten or replace.                      |
|   | (c) Worn fork shifter, broken shifter fork rail spring  | Replace.                                 |
|   | (d) Worn or damaged ball bearing  | Replace.                                 |
|   | (e) Excessive clearance between splines of synchronizer hub and synchronizer sleeve   | Replace.                                 |
|   | (f) Worn tooth step of synchronizer hub (responsible for slip-out of 3rd gear)  | Replace.                                 |
|   | (g) Worn 1st driven gear, needle bearing and race   | Replace.                                 |
|   | (h) Worn 2nd driven gear, needle bearing and race   | Replace.                                 |
|   | (i) Worn 3rd drive gear and bushing   | Replace.                                 |
|   | (j) Worn 4th drive gear and bushing   | Replace.                                 |
|   | (k) Worn 5th drive gear and bushing   | Replace.                                 |
|   | (l) Worn 6th drive gear and bushing   | Replace.                                 |
|   | (m) Worn reverse idler gear and bushing   | Replace.                                 |
| 3. Unusual noise comes from transmission.<br>NOTE:<br>If an unusual noise is heard when the vehicle is parked with its engine idling and if the noise ceases when the clutch is disengaged, it may be considered that the noise comes from the transmission.  | (a) Insufficient or improper lubrication  | Lubricate or replace with specified oil. |
|   | (b) Worn or damaged gears and bearings<br>NOTE:<br>If the trouble is only wear of the tooth surfaces, merely a high roaring noise will occur at high speeds, but if any part is broken, rhythmical knocking sound will be heard even at low speeds. | Replace.                                 |

# General Diagnostic Table

MANUAL TRANSMISSION AND DIFFERENTIAL

## 2. DIFFERENTIAL

| Symptom  | Possible cause   | Remedy  |
|--|--|---|
| 1. Broken differential (case, gear, bearing, etc.)<br>NOTE:<br>Abnormal noise will develop and finally it will become impossible to continue to run due to broken pieces obstructing the gear revolution.  | (a) Insufficient or improper oil   | Replace.  |
|  | (b) Use of vehicle under severe conditions such as excessive load and improper use of clutch | Replace.  |
|  | (c) Improper adjustment of taper roller bearing  | Adjust.   |
|  | (d) Improper adjustment of drive pinion and hypoid driven gear                               | Adjust.   |
|  | (e) Loose hypoid driven gear clamping bolts  | Tighten.  |
| 2. Differential and hypoid gear noises<br>Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise is the first indication of the trouble. However noises from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for the differential noise. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following four kinds of noises. <ul style="list-style-type: none"> <li>• Gear noise when driving: If noise increases as the vehicle speed increases it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc.</li> <li>• Gear noise when coasting: Damaged gears due to maladjusted bearings and incorrect shim adjustment</li> <li>• Bearing noise when driving or when coasting: Cracked, broken or damaged bearings</li> <li>• Noise which mainly occurs when turning: Unusual noise from the differential side gear, differential pinion, differential pinion shaft, etc.</li> </ul> | (a) Insufficient oil   | Lubricate.  |
|  | (b) Improper adjustment of hypoid driven gear and drive pinion                               | Check tooth contact.  |
|  | (c) Worn teeth of hypoid driven gear and drive pinion  | Replace as a set.<br>Readjust bearing preload.                                |
|  | (d) Loose roller bearing   | Readjust hypoid driven gear to drive pinion backlash and check tooth contact. |
|  | (e) Distorted hypoid driven gear or differential case  | Replace.  |
|  | (f) Broken or damaged LSD.   | Replace.  |

# Basic Diagnostic Procedure

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

### 1. Basic Diagnostic Procedure

#### A: PROCEDURE

| Step  | Check   | Yes   | No  |
|---|---|---|---|
| <p><b>1</b></p> <p><b>CHECK PRE-INSPECTION.</b></p> <p>1) Ask the customer when and how trouble occurred using the check list for interview. &lt;Ref. to 6MT(diag)-4, Check List for Interview.&gt;</p> <p>2) Before performing diagnosis, inspect the unit which might influence the driver's control center differential. &lt;Ref. to 6MT(diag)-5, INSPECTION, General Description.&gt;</p>   | Is unit that might influence the driver's control center differential problem normal? | Go to step 2.   | Repair the faulty unit.   |
| <p><b>2</b></p> <p><b>CALLING UP THE DTC.</b></p> <p>Check the DTC. &lt;Ref. to 6MT(diag)-20, WITH SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).&gt;</p> <p>NOTE:</p> <ul style="list-style-type: none"> <li>• For DTC, refer to "List of Diagnostic Trouble Code (DTC)". &lt;Ref. to 6MT(diag)-25, List of Diagnostic Trouble Code (DTC).&gt;</li> <li>• If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit.</li> </ul>   | Is the DTC called up?   | Go to step 3.<br>NOTE:<br>Record all DTC.   | Go to step 4.   |
| <p><b>3</b></p> <p><b>PERFORM THE DIAGNOSIS.</b></p> <p>1) Inspect and repair the all DTC using "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". &lt;Ref. to 6MT(diag)-27, Diagnostic Procedure with Diagnostic Trouble Code (DTC).&gt;</p> <p>NOTE:<br/>For DTC, refer to "List of Diagnostic Trouble Code (DTC)". &lt;Ref. to 6MT(diag)-25, List of Diagnostic Trouble Code (DTC).&gt;</p> <p>2) Start the engine.</p> <p>3) Read the DTC using Subaru Select Monitor. &lt;Ref. to 6MT(diag)-20, WITH SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).&gt;</p> | Is the DTC displayed?   | Record all DTC, and inspect using "Diagnostic Procedure with Diagnostic Trouble Code (DTC)" <Ref. to 6MT(diag)-27, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Repeat "PERFORM THE DIAGNOSIS" until any DTC is not displayed. | Go to step 4.   |
| <p><b>4</b></p> <p><b>READ THE DTC WITH COMBINATION METER.</b></p> <p>Check DTC with combination meter. &lt;Ref. to 6MT(diag)-20, READ DIAGNOSTIC TROUBLE CODE (DTC) WITH DIAGNOSTIC INDICATOR LIGHT., OPERATION, Read Diagnostic Trouble Code (DTC).&gt;</p> <p>NOTE:<br/>For details concerning DTCs refer to the "List of Diagnostic Trouble Code (DTC)". &lt;Ref. to 6MT(diag)-25, List of Diagnostic Trouble Code (DTC).&gt;</p>   | Is the DTC called up?   | Go to step 5.<br>NOTE:<br>Record all DTC.   | Inspect using "Can not calling up DTC". <Ref. to 6MT(diag)-27, DTC CANNOT BE CALLED UP, Diagnostic Procedure with Diagnostic Trouble Code (DTC).><br>NOTE:<br>After the inspection, read the DTC again. |

# Basic Diagnostic Procedure

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step  | Check                 | Yes   | No  |
|---|-----------------------|---|---|
| <p><b>5</b>      <b>PERFORM THE DIAGNOSIS.</b><br/>1) Inspect and repair the all DTC using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)”. &lt;Ref. to 6MT(diag)-27, Diagnostic Procedure with Diagnostic Trouble Code (DTC).&gt;<br/>NOTE:<br/>For DTC, refer to “List of Diagnostic Trouble Code (DTC)”. &lt;Ref. to 6MT(diag)-25, List of Diagnostic Trouble Code (DTC).&gt;<br/>2) Perform the inspection mode. &lt;Ref. to 6MT(diag)-22, Inspection Mode.&gt;</p> | Is the DTC displayed? | Record all DTC, and inspect using “Diagnostic Procedure with Diagnostic Trouble Code (DTC)” <Ref. to 6MT(diag)-27, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Repeat “PERFORM THE DIAGNOSIS” until any DTC is not displayed. | Inspect using “General Diagnostic Table”. |

## Check List for Interview

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

---

### 2. Check List for Interview

#### A: CHECK

Check the following items when problem has occurred.

NOTE:

Use copies of this page for interviewing customers.

|  |   |   |  |
|--|---|---|--|
| Customer's name                                      |   |   |  |
| Date of purchase                                     |   |   |  |
| Date of repair                                       |   |   |  |
| Trans. model   | TRANSMISSION  | VIN   |  |
| Odometer reading                                     |   |   |  |

# General Description

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

## 3. General Description

### A: CAUTION

Supplemental restraint system airbag wiring harness is routed near the driver's control center differential control module.

#### CAUTION:

- All airbag system connectors are colored yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when performing diagnostics and servicing the driver's control center differential control module.

- When measuring the voltage or resistance of each control unit or each sensor, use a tapered pin with diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Do not insert the pin with diameter of more than 0.65 mm (0.026 in).

### B: INSPECTION

#### 1. POWER SUPPLY

1) Measure battery voltage and specific gravity of electrolyte.

**Standard of voltage: More than 12 V**

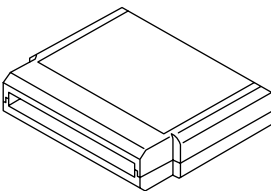

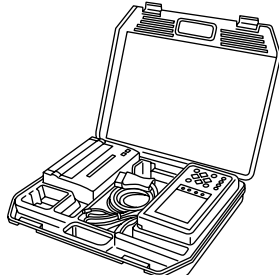

**Standard of gravity: More than 1.260**

2) Check the condition of fuse.

3) Check the condition of harness and harness connector.

### C: PREPARATION TOOL

#### 1. SPECIAL TOOL

| ILLUSTRATION  | TOOL NUMBER                        | DESCRIPTION               | REMARKS                                |

# Driver's Control Center Differential Control Module I/O Signal

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

- |   |   |  |
|---|---|--|
| (1) Battery   | (9) Driver's control center differential indicator light (Lock ratio 65%)   | (17) Engine control module (ECM)                         |
| (2) Ignition relay  | (10) Driver's control center differential indicator light (Lock ratio 85%)  | (18) Driver's control center differential                |
| (3) Stop light switch   | (11) Driver's control center differential indicator light (Lock ratio 100%) | (19) Parking brake switch                                |
| (4) Driver's control center differential relay                            | (12) AUTO indicator light   | (20) Manual mode switch                                  |
| (5) Combination meter   | (13) Neutral position switch  | (21) Rear differential oil temperature switch            |
| (6) Driver's control center differential indicator light (Lock ratio 0%)  | (14) ABS control module & hydraulic control unit (ABSCM&H/U)                | (22) Center differential control dial                    |
| (7) Driver's control center differential indicator light (Lock ratio 15%) | (15) Data link connector  | (23) Yaw rate & lateral G sensor                         |
| (8) Driver's control center differential indicator light (Lock ratio 35%) | (16) Accelerator pedal position sensor                                      | (24) Driver's control center differential control module |
|   |   | (25) Steering angle sensor                               |

### C: MEASUREMENT

Measure input and output signal voltage.

#### 1. WAVEFORM

- |                     |  |                   |
|---------------------|--|-------------------|
| (1) Yaw rate sensor | (3) Vehicle is at a standstill. (engine OFF, ABS is in normal condition) | (4) Less than 1 V |
| (2) Terminal No.    |  | (5) Approx. 6 V   |

# Subaru Select Monitor

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

### 6. Subaru Select Monitor

#### A: OPERATION

##### 1. READ DIAGNOSTIC TROUBLE CODE (DTC)

1) Prepare the Subaru Select Monitor kit. <Ref. to 6MT(diag)-5, SPECIAL TOOL, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge to Subaru Select Monitor. <Ref. to 6MT(diag)-5, SPECIAL TOOL, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

(1) Data link connector

(2) Connect the diagnosis cable to data link connector.

#### CAUTION:

Do not connect the scan tools except for Subaru Select Monitor or general scan tool.

5) Turn the ignition switch to ON (engine OFF) and turn the Subaru Select Monitor power switch to ON.

(1) Power switch

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

7) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.

8) Press the [YES] key after the {Center Differential Control} is displayed.

9) On the «Transmission Diagnosis» display screen, select the {DTC Display} and press the [YES] key.

#### NOTE:

- For details concerning operation procedure, refer to the "SUBARU SELECT MONITOR OPERATION MANUAL".

- For details concerning DTCs, refer to the "List of Diagnostic Trouble Code (DTC)". <Ref. to 6MT(diag)-25, List of Diagnostic Trouble Code (DTC).>

10) If transmission and Subaru Select Monitor cannot communicate, check the communication circuit. <Ref. to 6MT(diag)-17, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

11) On the «Check DTC» display screen, select the {Latest Code} or {Memory Code} and press the [Yes] key.

| Display     | Contents to be monitored  |
|-------------|---|
| Latest      | Indicate the latest DTC on the Subaru Select Monitor display.                     |
| Memory Code | Indicate the latest DTC in previous trouble on the Subaru Select Monitor display. |

# Subaru Select Monitor

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

## 2. READ CURRENT DATA

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
  - 2) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.
  - 3) Press the [YES] key after the {Center Differential Control} is displayed.
  - 4) On the «Transmission Diagnosis» screen, select the {Current Data Display/Save}, and then press the [YES] key.
  - 5) On the «Data Display Menu» screen, select the data display style and press the [YES] key.
  - 6) Using a scroll key, move the display screen up or down until necessary data is shown.
- A list of the support data is shown in the following table.

| Display                              | Contents to be monitored  | Unit of measure |
|--------------------------------------|---|-----------------|
| Lateral G Sensor                     | Lateral G sensor voltage is displayed.                                | V               |
| Center Differential Switch Voltage   | Center differential switch voltage is displayed.                      | V               |
| Center Differential Actual Current   | Actual current of center differential is displayed.                   | A               |
| Center Differential Set Current      | Set current of center differential is displayed.                      | A               |
| FR Wheel Speed                       | Wheel speed detected by front ABS wheel speed sensor RH is displayed. | km/h or MPH     |
| FL Wheel Speed                       | Wheel speed detected by front ABS wheel speed sensor LH is displayed. | km/h or MPH     |
| RR Wheel Speed                       | Wheel speed detected by rear ABS wheel speed sensor RH is displayed.  | km/h or MPH     |
| RL Wheel Speed                       | Wheel speed detected by rear ABS wheel speed sensor LH is displayed.  | km/h or MPH     |
| Sub-Accelerator Sensor               | Accelerator pedal position sensor voltage is displayed.               | V               |
| Yaw rate sensor voltage              | Voltage detected by yaw rate sensor is displayed.                     | V               |
| Yaw rate & G sensor ref. V           | Reference voltage of yaw rate & lateral G sensor is displayed.        | V               |
| Steering Angle Sensor                | Steering angle is displayed.  | deg             |
| Engine Speed                         | Current engine speed is displayed.                                    | rpm             |
| ABS Signal                           | ON/OFF of ABS signal is displayed.                                    | ON or OFF       |
| Stop Light SW                        | ON/OFF of stop light switch is displayed.                             | ON or OFF       |
| Rear differential Oil Temperature SW | ON/OFF of rear differential oil temperature switch is displayed.      | ON or OFF       |
| Module Identification Signal         | ON/OFF of module identification signal is displayed.                  | ON or OFF       |
| Center Differential Light 1          | ON/OFF of center differential light 1 is displayed.                   | ON or OFF       |
| Center Differential Light 2          | ON/OFF of center differential light 2 is displayed.                   | ON or OFF       |
| Center Differential Light 3          | ON/OFF of center differential light 3 is displayed.                   | ON or OFF       |
| Center Differential Light 4          | ON/OFF of center differential light 4 is displayed.                   | ON or OFF       |
| Center Differential Light 5          | ON/OFF of center differential light 5 is displayed.                   | ON or OFF       |
| Center Differential Light 6          | ON/OFF of center differential light 6 is displayed.                   | ON or OFF       |
| Parking SW                           | ON/OFF of parking switch is displayed.                                | ON or OFF       |
| Center Differential Relay            | ON/OFF of center differential relay is displayed.                     | ON or OFF       |
| AUTO/MANUAL Mode Change SW           | ON/OFF of AUTO/MANUAL mode change switch is displayed.                | ON or OFF       |
| AUTO Mode Light                      | ON/OFF of AUTO mode light is displayed.                               | ON or OFF       |
| Neutral Switch                       | Neutral switch condition (neutral/except neutral) is displayed.       | ON or OFF       |

### NOTE:

For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

# Subaru Select Monitor

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

### 3. CLEAR MEMORY MODE

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Transmission} and press the [YES] key.
- 3) Press the [YES] key after the {Center Differential Control} is displayed.
- 4) On the «Transmission Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.

| Display                          | Contents to be monitored  |
|----------------------------------|---------------------------|
| Is a memory clearance performed? | Function of clearing DTC. |

- 5) When “Done” and “Turn ignition switch OFF” are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

#### NOTE:

For details concerning operation procedure, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

### 4. FREEZE FRAME DATA

#### NOTE:

- Data stored at the time of trouble occurrence is shown on display.
- Each time trouble occurs, the latest information is stored in the freeze frame data in memory.
- Freeze frame data will be memorized up to nine.

| DTC   | Content   | Contents be monitored   |
|-------|---|---|
| P1521 | Brake switch circuit range                      | Brake switch circuit condition is displayed.                          |
| P1720 | DCCD CAN system circuit                         | CAN communication circuit condition is displayed.                     |
| P1721 | DCCD engine rpm signal system                   | Engine speed signal circuit condition is displayed.                   |
| P1759 | Lateral G sensor                                | Lateral G sensor circuit condition is displayed.                      |
| P1764 | Yaw rate sensor system circuit                  | Yaw rate & lateral G sensor circuit condition is displayed.           |
| P1765 | Yaw rate side G sensor reference system circuit | Yaw rate & lateral G sensor reference circuit condition is displayed. |
| P1767 | DCCD steering angle sensor                      | Steering angle circuit condition is displayed.                        |
| P1875 | Center differential                             | Center differential circuit condition is displayed.                   |
| P2125 | Accelerator pedal position sensor               | Accelerator pedal position sensor circuit condition is displayed.     |

# Subaru Select Monitor

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

## B: INSPECTION

### 1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

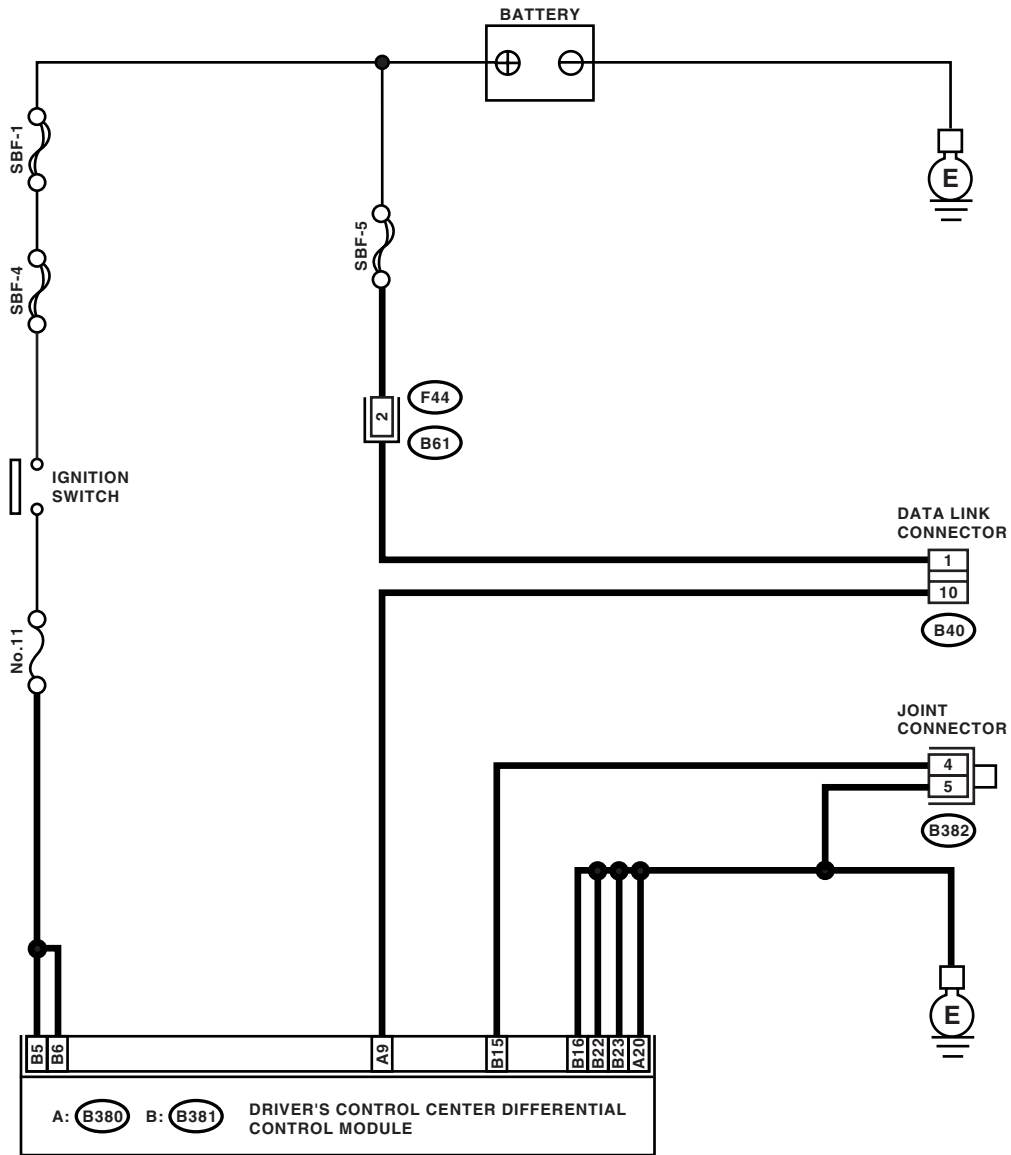

#### DETECTING CONDITION:

Faulty harness connector.

#### TROUBLE SYMPTOM:

Communication is impossible between driver's control center differential control module and Subaru Select Monitor.

#### WIRING DIAGRAM:

| <b>11</b><br><b>CHECK HARNESS CONNECTOR BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND CHASSIS GROUND.</b><br>1) Turn the ignition switch to OFF.<br>2) Measure the resistance of harness between driver's control center differential control module and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B380) No. 20 — Chassis ground:</b><br><b>(B381) No. 15 — Chassis ground:</b><br><b>(B381) No. 16 — Chassis ground:</b><br><b>(B381) No. 22 — Chassis ground:</b><br><b>(B381) No. 23 — Chassis ground:</b> | Is the resistance less than 1 $\Omega$ ?  | Go to step 12.        | Repair open circuit in harness between driver's control center differential control module and inhibitor side connector, and poor contact in coupling connector. |
| <b>12</b><br><b>CHECK POOR CONTACT IN CONNECTOR.</b>  | Is there poor contact in control module power supply, ground circuit and data link connector? | Repair the connector. | Replace the driver's control center differential control module.<br><Ref. to 6MT(diag)-6, LOCATION, Electrical Component Location.>                              |

## Read Diagnostic Trouble Code (DTC)

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

---

### 7. Read Diagnostic Trouble Code (DTC)

#### A: OPERATION

##### 1. READ DIAGNOSTIC TROUBLE CODE (DTC) WITH DIAGNOSTIC INDICATOR LIGHT.

**NOTE:**

Perform the following step 4) to 8) within 30 sec.

- 1) Securely apply the parking brake.
- 2) Set the center differential control dial to differential free.
- 3) Start the engine.
- 4) Set the center differential control dial to differential lock.
- 5) Release the parking brake.
- 6) Set the center differential control dial to differential free.
- 7) Securely apply the parking brake.
- 8) Repeat the step 4) to 7) for twice.

**NOTE:**

Repeat the step from the beginning when diagnostic indicator light does not blink.

9) Execute inspection mode. <Ref. to 6MT(diag)-22, Inspection Mode.>

**NOTE:**

Refer to "HOW TO READ DIAGNOSTIC TROUBLE CODE (DTC)" for reading DTC. <Ref. to 6MT(diag)-21, HOW TO READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Read Diagnostic Trouble Code (DTC).>

##### 2. WITH SUBARU SELECT MONITOR

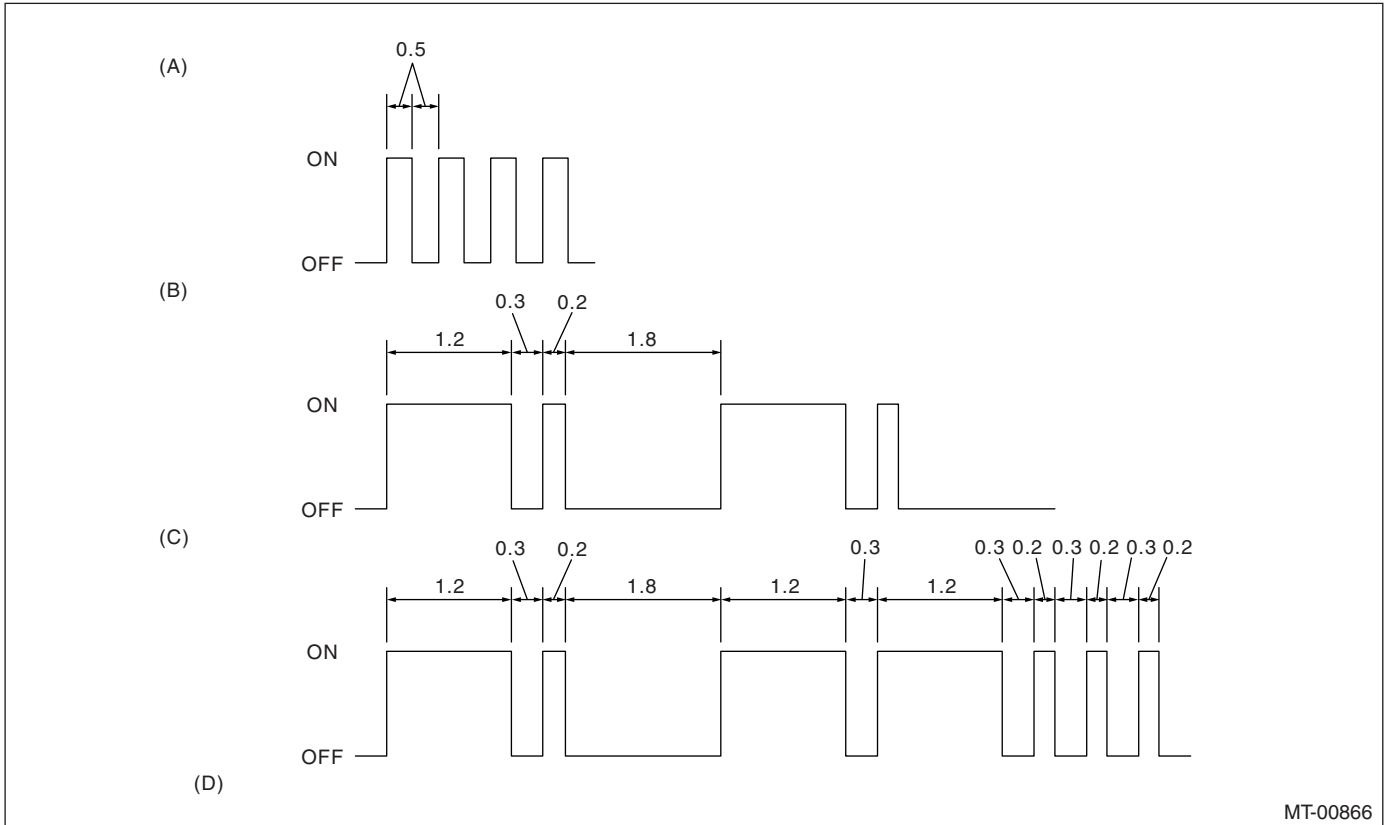

Detail procedure for reading DTC, refer to "SUBARU SELECT MONITOR". <Ref. to 6MT(diag)-14, Subaru Select Monitor.>

# Read Diagnostic Trouble Code (DTC)

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

## 3. HOW TO READ DIAGNOSTIC TROUBLE CODE (DTC)

DTC for faulty part is indicated by blinking of driver's control center differential indicator. Long blink (1.2 sec.) means ten's place, short blink (0.2 sec.) means one's place.

(A) Normal code

(B) DTC 11

(C) DTC 11 and 23

(D) Unit: Seconds

### NOTE:

- The codes which are memorized in control module, and the codes which are appeared to inform the trouble to driver in normal driving condition are only nine; "21", "22", "23", "25", "26", "27", "28", "29" and "33".
- For details of DTC, refer to "List of Diagnostic Trouble Code (DTC)". <Ref. to 6MT(diag)-25, List of Diagnostic Trouble Code (DTC).>

## 8. Inspection Mode

### A: PROCEDURE

#### WARNING:

**Observe the road traffic law.**

- 1) Call up the Self-diagnosis diagnostic trouble code (DTC). <Ref. to 6MT(diag)-20, READ DIAGNOSTIC TROUBLE CODE (DTC) WITH DIAGNOSTIC INDICATOR LIGHT., OPERATION, Read Diagnostic Trouble Code (DTC).>
- 2) A brake pedal is stepped on and a brake pedal is returned.
- 3) Operate the Manual mode switch once or more, and then set to Manual mode.
- 4) Turn the center differential control dial to differential lock and differential free for once, and turn it to differential lock, and then wait three seconds.
- 5) With the vehicle parked, shift the gear position to 1st then neutral.

## Clear Memory Mode

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

---

### 9. Clear Memory Mode

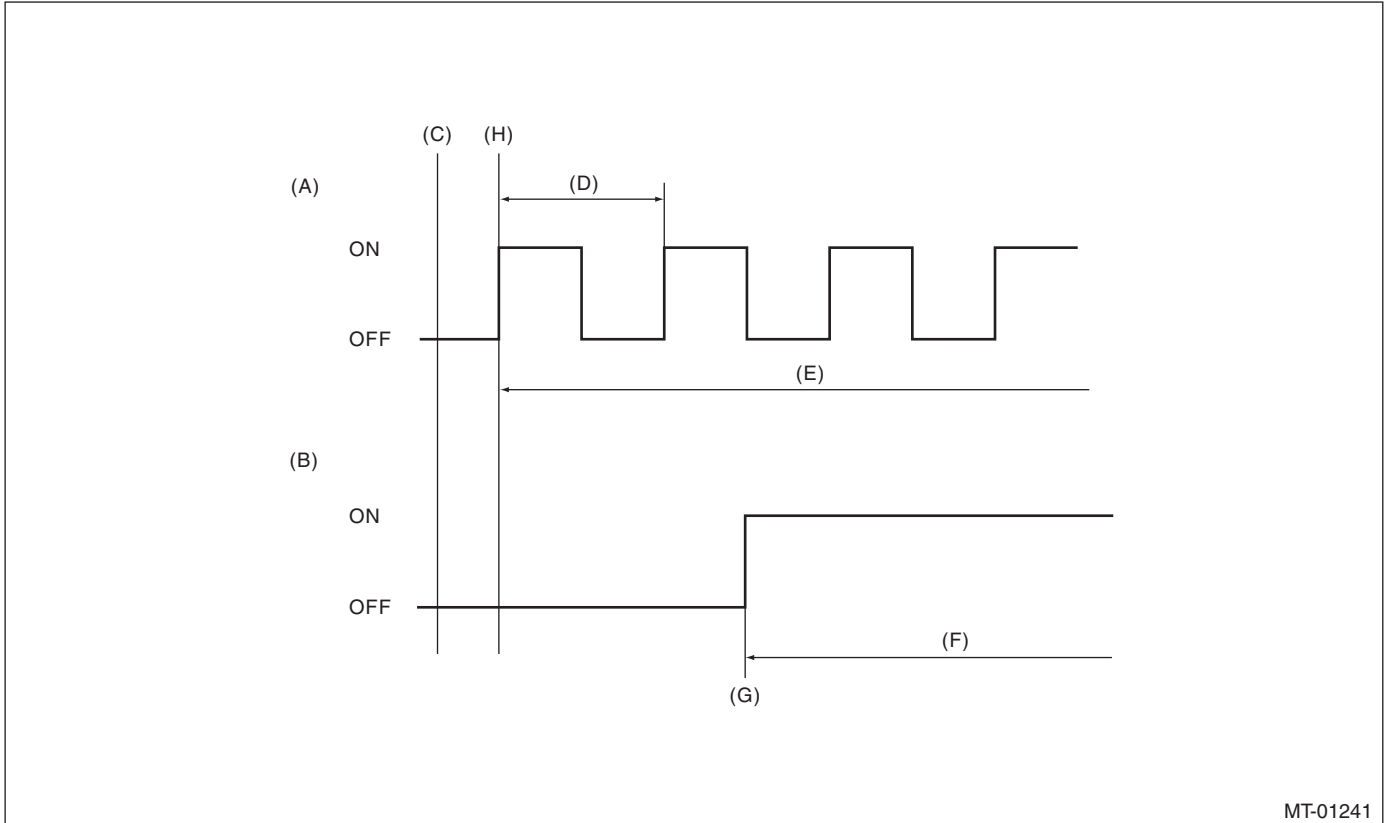

#### A: OPERATION

Detail procedure for clearing DTCs, refer to "SUBARU SELECT MONITOR". <Ref. to 6MT(diag)-14, Subaru Select Monitor.>

## 10.Driver's Control Center Differential Indicator Light Display

### A: INSPECTION

When the malfunction occurs on part or unit, the control module performs self diagnosis and driver's control center differential indicator light (at the bottom differential free light) keep blinking until detect the malfunction and the ignition switch is turned to OFF. Faulty part or unit can be identified by calling up DTC. Indicator display is as shown in the figure.

MT-01241

- |                        |  |  |
|------------------------|--|--|
| (A) Faulty             | (E) Blink  | (G) Set manual mode dial to differential free position |
| (B) Normal             | (F) Driver's control center differential indicator light illuminates | (H) Malfunction is detected                            |
| (C) Ignition switch ON |  |  |
| (D) 1 sec.             |  |  |

# List of Diagnostic Trouble Code (DTC)

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

## 11. List of Diagnostic Trouble Code (DTC)

### A: LIST

#### 1. SUBARU SELECT MONITOR DISPLAY

| DTC   | Content   | Content of diagnosis  | Index   |
|-------|---|---|---|
| P1521 | Brake Switch Circuit Range                      | Stop light switch circuit is open or shorted.                             | <Ref. to 6MT(diag)-33, DTC P1521 BRAKE SWITCH CIRCUIT RANGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |
| P1720 | DCCD CAN system circuit                         | CAN communication system circuit is open or shorted.                      | <Ref. to 6MT(diag)-35, DTC P1720 DCCD CAN SYSTEM CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                         |
| P1721 | DCCD engine rpm signal system circuit           | Engine speed signal system circuit is open or shorted.                    | <Ref. to 6MT(diag)-37, DTC P1721 DCCD ENGINE RPM SIGNAL SYSTEM CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>           |
| P1759 | Lateral Acceleration Sensor Circuit             | Lateral G sensor circuit is open or shorted.                              | <Ref. to 6MT(diag)-40, DTC P1759 LATERAL ACCELERATION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>             |
| P1764 | Yaw rate sensor system circuit                  | Yaw rate & lateral G sensor circuit is open, shorted or stuck.            | <Ref. to 6MT(diag)-43, DTC P1764 YAW RATE SENSOR SYSTEM CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                  |
| P1765 | Yaw rate side G sensor reference system circuit | Yaw rate & lateral G sensor reference circuit is open or shorted.         | <Ref. to 6MT(diag)-47, DTC P1765 YAW RATE SIDE G SENSOR REFERENCE SYSTEM CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| P1767 | DCCD Steering Angle Sensor                      | Steering angle sensor circuit is open or shorted, or communication error. | <Ref. to 6MT(diag)-50, DTC P1767 DCCD STEERING ANGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |
| P1875 | Circuit of Center Diff.                         | Driver's control center differential circuit is open or shorted.          | <Ref. to 6MT(diag)-52, DTC P1875 CIRCUIT OF CENTER DIFF., Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                         |
| P2125 | Accelerator Position Sensor E                   | Accelerator pedal position sensor circuit is open or shorted.             | <Ref. to 6MT(diag)-58, DTC P2125 ACCELERATOR POSITION SENSOR E, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                   |

#### 2. COMBINATION METER INDICATOR LIGHT

| DTC | Content                                | Content of diagnosis   | Index  |
|-----|--|--|--|
| 21  | Accelerator Position Sensor E          | Accelerator pedal position sensor circuit is open or shorted.    | <Ref. to 6MT(diag)-58, DTC P2125 ACCELERATOR POSITION SENSOR E, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>        |
| 22  | Lateral Acceleration Sensor Circuit    | Lateral G sensor circuit is open or shorted.                     | <Ref. to 6MT(diag)-40, DTC P1759 LATERAL ACCELERATION SENSOR CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>  |
| 23  | Circuit of Center Diff.                | Driver's control center differential circuit is open or shorted. | <Ref. to 6MT(diag)-52, DTC P1875 CIRCUIT OF CENTER DIFF., Diagnostic Procedure with Diagnostic Trouble Code (DTC).>              |
| 24  | Check Center Differential Control Dial | Center differential control dial circuit is open or shorted.     | <Ref. to 6MT(diag)-61, DTC 24 CHECK CENTER DIFFERENTIAL CONTROL DIAL., Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| 25  | DCCD CAN system circuit                | CAN communication system circuit is open or shorted.             | <Ref. to 6MT(diag)-35, DTC P1720 DCCD CAN SYSTEM CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>              |

## List of Diagnostic Trouble Code (DTC)

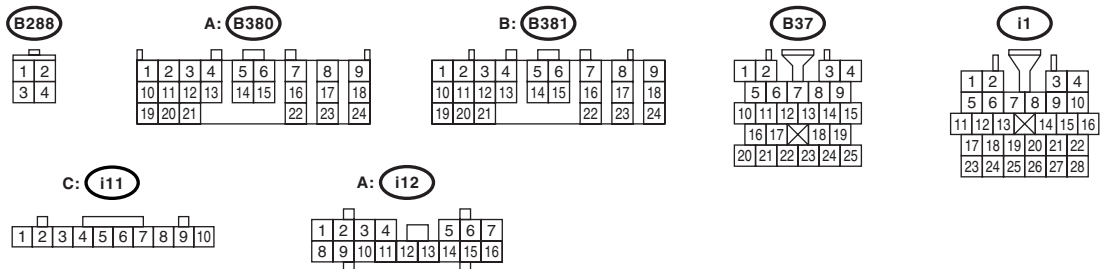

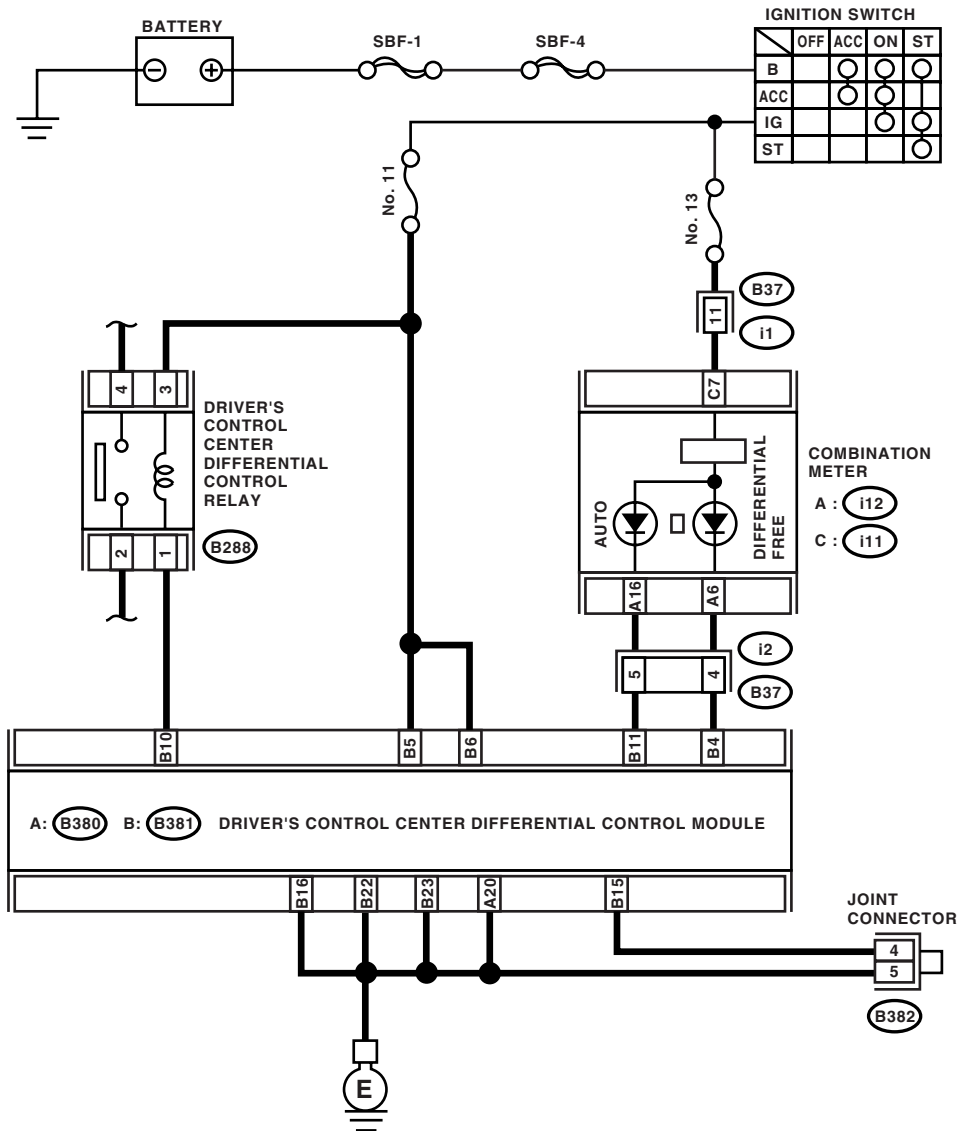

### MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| DTC | Content   | Content of diagnosis  | Index   |
|-----|---|---|---|
| 26  | DCCD engine rpm signal system                   | Engine speed signal system circuit is open or shorted.                    | <Ref. to 6MT(diag)-37, DTC P1721 DCCD ENGINE RPM SIGNAL SYSTEM CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>           |
| 27  | Yaw rate side G sensor reference system circuit | Yaw rate & lateral G sensor reference circuit is open or shorted.         | <Ref. to 6MT(diag)-47, DTC P1765 YAW RATE SIDE G SENSOR REFERENCE SYSTEM CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> |
| 28  | Yaw rate sensor system circuit                  | Yaw rate & lateral G sensor circuit is open, shorted or stuck.            | <Ref. to 6MT(diag)-43, DTC P1764 YAW RATE SENSOR SYSTEM CIRCUIT, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                  |
| 29  | DCCD Steering Angle Sensor                      | Steering angle sensor circuit is open or shorted, or communication error. | <Ref. to 6MT(diag)-50, DTC P1767 DCCD STEERING ANGLE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |
| 31  | Manual mode switch                              | Manual mode switch circuit is open or shorted.                            | <Ref. to 6MT(diag)-64, DTC 31 MANUAL MODE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                                 |
| 32  | Check Parking Brake Switch                      | Parking brake switch circuit is open or shorted.                          | <Ref. to 6MT(diag)-67, DTC 32 CHECK PARKING BRAKE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                         |
| 33  | Brake Switch Circuit Range                      | Brake switch circuit is open or shorted.                                  | <Ref. to 6MT(diag)-33, DTC P1521 BRAKE SWITCH CIRCUIT RANGE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                      |
| 37  | Neutral position switch                         | Neutral position switch circuit is open or shorted.                       | <Ref. to 6MT(diag)-69, DTC 37 NEUTRAL POSITION SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>                            |

## 12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### A: DTC CANNOT BE CALLED UP

WIRING DIAGRAM:

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step | Check   | Yes  | No   |   |
|------|---|--|--|---|
| 1    | <b>CHECK THE AUTO INDICATOR LIGHT.</b><br>Turn the ignition switch to ON.   | Does the AUTO indicator light illuminate?  | Go to step 5.  | Go to step 2.   |
| 2    | <b>CHECK THE GROUND CIRCUIT OF DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connector of driver's control center differential control module.<br>3) Measure the resistance between driver's control center differential control module harness connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B380) No. 20 — Chassis ground:</b><br><b>(B381) No. 15 — Chassis ground:</b><br><b>(B381) No. 16 — Chassis ground:</b><br><b>(B381) No. 22 — Chassis ground:</b><br><b>(B381) No. 23 — Chassis ground:</b> | Is the resistance less than 1 Ω?   | Go to step 3.  | Repair the open circuit of driver's control center differential control module ground circuit.  |
| 3    | <b>CHECK FUSE (No. 11).</b><br>Remove the fuse (No. 11).  | Is the fuse (No. 11) is blown out?   | Replace fuse (No. 11). If the replaced fuse (No. 11) is blown out easily, repair short circuit in harness between fuse (No. 11) and driver's control center differential control module. | Go to step 4.   |
| 4    | <b>CHECK IGNITION POWER SUPPLY CIRCUIT OF DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Turn the ignition switch to ON. (engine OFF)<br>2) Measure the voltage between driver's control center differential control module and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B381) No. 5 (+) — Chassis ground (-):</b><br><b>(B381) No. 6 (+) — Chassis ground (-):</b>  | Is the voltage more than 10 V?   | Go to step 5.  | Repair the open circuit in harness between fuse (No. 11) and driver's control center differential control module, or fuse (No. 11) and battery. |
| 5    | <b>CHECK MANUAL MODE SWITCH.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect all connectors.<br>3) Turn the ignition switch to ON.<br>4) Push the manual mode switch to enter the manual mode.   | Is the manual mode obtained?   | Go to step 6.  | Repair the switch.<br><Ref. to 6MT(diag)-64, DTC 31 MANUAL MODE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>               |
| 6    | <b>CHECK DRIVER'S CONTROL CENTER DIFFERENTIAL INDICATOR LIGHT.</b><br>Operate the center differential control dial.   | Does the center differential indicator light illuminate according to center differential control dial? | Go to step 8.  | Go to step 7.   |
| 7    | <b>CHECK THE CENTER DIFFERENTIAL CONTROL DIAL</b><br><Ref. to 6MT(diag)-61, DTC 24 CHECK CENTER DIFFERENTIAL CONTROL DIAL., Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   | Is the center differential control dial circuit normal?  | Go to step 8.  | Repair it.  |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step   | Check   | Yes  | No  |
|--|---|--|---|
| <b>8 CHECK THE PARKING BRAKE SWITCH</b><br><Ref. to 6MT(diag)-67, DTC 32 CHECK PARKING BRAKE SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>   | Is the parking brake switch circuit normal?   | Go to step 9.  | Repair it.  |
| <b>9 READ THE DTC.</b><br>Read the DTC. <Ref. to 6MT(diag)-20, OPERATION, Read Diagnostic Trouble Code (DTC).>   | Is the DTC called up?   | Go back to the Basic Diagnostic Procedure. <Ref. to 6MT(diag)-2, PROCEDURE, Basic Diagnostic Procedure.> | Go to step 10.  |
| <b>10 CHECK THE DRIVER'S CONTROL CENTER DIFFERENTIAL INDICATOR LIGHT.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect harness connector from combination meter.<br>3) Turn the ignition switch to ON. (engine OFF)<br>4) Short between the combination meter harness connector and chassis ground.<br><b>Connector &amp; terminal</b><br><i>(i12) No. 6 — Chassis ground:</i>  | Does the lowest light of driver's control center differential indicator illuminate? | Go to step 11.   | Check the combination meter.  |
| <b>11 CHECK THE HARNESS BETWEEN COMBINATION METER AND DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the harness connector from driver's control center differential control module.<br>3) Measure the resistance of harness between combination meter harness connector and driver's control center differential control module harness connector.<br><b>Connector &amp; terminal</b><br><i>(i12) No. 6 — (B381) No. 4:</i> | Is the resistance less than 1 $\Omega$ ?  | Go to step 12.   | Repair the open circuit and connector of harness between combination meter harness connector and driver's control center differential control module harness connector. |
| <b>12 CHECK THE HARNESS BETWEEN COMBINATION METER AND DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>Measure the resistance of harness between driver's control center differential control module harness connector and chassis ground.<br><b>Connector &amp; terminal</b><br><i>(B381) No. 4 — Chassis ground:</i>  | Is the resistance more than 1 $M\Omega$ ?   | Go to step 13.   | Repair the short of harness between combination meter harness connector and driver's control center differential control module harness connector.                      |
| <b>13 CHECK THE POOR CONTACT IN HARNESS CONNECTOR</b>  | Is there any poor contact in harness connectors of each circuit?                    | Repair the poor contact.   | Replace the driver's control center differential control module.  |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

### B: CHECK REAR DIFFERENTIAL OIL TEMPERATURE SWITCH

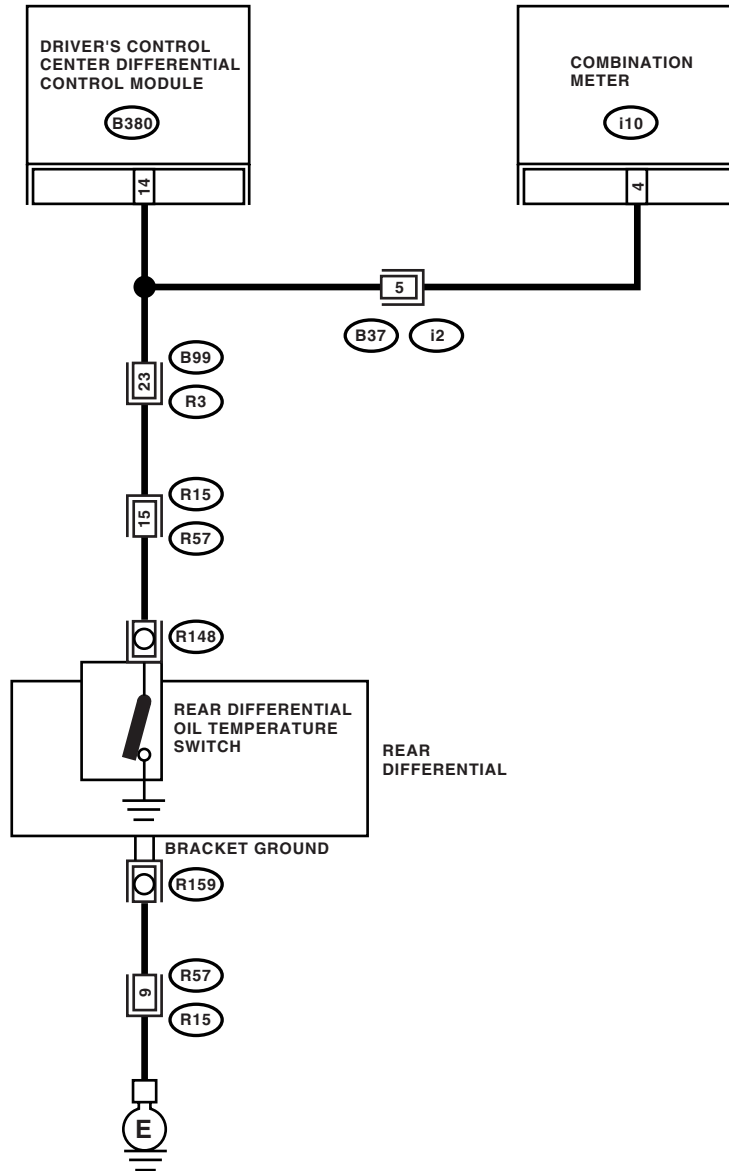

#### DIAGNOSIS:

Input signal circuit of rear differential oil temperature switch is open or shorted.

#### TROUBLE SYMPTOM:

- Center differential stays free.
- Handling tends to oversteer.
- Rear differential oil temperature switch warning light illuminates.

#### WIRING DIAGRAM:

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step   | Check   | Yes   | No  |
|--|---|---|---|
| <p><b>1</b></p> <p><b>CHECK REAR DIFFERENTIAL OIL TEMPERATURE SWITCH WARNING LIGHT CIRCUIT.</b></p> <p>1) Turn the ignition switch to OFF.<br/>                     2) Disconnect the connector of driver's control center differential control module harness connector.<br/>                     3) Turn the ignition switch to ON. (engine OFF)<br/>                     4) Measure the voltage of rear differential oil temperature switch.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B380) No. 14 (+) — Chassis ground (-):</b></p>   | Is the voltage less than 0.4 V?   | Go to step 7.   | Go to step 2.   |
| <p><b>2</b></p> <p><b>CHECK THE HARNESS BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND COMBINATION METER.</b></p> <p>1) Turn the ignition switch to OFF.<br/>                     2) Disconnect the harness connector from the combination meter.<br/>                     3) Disconnect the connector from the rear differential oil temperature switch.<br/>                     4) Measure the resistance between combination meter and driver's control center differential control module harness connector.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B380) No. 14 — (i10) No. 4:</b></p> | Is the resistance less than 1 $\Omega$ ?                                  | Go to step 3.   | Repair the open circuit between driver's control center differential control module and combination meter.                        |
| <p><b>3</b></p> <p><b>CHECK THE HARNESS BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND REAR DIFFERENTIAL OIL TEMPERATURE SWITCH.</b></p> <p>Measure the resistance between driver's control center differential control module harness connector and rear differential oil temperature switch harness connector.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B380) No. 14 — (R148) No. 1:</b></p>   | Is the resistance less than 1 $\Omega$ ?                                  | Go to step 4.   | Repair the open circuit between driver's control center differential control module and rear differential oil temperature switch. |
| <p><b>4</b></p> <p><b>CHECK REAR DIFFERENTIAL OIL TEMPERATURE SWITCH GROUND CIRCUIT.</b></p> <p>1) Disconnect the harness connector from bracket ground of rear differential.<br/>                     2) Measure the resistance between the rear differential oil temperature switch ground harness connector and chassis ground.</p> <p><b>Connector &amp; terminals</b><br/> <b>(R159) No. 1 — Chassis ground:</b></p>  | Is the resistance more than 1 M $\Omega$ ?                                | Repair the open circuit of rear differential oil temperature switch ground circuit and poor contact of harness connector. | Go to step 5.   |
| <p><b>5</b></p> <p><b>CHECK REAR DIFFERENTIAL OIL TEMPERATURE SWITCH.</b></p> <p>Measure the resistance between rear differential oil temperature switch terminal and rear differential oil temperature switch body.</p> <p><b>Terminals</b><br/> <b>No. 1 — Rear differential oil temperature switch body:</b></p>  | Is the resistance less than 1 $\Omega$ ?                                  | Go to step 6.   | Replace the rear differential oil temperature switch.   |
| <p><b>6</b></p> <p><b>CHECK REAR DIFFERENTIAL OIL TEMPERATURE SWITCH WARNING LIGHT.</b></p> <p>1) Turn the ignition switch to ON.<br/>                     2) Short between the combination meter harness connector and chassis ground.</p> <p><b>Connector &amp; Terminals</b><br/> <b>(i10) No. 4 (+) — Chassis ground (-):</b></p>  | Does the rear differential oil temperature switch warning light turn OFF? | Go to step 7.   | Replace the combination meter.  |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

|   | Step                       | Check   | Yes                      | No   |
|---|----------------------------|---|--------------------------|--|
| 7 | <b>CHECK POOR CONTACT.</b> | Is there any poor contact in the circuit of rear differential oil temperature switch? | Repair the poor contact. | Replace the driver's control center differential control module. |

**C: DTC P1521 BRAKE SWITCH CIRCUIT RANGE**

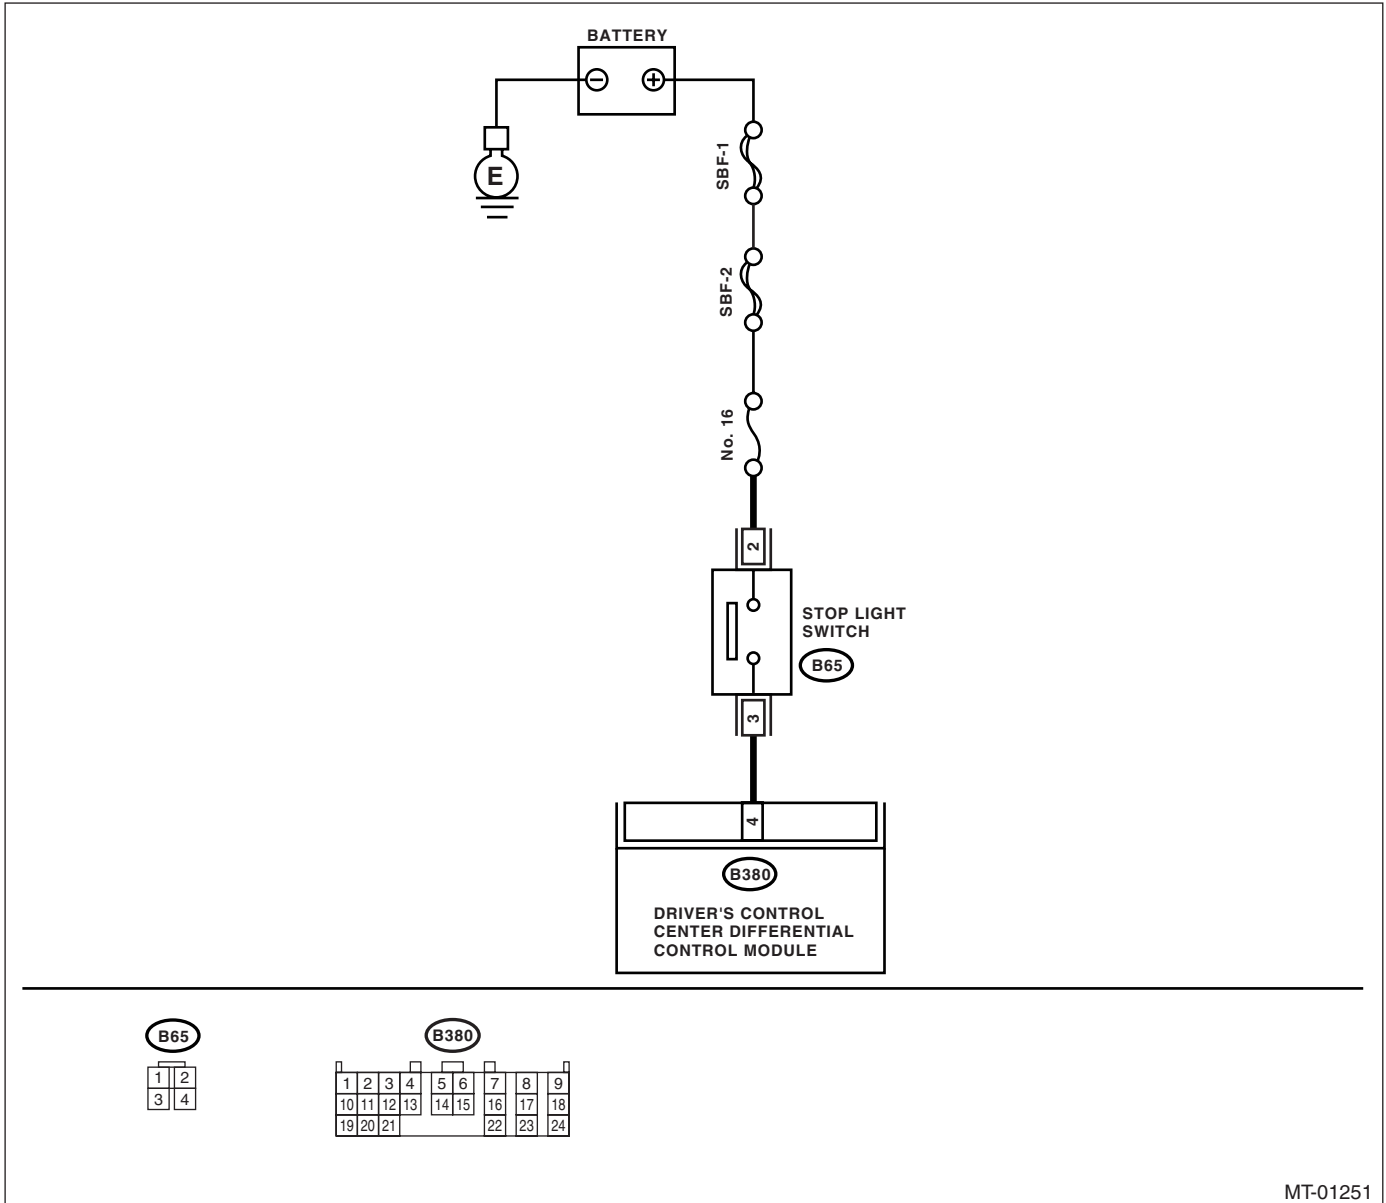

**DIAGNOSIS:**

Open or short circuit in stop light switch circuit

**TROUBLE SYMPTOM:**

Wheels are locked while the ABS operates.

**WIRING DIAGRAM:**

| Step                   | Check   | Yes                         | No            |
|------------------------|---|-----------------------------|---------------|
| 1<br><b>CHECK DTC.</b> | Is the stop light switch related DTC displayed during ABS self-diagnosis test mode? | Check according to ABS DTC. | Go to step 2. |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step  | Check   | Yes  | No   |
|---|---|--|--|
| <b>2 CHECK DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the Subaru Select Monitor to data link connector.<br>3) Turn the ignition switch to ON, and Subaru Select Monitor power switch to ON.<br>4) Read the data of "Stop Light Switch" using Subaru Select Monitor.  | Is the "OFF" displayed?                             | Go to step 3.  | Replace the driver's control center differential control module.   |
| <b>3 CHECK DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Depress the brake pedal and hold it.<br>2) Read the data of "Stop Light Switch" using Subaru Select Monitor.  | Is the "ON" displayed?                              | Go to step 6.  | Go to step 4.  |
| <b>4 CHECK INPUT SIGNAL FOR DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the harness connector of driver's control center differential control module.<br>3) Depress the brake pedal and hold it.<br>4) Measure the voltage between driver's control center differential control module and chassis ground.<br><i>Connector &amp; terminal<br/>(B380) No. 4 (+) — Chassis ground (-):</i> | Is the voltage more than 8 V?                       | Go to step 5.  | Repair the open circuit in harness between driver's control center differential control module and stop light switch.  |
| <b>5 CHECK POOR CONTACT.</b>  | Is there poor contact in stop light switch circuit? | Repair the poor contact in harness connector.                    | Go to step 6.  |
| <b>6 CHECK DTC.</b><br>Read the DTC from combination meter. <Ref. to 6MT(diag)-20, Read Diagnostic Trouble Code (DTC).>   | Is the DTC 33 displayed?                            | Replace the driver's control center differential control module. | Go to step 7.  |
| <b>7 CHECK FOR OTHER DTC ON DISPLAY.</b>  | Is there any DTC other than 33 displayed?           | Perform the diagnosis according to DTC.                          | Stop light switch circuit is in normal condition. Temporary poor contact occurs.<br>Repair the harness or connector between driver's control center differential control module and stop light switch. |

**D: DTC P1720 DCCD CAN SYSTEM CIRCUIT**

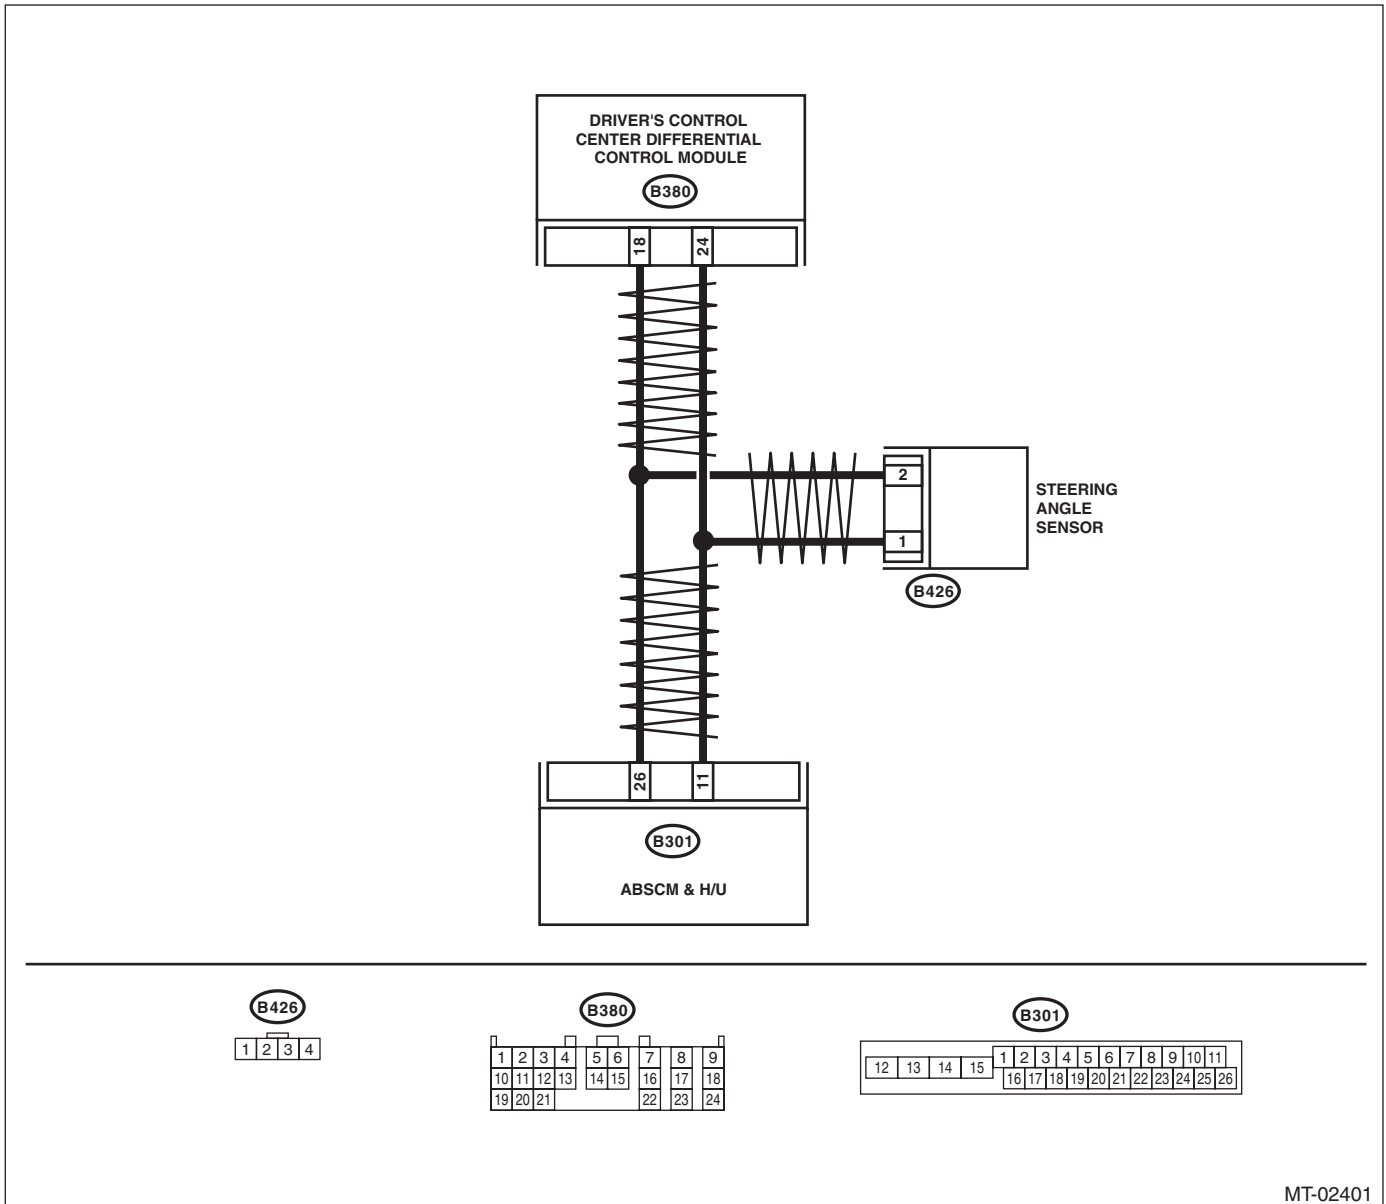

**DIAGNOSIS:**

Open or short circuit in CAN communication circuit

**TROUBLE SYMPTOM:**

- Tight corner braking phenomenon is occurred.
- ABS does not operate.
- ABS warning light illuminates.

**WIRING DIAGRAM:**

MT-02401

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step   | Check   | Yes   | No   |
|--|---|---|--|
| <b>1 CHECK HARNESS CONNECTOR BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND ABSCM.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from driver's control center differential control module and ABSCM&H/U.<br>3) Measure the resistance of harness connector between driver's control center differential control module and ABSCM&H/U.<br><b>Connector &amp; terminal</b><br><b>(B380) No. 18 — (B301) No. 26:</b><br><b>(B380) No. 24 — (B301) No. 11:</b> | Is the resistance less than 1 $\Omega$ ?                    | Go to step 2.   | Repair the open circuit in harness between driver's control center differential control module and ABSCM&H/U.  |
| <b>2 CHECK HARNESS CONNECTOR BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND ABSCM.</b><br>1) Disconnect the connector from steering from steering angle sensor.<br>2) Measure the resistance between driver's control center differential control module and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B380) No. 18 — Chassis ground:</b><br><b>(B380) No. 24 — Chassis ground:</b>   | Is the resistance more than 1 $M\Omega$ ?                   | Go to step 3.   | Repair the short circuit in harness between driver's control center differential control module and ABSCM&H/U. |
| <b>3 CHECK HARNESS CONNECTOR BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND ABSCM.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the voltage between driver's control center differential control module connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B380) No. 18 (+) — Chassis ground (-):</b><br><b>(B380) No. 24 (+) — Chassis ground (-):</b>   | Is the voltage less than 1 V?                               | Go to step 4.   | Repair the short circuit in harness between driver's control center differential control module and ABSCM&H/U. |
| <b>4 CHECK POOR CONTACT.</b>   | Is there poor contact in CAN communication circuit?         | Repair the poor contact.  | Go to step 5.  |
| <b>5 CHECK STEERING ANGLE SENSOR.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the connectors of ABSCM and driver's control center differential control module.<br>3) Start the engine.<br>4) Read the DTC.  | Is DTC P1720 displayed?                                     | Go to step 6.   | Replace the steering angle sensor.<br><Ref. to 6MT-130, Steering Angle Sensor.>                                |
| <b>6 CHECK ABSCM.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect all the connectors.<br>3) Clear DTCs.<br>4) Read the DTC.   | Is the DTC of CAN communication circuit displayed on ABSCM? | Replace the driver's control center differential control module.<br><Ref. to 6MT-129, Driver's Control Center Differential Control Module.> | Check ABSCM.   |

**E: DTC P1721 DCCD ENGINE RPM SIGNAL SYSTEM CIRCUIT**

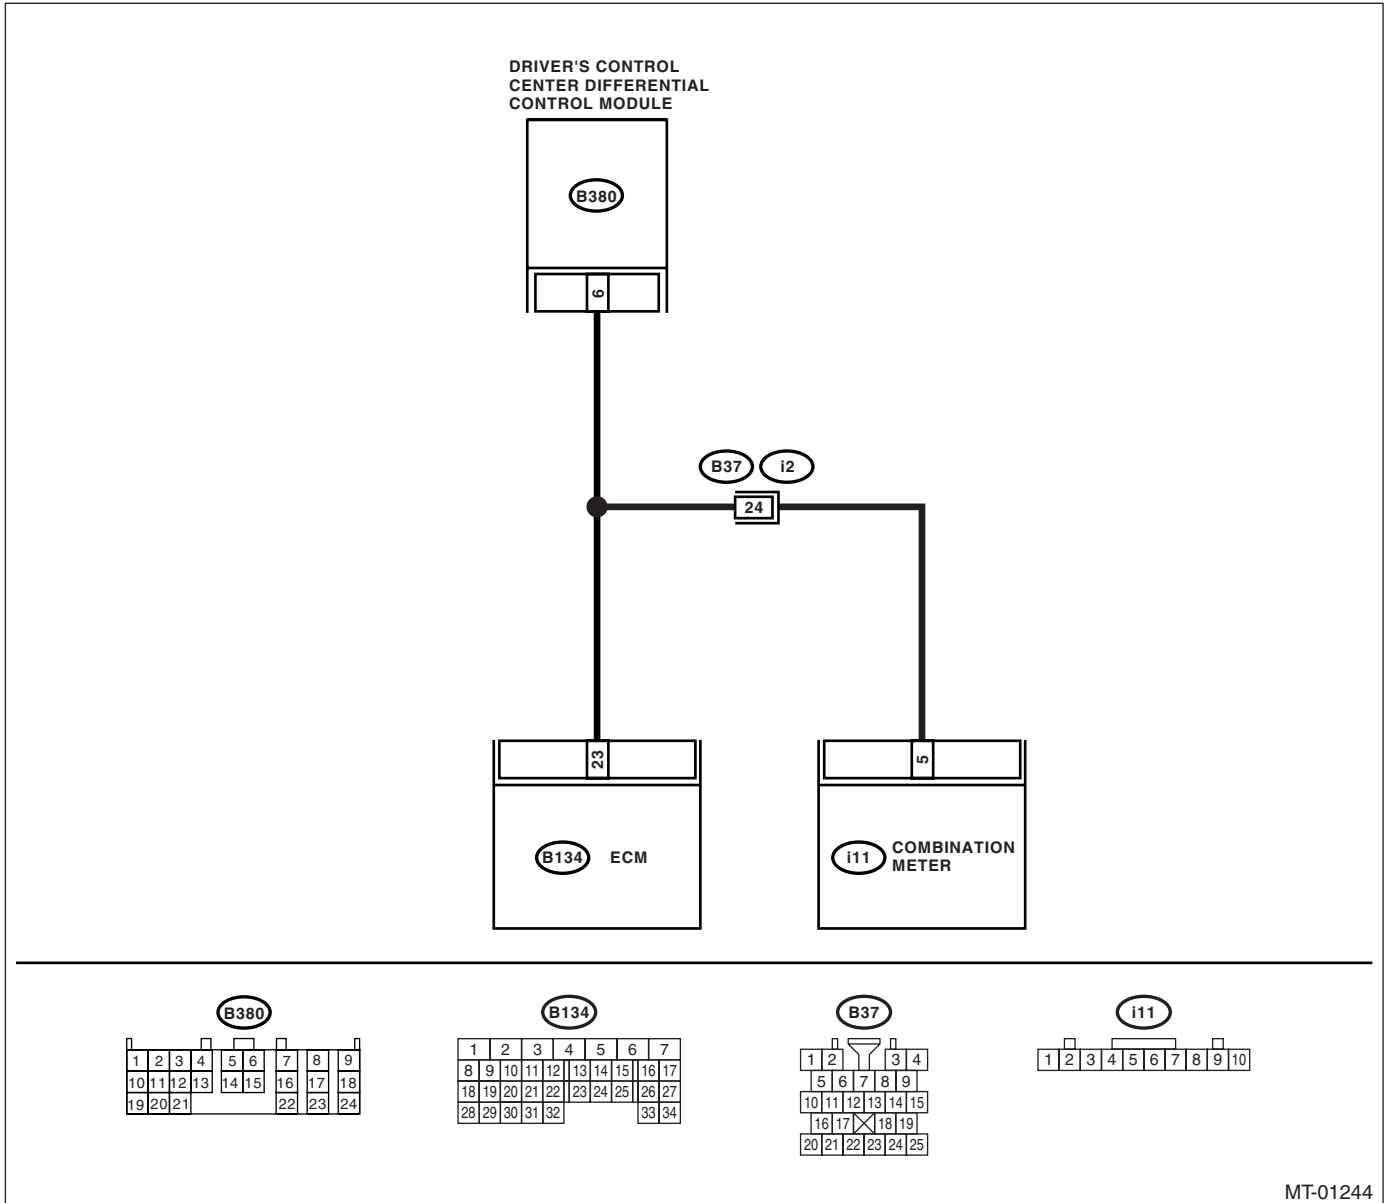

**DIAGNOSIS:**

Open or short in DCCD engine speed output signal circuit

**TROUBLE SYMPTOM:**

The tendency of oversteer occurred when high speed cornering.

**WIRING DIAGRAM:**

MT-01244

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step  | Check  | Yes   | No   |
|---|--|---|--|
| <b>1 CHECK HARNESS CONNECTOR BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND ECM.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from driver's control center differential control module, Combination Meter and ECM.<br>3) Measure the resistance of harness connector between driver's control center differential control module and ECM.<br><i>Connector &amp; terminal<br/>(B380) No. 6 — (B134) No. 23:</i> | Is the resistance less than 1 $\Omega$ ?   | Go to step 2.   | Repair the open circuit in harness between driver's control center differential control module and ECM.  |
| <b>2 CHECK HARNESS CONNECTOR BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND ECM.</b><br>Measure the resistance between driver's control center differential control module and chassis ground.<br><i>Connector &amp; terminal<br/>(B380) No. 6 — Chassis ground:</i>   | Is the resistance more than 1 $M\Omega$ ?  | Go to step 3.   | Repair the short circuit in harness between driver's control center differential control module and ECM. |
| <b>3 CHECK HARNESS CONNECTOR BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND ECM.</b><br>1) Turn the ignition switch to ON.<br>2) Measure the resistance between driver's control center differential control module and chassis ground.<br><i>Connector &amp; terminal<br/>(B380) No. 6 (+) — Chassis ground (-):</i>  | Is the voltage less than 1 V?  | Go to step 4.   | Repair the short circuit in harness between driver's control center differential control module and ECM. |
| <b>4 CHECK INPUT SIGNAL FOR DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect all connectors.<br>3) Start the engine and let it idle.   | Does the tachometer in the combination meter operate?  | Go to step 5.   | Check ECM.   |
| <b>5 CHECK INPUT SIGNAL FOR DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Turn the ignition switch to OFF.<br>2) Connect the Subaru Select Monitor to data link connector.<br>3) Start the engine and Subaru Select Monitor power switch to ON.<br>4) Idle the engine.<br>5) Read the data of engine speed using Subaru Select Monitor.  | Is the revolution value about the same as tachometer reading shown in the combination meter? | Go to step 7.   | Go to step 6.  |
| <b>6 CHECK POOR CONTACT.</b>  | Is there poor contact in engine speed signal circuit?  | Repair the poor contact.  | Go to step 7.  |
| <b>7 CHECK DTC.</b><br>Perform the inspection mode and read DTC.  | Is the DTC 26 displayed?   | Replace the driver's control center differential control module.<br><Ref. to 6MT-129, Driver's Control Center Differential Control Module.> | Go to step 8.  |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step   | Check                                     | Yes                                     | No  |
|--|---|---|---|
| <b>8</b><br><b>CHECK FOR OTHER DTC ON DISPLAY.</b> | Is there any DTC other than 26 displayed? | Perform the diagnosis according to DTC. | Even if the center differential indicator light (differential free position) blinks, the circuit is in normal condition. Temporary poor contact occurs.<br>Repair the harness or connector between driver's control center differential control module and ECM. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

### F: DTC P1759 LATERAL ACCELERATION SENSOR CIRCUIT

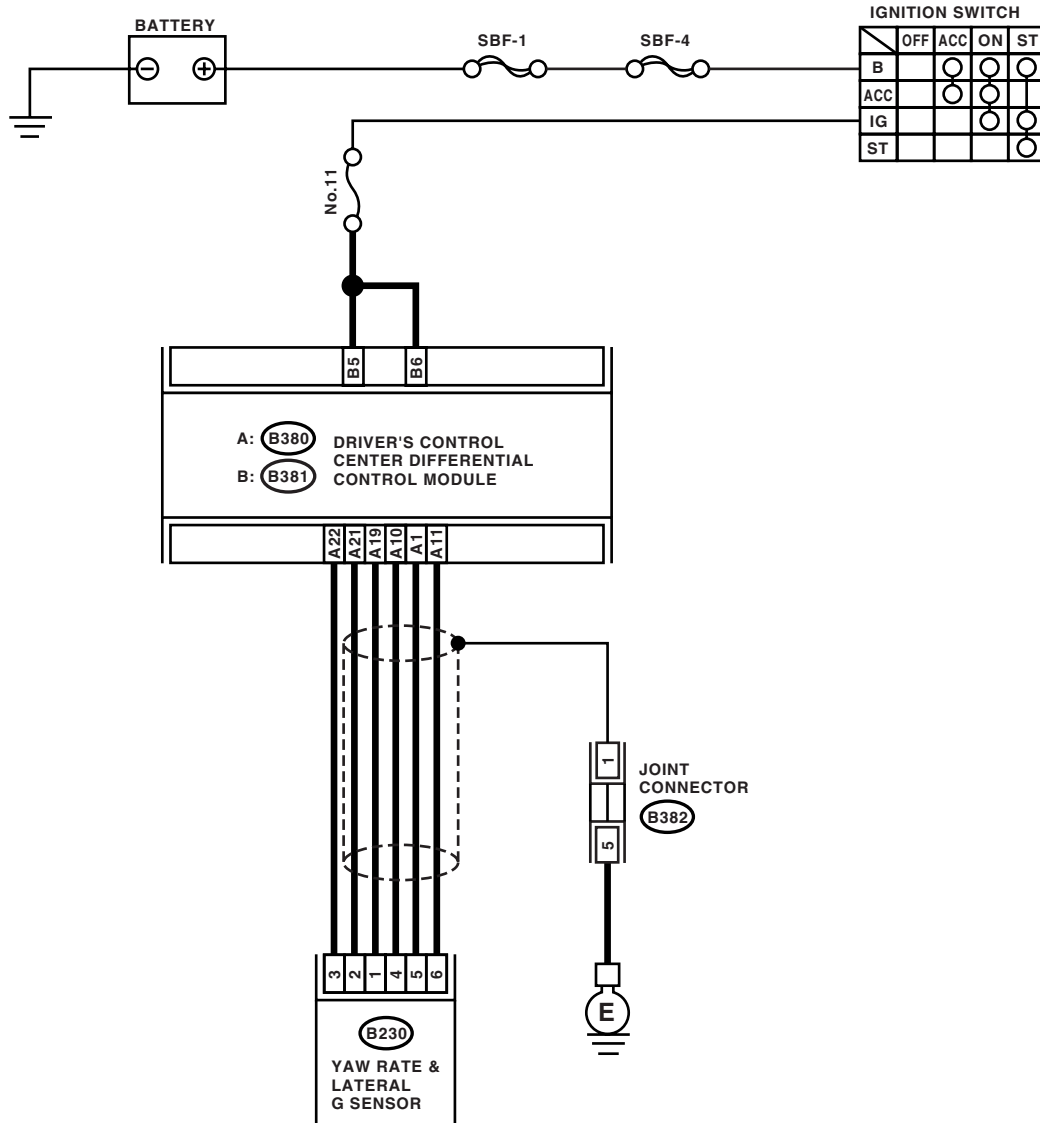

#### DIAGNOSIS:

Open or short in yaw rate & lateral G sensor circuit

#### TROUBLE SYMPTOM:

The tendency of understeer occurred when high speed cornering.

#### WIRING DIAGRAM:

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step   | Check                                     | Yes   | No   |
|--|---|---|--|
| <p><b>1 CHECK YAW RATE &amp; LATERAL G SENSOR VOLTAGE.</b></p> <p>1) Turn the ignition switch to OFF.<br/>                     2) Disconnect the connectors from yaw rate &amp; lateral G sensor.<br/>                     3) Turn the ignition switch to ON. (engine OFF)<br/>                     4) Measure the voltage between yaw rate &amp; lateral G sensor harness connector and Chassis ground (-).</p> <p><b>Connector &amp; terminal</b><br/> <b>(B230) No. 3 (+) — Chassis ground (-):</b></p> | Is the voltage more than 12 V?            | Go to step 4.   | Go to step 2.  |
| <p><b>2 CHECK OUTPUT SIGNAL OF DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b></p> <p>Measure the voltage between driver's control center differential control module and chassis ground.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B380) No. 22 (+) — Chassis ground (-):</b></p>  | Is the voltage more than 12 V?            | Repair the open circuit in harness between driver's control center differential control module and yaw rate & lateral G sensor. | Go to step 3.  |
| <p><b>3 CHECK DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE POWER SUPPLY VOLTAGE.</b></p> <p>Measure the voltage between driver's control center differential control module harness connector and chassis ground.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B381) No. 5 (+) — Chassis ground (-):</b><br/> <b>(B381) No. 6 (+) — Chassis ground (-):</b></p>  | Is the voltage more than 12 V?            | Go to step 11.  | Check the harness connectors between driver's control center differential control module power supply circuit, battery and driver's control center differential control module, and replace or charge the battery. |
| <p><b>4 CHECK YAW RATE &amp; LATERAL G SENSOR GROUND CIRCUIT.</b></p> <p>1) Turn the ignition switch to OFF.<br/>                     2) Disconnect the connectors from driver's control center differential control module.<br/>                     3) Measure the resistance between driver's control center differential control module and yaw rate &amp; lateral G sensor.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B380) No. 10 — (B230) No. 4:</b></p>                                      | Is the resistance less than 1 $\Omega$ ?  | Go to step 5.   | Repair the open circuit in harness between driver's control center differential control module and yaw rate & lateral G sensor.  |
| <p><b>5 CHECK YAW RATE &amp; LATERAL G SENSOR GROUND CIRCUIT.</b></p> <p>Measure the resistance between driver's control center differential control module connector and Chassis ground (-).</p> <p><b>Connector &amp; terminal</b><br/> <b>(B380) No. 10 — Chassis ground:</b></p>   | Is the resistance more than 1 $M\Omega$ ? | Go to step 6.   | Repair the short circuit in harness between driver's control center differential control module and yaw rate & lateral G sensor.   |
| <p><b>6 CHECK HARNESS CONNECTOR BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND YAW RATE &amp; LATERAL G SENSOR.</b></p> <p>Measure the resistance between driver's control center differential control module and yaw rate &amp; lateral G sensor.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B380) No. 1 — (B230) No. 5:</b></p>  | Is the resistance less than 1 $\Omega$ ?  | Go to step 7.   | Repair the open circuit in harness between driver's control center differential control module and yaw rate & lateral G sensor.  |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step   | Check  | Yes  | No  |
|--|--|--|---|
| <b>7 CHECK HARNESS CONNECTOR BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND YAW RATE &amp; LATERAL G SENSOR.</b><br>Measure the resistance between driver's control center differential control module harness connector and Chassis ground (-).<br><b>Connector &amp; terminal</b><br><b>(B380) No. 1 — Chassis ground:</b>  | Is the resistance more than 1 MΩ?                  | Go to step 8.  | Repair the short circuit in harness between driver's control center differential control module and yaw rate & lateral G sensor.  |
| <b>8 CHECK YAW RATE &amp; LATERAL G SENSOR.</b><br>1) Remove the yaw rate & lateral G sensor from body.<br>2) Connect the connector to yaw rate & lateral G sensor.<br>3) Connect the connector to driver's control center differential control module.<br>4) Turn the ignition switch to ON.<br>5) Measure the voltage between yaw rate & lateral G sensor terminals when the yaw rate & lateral G sensor is horizontal.<br><b>Connector &amp; terminal</b><br><b>(B230) No. 5 (+) — No. 6 (-):</b> | Is the voltage 2.35 — 2.65 V?                      | Go to step 9.  | Replace the yaw rate & lateral G sensor.  |
| <b>9 CHECK YAW RATE &amp; LATERAL G SENSOR.</b><br>Measure the voltage between yaw rate & lateral G sensor terminals when the yaw rate & lateral G sensor connector is tilted 90° to right.<br><b>Connector &amp; terminal</b><br><b>(B230) No. 5 (+) — No. 6 (-):</b>   | Is the voltage 3.3 — 3.7 V?                        | Go to step 10.   | Replace the yaw rate & lateral G sensor.  |
| <b>10 CHECK YAW RATE &amp; LATERAL G SENSOR.</b><br>Measure the voltage between yaw rate & lateral G sensor terminals when the yaw rate & lateral G sensor connector is tilted 90° to left.<br><b>Connector &amp; terminal</b><br><b>(B230) No. 5 (+) — No. 6 (-):</b>   | Is the voltage 1.3 — 1.7 V?                        | Go to step 11.   | Replace the yaw rate & lateral G sensor.  |
| <b>11 CHECK POOR CONTACT.</b>  | Is there poor contact in lateral G sensor circuit? | Repair the poor contact.   | Go to step 12.  |
| <b>12 CHECK DTC.</b><br>1) Perform the "clear memory". <Ref. to 6MT(diag)-23, Clear Memory Mode.><br>2) Start the engine.<br>3) Read the DTC using Subaru Select Monitor. <Ref. to 6MT(diag)-20, Read Diagnostic Trouble Code (DTC).>  | Is the DTC P1759 displayed?                        | Replace the driver's control center differential control module. | Go to step 13.  |
| <b>13 CHECK FOR OTHER DTC ON DISPLAY.</b>  | Is there any DTC other than P1759 displayed?       | Perform the diagnosis according to DTC.                          | Lateral G sensor circuit is in normal condition. Temporary poor contact occurs.<br>Repair the harness or connector between driver's control center differential control module and yaw rate & lateral G sensor. |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

### G: DTC P1764 YAW RATE SENSOR SYSTEM CIRCUIT

**DIAGNOSIS:**

Yaw rate & lateral G sensor circuit is open, shorted or stuck.

**TROUBLE SYMPTOM:**

The tendency of understeer occurred when high speed cornering.

**WIRING DIAGRAM:**

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step  | Check                                      | Yes   | No   |
|---|--|---|--|
| <p><b>1 CHECK YAW RATE &amp; LATERAL G SENSOR POWER SUPPLY.</b></p> <p>1) Turn the ignition switch to OFF.<br/>                     2) Disconnect the connectors from yaw rate &amp; lateral G sensor.<br/>                     3) Turn the ignition switch to ON. (engine OFF)<br/>                     4) Measure the voltage between yaw rate &amp; lateral G sensor and chassis ground.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B230) No. 3 (+) — Chassis ground (-):</b></p> | Is the voltage more than 12 V?             | Go to step 4.   | Go to step 2.  |
| <p><b>2 CHECK DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE POWER SUPPLY OUTPUT.</b></p> <p>Measure the resistance between driver's control center differential control module and chassis ground.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B380) No. 22 (+) — Chassis ground (-):</b></p>   | Is the voltage more than 12 V?             | Repair the open circuit in harness between driver's control center differential control module and yaw rate & lateral G sensor. | Go to step 3.  |
| <p><b>3 CHECK DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE POWER SUPPLY VOLTAGE.</b></p> <p>Measure the voltage between driver's control center differential control module harness connector and chassis ground.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B381) No. 5 (+) — Chassis ground (-):</b><br/> <b>(B381) No. 6 (+) — Chassis ground (-):</b></p>   | Is the voltage more than 12 V?             | Go to step 10.  | Check the harness connectors between driver's control center differential control module power supply circuit, battery and driver's control center differential control module, and replace or charge the battery. |
| <p><b>4 CHECK YAW RATE &amp; LATERAL G SENSOR GROUND CIRCUIT.</b></p> <p>1) Turn the ignition switch to OFF.<br/>                     2) Disconnect the connectors from driver's control center differential control module.<br/>                     3) Measure the resistance between driver's control center differential control module and yaw rate &amp; lateral G sensor.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B380) No. 11 — (B230) No. 6:</b></p>                     | Is the resistance less than 1 $\Omega$ ?   | Go to step 5.   | Repair the open circuit in harness between driver's control center differential control module and yaw rate & lateral G sensor.  |
| <p><b>5 CHECK YAW RATE &amp; LATERAL G SENSOR GROUND CIRCUIT.</b></p> <p>Measure the resistance between driver's control center differential control module and chassis ground.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B380) No. 11 — Chassis ground:</b></p>  | Is the resistance more than 1 M $\Omega$ ? | Go to step 6.   | Repair the short circuit in harness between driver's control center differential control module and yaw rate & lateral G sensor.   |
| <p><b>6 CHECK DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND YAW RATE &amp; LATERAL G SENSOR GROUND CIRCUIT.</b></p> <p>Measure the resistance between driver's control center differential control module and yaw rate &amp; lateral G sensor.</p> <p><b>Connector &amp; terminal</b><br/> <b>(B380) No. 10 — (B230) No. 4:</b></p>   | Is the resistance less than 1 $\Omega$ ?   | Go to step 7.   | Repair the open circuit in harness between driver's control center differential control module and yaw rate & lateral G sensor.  |

| 6    | <b>CHECK POOR CONTACT.</b>  | Is there poor contact in steering angle sensor circuit?  | Repair the poor contact.<br><br>Go to step 7.  |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step  | Check  | Yes  | No   |
|---|--|--|--|
| <b>7</b><br><b>CHECK DTC.</b><br>1) Turn the ignition switch to OFF.<br>2) Erase the memory.<br>3) Start the engine.<br>4) Read the DTC.  | Is DTC P1767 displayed?                      | Go to step <b>8</b> .  | Even if the center differential indicator light (differential free position) is blinking, the circuit has returned to normal condition at this time. A temporary poor contact of connector or harness may be the cause. Repair the connector or harness between driver's control center differential control module and steering angle sensor. |
| <b>8</b><br><b>CHECK DTC.</b><br>1) Turn the ignition switch to OFF.<br>2) Replace the steering angle sensor. <Ref. to 6MT-130, Steering Angle Sensor.><br>3) Erase the memory.<br>4) Start the engine.<br>5) Read the DTC. | Is DTC P1767 displayed?                      | Replace the driver's control center differential control module. | Go to step <b>9</b> .  |
| <b>9</b><br><b>CHECK FOR OTHER DTC ON DISPLAY.</b>  | Is there any DTC other than P1767 displayed? | Perform the diagnosis according to DTC.                          | The original steering angle sensor is faulty.  |

### **J: DTC P1875 CIRCUIT OF CENTER DIFF.**

#### **DIAGNOSIS:**

Driver's control center differential circuit is open or shorted.

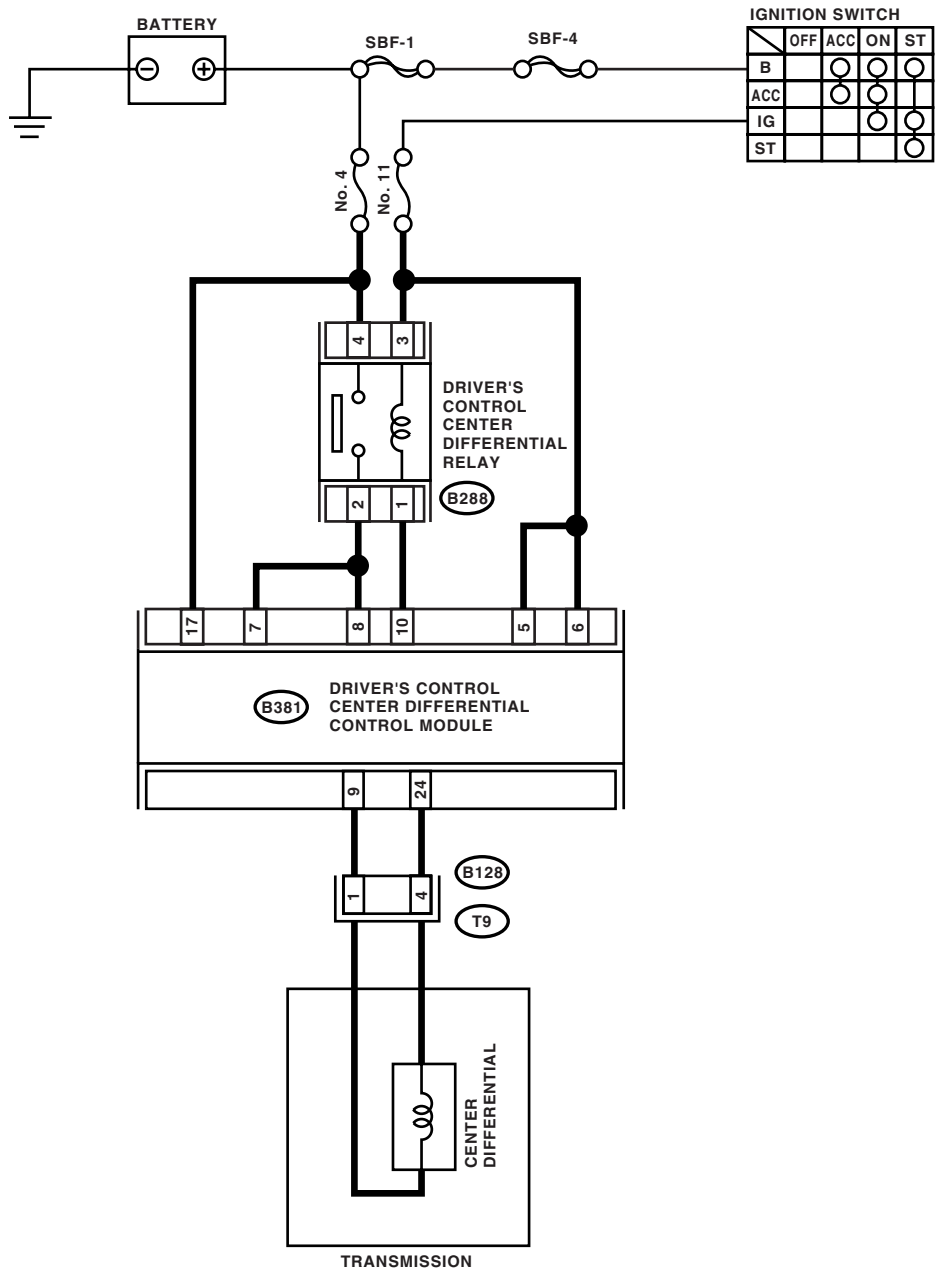

#### **TROUBLE SYMPTOM:**

- Center differential does not operate.
- Lock ratio of center differential does not variation, or malfunction occurs.
- Tight corner braking condition occurs.
- Handling tends to oversteer.
- The tendency of understeer occurred when high speed cornering.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step   | Check                                      | Yes   | No  |
|--|--|---|---|
| <b>1 CHECK GROUND CIRCUIT OF MANUAL MODE SWITCH.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the manual mode switch connector.<br>3) Measure the resistance between manual mode switch harness connector and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B339) No. 4 — Chassis ground:</i>   | Is the resistance more than 1 M $\Omega$ ? | Repair the open circuit of harness between manual mode switch harness connector and chassis ground. | Go to step 2.   |
| <b>2 CHECK THE HARNESS BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND MANUAL MODE SWITCH.</b><br>1) Disconnect the driver's control center differential control module harness connector.<br>2) Measure the resistance of harness between driver's control center differential control module and manual mode switch.<br><i>Connector &amp; terminal</i><br><i>(B380) No. 13 — (B339) No. 5:</i>  | Is the resistance less than 1 $\Omega$ ?   | Go to step 3.   | Repair the open circuit of harness between driver's control center differential control module and manual mode switch.  |
| <b>3 CHECK THE HARNESS BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND MANUAL MODE SWITCH.</b><br>Measure the resistance of harness between driver's control center differential control module and chassis ground.<br><i>Connector &amp; terminal</i><br><i>(B380) No. 13 — Chassis ground:</i>   | Is the resistance more than 1 M $\Omega$ ? | Go to step 4.   | Repair the short circuit of harness between driver's control center differential control module and manual mode switch. |
| <b>4 CHECK THE MANUAL MODE SWITCH.</b><br>1) Remove the manual mode switch.<br>2) Measure the resistance of between manual mode switch connectors.<br><i>Terminals</i><br><i>No. 4 — No. 5:</i>  | Is the resistance more than 1 M $\Omega$ ? | Go to step 5.   | Replace the manual mode switch.   |
| <b>5 CHECK THE MANUAL MODE SWITCH.</b><br>1) Keep depressing the manual mode switch.<br>2) Measure the resistance of between manual mode switch connectors.<br><i>Terminals</i><br><i>No. 4 — No. 5:</i>   | Is the resistance less than 1 $\Omega$ ?   | Go to step 6.   | Replace the manual mode switch.   |
| <b>6 CHECK THE INPUT SIGNAL OF DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Install the manual mode switch.<br>2) Connect the harness connector of driver's control center differential control module.<br>3) Connect the Subaru Select Monitor to data link connector.<br>4) Turn the ignition switch to ON. (engine OFF)<br>5) Turn the Subaru Select Monitor power switch to ON.<br>6) Read the data of AUTO/MANUAL mode switch signal using Subaru Select Monitor. | Is the data OFF?                           | Go to step 7.   | Go to step 8.   |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step   | Check  | Yes  | No   |
|--|--|--|--|
| <b>7</b><br><b>CHECK THE INPUT SIGNAL OF DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Keep depressing the manual mode switch.<br>2) Read the data of AUTO/MANUAL mode switch signal using Subaru Select Monitor. | Is the data ON?  | Go to step <b>9</b> .  | Go to step <b>8</b> .  |
| <b>8</b><br><b>CHECK POOR CONTACT IN HARNESS CONNECTOR.</b>  | Is there any poor contact in manual mode switch circuit? | Repair the poor contact.   | Go to step <b>9</b> .  |
| <b>9</b><br><b>CHECK DTC.</b><br>Read the DTC from combination meter. <Ref. to 6MT(diag)-20, Read Diagnostic Trouble Code (DTC).>  | Is the DTC 31 displayed?                                 | Replace the driver's control center differential control module. | Go to step <b>10</b> .   |
| <b>10</b><br><b>CHECK FOR OTHER DTC.</b>   | Is there any DTC other than 31 displayed?                | Perform the diagnosis according to DTC.                          | Center differential control dial circuit is in normal condition. Temporary poor contact occurs.<br>Repair the harness or connector between driver's control center differential control module, manual mode switch and chassis ground. |

## N: DTC 32 CHECK PARKING BRAKE SWITCH

### DIAGNOSIS:

Parking brake switch circuit is open or shorted.

### TROUBLE SYMPTOM:

- Differential does not tend to be free though apply the parking brake.
- Differential stays free by releasing the parking brake.

### WIRING DIAGRAM:

MT-01250

| Step  | Check  | Yes           | No  |
|---|--|---------------|---|
| <b>1 CHECK THE PARKING BRAKE SWITCH CIRCUIT.</b><br>1) Turn the ignition switch to ON.<br>2) Start the engine.<br>3) Apply the parking brake. | Does the parking brake warning light illuminate? | Go to step 2. | Check the parking pilot & brake fluid warning light circuit.                          |
| <b>2 CHECK THE PARKING BRAKE SWITCH CIRCUIT.</b><br>Release the parking brake.  | Does the parking brake warning light turn OFF?   | Go to step 3. | Check the brake fluid level, parking pilot & brake fluid level warning light circuit. |

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step   | Check  | Yes   | No  |
|--|--|---|---|
| <b>3</b><br><b>CHECK THE HARNESS BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND PARKING BRAKE SWITCH.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the harness connector of driver's control center differential control module, combination meter and parking brake switch.<br>3) Measure the resistance of harness between driver's control center differential control module and parking brake switch.<br><b>Connector &amp; terminal</b><br><b>(B380) No. 5 — (R4) No. 1:</b> | Is the resistance less than 1 $\Omega$ ?                                 | Go to step 4.                                 | Repair the open circuit of harness and poor contact of connector.   |
| <b>4</b><br><b>CHECK THE HARNESS BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND PARKING BRAKE SWITCH.</b><br>Measure the resistance between driver's control center differential control module harness connector and chassis ground.<br><b>Connector &amp; terminal</b><br><b>(B380) No. 5 — Chassis ground:</b>   | Is the resistance more than 1 M $\Omega$ ?                               | Go to step 5.                                 | Repair the short circuit of harness.  |
| <b>5</b><br><b>CHECK THE INPUT SIGNAL OF DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Connect all the harness connectors.<br>2) Connect the Subaru Select Monitor to data link connector.<br>3) Turn the ignition switch to ON, and Subaru Select Monitor power switch to ON.<br>4) Release the parking brake.<br>5) Read the data of "Parking Position Switch" using subaru Select Monitor.   | Is the data OFF?   | Go to step 6.                                 | Replace the driver's control center differential control module.  |
| <b>6</b><br><b>CHECK THE INPUT SIGNAL OF DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Apply the parking brake.<br>2) Read the data of "Parking Position Switch" using subaru Select Monitor.   | Is the data ON?  | Go to step 7.                                 | Replace the driver's control center differential control module.  |
| <b>7</b><br><b>CHECK POOR CONTACT IN HARNESS CONNECTOR.</b>  | Is there any poor contact in harness connector of parking brake circuit? | Repair the poor contact of harness connector. | The parking brake switch circuit is in normal condition. A temporary poor contact of connector or harness may be the cause. Repair harness or connector between driver's control center differential control module, brake fluid level switch, ABS unit, combination meter and parking brake switch. Also, check the brake fluid level. |

**O: DTC 37 NEUTRAL POSITION SWITCH**

**DIAGNOSIS:**

Open or short in neutral position switch circuit

**TROUBLE SYMPTOM:**

- Handling tends to oversteer.
- The tendency of understeer occurred when high speed cornering.

**WIRING DIAGRAM:**

MT-01430

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step  | Check                                     | Yes           | No   |
|---|---|---------------|--|
| <b>1 CHECK HARNESS BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND NEUTRAL POSITION SWITCH.</b><br>1) Turn the ignition switch to OFF.<br>2) Disconnect the connectors from driver's control center differential control module, ECM and in neutral position switch.<br>3) Measure the resistance between driver's control center differential control module and neutral position switch.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B380) No. 15 — (B128) No. 2:</b></i> | Is the resistance less than 1 $\Omega$ ?  | Go to step 2. | Repair the open circuit in harness between neutral position switch connector and Engine ground (-).                        |
| <b>2 CHECK HARNESS BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND NEUTRAL POSITION SWITCH.</b><br>Measure the resistance between driver's control center differential control module connector and Chassis ground (-).<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B380) No. 15 — Chassis ground:</b></i>  | Is the resistance more than 1 $M\Omega$ ? | Go to step 3. | Repair the short circuit in harness between neutral position switch and driver's control center differential control unit. |
| <b>3 CHECK HARNESS BETWEEN DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE AND ENGINE GROUND.</b><br>Measure the resistance between neutral position switch connector and Engine ground (-).<br><i><b>Connector &amp; terminal</b></i><br><i><b>(B128) No. 5 — Engine ground:</b></i>   | Is the resistance less than 1 $\Omega$ ?  | Go to step 4. | Repair the open circuit in harness between neutral position switch connector and Engine ground (-).                        |
| <b>4 CHECK NEUTRAL POSITION SWITCH.</b><br>1) Move the shift lever to "N".<br>2) Measure the resistance between transmission harness connector terminals.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(T9) No. 2 — No. 5:</b></i>  | Is the resistance less than 1 $\Omega$ ?  | Go to step 5. | Replace the neutral position switch.   |
| <b>5 CHECK NEUTRAL POSITION SWITCH.</b><br>1) Move the shift lever to other than "N".<br>2) Measure the resistance between transmission harness connector terminals.<br><i><b>Connector &amp; terminal</b></i><br><i><b>(T9) No. 2 — No. 5:</b></i>   | Is the resistance more than 1 $M\Omega$ ? | Go to step 6. | Replace the neutral position switch.   |
| <b>6 CHECK INPUT SIGNAL FOR DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Connect all the connectors.<br>2) Turn the ignition switch to ON.<br>3) Subaru Select Monitor switch to ON.<br>4) Move the shift lever to "N".<br>5) Read the data of "Neutral switch" using Subaru Select Monitor.  | Is the "ON" displayed?                    | Go to step 7. | Go to step 8.  |

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

| Step  | Check   | Yes   | No   |
|---|---|---|--|
| <b>7</b><br><b>CHECK INPUT SIGNAL FOR DRIVER'S CONTROL CENTER DIFFERENTIAL CONTROL MODULE.</b><br>1) Move the shift lever to other than "N".<br>2) Read the data of "Neutral switch" using Subaru Select Monitor. | Is the "OFF" displayed?                                       | Neutral switch circuit is in normal condition. Temporary poor contact occurs.<br>Repair the harness or connector between driver's control center differential control module, neutral switch and ECM. | Go to step <b>8</b> .  |
| <b>8</b><br><b>CHECK POOR CONTACT.</b>  | Is there any poor contact in neutral position switch circuit? | Repair the poor contact.  | Go to step <b>9</b> .  |
| <b>9</b><br><b>CHECK DTC.</b><br>Read the DTC from combination meter. <Ref. to 6MT(diag)-20, Read Diagnostic Trouble Code (DTC).>   | Is DTC 37 displayed?  | Replace the driver's control center differential control unit.  | Go to step <b>10</b> .   |
| <b>10</b><br><b>CHECK FOR OTHER DTC.</b>  | Is any DTC except DTC 37 displayed?                           | Diagnose according to DTC.  | The neutral position switch circuit is in normal condition. A temporary poor contact of connector or harness may be the cause. Repair harness or connector in neutral position switch circuit. |

# General Diagnostic Table

MANUAL TRANSMISSION AND DIFFERENTIAL (DIAGNOSTICS)

## 13. General Diagnostic Table

### A: INSPECTION

| Symptom   | Abnormal units/parts   |
|---|--|
| Tight cornering condition   | <ul style="list-style-type: none"> <li>• ABSCM&amp;H/U</li> <li>• ABS wheel speed sensor</li> <li>• Yaw rate &amp; lateral G sensor</li> <li>• CAN communication signal</li> <li>• Steering angle sensor</li> <li>• Center differential</li> <li>• Center differential control dial</li> <li>• Manual mode switch</li> <li>• Tire/Wheel</li> <li>• Driver's control center differential control module</li> </ul>  |

## C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use Subaru genuine fluid, grease etc. or the equivalent. Do not mix fluid, grease etc. with that of another grade or from other manufacturers.

- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply grease onto sliding or revolution surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of fluid to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Keep fluid away from the vehicle body. If any fluid contacts the vehicle body, immediately flush the area with water.

## D: PREPARATION TOOL

### 1. SPECIAL TOOL

| ILLUSTRATION  | TOOL NUMBER | DESCRIPTION        | REMARKS   |
|---|-------------|--------------------|---|
| <br>ST-498497100  | 498497100   | CRANKSHAFT STOPPER | Used for stopping rotation of flywheel when loosening tightening bolt, etc. |
| <br>ST-499747100 | 499747100   | CLUTCH DISC GUIDE  | Used when installing clutch disc to flywheel.                               |

### 2. GENERAL TOOL

| TOOL NAME      | REMARKS  |
|----------------|--|
| Circuit tester | Used for measuring resistance, voltage and ampere. |
| Dial gauge     | Used for measuring clutch disc run-out.            |
| Depth gauge    | Used for measuring clutch disc wear.               |

# Clutch Disc and Cover

## CLUTCH SYSTEM

### 2. Clutch Disc and Cover

#### A: REMOVAL

1) Remove the transmission assembly from vehicle body.

5MT:

<Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>

6MT:

<Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>

2) Install the ST on flywheel.

ST 499747100 CLUTCH DISC GUIDE

(A) Clutch cover

3) Remove the clutch cover and clutch disc.

NOTE:

- Take care not to allow oil on the clutch disc facing.
- Do not disassemble the clutch cover and clutch disc.
- Be sure to put alignment marks on the flywheel and clutch cover before removing clutch cover.

#### B: INSTALLATION

1) Insert the ST into clutch disc and install them on the flywheel by inserting the ST end into pilot bearing.

NOTE:

When installing the clutch disc, be careful to its direction.

ST 499747100 CLUTCH DISC GUIDE

(A) Flywheel side

2) Install the clutch cover on flywheel and tighten the bolts to specified torque.

NOTE:

- When reinstalling, align the alignment marks.
- When installing a new clutch cover, position the clutch cover so that there is a gap of 120° or more between “0” marks on the flywheel and clutch cover. (“0” marks indicate the directions of residual unbalance.)
- Note the front and rear of the clutch disc when installing.
- Tighten the clutch cover installing bolts gradually. Each bolt should be tightened to the specified torque in a crisscross order.

**Tightening torque:**

**16 N·m (1.6 kgf·m, 11.8 ft·lb)**

(A) “0” marks

3) Remove the ST.

ST 499747100 CLUTCH DISC GUIDE

4) Install the transmission assembly.

5MT:

<Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

6MT:

<Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

## C: INSPECTION

### 1. CLUTCH DISC

#### 1) Facing wear

Measure the depth of rivet head from the surface of facing. Replace if facings are worn locally or worn down to less than the specified value.

#### Depth of rivet head:

##### Limit of sinking

**0.3 mm (0.012 in)**

#### NOTE:

Do not wash the clutch disc with any cleaning fluid.

#### 2) Hardened facing

Correct by using emery paper or replace.

#### 3) Oil leakage on facing

Replace the clutch disc and inspect the transmission front oil seal, transmission case mating surface, engine rear oil seal and other points for oil leakage.

(A) Clutch facing

#### 4) Deflection on facing

If deflection exceeds the specified value at the outer circumference of facing, repair or replace.

ST 499747100 CLUTCH DISC GUIDE

#### Limit for deflection:

##### Non-turbo model

**0.7 mm (0.028 in) at R = 107.5 mm (4.23 in)**

##### Turbo model

**0.7 mm (0.028 in) at R = 110 mm (4.33 in)**

##### STI model

**0.7 mm (0.028 in) at R = 115 mm (4.53 in)**

5) If worn spline, loose rivets or damper spring failure is found, replace the clutch disc.

(A) Spline

(B) Rivet

(C) Damper spring

### 2. CLUTCH COVER

#### NOTE:

Visually check for the following items without disassembling, and replace or repair if defective.

1) Loose thrust rivet

## Clutch Disc and Cover

### CLUTCH SYSTEM

---

2) Damaged or worn bearing contact area at center of diaphragm spring

- (A) Thrust rivet
- (B) Diaphragm spring

## 3. Flywheel

### A: REMOVAL

1) Remove the transmission assembly.

5MT:

<Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>

6MT:

<Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>

2) Remove the clutch cover and clutch disc. <Ref. to CL-14, REMOVAL, Clutch Disc and Cover.>

3) Using the ST, remove the flywheel.

ST 498497100 CRANKSHAFT STOPPER

(A) Flywheel

### B: INSTALLATION

1) Install the flywheel and ST.

ST 498497100 CRANKSHAFT STOPPER

2) Tighten the flywheel attaching bolts to the specified torque.

**NOTE:**

Tighten the flywheel installing bolts gradually. Each bolt should be tightened to the specified torque in a crisscross fashion.

**Tightening torque:**

**Except STI model**

**72 N·m (7.3 kgf-m, 52.8 ft-lb)**

**STI model**

**75 N·m (7.6 kgf-m, 55.3 ft-lb)**

3) Install the clutch disc and cover. <Ref. to CL-14, INSTALLATION, Clutch Disc and Cover.>

4) Install the transmission assembly.

5MT:

<Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

6MT:

<Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

### C: INSPECTION

**CAUTION:**

**Since this bearing is grease sealed and is of a non-lubrication type, do not wash with gasoline or any solvent.**

1) Damage on sliding surface of facing and ring gear

If defective, replace the flywheel.

(A) Flywheel

(B) Ring gear

2) Smoothness of rotation

Rotate the ball bearing applying pressure in thrust direction.

3) If noise or excessive play is noted, replace the flywheel.

## 4. Release Bearing and Lever

### A: REMOVAL

#### 1. EXCEPT STI MODEL

1) Remove the transmission assembly from vehicle body.

<Ref. to 5MT-26, REMOVAL, Manual Transmission Assembly.>

2) Remove the two clips from release lever and remove the release bearing. (Non-turbo model)

**CAUTION:**

**Be careful not to deform clips.**

3) Remove the release bearing from release lever. (Turbo model)

4) Remove the dust cover.

(A) Release lever  
(B) Dust cover

5) Remove the lever spring from pivot with a screwdriver by accessing it through clutch housing release lever hole. Then remove the release lever.

(A) Release lever  
(B) Screwdriver

#### 2. STI MODEL

1) Remove the transmission assembly from vehicle body.

<Ref. to 6MT-36, REMOVAL, Manual Transmission Assembly.>

2) Remove the release lever from transmission.

3) Put the release bearing in engine side.

4) Remove the release bearing from the clutch cover using flat-type screwdriver.

(A) Release bearing

### B: INSTALLATION

#### 1. EXCEPT STI MODEL

**NOTE:**

Before or during assembling, lubricate the following points with a light coat of grease.

- Contact surface of lever and pivot
- Contact surface of lever and bearing
- Transmission main shaft spline (Use grease containing molybdenum disulphide.)

1) While pushing the release lever to pivot and twisting it to both sides, fit the lever spring onto the constricted portion of pivot.

**NOTE:**

- Apply grease (KOPR-KOTE: Part No. 003603001) to the contact point of release lever and operating cylinder.
- Confirm that the lever spring is securely fitted by observing it through the main case hole.

(A) Release lever

2) Install the release bearing and fasten it with two clips. (Non-turbo model)

3) Install the release bearing. (Turbo model)

4) Install the dust cover.

- (A) Release lever
- (B) Dust cover

5) Check smooth movement of the bearing with operating release lever.

6) Install the transmission assembly.

<Ref. to 5MT-28, INSTALLATION, Manual Transmission Assembly.>

## 2. STI MODEL

1) Install the release bearing on transmission.

2) Insert the release fork into release bearing tab.

- (A) Release fork
- (B) Release bearing

3) Apply grease to the spline portion.

**Grease:**  
**NICHIMOLY 130**

- (A) Spline

4) Insert the release fork shaft into release fork.

**NOTE:**

Make sure the cutout portion of release fork shaft contacts spring pin.

- (A) Release fork
- (B) Release shaft
- (C) Spring pin

5) Tighten the plug.

# Release Bearing and Lever

## CLUTCH SYSTEM

### Tightening torque:

**44 N·m (4.5 kgf-m, 32.5 ft-lb)**

6) Install the transmission assembly.  
<Ref. to 6MT-38, INSTALLATION, Manual Transmission Assembly.>

## C: INSPECTION

### 1. RELEASE BEARING

#### CAUTION:

Since this bearing is grease sealed and is of a non-lubrication type, do not wash with gasoline or any solvent when servicing the clutch.

1) Check the bearing for smooth movement by applying force in the radial direction.

#### Radial direction stroke:

**1.4 mm (0.055 in)**

(A) Bearing case

2) Check the bearing for smooth rotation by applying pressure in the thrust direction.

(A) Bearing case

3) Check wear and damage of the bearing case surface contacting with lever.

### 2. RELEASE LEVER

Check the lever pivot portion and the point of contact with release bearing case for wear.

- (A) Release lever
- (B) Pivot
- (C) Release bearing

## 5. Operating Cylinder

### A: REMOVAL

1) Remove the air intake chamber (Non-turbo model). <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>

2) Remove the intercooler. (Turbo model)  
<Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>

3) Remove the clutch hose from operating cylinder.

#### CAUTION:

- Cover the hose joint to prevent clutch fluid from flowing out.
- Do not loosen or remove the cap bolt. (Turbo model and STI model)
- Non-turbo model

- (A) Clutch hose
- (B) Operating cylinder

- Turbo model

- (A) Clutch hose
- (B) Operating cylinder
- (C) Cap bolt

- STI model

- (A) Clutch hose
- (B) Operating cylinder
- (C) Cap bolt

4) Remove the operating cylinder from transmission.

- Non-turbo model

- Turbo model

- STI model

- (A) Operating cylinder

# Operating Cylinder

## CLUTCH SYSTEM

### B: INSTALLATION

1) Install in the reverse order of removal.

#### NOTE:

- Before installing the operating cylinder, apply grease (KOPR-KOTE: Part No. 003603001) to contact point of the release lever and operating cylinder.
- For turbo model, bleed air with the operating cylinder attached to clutch hose, and then install it to vehicle. <Ref. to CL-30, STI MODEL, PROCEDURE, Clutch Fluid Air Bleeding.>
- Non-turbo model

#### Tightening torque:

**T1: 18 N·m (1.8 kgf-m, 13.3 ft-lb)**

**T2: 37 N·m (3.8 kgf-m, 27.5 ft-lb)**

- Turbo model

#### Tightening torque:

**T1: 18 N·m (1.8 kgf-m, 13.3 ft-lb)**

**T2: 37 N·m (3.8 kgf-m, 27.5 ft-lb)**

- STI model

#### Tightening torque:

**T1: 18 N·m (1.8 kgf-m, 13.3 ft-lb)**

**T2: 41 N·m (4.2 kgf-m, 30.2 ft-lb)**

#### NOTE:

- Be sure to install the clutch hose with the mark side facing upward.
- Be careful not to twist the clutch hose during installation.

- (A) Marking
- (B) Clutch hose
- (C) Operating cylinder

2) After bleeding air from the operating cylinder, ensure that clutch operates properly.

<Ref. to CL-29, Clutch Fluid Air Bleeding.>

### C: DISASSEMBLY

#### NOTE:

Disassembly for operating cylinder of only 5MT model can be performed. That of 6MT model is a component that cannot be disassembled.

1) Remove the boot and push rod.

- Non-turbo model

- Except Non-turbo model and STI model

2) Apply compressed air through the clutch hose attaching hole.

**NOTE:**

Face the piston hole downward and place a wooden block to prevent the piston from jumping out.

- Non-turbo model

- Except Non-turbo model and STI model

3) Separate the piston and piston spring.

- Non-turbo model

- Except Non-turbo model and STI model

## D: ASSEMBLY

**NOTE:**

- Keep applying working fluid to all the parts during assembly.
- Assembly for operating cylinder of only 5MT model can be performed. That of 6MT model is a component that cannot be disassembled.

**Recommended clutch fluid:**

**FMVSS No. 116, fresh DOT3 or 4 brake fluid**

1) Install the piston spring to piston.

- Non-turbo model

# Operating Cylinder

## CLUTCH SYSTEM

---

- Except Non-turbo model and STI model

- 2) Insert the piston into operating cylinder.
- 3) Install the push rod to boot.
- 4) Install the boot and push rod to operating cylinder.

- Non-turbo model

- Except Non-turbo model and STI model

### **E: INSPECTION**

- 1) Check the operating cylinder for damage. If operating cylinder is damaged, replace it.
- 2) Check the operating cylinder for fluid leakage or damage on boot. If any leakage or damage is found, replace the operating cylinder.

## 6. Master Cylinder

### A: REMOVAL

- 1) Thoroughly drain the brake fluid from reservoir tank.
- 2) Remove the snap pin, clevis pin and separate the push rod of master cylinder from clutch pedal.

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod
- (D) Lock nut

- 3) Remove the air intake chamber (Non-turbo model). <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 4) Remove the intercooler (Turbo model). <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 5) Disconnect the clutch pipe from master cylinder.
- 6) Remove the master cylinder and reservoir tank as a unit.

### CAUTION:

**Be extremely careful not to spill brake fluid. Brake fluid spilt on the vehicle body will harm the paint surface; wipe it off quickly if spilt.**

### B: INSTALLATION

- 1) Install the master cylinder to body, and connect the clutch pipe to master cylinder.

### NOTE:

Check that the pipe is routed properly.

### Tightening torque:

**T1: 15 N·m (1.5 kgf-m, 10.8 ft-lb)**

**T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)**

- 2) Connect the push rod of master cylinder to clutch pedal, and install the clevis pin and snap pin.

### NOTE:

Apply grease to the clevis pin.

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod

- 3) After bleeding air from the clutch system, ensure that clutch operates properly. <Ref. to CL-29, Clutch Fluid Air Bleeding.>
- 4) Install the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, INSTALLATION, Air Intake Chamber.>
- 5) Install the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

# Master Cylinder

## CLUTCH SYSTEM

### C: DISASSEMBLY

1) Remove the straight pin and reservoir tank.

- (A) Reservoir tank
- (B) Straight pin

2) Remove the oil seal.

- (A) Oil seal
- (B) Master cylinder

3) Move the cylinder boot backward.

- (A) Cylinder boot
- (B) Master cylinder

4) Remove the snap ring.

**CAUTION:**  
Be careful when removing the snap ring to prevent the rod, washer, piston and return spring from flying out.

5) Remove the clutch damper.

### D: ASSEMBLY

1) Install the clutch damper.

**Tightening torque:**

**46.6 N·m (4.75 kgf-m, 34.4 ft-lb)**

2) Apply a coat of grease to the contacting surfaces of the push rod and piston before installation.

**Grease:**

**SILICONE GREASE G-40M (Part No. 004404003)**

3) Assemble in the reverse order of disassembly.

**Tightening torque:**

**10 N·m (1.0 kgf-m, 7 ft-lb)**

### E: INSPECTION

If any damage, deformation, wear, swelling, rust or other faults are found on the cylinder, piston, push rod, fluid reservoir, return spring, gasket, clutch damper, cylinder boot and hose replace the faulty part.

- (A) Master cylinder body
- (B) Return spring
- (C) Piston
- (D) Stop ring
- (E) Push rod ASSY
- (F) Clutch damper
- (G) Cylinder boot

## 7. Clutch Pipe and Hose

### A: REMOVAL

- 1) Remove the air intake chamber and air intake duct. (Non-turbo model) <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.> <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>
- 2) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 3) Drain the clutch fluid. <Ref. to CL-28, Clutch Fluid.>
- 4) Remove the clutch pipe from the clutch hose and master cylinder.
- 5) Pull out the clamp, then remove the clutch hose from bracket.

- (A) Clamp
- (B) Clutch hose

- 6) Remove the hose from operating cylinder.
- 7) Remove the bracket.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Bleed air of the clutch fluid. <Ref. to CL-29, Clutch Fluid Air Bleeding.>

#### Tightening torque:

**T1: 15 N·m (1.5 kgf-m, 10.8 ft-lb)**

**T2: 18 N·m (1.8 kgf-m, 13.3 ft-lb)**

- (A) Clutch pipe
- (B) Clip
- (C) Clutch hose

### C: INSPECTION

Check the pipes and hoses for cracks, breakage, or damage. Check the joints for fluid leakage. If any cracks, breakage, damage or leakage is found, repair or replace the applicable pipe or hose.

### 8. Clutch Fluid

#### A: INSPECTION

- 1) Park the vehicle on a level surface.
- 2) Inspect the fluid level using scale on the outside of the reservoir tank. If the level is below "MIN", add fluid to bring it up to "MAX", and also inspect for leakage.

- (A) Max. level
- (B) Min. level
- (C) Reservoir tank

#### B: REPLACEMENT

##### CAUTION:

- The FMVSS No. 116, fresh DOT3 or 4 brake fluid must be used.
- Cover the bleeder with waste cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.
- Avoid mixing different brands of brake fluid to prevent degrading the quality of the fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.

##### NOTE:

- During bleeding operation, keep the clutch reservoir tank filled with brake fluid to eliminate entry of air.
  - Clutch pedal operating must be very slow.
  - Bleed air from the oil line with help of a co-worker.
  - The amount of brake fluid required is approx. 70 ml (2.4 US fl oz, 2.5 Imp fl oz) for total clutch system.
- 1) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
  - 2) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
  - 3) Either jack-up the vehicle and place a rigid racks under it, or lift-up the vehicle.
  - 4) Drain brake fluid from the reservoir tank.
  - 5) Refill the reservoir tank with recommended brake fluid.

##### Recommended brake fluid:

**FMVSS No. 116, fresh DOT3 or 4 brake fluid**

- 6) Drain all contaminated fluid in the same method as air bleeding.
- 7) Refill the brake fluid before reservoir tank becomes empty, and drain contaminated fluid again.
- 8) Repeat the above procedure until the contaminated fluid is completely drained.

## 9. Clutch Fluid Air Bleeding

### A: PROCEDURE

#### 1. EXCEPT STI MODEL

**NOTE:**

Bleed air from the oil line with help of a co-worker.

1) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>

2) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>

3) Fit one end of a vinyl tube into the air bleeder of operating cylinder and put the other end into a brake fluid container.

- Non-turbo model

(A) Clutch hose  
(B) Air bleeder

- Turbo model

(A) Clutch hose  
(B) Air bleeder

4) Slowly depress the clutch pedal and keep it depressed. Then open the air bleeder to discharge air together with the fluid.

Release the air bleeder for 1 or 2 seconds. Next, with the bleeder closed, slowly release the clutch pedal.

**CAUTION:**

**Cover the bleeder with waste cloth when loosening it, to prevent brake fluid from being splashed over surrounding parts.**

- Non-turbo model

(A) Operating cylinder  
(B) Vinyl tube

- Turbo model

(A) Operating cylinder  
(B) Vinyl tube

5) Repeat the procedure 4), until there are no more air bubbles in the vinyl tube.

6) Tighten the air bleeder.

**Tightening torque:**

**T: 7.8 N·m (0.8 kgf-m, 5.8 ft-lb)**

- Non-turbo model

CL-00358

# Clutch Fluid Air Bleeding

## CLUTCH SYSTEM

- Turbo model

7) After depressing the clutch pedal, make sure that there are no leaks evident in the entire clutch system.

8) After bleeding air from the clutch system, ensure that clutch operates properly.

9) Install the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, INSTALLATION, Air Intake Chamber.>

10) Install the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

## 2. STI MODEL

### NOTE:

Bleed air from the oil line with help of a co-worker.

1) Remove the intercooler. <Ref. to IN(STI)-11, REMOVAL, Intercooler.>

2) Remove the operating cylinder.

### NOTE:

Do not remove the clutch hose.

3) Fix the piston with clamp to avoid the piston from jumping out.

4) Fit one end of a vinyl tube into the air bleeder of operating cylinder and put the other end into a brake fluid container.

5) Slowly depress the clutch pedal and keep it depressed. Then open the air bleeder to discharge air together with the fluid.

Release the air bleeder for 1 or 2 seconds. Next, with the bleeder closed, slowly release the clutch pedal.

### NOTE:

Set the air breather screw position higher than the tip of operating cylinder when performing this procedure.

(A) Operating cylinder

(B) Vinyl tube

6) Repeat these steps until there are no more air bubbles in the vinyl tube.

### CAUTION:

**Cover the bleeder with waste cloth when loosening it, to prevent brake fluid from being splashed over surrounding parts.**

7) Tighten the air bleeder.

### Tightening torque:

**7.8 N·m (0.8 kgf·m, 5.8 ft·lb)**

8) Install the operating cylinder.

### Tightening torque:

**41 N·m (4.2 kgf·m, 30.2 ft·lb)**

9) After depressing the clutch pedal, make sure that there are no leaks evident in the entire system.

- 10) After bleeding air from the system, ensure that clutch operates properly.
- 11) Install the intercooler. <Ref. to IN(H4DOTC)-11, INSTALLATION, Intercooler.>

## 10. Clutch Pedal

### A: REMOVAL

- 1) Remove the steering column. <Ref. to PS-23, REMOVAL, Tilt Steering Column.>
- 2) Disconnect the connectors from stop light and clutch switches.
- 3) Remove the snap pins which secure lever to push rod and operating rod.
- 4) Remove the clevis pins which secure lever to push rod and operating rod.

- (A) Operating rod
- (B) Push rod
- (C) Snap pin
- (D) Clevis pin

- 5) Remove the air intake chamber. (Non-turbo model) <Ref. to IN(H4SO)-6, REMOVAL, Air Intake Chamber.>
- 6) Remove the intercooler. (Turbo model) <Ref. to IN(H4DOTC)-11, REMOVAL, Intercooler.>
- 7) Remove the nut which secures clutch master cylinder.

- 8) Remove the bolts and nuts which secure brake and clutch pedals, and remove the pedal assembly.

### B: INSTALLATION

- 1) Install in the reverse order of removal.

**NOTE:**

Always use new clevis pins.

- 2) Adjust the clutch pedal after installation. <Ref. to CL-33, ADJUSTMENT, Clutch Pedal.>

- 3) Adjust the clutch switch (Starter interlock). <Ref. to CL-37, ADJUSTMENT, Clutch Switch.>

### C: DISASSEMBLY

- 1) Remove the clips, assist spring, rod and bushing.

- (A) Clip
- (B) Assist spring
- (C) Assist rod
- (D) Bushing
- (E) Clevis pin

- 2) Remove the spring pin and lever.

- (A) Pin
- (B) Lever

- 3) Remove the clutch pedal and bushings.

- (A) Clutch pedal
- (B) Bushing

4) Remove the stopper, clip, O-ring, rod S, and then remove the spring S and bushing S.

- (A) Clip
- (B) Bushing S
- (C) Spring S
- (D) Rod S
- (E) Stopper

5) Remove the stoppers from clutch pedal.  
6) Remove the clutch pedal pad. (Non-turbo model)

## D: ASSEMBLY

- 1) Attach the stopper, etc. to pedal bracket temporarily.
- 2) Clean inside of bores of clutch pedal and brake pedal, apply grease, and set bushings into bores.

### Grease:

**SUNLIGHT 2 (Part No. 003602010) or equivalent**

- 3) Align bores of pedal bracket, clutch pedal and brake pedal, attach the brake pedal return spring, assist rods, spring, and bushing.

### NOTE:

Clean up inside of bushings and apply grease before installing the spacer.

## E: INSPECTION

Move the clutch pedal pads in the lateral direction with a force of approximately 10 N (1 kgf, 2 lbf) to ensure pedal play is in specified range.

### CAUTION:

**If excessive movement is noted, replace the bushings with new ones.**

### Play of clutch pedal:

#### Service limit

**5.0 mm (0.197 in) or less**

- (A) Clutch pedal
- (B) Brake pedal

## F: ADJUSTMENT

- 1) Turn the lock nuts until clutch pedal full stroke length is within specifications.

### CAUTION:

**Do not attempt to turn the clutch switch to adjust clutch pedal full stroke length.**

### NOTE:

If lock nuts cannot adjust the clutch pedal full stroke length to specifications, turn the master cylinder push rod to adjust it.

#### Clutch pedal full stroke A:

**130 — 135 mm (5.12 — 5.31 in)**

#### Tightening torque (Clutch switch lock nut):

**T: 8 N·m (0.8 kgf·m, 5.9 ft-lb)**

- 2) If the full stroke is out of specifications, loosen the clutch stopper nut (model without cruise control) or clutch switch lock nut (model with cruise control) to adjust.

#### Tightening torque:

**8 N·m (0.8 kgf·m, 5.8 ft-lb)**

# Clutch Pedal

## CLUTCH SYSTEM

### 3) Loosen the push rod lock nut.

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod
- (D) Push rod lock nut

### 4) Turn the push rod to adjust.

- (1) Make sure that the clutch pedal contacts the stopper bolt side (model without cruise control) or the clutch switch side (model with cruise control) when releasing the clutch pedal.
- (2) Make sure that the clutch pedal contacts clutch pedal bracket stopper, when fully depressing the clutch pedal.

- (A) Clevis hole
- (B) Push rod lock nut
- (C) Shortening direction
- (D) Lengthening direction
- (E) Push rod
- (F) Clevis

### 5) Turn the push rod to shorten until the clearance is made at the stopper bolt side (model without cruise control) or the clutch switch side (model with cruise control).

### • Model without cruise control

- (A) Stopper
- (B) Stopper bolt

### • Model with cruise control

- (A) Clutch switch
- (B) Stopper

### 6) Turn the push rod to lengthen until the clutch pedal contacts the stopper bolt (model without cruise control) or clutch switch (model with cruise control).

### 7) Turn the push rod further 270° to shorten (in the arrow direction as shown in the figure).

- (A) Accelerator pedal
- (B) Clevis

### 8) Move the clevis pin to the right and left to make sure it moves smoothly.

### 9) Tighten the push rod lock nut.

**Tightening torque (Push rod lock nut):**  
**T: 10 N·m (1.0 kgf-m, 7 ft-lb)**

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod

10) Depress and release the clutch pedal two to three times to ensure that clutch pedal and release fork operates smoothly. If the clutch pedal and release fork do not operate smoothly, bleed air from the clutch hydraulic system. <Ref. to CL-29, Clutch Fluid Air Bleeding.>

11) Measure the clutch pedal full stroke length again to ensure that it is within specifications. If it is not, repeat adjustment procedures again from the beginning.

**Clutch pedal full stroke:**  
**130 — 135 mm (5.12 — 5.31 in)**

12) Push the release lever until operating cylinder push rod retracts. Ensure that clutch fluid level in reservoir tank increases. If the clutch fluid level increases, the hydraulic clutch is properly adjusted; if fluid level does not increase or push rod does not retract, replace the master cylinder with a new one. <Ref. to CL-25, Master Cylinder.>

- (1) Push rod
- (2) Release lever
- (3) Operating cylinder

13) Push the release lever until operating cylinder push rod retracts. Check that the clutch fluid level in reservoir tank increases.

- (1) Push rod
- (2) Release lever
- (3) Operating cylinder

14) If the clutch fluid level increases, hydraulic clutch play is correct.

15) If the clutch fluid level does not increase or push rod does not retract, clutch pedal must be re-adjusted.

16) Check the fluid level on the outside of the reservoir tank. If the level is below "MIN", add clutch fluid to bring it up to "MAX".

**Recommended clutch fluid:**

**FMVSS No. 116, fresh DOT 3 or DOT 4 brake fluid**

- (A) Max. level
- (B) Min. level
- (C) Reservoir tank

# Clutch Switch

## CLUTCH SYSTEM

### 11. Clutch Switch

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover.
- 3) Disconnect the connector from clutch switch.
- 4) Remove the clutch switch.

#### B: INSTALLATION

##### 1. CLUTCH SWITCH (CRUISE CONTROL)

- 1) Move the clevis pin of the push rod right and left and hold where it moves smoothly, then measure stroke of clutch pedal.

##### **Specified clutch pedal full stroke A:**

**130 — 135 mm (5.12 — 5.31 in)**

##### **Tightening torque:**

**T: 8 N·m (0.8 kgf·m, 5.9 ft·lb)**

- 2) If the clutch pedal stroke is out of specification, adjust the stroke. <Ref. to CL-33, ADJUSTMENT, Clutch Pedal.>

- 3) Connect clutch switch connector.

##### 2. CLUTCH SWITCH (STARTER INTER-LOCK)

- 1) Fully depress the clutch pedal.
- 2) Install the clutch pedal plate and clutch switch so that the gap between them is 3 — 3.5 mm (0.12 — 0.14 in), and then tighten the lock nut.

##### **Tightening torque:**

**8 N·m (0.8 kgf·m, 5.9 ft·lb)**

(A) Plate

(B) Clutch switch

(C) 3 — 3.5 mm (0.12 — 0.14 in)

- 3) Connect the clutch switch connector.
- 4) Confirm that the engine does not start when the clutch pedal is released.
- 5) Confirm that the engine starts when the clutch pedal is fully depressed.

#### C: INSPECTION

- 1) If the clutch switch (cruise control) does not operate properly (or if it does not stop at the specified position), replace with a new one.

##### **Specified position L:**

**2+1.5 mm (0.079+0.059 in)**

- 2) Check the clutch switch continuity. If the resistance is not as specified, replace the switch.

- (1) Disconnect the clutch switch connector.
- (2) Measure the resistance between 1 and 2 of switch terminal.

- Clutch switch (Cruise control)

**Terminals/Specified resistance**

**When clutch pedal depressed:**

**No. 1 — No. 2/More than 1 MΩ**

**When clutch pedal not depressed:**

**No. 1 — No. 2/Less than 1 Ω**

- Clutch switch (Starter interlock)

**Terminals/Specified resistance**

**When clutch pedal depressed:**

**No. 1 — No. 2/Less than 1 Ω**

**When clutch pedal not depressed:**

**No. 1 — No. 2/More than 1 MΩ**

3) Confirm that the engine does not start when the clutch pedal is not depressed. If the engine starts, adjust the clutch switch, and inspect the starter interlock circuit.

4) Confirm that the engine starts when the clutch pedal is fully depressed. If the engine does not start, adjust the clutch switch, and inspect the starter interlock circuit.

## D: ADJUSTMENT

1) Loosen the clutch switch mounting lock nut (Starter interlock).

- (A) Lock nut
- (B) Clutch switch (Starter interlock)

2) Fully depress the clutch pedal.

3) Adjust the clutch pedal plate and clutch switch so that the gap between them is 3 — 3.5 mm (0.12 — 0.14 in).

- (A) Plate
- (B) Clutch switch (Starter interlock)
- (C) 3 — 3.5 mm (0.12 — 0.14 in)

4) Tighten the lock nut.

**Tightening torque:**

**8 N·m (0.8 kgf·m, 5.9 ft·lb)**

# General Diagnostic Table

## CLUTCH SYSTEM

### 12. General Diagnostic Table

#### A: INSPECTION

##### 1. CLUTCH

| Symptom   | Possible cause                                      | Corrective                         |
|---|---|------------------------------------|
| <p>1. Clutch slippage</p> <p>It is hard to perceive clutch slippage in the early stage, but pay attention to the following symptoms</p> <ul style="list-style-type: none"> <li>• Engine speed up when shifting.</li> <li>• High speed driving is impossible; especially rapid acceleration impossible and vehicle speed does not increase in proportion to an increase in engine speed.</li> <li>• Power falls, particularly when ascending a slope, and there is a smell of burning of the clutch facing.</li> <li>• Method of testing: Put the vehicle in stationary condition with parking brake fully applied. Disengage the clutch and shift the transmission gear into the first. Gradually allow the clutch to engage while gradually increasing the engine speed. The clutch function is satisfactory if the engine stalls. However, the clutch is slipping if the vehicle does not start off and the engine does not stall.</li> </ul> | (a) Clutch facing smeared by oil                    | Replace.                           |
|   | (b) Worn clutch facing                              | Replace.                           |
|   | (c) Deteriorated diaphragm spring                   | Replace.                           |
|   | (d) Distorted pressure plate or flywheel            | Correct or replace.                |
|   | (e) Defective release bearing holder                | Correct or replace.                |
| <p>2. Clutch drags.</p> <p>As a symptom of this trouble, a harsh scratching noise develops and control becomes quite difficult when shifting gears. The symptom becomes more apparent when shifting into the first gear. However, because much trouble of this sort is due to defective synchronization mechanism, carry out the test as described after.</p> <ul style="list-style-type: none"> <li>• Method of testing: &lt;Ref. to CL-39, DIAGNOSTIC DIAGRAM OF CLUTCH DRAG, INSPECTION, General Diagnostic Table.&gt;</li> </ul> <p>It may be judged as insufficient disengagement of clutch if any noise occurs during this test.</p>  | (a) Worn or rusty clutch disc hub spline            | Replace the clutch disc.           |
|   | (b) Excessive deflection of clutch disc facing      | Correct or replace.                |
|   | (c) Seized crankshaft pilot needle bearing          | Replace.                           |
|   | (d) Cracked clutch disc facing                      | Replace.                           |
|   | (e) Stuck clutch disc (smeared by oil or water)     | Replace.                           |
| <p>3. Clutch chatters.</p> <p>Clutch chattering is an unpleasant vibration to the whole body when the vehicle is just started with clutch partially engaged.</p>  | (a) Adhesion of oil on the facing                   | Replace the clutch disc.           |
|   | (b) Weak or broken damper spring                    | Replace the clutch disc.           |
|   | (c) Defective facing contact or excessive disc wear | Replace the defective clutch disc. |
|   | (d) Warped pressure plate or flywheel               | Correct or replace.                |
|   | (e) Loose disc rivets                               | Replace the clutch disc.           |
|   | (f) Loose engine mounting                           | Retighten or replace the mounting. |
|   | (g) Improper adjustment of pitching stopper         | Adjustment.                        |

# General Diagnostic Table

| Symptom  | Possible cause   | Corrective  |
|--|--|---|
| 4. Noisy clutch<br>The noise is generated when the clutch is disengaged, engaged, or partially engaged.  | (a) Broken, worn or unlubricated release bearing       | Replace the release bearing.  |
|  | (b) Insufficient lubrication of pilot bearing          | Apply grease or replace the pilot bearing.                            |
|  | (c) Loose clutch disc hub                              | Replace the clutch disc.  |
|  | (d) Loose damper spring retainer                       | Replace the clutch disc.  |
|  | (e) Deteriorated or broken damper spring               | Replace the clutch disc.  |
| 5. Clutch grabs.<br>When starting the vehicle with the clutch partially engaged, the clutch engages suddenly and the vehicle jumps instead of making a smooth start. | (a) Grease or oil on facing                            | Replace the clutch disc.  |
|  | (b) Deteriorated cushioning spring                     | Replace the clutch disc.  |
|  | (c) Worn or rusted spline of clutch disc or main shaft | Take off rust, apply grease or replace the clutch disc or main shaft. |
|  | (d) Deteriorated or broken damper spring               | Replace the clutch disc.  |
|  | (e) Loose engine mounting                              | Retighten or replace the mounting.                                    |
|  | (f) Deteriorated diaphragm spring                      | Replace.  |

## 2. CLUTCH PEDAL

| Trouble   | Corrective action                                |
|---|--|
| Insufficient pedal play                                 | Adjust pedal play.                               |
| Clutch pedal free play insufficient                     | Adjust pedal free play.                          |
| Excessively worn and damaged pedal shaft and/or bushing | Replace the bushing and/or shaft with a new one. |

## 3. DIAGNOSTIC DIAGRAM OF CLUTCH DRAG

| Step   | Check   | Yes  | No   |
|--|---|--|--|
| <b>1</b><br><b>CHECK GEAR NOISE.</b><br>1) Start the engine.<br>2) Disengage the clutch and shift quickly from neutral to reverse in idling condition.   | Is there any abnormal noise from the transmission gear? | Go to step 2.  | Clutch is normal.  |
| <b>2</b><br><b>CHECK GEAR NOISE.</b><br>Disengage the clutch at idle and shift from neutral to reverse within 0.5 — 1.0 seconds.   | Is there any abnormal noise from the transmission gear? | Go to step 3.  | Defective transmission or excessive clutch drag torque. Inspect the pilot bearing, clutch disc, transmission and clutch disc hub spline. |
| <b>3</b><br><b>CHECK GEAR NOISE.</b><br>1) Disengage the clutch at idle and shift from neutral to reverse within 0.5 — 1.0 seconds.<br>2) With the clutch disengaged, shift from N to R, R to N several times. | Is there any abnormal noise from the transmission gear? | Defect in clutch disengaging. Inspect the clutch disc, clutch cover, clutch release, and clutch pedal free play. | Clutch and fly-wheel seizure. Inspect the clutch disc, spline of clutch disc hub.  |

**CHASSIS SECTION**

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

| (17) Dust seal                       | (35) Fitting                                   |  |                             |

### C: CAUTION

- Wear work clothing, including a cap, protective goggles and protective shoes during operation.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.

## D: PREPARATION TOOL

### 1. SPECIAL TOOL

| ILLUSTRATION  | TOOL NUMBER | DESCRIPTION                | REMARKS  |
|---|-------------|----------------------------|--|
|  <p style="text-align: center;">ST-927680000</p> | 927680000   | INSTALLER &<br>REMOVER SET | Used for replacing transverse link bushing.                  |
|  <p style="text-align: center;">ST-927760000</p> | 927760000   | STRUT MOUNT<br>SOCKET      | Used for disassembling and assembling strut and shock mount. |

### 2. GENERAL TOOL

| TOOL NAME               | REMARKS                               |
|-------------------------|---------------------------------------|
| Alignment gauge         | Used for wheel alignment measurement. |
| Alignment gauge adapter | Used for wheel alignment measurement. |
| Turning radius gauge    | Used for wheel alignment measurement. |
| Toe-in gauge            | Used for toe-in measurement.          |

| Coil spring compressor  | Used for strut disassembly/assembly.  |

# Wheel Alignment

## FRONT SUSPENSION

### 2. Wheel Alignment

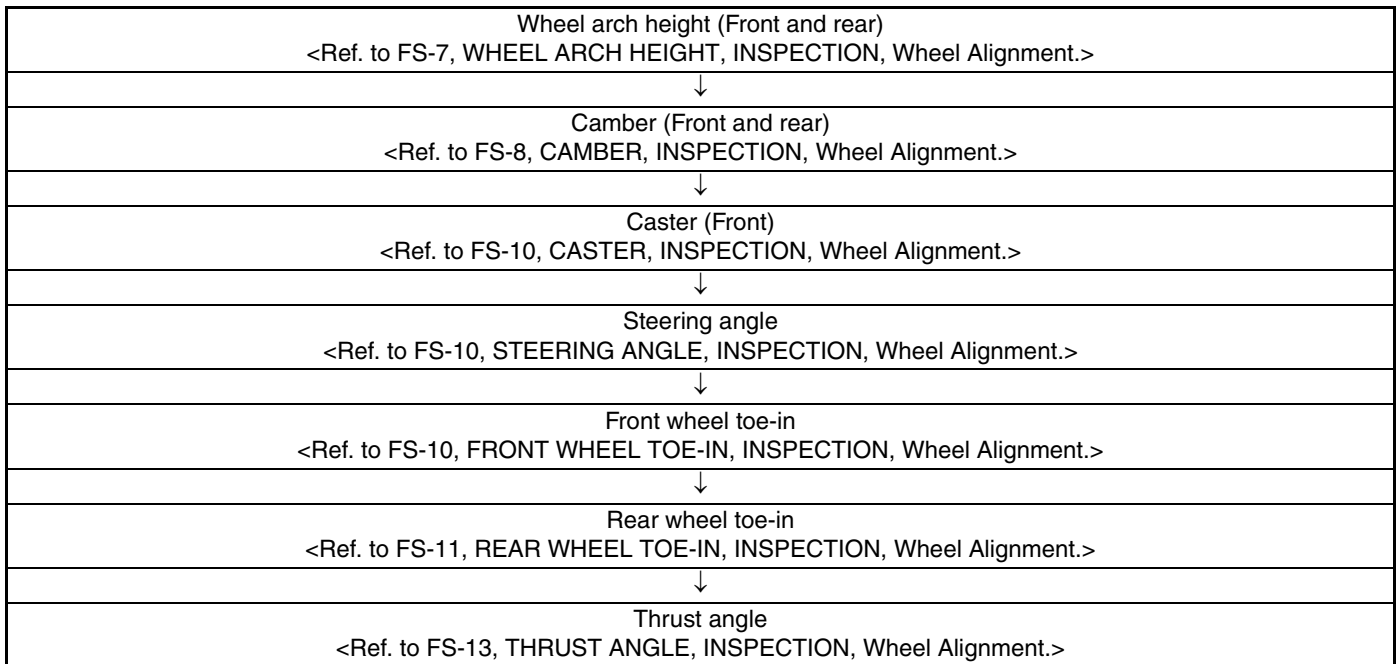

#### A: INSPECTION

Check the following items before taking wheel alignment measurement.

Check items before taking wheel alignment measurement:

- tire air pressure
- unbalanced right and left tire wear, size difference
- tire run-out
- ball joint excessive play, wear
- tie rod end excessive play, wear
- wheel bearing excessive play
- right and left wheel base imbalance
- steering link part deformed, excessive play
- suspension part deformed, excessive play

Check, adjust and/or measure the wheel alignment in accordance with procedures indicated in the figure:

# Wheel Alignment

## FRONT SUSPENSION

### 1. WHEEL ARCH HEIGHT

- 1) Set the vehicle on a level surface.
- 2) Set the vehicle to “curb weight” conditions. (Empty luggage compartment, install spare tire, jack, service tools, and top up fuel tank.)

- 3) Set the steering wheel in a straight line, then remove the vehicle straight ahead more than 5 m (16 ft) to settle the suspension.
- 4) Suspend the thread from wheel arch (point “A” in figure below) to determine a point directly above center of wheel.
- 5) Measure the distance between measuring point “A” and center of wheel.

FS-00181

(A) Except STI model

(B) STI model

(1) Wheel arch height

(4) Front wheel arch height

(7) Measuring point

(2) Front fender

(5) Rear wheel arch height

(8) End of spindle

(3) Rear quarter

(6) Flange bend line

| Model   |       | Specified wheel arch height [Tolerance: $+12_{-24}$ mm ( $+0.47_{-0.94}$ in)] |                   |
|---------|-------|---|-------------------|
|         |       | Non-turbo   | Turbo             |
| Sedan   | Front | 406 mm (15.98 in)   | 396 mm (15.59 in) |
|         | Rear  | 381 mm (15.0 in)  | 376 mm (14.80 in) |
| Wagon   | Front | 397 mm (15.63 in)   | 387 mm (15.24 in) |
|         | Rear  | 381 mm (15.0 in)  | 376 mm (14.80 in) |
| OUTBACK | Front | 402 mm (15.83 in)   | —                 |
|         | Rear  | 386 mm (15.20 in)   | —                 |
| STI     | Front | —   | 386 mm (15.20 in) |
|         | Rear  | —   | 363 mm (14.29 in) |

# Wheel Alignment

## FRONT SUSPENSION

### 2. CAMBER

#### • Inspection

- 1) Place the front wheel on turning radius gauge. Make sure ground contacting surfaces of front and rear wheels are set at the same height.
- 2) Set the adapter into the center of wheel, and then install the wheel alignment gauge.

- (1) Alignment gauge
- (2) Turning radius gauge
- (3) Adapter

- 3) Follow the wheel alignment gauge operation manual to measure camber angle.

#### NOTE:

Refer to the "SPECIFICATION" for camber values.  
Front: <Ref. to FS-2, SPECIFICATION, General Description.>

Rear: <Ref. to RS-2, SPECIFICATION, General Description.>

#### • Front Camber Adjustment

- 1) Loosen the two self-locking nuts located at lower front portion of strut.

#### NOTE:

When adjusting bolt needs to be loosened or tightened, hold its head with a wrench and turn self-locking nut.

- 2) Turn the camber adjusting bolt so that camber is set at the specification.

#### NOTE:

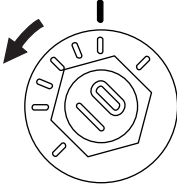

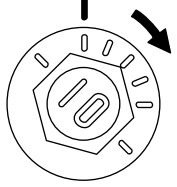

Moving the adjusting bolt by one scale graduation changes camber by approx.  $0^{\circ}10'$ .

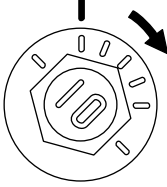

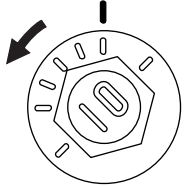

- (1) Strut
- (2) Adjusting bolt
- (3) Housing
- (4) Outer
- (5) Inner
- (6) Camber is increased.
- (7) Camber is decreased.

# Wheel Alignment

FRONT SUSPENSION

| To increase Camber:   |   |
|---|---|
| Rotate camber adjusting bolt LH counterclockwise.                                 | Rotate camber adjusting bolt RH clockwise.  |
|  |  |
| FS-00009  | FS-00010  |

| To decrease Camber:  |  |
|--|--|
| Rotate camber adjusting bolt LH clockwise.   | Rotate camber adjusting bolt RH counterclockwise.                                    |
|  |  |
| FS-00010   | FS-00009   |

3) Tighten two new self-locking nuts.

**Tightening torque:**

**175 N·m (17.8 kgf·m, 129 ft·lb)**

# Wheel Alignment

## FRONT SUSPENSION

### 3. CASTER

#### • Inspection

- 1) Place the front wheel on turning radius gauge. Make sure ground contacting surfaces of front and rear wheels are set at the same height.
- 2) Set the adapter into center of wheel, and then install the wheel alignment gauge.

- (1) Alignment gauge
- (2) Turning radius gauge
- (3) Adapter

- 3) Follow the wheel alignment gauge operation manual to measure caster angle.

#### NOTE:

Refer to "SPECIFICATION" for caster values. <Ref. to FS-2, SPECIFICATION, General Description.>

### 4. STEERING ANGLE

#### • Inspection

- 1) Place the vehicle on a turning radius gauge.
- 2) While depressing the brake pedal, turn the steering wheel fully to the right and left. With the steering wheel held at each fully turned position, measure both the inner and outer wheel steering angle.

#### Steering angle:

| Model       | Except STI model               | STI model                      |
|-------------|--------------------------------|--------------------------------|
| Inner wheel | $34.5^{\circ} \pm 1.5^{\circ}$ | $32.9^{\circ} \pm 1.5^{\circ}$ |
| Outer wheel | $30.3^{\circ} \pm 1.5^{\circ}$ | $28.5^{\circ} \pm 1.5^{\circ}$ |

#### • Adjustment

- 1) Turn the tie-rod to adjust steering angle of both inner and outer wheels.
- 2) Check the toe-in.

#### NOTE:

Correct the boot if it is twisted.

- (1) Lock nut

### 5. FRONT WHEEL TOE-IN

#### • Inspection

#### Toe-in:

$0 \pm 3 \text{ mm}$  ( $0 \pm 0.12 \text{ in}$ ) (tolerance)

- 1) Set the toe-in gauge to rear sides of right and left front tires at height corresponding to center of spindle.
- 2) Mark each right and left tires at height corresponding to center of spindle and measure the distance "A" between marks.
- 3) Move the vehicle forward to rotate wheels  $180^{\circ}$ .

#### NOTE:

Whenever rotating the wheels, drive the vehicle forward.

- 4) Measure the distance "B" between right and left marks. Toe-in can then be obtained by the following equation:

$$A - B = \text{Toe-in}$$

#### • Adjustment

- 1) Make sure that the right and left steering angles are within specified value.
- 2) Loosen the right and left side steering tie-rods lock nuts.
- 3) Turn the right and left tie rods equal amounts until the toe-in is at the specification.

**Toe-in:**

**$0 \pm 2$  mm ( $0 \pm 0.08$  in) (adjustment standard)**

Both the right and left tie-rods are right-hand threaded. To increase toe-in, turn both tie-rods clockwise equal amounts (as viewed from inside of the vehicle).

(1) Lock nut

4) Tighten the tie-rod lock nut.

**Tightening torque:**

**Non- turbo model:**

**83 N·m (8.5 kgf·m, 61.5 ft·lb)**

**Turbo model and STI model:**

**85 N·m (8.6 kgf·m, 62.2 ft·lb)**

**NOTE:**

Correct the tie-rod boot, if it is twisted.

## 6. REAR WHEEL TOE-IN

• **Inspection**

**Toe-in:**

**$0 \pm 3$  mm ( $0 \pm 0.12$  in) (tolerance)**

For rear toe-in inspection procedure, refer to FRONT WHEEL TOE-IN procedure.

<Ref. to FS-10, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

• **Adjustment**

1) Loosen the self-locking nut on inner side of link rear.

**NOTE:**

When loosening or tightening the adjusting bolt, hold the bolt head and turn self-locking nut.

(1) Adjusting bolt

(2) Link rear

2) Turn the adjusting bolt head until toe-in is at the specification.

**Toe-in:**

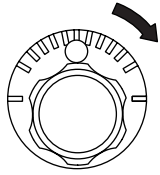

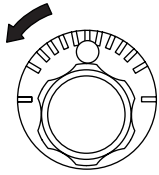

**$0 \pm 2$  mm ( $0 \pm 0.08$  in) (adjustment standard)**

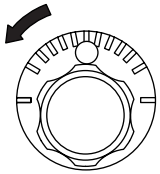

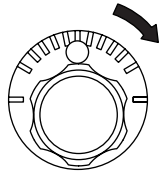

**NOTE:**

When the right and left wheels are adjusted for toe-in at the same time, the movement of one scale graduation changes toe-in by approx. 1.5 mm (0.6 in).

# Wheel Alignment

## FRONT SUSPENSION

| To increase Toe-in:  |  |
|--|--|
| Rotate camber adjusting bolt LH clockwise.   | Rotate camber adjusting bolt RH counterclockwise.  |
|  <p>Diagram showing the camber adjusting bolt on the left side (LH) rotated clockwise, indicated by a curved arrow.</p> |  <p>Diagram showing the camber adjusting bolt on the right side (RH) rotated counterclockwise, indicated by a curved arrow.</p> |

| To decrease Toe-in:  |  |
|--|--|
| Rotate camber adjusting bolt LH counterclockwise.  | Rotate camber adjusting bolt RH clockwise.   |
|  <p>Diagram showing the camber adjusting bolt on the left side (LH) rotated counterclockwise, indicated by a curved arrow.</p> |  <p>Diagram showing the camber adjusting bolt on the right side (RH) rotated clockwise, indicated by a curved arrow.</p> |
| FS-00019   | FS-00018   |

3) Tighten a new self-locking nut.

**Tightening torque:**

**100 N·m (10.2 kgf·m, 74 ft·lb)**

## 7. THRUST ANGLE

### • Inspection

- 1) Position the vehicle on a level surface.
- 2) Move the vehicle 3 to 4 m (10 to 13 ft) directly forward.
- 3) Determine the center lines of loci of both front and rear axles.
- 4) Measure the distance "L" between center lines of loci of the axles.

### Thrust angle:

$0^{\circ} \pm 30'$  (tolerance)

Less than 30' when "L" is less than 22 mm (0.9 in).

- (1) Center line of loci (front axle)  
 (2) Center line of loci (rear axle)

### • Adjustment

- 1) Make the thrust angle adjustments by turning toe-in adjusting bolts of rear suspension equally in the same direction.
- 2) When one rear wheel is adjusted in a toe-in direction, adjust the other rear wheel equally in toe-out direction, in order to make thrust angle adjustment.
- 3) When the right and left adjusting bolts are turned incrementally by one graduation in the same direction, the thrust angle will change approx. 16' ["L" is almost equal to 12 mm (0.472 in)].

### Thrust angle:

$0^{\circ} \pm 20'$  (adjustment standard)

Less than 20' when "L" is less than 13 mm (0.51 in).

- (1) Front  
 (2) Thrust angle  
 (3) Body center line

### NOTE:

Thrust angle refers to a mean value of right and left rear wheel toe angles in relation to the vehicle body center line. Vehicle is driven straight in the thrust angle direction while swinging in the oblique direction depending on the degree of the mean thrust angle.

**Thrust angle:  $r = (\alpha - \beta)/2$**

$\alpha$ : Right rear wheel toe-in angle

$\beta$ : Left rear wheel toe-in angle

Here, use only positive toe-in values from each wheel to substitute for  $\alpha$  and  $\beta$  in the equation.

- (1) Front  
 (2) Body center line

# Front Transverse Link

## FRONT SUSPENSION

### 3. Front Transverse Link

#### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Lift-up the vehicle and remove the wheel.
- 3) Remove the sub frame.
- 4) Disconnect the stabilizer link from transverse link.
- 5) Remove the bolt securing ball joint of transverse link to housing.

- Sedan turbo model and STI model

- Except Sedan turbo model and STI model

- 6) Remove the nut (do not remove bolt) securing transverse link to crossmember.
- 7) Remove the two bolts securing bushing bracket of transverse link to the vehicle body at rear bushing location.

- 8) Extract the ball joint from housing.

- 9) Remove the bolt securing transverse link to crossmember, and then extract the transverse link from crossmember.

#### B: INSTALLATION

- 1) Temporarily tighten the two bolts used to secure rear bushing of transverse link to body.

#### NOTE:

These bolts should be tightened to such an extent that they can still move back and forth in the oblong shaped hole in the bracket (which holds the bushing).

- 2) Install the bolts used to connect transverse link to crossmember and temporarily tighten with a new self-locking nut.
- 3) Insert the ball joint into housing.
- 4) Connect the stabilizer link to transverse link, and then temporarily tighten a new self-locking nut.

- Sedan turbo model and STI model

- Except Sedan turbo model and STI model

- 5) Tighten the following points in the order shown below when tires are in full contact with the ground and vehicle is curb weight.

- (1) Transverse link to stabilizer link, and stabilizer to stabilizer link (Sedan turbo model and STI model)

**Tightening torque:**

**45 N-m (4.6 kgf-m, 33 ft-lb)**

- (2) Transverse link to stabilizer link, and stabilizer to stabilizer link (Except Sedan turbo model and STI model)

**Tightening torque:**

**Transverse link to stabilizer link:**

**30 N-m (3.1 kgf-m, 22 ft-lb)**

**Stabilizer to stabilizer link:**

**45 N-m (4.6 kgf-m, 33 ft-lb)**

- (3) Transverse link and crossmember

**Tightening torque:**

**95 N-m (9.7 kgf-m, 70.1 ft-lb)**

- (4) Transverse link rear bushing and body

**Tightening torque:**

**250 N-m (25.5 kgf-m, 184 ft-lb)**

**NOTE:**

Move the rear bushing back and forth until transverse link-to-rear bushing clearance is established (as indicated in the figure) before tightening.

- (1) Rear bushing
- (2) 1 mm (0.04 in)
- (3) 1.5 mm (0.059 in)

- 6) Check the wheel alignment and adjust if necessary.

## C: DISASSEMBLY

### 1. FRONT BUSHING

Using the ST, press the front bushing out of place.  
ST 927680000 INSTALLER & REMOVER SET

### 2. REAR BUSHING

- 1) Scribe an aligning mark on the transverse link and rear bushing.
- 2) Loosen the nut, and then remove the rear bushing.

## D: ASSEMBLY

### 1. FRONT BUSHING

Assemble in the reverse order of disassembly.

**CAUTION:**

**Install the front bushing in correct direction, as shown in the figure.**

- (1) Face bushing toward center of ball joint
- (2) Ball joint
- (3) ±3°

# Front Transverse Link

## FRONT SUSPENSION

---

### 2. REAR BUSHING

- 1) Install the rear bushing to transverse link, and then align the aligning marks scribed on the two.
- 2) Tighten the new self-locking nut.

#### NOTE:

While holding the rear bushing so as not to change position of aligning marks, tighten the self-locking nut.

#### *Tightening torque:*

*190 N·m (19.4 kgf-m, 140 ft-lb)*

### E: INSPECTION

- 1) Check the transverse link for wear, damage and cracks, and correct or replace if defective.
- 2) Check the bushings for large cracks, fatigue or damage.
- 3) Check the rear bushing for oil leaks.

## 4. Front Ball Joint

### A: REMOVAL

- 1) Remove the wheel.
- 2) Pull out the cotter pin from ball stud, remove the castle nut, and extract the ball stud from transverse link.
- 3) Remove the bolt securing ball joint to housing.

- 4) Extract the ball joint from housing.

### B: INSTALLATION

- 1) Install the ball joint onto housing.

**Tightening torque (Bolt):**  
**50 N·m (5.1 kgf·m, 37 ft·lb)**

#### CAUTION:

**Do not apply grease to tapered portion of ball stud.**

- 2) Connect the ball joint to transverse link.

**Tightening torque (Castle nut):**  
**Sedan turbo model and STI model:**  
**30 N·m (3.1 kgf·m, 22 ft·lb)**  
**Except Sedan turbo model and STI model:**  
**40 N·m (4.1 kgf·m, 30 ft·lb)**

- 3) Retighten the castle nut further within 60° until a slot in castle nut is aligned with the hole in ball stud end, then insert a new cotter pin and bend it around castle nut.
- 4) Install the front wheel.

### C: INSPECTION

- 1) Measure the play of ball joint by the following procedures. Replace with a new one when the play exceeds specified value.

- (1) With 686 N (70 kgf, 154 lbf) loaded in direction shown in the figure, measure the dimension  $l_1$ .

- (2) With 686 N (70 kgf, 154 lbf) loaded in opposite direction shown in the figure, measure the dimension  $l_2$ .

- (3) Calculate plays from the following formula.  
 $S = l_2 - l_1$

- (4) When plays are larger than the following value, replace with a new one.

#### FRONT BALL JOINT:

**Specified play for replacement S:**  
**Less than 0.3 mm (0.012 in)**

- 2) When the play is smaller than specified value, visually inspect the dust cover.
- 3) The ball joint and cover that have been removed must be checked for wear, damage or cracks, and any defective part must be replaced.
- 4) If the dust cover is damaged, replace with a new ball joint.

## 5. Front Strut

### A: REMOVAL

- 1) Remove the wheel.
- 2) Remove the bolt securing the brake hose from strut.

- 3) Scribe an alignment mark on the camber adjusting bolt which secures the strut to housing.
- 4) Remove the bolt securing ABS wheel speed sensor harness.

- 5) Remove the two bolts securing housing to strut.

**NOTE:**

While holding the head of adjusting bolt, loosen self-locking nut.

- 6) Remove the three nuts securing the strut mount to body.

### B: INSTALLATION

- 1) Install the strut mount at upper side of strut to body, and then tighten with the nuts.

**Tightening torque:**

**20 N·m (2.0 kgf-m, 14.5 ft-lb)**

- 2) Position the aligning mark on camber adjustment bolt with aligning mark on lower side of strut. Install the strut to housing with a new self-locking nut.

**NOTE:**

While holding the head of adjusting bolt, tighten the self-locking nut.

**Tightening torque:**

**175 N·m (17.8 kgf-m, 129 ft-lb)**

- 3) Install the ABS wheel speed sensor harness to strut.

**Tightening torque:**

**33 N·m (3.3 kgf-m, 24 ft-lb)**

- 4) Install the bolts which secure the brake hose to strut.

**Tightening torque:**

**33 N·m (3.4 kgf-m, 24.3 ft-lb)**

- 5) Install the wheels.

**NOTE:**

Check the wheel alignment and adjust if necessary.

## C: DISASSEMBLY

- 1) Using a coil spring compressor, compress the coil spring.

- 2) Using the ST, remove the self-locking nut.  
ST 927760000 STRUT MOUNT SOCKET

- 3) Remove the strut mount, upper spring seat and rubber seat from strut.
- 4) Gradually decreasing the compression force of compressor, and then remove the coil spring.
- 5) Remove the dust cover and helper spring.

## D: ASSEMBLY

- 1) Before installing the coil spring, strut mount, etc., on strut, check for the presence of air in the damping force generating mechanism of strut since air prevents proper damping force from being produced.
  - 2) Checking for the presence of air
    - (1) Place the strut vertically with piston rod facing up.
    - (2) Move the piston rod to center of its entire stroke.
    - (3) While holding the piston rod end with fingertips, move the rod up and down.
    - (4) If the piston rod moves at least 10 mm (0.39 in) in the former step, purge air from the strut.
  - 3) Air purging procedure
    - (1) Place the strut vertically with piston rod facing up.
    - (2) Fully extend the piston rod.
    - (3) With the piston rod fully extended, place the piston rod side down. The strut must stand vertically.
    - (4) Fully contract the piston rod.

- (5) Repeat three or four times from first step.

### NOTE:

After completely purging air from strut, be sure to place the strut with piston rod facing up. If it is laid down, check for entry of air in the strut as outlined under "Checking for the presence of air".

- 4) Using a coil spring compressor, compress the coil spring.

### NOTE:

Make sure that the installing direction of coil spring is as shown in the figure.

- (1) Flat (top side)
- (2) Identification paint
- (3) Inclined (bottom side)

- 5) Set the coil spring correctly so that its end face fits well into the spring seat as shown in the figure.

- (1) Coil spring end face

- 6) Install the helper and dust cover to the piston rod.
- 7) Pull the piston rod fully upward, and install the rubber seat and spring seat.

# Front Strut

## FRONT SUSPENSION

### NOTE:

Ensure that the upper spring seat is positioned as shown in the figure.

(1) Outside of body

8) Install the strut mount to the piston rod, and then tighten a new self-locking nut temporarily.

9) Using a hexagon wrench to prevent strut rod from turning, tighten the self-locking nut with ST.  
ST 927760000 STRUT MOUNT SOCKET

### Tightening torque:

**55 N·m (5.6 kgf·m, 41 ft·lb)**

10) Loosen the coil spring carefully.

## E: INSPECTION

Check the disassembled parts for cracks, damage and wear, and replace with new parts if defective.

### 1. DAMPER STRUT

- 1) Check for oil leakage.
- 2) Move the piston rod up and down to check that it operates smoothly without any binding.

3) Play of piston rod

- Measure the play as follows:

Fix outer shell and fully extend the rod. Set a dial gauge at the end of rod: L [10 mm (0.39 in)], then apply a force of W [20 N (2 kgf, 4 lbf)] to threaded portion. With the force of 20 N (2 kgf, 4 lbf) applied, read dial gauge indication:  $P_1$ . Apply a force of 20 N (2 kgf, 4 lbf) in the opposite direction of "W", then read dial gauge indication:  $P_2$ .

**Limit of play ( $P_1 + P_2$ ):**  
**0.8 mm (0.031 in)**

If the play is greater than limit, replace the strut.

### 2. STRUT MOUNT

Check the rubber part for large cracks, deformation and deterioration, and replace it with a new one if defective.

### 3. DUST COVER

If any large cracks or damage are found, replace it with a new one.

### 4. COIL SPRING

One having permanent strain should be replaced with a new one. When the vehicle posture is uneven, although there are no considerable reasons like tire puncture, uneven loading, etc., check the coil spring for its free length referring to specifications, cracks, etc., and replace it with a new one if defective.

### 5. HELPER

Replace it with a new one if cracked excessively or damaged.

## F: DISPOSAL

### 1. EXCEPT STI MODEL

**CAUTION:**

- Before handling gas filled struts, be sure to wear goggles to protect eyes from gas, oil and filings.
- Do not disassemble the strut damper or place into a fire.
- Drill holes before disposing of gas filled struts.

1) Place the gas filled strut on a flat and level surface with piston rod fully extended.

2) Using a 2 to 3 mm (0.08 to 0.12 in) dia. drill, make holes in areas shown in the figure.

(1) 40 mm (1.57 in)

2) Using a 2 to 3 mm (0.08 to 0.12 in) dia. drill, make holes in (1), and then make a hole in (2).

- (1) 20 mm (0.78 in)
- (2) 10 mm (0.39 in)
- (3) Strut
- (4) Damping tube

### 2. STI MODEL

**CAUTION:**

- Before handling gas filled struts, be sure to wear goggles to protect eyes from gas, oil and filings.
- Do not disassemble the strut damper or place into a fire.
- Drill holes before disposing of gas filled struts.

1) Place the gas filled strut on a flat and level surface with damping tube fully extended.

# Front Stabilizer

## FRONT SUSPENSION

### 6. Front Stabilizer

#### A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove the jack-up plate from lower part of crossmember.
- 3) Remove the sub frame.
- 4) Remove the nut which secures stabilizer link to front transverse link.

- Sedan turbo model and STI model

- Except Sedan turbo model and STI model

- 5) Remove the bolts which secure stabilizer to crossmember.

#### B: INSTALLATION

- 1) Install in the reverse order of removal.

#### NOTE:

- Install the bushing (on front crossmember side) while aligning it with paint mark on stabilizer.

- Ensure that bushing and stabilizer have the same identification colors when installing.

- (1) Mark stamped on stabilizer
- (2) Bushing identification color

- 2) Always tighten the bushing location when tires are in full contact with the ground and vehicle is curb weight.

#### Tightening torque:

##### Jack-up plate to crossmember:

70 N·m (7.1 kgf-m, 52 ft-lb)

##### Stabilizer link to front transverse link (Sedan turbo model and STI model):

45 N·m (4.6 kgf-m, 33 ft-lb)

##### Stabilizer link to front transverse link (Except Sedan turbo model and STI model):

30 N·m (3.1 kgf-m, 22 ft-lb)

##### Stabilizer to crossmember:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

#### C: INSPECTION

- 1) Check the bushing for large cracks, fatigue or damage.
- 2) Check the stabilizer link for deformities, cracks, or damage, and bushing for protrusions from the hole of stabilizer link.

## 7. Front Crossmember

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Lift-up the vehicle, and then remove the front wheels.
- 3) Remove the sub frame.
- 4) Remove both the stabilizer and jack-up plate.

- (1) Front stabilizer
- (2) Front crossmember

- 5) Disconnect the tie-rod end from housing.
- 6) Remove the front exhaust pipe. <Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.> <Ref. to EX(H4DOTC)-8, REMOVAL, Front Exhaust Pipe.>
- 7) Remove the front transverse link from front crossmember and body.

- 8) Remove the nuts attaching engine mount cushion rubber to crossmember.
- 9) Remove the steering universal joint.
- 10) Disconnect the power steering pipe from steering gear box.
- 11) Lift the engine by approx. 10 mm (0.39 in) by using chain block.
- 12) Support the crossmember with a jack, remove nuts securing crossmember to body and lower the crossmember gradually along with steering gear-box.

### CAUTION:

**When removing the crossmember downward, be careful that tie-rod end does not interfere with SFJ boot.**

### B: INSTALLATION

- 1) Install in the reverse order of removal.

#### NOTE:

Always tighten the bushing when tires are in full contact with the ground and vehicle is curb weight.

#### Tightening torque:

**Transverse link bushing to crossmember:**

**95 N·m (9.7 kgf-m, 70.1 ft-lb)**

**Stabilizer to bushing:**

**25 N·m (2.5 kgf-m, 18.1 ft-lb)**

**Tie-rod end to housing:**

**27.0 N·m (2.75 kgf-m, 19.9 ft-lb)**

**Front cushion rubber to crossmember:**

**85 N·m (8.7 kgf-m, 62.7 ft-lb)**

**Universal joint to pinion shaft:**

**24 N·m (2.4 kgf-m, 17.4 ft-lb)**

**Crossmember to body:**

**95 N·m (9.7 kgf-m, 70.1 ft-lb)**

- 2) Purge air from the power steering system.
- 3) Check the wheel alignment and adjust if necessary.

### C: INSPECTION

Check the crossmember for wear, damage and cracks, and correct or replace if defective.

# Sub Frame

## FRONT SUSPENSION

### 8. Sub Frame

#### A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove the under cover. <Ref. to EI-23, REMOVAL, Front Under Cover.>
- 3) Remove the bolt cover.

- 4) Remove the clip.

- 5) Remove the sub frame.

#### NOTE:

Loosen bolt (1) and leave a few threads caught, then remove the bolts in the order of (2), (3), (4), (5), and (6).

#### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Replace the M12 bolt with a new one.

#### Tightening torque:

**T1: 34 N·m (3.5 kgf-m, 25 ft-lb)**

**T2: 55 N·m (5.6 kgf-m, 41 ft-lb)**

**T3: 70 N·m (7.1 kgf-m, 52 ft-lb)**

- (1) M8 bolt
- (2) M12 bolt (with wax)
- (3) M10 bolt
- (4) M10 bolt
- (5) M12 bolt (with wax)

#### C: INSPECTION

- 1) Check that there is no damage and distortion at the sub frame.
- 2) Check that the bolts are tightened with the specified torque. If there is looseness, tighten to the specified torque.

#### Tightening torque:

**T1: 34 N·m (3.5 kgf-m, 25 ft-lb)**

**T2: 55 N·m (5.6 kgf-m, 41 ft-lb)**

**T3: 70 N·m (7.1 kgf-m, 52 ft-lb)**

- (1) M8 bolt
- (2) M12 bolt
- (3) M10 bolt
- (4) M10 bolt
- (5) M12 bolt

## 9. Jack-up Plate

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Lift-up the vehicle.
- 3) Remove the under cover. <Ref. to EI-23, REMOVAL, Front Under Cover.>
- 4) Remove the jack-up plate.
  - Non-turbo model

- Turbo model and STI model

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Jack-up plate to crossmember:**

**70 N·m (7.1 kgf-m, 52 ft-lb)**

#### **Turbo model and STI model**

#### **Tightening torque:**

**Both end of jack-up plate to crossmember:**

**30 N·m (3.1 kgf-m, 22 ft-lb)**

### C: INSPECTION

Check the jack-up plate for wear, damage and cracks, and correct or replace if defective.

# General Diagnostic Table

## FRONT SUSPENSION

### 10. General Diagnostic Table

#### A: INSPECTION

##### 1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

| Possible causes  | Countermeasures            |
|--|----------------------------|
| (1) Permanent distortion or breakage of coil spring          | Replace.                   |
| (2) Unsmooth operation of damper strut and/or shock absorber | Replace.                   |
| (3) Installation of wrong strut and/or shock absorber        | Replace with proper parts. |
| (4) Installation of wrong coil spring                        | Replace with proper parts. |

##### 2. POOR RIDE COMFORT

- 1) Large rebound shock
- 2) Rocking of the vehicle continues too long after running over bump and/or hump.
- 3) Large shock in bumping

| Possible causes  | Countermeasures                                   |
|--|---|
| (1) Breakage of coil spring  | Replace.  |
| (2) Overinflating pressure of tire   | Adjust.   |
| (3) Improper wheel arch height   | Adjust or replace the coil springs with new ones. |
| (4) Fault in operation of damper strut and/or shock absorber                             | Replace.  |
| (5) Large crack or deformation of strut mount and/or shock absorber mount                | Replace.  |
| (6) Unsuitability of maximum and/or minimum length of damper strut and/or shock absorber | Replace with proper parts.                        |
| (7) Large deformation or loss of bushing   | Replace.  |
| (8) Deformation or damage of helper in strut assembly and/or shock absorber              | Replace.  |
| (9) Oil leakage of damper strut and/or shock absorber                                    | Replace.  |

##### 3. NOISE

| Possible causes  | Countermeasures                    |
|--|------------------------------------|
| (1) Wear or damage of damper strut and/or shock absorber component parts                 | Replace.                           |
| (2) Loosening of suspension link installing bolt   | Retighten to the specified torque. |
| (3) Large deformation or loss of bushing   | Replace.                           |
| (4) Unsuitability of maximum and/or minimum length of damper strut and/or shock absorber | Replace with proper parts.         |
| (5) Breakage of coil spring  | Replace.                           |
| (6) Wear or damage of ball joint   | Replace.                           |
| (7) Deformation of stabilizer clamp  | Replace.                           |

#### NOTE:

- Front and rear toe-in and front camber can be adjusted. If toe-in or camber exceeds tolerance, adjust toe-in and camber to the adjustment standard.
- The other items indicated in the specification table cannot be adjusted. If the other items exceed specifications, check suspension parts and connections for deformities; replace with new ones as required.

(1) Front

A – B = Positive: Toe-in, Negative: Toe-out

$\alpha$  = Each toe angle

---

### C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Before disposing shock absorbers, be sure to bleed gas completely. Also, do not throw away in fire.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.

## 2. GENERAL TOOL

| TOOL NAME               | REMARKS                                   |
|-------------------------|---|
| Alignment gauge         | Used for wheel alignment measurement.     |
| Alignment gauge adapter | Used for wheel alignment measurement.     |
| Turning radius gauge    | Used for wheel alignment measurement.     |
| Toe-in gauge            | Used for toe-in measurement.              |
| Transmission jack       | Used for suspension assembly/disassembly. |
| Bearing puller          | Used for removing bushings.               |
| Coil spring compressor  | Used for strut assembly/disassembly.      |

## 2. Wheel Alignment

### A: INSPECTION

**NOTE:**

Front and rear wheel alignment must be measured and/or adjusted at a time. Follow the procedure in "FS" section "Wheel Alignment" for measurement and/or adjustment of wheel alignment. <Ref. to FS-6, INSPECTION, Wheel Alignment.>

# Rear Stabilizer

## REAR SUSPENSION

### 3. Rear Stabilizer

#### A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove the stabilizer link.
  - Except STI model

- STI model

- 3) Remove the bolt and nut which secure the stabilizer to stabilizer bracket.

#### B: INSTALLATION

- 1) Install in the reverse order of removal.

#### NOTE:

- Install the stabilizer bushing while aligning it with paint mark on stabilizer.

- Ensure the stabilizer bushing and stabilizer have the same identification colors when installing.

- (1) Mark painted on stabilizer
- (2) Bushing identification color

- 2) Always tighten the stabilizer bushing location when tires are in full contact with the ground and the vehicle is curb weight.

#### Tightening torque:

**Stabilizer link to rear lateral link**

**45 N·m (4.6 kgf-m, 33.2 ft-lb)**

**Stabilizer to stabilizer bracket**

**25 N·m (2.5 kgf-m, 18.1 ft-lb)**

#### C: INSPECTION

- 1) Check the bushing for large cracks, fatigue or damage.
- 2) Check the stabilizer links for deformities, cracks, or damage, and bushing for protrusions from the hole of stabilizer link.

## 4. Rear Trailing Link

### A: REMOVAL

- 1) Loosen the rear wheel nuts.
- 2) Lift-up the vehicle, and then remove the rear wheels.
- 3) Remove both the rear parking brake clamp and ABS wheel speed sensor harness.
- 4) Remove the bolt which secures the trailing link to trailing link bracket.

(1) Trailing link

- 5) Remove the bolt which secures the trailing link to rear housing.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Always tighten the bushing location when tires are in full contact with the ground and the vehicle is at curb weight condition.

#### NOTE:

Check the wheel alignment and adjust if necessary.

## C: DISASSEMBLY

### 1. FRONT BUSHING

Using the ST, press the front bushing out of place.  
 ST 927720000 INSTALLER & REMOVER SET

- (1) Press
- (2) Trailing link

### 2. REAR BUSHING

- 1) Remove the housing. <Ref. to DS-27, REMOVAL, Rear Axle.>
- 2) Using the ST, press the rear bushing out of place.

# Rear Trailing Link

REAR SUSPENSION

ST 927730000 INSTALLER & REMOVER SET

- (1) Press
- (2) Housing

## D: ASSEMBLY

### 1. FRONT BUSHING

Using the ST, press the bushing into trailing link.

ST 927720000 INSTALLER & REMOVER SET

**CAUTION:**  
Turn the ST plunger upside down and press it until the plunger end surface contacts the trailing link end surface.

- (1) Press
- (2) Front bushing
- (3) Trailing link

**CAUTION:**  
Install the front bushing in the proper direction, as shown in the figure.

- (1) Front
- (2)  $\pm 5^\circ$

## 2. REAR BUSHING

1) Using the ST, press the bushing into trailing link.

ST 927730000 INSTALLER & REMOVER SET

**NOTE:**

If it is difficult to press the bushing into trailing link, apply water-diluted TIRE LUBE to the inner surface of ST as a lubricant.

**Specified lubricant:**

**TIRE LUBE: water = 1: 3**

ST 927730000 INSTALLER & REMOVER SET

(1) Press

2) Press the ST plunger until the bushing flange protrudes beyond trailing link.

(1) Plunger  
(2) Flange

3) Turn the trailing link upside down. Press the ST plunger in the opposite direction that outlines in the former procedure until bushing is correctly positioned in trailing link.

# Rear Trailing Link

REAR SUSPENSION

ST 927730000 INSTALLER & REMOVER SET

- (1) Press
- (2) Plunger

4) Install the housing. <Ref. to DS-28, INSTALLATION, Rear Axle.>

## **E: INSPECTION**

Check the trailing links for bends, corrosion or damage.

## 5. Rear Strut

### A: REMOVAL

- 1) Remove the rear seat cushion and backrest. (Sedan model)
- 2) Remove the strut cap of quarter trim. (Wagon model)
- 3) Loosen the rear wheel nuts.
- 4) Lift-up the vehicle, and remove rear wheels.
- 5) Remove the brake hose clip, and then remove the brake hose from rear strut.

- (1) Brake hose clip
- (2) Brake hose

- 6) Remove the bolts which secure the rear strut to housing.

- 7) Remove the nuts securing strut mount to body.

### B: INSTALLATION

- 1) Secure the strut mount to vehicle body using a new self-locking nut.

#### **Tightening torque:**

**20 N·m (2.0 kgf-m, 14.5 ft-lb)**

- 2) Secure the rear strut to housing using a new self-locking nut.

#### **Tightening torque:**

**200 N·m (20.0 kgf-m, 145 ft-lb)**

- 3) Install the brake hose to lower side of strut, then insert the brake hose clip.

#### **CAUTION:**

- Check the hose clip is positioned properly.
- Check the brake hose for twisting, or excessive tension.

- Do not subject the ABS wheel speed sensor harness to excessive tension.

- 4) Lower the vehicle and tighten wheel nut.

#### **Tightening torque:**

**90 N·m (9.2 kgf-m, 66 ft-lb)**

- 5) Install the rear seat backrest and rear seat cushion. (Sedan model)

- 6) Install the strut cap to rear quarter trim. (Wagon model)

#### **NOTE:**

Check the wheel alignment and adjust if necessary.

### C: DISASSEMBLY

For disassembly of rear strut, refer to procedures outlined under front strut as a guide. <Ref. to FS-19, DISASSEMBLY, Front Strut.>

### D: ASSEMBLY

Refer to Front Strut as a guide for assembly procedures. <Ref. to FS-19, ASSEMBLY, Front Strut.>

### E: INSPECTION

Refer to Front Strut as a guide for inspection procedures. <Ref. to FS-20, INSPECTION, Front Strut.>

### F: DISPOSAL

Refer to Front Strut as a guide for disposal procedures. <Ref. to FS-21, DISPOSAL, Front Strut.>

# Lateral link

## REAR SUSPENSION

### 6. Lateral link

#### A: REMOVAL

- 1) Loosen the wheel nuts. Lift-up the vehicle and remove wheel.
- 2) Remove the stabilizers.
- 3) Remove the ABS wheel speed sensor harness from trailing link.
- 4) Remove the bolt securing trailing link to rear housing.

- (1) Rear housing
- (2) Trailing link

- 5) Remove the bolts which secure the lateral link assembly to rear housing.
- 6) Remove the DOJ from rear differential using ST. ST 28099PA100 DRIVE SHAFT REMOVER

#### NOTE:

The side spline shaft snap ring comes out together with the shaft.

- (1) Bolt
- (2) DOJ

#### CAUTION:

Be careful not to damage the side bearing retainer. Always use bolt shown in the figure, as supporting point for ST during removal.

- 7) Scribe an alignment mark on the rear lateral link adjusting bolt and crossmember.
- 8) Remove the bolts securing front and rear lateral links to crossmember, detach lateral links.

#### CAUTION:

To loosen the adjusting bolt, always loosen the nut while holding head of adjusting bolt.

#### B: INSTALLATION

Install in the reverse order of removal. Observe the following instructions.

- Installation of DOJ to differential: <Ref. to DS-42, INSTALLATION, Rear Drive Shaft.>

#### CAUTION:

- Replace the self-locking nut and DOJ snap ring with new ones.
- Always use the special tool not to allow the DOJ splines to damage the side oil seal. ST 28099PA090 OIL SEAL PROTECTOR
- Always tighten the bushing location when tires are in full contact with the ground and vehicle is curb weight.
- Secure the bolt head and tighten the nut when installing the adjusting bolt.

#### NOTE:

Check the wheel alignment and adjust if necessary.

#### C: DISASSEMBLY

- 1) Using the following table as a guide, verify the type of bushings.
- 2) Select the ST according to type of bushings used.

| Bushing   | ST: INSTALLER & REMOVER SET |
|-----------|-----------------------------|
| Bushing A | 927700000                   |
| Bushing B | 927690000                   |
| Bushing C | 927700000                   |

- (1) Bushing A
- (2) Bushing B
- (3) Bushing C
- (4) Front
- (5) Outside of body

3) Using the ST, press the bushing out of place.

- (1) Press
- (2) Lateral link

3) Using the ST, press the bushing into place.

- (1) Press
- (2) Bushing
- (3) Lateral link

## D: ASSEMBLY

- 1) Use the same ST that was used during disassembly.
- 2) If it is difficult to press the bushing into trailing link, apply water-diluted TIRE LUBE to the inner surface of ST as a lubricant.

### **Specified lubricant:**

**TIRE LUBE: water = 1: 3**

# Lateral link

## REAR SUSPENSION

4) Press the ST plunger until bushing flange protrudes beyond lateral link.

- (1) Press
- (2) Plunger
- (3) Lateral link
- (4) Flange

5) Turn the lateral link upside down. Press the ST plunger in opposite direction that outlined in the former procedure until bushing is correctly positioned in trailing link.

- (1) Press
- (2) Plunger
- (3) Lateral link

### E: INSPECTION

Visually check the lateral links for damage or bends.

## 7. Rear Crossmember

### A: REMOVAL

#### CAUTION:

**Do not subject the ABS wheel speed sensor harness to excessive tension.**

- 1) Separate the front exhaust pipe and rear exhaust pipe.
- 2) Remove the rear exhaust pipe and muffler.
  - Non-turbo model  
<Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>
  - Turbo model  
<Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>
- 3) Remove the rear differential. <Ref. to DI-21, REMOVAL, Rear Differential.>
- 4) Place the transmission jack under rear crossmember.

- 5) Remove the bolts securing crossmember to vehicle body, and then remove the crossmember.

- 6) Scribe an alignment mark on the rear lateral link cam bolt and crossmember.
- 7) Remove the front and rear lateral links by loosening nuts.

### B: INSTALLATION

#### NOTE:

- Discard the loosened self-locking nut and replace it with a new one.
- Always secure the bolt head and tighten the nut when tightening the adjusting bolt.

- 1) Install in the reverse order of removal.
- 2) Install the rear differential.  
<Ref. to DI-23, INSTALLATION, Rear Differential.>
- 3) Always tighten the rubber bushing when tires are in full contact with the ground and vehicle is curb weight.
- 4) Check the wheel alignment and adjust if necessary.

### C: INSPECTION

Check the removed parts for wear, damage and cracks, and correct or replace if defective.

# General Diagnostic Table

REAR SUSPENSION

## 8. General Diagnostic Table

### A: INSPECTION

#### 1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

| Possible causes   | Countermeasures            |
|---|----------------------------|
| (1) Permanent distortion or breakage of coil spring       | Replace.                   |
| (2) Irregular operation of damper strut or shock absorber | Replace.                   |
| (3) Installation of wrong strut or shock absorber         | Replace with proper parts. |
| (4) Installation of wrong coil spring                     | Replace with proper parts. |

#### 2. POOR RIDE COMFORT

- 1) Large rebound shock
- 2) Rocking of the vehicle continues too long after running over bump and/or hump
- 3) Large shock in bumping

| Possible causes  | Countermeasures                                   |
|--|---|
| (1) Breakage of coil spring  | Replace.  |
| (2) Overinflating pressure of tire   | Adjust.   |
| (3) Improper wheel arch height   | Adjust or replace the coil springs with new ones. |
| (4) Fault in operation of damper strut or shock absorber                         | Replace.  |
| (5) Large crack or deformation of strut mount or shock absorber mount            | Replace.  |
| (6) Unsuitability of maximum or minimum length of damper strut or shock absorber | Replace with proper parts.                        |
| (7) Large deformation or loss of bushing   | Replace.  |
| (8) Deformation or damage of helper in strut assembly or shock absorber          | Replace.  |
| (9) Oil leakage of damper strut or shock absorber                                | Replace.  |

#### 3. NOISE

| Possible causes  | Countermeasures                    |
|--|------------------------------------|
| (1) Wear or damage of damper strut or shock absorber component parts             | Replace.                           |
| (2) Loosening of suspension link installing bolt                                 | Retighten to the specified torque. |
| (3) Large deformation or loss of bushing   | Replace.                           |
| (4) Unsuitability of maximum or minimum length of damper strut or shock absorber | Replace with proper parts.         |
| (5) Breakage of coil spring  | Replace.                           |
| (6) Wear or damage of ball joint   | Replace.                           |
| (7) Deformation of stabilizer clamp  | Replace.                           |

|               | STI                   | T135/70D17 102M | 17 × 4T           | 40 (1.57)         | 114.3 (4.50)   |               |  |

**NOTE:**

"T-type" tire for temporary use is supplied as a spare tire.

# General Description

WHEEL AND TIRE SYSTEM

## 2. SERVICE DATA

| Item           | Axial runout      | Radial runout |
|----------------|-------------------|---------------|
| Aluminum wheel | 1.0 mm (0.039 in) |               |

## 3. ADJUSTING PARTS

| Wheel balance     | Standard                | Service limit |
|-------------------|-------------------------|---------------|
| Dynamic unbalance | Less than 5 g (0.18 oz) |               |

| Balance weight part number<br>(Knock-on type weight for aluminum wheel) | Weight         |
|---|----------------|
| 28101SA000  | 5 g (0.18 oz)  |
| 28101SA010  | 10 g (0.35 oz) |
| 28101SA020  | 15 g (0.53 oz) |
| 28101SA030  | 20 g (0.71 oz) |
| 28101SA040  | 25 g (0.88 oz) |
| 28101SA100  | 30 g (1.06 oz) |
| 28101SA110  | 35 g (1.23 oz) |
| 28101SA120  | 40 g (1.41 oz) |
| 28101SA130  | 45 g (1.59 oz) |
| 28101SA140  | 50 g (1.76 oz) |
| —   | 55 g (1.94 oz) |
| 28101SA150  | 60 g (2.12 oz) |

| Balance weight part number<br>(Adhesive type weight for aluminum wheel) | Weight           |
|---|------------------|
| 28101AG001  | 5 g (0.18 oz)    |
| 28101AG011  | 7.5 g (0.26 oz)  |
| 28101AG021  | 10 g (0.35 oz)   |
| 28101AG031  | 12.5 g (0.44 oz) |
| 28101AG041  | 15 g (0.53 oz)   |
| 28101AG051  | 17.5 g (0.62 oz) |
| 28101AG061  | 20 g (0.71 oz)   |
| 28101AG071  | 22.5 g (0.79 oz) |
| 28101AG081  | 25 g (0.88 oz)   |
| 28101AG091  | 27.5 g (0.97 oz) |
| 28101AG101  | 30 g (1.06 oz)   |
| 28101AG111  | 32.5 g (1.15 oz) |
| 28101AG121  | 35 g (1.23 oz)   |
| 28101AG131  | 37.5 g (1.32 oz) |
| 28101AG141  | 40 g (1.41 oz)   |
| 28101AG151  | 42.5 g (1.50 oz) |
| 28101AG161  | 45 g (1.59 oz)   |
| 28101AG171  | 47.5 g (1.68 oz) |
| 28101AG181  | 50 g (1.76 oz)   |
| 28101AG191  | 52.5 g (1.85 oz) |
| 28101AG201  | 55 g (1.94 oz)   |
| 28101AG211  | 57.5 g (2.03 oz) |
| 28101AG221  | 60 g (2.12 oz)   |
| 28101AG231  | 62.5 g (2.20 oz) |
| 28101AG241  | 65 g (2.29 oz)   |

| Balance weight part number<br>(Adhesive type weight for aluminum wheel) | Weight           |
|---|------------------|
| 28101AG251  | 67.5 g (2.38 oz) |
| 28101AG261  | 70 g (2.47 oz)   |
| 28101AG271  | 72.5 g (2.56 oz) |
| 28101AG281  | 75 g (2.65 oz)   |
| 28101AG291  | 77.5 g (2.73 oz) |
| 28101AG301  | 80 g (2.82 oz)   |
| 28101AG311  | 82.5 g (2.91 oz) |
| 28101AG321  | 85 g (3.00 oz)   |
| 28101AG331  | 87.5 g (3.09 oz) |
| 28101AG341  | 90 g (3.17 oz)   |
| 28101AG351  | 92.5 g (3.26 oz) |
| 28101AG361  | 95 g (3.35 oz)   |
| 28101AG371  | 97.5 g (3.44 oz) |
| 28101AG381  | 100 g (3.53 oz)  |

## B: PREPARATION TOOL

### 1. GENERAL TOOL

| TOOL NAME          | REMARKS                               |
|--------------------|---------------------------------------|
| Air pressure gauge | Used for measuring tire air pressure. |
| Dial gauge         | Used for measuring wheel runout.      |
| Wheel balancer     | Used for adjusting wheel balance.     |

## 2. Tire

### A: INSPECTION

- 1) Take stone, glass, nail etc. off from tread groove.
- 2) Replace the tire if as follows.

#### CAUTION:

**When replacing a tire, make sure to use only the same size, construction and load range tire as originally installed.**

- (1) When a large crack on the side wall, damage or a crack on tread are found.
- (2) When the "tread wear indicator" appears as a solid band across the tread.

- (1) Tread wear indicator
- (2) Tire tread

- 3) When a crack on tire valve is found, replace the tire valve.

### 1. TIRE ROTATION

Rotate tires periodically (12,500 km/7,500 miles) as shown in the figure, in order to prevent them from uneven wear and to prolong their life.

## 3. Aluminum Wheel

### A: REMOVAL

- 1) Apply parking brake, and position the select lever or shift lever to "P" range (AT model) or "1st gear" (MT model).
- 2) Set jacks or a lift to the specified point, and support the vehicle with its tires slightly contacting the floor.
- 3) Loosen the wheel nuts.
- 4) Raise the vehicle until its tires take off the ground using a jack or a lift.
- 5) Remove the wheel nuts and wheels.

**NOTE:**

- While removing the wheels, prevent the hub bolts from damage.
- Place the wheels with their outer sides facing upward to prevent the wheels from damage.

### B: INSTALLATION

- 1) Remove dirt from the mating surface of wheel and brake rotor.
- 2) Attach the wheel to hub by aligning the wheel bolt hole with hub bolt.
- 3) Temporarily attach the wheel nuts to hub bolts, using SUBARU genuine wheel nut.
- 4) Manually tighten the nuts making sure the wheel hub hole is aligned correctly to guide portion of hub.
- 5) Tighten the wheel nuts in a diagonal selection to specified torque. Use a wheel nut wrench.

**Wheel nut tightening torque:**  
**90 N·m (9.1 kgf·m, 65.7 ft·lb)**

**CAUTION:**

- Tighten the wheel nuts in two or three steps by gradually increasing the torque and working diagonally, until the specified torque is reached.
- Do not depress the wrench with foot; Always use both hands when tightening.
- Make sure the bolt, nut and nut seating surface of the wheel are free from oils.

6) If a wheel is removed for replacement or for repair of a puncture, retighten the wheel nuts to the specified torque after running 1,000 km (600 miles).

### C: INSPECTION

- 1) Deformation or damage on the rim can cause air leakage. Check the rim flange for deformation, crack or damage, and repair or replace as necessary.
- 2) Jack-up the vehicle until tires clear the floor.

3) Slowly rotate the wheel to check the rim "runout" using a dial gauge.

| Axial runout limit | Radial runout limit |
|--------------------|---------------------|
| 1.0 mm (0.039 in)  |                     |

4) If the rim runout exceeds specifications, remove the tire from rim and check runout while attaching the dial gauge to positions shown in the figure.

(1) Approx. 7 mm (0.28 in)

5) If the measured runout still exceeds specifications, replace the wheel.

### D: CAUTION

Aluminum wheels are easily scratched. To maintain their appearance and safety, do the following:

- 1) Do not damage the aluminum wheels during removal, installation, wheel balancing, etc. After removing, place them on a rubber mat, etc.
- 2) While the vehicle is being driven, be careful not to ride over sharp obstacles or allow the wheels to contact the shoulder of road.
- 3) When installing a tire chain, be sure to install it properly not to have slack; otherwise it may hit the wheel while driving.
- 4) When washing the aluminum wheel, use neutral synthetic detergent and water. Avoid using the cleanser including abrasive, hard brushes or an automatic car washer.

# Wheel Balancing

## WHEEL AND TIRE SYSTEM

### 4. Wheel Balancing

#### A: REPLACEMENT

##### 1. STICK-ON TYPE BALANCE WEIGHT

- 1) Remove balance weights.
- 2) Using dynamic balancing, measure wheel balance.
- 3) Select a weight close to the value measured by dynamic balancing.

| Balance weight part number<br>(Knock-on type weight for aluminum wheel) | Weight         |
|---|----------------|
| 28101SA000  | 5 g (0.18 oz)  |
| 28101SA010  | 10 g (0.35 oz) |
| 28101SA020  | 15 g (0.53 oz) |
| 28101SA030  | 20 g (0.71 oz) |
| 28101SA040  | 25 g (0.88 oz) |
| 28101SA100  | 30 g (1.06 oz) |
| 28101SA110  | 35 g (1.23 oz) |
| 28101SA120  | 40 g (1.41 oz) |
| 28101SA130  | 45 g (1.59 oz) |
| 28101SA140  | 50 g (1.76 oz) |
| —   | 55 g (1.94 oz) |
| 28101SA150  | 60 g (2.12 oz) |

- 4) Install the selected weight to the point designated by dynamic balancing.
- 5) Using dynamic balancing, measure wheel balance again. Check that wheel balance is correctly adjusted.

##### 2. PASTE-ON TYPE BALANCE WEIGHT

- 1) Remove balance weights.
- 2) Remove traces of two-sided tape on wheel and clean adhesive layer.
- 3) Set balancing (dynamic balancing for stick-on balance weight is available) and measure wheel balance.

| Balance weight part number<br>(Adhesive type weight for aluminum wheel) | Weight           |
|---|------------------|
| 28101AG001  | 5 g (0.18 oz)    |
| 28101AG011  | 7.5 g (0.26 oz)  |
| 28101AG021  | 10 g (0.35 oz)   |
| 28101AG031  | 12.5 g (0.44 oz) |
| 28101AG041  | 15 g (0.53 oz)   |
| 28101AG051  | 17.5 g (0.62 oz) |
| 28101AG061  | 20 g (0.71 oz)   |
| 28101AG071  | 22.5 g (0.79 oz) |
| 28101AG081  | 25 g (0.88 oz)   |
| 28101AG091  | 27.5 g (0.97 oz) |
| 28101AG101  | 30 g (1.06 oz)   |
| 28101AG111  | 32.5 g (1.15 oz) |

| Balance weight part number<br>(Adhesive type weight for aluminum wheel) | Weight           |
|---|------------------|
| 28101AG121  | 35 g (1.23 oz)   |
| 28101AG131  | 37.5 g (1.32 oz) |
| 28101AG141  | 40 g (1.41 oz)   |
| 28101AG151  | 42.5 g (1.50 oz) |
| 28101AG161  | 45 g (1.59 oz)   |
| 28101AG171  | 47.5 g (1.68 oz) |
| 28101AG181  | 50 g (1.76 oz)   |
| 28101AG191  | 52.5 g (1.85 oz) |
| 28101AG201  | 55 g (1.94 oz)   |
| 28101AG211  | 57.5 g (2.03 oz) |
| 28101AG221  | 60 g (2.12 oz)   |
| 28101AG231  | 62.5 g (2.20 oz) |
| 28101AG241  | 65 g (2.29 oz)   |
| 28101AG251  | 67.5 g (2.38 oz) |
| 28101AG261  | 70 g (2.47 oz)   |
| 28101AG271  | 72.5 g (2.56 oz) |
| 28101AG281  | 75 g (2.65 oz)   |
| 28101AG291  | 77.5 g (2.73 oz) |
| 28101AG301  | 80 g (2.82 oz)   |
| 28101AG311  | 82.5 g (2.91 oz) |
| 28101AG321  | 85 g (3.00 oz)   |
| 28101AG331  | 87.5 g (3.09 oz) |
| 28101AG341  | 90 g (3.17 oz)   |
| 28101AG351  | 92.5 g (3.26 oz) |
| 28101AG361  | 95 g (3.35 oz)   |
| 28101AG371  | 97.5 g (3.44 oz) |
| 28101AG381  | 100 g (3.53 oz)  |

- 4) Select a weight close to the calculated value, clean the point designated by balancing and paste on the weight there.

#### CAUTION:

- Press on the weight for more than 2 seconds with a force of 25 N·m (2.6 kgf-m, 18 ft-lb) or more per 5 g (0.18 oz) to paste on.
- Adjust weight balance from outside first and then inside.
- The weight to be pasted on must be under 100 g (3.53 oz).

#### B: INSPECTION

- 1) Proper wheel balance may be lost if the tire is repaired or if it wears. Check the tire for dynamic balance, and repair as necessary.
- 2) To check for dynamic balance, use a dynamic balancer. Drive in the balance weight on both the top and rear sides of the rim.
- 3) Some types of balancer can cause damage to the wheel. Use an appropriate balancer when adjusting the wheel balance.

4) Use genuine balance weights.

WT-00111

**Service limit A:**  
**5.0 mm (0.20 in)**

### 5. “T-type” Tire

#### A: NOTE

“T-type” tire for temporary use is prepared as a spare tire.

#### CAUTION:

- Do not use a tire chain with the “T-type” tire. Because of the smaller tire size, a tire chain will not fit properly and will result in damage to the vehicle and the tire.
- Do not drive at a speed greater than 80 km/h (50 MPH).
- Drive as slowly as possible and avoid passing over bumps.

#### B: REPLACEMENT

Refer to Aluminum Wheel for removal and installation of “T-type” tires. <Ref. to WT-5, Aluminum Wheel.>

#### CAUTION:

Replace with a conventional tire as soon as possible since the “T-type” tire is only for temporary use.

#### C: INSPECTION

1) Check the tire inflation pressure.

##### *Specification:*

***420 kPa (4.2 kgf/cm<sup>2</sup>, 60 psi)***

2) Take stones, glass, nails, etc. out of the tread groove.

3) Check the tires for deformation, cracks, partial or over limit wear.

#### CAUTION:

Replace the tire with a new one.

## 6. General Diagnostic Table

### A: INSPECTION

| Symptom            | Possible cause                    | Remedy   |
|--------------------|-----------------------------------|--|
| Front wheel shimmy | Worn or improperly inflated tire. | In case of worn tire, replace the tire.<br>In case of improperly inflated tire, adjust the tire air pressure properly. |
|                    | Wheel is out of balance.          | Adjustment.  |
| Abnormal tire wear | Improperly inflated tire.         | Replace.   |
| Sways/pitches      | Worn or improperly inflated tire. | In case of worn tire, replace the tire.<br>In case of improperly inflated tire, adjust the tire air pressure properly. |
| Sways/shimmies     | Worn or improperly inflated tire. | In case of worn tire, replace the tire.<br>In case of improperly inflated tire, adjust the tire air pressure properly. |

## DIFFERENTIALS

### 1. General Description

#### A: SPECIFICATION

When replacing a rear differential assembly, select the correct one according to the following table.

**NOTE:**

Using the different rear differential assembly causes the drive line and tires to “drag” or emit noise when AWD is selected.

| Model                             | 2.5i, OUTBACK                 |               |              | WRX                   |               |

**Tightening torque: N·m (kgf·m, ft·lb)**

**T1: 33 (3.4, 24.3)**

**T2: 50 (5.1, 36.9)**

**T3: 70 (7.1, 51.6)**

**T4: 90 (9.2, 66.4)**

**T5: 100 (10.2, 73.8)**

### **C: CAUTION**

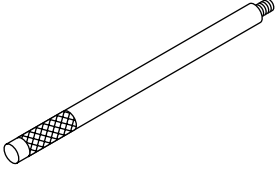

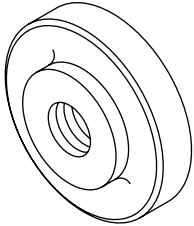

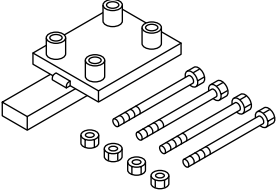

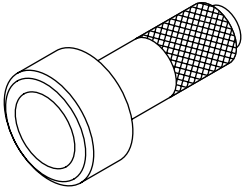

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn yourself, because each part on the vehicle is hot after running.
- Use SUBARU genuine gear oil, grease etc. or the equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Apply gear oil onto sliding or revolution surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of gear oil to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Avoid damaging the mating face of the case.

## 2. GENERAL TOOL

| TOOL NAME         | REMARKS   |
|-------------------|---|
| Transmission jack | Used for assembly/disassembly of rear differential. |
| Puller            | Used for removal of side bearing retainer.          |
| Thickness gauge   | Used for measuring clearance.                       |

## 2. Differential Gear Oil

### A: INSPECTION

1) Disconnect the oil temperature switch connector. (STI model)

(A) Connector

2) Remove the filler plug or rear differential oil temperature switch and then check the gear oil. If it is contaminated or deteriorated, replace the gear oil. <Ref. to DI-18, REPLACEMENT, Differential Gear Oil.>

3) Check the gear oil level is up to the bottom part of filler bolt. If the level is low, refill up to the bottom of filler bolt.

(A) Filler plug  
(B) Drain plug

### B: REPLACEMENT

1) Lift-up the vehicle.

2) Disconnect the oil temperature switch connector. (STI model)

(A) Connector

3) Remove the oil drain plug and filler plug, and drain the gear oil.

#### CAUTION:

**Be careful not to burn your hands, because gear oil becomes extremely hot after running.**

(A) Filler plug  
(B) Drain plug

4) Tighten the oil drain plug.

#### NOTE:

Apply liquid gasket to the drain plug.

#### Liquid gasket:

**THREE BOND 1105 (Part No. 004403010) or equivalent**

#### Tightening torque:

**49 N·m (5.0 kgf·m, 36.2 ft·lb)**

5) Fill the differential carrier with gear oil to the upper plug level.

#### NOTE:

- Carefully refill oil while watching the level. Excess or insufficient oil must be avoided.
- Use gear oil for the mechanical LSD for STI model.

**Recommended oil:**

**Except STI model:**

**GL-5 (75W-90) or equivalent**

**STI model:**

**GEAR OIL LSD (Part No. K0305Y0900), GL-5 (90) or equivalent**

**Oil capacity:**

**Except STI model:**

**0.8 ℓ (0.8 US qt, 0.7 Imp qt)**

**STI model:**

**1.0 ℓ (1.1 US qt, 0.9 Imp qt)**

- (A) Filler plug
- (B) Drain plug

6) Install the filler plug or rear differential oil temperature switch.

**NOTE:**

Apply liquid gasket to the filler plug or rear differential oil temperature switch.

**Liquid gasket:**

**THREE BOND 1105 (Part No. 004403010) or equivalent**

**Tightening torque:**

**49 N·m (5.0 kgf·m, 36.2 ft·lb)**

7) Connect the oil temperature switch connector. (STI model)

- (A) Connector

### 3. Front Differential Assembly

#### A: NOTE

##### 1. AT MODEL

For front differential of AUTOMATIC TRANSMISSION, refer to "AT" section. <Ref. to 4AT-101, Front Differential Assembly.>

##### 2. MT MODEL

For front differential of manual transmission, refer to "5MT" or "6MT" section. <Ref. to 5MT-68, Front Differential Assembly.> <Ref. to 6MT-105, Front Differential Assembly.>

## 4. Rear Differential

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Move the select lever or gear shift lever to "N".
- 4) Release the parking brake.
- 5) Loosen the wheel nut.
- 6) Jack-up the vehicle and support it with sturdy racks.
- 7) Remove the wheel.
- 8) Disconnect the connector from oil temperature switch. (STI model)

(A) Connector

- 9) Remove the rear exhaust pipe and muffler. SOHC model  
<Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>  
DOHC Turbo model  
<Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>
- 10) Remove the front cover of rear differential mount.

- 11) Remove the propeller shaft. <Ref. to DS-16, REMOVAL, Propeller Shaft.>
- 12) Remove the rear differential protector. (If equipped)
- 13) Remove the DOJ of rear drive shaft from rear differential.

- (1) Remove the ABS wheel speed sensor cable clamp and parking brake cable clamp from bracket.

(A) ABS wheel speed sensor cable clamp  
(B) Parking brake cable clamp

- (2) Remove the ABS wheel speed sensor cable clamp from trailing link.

- (3) Remove the ABS wheel speed sensor cable clamp and parking brake cable guide from trailing link.

(A) Parking brake cable guide  
(B) ABS wheel speed sensor cable clamp

# Rear Differential

## DIFFERENTIALS

(4) Remove the rear stabilizer link.

(5) Remove the bolts which secure trailing link to housing.

(6) Remove the bolts which secure the front and rear lateral link to rear housing.

(7) Remove the DOJ from the rear differential by using ST.

### NOTE:

When removing the DOJ from rear differential, fit ST to the bolts as shown in the figure so as not to damage the side bearing retainer.

ST 208099PA100 DRIVE SHAFT REMOVER

(A) Bolt

14) Secure the rear drive shaft to rear crossmember using wire.

15) Remove the differential mount lower bracket.

(A) Differential mount lower bracket

16) Support the rear differential with transmission jack.

17) Remove the self-locking nuts and bolts.

18) Remove the bolts which secure the front differential member to body.

Loosen the bolt A first, then remove the bolts B.

NOTE:

Support the differential front member with use of a helper to prevent it from dropping.

(A) Bolt A

(B) Bolt B

19) Remove the bolt A.

20) While slowly lowering the transmission jack, move the rear differential forward and remove differential front member and rear differential from vehicle.

21) Remove the rear differential from vehicle.

## B: INSTALLATION

1) Install the air breather cap tapping with a plastic hammer.

NOTE:

Be sure to install a new air breather cap.

2) Position the differential front member on body by passing it under the parking brake cable and securing to rear differential.

NOTE:

When installing the differential front member of rear differential, do not confuse the installation sequence of the upper and lower stoppers.

3) Install the DOJ of drive shaft into rear differential. <Ref. to DI-50, REPLACEMENT, Rear Differential Side Oil Seal.>

ST 28099PA090 OIL SEAL PROTECTOR

# Rear Differential

## DIFFERENTIALS

4) Installing procedure hereafter is in the reverse order of removal.

5) After installation, fill the differential carrier with gear oil to the filler plug level. <Ref. to DI-18, Differential Gear Oil.>

### C: DISASSEMBLY

#### 1. EXCEPT STI MODEL

To detect the real cause of trouble, inspect the following items before disassembling.

- Tooth contact of hypoid driven gear and pinion, and backlash
- Runout of hypoid driven gear at its back surface
- Total preload of drive pinion

1) Set the ST on vise and install the differential assembly to ST.

ST 398217700 ATTACHMENT

2) Drain the gear oil by removing the plug.

3) Remove the air breather cap.

NOTE:

- Do not attempt to remove the air breather cap if unnecessary.
- When removing the air breather cap, replace the air breather cap with a new one.

(A) Air breather cap

(B) Rear cover

4) Remove the bolts, and then remove the rear cover.

NOTE:

Remove it by tapping with plastic hammer.

(A) Rear cover

(B) Differential carrier

5) Make right and left side bearing retainers in order to identify them at reassembly. Remove the side bearing retainer attaching bolts, set the ST to differential case, and extract right and left side bearing retainers with a puller.

NOTE:

Each shim, which is installed to adjust the side bearing preload, should be kept together with its mating retainer.

ST 398457700 ATTACHMENT

6) Pull out the differential case assembly from differential carrier.

NOTE:

Be careful not to hit the teeth against the case.

7) When replacing the side bearing, pull the bearing cup from side bearing retainer using ST.

ST 398527700 PULLER ASSY

8) Extract the bearing cone with ST.

NOTE:

- Do not attempt to disassemble the parts unless necessary.
- Set the puller so that its claws catch the edge of bearing cone.
- Never mix up the right and left hand bearing races and cones.

ST 18759AA000 PULLER ASSY

9) Remove the hypoid driven gear by loosening the hypoid driven gear bolts.

10) Drive out the pinion shaft lock pin from hypoid driven gear side. (Model without LSD)

NOTE:

The lock pin is staked at the pin hole end on the differential carrier; do not drive it out forcibly before unstaking it.

ST 899904100 STRAIGHT PIN REMOVER

11) Draw out the pinion mate shaft and remove the pinion mate gears, side gears and thrust washers. (Model without LSD)

NOTE:

The gears as well as thrust washers should be marked or kept separated right and left, front and rear.

- (A) Side gear
- (B) Pinion mate gear
- (C) Thrust washer
- (D) Differential case
- (E) Pinion mate shaft

12) Hold the companion flange with ST and remove self-locking nut.

ST 498427200 FLANGE WRENCH

# Rear Differential

## DIFFERENTIALS

13) Extract the companion flange with a puller.

ST 398527700 PULLER ASSY

14) Press the end of drive pinion shaft and extract it together with the rear bearing cone, preload adjusting spacer and washer.

NOTE:

Hold the drive pinion so as not to drop it.

ST 398467700 DRIFT

17) Remove the pilot bearing together with front bearing cone and spacer using ST.

ST 398467700 DRIFT

- (A) Pilot bearing
- (B) Spacer
- (C) Front bearing
- (D) Rear bearing cup

15) Remove the rear bearing cone from drive pinion by supporting the cone with ST.

NOTE:

Place the replacer so that its center-recessed side faces the pinion gear.

ST 398517700 REPLACER

18) When replacing the bearings, hit out the front bearing cup and rear bearing cup in this order out of case by using a brass bar.

- (A) 2 cutouts along diagonal lines
- (B) Hit out alternately with brass bar.

16) Remove the front oil seal from differential carrier using ST.

## 2. STI MODEL

To detect the real cause of trouble, inspect the following items before disassembling.

- Tooth contact of hypoid driven gear and pinion, and backlash
- Runout of hypoid driven gear at its back surface
- Total preload of drive pinion

1) Set the ST on vise and install the differential assembly to ST.

ST 398217700 ATTACHMENT

- 2) Drain the gear oil by removing the plug.
- 3) Remove the air breather cap.

NOTE:

- Do not attempt to remove the air breather cap if unnecessary.
- When removing the air breather cap, replace the air breather cap with a new one.

- (A) Air breather cap  
(B) Rear cover

- 4) Remove the bolts, and then remove the rear cover.

NOTE:

Remove it by tapping with plastic hammer.

- (A) Rear cover  
(B) Differential carrier

- 5) Make right and left side bearing retainers in order to identify them at reassembly. Remove the side bearing retainer attaching bolts, set the ST to differential case, and extract right and left side bearing retainers with a puller.

NOTE:

Each shim, which is installed to adjust the side bearing preload, should be kept together with its mating retainer.

ST 398457700 ATTACHMENT

- 6) Pull out the differential case assembly from differential carrier.

NOTE:

Be careful not to hit the teeth against the case.

# Rear Differential

7) When replacing the side bearing, pull the bearing cup from side bearing retainer using ST.

ST 398527700 PULLER ASSY

8) Extract the bearing cone with ST.

**NOTE:**

- Do not attempt to disassemble the parts if unnecessary.
- Set the puller so that its claws catch the edge of bearing cone.
- Never mix up the right and left hand bearing races and cones.

ST 18759AA000 PULLER ASSY

9) Remove the hypoid driven gear by loosening the hypoid driven gear bolts.

**NOTE:**

Disassembling the differential case is not allowed.

10) Hold the companion flange with ST and remove self-locking nut.

ST 18633AA000 WRENCH COMPL

11) Extract the companion flange with a puller.

12) Press the end of drive pinion shaft and extract it together with the rear bearing cone, preload adjusting spacer and washer.

**NOTE:**

Hold the drive pinion so as not to drop it.

ST 398467700 DRIFT

13) Remove the rear bearing cone from drive pinion.

14) Remove the front oil seal from differential carrier using ST.

ST 398527700 PULLER ASSY

15) Remove the pilot bearing together with front bearing cone and spacer using ST.

ST 398467700 DRIFT

- (A) Pilot bearing
- (B) Spacer
- (C) Front bearing
- (D) Rear bearing cup

16) When replacing the bearings, tap the front bearing cup and rear bearing cup in this order out of case by using a brass bar.

- (A) 2 cutouts along diagonal lines
- (B) Hit out alternately with brass bar.

## D: ASSEMBLY

### 1. EXCEPT STI MODEL

#### NOTE:

- Assemble in the reverse order of disassembling.
- Check and adjust each part during assembly.
- Keep the shims and washers in order, so that they are not improperly installed.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply gear oil when installing the bearings and thrust washers.
- Be careful not to mix up the right and left hand races of the bearings.
- Use a new O-ring and gasket.
- Replace the oil seal with a new one at every disassembly. Apply chassis grease between the lips when installing the oil seal.
- Be careful not to confuse the installing direction of oil seal.

1) Adjusting preload for front and rear bearings  
Adjust the bearing preload with spacer and washer between front and rear bearings. Pinion height adjusting washer are not affected by this adjustment. The adjustment must be carried out without oil seal inserted.

(1) Press the rear bearing race into differential carrier using ST1 and ST2.

ST1 398477701 HANDLE  
ST2 398477703 DRIFT 2

# Rear Differential

## DIFFERENTIALS

(2) Install the front bearing race to differential carrier using ST1 and ST2.

ST1 398477701 HANDLE

ST2 398477702 DRIFT

(3) Insert the ST1 into carrier with pinion height adjusting washer and rear bearing cone fitted onto it.

### NOTE:

- If tooth contact (Drive pinion, Hypoid driven gear) is normal in the inspection before disassembling, verify that the washer is not deformed, and then re-use the used washer.

- Use a new rear bearing cone.

(4) Then install the preload adjusting spacer and washer, front bearing cone, ST2, companion flange, and washer and drive pinion nut.

ST1 398507702 DUMMY SHAFT

ST2 398507703 DUMMY COLLAR

- (A) Pinion height adjusting washer
- (B) Preload adjusting spacer
- (C) Preload adjusting washer

(5) Turn the ST1 with hand to make the bearing accustomed, and tighten the self-locking nut while measuring the starting load or starting torque with spring balance or torque wrench. Select the preload adjusting washer and spacer so that the specified preload is obtained when nut is tightened to the specified torque.

### NOTE:

- Use a new self-locking nut.
- Be careful not to give excessive preload.

- When tightening the self-locking nut, lock ST1 with ST2 as shown in the figure.
- Measure the preload in direction of tangent to flange.

ST1 398507702 DUMMY SHAFT

ST2 398507704 BLOCK

### Tightening torque:

**181.5 N·m (18.5 kgf·m, 134 ft·lb)**

|                          | 383825200     | 2.35 (0.0925)     |
|                          | 383835200     | 2.33 (0.0917)     |
| 383845200                | 2.31 (0.0909) |                   |

  

| Preload adjusting spacer | Part No.  | Length mm (in) |
|--------------------------|-----------|----------------|
|                          | 383695201 | 56.2 (2.213)   |
|                          | 383695202 | 56.4 (2.220)   |
|                          | 383695203 | 56.6 (2.228)   |
|                          | 383695204 | 56.8 (2.236)   |
|                          | 383695205 | 57.0 (2.244)   |
|                          | 383695206 | 57.2 (2.252)   |

**NOTE:**

Make sure there is no clearance between the case and ST2.

- ST1 398507702 DUMMY SHAFT
- ST2 398507701 DIFFERENTIAL CARRIER GAUGE

(3) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed shim with this one.

$$T = T_o + N - (H \times 0.01) - 0.20 \text{ mm (0.0079 in)}$$

**NOTE:**

Use copies of this page.

|                |   |         |  |
|----------------|---|---------|--|
| T              | Thickness of pinion height adjusting washer | mm (in) |  |
| T <sub>o</sub> | Thickness of washer temporarily inserted    | mm (in) |  |
| N              | Reading of thickness gauge                  | mm (in) |  |
| H              | Figure marked on drive pinion head          |         |  |
| Memo:          |   |         |  |

(Example of calculation)

$$T_o = 2.20 + 1.20 = 3.40 \text{ mm}$$

$$N = 0.23 \text{ mm}$$

$$H = + 1$$

$$T = 3.40 + 0.23 - 0.01 - 0.20 = 3.42$$

Result: Thickness = 3.42 mm

Therefore use the washer 383605200.

**2) Drive pinion height adjustment**

Adjust the drive pinion height with shim installed between the rear bearing cone and back of pinion gear.

(1) Install the ST2.

**NOTE:**

At this time, install a pinion height adjusting washer which is temporarily selected or the same as that used before. Measure and record the thickness.

- ST1 398507702 DUMMY SHAFT
- ST2 398507701 DIFFERENTIAL CARRIER GAUGE
- ST3 398507703 DUMMY COLLAR

(A) Pinion height adjusting washer

(2) Measure the clearance N between the end of ST2 and end surface of ST1 by using a thickness gauge.

| Pinion height adjusting washer |                   |
|--------------------------------|-------------------|
| Part No.                       | Thickness mm (in) |
| 383495200                      | 3.09 (0.1217)     |

3) Install the selected pinion height adjusting washer on drive pinion, and press the rear bearing cone into position with ST.

ST 398177700 INSTALLER

4) Insert the drive pinion into differential carrier, install the previously selected bearing preload adjusting spacer and washer.

- (A) Drive pinion
- (B) Bearing preload adjusting spacer
- (C) Bearing preload adjusting washer
- (D) Differential carrier

5) Press-fit the front bearing cone into case with ST1, ST2 and ST3.

ST1 398507703 DUMMY COLLAR  
ST2 399780104 WEIGHT

ST3 899580100 INSTALLER

6) Insert the spacer, then press-fit the pilot bearing with ST1 and ST2.

ST1 399780104 WEIGHT  
ST2 899580100 INSTALLER

7) Fit a new oil seal with ST.

NOTE:

- Press-fit until the end of oil seal is 1 mm (0.04 in) inward from end of carrier.
- Apply grease between the oil seal lips.

ST 498447120 INSTALLER

8) Press-fit the companion flange with ST1 and ST2.

NOTE:

Be careful not to damage the bearing.

ST1 899874100 INSTALLER

ST2 399780104 WEIGHT

9) Apply Lock Tite to the bolt threads of drive pinion shaft, and the seating surface of new self-locking nut.

**Lock Tite:**

**THREE BOND 1324 (Part No. 004403042)**

10) Install a new self-locking nut. Then tighten it with the ST.

ST 498427200 FLANGE WRENCH

**Tightening torque:**

**181.5 N·m (18.5 kgf·m, 134 ft·lb)**

**11) Assembling differential case**

Install the side gears and pinion mate gears, with their thrust washers and pinion mate shaft, into differential case. (Model without LSD)

**NOTE:**

- Apply gear oil on both sides of the washer and on the side gear shaft before installing.

- Insert the pinion mate shaft into the differential case by aligning the lock pin holes.

(1) Measure the side gear backlash.

**Side gear backlash:**

**0.10 — 0.20 mm (0.004 — 0.008 in)**

(2) Adjust the backlash as specified by selecting the side gear thrust washer.

| Side gear thrust washer |                               |
|-------------------------|-------------------------------|
| Part No.                | Thickness mm (in)             |
| 383445201               | 0.75 — 0.80 (0.0295 — 0.0315) |
| 383445202               | 0.80 — 0.85 (0.0315 — 0.0335) |
| 383445203               | 0.85 — 0.90 (0.0335 — 0.0354) |

(3) Check the condition of rotation after applying oil to the gear tooth surfaces and thrust surfaces.

(4) After inserting the pinion shaft lock pin into differential case, stake both sides of the hole to prevent pin from falling off.

12) Install the hypoid driven gear on differential case.

# Rear Differential

## DIFFERENTIALS

### NOTE:

- Before installing the bolts, apply Lock Tite to bolt threads.
- Make sure that there is no clearance between differential case and driven gear.

### Lock Tite:

**THREE BOND 1324 (Part No. 004403042) or equivalent**

### NOTE:

Tighten diagonally while tapping the bolt heads.

### Tightening torque:

**103 N·m (10.5 kgf·m, 76 ft·lb)**

13) Press-fit the side bearing into differential case using ST.

ST 398487700 DRIFT

14) Press the side bearing outer race into side bearing retainer using ST.

ST 398417700 DRIFT

15) Adjusting side bearing retainer shims

(1) The driven gear backlash and side bearing preload can be determined by the side bearing retainer shim thickness.

(2) Install the differential case assembly into differential carrier in the reverse order of disassembly.

### NOTE:

Be careful not to hit the teeth against the case.

(3) Install the side bearing retainer shims to the right and left retainers from which they were removed.

### NOTE:

Replace the broken or corroded side bearing retainer shim with a new one of same thickness.

| Side bearing retainer shim |                   |
|----------------------------|-------------------|
| Part No.                   | Thickness mm (in) |
| 383475201                  | 0.20 (0.0079)     |
| 383475202                  | 0.25 (0.0098)     |
| 383475203                  | 0.30 (0.0118)     |
| 383475204                  | 0.40 (0.0157)     |
| 383475205                  | 0.50 (0.0197)     |

(4) Align the arrow mark on differential carrier with the mark on side bearing retainer during installation.

### NOTE:

Be careful that side bearing outer race is not damaged by bearing roller.

(A) Arrow mark

(5) Tighten the side bearing retainer bolts.

**Tightening torque:**

**10.5 N·m (1.1 kgf·m, 7.7 ft·lb)**

(6) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move the hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.

**Backlash:**

**0.10 — 0.20 mm (0.004 — 0.008 in)**

**NOTE:**

If the backlash exceeds 0.20 mm (0.008 in), reduce the thickness of shim on the back face of hypoid driven gear and increase the thickness of shim on the tooth face of hypoid driven gear. If the backlash is less than 0.10 mm (0.004 in), increase the thickness of shim on the back face of hypoid driven gear and reduce the thickness of shim on the tooth face of hypoid driven gear.

(7) At the same time, measure the total preload of drive pinion. Compared with the resistance when differential case is not installed, if the total preload is not within specification, adjust the thickness of side bearing retainer shims, increasing/reducing by an even amount at a time.

**Total preload:**

**20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lbf)**

16) Re-check the hypoid driven gear-to-pinion backlash.

**Backlash:**

**0.10 — 0.20 mm (0.004 — 0.008 in)**

17) Check the hypoid driven gear runout on its back surface, and make sure that pinion and hypoid driven gear rotate smoothly.

**Limit of runout:**

**Less than 0.05 mm (0.0020 in)**

18) Checking and adjusting tooth contact of hypoid driven gear

(1) Apply an even coat of red lead on both sides of three or four teeth on the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.

(2) When the contact pattern is incorrect, readjust according to the instructions given in "TOOTH CONTACT PATTERN".

**NOTE:**

Be sure to wipe off red lead completely after adjustment is completed.

# Rear Differential

## DIFFERENTIALS

- Correct tooth contact

**Checking item: Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. (When loaded, contact pattern moves toward heel)**

- (A) Toe side
- (B) Heel side

- Face contact

**Checking item: Backlash is too large.**  
Contact pattern

**Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.**

- Flank contact

**Checking item: Backlash is too small.**  
Contact pattern

**Corrective action: Reduce thickness of drive pinion height adjusting washer in order to move drive pinion away from hypoid driven gear.**

- Toe contact (Inside end contact)

**Checking item: Contact area is small.**  
Contact pattern

**Corrective action: Reduce thickness of drive pinion height adjusting washer in order to move drive pinion away from hypoid driven gear.**

- Heel contact (Outside end contact)
- Checking item: Contact area is small.**  
Contact pattern

Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.

19) If proper tooth contact is not obtained, once again adjust the drive pinion height by changing RH and LH side bearing retainer shims and the hypoid gear backlash.

20) Remove the side bearing retainers on right and left side.

21) Install new O-rings to side bearing retainers on right and left side.

22) Install the oil seals to side bearing retainers on right and left side.

23) Align the arrow mark on differential carrier with the mark on side bearing retainer during installation.

(A) Arrow mark

24) Apply liquid gasket to the bolt with arrow mark, and install the side bearing retainer.

**Liquid gasket:**  
**THREE BOND 1105 (Part No. 004403010) or equivalent**

**Tightening torque:**  
**10.5 N·m (1.1 kgf-m, 7.7 ft-lb)**

25) Install the new gasket and rear cover and tighten the bolts to specified torque.

**Tightening torque:**  
**29.5 N·m (3.0 kgf-m, 21.8 ft-lb)**

26) Install the air breather cap.

27) Install the drain plug and filler plug.

**Tightening torque:**  
**49 N·m (5.0 kgf-m, 36.2 ft-lb)**

## 2. STI MODEL

- 1) Precautions for assembling
  - Assemble in the reverse order of disassembling.
  - Check and adjust each part during assembly.
  - Keep the shims and washers in order, so that they are not improperly installed.
  - Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
  - Apply gear oil when installing the bearings and thrust washers.
  - Be careful not to mix up the right and left hand races of the bearings.

# Rear Differential

## DIFFERENTIALS

- Replace the oil seal with a new one at every dis-assembly. Apply chassis grease between the lips when installing the oil seal.

- Adjust the bearing preload with spacer and washer between front and rear bearings. Pinion height adjusting washer are not affected by this adjustment. The adjustment must be carried out without oil seal inserted.

2) Press-fit the rear bearing race into differential carrier using ST.

ST 398417700 DRIFT

3) Press-fit the front bearing race into differential carrier using ST.

ST 398477702 DRIFT

4) Pinion height adjusting washer selection.

(1) Measure the thickness of inserted pinion height adjusting washer.

(2) Read the punch mark of installed drive pinion gear and new one.

NOTE:

If there is no punch mark, it means 0 (zero).

(3) Obtain the thickness of pinion height adjust shim to be inserted from the following formula, and replace the inserted shim with this one.

$$T = T1 + (T2 \times 0.01 - T3 \times 0.01)$$

|          |   |
|----------|---|
| T<br>mm  | Thickness of selected pinion height adjusting washer. |
| T1<br>mm | Thickness of inserted pinion height adjusting washer. |
| T2<br>mm | Punch mark number on installed drive pinion gear.     |
| T3<br>mm | Punch mark number on new drive pinion gear.           |

(Example of calculation)

$$T1 = 3.30, T2 = +2, T3 = -1$$

$$T = 3.30 + \{(2 \times 0.01) - (-1 \times 0.01)\} = 3.33$$

Result: Thickness = 3.33 mm

Therefore use the washer 38336AA310.

| Pinion height adjusting washer |                     |
|--------------------------------|---------------------|
| Part No.                       | Thickness T mm (in) |

20) Press-fit the side bearing onto differential case with ST.

ST 398487700 DRIFT

21) Assembling side bearing retainer.

(1) Press-fit the side bearing outer race with press and ST.

ST 398417700 DRIFT

# Rear Differential

## DIFFERENTIALS

(2) Install the oil seal. <Ref. to DI-50, REPLACEMENT, Rear Differential Side Oil Seal.>

### 22) Adjusting side bearing retainer shims

(1) The driven gear backlash and side bearing preload can be determined by the side bearing retainer shim thickness.

(2) Install the differential case assembly into differential carrier in the reverse order of disassembly.

**NOTE:**

Be careful not to hit the teeth against the case.

DI-00065

(3) Install the side bearing retainer shims to the right and left retainers from which they were removed.

**NOTE:**

Replace the broken or corroded side bearing retainer shim with a new one of same thickness.

| Side bearing retainer shim |                   |
|----------------------------|-------------------|
| Part No.                   | Thickness mm (in) |
| 383475201                  | 0.20 (0.0079)     |
| 383475202                  | 0.25 (0.0098)     |
| 383475203                  | 0.30 (0.0118)     |
| 383475204                  | 0.40 (0.0157)     |
| 383475205                  | 0.50 (0.0197)     |

(4) Align the arrow mark on differential carrier with the mark on side bearing retainer during installation.

**NOTE:**

Be careful that side bearing outer race is not damaged by bearing roller.

DI-00097

(A) Arrow mark

(5) Tighten the side bearing retainer bolts.

**Tightening torque:**

**10.5 N·m (1.1 kgf·m, 7.7 ft·lb)**

DI-00098

(6) Measure the hypoid driven gear-to-drive pinion backlash. Set the magnet base on differential carrier. Align the contact point of dial gauge with tooth face of hypoid driven gear, and move the hypoid driven gear while holding drive pinion still. Read the value indicated on dial gauge.

**Backlash:**

**0.10 — 0.20 mm (0.004 — 0.008 in)**

DI-00099

**NOTE:**

If the backlash exceeds 0.20 mm (0.008 in), reduce the thickness of shim on the back face of hypoid driven gear and increase the thickness of shim on the tooth face of hypoid driven gear. If the backlash is less than 0.10 mm (0.004 in), increase the thickness of shim on the back face of hypoid driven gear and reduce the thickness of shim on the tooth face of hypoid driven gear.

(7) At the same time, measure the total preload of drive pinion. Compared with the resistance when differential case is not installed, if the total preload is not within the specified range, readjust side bearing retainer shims, increasing/reducing by an even amount at a time.

**Total preload:**

**27 — 54 N (2.8 — 5.50 kgf, 6.1 — 12.2 lbf)**

23) Re-check the hypoid driven gear-to-pinion backlash.

**Backlash:**

**0.10 — 0.20 mm (0.004 — 0.008 in)**

24) Check the hypoid driven gear runout on its back surface, and make sure that pinion and hypoid driven gear rotate smoothly.

**Limit of runout:**

**Less than 0.05 mm (0.0020 in)**

25) Checking and adjusting tooth contact of hypoid driven gear

(1) Apply an even coat of red lead on both sides of three or four teeth on the hypoid driven gear. Check the contact pattern after rotating the hypoid driven gear several revolutions back and forth until a definite contact pattern appears on the hypoid driven gear.

(2) When the contact pattern is incorrect, readjust according to the instructions given in "TOOTH CONTACT PATTERN".

**NOTE:**

Be sure to wipe off red lead completely after adjustment is completed.

- Correct tooth contact

**Checking item: Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. (When loaded, contact pattern moves toward heel)**

- (A) Toe side
- (B) Heel side

- Face contact

**Checking item: Backlash is too large. Contact pattern**

# Rear Differential

## DIFFERENTIALS

Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.

- Flank contact

**Checking item: Backlash is too small.**  
Contact pattern

Corrective action: Reduce thickness of drive pinion height adjusting washer in order to move drive pinion away from hypoid driven gear.

- Toe contact (Inside end contact)

**Checking item: Contact area is small.**  
Contact pattern

Corrective action: Reduce thickness of drive pinion height adjusting washer in order to move drive pinion away from hypoid driven gear.

- Heel contact (Outside end contact)

**Checking item: Contact area is small.**  
Contact pattern

Corrective action: Increase thickness of drive pinion height adjusting washer in order to bring drive pinion close to hypoid driven gear.

26) If proper tooth contact is not obtained, once again adjust the drive pinion height by changing RH and LH side bearing retainer shims and the hypoid gear backlash.

27) Remove the side bearing retainers on right and left side.

28) Install new O-rings to side bearing retainers on right and left side.

29) Align the arrow mark on differential carrier with the mark on side bearing retainer during installation.

(A) Arrow mark

30) Apply liquid gasket to the bolt with arrow mark, and install the side bearing retainer.

**Liquid gasket:**

**THREE BOND 1105 (Part No. 004403010) or equivalent**

**Tightening torque:**

**10.5 N-m (1.1 kgf-m, 7.7 ft-lb)**

31) Install the new gasket, rear cover and stay ground and tighten the bolts to specified torque.

**Tightening torque:**

**44 N-m (4.5 kgf-m, 32.5 ft-lb)**

(A) Stay ground

32) Install the new air breather cap.

33) Install the drain plug and rear differential oil temperature switch or oil temperature sensor.

**Tightening torque:**

**49 N-m (5.0 kgf-m, 36.2 ft-lb)**

**E: INSPECTION**

Wash all the disassembled parts clean, and examine them for wear, damage, or other defects. Repair or replace defective parts as necessary.

- 1) Hypoid driven gear and drive pinion
  - If abnormal tooth contact is evident, find out the cause and adjust to give correct tooth contact at assembly. Replace the gear if excessively worn or incapable of adjustment.
  - If crack, score, or seizure is evident, replace as a set. Slight damage of tooth can be corrected by oil stone or the like.
- 2) Side gear and pinion mate gear
  - Replace if crack, score, or other defects are evident on tooth surface.
  - Replace if thrust washer contacting surface is worn or seized. Slight damage of the surface can be corrected by oil stone or the like.
- 3) Bearing
 

Replace if seizure, peeling, wear, rust, dragging during rotation, abnormal noise or other defect is evident.
- 4) Thrust washers of side gear and pinion mate gear
 

Replace if seizure, flaw, abnormal wear or other defect is evident.
- 5) Oil seal
 

Replace if deformed or damaged, and at every disassembling.
- 6) Differential carrier
 

Replace if the bearing bores are worn or damaged.
- 7) Differential case
 

Replace if its sliding surfaces are worn or cracked.
- 8) Companion flange
 

Replace if the oil seal lip contacting surfaces have flaws.
- 9) Rear differential oil temperature switch
 

If the results of the following inspections are not satisfactory, replace rear differential temperature switch.

  - (1) At room temperature, check for continuity between the sensor terminal and body.
  - (2) Soak the sensor in oil, then raise the oil temperature. Check that the continuity is cut off when the oil temperature is between 144°C (291°F) and 156°C (313°F). Then, check that the continuity resumes by the time the oil temperature drops to 135°C (275°F).

# Rear Differential

## DIFFERENTIALS

### 1. SIDE GEAR BACKLASH

Using a dial gauge, check the backlash of the side gear.

**Side gear backlash:**

**0.1 — 0.2 mm (0.004 — 0.008 in)**

If the side gear backlash is not within the specification, adjust clearance as specified by selecting the side gear thrust washer.

### 2. HYPOID DRIVEN GEAR BACKLASH

Using a dial gauge, check the backlash of the hypoid driven gear.

**Hypoid driven gear backlash:**

**0.1 — 0.2 mm (0.004 — 0.008 in)**

If the hypoid driven gear backlash is not within the specification, adjust the side bearing preload or repair if necessary.

### 3. HYPOID DRIVEN GEAR RUNOUT

Using a dial gauge, check the hypoid driven gear runout.

**Hypoid driven gear runout:**

**Less than 0.05 mm (0.0020 in)**

If the hypoid driven gear runout exceeds 0.05 mm (0.0020 in), replace the hypoid driven gear.

### 4. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Inspect the tooth contact between hypoid driven gear and driven pinion. <Ref. to DI-29, ASSEMBLY, Rear Differential.>

### 5. TOTAL PRELOAD

Using a gauge, check the turning resistance increase.

**Total preload:**

**Except STI model:**

**20.7 — 54.4 N (2.1 — 5.5 kgf, 4.7 — 12.2 lbf)**

**STI model:**

**27 — 54 N (2.8 — 5.50 kgf, 6.1 — 12.2 lbf)**

If the total preload is not within the specification, adjust the side bearing retainer shims.

## 6. COMPANION FLANGE

- 1) If rust or dirt is attached to the companion flange, remove them.
- 2) Set a dial gauge at a companion flange surface (mating surface of propeller shaft and companion flange), and then measure the companion flange runout.

**Limit of runout:**  
**0.08 mm (0.003 in)**

- 3) Set the gauge inside of the companion flange, and measure the runout.

**Limit of runout:**  
**0.08 mm (0.003 in)**

- 4) If either runout exceeds the limit, move the phase of companion flange and drive pinion 90° each, and find the point where the runout is within the limit.
- 5) If the runout exceeds the limit after changing the phase, replace the companion flange and recheck the runout.
- 6) If the runout exceeds the limit after replacing the companion flange, the drive pinion may be assembled incorrectly or bearing is faulty.

## F: ADJUSTMENT

### 1. SIDE GEAR BACKLASH

Adjust the side gear backlash. <Ref. to DI-29, ASSEMBLY, Rear Differential.>

### 2. HYPOID DRIVEN GEAR BACKLASH

Adjust the hypoid driven gear backlash. <Ref. to DI-29, ASSEMBLY, Rear Differential.>

### 3. TOOTH CONTACT BETWEEN HYPOID DRIVEN GEAR AND DRIVE PINION

Adjust the tooth contact between hypoid driven gear and drive pinion gear. <Ref. to DI-29, ASSEMBLY, Rear Differential.>

### 4. TOTAL PRELOAD

Adjust the side bearing shim. <Ref. to DI-29, ASSEMBLY, Rear Differential.>

## 5. Rear Differential Front Oil Seal

### A: REPLACEMENT

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Move the select lever or gear shift lever to "N".
- 4) Release the parking brake.
- 5) Remove the oil drain plug, and drain the gear oil.

- (A) Filler plug  
(B) Drain plug

- 6) Install the oil drain plug.

**NOTE:**

Apply liquid gasket to the drain plug.

**Liquid gasket:**

**THREE BOND 1105 (Part No. 004403010) or equivalent.**

**Tightening torque:**

**49 N·m (5.0 kgf·m, 36.2 ft·lb)**

- 7) Lift-up the vehicle.
- 8) Remove the rear exhaust pipe and muffler.
- 9) Remove the propeller shaft from body. <Ref. to DS-16, REMOVAL, Propeller Shaft.>
- 10) Remove the self-locking nut while holding the companion flange with ST.

Except STI model

ST 498427200 FLANGE WRENCH

STI model

ST 18633AA000 WRENCH COMPL

- 11) Remove the center heat shield cover.

- 12) Extract the companion flange using ST.

ST 399703600 PULLER ASSY

- 13) Remove the oil seal using ST.

ST 398527700 PULLER ASSY

- 14) Fit a new oil seal using ST.

ST 498447120 INSTALLER

- 15) Install the companion flange.

**NOTE:**

Use a plastic hammer to install the companion flange.

16) Apply Lock Tite to the bolt threads of drive pinion shaft, and the seating surface of new self-locking nut.

**Lock Tite:**

**THREE BOND 1324 (Part No. 004403042)**

17) Tighten the self-locking nut within the specified torque range so that the preload of companion flange becomes the same as that before replacing oil seal.

Except STI model

ST 498427200 FLANGE WRENCH

STI model

ST 18633AA000 WRENCH COMPL

NOTE:

Use a new self-locking nut.

**Tightening torque:**

**181.5 N·m (18.5 kgf-m, 134 ft-lb)**

18) Hereafter, reassemble in the reverse order of disassembly.

19) Fill the differential carrier with gear oil to the bottom of filler plug hole after installing. <Ref. to DI-18, Differential Gear Oil.>

# Rear Differential Side Oil Seal

## DIFFERENTIALS

### 6. Rear Differential Side Oil Seal

#### A: INSPECTION

Make sure that there is no oil leakage from side oil seal.

If there is any oil leakage, replace the oil seal.

#### B: REPLACEMENT

- 1) Move the select lever or gear shift lever to "N".
- 2) Release the parking brake.
- 3) Loosen both wheel nuts.
- 4) Lift-up the vehicle.
- 5) Remove the wheels.
- 6) Remove the rear exhaust pipe and muffler.

- Non-turbo model

<Ref. to EX(H4SO)-7, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4SO)-8, REMOVAL, Muffler.>

- Turbo model and STI model

<Ref. to EX(H4DOTC)-15, REMOVAL, Rear Exhaust Pipe.> <Ref. to EX(H4DOTC)-16, REMOVAL, Muffler.>

7) Remove the DOJ of rear drive shaft from rear differential.

- (1) Remove the ABS wheel speed sensor cable clamp and parking brake cable clamp from bracket.

- (A) ABS wheel speed sensor cable clamp
- (B) Parking brake cable clamp

- (2) Remove the ABS wheel speed sensor cable clamp from trailing link.

- (3) Remove the ABS wheel speed sensor cable clamp and parking brake cable guide from trailing link.

- (A) Parking brake cable guide
- (B) ABS wheel speed sensor cable clamp

- (4) Remove the rear stabilizer link.

- (5) Remove the bolts which secure trailing link to housing.

- (6) Remove the bolts which secure the front and rear lateral link to rear housing.

(7) Remove the DOJ from the rear differential by using ST.

**NOTE:**

When removing the DOJ from rear differential, fit ST to the bolts as shown in the figure so as not to damage the side bearing retainer.

ST 208099PA100 DRIVE SHAFT REMOVER

(A) Bolt

8) Suspend the rear drive shaft to the rear cross-member using wire.

9) Remove the oil seal using ST.

ST 398527700 PULLER ASSY

10) Drive in a new side oil seal using ST.

**NOTE:**

Apply chassis grease between the oil seal lips.

ST 398437700 DRIFT

11) Insert the DOJ into rear differential.

(1) Install the ST to rear differential.

ST 28099PA090 OIL SEAL PROTECTOR

(2) Install the spline shaft until the spline portion is inside the side oil seal using ST.

ST 28099PA090 OIL SEAL PROTECTOR

## Rear Differential Side Oil Seal

### DIFFERENTIALS

---

- (3) Remove the ST.
- ST 28099PA090 OIL SEAL PROTECTOR
- 12) Hereafter, reassemble in the reverse order of disassembly.

## 7. Rear Differential Member

### A: REMOVAL

When removing the differential front member, work the removal procedure as rear differential.

<Ref. to DI-21, REMOVAL, Rear Differential.>

### B: INSTALLATION

1) Position the differential front member on body by passing it under the parking brake cable and securing to rear differential.

#### NOTE:

When installing the differential front member, do not confuse the installation sequence of the stopper.

2) Insert the DOJ of rear drive shaft into rear differential. <Ref. to DI-50, REPLACEMENT, Rear Differential Side Oil Seal.>

#### NOTE:

Before inserting, replace the differential side oil seal with a new one.

ST 28099PA090 OIL SEAL PROTECTOR

3) Hereafter, install in the reverse order of removal.

### C: INSPECTION

1) Check the rear differential member for damage, bend, or corrosion.
